Russia, of course, can go on if she likes, and for as long as she wishes, provided she can find the money. There is nothing else whatever to stop her save the improbable dawn of returning sense. But is the game worth the candle, and is there anything in the realization of Japanese aspirations that can bring anything but satisfaction to the legitimate desires of the great Russian people? These are questions for Russia to answer, but we can only hope, for her sake, that she is not going to be fooled once more by individuals like Admiral Dubassoff, who has just returned to Paris from London with the interesting information that Japan will be exhausted in four or five months. If there be a statesman in Russia, the best thing he could do for his country would be to recast the intelligence service at St. Petersburg, which has become a public danger. We are, of course, aware that the organ of the German General Staff recently committed itself to the statement that it was materially impossible for Japan to place more than 350,000 men in the field, but it is necessary for Russia to recognize the fact that the German General Staff is out of date. If we, practically without an army, placed 350,000 men in the field during a three years' war by voluntary service, what is the effort that is reasonably to be expected from 46 millions of warlike and patriotic people, engaged in a national war of existence, who have embraced the system of the nation in arms?

The fact is, a most unfortunate fact but none the less true, that Russia's leaders are still labouring under the misapprehensions which betrayed them into this war: they entirely underrate Japan's capacity. Admiral Dubassoff says that he "knows the Japanese," and what his knowledge tells him is that "in five or six months they will be the first to begin *pourparlers* for peace." He could not have said anything better calculated to prove that he does not know the Japanese. His statement

is even more erroneous than that of the organ of the German General Staff, which said that it was materially impossible for Japan to place more than 350,000 men in the field. The latter miscalculation has been emphatically disproved by the Battle of Mukden, and Admiral Dubassoff's forecast will be found equally misleading. He may be excused, perhaps, for total ignorance as to the staying quality of Japanese morale, though he can not be excused for claiming knowledge which he does not possess and above all for deceiving his country by such professions. But he ought at least to know, did his inquiries bear any due ratio to his responsibilities, that so far as finance is concerned Japan has now made full arrangements to continue the war until next March, and therefore the pecuniary exhaustion he predicts for July or August is totally erroneous. Until men like him cease to throw dust in the eyes of their country there is no hope of peace.

These reflections derive weight from the following note issued on March 11th by the semi-official agency in St. Petersburg:—

"The defeat at Mukden is furnishing material for conjectures as to peace *pourparlers* to the European Press, which is filled with articles and expressions of opinion on the subject of peace. It has been stated in all seriousness that the Russian Government has informed the French Government that it is the intention of the Emperor to engage in peace *pourparlers*.

"We are authorized to declare in the most categorical fashion that all statements to the effect that it is the intention of the Russian Government to open *pourparlers* with a view to the conclusion of peace are absolutely without foundation. These statements do not emanate and cannot emanate from well-informed Russian sources. They are either simply the conjectures of the various correspondents or are derived from Japanese sources. It is known that Japan is at present negotiating a loan with British and American bankers, and that she is also negotiating a loan of 100,000,000 yen with an oil company on the guarantee of the naphtha deposits in the north of Japan and in Sakhalin. Interested parties are encouraging these reports in order to assure the success of the loan after removing the fears caused by the uncertainty as to the duration of the war."

Does this agency seriously believe that Japan attempted to borrow money on the security of Sakhalin oil-deposits, an unknown quantity in a country that does not belong to her? Does it believe that the securities she has to offer for loans are reduced to that low ebb? Either the agency deliberately deals in colossal falsehoods or its ignorance of Japanese affairs is stupendous.

## RUSSIA DENIES.

London sends an extraordinary telegram to the *Fiji Shimpō*. It says that the Russian Government denies *in toto* the statements made in the Japanese official announcement of the 24th instant. The announcement declared, first, that the French Government had instructed the Governor-General of Indo-China to direct the Russian Squadron to leave French territory with the utmost possible celerity, whereupon the Governor-General replied that in compliance with these instructions he had already taken suitable steps; and, secondly, that the French Government had addressed a request to the Russian Government that the latter should issue instructions for the withdrawal of the Baltic Fleet from French territory, whereupon the Russian Government answered that it had already issued such instructions. Now the *Fiji Shimpō*'s London telegram affirms that the Russian Government publicly denies, first that France made any such request to St. Petersburg, and, secondly, that any such instructions were addressed by French officials to Rojestvensky. What is

to be understood by this denial? Does the Russian Government intend to publicly fix a falsehood upon the French Government or on the Japanese Government? One of these alternatives must be contemplated unless the London telegram is wholly incorrect. As for the Governor-General of Indo-China, it must have been observed by all careful readers of the Japanese official publication that he did not claim to have actually directed the Russian Squadron to leave French territorial waters: he merely claimed to have taken suitable steps. Here, by some juggling with terms, there may be room for the Russian denial, but in other respects the thing is so perplexing that we prefer to regard the London telegram as a blunder.

## THE LATE SIR EDWARD BLOUNT.

The death of Sir Edward Blount carries the mind back over such a stretch of history as is rarely comprised in one life. To have just parted with a man who was present at the Coronation of George IV., and who as a Government clerk copied out the Treaty of Navarino, gives a vivid impression of the amount of experience which may come to a man whose life is unusually prolonged. Sir Edward had more claims to remembrance than the fact that he was ninety-six. He was a great railway pioneer on the Continent, and his conduct in looking after the English residents of Paris during the siege when the Consul and Minister had departed entitled him to the gratitude of his country. When he returned to England the late Mr. Gladstone invited him to breakfast, Earl Granville being one of the guests. On being asked, as *The Times* recalls, at what moment during the war he felt his position most acutely, he answered that he felt humiliated as an Englishman when the Prussians sank seven British coal ships at the mouth of the Seine and when Lord Granville, in the House of Lords, attempted to gloss the affair over by stating that the Government received £7,000 by way of indemnity. Sir Edward belonged to a family, which, according to Debrett, claims descent from William, son of Blount, Earl of Guisnes, a companion of William the Conqueror. The first baronet suffered for his loyalty during the civil wars, and was long imprisoned—first at Oxford and afterwards in the Tower. The Barons of Mountjoy of Thurston, and the Barons of Ixworth, in Suffolk (now extinct), were of the same family.

## FORMOSA.

At a meeting of the Privy Council held on the 26th instant, it was decided that Formosa should be regarded as within the belligerent area, and that martial law should be applied throughout the whole island. This is doubtless a necessary precaution, but it evidently suggests that the possibility of Rojestvensky attempting to make use of Formosan harbours is not considered altogether remote, nor is it thought that he will pass out into the Pacific, after leaving the Indo-China coast to which he is clinging so tenaciously.

## ROJESTVENSKY'S SOLILOQUY.

Togo or not Togo: that is the question:  
Whether 'tis better on the sea to suffer  
The winds and billows of outraged  
Neptune,  
Or to take arms against the fleet of Togo,  
And by opposing end me.

UNCAS.

## CHINA.

The French Representative in Peking is reported to have informed the Chinese Government that effective steps would be taken to ensure the neutrality of Kwangchow Bay as well as of all the neighbouring islands.

The authorities at Shanghai are said to have posted two vessels at Woosung and two higher up the river to guard against any attempt on the part of the *Askold* and her consorts to join Rojestvensky.

It is observable that we hear no hint whatever of anything like an emergence of the *Czarevitch* from Kiaochow. No one imagines that the Germans will suffer any tampering with their neutrality.

Saigon wires to Shanghai that the Baltic Squadron had contemplated a stay of at least two months in Annamese waters.

Shanghai alleges that conferences have taken place between the Russian officers and General Dessino as to the advisability and feasibility of an exodus by the *Askold*, the *Grosvoy* and the *Manjar*. There is no sentiment of compunction about violating China's neutrality, so far as China herself is concerned, but some thought is said to be taken of the opinion of the world, and it is questioned whether the material results of an escape would be commensurate with its moral effects. Then there is complete uncertainty as to Admiral Togo's plans, and the ships would consequently find difficulty in shaping a course after leaving the Yangtze. On the whole the council is said to have decided that the best plan will be to await the result of the pending encounter between Togo and Rojestvensky.

We wonder how Shanghai obtained this news. The feat of procuring it seems too difficult to encourage credence. And it is also clumsy news. If the *Askold* and her consorts are thinking of making a run for it—and very anxious they must be to do so—they can easily get into previous communication with Rojestvensky and thus be assured of picking up his squadron before the engagement with Togo—provided that they can escape the Japanese and the Chinese. That is a big proviso. Meanwhile the Japanese Consul is said to be insisting that the vessels should be deprived of their screws and compelled to anchor in the middle of the river. Our own information goes to show that they are not fit to fight, and that, consequently, they will not make any attempt to leave Shanghai.

It appears that Peking has acceded to the application of the Viceroy of the Liang-kwang and will send two or three vessels of the Peh-yang Squadron to assist in enforcing China's neutral obligations. At Shanghai, also, such vigour as China is capable of showing is being exercised to avert the danger of the Russian ships' exit, a danger which appears to be now regarded as imminent. The Chinese war-craft in the river have been warned to hold themselves in readiness to pursue or intercept the *Askold* and her smaller consorts, and an increased force of troops has been placed in the Woosung Forts. Peking has also instructed the Viceroy of the Two Kwang to appoint special officials whose duty it shall be to watch and report every movement of the Russians.

Would China actually commence hostilities if the Russians disregarded her neutrality, and has Russia any intention of openly disregarding it? It is hard to answer either question. China has never shown herself heroic, and it would be something like heroism—probably futile heroism—to cross swords with Russia. But as for Russia, if

Rojestvensky's doings are an index of her mood, she has not the smallest respect for any neutrality that can be violated with advantage and immunity. If she has treated France as she is now treating her, what scruples is she likely to feel with regard to China? It becomes a pertinent question whether Russia is not deliberately seeking to extend the area of the war, in the hope that amid the general dust thus created an exit from her own humiliation may be found.

The *Nichi Nichi* has information from Peking that a large quantity of provisions has been discovered at Hsinmintun, destined for the use of the Russian Army, and that orders have been issued for the confiscation of the goods. It is not easy to understand how provisions could reach the Russians by such a route, unless they were transported right through Mongolia.

Japanese journals state that in consideration of memorials addressed to the Chinese Throne by Mr. Wu Ting-fang, it has been decided to adopt an amended Criminal Code drafted by Mr. Wu. This code abolishes the cruelties of the present system, above all the "comprehensive execution" (*keiyeki*, vulgarly called *me-dayashi*) which was practised once in Japan and is still in vogue in China—capital punishment including the whole family of a criminal. Mr. Wu, an eminent barrister who once occupied a place on the Legislative Council in Hongkong, has thus effected the most signal reform recorded in China's modern history. It is said that his code abolishes all kinds of torture and reduces capital punishment—except in special cases—to the one form of hanging, doing away, at the same time, with many other abuses which disfigured the previous criminal administration of China. Any one familiar with the religious beliefs of the Chinese knows how vastly different in their eyes are death by strangulation and death by decapitation.

The *Fiji Shimpo* has a telegram from Peking saying that the Chinese authorities have decided to build the Peking-Changkiakow Railway without the aid of foreign experts or foreign capital. They will obtain funds from the working profits of the Intra-mural and Extra-mural lines, and it is probably because of that somewhat tardy source that they estimate the time of construction at 9 years, a long period for building 120 miles of line.

A telegram from Yingkow says that the spring thaws have brought a great volume of water down the river, and the violent current has caused steamers to collide and to break away from their moorings. The names of the colliding steamers are the *Shikoku Maru*, the *Notto Maru*, the *Koyo Maru*, the *Kyodo Maru*, the *Mayasan Maru*, and the *Soratsu Maru*. The current has also cast up Russian mines, which add materially to the dangers.

At the annual meeting of the China Association Mr. R. S. Gundry, C.B., was elected president for the ensuing year.

The *Universal Gazette* hears that Hanghu, a district lying between Kiangsu and Anhui, has been the seat of a disturbance caused by the salt smugglers, who number between 10,000 and 20,000. The local militia of the district are too insignificant to cope with them.

The Shanghai Municipal Council has received four tenders to install an electric tramway service in Shanghai. The firms are Bruce Peebles and

Co., Compagnie Internationale d'Orient, Brussels, Shanghai Electric Tramways, Ltd., and Société Parisienne des Tramways Electriques.

Mr. Phillips, secretary to Mr. Choate, the American Ambassador, has been appointed Second Secretary to the American Legation at Peking.

A few days ago a mine exploded near a small village about fifty miles west of Chefoo, killing one coolie. The man found the mine on the beach and attempted to take it home. As it was too heavy for him to carry, he dragged it along. The contact spikes struck the ground causing an explosion. Of the victim only small pieces were found strewn about.

His many friends in China and Europe will be glad to hear, says the *Daily Press*, that the Chinese Government has appointed Taotai Lew Yuk Lin to the post of consul-general for China at Johannesburg, Transvaal. Taotai Lew has held official appointments in London, Brussels and other European capitals, and is favourably known to many in Hongkong.

It is reported that H.E. Tang Shao Yi, the Chinese Minister in London, intends to resign his post in connection with the Tibetan treaty negotiation. The fact, however, says the *Shanghai Times*, is that the Minister has been disgraced and recalled, owing to his failure in preventing the signature of the treaty. He, on his return to China, will be appointed Chinese director general of the Luhan railway and its branches.

A Shanghai telegram states that a preliminary conference between the German and Chinese plenipotentiaries for the commercial treaties took place on the 14th, during which the German draft of the treaty was handed to the representatives of China. China was represented by their Excellencies Lu Haihuan and Sheng Kung-pao, Mr. A. E. Hippisley and Mr. F. F. Taylor, and Germany by Consul-General Dr. Knappe, Dr. Mercklinghaus.

Hongkong has hitherto been spoken of as the third shipping port in the world. The figures for 1904 are not yet available, but those for 1903 show that it is not only far ahead of New York, the third largest, but so good a second that there is every probability of its soon being first. The official returns of vessels entered at the five greatest ports in 1903 are:—

	Tons.
London .....	10,958,739
Hongkong.....	10,783,502
New York.....	9,371,545
Antwerp.....	9,939,313
Hamburg (excluding Cuxhaven) ...	8,244,660

A correspondent, who has returned to Hongkong after an extended tour throughout the Southern and Central districts of Kwangsi Province, writes bearing out the report which recently appeared in the *Hongkong Telegraph* to the effect that the rebels had stopped operations for the present. He does not agree with the statement that this has been brought about by military operations but avers that the temporary cessation of the rebellion is because in 1904 there were three good crops of rice gathered in by the natives. He states that if the harvests are equally as good this year the rising may not break out for some time to come. This, he says, is borne out by the fact that, although the Viceroy informed the Government the rebellion was at an end and expressed a desire to be allowed to proceed north, he was ordered to remain at his post for another year in order that the Imperial authorities might see for themselves exactly what was the conditions of affairs in Kwangsi.

The American Government, says the Peking correspondent of the *Shanghai Times*, has demanded, through the American Minister, from the Wai-wu-pu that China should recognise the importance of maintaining the integrity of all parts of China, by fulfilling her promises to the Powers in respect to Manchuria and open, as per treaty, the cities of Mukden, Antungshien and Dalny, so that subjects of foreign countries may be allowed to reside therein, for the

purpose of carrying on their mercantile pursuits, without molestation or restraint. In accordance with treaty the American Government demands that it should be permitted to appoint superintendents and consular officers to reside at each of the above named cities and towns who shall be the medium of communication between Chinese officials and American merchants carrying on trade through the ports; and that these officials shall see that justice is done as between Chinese and Americans, and Americans and Chinese. The Wai-wu-pu referred the American minister to Mr. Uchida, the Japanese Minister at Peking, saying the Chinese Government were powerless at the present juncture. In reply the Japanese Minister said the matter would be settled at an early date, but there were several difficulties in the way, concerning which he had referred to his Government. He could assure the Wai-wu-pu and the American Government that it was Japan's desire that the commercial door of China should be opened to the trade of the world at as early a date as possible and that once opened it should remain open to the mutual benefit of the commerce of the world. He felt sure present difficulties though great would soon be removed as they were those found necessary to a temporary military occupation. Japan was anxious for the removal of the necessity for this occupation at an early date.

#### A TRIBUTE TO JAPANESE GENERALSHIP.

What the military expert of *The Times* has to say of the manner in which the Japanese planned and conducted the battle of Mukden is this:—

At the same time it is impossible to close our survey without a tribute of sincere admiration to the great plan of battle with which Marshal Oyama and his talented Headquarters Staff accomplished the destruction of the Russian army. They had profited by the past, and their plan for the enveloping attack upon the enemy will stand for generations as a model of one of the fine arts of war. The plan was based on a correct appreciation of the temperament of Kuro-patkin, of the fighting powers of his troops, and of the influence of each move upon Russian decisions. It was scientific in conception, soaring in ambition, and took fully into account the physical characteristics of the battlefield, the condition of the seasons, and the retaining power of modern firearms in the hands of trained soldiers under capable leadership. It was established upon the correct political perception that nothing short of a conclusive result would meet the requirements of Japan; but it is seldom indeed that a more or less impersonal syndicate, like a modern general staff, can rise to the piddy heights of an absolutely Napoleonic improvisation. The sacred fire is not often found in bulk.

The execution was in every way worthy of the brilliancy of the plan. Every single Japanese soldier appeared to realize the particular part he was to play in a great national drama, and he played it with all his might. If there be other nations who think they can deal so roughly with a Russian host, let them first produce for our inspection statesmen, sailors, and soldiers the equals of those of Japan!

The crowning victory of Mukden was won, first and foremost, because the statesmen of Japan had the spirit and the backbone to declare war at their own hour; it was won because Japan was united in the attainment of national aims and shrank from no sacrifice to secure it; because the moral forces within the nation doubled and trebled material strength; because all was prepared, weighed, studied, known; because the shortcomings of the enemy, which were many, were recognized and profited by; because a General Staff, framed on the best existing model, was able to direct all forces to a common end; because each soldier and seaman knew and understood the part he had to play, and played it whole-heartedly for his country, regardless of his own unimportant fate; and, last but not least, because the offensive, in naval war, was the beginning and middle and end of national strategy.

*Laboriosus in negotio, fortis in periculo, industrius in agendo, celer in conficiendo.* So was the ideal of the great captain defined by Cicero, and it is over the heads of the pygmies that great masters speak to one another, be it though it may in different tongues, across long and dark ages that intervene.

This able writer fails to say anything about the fact that it had become habitual with European critics to speak of the excel-

lence of the Japanese soldier as a fighting unit and the inferiority of the Japanese general as a strategic leader. Yet we are still too close to those depreciations for any one to have forgotten them. The *Spectator's* dictum is fresh in our memories. Providence, said that attractively written journal, seems to have a special care for Russia's destiny since, in all her moments of crisis, she is found to be equipped with a heaven-born leader, a Todleben, a Skobeloff or a Kuropatkin; and fresh also in our memories is the sententious essay of "Calchas" who convinced himself that a Japanese captain has limitations which must fatally impair the ultimate achievements of a Japanese army. These analysts are silent now, but the military critic of *The Times*, not having committed himself to any such unreflecting verdict, is able to speak unequivocally.

#### THE CAPTURED STEAMERS.

There are no particulars as to the two steamers said to have been captured by the Russians with cargoes of rice from Saigon to Japan. If such vessels have been seized, they are probably the property of the Mitsui firm or of British merchants. The question is what the Russian Admiral can do with vessels seized under present circumstances. Of course if they be Japanese vessels he is at liberty to do what he pleases with them. But if they are British, or if they fly some other neutral flag, he may not deal with them until the verdict of a prize court is obtained, and for him the nearest prize court is Vladivostok. We can be sure that no more *Knight-Commander* exploits will be tolerated. If Rojestvensky sinks British merchantmen on his own responsibility, he will find it a very heavy responsibility. On the other hand, he can not send them into any neutral port, and to take them with him to Vladivostok looks like a difficult task. These are considerations which show how greatly he is hampered for the discharge of the commerce-destroying role which some publicists are disposed to attribute to him. To act such a part with anything like efficiency, he would have to be equipped with a base of his own, first for receiving his captures and secondly for sheltering himself should he contemplate any lengthy devotion to an anti-commercial occupation. That is what makes us think that he intends to come on and fight as soon as he is tolerably ready. Neutral Powers would not suffer him to constitute himself at once captor, judge and jury, or to expose captured ships to unreasonable risks pending their arrival at a prize-court harbour. His hands are hampered by the conditions and the only clear course for him is the natural course that fighting ships should follow, namely, to fight.

#### NOTES ON CURRENT EVENTS.

Several Tokyo journals write of a recent report made by Mr. Griscom to the State Department in Washington. Speaking of the losses and injuries suffered by merchant steamers during the war, His Excellency observes that the Japanese have not sunk so much as one vessel flying the Russian flag or carrying contraband of war. The Russians, on the other hand, have sunk 9 Japanese steamers and 4 sailing ships without attempting to capture them. At Port Arthur the Japanese sunk 17 of their own steamers for the purpose of blocking the harbour, but they have

captured 23 Russian vessels. As a matter of comparison Mr. Griscom praises Japan's procedure and calls it the more enlightened of the two.

A striking illustration has just been furnished of the sympathy felt with Japan in the United States. Recently an old lady called at the Japanese Consulate in New York and, after expressing a desire to contribute something towards the support of the widows and orphans of those killed in battle, she produced a sum of \$1,500 (gold), but declined either to give her name or to take a receipt, and went away leaving the money in the Consul's hands. The donation was transmitted to Tokyo on the 19th instant.

It appears that a case of real pest has occurred in Hamaguri street in the Fukagawa suburb. The victim was a child of twelve years. The carcasses of rats had previously been found in the district, and examination showed them to be infested with plague bacilli. This Hamaguri street is one of the most insanitary and squalid places in the capital. There is talk of removing all its denizens and destroying the place by fire.

The United States Consuls in Russia, complying with instructions from Washington, have examined into and reported upon the condition of the Japanese prisoners. Their statement seems to have been very favourable. They represent the prisoners as well treated and enjoying a large measure of liberty.

In response to General Terauchi's telegram of condolence on the occasion of the Darnsala catastrophe Lord Curzon has replied in suitable terms.

The British Court has also replied by telegraph to the message of the Mayor of Tokyo.

Rates of insurance for Bombay cotton have largely appreciated, but even at the higher figures it is difficult to get shipments covered, and a telegram to the *Niroku* says that from next month no cargoes are likely to leave Bombay. This will be a serious matter for the Japanese mills unless America can step into the breach. The Tokyo Marine Insurance Company, however, is still taking risks on ships navigating the China Seas; wisely too, we think, for if Rojestvensky enters the Formosan Channel he will not be thinking of visiting merchant ships or making prizes: other matters will occupy his attention.

At a meeting of the Tokyo Bankers on the 22nd instant a sum of 63,800,000 yen was pledged towards the Fifth Domestic Loan. The principal contributors were:—

The Fifteenth Bank (Nobles) .....	10 million yen.
The Mitsu Bishi Bank .....	5 "
The Mitsui Bank .....	5 "
The Specie Bank .....	5 "
The First Bank .....	3,600,000 yen.
The Third Bank .....	2 million yen.
The Yasuda Bank .....	2 "
The Hundredth Bank .....	1,200,000 yen.
The Shogyo Bank .....	1 million.
The Murai Bank .....	1 "
The Bank of Japan .....	20 "
The Kogyo Bank .....	3 "
The Kwangyo Bank .....	1 "

The people of the Bonin Islands are reported to be considerably alarmed lest Rojestvensky should pay them a visit. They have an excellent harbour, where in by-gone days Commodore Perry anchored his ships, and they foresee clearly the kind of treatment Japanese subjects are likely to receive at Russian hands should their islands become for a moment a Russian naval base. They

are to be sympathised with. The reputation of the Russians for lawless conduct is unfortunately not to be denied. But we greatly doubt whether the Bonins are likely to tempt Rojestvensky.

In the *Yokosue Choho* we find a remarkable table showing the numbers of applicants during the current year for admission as naval cadets, the numbers for the previous years being given simultaneously for purposes of comparison:—

	1903.	1904.	1905.
Miyagi Prefecture .....	601	1,031	1,099
Aichi Prefecture .....	613	664	2,113
Fukushima Prefecture .....	305	734	900
Iwate Prefecture .....	321	580	782
Miyagi Prefecture .....	237	294	1,097
Chiba Prefecture .....	179	352	673
Ibaraki Prefecture .....	200	381	513
Shizuoka Prefecture .....	179	285	613
Awamori Prefecture .....	88	265	220
Hokkaido Prefecture .....	108	278	353
Yamaguchi Prefecture .....	66	178	430
Tokyo Prefecture .....	65	138	318
Kanagawa Prefecture .....	58	116	248
Gumma Prefecture .....	38	84	250
Tochigi Prefecture .....	42	71	92
Saitama .....	16	99	120
Totals .....	3,182	5,552	9,735

The figures relate only to the districts within the jurisdiction of the Yokosuka Admiralty. They have to be supplemented by the returns for Kure, Sascho and Maizuru.

Between March 1st and April 10th the number of Russian prisoners that reached Japan was 289 officers and 21,273 rank and file; a total of 21,562. Among the officers were two Major-Generals, four Colonels and fifteen Lieutenant-Colonels.

The number of those whose spirits are to be worshipped at the Kudan Festival on the 3rd, 4th and 5th of May, are 28,999 of the Army and 1,887 of the Navy. These figures represent the total losses up to the end of the siege of Port Arthur, but they do not include the losses in the Battle of Mukden.

The Imperial Cherry Party took place on the 24th instant in beautiful weather, but the Emperor was prevented from attending by slight indisposition. It is stated that from three to four thousand persons were present. Indeed this *fiête*, and the chrysanthemum party in autumn, promise to become landmarks for travellers, especially American.

Mrs. Macdonald wishes, though the *Japan Mail*, to acknowledge with heartfelt thanks the many kind letters received from friends in Japan, and to express her grateful appreciation of the sympathy extended to her in her recent sad bereavement in the sudden death of her husband, Dr. Davidson Macdonald.

It is satisfactory to learn that M. Delcassé has withdrawn his resignation and resumed his able guidance of France's foreign affairs. Rumour says that the Morocco complication was the immediate cause of his tendering his resignation, but a telegram to the *Nichi Nichi Shimbun* suggests that the neutrality question also had some influence. At any rate, as *The Times* says, it would be most regrettable in the interests of the world's peace if a statesman of such marked ability as M. Delcassé gave up his portfolio at this juncture.

On the morning of the 23rd, H.I.H. Prince Arisugawa reached Colombo, and left it on the same evening. The Prince and Princess are said to be in excellent health.

We shall not imagine the editor of the *Japan Herald* to be serious in his contention that the duties of neutrality are discharged

when a neutral allows the use of his ports by the fleet of a belligerent for the purpose of equipping itself to attack another belligerent. If that be neutrality, or if it bear any resemblance to neutrality, an entirely new definition of the term must be provided. We beg to be excused from discussing such a frivolous proposition, especially as France herself has not attempted to defend it. But we repeat our assertion that all who, by defending the Kamranh outrage, encouraged its perpetuation, were assisting to precipitate a crisis of the gravest nature.

The Japanese have just sent to Chefoo from Port Arthur 670 Russians, including 17 officers, 13 women and 25 children. Among the officers—all of whom are paroled—there is a colonel, who is the only one not crippled among the 632 men. All the rest have lost limbs, and are therefore set at liberty, according to the Japanese principle, inaugurated by General Terauchi, that maimed men should not be held prisoners.

The *Hochi Shimbun* has a telegram from London saying that, according to the Paris correspondent of *The Times*, Mr. Motono's diplomatic success in the recent complication is frankly recognised by the French, who have consequently conceived a higher estimate of Japan and an increased sentiment of respect and friendship.

The retirement of Sir Francis Plunkett from diplomatic life has drawn forth many appreciative notices in the English papers of his long career. It is over twenty years since he represented Great Britain at the Court of Tokyo, where he was well liked; in the foreign community of Yokohama, too, he made many friends. Sir Francis has lived in the Austrian capital for the last five years, passing from Brussels to succeed Sir Horace Rumbold. It is just fifty years since the retiring Ambassador entered the Diplomatic Service as a young man of twenty. Since then he has been at Washington, Tokyo, St. Petersburg, Stockholm, Copenhagen, Brussels, and Vienna, among other places, and he goes home to England to a well earned retirement in his seventieth year. Sir Francis is an Irishman, the son of the ninth Earl of Fingall, and the uncle of the present peer. When only seven years of age he accompanied his parents on a trip abroad, but he probably has not a very vivid recollection of the visit which they paid to Pope Gregory XVI. While in Rome, too, Sir Francis, with his parents, was introduced to that great linguist, Cardinal Mezzofanti, who conversed with his visitors in ancient Irish.

The *Nichi Nichi Shimbun* says that quantities of spoils have been found in the houses of the Chinese westward of Mukden. In this part of the field the Japanese attack was pushed with too much vigour to permit the collection of spoils, so the wide-awake Chinaman found an opportunity which he naturally utilized. He is now being obliged to make restitution.

#### SATURDAY'S CONCERT.

The Concert to be given on Saturday in the Ueno School of Music, the programme of which appears below, is given in behalf of the Tokyo School for Foreign Children. The School originated about two years ago in a mutual undertaking by some of the ladies of Tokyo to meet a very pressing need, the teachers at first being all from their own number. It was soon, however, recognized that the demands upon the School were too great for this mutual plan and the School was reorganized under a Board of

Trustees, among whom are the following gentlemen: Dr. Greene, Chairman; Bishop Awdry, Professor Lonholm and Mr. Miller, of the American Legation. The grade of the School was raised to include courses preparatory to English and American Universities. Mrs. B. C. Hawarth, A.B., was secured as Principal, which position she still holds and she has as assistants a well-qualified staff of teachers. There are now more than one hundred pupils enrolled, many of whom come from distant parts of Japan. At present no more can be received into the School who do not reside in or near Tokyo because of the difficulty of securing suitable homes for them. A number have been turned away this past year who desired to enter because of the impossibility of finding boarding places. It is greatly desired that a boarding-house in connection with the School be opened in the autumn to meet this need and it is towards this end that the proceeds of the Concert will be used. We trust that all who possibly can will avail themselves of this opportunity to help so worthy a cause and a glance at the programme will show that a rare musical treat is in store for those who attend.

#### PROGRAMME.

1. Piano Quartette...Overture "Ruy Blas" Mendelssohn.  
Mesdames Swift, Skirminshire, McIvor and Miss G. Page.
2. Song....."Springtide".....Recker.  
Mrs. W. T. Payne.
3. Song....."Love Song".....M. V. White.  
Mr. N. G. Maitland.
4. Songs...(a) "How many a lonely caravan" A Woodford Finden.  
(b) "Allah be with us" Mrs. W. A. Harrison.
5. Cello Solo..."Romance sans Paroles".....v. Goenz.  
Mr. E. Salinger.
6. Song....."Myself when Young".....Lehmann.  
(From Persian Garden)  
Capt. J. C. Somerville.
7. Song....."Sunshine and Rain".....Blumenthal.  
Mrs. Lee Lee.
8. Recitation..."European Guides".....Mark Twain.  
Mr. G. G. Brady.
1. Piano Quartette...Overture "Midsummer night's Dream".....Mendelssohn.
2. Song....."The Rose".....Curschmann.  
Mrs. W. T. Payne.
3. Song..."I'll sing thee Songs of Araby".....Clay.  
Mr. N. G. Maitland.
4. Song....."The Spring has come".....M. V. White.  
Mrs. Lee Lee.
5. Cello Solo....."Kirchen Arie".....Stradella.  
Mr. E. Salinger.
6. Song....."Marching Along".....M. V. White.  
Capt. J. C. Somerville.
7. Song....."The Lost Chord".....Sullivan.  
(With Organ obligato)  
Mrs. W. A. Harrison.
8. Recitation..."Hanging a Picture".....Jerome.  
Mr. G. G. Brady.
9. Glee....."Sweet and Low".....Barnby  
At the Piano.....Mr. H. Horne.

#### FIRES.

Early on the morning of April 24th, fire broke out in Shin-machi, near Yamada, Ise province, burning down nine houses. Two persons lost their lives.

The Jukada hospital, in Yokosuka, was destroyed by fire, on April 24th. The patients were all removed before the flames spread throughout the building.

On Monday, about 11.30 a.m., fire occurred in a military warehouse at Nakano, near Tokyo, destroying the building. Thirteen soldiers and five firemen were injured. The cause is said to have been an explosion of gas used for a balloon which was being tried in the compound. The whole damage is estimated at some thirty thousand yen.

Fire broke out on April 25th in the village of Uchiura, Sado Island, destroying 29 houses and 95 small sheds.

At 3.25 a.m. on April 27th, fire broke out in the Aioi theatre, Isezaki-cho, Yokohama. In spite of heavy rain, the flames, owing to a strong northerly wind, extended to the adjoining houses, with the result that nineteen buildings in all were burned down. Three men were injured.

## FRANCE'S DECISION.

FRANCE has done the right thing and has done it in the straightforward frank manner that the world has learned to associate with her procedure for several years past. Finding that the Russian Admiral was trespassing unconscionably on her hospitality, she has asked him to go away. It must have been terribly hard to do so, for no nation pays such deference to the dictates of politeness or is influenced more profoundly by sentiment. Probably at this moment France's feeling towards her ally is far more helpful than it would have been had success followed the Russian arms everywhere. That is her disposition: she invariably sympathises with the losing side. The more inexcusable does ROJESTVENSKY's conduct become when thus considered. Did he deliberately trespass on France's good-nature? Did he tell himself that it would be almost intolerable to her to turn out a visitor who came in the guise of a distressed friend? It looks very like something of the kind. At all events the Paris Government has done what might have been predicted from its record and a very grave crisis has thus been averted. But it is infinitely regrettable that the French Government did not adopt previous measures to guarantee its neutrality against the signal disrespect displayed towards it by the Russian Admiral. There was no question of the unexpected in this matter. ROJESTVENSKY had made use of Madagascar in a manner which, though possibly reconcilable with the actual text of international law—if there be such a thing as an actual text—was undoubtedly at variance with the spirit of neutrality. The Japanese had protested, and their protest had elicited a denial that the Russian vessels were within French territorial waters, as well as an assurance that the French Government intended to discharge its neutral obligations strictly. From the moment of ROJESTVENSKY's departure from Madagascar on his eastward voyage, it was certain that if he hoped to bring his squadron into the fighting arena in a serviceable condition, he would have to abuse the neutrality either of Holland, or of France or of China. Holland seemed to be his most likely choice, and Japan is understood to have communicated with the Hague Government, the result being that the Russian Admiral would have found the Dutch East Indies effectually closed to him had he attempted to seek a refuge there. But it is more than doubtful whether he ever entertained any such project. We may take it for granted that Kamranh Bay was his pre-arranged destination before he left Madagascar, and it is inconceivable that he should have selected that place without the knowledge and connivance of some French officials at all events. The French Cabinet, indeed, if we suppose its manner of discharging its duties to be somewhat perfunctory, may have trusted the Governor-General of Tongking to adopt all necessary

precautions, and may therefore have refrained from conveying any caution to him. That is conceivable, but only at the expense of M. DELCASSÉ's reputation for efficiency. At all events in the last resort the Governor-General was directly responsible. Are we to assume that he too was found napping? It would be pleasant to think so. But there is a difficulty; namely, that when a Japanese squadron under Admiral DEWA visited Kamranh some time before arrival of the Russians, the Admiral was promptly asked for an explanation of his coming and was plainly made sensible that his continued presence in the Bay would be unwelcome. It seems therefore that the officials were on the alert, and that they were prepared to enforce the obligations of neutrality against Japan at any rate. Why were they not equally circumspect when the Baltic Squadron appeared upon the scene? Why did they allow it to lie safely within French territorial waters for a space of some ten days, receiving great supplies of coal and provisions from prearranged sources? The stable-door has been closed at last, but not until after the horse had flown. There can be no questioning London's opinion that ROJESTVENSKY has gained a great advantage by abusing French neutrality.

ROJESTVENSKY is now once more in space. But it is tolerably certain that he will not be able to hide his hand much longer. We must soon know whether he intends to steer out into the Pacific and head for Tsugaru and Soya, or whether he intends to try his fate at Tsushima. That Vladivostock is his ultimate destination scarcely admits of question. The only doubtful point is the route he will choose to get there. The Third Squadron will not now be permitted to do as the Second did. French ports will be closed to it, for France, having given an assurance of her intention to observe strict neutrality, can be implicitly trusted to keep her word. Yet the Third Squadron can not be left to run the gauntlet on its own account. It consists of only the *Nicolai I*, a second-class battle-ship; the *Vladimir Monomach*, an old second-class cruiser; and the three armoured cruisers *Apraksin*, *Oushakoff* and *Seniavine*. These will make a sensible addition to ROJESTVENSKY's strength, but as an independent squadron they are powerless, and the probability is that the Russian Admiral will remain in Chinese waters until they join him. He will then have 8 battle-ships, of sorts, and 12 cruisers, with 12 or 14 destroyers, a formidable fleet.

## ROJESTVENSKY'S WHEREABOUTS.

UP to this moment—the morning of the 25th—there is no certain information as to ROJESTVENSKY's whereabouts. One is inclined to think that he may be sailing southward to meet the Third Squadron, but in that case he should have been sighted ere now by some of the many vessels plying in the China Seas. There is an impression in some quarters that he will not attempt to

effect a junction with the Third Squadron between Sunda and Saigon, but that both he and NEBOGATOFF will pass out into the Pacific, ROJESTVENSKY by the Bashi Straits on the north of the Philippines and NEBOGATOFF by the Straits of Macassar. Our own idea originally, when we supposed that ROJESTVENSKY would neither be allowed nor be sufficiently audacious to openly violate French neutrality, was that he himself would take the Straits of Macassar, and coal at some island in the Pacific, preparatory to making for the straits of Tsugaru or Soya, or both. But if he is now to go into the Pacific from Kamranh, he will probably select the Bashi route, in which event the Fourth Squadron will proceed to its rendezvous—wherever that may be—*via* Macassar. The Straits of Macassar, however, are not yet fully surveyed, we believe, and their passage, as well as the passages between the numerous islands in their vicinity, present dangers which NEBOGATOFF may be unwilling to encounter. Then there is the question of coaling. Since the Fourth Squadron left Jibouti it does not appear to have coaled at any port, and it must have been in an exhausted condition, so far as fuel is concerned, when it reached Sunda. Provisions also would be a difficulty unless NEBOGATOFF abuses Dutch neutrality as ROJESTVENSKY abused French. Besides, there is the problem, what could the two Squadrons gain by going out into the Pacific? Their mission is to reach Vladivostock, and the only route open to them is the Tsushima Strait. Thither then they must come sooner or later. Why not sooner? What will they profit by cruising in the wide Pacific? The *Asahi Shimbun* thinks that the two squadrons must unite and that the Third Squadron can not possibly be made efficient for further operations without renewed abuse of some Power's neutrality. Had it been possible to dispense with the aid ROJESTVENSKY received at Kamranh Bay, he would certainly have dispensed with it. But it was not possible, and it will not be possible for the Third Squadron. The Russian Admiral's calculation may now be that practical opportunities can always be found in the slowly moving processes of diplomacy. By boldly steaming into a Dutch or a Chinese port and waiting until he is turned out, ROJESTVENSKY may count on a week's leisure to fill his bunkers and his store-rooms. That seems to be the view of other Tokyo journals besides the *Asahi*. But such methods would soon convert the Russian Admiral into an Ishmael, with everybody's hand against him. He could not be allowed to cruise around defying all the laws of nations and showing his contempt for the sovereign rights of all Powers. It is there that the importance of recent events lies. The world now knows that any State which by flagrant neglect of its neutral obligations ranges itself on the side of Russia, must count on being confronted by England and Japan. Holland—even supposing that she ever had any disposition to be perfunctory, which we do not

believe and have no right to believe—will now show herself exceedingly circumspect, and if ROJESTVENSKY essays to take any licence in American or German waters, he will be brought up quickly. There remains China, but Chinese ports are not available for his immediate purposes, and will not be available unless he takes his courage in his two hands and steers towards Tsushima. It is a situation of the greatest possible interest. All our Tokyo contemporaries appear convinced that ROJESTVENSKY will make it his business to wait somewhere for the Third Squadron, but none ventures to predict where he will wait.

#### RUSSIAN FORCES IN MANCHURIA.

THE tendency of *The Times'* military correspondent has hitherto been to give a somewhat low estimate of the forces put by Russia in the field, but, on the other hand, among all the writers in European journals he is eminently the one who has studied the subject most carefully and knows most about it. Speaking on March 14th, after the news of the battle of Mukden, he said:—

The following tables show—(a) Russian reinforcements for the field army already mobilized and partially in course of transport; (b) frontier guards and railway troops holding the line; (c) Ussuri group constituting the garrison of Vladivostok:—

##### (A) RUSSIAN REINFORCEMENTS.

Unit.	Approximate date of arrival at Tie-ling.	Battalions.	Batteries.	Squadrons.
3rd Rifle Brigade .....	March 1...	8	3	—
4th Rifle Brigade .....	March 12...	8	3	—
4th Army Corps .....	March 15...	32	12	—
2nd platoon Brigade .....	April 7...	6	—	—
Caucasian Cossack Division .....	April .....	—	2	24
10th Cavalry Division .....	April .....	—	—	18
Details .....	?	24	8	½
Total .....		60	28	42½

##### (B) FRONTIER GUARDS, &c.

Unit	Battalions	Batteries	Squadrons.
Trans-Amur Railway Brigade .....	5 (28 companies).	—	—
Frontier Guards .....	13½ (55 companies).	6	55
Total .....	18½	6	55

Note.—Probably strengthened by reserve formations.

##### (C) USSURI GROUP.

Unit.	Battalions.	Batteries	Squadrons
2nd East Siberian Rifle Division .....	9	4	—
8th East Siberian Rifle Division .....	12	3	—
Cossack Brigade .....	—	—	30
Ussuri Railway Brigade .....	2	1	—
Fortress Artillery .....	—	6	—
Sappers .....	½	—	—
Total .....	23½	14	30

Note.—It is possible that the 22nd Division of the 1st Army Corps is now at Vladivostok or in the vicinity. From these tables it would appear that no sufficient reinforcements are on their way to enable the Russians to restore the balance, and that the railway is already occupied until the end of April. If a fresh mobilization takes place, it will probably occupy 17 days, and the first units sent eastward as the result of such mobilization, and following after the troops named in table A, will not reach Kharbin before the middle of May, when we must allow that they will come in at the rate of 35,000 men a month.

The War Council, we are told by a correspondent in St. Petersburg, yesterday decided to mobilize forthwith the Grenadier Corps, which consists of three divisions, mostly stationed at Moscow, and two

army corps. We have already pointed out that during the eight successive and partial mobilizations effected up to and inclusive of December 15 last, all save 250 out of the 764 recruiting districts have been heavily drawn upon for men, and that, in many cases, two and even three calls have been made upon the same district. It is also the fact that the outlying territories within the Russian Empire—namely Poland, Finland, and the Caucasus—have not as yet been affected, except in very small degree, by the mobilization orders, and that, in case of a decision to raise a new army, the choice will have to be made between districts already heavily drawn upon and others where mobilization may create serious disaffection. In neither event is the internal situation likely to improve.

It will be seen from the above table that under the mobilization scheme in force at the time when the battle of Mukden was fought, 60 battalions of infantry, 28 batteries of artillery and 42½ squadrons of cavalry were due to reach Manchuria by the end of April, that is to say, a total of from 56,000 to 57,000 of all arms. If another mobilization be effected—and we know that it was announced and presumably undertaken—the first of the resulting troops will reach Harbin in the middle of May, and will thenceforward arrive at the rate of 35,000 men per month. Thus the old mobilization and the new will add from 120,000 to 130,000 men to LINEVITCH's army by the middle of July, and will enable him to put a considerable force into the field.

One interesting point brought out by the above is that only 48 new battalions would have reached the Mukden position by April 7th, supposing that the Japanese had deferred their attack until then. It was always understood to be KUROPATKIN's intention to assume the offensive at the commencement of April. He did not expect, apparently, that the Japanese would anticipate him by some two months. But if the above table be correct, as there is every reason to suppose, the Russians would not have been much more favourably circumstanced for attacking in April than they were in February: they would have received a stiffening of only some forty thousand men, and the Japanese, meanwhile, would not have been idle in the matter of reinforcements. It is not clear, therefore, what solid reason KUROPATKIN had for waiting until April. Numerically his circumstances would not have been improved, and he would have had to fight with a big unfrozen river at his back.

In Petersburg there was a belief after the Mukden battle that a section of the Russian army would direct its march upon Vladivostok, the other section retreating to Harbin, and that idea received indirect confirmation in the shape of a subsequent statement that Vladivostok was now garrisoned by 100,000 men. On the other hand, Japanese information, generally accurate, recently showed that the Ussuri troops were marching to Kirin, and since Vladivostok's garrison is drawn from the Ussuri army, the two accounts are in conflict. It will probably be many days before events in Manchuria show any signal development.

#### KINDERGARTEN.

A very pleasant afternoon was given on April 20th, by the pupils of Miss Irwine's Kindergarten. The proceedings took place in the school-room which has been specially designed and built for the class, and the work of the term was here set out for inspection by parents and friends. Miss Irwine, in a little speech, welcomed her guests, and continued, "I wish to impress on those here this afternoon, that Yokohama has got hold of quite a wrong idea in thinking that the Kindergarten is all play. It is not so at all; the children obtain knowledge while they play, and really learn a great many things without knowing it. Their little minds never get tired, for they are not kept more than 15 minutes at one subject, except the nature lesson, or the sand geography, to these we devote half an hour, and they all love the work." The truth of Miss Irwine's observations was amply exemplified in the Programme of 16 numbers which immediately followed, the Recitations, both English and French, being given distinctly and with a good deal of intelligent action. In the nature lesson, one or two answers elicited by the teacher showed a great deal of thought; while the French lesson also drew out the children in a manner surprising for their tender years. Programme:—

"Jack Frost".....The Class.  
 "The Merry Mice".....Doris Healing.  
 "The Ants".....The Class.  
 "My Shadow".....Marjorie Bellamy Brown.  
 "Bird's Thoughts".....Iris Neville.  
 "Madame Sans Souci".....Eric Bellamy Brown.  
 French Lesson.

"Rataplan".....The Class.  
 "The Little Builder".....Henry McLarty.  
 "A Paris".....The Class.  
 "The Grasshopper's Party".....Doris Healing.  
 "Foreign Lands".....Marjorie Bellamy Brown.  
 Nature Lesson.

"Un, deux, trois".....The Class.  
 "The Kittens' Tea-party".....Eric Bellamy Brown.  
 "The Rats".....The Class.

#### EASTER.

The fine weather which set in on Good Friday continued throughout the Easter holidays and had the effect of sending a large number of the foreign community into the country, but a considerable portion remained in town and the various churches on Easter Sunday were very well attended. Christ Church was decorated for the occasion with lilies, narcissus, azalea and double white cherry blossom, though the latter flower could scarcely be considered a successful feature in the colour scheme, drooping all too soon. The early celebration of Holy Communion was largely attended, and the choral celebration later in the day drew many communicants. The outstanding feature of the evening service was a solo taken from Sir Arthur Sullivan's "Light of the World," entitled "He shall wipe away all tears," which was most sympathetically sung by Mrs. Lee Lee. Throughout the day the incumbent, the Rev. W. P. G. Field, was assisted by the chaplain of H.M.S. *Hogue*.

The special Easter service at Union Church attracted a large congregation. The musical service, arranged by Mr. W. Karl E. Vincent, included Easter hymns and the Anthem "Christ is Risen" (Elvey), all of which were brightly sung. The preacher was the Rev. B. Chapell, of Tokyo.

In the afternoon a Flower Service was held in the Van Schaick Hall by the Union Church Sunday School. Seventy-seven pupils were present, and the body of the hall was filled with parents and friends. Seven Easter Carols were sung by the children, and these were interspersed with short addresses by Mrs. Viloudaki (who is shortly leaving for Australia) Miss Strain, the Rev. J. L. Dearing, the Rev. B. Chapell, Professor Sharpe and the Superintendent, Mr. Clarence Griffin. At the close the flowers were distributed, pupils and teachers being remembered, even those absent through sickness, and then a large number of nosegays were taken to the British, American and General Hospitals for distribution among the patients.

MONTHLY SUMMARY OF JAPANESE  
CURRENT LITERATURE.

The Department of Education some weeks ago submitted to the consideration of the High Education Council (Kōtō Kyōiku Kwaigi) two drafts bearing on improvements in the method of writing Japanese in *kana* and on grammatical usage. The first measure bears the title *Kokugo Kanatsukai Kaitei-an* and the second *Kyōjō* (許容) *subeki jikō*. Though the decision of the council on the proposed reforms has not yet been published, the press has taken up the question and great opposition to the whole scheme is manifested everywhere. The *Kyōjōkai* has two articles on the subject, both of which contain strong objections to the procedure of the Mombushō. The ground taken by the writers is that the Mombushō should aim at embodying present popular usage, reducing it to an easily acquired form and enforcing it in the schools. Instead of this, the Department aims at reviving ancient usage. The *Kyōjōkai* points out that the Department is not sufficiently powerful to alter the practice of the nation as a whole and adds that it would be most pernicious to teach a system in the schools that would be of no use in after-life. It seems to us that this is an objection that might be brought against any proposed Mombushō reform whatever, and so it comes to be a question of whether the Department of Education should follow or lead the nation. But as to the nature of the proposed changes, they must of course be discussed on their own merits and suitability, and so far the majority of Japanese scholars seem to disapprove of them. Foreign students of Japanese would undoubtedly welcome the enforcement of a uniform method of *kana* spelling. At present telegraphic messages are often obscure owing to the *kana* spelling followed.

Under the title "Phenomena to be regretted in the Education World," Mr. Inouye Kamegorō in the course of a long article published in the April number of the *Kyōjōkai*, makes the following observations: Europeans are by no means agreed as to what should be the chief object of education. The various authorities may be thus classified. There is the Utilitarian School, the Religious School, the Political School, the Ethical School, the Humanitarian School, and the Aesthetic School. Though in theory all these divisions exist, if actually existing systems of education be examined, it will be found that they have one of the following objects in view or they keep them both in view. They aim at preparing boys and girls for the duties that will devolve on them later on, or they aim at mere mental culture for its own sake; that is to say, they are either utilitarian in principle, or ideal, the ideals being of diverse kinds, but all aiming at culture and refinement that is not absolutely essential for bread-earning. The latter principle is usually regarded as the more noble, and the system of education that follows it embraces studies which the strict utilitarian would deem superfluous. Mr. Inoue next proceeds to examine the system of education followed in this country, reaching the conclusion that it is lacking in the chief elements of a thoroughly utilitarian education, while it fails to produce results which can be considered satisfactory from the point of view of high idealism. An education entitled to be called utilitarian must send pupils into the world with a thorough knowledge of the three "R's." According to Mr. Inoue, whose opinion on this subject is that of a great number of other writers, the graduates of Japan's Primary Schools to-day are neither versed in reading, writing nor arithmetic. The knowledge they possess is quite inadequate to enable them to read and understand properly the daily newspapers, to say nothing of magazines; and as for their letter writing it abounds with mistakes in spelling, grammar, and the use of ideographs. Coming to arithmetic, we find that the modern Primary School graduate neither knows how to reckon by the foreign method of written figures nor by means of the abacus. While there is a talk of introducing the abacus in Europe and America on account of the facility with which calculations

can be made on it, it is the fashion in our modern schools to pooh-pooh its use. Mr. Inoue reaches the conclusion that the Mombushō cannot claim that the success in the present war is the result of their system of education; rather has it been in defiance of that system, being an effect of pre-Meiji teaching and influences which did more to develop general intelligence, will and spirit than do the modern schools. The things which it is most essential that all pupils should know, these, according to Mr. Inoue, are not properly taught in the Primary and Middle Schools of the country.

\* \* \*

On April 8th the *Yomiuri Shinbun* issued its ten thousandth number. The paper was started by Mr. Motono, the father of the Japanese Minister in Paris, about 34 years ago, who still owns the journal. The object Mr. Motono had in starting the *Yomiuri*, he now tells us, was the reform of society, and from the first he decided to publish the paper in easy semi-colloquial Japanese with *kana* attached to all the ideographs, hoping thereby to reach a very large class of readers. This journal has made a specialty of Japanese literature, furnishing well written reviews of new books. It has also been a fearless exposé of abuses, specially those of the educational world. The extra number published on the 8th inst. contains some useful articles. Mr. Sawayanagi Masatarō defends the general education imparted by the Department of Education, informing the public that they expect too much of the Mombushō. Dr. S. Ishikawa writes on the "Bushidō and Selection" quoting from the writings of Lieut.-General Janson and other foreigners on the part played by the Bushidō in contributing to the success of the war and discussing the possibility of utilizing the fine qualities displayed in this war in time of peace. Dr. Yokoi, the agriculturist, thinks that the characteristics which have rendered Japan successful in war need to be supplemented largely by different qualities in order to insure her permanent success as a competing power. To these sentiments he gives expression in an article entitled *Nihon Minzoku Tokuchō* (特長) *no riyō*. He thinks that the mass of the Japanese people are farmers first and foremost and that it is most undesirable that this occupation should be replaced by any other. He advocates the further development of agriculture. Dr. Tsubouchi compares modern Japan to ancient Greece. In the matter of military achievements, and in certain national traits such as sunniness of disposition, lightheartedness, polytheism and the like, the two peoples resemble each other, but Dr. Tsubouchi frankly acknowledges that in the world of letters Japan shows no such genius as Greece displayed for over a century. Dr. Tsubouchi protests against the pessimism of certain modern writers, and at the same time he deprecates the fact that few if any great books are published nowadays.

There are many other articles in the *Yomiuri* which we have no space to notice. Dr. Nanjō writes on the origin of the term *man*, 10,000, and Dr. Nakajima Rikizō on the imperfections of Japanese calligraphy. In reference to the title of the newspaper, we are informed by Mr. Motono that at first the circulation of the *Yomiuri Shinbun* was greatly hindered by the want of selling agencies. The booksellers looked askance at the *kana* besprinkled sheet, and so the plan of distributing the paper gratis on the condition that after being read it should be sold sprung up. Hence the name *Yomiuri Shinbun* (The Reading and Selling Newspaper).

Mr. Ozaki Yukio's first article under the title *Betsu Tenchi* (A Different World) insists on the importance of Japan's taking and keeping Vladivostok and of her allowing no interference with her plans in Korea by any third Power. The undisputed perpetual command of the Straits of Tsushima is, says Mr. Ozaki, essential to Japan's security.

\* \* \*

The *Jitsugyō no Nihon* (Business Japan) observes that in the case of young men engaged in business the number of failures is greater than the number of successes. But since the failures can usually be traced to certain causes, it invites correspon-

dence on this subject. Young men who can't get on are asked to state their cases in the magazine and comforting advice is promised. The title given to this part of the periodical is *Fuketei no ian Shippai no kyūjo* (Comfort for the Discontented; Remedies for Failure). Several young men's letters to the editor are given. One writes to say that he has been serving a company for three years, but that neither promotion nor increase of pay has come. Many of his comrades have left the office and are doing well elsewhere, but his uncle tells him to hold on. Is his uncle right in giving this advice? The answer of the editor is, yes. He reminds the young man that three years is not a very long time and that wherever he might go he would have to begin all over again. If his companions have higher wages, he has the advantage of having shown his employees that he is persevering, that even on low wages he does good service. He has a record which his fickle companions do not possess. Patience, perseverance, and contentment are the mental qualities this young man is recommended to cultivate. Another letter is from a draper who attributes his losses to the war and who proposes to give up his business and cross over to America and asks for information as to how he is to succeed in America. This case is discussed at some length by the editor who displays considerable judgment in dealing with it. He advises the draper to stick to his shop and manage it better. He has been 5 years in the business and has gained much knowledge that would be of little use in America, and so on. The whole tone of writing in the *Jitsugyō no Nihon* is excellent, full of common-sense and of rational, discerning optimism.

The April *Taiyō*, though not perhaps quite up to the usual standard of this magazine, contains several interesting articles. Mr. Shimada Saburō discusses pretty thoroughly Japan's policy in Korea. His views differ considerably from those hitherto espoused and defended in the pages of the *Taiyō* and elsewhere. His opinion is that hitherto Japan's dealings with Korea have led to no satisfactory results principally because she has confined her attention to the Court and the Government instead of endeavouring to raise the nation to a higher level. Most of the Japanese politicians and traders who know Korea well, says Mr. Shimada, seem to despair of the Koreans as a nation. They are pronounced to be past reform and hence strong repressive measures are advocated. They are to be treated as slaves. In connection with this Mr. Shimada proceeds to propound several questions thus:—Is the present inferiority of the Koreans an attribute of the race to which they belong or the result of their environment? Is there no remedy for the existing corruption and deterioration? Do those who advocate a crushing and oppressive policy intend to enslave or exterminate the whole race? Is this the fate deserved by ten million people? The answers given to the above questions by Mr. Shimada, briefly stated, are as follows:—The present condition of the Koreans is not part of their original nature, but the result of centuries of bad government. As regards the Koreans as a race, in ancient times the settlers in the South-Eastern part of Korea were of the same stock as the settlers in the Western part of Japan. And, taking the peninsula as a whole, there was a time when the Koreans were far ahead of us in civilisation and general intelligence, and when they were a very wealthy people. But warlike qualities were gradually supplanted by effeminacy, and the Koreans lost the power of maintaining political independence. That two nations derived from the same race should go such opposite ways as have the Japanese and Koreans is certainly very remarkable. It may be that we owe much to the circumstance that we took possession of a number of islands and thus got rid of the enervating and corrupting influences which China has brought to bear on neighbouring continental states. Korean history shows most plainly that under other conditions the nation might have been to-day as strong and independent as ourselves. To us it seems that the civilising of savages is a far more difficult task than the revivification of civilised ideas among a people who have once known

what it is to live a higher life than that they are now passing. For in the case of those who have fallen away there are always certain openessities and susceptibilities that may be utilized by the reformer. In the nineteenth century there were men like Lincoln and Livingstone who maintained that even Africans were capable of being raised to the level of the most civilised races. In the face of this for us to despair of the Koreans would be most unreasonable. It is true that the Koreans to-day are an idle race which seems to dislike work. But whence came this spirit of idleness? From the fruitlessness of labour. With a Government that was ever ready to seize and appropriate the results of toil, the people naturally began to think that it was foolish to do any more work than they were compelled to do. The Koreans for centuries have never known what security is in the matter of property. The man who has accumulated property in Korea has ever been the object of official persecution, and not a few property holders have spent years in prison for no other crime than the display of industry and skilful business management. What incentive is there to work in such a country? Korean idleness is not the offspring of original Korean human nature, but the result of an iniquitous system of government which allows no man to reap the full benefit of his toil. The men who despair of reforming the Koreans are mostly politicians and merchants. Those who maintain that the nation is capable of thorough transformation are educationists or religious teachers. A friend of mine went to Korea last year with the double object of ministering to the spiritual wants of the Japanese troops and of finding out the real state of affairs in Korea. Here is the gist of what he had to say on the question under consideration. Speaking generally, the southern Koreans are not friendly to Japan, but in Northern Korea the Japanese are popular. This is strange, as the intercourse of Japan with Southern Korea has been of long duration, whereas it is only quite recently that any number of Japanese have settled in Northern Korea. But a little consideration will reveal the reason of this. Under the Bakufu the Koreans of the southern ports were treated with considerable haughtiness by the Japanese. Korea was regarded as a tributary state. During the Meiji era successive generations of settlers have adopted the old *haut en bas* attitude to the Koreans. This has naturally created great hostility.\* Realizing that they are in every respect superior to the Koreans, Japanese settlers lord it over them very much in the same way as do their own Government officials, and this oppression is borne by the crushed inhabitants with uncomplaining patience. But as our proverb has it, *Issun no mushi ni mo go ote no tamashi ari*. (Even an insect an inch long has half an inch of soul). However low people may have fallen, there are human feelings left. And so the Koreans, while bearing unjust treatment from their own Government and from the Japanese, are naturally unfriendly to both; for friendliness and a sense of being wronged do not go together. About 10 years ago, just after the war, Japanese began to settle in Northern Korea. The first Japanese with whom the Northern Koreans did business were military men. The officers were most careful in all their dealings with the natives, acting under instructions from their commanders, and they created an excellent impression. This conciliatory attitude was maintained by the Japanese civilians who subsequently opened up trade in Northern Korea, resulting in the creation of friendly feelings unknown among the natives of the South. In the South there is no denying that Europeans and Americans are more popular than Japanese and, moreover, they have done far more to raise the Koreans to a higher level than have our settlers. Now, it is of vital importance to us as a nation that at this crisis of our history the

\* We have come across statements of this kind elsewhere in the course of our reading. Their interest lies in the reflection that the Japanese for a very long time were naturally much annoyed by the air of superiority adopted by Occidentals towards them. The cases are not parallel of course, but they remind one of the weaknesses begotten by success and the consciousness of power.—(WRITER OF SUMMARY.)

mass of the Koreans should work with us and not against us, as they have so often done during the past 20 years. We can force the Korean Government to go with us, but we can't force the people to support the Government. If we can so conduct ourselves in Korea as to carry the nation with us, our troubles there will cease. Our difficulties in Korea in the past have resembled those of the English Government in Ireland for a very long time. The Irish were regarded with suspicion, they were oppressed by over-stringent regulations. Conciliatory methods have during the past 20 years been tried with excellent results. We must adopt the same methods in Korea. No assimilation can take place as long as enmity exists, and Korea can never become a source of strength to us till by education, intermarriage and hearty corporation in various enterprises the Japanese and Koreans become like one nation. One cannot but admire the way in which the Anglo-Saxon race ever assimilates other races to itself. How much of this assimilative power does Japan possess? Upon this depends her future career as a nation? The influence of the Roman Catholics in Korea is very great. Their converts are to be found everywhere. Catholic influence may mean French influence or Spanish influence, but it cannot be considered pro-Japanese. The upshot of it all is that we must resort to other means of influencing the Koreans than those hitherto employed or fail to establish on a firm basis our pre-eminence in the peninsula.

Mr. Nagatani Chōtonkō writes in the *Taiyō* on "The present Crisis and the Political Outlook." The following observations we quote from his article. Political parties in Japan have practically nothing to settle or discuss. All the different sections have agreed to support the present Government till the war is over. But directly peace conditions come to be discussed, the old activity will be resumed. All our leading politicians fully realize that immense importance will be attached to the nature of these conditions. Upon them the whole future history of Japan and the neighbouring continent will largely depend. Among the grave questions to be settled are the following:—What position shall we occupy in reference to the Liaotung peninsula and Manchuria? What will be our relations to Western Powers in those regions? To what extent is Russian power to be limited in the Far East? Is Russia to have no such trade concessions made to her as are made to other Western Powers? What is the amount of the indemnity to be demanded? In reference to Manchuria, when the war commenced we stated that our object was to restore Chinese dominion in that province and throw open commerce there to all the Powers. We can't go back on that now and talk about appropriating the province. In conjunction with China, however, we may be able to take such steps as we deem necessary for insuring the carrying out of the above-named policy. But a still more important question than the disposal of Manchuria, the southern part of which is already in our hands, is the policy we mean to pursue in reference to Vladivostok. Vladivostok is rightly considered by Russia to be her only remaining naval base in the Far East. Is she to be left in undisturbed possession of this port after the war? If so the war sooner or later will have to be fought over again. It does not follow that because our arms are triumphant everywhere, our Government will act in the wisest manner possible when it comes to diplomacy. Fighting is one thing and diplomacy quite another. It is not outside the range of probability that when peace terms are discussed our Government may be inclined to be more generous than provision for our future security will warrant. Then will be the supreme moment for our political parties to step into the arena and insist on the right kind of settlement being made. Hence the amount of activity displayed in the immediate future by our political parties will largely depend on the peace conditions in which the Government is ready to acquiesce. After the war this country will no longer occupy the position in the Far East she has hitherto filled. Questions of greater importance than any that our politicians have been called on to deal with will come up for settlement. Political life in Japan

will then be far more interesting than it has hitherto been.

There are two more long articles in the *Taiyō* on the war and Manchuria, one by Mr. Yamada Ichirō, which deals minutely with the prospects of foreign interference and with the question of Russia's ability to continue the war for any length of time, in which Mr. Yamada expresses rather pessimistic views, supporting them by quotations from passages in European history, and another by Dr. Kanai En on the amount of resolution that will be needed by the nation to see the war to the bitter end. Dr. Kanai agrees with Mr. Yamada Ichirō and many other writers in thinking it most improbable that a great Power like Russia will consent readily to anything like an ignominious peace. Her hand may be forced by internal disorder and thus the unexpected may happen, but if this be not the case, it is almost certain she will resort to Fabian tactics, and in that event Japan's patience will be put to a severer test than it has even known. It is just as well that even now the nation should prepare itself for a contingency whose occurrence looks so very probable. Dr. Kanai's essay is far too long to be dealt with here, covering as it does 13 closely printed pages.

Dr. Anezaki contributes to this month's *Taiyō* an interesting article on the desirability of the Government's taking in hand the elaboration of a system of public gardens and parks. Dr. Anezaki says that in the love of nature the Japanese are not surpassed by any nation, and yet, owing to the *laissez faire* policy of the Government, hideously ugly towns have sprung up everywhere. Few restrictions are placed on the form that buildings are to take such as are in force throughout Europe and America. In some large cities of Japan the prevention of fire and sanitary considerations have led to the passing of a few municipal building laws. But aesthetics are left to take care of themselves. The Government should certainly take measures to furnish the means available in other countries for the cultivation of that love of natural beauty which from time immemorial has distinguished the Japanese people, but which in this ultra-utilitarian age is in danger of dying for want of nourishment. In the possession of a country that has rare beauties, we owe it to our ancestors, says Dr. Anezaki, to cherish our inherited aesthetic tastes by collecting in well laid out parks all that is most pleasing in natural scenery.

\* \* \*

The age in which we live is one in which, in the eyes of learned critics, no books, manuscripts, theories, beliefs or doctrines are sacred. Everything is being overhauled. Things Buddhist, things Christian, things Jewish, things Mahometan, and, in this country if not in China, things Confucian. The influence of Confucianism here has never been thoroughly written up. It may be that this influence, like that of Christianity in Europe, is too subtle for analysis. But it is important to observe that modern Japanese thinkers are studying with intense interest and great insight the writings and sayings of China's greatest sage. Quite recently two original works bearing on the life and teaching of Confucius have been prepared in Japan. One of these is Mr. Yamaji Aizan's *Kōshi Ron*, for sale at the Minyūsha; the other consists of an essay by Dr. Kanie Yoshimaru, which owing to the unfortunate illness of the author has not yet been put on the market. Mr. Yamaji's book has attracted great attention on all sides and is pronounced by competent critics to be one of the few original works of the present age. It covers 276 small-sized pages. The work is dedicated to "The inhabitants of Nagano-Ken who for the space of 57 months furnished me with the opportunity of quietly studying books."\* In his short preface Mr. Yamaji refers to the enormous power exercised by Confucian teaching in this country and gives it as his opinion that the present is an opportune time for studying afresh the philosophy of the man whom China still holds to be the

\* Mr. Yamaji, who is a Christian, we are informed, edited a newspaper in Nagano and during his spare time in the newspaper office prepared himself for the writing of this book on Confucius.—(WRITER OF SUMMARY.)

highest of all authorities on morality and politics. In Chap. I. Mr. Yamaji maintains that in many important respects Confucius was a greater historical figure than either Shaka or Christ. There is little reliable information to be had respecting the life of Shaka, says Mr. Yamaji. Though nothing that has been handed down to us bearing on the life of Christ was written until a long time after his death, despite what learned critics have said, the New Testament may be regarded as fairly reliable as to the main facts, observes Mr. Yamaji. But, he continues, Christ was unfortunately surrounded by illiterate disciples none of whom interpreted his deeper thoughts with the appreciation and insight shown by the disciples of Confucius, and therefore considered from a historical standpoint Christ was less fortunate than Confucius (*Kore shigaku no uye ni oite wa kore no Kōshi yori fukō naru yuyen nari*). Confucius mixed with literary men. He argued with them, he taught them. His sayings were at once recorded by them and their significance was fully appreciated during the life of the sage. Yet that halo of romance which ever enshrouds the lives of great men is not wanting in the case of Confucius; and so Mr. Yamaji finds it necessary to discuss the question of the authority to be attached to the books which in uncritical ages have been accepted as reliable sources of information. Mr. Yamaji devotes seven chapters to the discussion of authorities. He rejects as unreliable the *Doctrine of the Mean*, the *Great Learning*, the *Li* or Book of Rites, the *Yih King* or Book of Changes, the works of Mencius and several other much quoted books. The *Shi King*, or *Ancient Poems*, the *Analects* and *Spring and Autumn* are the writings that in his opinion best reveal the mind of Confucius. The greatness of the first of these books, Mr. Yamaji observes, has been recognized by all Chinese scholars of whatever school. It is quoted as the one paramount authority, and Confucius was wont to say that he who was unacquainted with these poems was not fit to be conversed with and that a study of them would produce a mind without a single depraved thought. Mr. Yamaji's main object in writing this life is to distinguish the real Confucius from the sage which the general public, following the lead of uncritical writers, has been accustomed to regard as China's greatest man. Mr. Yamaji maintains that Confucius has not been properly understood in this country. After deciding on the authorities to be relied on in studying the life of Confucius, Mr. Yamaji proceeds to describe the main characteristics of the age in which Confucius lived. He begins by giving an account of the country in which Confucius passed his life, of the race to which he belonged, of the Government; the literature, the art, and such scientific knowledge as existed. He then discusses at considerable length the Confucius of the *Analects*, Confucius' general ideas and political opinions, and his ethics. Mr. Yamaji speaks of the religion of Confucius as "the religion of commonsense" and he points out that he taught universal brotherhood.

Most of the small publishing companies have felt the war very keenly, but we observe that the Hakubunkan, the Fuzambō and one or two other big firms still continue to issue a number of bulky books of reference and other works. The Hakubunkan announces the publication of a new Law Dictionary, bearing the title *Horitsu Jiten*, compiled by Mr. Uyeno Teisei, Barrister at Law. It consists of six volumes, the price of which is 3 yen 30 sen. It contains over 13,000 legal terms, which are said to be explained clearly. Examples of use are given. Nothing so exhaustive has, it is asserted, yet been published. It is now 15 years since John Bouvier's Law Dictionary was translated by Mr. S. Urabe. That book we ourselves have constantly used and found it very accurate, but it is in many respects inadequate for the study of the meaning of the law terms now in use in Japan, the original work being founded on American Law, so that Mr. Uyeno's work should have a great sale.

The Conscription Regulations having been greatly altered and there being a general demand for information on this subject, the Hakubunkan has published in pamphlet form the Revised

Rules under the title *Kaisei Chōhei Kisoku Daizen*. The work covers 500 pages and sells at 35 sen a copy.

Mr. Kubo Tenzuin's big work entitled *Tōyō Tsūshi* (A Full History of the East), consisting of 12 volumes is now ready for sale at the Hakubunkan. The price of each volume if bought separately is 50 sen. The whole 12 volumes may be had for 5 yen. The last 3 volumes deal with the principal political events in the Far East during the Meiji era. Mr. Kubo is a very capable writer and the work seems to be generally well-spoken of.

An almost endless amount of literature on the Bushidō comes pouring out of the press. There is Mr. Kubo's "History of the Bushidō, ancient and modern," and then there is Dr. Inoue Tetsujirō and Mr. Arima's *Bushidō Sisho*, consisting of 3 volumes, covering in all 1,500 pages, and a number of less pretentious works. The war seems to have turned the attention of scholars to Japan's moral code.

The books that profess to teach Japanese composition to bewildered students may be counted by the score, if not by the hundred. Yet another has been added to the long list by Mr. Hatakeyama, of the Tōkyō High Normal School. It is called *Sakubun Shinjirin* and sells at 1 yen 20 sen. The demand for such books must be very great or the publishers at such a time as the present would never put them on the market.

#### UNION CHURCH.

An extraordinary meeting of the members and congregation of Union Church was held at the Van Schaick Hall on Tuesday evening. The Rev. E. S. Booth occupied the chair and there was a good attendance.

After the meeting had been opened the Chairman explained that the members and congregation were called together to consider a resolution as follows:—

"That a permanent board of seven trustees be appointed by this Church with full power to raise funds to acquire property on the Bluff, Yokohama which shall be held in their name and in the names of trustees, whom they shall hereafter appoint to fill vacancies, in trust for the Union Church as a building site for Church, school and manse."

Mr. I. BUNTING, who proposed the adoption of the resolution, said he thought it was high time they, as a Christian church, should provide for the children of the town. The idea had been strongly supported by all the people with whom he had discussed the matter. There had been a remarkable unanimity of opinion with regard to the proposal. Moreover, they had such a good chance of getting property for this purpose that they ought not to let it pass. It might never occur again and they ought to take advantage of it. They had long enough dwelt tents, as he might say, and he thought it was time they had a permanent church.

Mr. GRIFFIN seconded the resolution. He said he quite agreed that the Union Church had dwelt long enough in tents. There was no material building; there was a Union Church in the shape of a body of church members, a spiritual church, but there was no material church. Of course, in the early days of Yokohama, before the Bluff was peopled all the churches and public buildings were situated in the Settlement because the majority of the people lived there. Now the majority of the people resided on the Bluff and they had seen the various institutions move from the Settlement to the Bluff and become more prosperous by so doing and he was sure the Union Church would greatly prosper if they had a building on the Bluff. They did not want to live in lodgings or apartments all the time, they wanted to have a place where church members and children could feel they had a home, where they could meet without let or hindrance. He thought the Union Church should form a centre of religious and social life on the Bluff. There should be church parlours, a social hall, etc., in connection with the church as well as a manse so that they could have there the

meetings of the Young Men's Christian Association, if there were such a body locally, and the societies of Christian Endeavour could meet there. He was sure if they devoted themselves to the work they could accomplish it. The pioneers in Yokohama had been the Rev. S. R. Brown, Dr. Nathan Brown and Dr. Hepburn and they would be doing an excellent thing if they raised a church partly in their memory. He thought the church could be erected and that it would live after them, standing as a beacon light in the erection of which they would be proud to have assisted.

The CHAIRMAN said that having been somewhat intimately connected with the Union Church he had felt that it was a very serious drawback for the Pastor not to have a centre from which the spiritual and social work of the church could emanate. In saying that he did not wish, in any way, to disparage the comfort that had been enjoyed in the past and which they hoped to enjoy until such a centre materialized. He was sure it would be a great spiritual advantage to have a home and there would be an even stronger loyalty than at present. Human nature entered into the Christian Church as into other institutions and it was important they should provide such accommodation that Christian work in the community could be carried on with the very best possible means and for the highest aims and purposes. What was proposed was with that end in view. At the annual meeting in February it was decided that a Sustentation Fund be formed with the surplus which was carried over from the previous year's balance sheet and that Sustentation Fund be divided into three parts, a fund for a pastor, a fund for a church, and a fund for a manse, and it was that resolution which suggested the desirability of securing a church site as soon as possible.

Desirable sites, as they knew, were not abundant and they would not be more abundant in the future, so that if there were a desirable site in view it was wise that they should so organize themselves that the opportunity of securing it might not pass.

Mr. J. MACBETH supported the resolution suggesting that the functions of the new trustees should be defined, and pointing out that there was already in existence a body of trustees in connection with the church.

The CHAIRMAN urged the need for registering the trustees so that they might have authority to purchase and power to hold property. He also mentioned election of successors which, he thought, should be in the hands of the church.

On these points some discussion ensued. Ultimately the resolution was adopted without dissent in an amended form, the words "or committee" being added after "seven trustees" and the reference to the power of filling vacancies being omitted.

It was suggested that the following seven gentlemen to act as a body of trustees or committee be appointed to carry out the arrangements and act on behalf of the church, Messrs. Bagnall, Blake, Bunting, Griffin, Pollard, Swain and Viloudaki.

It was subsequently put as a resolution and adopted.

On the motion of Mr. Viloudaki the following ladies and gentlemen were formed into an association for the purposes of rendering assistance in connection with the building scheme.

Rev. E. S. Booth, Rev. J. L. Dearing, D.D., Rev. H. Loomis, Messrs. Frank, Colton, Macbeth, W. K. Vincent, C. Griffin, W. Graham, Sen., Somerton, Watt, and Harris; Mesdames Bagnall, Blake, Swain, Colton, Macbeth, Booth, Dearing, Loomis, Harris, Pollard, Van Petten, Neville, Smith, Scidmore and Greene, Miss Griffin, Miss Crosby, Miss Watt, Miss Wilson, and Miss Maclean.

Mrs. BACNALL announced that the Ladies Auxiliary would contribute yen 2,000.

A subscription list was opened and passed round and the Chairman announced that yen 6,800 had been promised that evening and that, with the yen 500 in hand for the same purpose, gave them a total of yen 7,300.

A resolution was then proposed authorising the registration of the new committee and the meeting closed with a vote of thanks to the Chairman and the usual religious exercises.

## A RUSSIAN'S IMPRESSIONS.

The only Russian journalist known so far to have visited Japan during the present war is M. W. Krazhevsky, who took the name of "Percy Palmer," and gave himself out to be an American tourist. He has now begun to publish his experiences in the Moscow newspaper *Russkoye Slovo*, and the *Globe*, in all gravity, translates the same for the benefit of English readers. We give below one or two extracts.

Only the males are allowed to take leave of the soldier publicly in the street or at the railway station; no females must approach the men who are setting out; they stand apart with their children, swallow their tears and try to smile. Take this picture from the railway station at Yokohama. Nine officers are setting forth in a first-class car. It is plain they belong to the best society, as also do the Japanese standing at the car windows; the latter Japanese are dressed in European costume, and they look comical in tall silk hats. There are some English and American ladies, who take such a fervent leave of the officers that one might think they were the latter's mothers and sisters; all the while the real mothers and wives, with little children holding their hands, stand aside at some distance; they are wearing their everyday clothes, and might be taken to be casual onlookers. The officers are merry; they chat with the foreign ladies, with the little crowd of Englishmen and Americans, but they throw never a glance towards the women, who, standing apart, are shedding tears that cannot be seen.

The engine whistle is sounded for the train to start; then the officers look at their wives, who curse, and use all their strength to smile; the men just wave their hands in farewell, but no word of farewell leaves their lips. Everybody is agreeable to the officers, but there is a certain reserve, for "to be an Englishman" is "good form" in Japan. The officers are clean-shaven, like the English, and the general public thinks it its duty to be reserved in the English fashion. The slow journey to Tokio takes fifty minutes. I left the train with the officers at the station of Shimbashi in Tokyo. So long as I remained in Tokyo, I used to go several times a day to watch the trains going though, with soldiers, for Tokyo is on the route between Yokohama and Osaka, whence the soldiers go by ship to the front. Thus, Tokyo is an extremely busy centre for military trains, which arrive from Yokohama, Enoshima, Kamakura, and Nikko. The trains follow one another at an extremely slow rate of speed, and thus the traffic is maintained in a marvellous way, for there is never a delay of even a minute in the arrival or despatch of a train. From ten to twelve military trains pass through Tokyo daily; these trains are small, as they consist of only six or seven cars, which are also small, for they hold only twenty men each.

At every station there are swarms of boys who sell food, sweets, and refreshing drinks. The soldiers buy "Kirin-bir," which is a dark beer, rice with plums, sweets, fruit, and especially newspapers. These military trains halt for twenty minutes at Tokyo; they are boarded at once by crowds of boys staggering under heaps of newspapers, which are all sold in a minute, for every man travelling in these trains must have his news. The Japanese love the railway. They have to pay ten sen, or 2½d., for the right to walk up and down the platform, and there are always shoals of people to welcome the soldiers' trains. But there is no wild shouting, no noisy greetings; the people just crowd round the windows of the train and chat quietly; to do otherwise would be "bad form."

## THE LAW COURTS.

## A DIVORCE CASE.

An action instituted by Mr. Charles F. Rhine, No. 220, Bluff, Yokohama, petitioning for divorce from his wife Mrs. Gretchen Marie Dorothea Rhine, now living in Hamburg, came up on April 21st in the Yokohama District Court before Judge Nakanichi.

Plaintiff was represented by Mr. H. Sato, but defendant was not represented.

Plaintiff's Counsel stated that his client is a British subject. Early in life he went to Hamburg on business and fixed his residence there. On October 18th, 1890, he married defendant. Two years after marriage, the wife was delivered of a daughter. One evening when plaintiff returned home from a visit to his uncle, he found that his wife and child were absent and that many articles of his property were taken away. Fur-

ther he found a letter on a table in the parlor left by his wife which was as follows:—

"Hamburg, 25th December, 1901.—I herewith inform you that I and my child have left you and will not return to you any more as from the beginning of our marriage and especially recently. I have become convinced that you did not marry me for love's sake, but out of speculation and my love for you has utterly ceased.

I will provide for myself and for my child, as you are not able to do so."

The original of this letter was in German, and for the convenience of the Court it was translated into English by Mr. Rhine and Counsel also translated it into Japanese. Counsel further said that the letter was dated Dec. 25th, 1891, but should read 1892 because she deserted her husband in the latter year. Since that time plaintiff had not seen his wife or child.

With regard to the law dealing with divorce, Counsel contended that Mr. Rhine had left his home—England—in his youth for Germany and then for Japan. In this country, he continued his residence over ten years. Thus his case should be decided by Japanese law, and not by English law. In Japanese law, wilful desertion constitutes a cause of divorce.

The Court examined evidence produced by plaintiff and put a few questions, after which the Court adjourned the case till May 1st.

In this context, it may be noted, according to the Court's calendar, that Mrs. Rhine also has lodged a similar petition in the Court against her husband.

## CLAIM FOR RENT.

Judgment was given on April 25th in the Yokohama District Court before Judge Yasuda in a case instituted by Mr. P. Helm against Tsen-hwang Chee, a Chinese merchant, claiming yen 348 for rent of a house leased to defendant, dismissing the claim of plaintiff.

It the Yokohama District Court, a case instituted by the American Trading Company against Mr. R. M. Sloman, Hamburg, (whose Yokohama agents are Messrs. C. Illies and Co.) claiming yen 485.36 came up on April 22nd before Judge Yasuda. The sum claimed represents the damage alleged to have been sustained by plaintiffs in the loss and injury of a number of hats shipped by defendant's steamer *Verona* from New York. This case is a revival of a case which was decided in favour of defendant on Oct. 30th in the present court by Judge Kano, but which was later sustained in the Tokyo Appeal Court.

While admitting the damage as set out by plaintiffs, Mr. Nagashima, defendants' Counsel said that his clients could not be responsible for any damage amounting to over \$100, according to the provisions of Art. 1 of the bill of lading that the freight of goods, the value of which is not notified to the ship's owner, will be fixed at an estimated value of \$100.

Plaintiff's Counsel contended that Art. 1 was only effective in fixing the value of goods, but in this case Art. 11 must be applicable, which stipulated that when goods sustained damage compensation would be made in accordance with the market price of the place to which the goods were consigned.

The parties discussed Arts. 1 and 9 of the bill of lading, after which the Court adjourned the case till April 29th.

## YOKOHAMA AND TOKYO FOREIGN RESIDENTS' ASSOCIATION FOR THE RELIEF OF SUFFERERS BY THE WAR.

The Committee desire to acknowledge with thanks receipt of the following further sums:—

	Yen.
Amount already acknowledged .....	31,021.72
Offerings at Christ Church .....	100.00
Captain Mackenzie Grieve (£10) per Grand Hotel .....	97.46
Thomas James " .....	100.00
D. H. Moon " .....	100.00

Total..... 31,419.18  
Yokohama, April 25th, 1905.

## JAPANESE SEALING FLEET.

## REPORTED LOSS OF A SCHOONER.

The terrific storms which have raged along the British Columbian and Californian coasts during the past month have, according to reports which reached Yokohama by the *Kanagawa Maru*, had a disastrous effect upon the Japanese sealing fleet which left here during November and December last year, and one schooner is reported to have become a total wreck, although it is not definitely known whether the crew have reached shore in safety. A succession of heavy gales accompanied by incessant rain were encountered by a number of the small craft, both Japanese and Victorian; between Nootka and Ahousah, and until the arrival of the *Kinsei Maru* at the former port, on the 8th instant, the fleet had not been reported by any of the steamers passing through the track of the sealing grounds since the early part of last month.

The sealing season on the Vancouver coast closes this month, and the expectations of the Tokyo owners who have ventured their vessels across have been to some extent realised, although the presence of the Japanese schooners in Western Canadian waters has caused no small umbrage to the Victorian sealers who urge that they are competing with the Japanese on unequal conditions. They state that the Japanese are bound by no restrictions and may hunt within nine miles of the Behring Sea without any watch being kept over them to prevent them violating the *modus vivendi*. On the other hand they state that the Japanese schooners must cease hunting on the last day of April, and that unless they cross to the Copper Island coast they must remain inactive until the season opens in the Behring Sea when they are only permitted the use of the spear in the killing of the seal, and furthermore are prohibited from entering the seal rookeries nearer than a distance of sixty miles. These complaints have been embodied in a petition to the Ottawa Government who have promised to give it immediate attention.

The Tokyo owners, it is stated, have a good reply to the Victorians, for they say they are only doing what the latter did a number of years ago in sending their vessels to foreign coasts in search of seal, but whether it will be found profitable is another question. The *Kinsei Maru* has a catch of a little over a hundred pelts, and she is not only the stoutest little craft of the fleet, but carries thirty of the most experienced Japanese sealers with four foreign officers who have been for many years sealing on the northern Japanese coast. She left on the 9th instant for the Aleutian Islands, and will finish up the season in the Behring Sea, returning to Yokohama during the latter part of the year.

## YACHTING.

The Yokohama Yacht Club start the season on Saturday next with races for the Cruising Class and the Larks. The Mosquito Yacht Club will hold their opening day on the 30th, when a cruise in the *Aberigine* to Tomioka is scheduled. The *Winsome*, *Edna*, *Pele*, *Sunbeam* and *Maria Johanna* have come out of their winter quarters, and the old *Surprise* is again at her mooring quite resplendent in a coat of white paint.

Capt. Clausen reports that on Monday when returning to the harbour in the *Valkyrie* at about low water, he bumped somewhat heavily on an obstruction right in the entrance, about 12 feet North East from the white light. Apparently in strengthening the point of the Southern arm of the breakwater, a block of concrete has been misplaced or dropped clear of the abutment. Boats drawing over five feet should be careful to give the end of the breakwater a wide berth until the harbour authorities have removed the obstruction.

The revised rules of the Yokohama Yacht Club, adopted on the 10th inst at an extraordinary meeting of the members, have now been printed, and are in course of distribution to the members.

## SECURED DEBENTURES TRUST LAW.

(LAW NO. 52 OF THE 38TH YEAR OF MEIJI.)  
PROMULGATED BY IMPERIAL ORDER ON THE  
11TH MARCH, 1905.

TRANSLATED BY J. E. DE BECKER.

## CHAPTER I.

## GENERAL PROVISION.

Art. 1.—The words *Trust Company* (信託會社) in this law denote a company which carries on a trust business (信託事業) in connection with secured debentures (擔保附社債).

Art. 2.—Should it be desired to attach a security to debentures in the nature of a charge imposed upon property (物上擔保)\* such debentures must be issued in accordance with a trust contract (信託契約) made between the company issuing such debenture and the trust company.

Art. 3.—The undertaking of a trust according to this law is a commercial act.

Art. 4.—The only securities in the nature of a charge imposed upon property which may be attached to debentures are the following:—

- (1) Pledges of movable properties;
- (2) Pledges of right of claim with a document proving the existence thereof;
- (3) Mortgages of immovable properties;
- (4) Mortgages of ships;
- (5) Mortgages of railways;
- (6) Mortgages of factories;
- (7) Mortgages of mining properties;

Art. 5.—The trust business in connection with secured debentures cannot, except in cases governed by a special law, be carried on unless a charter be obtained from the competent authorities (主務官廳).

Art. 6.—A trust company may not carry on any additional business other than a banking business.

Art. 7.—The whole amount of the capital or the contributions (the subject of which is money) of a trust company cannot be less than one million yen (Y. 1,000,000.)

Art. 8.—No trust company may commence its business until its capital or contributions (the subject of which is money) has been paid up to the amount of yen five hundred thousand (Y. 500,000.)

Art. 9.—The supervision of a trust business appertains to the competent authorities.

Art. 10.—The competent authorities may, at any time, cause a report to be made of the business of a trust company, or may inspect the state of its business and assets (property.)

Art. 11.—Should it be deemed that the state of the business and assets of a trust company are not suitable to the carrying on of the trust business, the competent authorities may order the suspension of its operations, or the alteration of the manner of transacting same, or otherwise issue orders necessary for the protection of the interests of the trustor company and of the debenture creditors.

Art. 12.—When a trust company has infringed laws, ordinances, the company contract, or orders of the competent authorities, or committed any act injurious to the public interest, the competent authorities may either order the suspension of its business or the re-election of directors, or may cancel the charter.

Art. 13.—A company which has for its sole object the carrying on of a trust business in connection with secured debentures, is dissolved by the cancellation of its charter.

Art. 14.—When a trust company is dissolved by the cancellation of its charter, the competent authorities shall, in accordance with the request of persons interested, appoint a liquidator.

Art. 15.—The appointment, or revocation of the appointment, of liquidator provided in Articles 88 and 89, Paragraph 2 of Article 96, 100, Paragraph 2 of Article 226, Paragraph 2 of Article 232 or 228 of the Commercial Code shall be made by the competent authorities.†

\* "Dingliche-sicherheit." An actual security.

† Art. 88. In the case mentioned in Article 74, No. 5 (when only one partner remains) the liquidators

The request in accordance with Paragraph 2 of Article 228 of the Commercial Code can also be made by the trustor company appertains to the competent authorities.

Art. 16.—The supervision of the liquidation of a trust company appertains to the competent authorities.

The competent authorities may, at any time, make inspections necessary for the supervision mentioned in the preceding paragraph.

Art. 17.—A company desirous of inviting subscriptions in a foreign country for materially secured debentures may, upon obtaining permission of the competent authorities, enter into a trust contract with a foreign company.

When the foreign company undertaking a trust in accordance with the provisions of the preceding paragraph has no branch office in Japan, it must determine (appoint) a representative in Japan.

A commercial company may be the representative mentioned in the preceding paragraph.

When a representative has been appointed in accordance with the provisions of paragraph 2, his name and domicile, or its trade name and head office, shall, without delay, be notified to the competent authorities.

The representative in Japan of a foreign company is, as regards the trust business, possessed of the same powers as the directors of company, or a member representing a trust company.

## CHAPTER II.

## DEEDS OF TRUST.

Art. 18.—An agreement of trust must be made and executed in accordance with a deed of trust (信託證書).

Art. 19.—Deeds of trust shall contain the following matters and shall be signed by the representatives of the trustor and trustee companies:—

- (1) The trade names of the trustor and trustee companies;
- (2) The total amount of debentures;
- (3) The face value of each debenture;
- (4) The price or lowest price at which the debentures are issued;
- (5) The rate of interest to be paid on the debentures;
- (6) The method and period of repayment of the debentures;
- (7) The method and period of payment of interest;
- (8) The designation of matters to be mentioned in the debenture bonds, and, if coupons be attached thereto, the designation of such fact;
- (9) The class, subject matter, rank of the security, the amount of claim preferentially secured, and the designation of any rights which may be set up against the persons holding the security in connection with the subject matter;
- (10) Should the debentures be those issued in accordance with Article 32, that fact

are appointed by the Court on the application of any person interested.

Art. 89.—If the dissolution of the partnership has taken place by order of the Court, liquidators are appointed by the Court on the application of any person interested or by the public procurator.

Art. 96. (Paragraph 2).—For an important cause, the Court may remove a liquidator upon the application of any person interested.

Art. 100.—When the formation of a partnership is rescinded after it has already commenced business, liquidation must take place as in the case of dissolution. In such case liquidators are appointed by the Court on the application of any person interested.

Art. 226. (Paragraph 2).—If there are no persons to be liquidators under the preceding provisions, liquidators shall be appointed by the Court upon the application of any person interested.

Art. 228. (Paragraph 2).—For any important cause the Court may remove liquidators upon the application of the inspectors or of shareholders representing at least one-tenth of the capital.

Art. 232.—When after the commencement of business by the company it is discovered that its formation was invalid, liquidation shall take place as in the case of dissolution. In such case liquidators are appointed by the court upon the application of any person interested; (Dr. Lönholm's translation of the Commercial Code.)

and the share of the burden of each company;

(11) The expression of entrusting and acceptance of the trust;

(12) Date of the execution of the deed.

The par value of each debenture must be either equal, or such amount as may be divided by the minimum amount without leaving any fraction.

Art. 20.—An (original) copy of the deed of trust shall be kept by both the trustor company and the trustee company.

The original deed of trust mentioned in the preceding paragraph shall be kept at the head office, and a copy thereof at each branch office.

Art. 21.—Either the original or a copy of the deed of trust shall, at any time during business hours, be open to the inspection of the shareholders of the trustor company, of the creditors, or of the persons subscribing to the debentures, upon their request.

## CHAPTER III.

## INVITATION FOR SUBSCRIPTIONS TO DEBENTURES.

Art. 22.—A company inviting subscriptions for debentures in accordance with an agreement of trust shall make a public notification of the following matters:—

- (1) Matters mentioned in clauses 1 to 7 and clause 10 of paragraph 1 of Article 19;
- (2) That the debentures are to be issued upon security in the nature of a charge imposed upon property;
- (3) The designation of the deed of trust;
- (4) The designation of the gist of matters mentioned in Clause 9 of Paragraph 1 of Article 19 to such an extent as may be necessary for making known the value of the security;
- (5) When subscriptions to debentures have been invited upon any former occasion, the total amount of such debentures as may still remain unpaid;
- (6) The capital of the company and the total amount paid up on the shares;
- (7) The amount or property actually held by the company according to the last balance sheet;
- (8) Time and place at which the deed of trust or a copy thereof will be open to the inspection of the subscribers.

The public notification mentioned in the preceding paragraph shall be made upon obtaining the sanction of the trustee company.

Art. 23.—The trustor company may, by virtue of an agreement of trust, delegate to the trustee company the invitation for subscriptions to debentures. In this case, in the absence of any special provision in the agreement of trust, the trustee company is possessed of full powers to perform all acts in connection with the issue of debentures, repayment of debentures, and the payment of interest.

Art. 24.—In the case of the preceding Article, the public notification mentioned in Paragraph 1 of Article 22 shall be made by the trustee company.

In the public notification mentioned in the preceding paragraph it shall be mentioned that the trustee company invites subscriptions to the debentures on behalf of the trustor company.

Art. 25.—The trustee company may, in accordance with the provisions of an agreement of trust, undertake the whole amount of the debentures itself.

In the case of the preceding paragraph, the public notification mentioned in Art. 22 and in the preceding Article, need not be made.

Art. 26.—In the case of paragraph 1 of the preceding Article, the trustee company may demand from the trustor company the division of the debentures undertaken by the former company, and the issue of such debenture bonds as may be proportionate thereto.

When the trustee company is possessed of power to issue debentures in accordance with the agreement of trust, it may issue the debentures mentioned in the preceding paragraph after giving notice to the trustor company.

Art. 27.—When the trustee company intends to alienate (transfer) the debentures undertaken

in accordance with paragraph 1 of Article 25 a public notification shall be made to that effect.

With regard to the matters to be mentioned in the public notification referred to in the preceding paragraph, the provisions of paragraph 1 of Article 22 shall be applied *mutatis mutandis*.

The trustee company shall, upon the request of persons desirous of purchasing debentures, allow them to inspect the deed of trust or a copy of same at any time during business hours.

Art. 28.—When the trustee company has alienated (transferred) debentures in accordance with the provisions of the preceding Article, it is possessed of full powers to perform all acts and deeds in connection with the repayment of the debentures and the payment of interest on behalf of the trustor company.

Art. 29.—Either the trustor company or the trustee company may, in accordance with the provisions of a deed of trust, cause a third person to undertake the whole amount of the debentures.

The undertaking of the whole amount of debentures in accordance with the provisions of the preceding paragraph is a commercial act.

Persons who have undertaken the whole amount of debentures in accordance with paragraph 1 may demand of the trustor company the division of the debentures he has undertaken, and the issue of debenture certificates proportionate thereto.

When the trustee company has the power of issuing the debenture certificates the demand mentioned in the preceding paragraph may be made upon the trustee company.

Art. 30.—The provisions of paragraph 2 of Article 25, Paragraphs 1 and 2 of Articles 27 and 28 are applicable *mutatis mutandis* to cases where a third person has undertaken the whole amount of debentures.

Art. 31.—The trustor company or the trustee company shall deliver a copy of the deed of trust to persons who have undertaken the whole amount of debentures in accordance with paragraph 1 of Article 29.

With regard to the copy mentioned in the preceding paragraph, the fact that same is a true and exact copy of the original shall be certified to by the representative of the trustor company or the trustee company by affixing his signature thereto.

The provisions of Paragraph 3 of Article 27 are applicable *mutatis mutandis* to the copy mentioned in Paragraph 1.

Art. 32.—Companies may jointly issue debentures. In this case the invitation for subscriptions to the debentures shall be entrusted to the trustee company, or the trustee company shall be caused to undertake the whole amount of the debentures.

Art. 33.—In the case of the preceding Article, the trustee company is possessed of full powers to perform all acts and deeds in connection with the issue of debenture certificates, the repayment of debentures, and the payment of interest.

Art. 34.—The trustor company shall register the following matters in accordance with the provisions of paragraph 2 of Article 204 of the Commercial Code:—\*

- (1) Matters mentioned in Clauses 1 to 3, 5 to 7, and 9 to 10 of Paragraph 1 of Article 19;
- (2) Matters mentioned in Clauses 2 and 3 of Paragraph 1 of Article 22;
- (3) When the trust is made in accordance with Article 23, or when an undertaking is made in accordance with Paragraph 1 of Article 25, the fact;
- (4) When an undertaking is made in accordance with Paragraph 1 of Article 29 the fact, and the name of trade-name of the undertaker.

\* Art. 204 (Paragraph 2). The directors must register at the place of the principal and of each branch office the particulars specified in Article 173, Nos. 3 to 6 within two weeks from the day when they received payment of the full amount in accordance with the provisions of the foregoing paragraph. (Nos. 3 to 6 of Article 173 are as follows:—

3. Total amount of the debentures;
4. Amount in money of each debenture;
5. The rate of interest on the debentures;
6. The manner and time of repayment of the debentures.)

#### CHAPTER IV.

##### DEBENTURE CERTIFICATES.

Art. 35.—The debenture certificates issued in accordance with a deed of trust must contain the following particulars:—

- (1) Matters mentioned in Clauses 1 to 3 and 5 to 7 of Paragraph 1 of Article 19;
- (2) Matters mentioned in Clauses 2 and 3 of Paragraph 1 of Article 22;
- (3) (Serial) number of the debenture certificates;
- (4) Matters mentioned in Clauses 3 and 4 of the preceding Article.

Art. 36.—When the trustor company has issued debenture certificates conformably with the terms and conditions of the agreement of trust, the trustee company shall, upon the request of the trustor company, certify that the said debenture certificates are debenture certificates issued in accordance with a deed of trust, and shall deliver same to the trustor company or to a person designated by it.

The certificate mentioned in the preceding paragraph is given by writing the same down on each of the debenture certificates and affixing thereto the signatures of the directors of the trustee company or the signature of a member representing such company.

Art. 37.—Debenture certificates issued in accordance with a deed of trust will not acquire validity unless certified to as provided in the preceding Article.

Art. 38.—When the trustee company has issued debenture certificates on behalf of the trustor company, such fact shall be stated in each of the certificates and same shall be signed by the directors of the trustee company or by a member representing such company.

In the case of the preceding paragraph, the provisions of the preceding two Articles are not applicable.

Art. 39.—When the trustee company has issued debenture certificates on behalf of the trustor company, the entries to be made in accordance with Art. 206 of the Commercial Code shall be made by the trustee company and the demand to be made in accordance with Article 207 of the Commercial Code shall be made on the trustee company.\*

#### CHAPTER V.

##### DEBENTURE REGISTER.

Art. 40.—When a company has issued secured debentures, besides those mentioned in Article 173 of the Commercial Code,\*\* the following matters shall be entered in the Debenture Register:—

- (1) Matters mentioned in Clauses 1, 7, 9 & 10 of Paragraph 1 of Article 19;
- (2) Matters mentioned in Clauses 2 to 4 of Article 34.

Art. 41.—The trustor company shall prepare a copy of the Debenture Register and deliver same to the trustee company.

With regard to the copy mentioned in the

\* Art. 206.—Commercial Code. The assignment of a name-debenture cannot be set up against the company or against any other third person, unless the name and domicile of the assignee have been entered in the Debenture-Register and his name inserted in the debenture certificate.

Art. 207.—Commercial Code. The provisions of Article 155 apply correspondingly to debentures.

Art. 155.—Commercial Code. When the whole amount of the share has been paid up, a shareholder may require his certificate to be made out to bearer. A shareholder may at any time have a share to bearer changed into a name-share.

\*\* Art. 173.—Commercial Code. In the Debenture Register the following particulars must be entered:—

1. The name and domicile of the creditors;
2. The serial number of the debentures;
3. The total amount of the debentures;
4. The amount in money of each debenture;
5. The rate of interest on the debentures;
6. The manner and time of repayment of the debentures;
7. The date of the issue of the debentures;
8. The date of the acquisition of each debenture;
9. If debentures to bearer have been issued, their total number, their serial numbers and the date of their issue.

preceding paragraph, the fact that same is a true and faithful copy of the original shall be certified to under the signatures of the directors of the trustee company or that of a member representing such company.

Art. 42.—The trustee company shall keep the copy mentioned in the preceding Article at its head office, and permit inspection of the same by debenture creditors at any time, within business hours, when requested by such creditors.

Art. 43.—Whenever any alteration occurs in the entries of the Debenture Register, the trustor company shall notify it to the trustee company by means of a document signed by its directors or a member representing it.

When the trustee company has received the document mentioned in the preceding paragraph, the same shall be preserved by affixing it to the copy of the Debenture Register.

Art. 44.—When the trustee company has issued debentures for the trustor company the Debenture Register shall be prepared by the trustee company and kept at its head office.

The provisions of Paragraph 2 Article 171 of the Commercial Code are applicable *mutatis mutandis* to the case of the preceding paragraph.\*

Art. 45.—In the case of paragraph 1 of the preceding Article, the trustee company shall prepare a copy of the Debenture Register and deliver same to the trustor company.

The provisions of paragraph 2 of Article 41, Articles 42 & 43, and Paragraph 2 of Article 171 of the Commercial Code,\* are applicable *mutatis mutandis* to the case contemplated in the preceding paragraph.

Art. 46.—When the trustor company or the trustee company has prepared the Debenture Register, a copy thereof shall be delivered to the person who has undertaken the whole amount of the debentures in accordance with Paragraph 1 of Article 29.

The provisions of Paragraph 2 of Articles 41 and 43 are applicable *mutatis mutandis* to the case of the preceding paragraph.

Art. 47.—Whenever the trustor company, the trustee company, or a person who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29 has taken any such steps as to cause an alteration of the entries in the Debenture Register, the company keeping the Debenture Register shall be notified thereof in writing.

#### CHAPTER VI.

##### MEETINGS OF DEBENTURE-HOLDERS.

Art. 48.—The trustee company or a person who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29 may, if necessary, call a meeting of debenture-holders at any time.

Art. 49.—The trustor company, or any debenture-holders holding in the aggregate one-tenth of the whole amount of debentures, may make a demand upon the company, or the person who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29, to call a meeting of debenture-holders by lodging a document stating the object of the meeting and the reason why such meeting should be convoked.

Should the party receiving the demand mentioned in the preceding paragraph fail to take steps for calling the meeting within two weeks after such demand is made, the party making the demand may, upon obtaining the permission of the competent authorities, call the meeting.

Art. 50.—The meeting provided for in Paragraph 2 of Article 15, Articles 89, 94 or 99 may be called by debenture-holders having an aggregate of one-tenth of the whole amount of debentures.

The meeting mentioned in the preceding paragraph shall be called at the seat of the head-office of the trustee company unless otherwise specially provided in the agreement of trust.

The meeting provided for in Articles 94 and 99 can also be called by the trustor company.

\* Art. 171. (Paragraph 2).—Any shareholder or any creditor of the company may at any time during business hours demand an inspection of the above mentioned documents.

Art. 51.—The provisions of Article 156 of the Commercial Code apply *mutatis mutandis* to the calling of a meeting of debenture-holders.

Art. 52.—Unless otherwise specially provided in the agreement of trust, resolutions are passed at a meeting of debenture-holders by majority of the right of voting exercised. Provided, however, that with regard to resolutions relative to matters mentioned in Article 64, Paragraph 1 of Articles 67, 75, 85 and 86, and Paragraph 1 of Article 97, such cannot be passed unless the right of voting has been exercised by the holders of more than one half of the name debentures and those who have deposited their debenture certificates in accordance with the provisions of Paragraph 2 and having more than one half of the whole amount of the debentures.

The provisions of Paragraphs 2 to 4 of Article 161 of the Commercial Code apply *mutatis mutandis* to resolutions of the meeting of debenture-holders.†

Unless specially provided otherwise in the agreement of trust, debenture-holders who do not attend the meeting may exercise their right of voting by means of a document.

Every debenture-holder has the right to one vote for each portion of his debentures corresponding to the minimum amount of the debentures. Provided, however, that the right of voting of a debenture-holder who has debentures of more than eleven times the minimum amount of debentures may be restricted by the agreement of trust.

Art. 53.—Parties who have undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29, or their representatives, may attend and speak at a meeting of debenture-holders or state their views in writing.

Art. 54.—The representative of the trustee company may attend and speak at a meeting of debenture-holders, or state his views in writing, except when the meeting has been convened with regard to matters specified in Paragraph 2 of Article 89.

Art. 55.—The parties convening a meeting of debenture-holders shall give notice of such meeting to the parties mentioned in the preceding two Articles or to their representative.

The provisions of Paragraphs 1 and 2 of Article 156 of the Commercial Code apply *mutatis mutandis* to the notice mentioned in the preceding paragraph.†

Art. 56.—Should it be deemed necessary at a meeting of debenture-holders, or by the party convening the meeting, the trustor company may be notified and its representative may be requested to attend the meeting.

Art. 57.—Should the procedure of convening a meeting of debenture-holders or the manner in which resolutions are passed at the meeting, be contrary to either this law or the terms and conditions of the agreement of trust, the trustor company, the trustee company, or either of the debenture-holders, may apply to the Court for a decree declaring such resolution to be null and void.

The application mentioned in the preceding paragraph shall be made within one month from the day on which the resolution is passed.

\* Art. 156.—Notice of a general meeting must be given to each shareholder two weeks before the date fixed for such meeting.

The notice must state the object of the meeting and the matters to be voted upon.

If the company has issued shares to bearer, a public notification of the general meeting and of the particulars specified in the preceding paragraph must be given three weeks before the date fixed for the meeting.

† Art. 161.—(Paragraphs 2 to 4). Persons holding certificates to bearer cannot exercise their right of voting unless they have deposited their certificates with the company one week before the day of the meeting.

A shareholder may exercise his right of voting by a proxy, who must produce to the company a document proving his right of representation.

A person who has a special interest in a resolution of the company cannot exercise the right of voting.

‡ Art. 156.—(Paragraphs 1 and 2). Notice of a general meeting must be given to each shareholder two weeks before the date fixed for such meeting.

The notice must state the object of the meeting and the matters to be voted upon.

When a debenture-holder makes the application mentioned in Paragraph 1, his debenture certificates shall be deposited, and, upon the demand of the party who convened the meeting, suitable security shall be also provided.

Art. 58.—Matters relative to which resolutions may be passed at a meeting of debenture-holders are limited to those specified in this law and those specially provided for in the agreement of trust.

Art. 59.—Parties convening a meeting of debenture-holders shall prepare a minute-book.

Art. 60.—The trustee company shall keep at its head and branch offices either the original or a copy of the minute-book of the meeting of debenture-holders.

The trustee company shall, if so requested, allow the trustor company or debenture-holders to inspect the minute-book mentioned in the preceding paragraph at any time during business hours.

Art. 61.—When a party other than the trustee company has prepared the minute-book, he shall himself preserve the original and deliver a copy thereof to the trustee company.

The provisions of Paragraph 2 of the preceding Article apply *mutatis mutandis* to the copy mentioned in the preceding paragraph.

Art. 62.—The expenses of a meeting of debenture-holders shall be borne by the party who has convened the meeting, except when the meeting is called by the trustee company or by a party who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

Art. 63.—Resolutions passed at a meeting of debenture-holders are carried out by the trustee company. Provided that should the resolution be of such a nature as to preclude its being carried out by the trustee company, the meeting shall determine who is to execute such resolution.

Art. 64.—When not otherwise specially provided for in agreement of trust, one or more representatives may be selected and appointed at the meeting of debenture-holders to whom the decision of matters relative to which resolution is to be made is to be delegated.

The representatives are selected and appointed from among the party who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29, or persons each holding one thousandth or upwards of the whole amount of debentures.

Where there are several representatives, should no special decision be made at the meeting, matters falling within the sphere of the powers of the representatives are decided by them by a majority.

Art. 65.—In a case corresponding to the proviso of Article 63, the representatives may either themselves execute the matters falling within the sphere of their powers, or cause other persons to execute same.

Art. 66.—When the representatives have accepted their position, public notification thereof shall be made, and notice shall also be given to the trustor company, the trustee company, and the party who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

Art. 67.—A meeting of debenture-holders may at any time, revoke the appointment of the representatives or alter their powers.

In the case of the preceding paragraph, the meeting shall make a public notification thereof, and give notice thereof to the trustor company and the person who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

#### CHAPTER VII.

##### THE VALIDITY OF AGREEMENTS OF TRUST.

Art. 68.—The trustee company shall deal with the affairs of the trust with impartiality and faithfulness.

Art. 69.—The Trustee company is bound vis-a-vis the trustor company and debenture-holders to deal with the affairs of the trust with the care of a good administrator.

Art. 70.—The special security provided by the agreement of trust vests in the trustee company in respect to the whole of the debentures comprised in the deed of trust.

The trustee company has the burden of

preserving for all the debenture-holders the rights over the security and of enforcing same.

Art. 71.—Debenture-holders enjoy in equal proportion the benefit of the security according to the respective amounts of their claims.

Art. 72.—The material security provided by an agreement of trust will acquire validity even prior to the debentures coming into existence.

Art. 73.—The provisions of Articles 348 and 375 of the Civil Code and Article 277 of the Commercial Code do not apply to the rights of security provided by an agreement of trust.\*

Art. 74.—The trustee company may supplement the security by an agreement with the trustor company.

Art. 75.—The trustee company may alter the security in accordance with a resolution passed at a meeting of debenture-holders and an agreement made with the trustor company.

Art. 76.—The agreement mentioned in the preceding two Articles has the same force as the agreement of trust.

(TO BE CONTINUED.)

#### TRAINING NOTES.

During the past week the weather has been most unfavourable for steady training, but a few of the horses have managed to get in some fast work. "Rose de France" is going well, but as yet it is not possible to determine whether she has retained her speed or not, as she is not being galloped off her legs as are some of the other horses. "Phyllis" appears to have had too much work and a rest for three or four days might do her good. The same treatment would not do "Suma" much harm, for it looks as though, if her trainer be not very careful, she will be stale by the end of next week.

"Hitachi" is going strong and as fast as before. "Miyashino" and "Folly" do not appear to be able to get over the ground as fast as might have been expected. "Maynooth" is an unknown quantity; on shape and style of galloping she is not a flyer. "Parma Violet" has not done fast work for the last two days.

Of the last lot of Australians "Hyacinth" and "Flash" still stand out as the best two and the owner and trainer of the former should be well satisfied with the time in which this mare did the mile on Saturday last. "Flash" is a very strong and fast mare and will do better than she has yet done. There has not appeared any other mare that can equal the performances of the above pair. "Dekimas" is a nervous animal that in all probability will lose her backers more money than she will earn for them, and those who saw her gallop on Thursday were unanimous in their opinion that she goes slower in each succeeding gallop. It must be borne in mind that those interested in this mare are most unlikely to try to break records during the training.

"May Duke," "Wakashima" and "Raubgraf" are moving well and the latter, if he keeps as well as he is at the moment, should not be overlooked by backers.

"The Miller," unless the knowing ones are

\* Civil Code, Art. 348.—The pledgee may on his own responsibility repledge the thing pledged within the time of the duration of his own right. In that case, however, he is responsible for any damage caused to the thing by *vis-major* which would not have happened but for the repledge.

Civil Code, Art. 375.—A mortgagee may make his mortgage security for an obligation in favor of another person against him, or he may assign or waive his mortgage or the rank thereof in favor of another creditor of the same debtor.

If in any such case the mortgagee has made disposals of his right in favor of several persons, the right of such persons rank according to the respective times when notes of such facts were added to the registry of the mortgage.

Commercial Code, Art. 277.—The provisions of Article 349 of the Civil Code do not apply to a pledge created as a security for an obligation arising from a commercial transaction.

Civil Code, Art. 349.—The pledgor cannot, either by the act of creation or by an agreement made before the obligation is due, in order to make performance to the pledgee, agree that the latter shall become the owner of the thing pledged or shall dispose of it without complying with the requirements of the law.

much mistaken, will prove to be the best of the China Griffins; "Gulyasch" is however a very fast pony and "Kobe" and "Dairen" are improving rapidly.

Given fine weather, the training during the present week should be most interesting.

OLD SPORT.

#### LOVE'S SEASONS.

I went by her cottage,—

Full fast was it snowing;

Dropped low the white branches,

The north wind was blowing,

Bleak, bleak lay the winter

On mountain and lea,—

One looked from the window,

'Twas Summer to me.

All white slept the earth

And all black moaned the sea;

But 'twas Summer, fair Summer.

Sweet Summer to me.

I went by her cottage,—

The roses were glowing;

—Waved high the white branches,

The south wind was blowing.

Blithe, blithe sang the birds

In each blossoming tree,—

None looked from the window,

'Twas Winter to me.

All green smiled the earth,

And all blue laughed the sea,

But 'twas Winter, grey Winter,

Grim Winter to me.

No more at that window

Her glances shall meet me;

No more to her cottage

Her blushes shall greet me.

White, white is that cheek

Where love's roses bloomed free,

And cold are those lips

That gave welcome to me.

Tho' in Summer out-summered

Shone mountain and lea,

'Tis Winter, forever

Dead Winter, to me.

'Tis a fair summer land

Which our coming awaits,

When our far-wandered feet

Shall win home thro' the gates.

Sweet, sweet shall the May

Laugh on shore and on sea,

When her smile at the gate

Gives the morning to me.

Tho' of Winter out-wintered

Its seasons should be,

'Twill be Summer, forever

Sweet Summer, to me.

Yokohama.

SERAQ LL. YENDYS.

#### NEWS OF THE WEEK.

On Monday, 182 invalids were brought to Tokyo and on the following day 164, all being from Osaka or Hiroshima where they had undergone temporary treatment after coming from the front.

On April 24th, 87 Russian prisoners were brought from Dairen to Moji, and were removed to Kokura or Kurume. On the same day, 83 prisoners, including three officers, arrived at Nino-shima and were sent to Kumamoto or Kurume.

The S.-C. *Morning Post* publishes the following telegram from its Singapore correspondent:—"T.I.H. Prince and Princess Arisugawa, who are travelling to Germany on board the *Prins Heinrich*, take a keen interest in the Russian refugees who are their fellow passengers. On the voyage between Hongkong and Singapore Princess Arisugawa distributed toys to the children of the refugees, a gracious act which won the admiration of all on board. Prince Arisugawa is well."

The sum of yen 255 has been forwarded to Miss Holland, being the nett proceeds of the concert for the benefit of her Factory Girls Fund. The gross receipts were yen 336. Miss Holland

desires to thank those who so kindly took part in the concert; also Messrs. Thwaites & Co. for lending piano; and the *Japan Advertiser*, *Japan Gazette*, *Japan Herald* and *Japan Mail* for advertising free of charge; also the directors of the Public Hall; and the *Japan Mail* for printing the tickets and programmes at reduced rates.

The development of the New Zealand coal-fields proceeds apace. The Westport Coal Company has just concluded a satisfactory year, the annual output amounting to 530,000 tons; a considerable quantity of this coal was purchased by the British Admiralty and delivered to the Australian and China Stations. Two State coal mines are now in full working order, and supply all the Government requirements for the railways and other purposes; the surplus is disposed of to the public. A large coal area, estimated to contain some ten million tons of coal, and adjoining one of the Westport Coal Company's mines on the west coast, has been taken up by a Christchurch company, who intend to spend upwards of £100,000 in opening up the mine and providing a permanent way to transport the coal to the adjoining railway system.

The death occurred on 14th March, in his eightieth year, of Captain James Bucknell Atkins, Elder Brother of the Trinity House. When taking troops to the China War in the *Imperator*, he made what long stood as the record passage from Portsmouth to Singapore. Using his steam simply as an auxiliary, he did not stop at the Cape for coal, and arrived at Singapore about a fortnight before he was expected. Afterwards he was requested to lay his log before the Admiralty. Messrs. Laird, the builders, gave him a cheque, though the latter was withdrawn when he had the misfortune to collide with a sailing vessel on the return voyage. At that time sailing ships carried no lights, although the obligation then, as now, was on steamers to keep out of the way. It was no wonder that he was one of the first signatories of the petition to the Government to compel sailing ships to carry distinguishing lights at night.

#### AMERICAN TOPICS.

The Prudential committee of the American Board of Foreign Missions voted unanimously to accept the gift of \$100,000 from Mr. John D. Rockefeller, and will use the money for the benefit of the mission schools of the Orient.

During a heavy spring storm an electric power wire was broken and fell across a door knob of the home of John McGovern, engineer at the insane asylum at St. Louis, situated near the institution, and McGovern was instantly killed by the electricity as he opened the door.

Rear-Admiral Chester, Superintendent of the U. S. Naval Observatory, has completed arrangements for the observation of the total solar eclipse of Aug. 29-30, an event of the greatest importance to astronomers. Three stations will be established, one in the Columbre Islands, one near Valencia, Spain, and one near Algiers in Africa.

Decrees establishing the new monetary system of Mexico have been issued by President Diaz. The mints will be closed to the free coinage of silver on April 26 and the new monetary system go into effect May 8. The new theoretical unit of currency is the peso of 75 centigrams of gold, and silver dollars will be valued at that equivalent, or practically 50 cents gold. A reserve or exchange fund is established, beginning with \$100,000,000, which may be increased.

The President has, through the State Department and in accordance with the act of Congress, issued proclamation for an "International naval, marine and military celebration, beginning May 13 and ending not later than November 1, 1907, for the purpose of commemorating in a fitting and appropriate manner the birth of the American nation," which is to be held at Jamestown, Va. The proclamation invites foreign nations to send their naval vessels and representatives of military

organizations to participate in the tri-centennial of the founding of Jamestown, the first English-speaking settlement in America. The colonists founded Jamestown on May 13, 1607.

The Geological Survey is tabulating statistics on the oil output for 1904, which, it is believed, will have an important bearing on the investigation now being conducted in that industry by Commissioner of Corporations Garfield. The statistics will show a shifting of oil production from the east to the west of the Mississippi river. In 1898 the five states of New York, Pennsylvania, West Virginia, Ohio and Indiana produced 94 per cent. of the total output of petroleum in North America. In 1903 they produced only 55 per cent. In 1904 the west took the lead for the first time, producing 53 per cent., as against only 47 per cent., produced by states east of the Mississippi. In 1904 the oil production of the entire country was 119,000,000 barrels, being an increase over the previous year of 19,000,000 barrels.

An interesting study of the U.S. Government's emigration tables for January, 1904, is made by a writer for the *Chicago Record-Herald*. This writer says "First it is to be noted that the total immigration for the month was 56,328, as against 28,624 in 1904, 31,851 in 1903, 23,229 in 1902, 18,297 in 1901 and 16,785 in 1900. It will be observed that it stands quite alone because of its magnitude, and there are notable peculiarities in the apportionment among races or countries. This will be appreciated after an examination of the following table, which gives a comparison of the Italian, Austrian and Russian immigration for the month of January in the years named:

	1902.	1903.	1904.	1905.
Italy.....	5,961	8,140	6,340	7,964
Austria-Hungary.....	7,773	9,402	5,669	19,523
Russia.....	4,048	6,171	7,176	15,743

The result of the competition, in which Miss Helen Miller Gould offered three prizes of \$1,000, \$500 and \$250 for the best essays on the comparative merits of the Revised Version of the Bible (Protestant) and the Douay Version (Roman Catholic), has been made public by the Rev. Dr. W. W. White, of the Bible Teachers' Training School, New York. Two hundred and fifty-six essays were received. The first prize was awarded to the Rev. W. T. Whitley, a Baptist clergyman of Preston, England, the second prize to the Rev. G. H. Beard, a Congregational clergyman of New Haven, Conn., and the third prize to Mr. Charles B. Dalton, an Episcopalian, Assistant-Master in Trinity Parish, New York. The judges in this contest included President Patton, of Princeton Theological Seminary; Chancellor MacCracken, of New York University, and the Hon. Whitelaw Reid.

Nearly a half-million babies, it is said, died in the United States last year from the effects of adulterated infant foods, poisons used in coloring butter and candy, formaldehyde in milk, and other impure articles of diet made by fraudulent manufacturers. Data to prove this assertion was produced before a meeting of the executive committee of the National Association of State Dairy and Food Departments, which met in Chicago on April 1st. The assertion of enormous fatality among infants last year resulting from impure food was made by Mr. J. N. Hurly, Secretary of the Indiana State Board of Health. Hurly produced figures to show that 65 per cent. of the total deaths of infants in America last year were due to poisons administered in impure foods and deadly concoctions placed on the market by fraudulent food manufacturers. He produced statistics to show that more than 700,000 infants died in the United States last year.

It is pointed out by this same authority that these figures show that "there was a very remarkable increase for Austria-Hungary and Russia, between 1904 and 1905, and that Italy did not gain in anything like the same degree. It should be understood, however, that under normal conditions the Italian immigration is relatively small in January and very large in the spring months, and that it has led the list in recent fiscal years,

But even with this question it is a significant fact that the percentages of increase should be what they are. Out of a total of 53,212 for Europe and a grand total of 56,265, Russia and Austria-Hungary contribute 35,266. In combination with the outclassed Italy they make up nearly 77 per cent of the entire immigration and more than 80 per cent of the immigration from Europe. Outside the three leaders we have only three countries or regions contributing more than a thousand each, as follows: England, 3,474; Germany, 1,424, and the West Indies, 1,184. Irish, Scotch, Swedes, Norwegians and Danes figure up only 2,289 all told. Taken separately they are negligible factors, quite lost in the great tide from the interior of the continent.

Year by year, apparently, the work of Congress grows. Statistics prepared by the docket clerk of the House of Representatives show increases in the number of bills introduced, in the number of public acts passed in the Fifty-eighth Congress as compared with the preceding one. In all, 20,074 bills and resolutions were introduced. Reports were made by House committees on 4,904 measures, including Senate acts and resolutions. Of its own bills and resolutions the House passed 1,556 during the second session, while it adopted 551 of the 620 Senate acts and resolutions that had been reported from committees. At the close of the session only 112 public bills were left unacted upon. Of all the House bills sent to the President for his approval, only one failed to receive his signature. How greatly the work of Congress has grown in recent years may be gathered from the fact that from the Fifty-second to the Fifty-eighth Congress the number of bills and resolutions introduced increased from 10,623 to 20,074, the number of reports made from 2,613 to 4,604, the number of public laws enacted from 398 to 574, and the number of private laws enacted from 324 to 3,467—the latter total being, it will be seen, over ten times the former in amount.

In an editorial the *St. Louis Globe-Democrat* states that the agreement to curtail the acreage of cotton is being shirked. The convention at New Orleans a few weeks ago urged a reduction in acreage this year which would bring the production to a point at least 2,000,000 bales below that of 1904, when the crop passed the 13,000,000 bale mark. The reason why there is unlikely to be any material reduction in the cotton acreage this year is that at the present price there is considerable profit in cotton growing, and the chances are that the price will be higher before it is lower. The indications point to an upward turn before much of the planting is done. This will have a tendency to induce the planters to attempt to raise a larger crop. Agreements to reduce acreage, whether of wheat, corn or cotton, are usually shirked by many persons. Compacts of this kind have a tendency to strengthen the market, and in such cases the individual agriculturist will be apt to let his neighbor do the curtailing of the planting. This has been true in so many instances that the cotton acreage is likely to be at high figures for 1905. A 13,000,000 bale crop in 1905, if it is raised, will find a ready market at fair prices.

Washington dispatches say that Secretary Hay will do no more work until late in the Fall and if his health then be not greatly improved, he will retire from the cabinet. The Washington correspondent for the *New York World* says: "It is practically certain that Mr. Hay will be succeeded by Secretary Taft, who will be the real head of the State department while Mr. Hay is away. The President doubts that Mr. Hay will ever be strong enough to resume his official duties, and he already has selected Mr. Taft as his successor, barring some political contingency which now is unforeseen. Surgeon-General Rixey, who has been attending Mr. Hay for years, is by no means confident that the long rest which he has ordered will result in the complete restoration of his health. He goes no further than to say that he 'hopes' Mr. Hay will be sufficiently

benefitted to take up his work again by the time Congress convenes next Fall. The attack of faintness to which Mr. Hay succumbed as he was sailing from New York is accepted as an indication that he is weaker than had been supposed. As soon as he returns from his two months' cruise Mr. Hay will, by Dr. Rixey's orders, go to his summer home at Lake Sunapee, N. H., where he will stay until just before Congress convenes. His condition then will determine whether he is to remain in the cabinet. While he is at his summer home Mr. Hay will not be bothered with official cares. During the three months that Mr. Taft is to be away State Department matters of importance will be taken up directly with the President by Acting Secretary Loomis, and questions of great moment, if any arise, will be decided at the cabinet meetings."

Two hundred million dollars is the sum the railroads of the United States will spend for improvements in traffic equipment during the year 1905, according to conservative estimates made by some railroad men. This sum will be a record-breaker for a single year, and it is taken as an unfailing evidence that the current year is to be one of great prosperity. Ten leading lines are to spend \$110,000,000, and other lines will spend an estimated total of \$90,000,000. The following table tells the story concretely:

Penn. lines .....	\$23,000,000
Baltimore & Ohio .....	14,000,000
N. Y. C. lines .....	20,000,000
Southern Pacific .....	8,000,000
Southern .....	8,000,000
Rock Island .....	10,000,000
Atchafson .....	8,000,000
North and West .....	2,000,000
Erie .....	16,000,000
Frisco lines .....	2,000,000
Other sys. (est.) .....	90,000,000

Some authorities make the figures much higher than these. The orders included in the table are in addition to extensive expenditures made during the latter part of 1904. Soon after the election the demand for equipment grew so rapidly that the railroads were convinced of the need to act quickly if they were to avert a congestion of traffic in the present year.

To most Americans, says *Bradstreet's*, the name of the Hudson's Bay Company recalls long period when that venerable organization, which was originally chartered by the British crown in 1670, represented whatever of civilization or government could be found in the northwestern portion of the American continent. Moreover, the conflict in the fur trade between American interests engaged in that pursuit and the company gave it an historical importance familiar to all who have an acquaintance with the history of the northwest during the first half of the last century. The creation of the Dominion of Canada and the abridgment or practical extinction of the company's rights over a vast and ill-defined region, extending from the western bounds of Ontario to the Pacific and Arctic oceans, seemed likely to end its activity, except as a factor in the fur business. Part of the arrangement made with the Hudson's Bay Company, however, involved the conveyance to the organization of a large amount of lands which, owing to the influx of settlers from both Europe and the United States to the western Canadian region, have now acquired a value far in excess of anything deemed possible in that respect only a few years ago. One of the results has been that the £10 shares of Hudson's Bay stock, of which there are 100,000 outstanding, have lately become the object of a remarkable speculative movement in the London stock market. At the beginning of 1904 the quotation for them was 36½, but in last December they had gradually advanced to 53½. Since the beginning of the present year, however, a further rise has taken place, which early in the present month carried the price up to 74; and still higher prices are predicted, great stress being laid upon the potential value of the company's lands under present conditions.

## CORRESPONDENCE.

## AN OLD RESIDENT TO HIS FRIENDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the midst of the history-making events that are taking place around you in the Far East, it seems to me almost an impertinence for such an infinitesimally insignificant person as myself to ask you to allow me to send a line to the foreign community of Yokohama, through the medium of your paper. Yet, when I recall all the great kindness that I invariably received in my long residence in Japan, off and on, over forty years, I feel a strong wish to say a word to all those good comrades of the past, to express the feeling, that simply amounts to humiliation, at my having had to quit the social circle of Yokohama in so informal a way. The circumstances are known to my friends, and I feel that in their generous hearts they excused me. But with returning health and strength I wish to say one word more. Should any of you be placed in similar circumstances the one thing to do is to get away, for a change of climate, and let me recommend Victoria in British Columbia as the finest summer climate I have experienced in the world. There you will find (this year or next when the C.P.R. have finished it) a really magnificent hotel, and not expensive; or if you would find a still more economical way of getting a rest, go to the hotel first, and make your enquiries. You will find several comfortable boarding houses, especially in the outskirts of the town. You will find an excellent club, with a lot of good-hearted fellows as members, and an introduction to any one of them will procure you the entrée to the luxuries of a Home Club. You will find excellent medical men; a first rate hospital, good nurses, and with returning health, for you are sure to get better, you will find lovely scenery and good roads.

A land of home-flowers, and home fruits in profusion with the perfection of cool air, mornings and evenings, and with a generous but not excessive heat at mid-day. All that will help to bring back health. To complete it, take the train from Vancouver and go up to Banff, going by easy stages, stopping each night, first at Sicamoose, then at Glacier, then at Field, then at Laggan. At each of those places, you will find the perfection of comfort in the C.P.R. Hotels, the most glorious scenery, and the mountain air will soon put you right. If it does not, Home air and Home nursing will do what nothing else can. Experience has proved it in my case, and therefore I venture to send my advice to my old friends in the East, and to those who try it, let me say, that through our great banking institution of the East, my address will always be obtainable, and so long as I "bob up serenely" any Yokohama man will find a welcome from, sir,

Yours truly,  
R. D. ROBISON.  
Vallauris, Alpes Maritimes, France, March 8th, 1905.

## THE MINING LAW.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Mr. De Becker, with two exceptions, translates 収用 "purchase" in his "Mining Law." The first exception in Article 67 gives "employed by purchase" and the second in Article 70 gives "compulsory purchase." I have seen it translated by others "expropriation."

The characters used give no index to the legal meaning as 収 is simply "to take" or "receive" and 用 is "to use." There is of course the Law of 土地 収用.

What I would like Mr. De Becker to tell me is whether the accepted legal equivalent of 収用 is "purchase."

A Legal and Scientific Dictionary is much wanted. It is a great pity Mr. Gubbins does not add to his most useful dictionary an addenda of these terms.

Yours, etc.,

IGNORAMUS.

Tokyo, April 26th, 1905.

## THE MEMORIAL WORKS OF THE PRESENT EMERGENCY.

We have received the following in the form of a pamphlet:

It is not necessary here to repeat that at present everything in our country owes its success to the co-operation of the whole nation. Those who are at home must be frugal and devote whatever they can save to public service, and thus must try to make those who are at the front needless of being anxious about their families left behind. This is simply the duty of our people towards themselves as a belligerent nation. That we avail of this present national emergency as an opportunity of the nation's

development: that everywhere works are planned and projected in memory of the present war: that particularly education and industry are encouraged; and that we are progressive and enterprising as well as persevering and self-respecting—is not this the proper attitude of a great nation that has the glory of being victorious?

Some time ago when the Extraordinary Special Tax Act was issued, the local public communities contracted their business, lessened their expenses, and endeavored to leave a margin to the people's finance. But at the same time there are not wanting many of these local communities that are planning and projecting something in memory of the present emergency, thinking that at this extraordinary moment education and industry must be specially encouraged and advanced. For instance, in Takamatsu City, Kagawa Prefecture, the system of "half-day school" is adopted, and the children who do not go to school are gathered together, and not only elements of industrial education are taught them, but at the same time they are made to plant trees in memory of the present war. In Matsuyama City, Ehime Prefecture, school-girls are made to sew clothes for the sick and wounded soldiers, thus to secure the propagation of industrial education and at the same time the development of the spirit of civility and philanthropy. Also, Tokura Village in Tokyo Prefecture, Nisikuye Village in Saga Prefecture, and others, are to be mentioned as examples of local bodies in which good moral influence has been made effective and the friendly and co-operative spirit of the whole community has been heightened. The villagers of Awano Village, Tochigi Prefecture, have formed a society for planting trees, and by this means they have succeeded not only in consolidating the lots of land owned by the four large divisions of the village, but also in getting these lots of land contributed to the village. Thus we see that they accomplished the great scheme of planting trees, and also the firm foundation of the union of the whole village was secured. Indeed this is a work well adapted to the occasion.

To look in the direction of industry, there are many localities where rapid progress has been made in industrial works. As to the consolidation of farms, beginning with the 3,000 *cho* which extends over the three counties of Nukada, Aomori, Hazu of Aichi Prefecture, and the 2,400 *cho* of Asaka County, Fukushima Prefecture, there are over one hundred cases, either newly started or already accomplished. The profit that can be derived from this source, both in increasing the national wealth and also in supplying employment to the unemployed, is beyond calculation. As to the plantation of trees, the public forest land amounting to 200,000 *cho* in Miye Prefecture, is the leader. The Agricultural Council of Kagawa Prefecture has contributed young camphor-trees and young pine-trees to be planted around every school and every drilling ground, and also in districts where the soldiers go on board for the seat of war. The Chivalrous Society of Miyazaki Village, Nukada County, Aichi Prefecture, bought the superficies of the forest land owned by the divisions of the village and planted trees, for the purpose of distributing the land and trees, as tokens of farewell, to those who go to the front. Such examples are not few. Already the number of towns and villages that have planted trees in memory of the present war, has reached some 600.

Moreover, in Shirohigashi Village, Yosa County, Kyoto Prefecture, a new building was put up for raising silkworms in memory of the present war, and young silkworms, right after the third stage of their growth, are given out to every household in the village. In Toyama Prefecture, committees whose business is to encourage industries are placed in every town and village, and the methods of plowing and manuring are carefully taught so as to leave no benefit unreaped. In Miye, Fukushima, and Tokushima Prefectures, places for instructing the manufacture of *sanada* (tape) have been established or extended, in order to encourage the same manufacture. In Shiga Prefecture, Lake Biwa and Lake Yogo are utilized, and fisheries have been opened in the towns and villages along the coast. In Tokyo Prefecture, not only are meetings held from time to time for lectures about the war, but also societies for planting grass-seed have been formed in every town, in every village, or in every division of land convenient to this end for the purpose of advancing both education and industry hand in hand. Such noteworthy provisions are innumerable. Almost in every place some work or other is carried on in memory of the war, either saving societies are started, or industrial associations are formed, or else plans are made for breaking up new land. Take Iwate and Aomori Prefectures, where famine raged in recent years and hopelessly wasted the whole country. In the former, to meet the need of the present emergency, silk-manufacturing is encouraged and improved, and the number of graduates of the Takayama Company of Gunma Prefecture who have been invited as teachers, has reached one hundred. In the latter, improve-

ment in agriculture is encouraged to the utmost, and the industries which were formerly started to meet the evils of the famine have now turned to be the means of helping the families of those who are at the front to fight for their country. In short, these facts not only indicate to our joy and satisfaction that the co-operation of the people has tended to develop the national wealth and strength, but at the same time they prove that the thoughts of the fighting nation are grand and their care thorough-going.

As to the attitude of those who either publicly or privately devote themselves to these plans and projects, we may cite the following cases. The village-master of Minato Village, Sanbu County, Chiba Prefecture, accidentally heard on his way to Tokyo that there had been very few of his villagers who subscribed for the National Loan Bonds above par, and deeply impressed and very regretful he threw away the ticket which he had bought and hastened home to his native village, where he preached the importance of public service at this critical time and finally succeeded in persuading the whole village to subscribe for the Bonds above par. The villagers of Kiyokawa village, Naka-koma County, Yamanashi Prefecture, subscribed for the Bonds above par, in order to show their patriotism, and at the same time they contributed the whole amount to the village, and are waiting to invest the money in some enterprises of public benefit when the Bonds are paid back. Again in Iwashashi village, Kita-shidara County, Aichi Prefecture, the villagers have united in saving one *ryū* every day since the year 1876 (Meiji 11th year). When this amounted to the large sum of 15,000 *yen*, the villagers generously subscribed for the Bonds, adding thereto what they otherwise earned by their work and thrift. These cases plainly show what sort of mental attitude our nation have towards the present national emergency.

The school-children of Kuze County, Kyoto Prefecture, ploughed the farms of those who are away at the front, when school was not keeping them. Again the school-children of Ohara Village, Atago County of the same prefecture, helped in carrying timber, and offered what they thus earned to the Soldiers and Seamen's Comfort Board. The women of the same village, hearing of this, became so deeply impressed that they could not but volunteer to help these school-children in their noble work. Even school-children and illiterate country people are thus patriotic and are doing their best for the sake of their country.

Moreover, one Takage Waki of the City of Hiroshima, thankful for the glory of his being the supplier of canned goods for the army, encouraged and instructed his workmen to be faithful in their work and thus to show their spirit of public service. On his own part, he devoted his entire self to the realization of this object, and that in spite of illness. Also he opened a saving department in his factory, and in this way endeavored to enable his workmen to subscribe for the Loan Bonds. Cases of enthusiasm of this sort are too numerous to be stated. In Tokushima Prefecture, some public-minded men have started a scheme, according to which every town and village is to be furnished with an organization that supplies employment, in order both to prevent the increase of unemployed and also to help and guide discharged prisoners. Thus we see that in every circle of society the present emergency is utilized for the prosperity of the nation.

It seems certain that if this spirit is developed and extended, nothing is beyond accomplishment. From large prosperous cities to small country villages, plans and projects both for education and for industry are assiduously made and wonderfully succeeding. As long as this spirit exists and this road is followed, there is no need of anxiety for the future of the nation, however long the present war may last. So by availing of the materials obtained, we have made the following table showing the works started and carried on in memory of the present war, and thus we try to offer a glimpse of the national enthusiasm at the present emergency.

#### TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

#### FRANCE AND MOROCCO.

London, April 20.

M. Delcassé, the French Minister of Foreign Affairs, speaking in the Chamber, said that Morocco had accepted the principle of the French proposals, and negotiations were now proceeding on that basis. If Germany considered that the explanations regarding Morocco were insufficient, France was prepared to complete them, and would re-assure all the interests of Germany, in order to remove all misunderstanding.

#### BRITISH SEAMEN AND THE QUESTION OF CONTRABAND.

Mr. Alfred Lyttelton, British Secretary of State for the Colonies, speaking in the House of Commons, said that the Government had telegraphed for information concerning British seamen imprisoned at Hong-kong for refusing to serve on steamers alleged to be carrying contraband goods.

#### GREAT BRITAIN AND CHINA.

Earl Percy, British Under Secretary for Foreign Affairs, speaking in the House of Commons, said that no information had reached the Government that China has ignored the terms of the Mackay Treaty.

#### FRENCH NEUTRALITY.

M. Rouvier, the French Premier, replying to a question in the Chamber, said that France will do everything that is necessary to assure French neutrality in the Far East.

#### STALE NEWS.

London, April 21.

It is reported from Washington that Mr. Taft, the U.S. Secretary of War, will, on his return from the Philippines, visit Tokyo as the guest of Japan. The party includes Miss Alice Roosevelt (a daughter of President Roosevelt) and several Senators and Congressmen.

[Note—The full list of Mr. Taft's party and the details of the itinerary were printed in the *Japan Mail* on April 19th.]

#### KAMRANH BAY.

London, April 22.

The German steamer *Juliette*, at Mauritius, was prevented from finishing her coaling when it was ascertained that she was carrying stores to Kamranh Bay.

The *Daily Mail's* correspondent states that the English portion of the crew complained of having been deceived, and refused to continue the voyage. They preferred imprisonment. The Japanese Minister at Paris has called the attention of Delcassé to the presence of Russian ships at Kamranh Bay. It is maintained on behalf of France that she has taken precisely the same measures as she took when Japanese cruisers lately visited Kamranh. Moreover it is affirmed that the Baltic Squadron has quitted French territorial waters.

#### A PROHIBITED MEETING.

London, April 23.

A congress of members of the Zemstvos, fixed to take place in St. Petersburg on May 7th, has been prohibited.

#### FRENCH NEUTRALITY.

M. Rouvier, the French Premier, has emphatically re-affirmed in the Chamber of Deputies that formal, precise and repeated orders have been sent to the French officials in Indo-China to maintain absolute neutrality in those waters.

#### ST. PETERSBURG INSTRUCTIONS.

It is reported from St. Petersburg that the Admiralty has represented to Admiral Rojestvensky that his remaining in proximity to the coasts of Annam must gravely endanger peace, and believes that the Admiral will obey the formal instructions sent to him.

The general consensus of opinion in London is that Admiral Rojestvensky has gained a great advantage from coaling and provisioning at Kamranh Bay.

#### SANGUINE OF SUCCESS.

Naval circles in St. Petersburg are becoming sanguine of success.

#### CRETANS WANT UNION WITH GREECE.

The Cretan Chamber of Deputies have

unanimously proclaimed a union with Greece, at the same time expressing confidence in Prince George. The deputies then swore allegiance to King George of Greece.

#### THE CRUISER "DIANA" TO BE DISARMED.

Later.  
A telegram from Paris states that the authorities at Saigon have ordered the interned Russian cruiser *Diana*, which has been completely repaired, to disarm and hand over the essential parts of her machinery.

#### RUSSIA AND THE JAPANESE PROTEST.

Reuter's correspondent at St. Petersburg says it is understood that France confined herself to transmitting the Japanese protest to Russia, which replied that the precise whereabouts of Admiral Rojestvensky were unknown, and it was therefore impossible to say whether there was any ground for the complaint but that he would be communicated with as soon as possible.

#### HAVE LEFT KAMRANH.

Later.  
France has stated officially that the Second Baltic Squadron left Kamranh Bay on the 22nd, destination unknown.

#### THE BALTIC SQUADRON.

London, April 24.  
The *Temps* has a telegram from Saigon which states that at 10.40 a.m. on Sunday all the ships composing the Baltic Squadron left Kamranh Bay. Four Russian transports are at Saigon.

The Governor-General of Tongking has prohibited four Russian steamers from embarking a large quantity of coal which was consigned to them. They have been permitted to embark only sufficient to carry them on their voyage.

#### M. DELCASSE.

London, April 25.  
M. Delcassé, the French Minister of Foreign Affairs, has resigned. His position was shaken by the debate on Wednesday, his adversaries contending that the Kaiser would never have intervened had M. Delcassé considered German susceptibilities.

Later.  
M. Delcassé has withdrawn his resignation. He insisted that he must be in complete harmony with the Cabinet on the subject of foreign policy, and he received satisfactory assurances to this effect.

#### ADMIRAL ROJESTVENSKY ILL.

It is stated at Saigon that Admiral Rojestvensky is suffering from dysentery.

#### GERMANY AND MOROCCO.

The German mission is preparing to start for Fez. The tribes along the road are arranging great festivities in its honour.

#### THE BALTIC FLEET.

Later.  
A Saigon telegram dated the 24th says that the Baltic squadron which was anchored in Kamranh Bay, consisting of 52 ships, including transports, has sailed North. Fourteen transports, one cruiser, the *Sviat-lana*, and the hospital ship *Orel* continue near Kamranh Bay, but outside the territorial limits.

The French cruiser *Descartes* has sailed for Haicang, Hainan (?) where 20 warships were sighted.

#### THE CRETAN AFFAIR.

London, April 26.  
It is announced in Rome that Signor Tittoni, the Prime Minister, the British French, and Russian Ambassadors have conferred upon the situation in Crete.

From Malta comes news that the British warships *Leviathan* (with Admiral Lambton on board), the *Lancaster*, and *Minerva* have proceeded to Crete.

#### AMERICAN BANKER ARRESTED.

Later.  
Mr. Bigelow, President of the First National Bank of Milwaukee, has been arrested for defalcations amounting to £300,000 sterling, through speculations in wheat.

#### RUSSIANS CAPTURE JAPANESE RICE.

Under date of the 25th April it is reported from Saigon that the Baltic squadron have captured two steamers off Saigon bound to Japan with rice.

#### THE "DIANA" AT SAIGON.

London, April 27.  
From Saigon it is reported that the French authorities deny that any of the *Diana's* crew are missing. Portions of the machinery were lately removed because the Commander wished to change her anchorage and the authorities were anxious to avoid the slightest appearance of a breach of neutrality.

#### KING EDWARD IN PARIS.

London, April 27.  
King Edward maintains incognito whilst in Paris. He dines with President Loubet on Sunday, and will remain in Paris two or three days. The visit is regarded as a important political event and as an affirmation of the *entente* with regard to Morocco *vis-a-vis* Germany.

#### NEW RUSSIAN MINISTER TO CHINA.

M. Pokotiloff, Director of the Russo-Chinese Bank, has been appointed Russian Minister to Peking.

#### U.S. COTTON CROP.

The United States cotton crop is an extraordinary one and exceeds the world's record by  $2\frac{1}{2}$  million bales.

(Received at the Military Head Quarters; 22nd inst.)

#### NEWS FROM THE FRONT.

According to a report from the troops that occupied Tunghwa there are still small forces of the enemy at Laoling and Malukau (about 20 miles north of Tunghwa.) On the 20th instant about 100 of the enemy's cavalry attacked Yingcheing but were repulsed by our troops. In the direction of Taolu the enemy's outpost has been gradually re-inforced during the past few days, but there are no appearances of its becoming active. For the rest, with the exception of cavalry skirmishes there is no special change.

(Laoling is on the highroad from Tunghwa to Hai lungching. Taolu is on the road from Kaiyuan to Kirin.—Ed. J.M.)

(Received at the Imperial Military Head Quarters; 25th instant.)

On the 24th instant our troops, which were in occupation of Kaiyuan, outflanked a force of the enemy, consisting of 5 battalions of infantry, 16 sotnias of cavalry and one battery of artillery, which, having driven in our outposts, had advanced to attack Kaiyuan. We routed and pursued the enemy, driving him north of Mienhuachieh (20 miles north of Kaiyuan on the Itungchou road). Our casualties in this affair were 38, (including officers) and the enemy left about 200 dead on the field.

A force of the enemy consisting of 6 battalions of infantry and 16 sotnias of cavalry attacked in the direction of Changtu, and another force consisting of 12 sotnias of cavalry and one battery attacked in the

direction of Hsiaotatz, but these two forces retreated north simultaneously with the repulse of the attempt against Kaiyuan.

(Published by the Foreign Office on the 23rd inst.)

#### FRANCE REPLIES TO JAPAN.

The essence of the French Government's reply to Japan's protest with regard to the Kamranh Bay question is as follows:—

On receipt of intelligence that the Baltic Fleet had reached Kamranh Bay, the French Government immediately conveyed instructions to the Governor-General of Tongking that the rules relating to France's neutrality must be strictly enforced. Thereafter, Japan's protest having been received, further instructions were conveyed to the same Governor-General that he must direct the Russian Squadron to leave French territory with the utmost possible celerity, and the Governor-General answered that in compliance with these instructions he had already taken suitable steps.

Further, the French Government addressed a request to the Russian Government that the latter should issue instructions for the withdrawal of of the Baltic Squadron from French territory, and the Russian Government answered that it had already issued such instructions.

The French Government has already adopted the necessary measures to ensure strict respect being paid to its neutrality, and it guarantees similar measures in future.

(Published by the Foreign Office on the 24th inst.)

The French Government has informed Japan that according to a report received from the Governor-General of Indo-China, the Russian squadron left Kamranh Bay on the 22nd instant, for an unknown destination.

(RECEIVED BY THE FOREIGN OFFICE.)

On the night of the 14th the German ships *Koshichan* was visited and stopped at Kamranh Bay. But the Russian torpedo-boats collided, and in the confusion the steamer made her escape.

(Received by the Naval Department.)

#### KAMRANH.

With regard to the position in which the Russian Second Pacific Squadron is anchored in Kamranh Bay, the following report has been received from trustworthy eye-witnesses:—

"A three-masted three-funnelled warship (like the *Dimitri Donskoi*) and a two-masted three-funnelled converted cruiser two craft in all, are patrolling outside Kamranh Bay. Two four-masted one-funnelled merchant steamers are anchored outside the harbour near the northern entrance. Looking from the north entrance, five vessels like battle-ships are anchored inside the harbour and two of them (two-masted three-funnelled craft) have Admirals' pennants flying on their fore-masts. Along the southern bank of the south entrance, near the land, six war-ships are anchored in line, and from the inside of the harbour volumes of smoke are ascending.

[This finally disposes of the question. The Russians have absolutely taken possession of the harbour, and are treating it as though it were in their own territory. The patrolling off the entrance by the *Dimitri Donskoi* and a converted cruiser is a feature not requiring comment.—Ed. J.M.]

(FROM THE "HOCHI SHIMBUN.")

London, April 20.

Public opinion in England is unanimous in holding that rather than incur the ill-will of Japan it would be better to sacrifice the *entente* with France. England desires to be

on good terms with France, but things having reached this pass, there is no help.

The *Morning Post* insists that England should make amicable representations to France. It says also that as the open violation of neutrality at Kamranh is a serious development for Japan, England may possibly become involved and therefore it is a very grave business.

The responsible English newspapers say that Great Britain should assist Japan's protest in Paris, and that strong, firm and rapid action is essential.

A telegram from St. Petersburg says that the Third Squadron under Admiral Niebodakoff has reached the Sunda Strait.

Mr. Motono, Japan's Representative in Paris, has protested to the French Government that the continued stay of the Russian Squadron in Kamranh Bay is a violation of the terms of neutrality. M. Delcassé has replied in warm language that some time will be needed before he can obtain accurate reports on this subject.

The British Government has suspended the voyage of the German steamer *Juliet* in Mauritius harbour. The crew of the steamer say that she was engaged to carry supplies to the Baltic Squadron.

London, April 21.  
Replying to a question put by M. Deloncle in the Chamber of Deputies on the afternoon of the 20th, the French Prime Minister said that in consequence of Japan's protest, instructions had been despatched in the sense that the Baltic Squadron under Admiral Rojestvensky, now anchored in Kamranh Bay, should be required to leave the harbour in French territory at once.

The French Government has instructed its Representative in Tokyo to inform the Japanese Government that France will carefully observe the obligations of strict neutrality. [It is to be sincerely hoped that the above news is correct.—Ed. J.M.]

#### TO STRENGTHEN VLADIVOSTOCK.

It is stated that 600 military artificers have left St. Petersburg with the object of strengthening the defences of Vladivostock.

#### THE BALTIC FLEET.

Hongkong, 11 a.m. 20th inst.

On the 16th instant the Russian Squadron was not seen in Kamranh Bay. Report says that it has proceeded south of Saigon.

The Russian ships are anchored at Pulu Condore and at Honko.

Hongkong, 5 p.m. 20th inst.

The steamers *Signal* and *Rickmers*, when passing Kamranh, did not see any Russian ships. On the evening of the 18th instant the steamer *Chiisan* passed Kamranh at a distance of 12 miles and could not detect anything.

#### THE BALTIC SQUADRON AFFAIR.

London, April 22.

According to reports circulated in Paris Rojestvensky has left Kamranh Bay, and is now coaling at Hainan Island.

The British Ambassador has returned to his duties in Paris. He is specially charged to inform the French Foreign Office that England participates in Japan's protest.

The French Foreign Minister, M. Delcassé, has tendered his resignation, but M. Loubet has urged him to withdraw it.

Baron Suyematsu, speaking to a representative of the *Matin*, said that Japan asked France not to assist Japan's enemy.

France appreciating that the conditions at Kamranh Bay involved serious danger, the Government has issued urgent orders to the Governor-General of Indo-China that strict neutrality must be absolutely observed. But it need scarcely be said that the general

opinion is that Rojestvensky is recklessly abusing French good-will.

The British newspapers all strongly support Japan's views. Their contention is briefly this:—What the French journals advance is a purely academical plea which disregards essentials. The occupation of Kamranh Bay by Russia is clearly and certainly a warlike movement which has for basis the potential activity of her strategical plan. Diplomatic questions demand circumspection, secrecy and care, and therefore on this occasion calm moderation must be maintained and everything in the shape of violent language avoided. Nevertheless it must be universally agreed that in order to avert a serious complication France should concede Japan's just demands.

#### RUSSIAN TROOPS FOR THE FRONT.

London, April 25.

From the regiments in the Moscow District 25,000 of the best troops will soon be sent to the seat of war.

The Authorities are not agreed about Russia's naval policy in the Far East and therefore the Russian ship-building programme has not been fixed. Among naval officers there are some who say that without a naval base in Korea Vladivostock is useless and they therefore decline to support the new programme. The vessels now on the stocks are 3 cruisers of the *Bayan* type and a number of torpedo-craft. These are all. It is doubtful whether the battle-ships *Paul I.* and her consort will be finished this year.

(FROM THE "JIJI SHIMPO.")

M. DELCASSÉ.

London, April 22.

The French Minister of Foreign Affairs, M. Delcassé, has presented his resignation in consequence of the unfavourable criticism of the newspapers.

Concerning this *The Times* expresses regret, and says:—"Just at this time when the Baltic Squadron is behaving with the greatest audacity, France has urgent need of an experienced Minister of Foreign Affairs."

The Paris correspondent of *The Times* formulates a strong theory. He says that Rojestvensky's present procedure is simply doing service to Germany. Supposing that the Russian Admiral took his orders not from St. Petersburg but from Berlin, it may be doubted whether he could render more faithful service.

[That is an idea which has frequently occurred to us also within the past few days. Without intending to reflect in the smallest degree upon Germany, we can not hide from ourselves the fact that nothing in the whole range of human contingencies could benefit her more signally than a war between England and Japan on one side and Russia and France on the other. And it is worth noting in this context that the newspaper organ recently acquired by the Germans in this settlement is the only journal which has attempted to establish the legality of Rojestvensky's proceedings in Kamranh Bay, and thus to encourage their continuance, in spite of the absolute certainty that, if continued, they must have led to an open rupture between Japan and France. We can not too sincerely thank the French Government for having, by an exercise of the sound judgment invariably shown by it, averted what would have been a world-wide calamity.—Ed. J.M.]

#### DISSENSIONS.

London, April 26.

General Kuropatkin is said to have come into collision with General Linevitch and to have resigned his command. The origin of the trouble is reported to be that General Linevitch advocates assuming the offensive in order to save Vladivostock. Kuropatkin's successor is General Baron Kaulbars.

#### THE BALTIC SQUADRON.

The St. Petersburg correspondent of the *Matin* wires that a report has been received

from Rojestvensky at the Russian Admiralty, saying that he has established communications with Nebogatoff, and that the two Squadrons will come together at Batavia, whence they will start for Vladivostock via the Formosa strait.

(This of course leaves it quite uncertain whether Rojestvensky will make his attempt via Tsushima, Tsugaru or Soya.—Ed. J.M.)

(FROM THE "ASAHI SHIMBUN.")

#### THE YANGTZE VALLEY.

Shanghai, April 23.

According to trustworthy information, Chu Fu, the new Viceroy of Nanking, when about to leave his former post in Shantung, promised the German Governor of Kiaochow that when he reached Nanking he would grant special privileges to Germany in the Yangtze Valley. Arriving in Shanghai, he repeated the promise to the German Consul. Recently the number of German war-ships entering the Yangtze has increased and, some time ago, the Viceroy acceded to a request to grant for German naval purposes a drill-ground under Lion's Hill Fort at Nanking. On learning this the United States Consul applied to the Taotai for a similar privilege, but was refused. He then cited the German precedent and contended that his application should be granted. This was the first the public heard of the matter, and now foreign war-ships entering the Yangtze are disposed to disregard all restrictions.

#### THE BARDENS AFFAIR.

ALL PROCEEDINGS WITHDRAWN.

(FROM OUR CORRESPONDENT.)

Kobe, April 22.

As a result of consultation between the representatives of Messrs. Samuel Samuel & Co., and Mr. F. J. Bardens all the proceedings in this case have been withdrawn.

#### LATEST SHIPPING.

##### ARRIVALS.

*Benalder*, British steamer, 1,959, C. K. McIntosh, 21st April.—London via ports, and Kobe, 20th April, General.—Comes & Co.  
*Hiogo Maru*, Japanese steamer, 882, N. Nielsen, 21st April.—Bonin Islands, Mails and General.—Nippon Yusen Kaisha.  
*Norrana*, Norwegian steamer, 973, H. Anderson, 22nd April.—Barrow, Pig Iron.—Captain.  
*Tefarlos*, German steamer, 1,812, Dessler, 22nd April.—Takao, General.—Osaka Shosen Kaisha.  
*Decima*, German steamer, 794, Hans Schlaikier, 22nd April.—Anping, General.—Osaka Shosen Kaisha.  
*Hyades*, American steamer, 2,932, Geo. Wright, 22nd April.—Seattle, Wash., 31st March Mails and General.—Dodwell & Co., Ltd.  
*Benworth*, British steamer, 2,164, W. Thomson, 22nd April.—Shanghai via ports, Mails and General.—Nippon Yusen Kaisha.  
*Feik*, Norwegian steamer, 744, J. Lorentzen, 23rd April.—Yokkaichi, 12nd April, General.—Nippon Yusen Kaisha.  
*Breconshire*, British steamer, 2,323, G. E. Elliott, 23rd April.—Kobe, 21st April, General.—Nippon Yusen Kaisha.  
*Jason*, British steamer, 4,880, T. G. Steeves, 23rd April.—Liverpool via ports, and Kobe, 21st April, General.—Butterfield & Swire.  
*Preussen*, German steamer, 3,278, R. Dahl, 23rd April.—Hamburg and Bremen via ports and Kobe, 22nd April, Mails and General.—H. Ahrens & Co., Nachf.  
*Empire*, British steamer, 2,843, P. T. Helms, 23rd April.—Australia via ports, Mails and General.—Comes & Co.  
*Haldis*, Norwegian steamer, 1,055, J. C. Jensen, 23rd April.—Cheloo, General.—Osaka Shosen Kaisha.

Calcutta, Medium to best	210.00 to 260.00
Madras (Karpas), Medium to best	140.00 to 220.00
Madras (Dry Leaf), Medium to best	100.00 to 140.00

## EXPORTS.

## RAW SILK.

There has been more life in the market this week, and prices have taken a turn upwards. The quality of present offerings has not improved, however, and sellers are doing very well indeed by getting rid of the dregs of the crop at such good prices. There is nothing fresh about new crop. All seems going well so far.

# ITCHING HUMOURS

## SPEEDY CURE TREATMENT FOR EVERY HUMOUR.

Bathe the affected parts with hot water and CUTICURA SOAP, to cleanse the skin and scalp of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply CUTICURA OINTMENT freely to allay itching, irritation, and inflammation, and soothe and heal, and lastly take CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. This pure, sweet, and wholesome treatment affords instant relief, permits rest and sleep, and points to a speedy, permanent, and economical cure of the most torturing, disfiguring, itching, burning, and scaly skin, scalp, and blood humours, eczemas, rashes, and irritations, from infancy to age, with loss of hair, when all else fails.

# MILLIONS USE CUTICURA SOAP

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, and for all the purposes of the toilet, bath, and nursery. Millions of Women use CUTICURA SOAP in the form of baths for annoying irritations, inflammations, and excoriations, for too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative, antiseptic purposes which readily suggest themselves to women, especially mothers.

## CUTICURA RESOLVENT PILLS, CHOCOLATE COATED,

Are a new, tasteless, odorless, economical substitute for the celebrated Liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials containing 60 doses. CUTICURA PILLS are alterative, antiseptic, tonic, and digestive, and beyond question the purest, sweetest, most successful and economical blood and skin purifiers, humour cures, and tonic-digestives, yet compounded.

CUTICURA PREPARATIONS are sold throughout the world. Australian Depot: E. Towns & Co., Sydney. British Depot: 27-28, Charterhouse Sq., London. French Depot: 2 Rue de la Paix, Paris. Forras Devo and Ours. Coar, Sole Prop., Boston, U. S. A.

## WASTE SILK.

Small business. Daily purchases of no great moment at quotations. The season, however, is evidently drawing to a close.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 6TH, 1905.

## SUMMARY OF NEWS.

EIGHTEEN sergeants have been promoted sub-lieutenant.

PRINCE and Princess Arisugawa arrived on April 29th at Aden.

SNOW fell on the morning of April 29th at Morioka, Iwate prefecture.

ON the night of April 29th, two Japanese vessels were wrecked at Shimonoseki.

VICOUNT A. SAISHO, a councillor of the Palace, has been appointed to the Privy Council.

AN official report from Formosa says that on the 25th April 34 cases of plague appeared in that island; 31 proved fatal.

AT 2.30 p.m. on April 28th, hail fell at Oiso for seven minutes. The damage to tea and mulberry leaves was slight.

A CASE of small-pox was reported on April 27th in the district of Tsuno near Nagasaki. The patient is a man who recently returned from China.

AN official report says that about yen 55,000,000 of war notes are now in circulation at the front. At one time they had accumulated to about eighty million yen.

ON the morning of May 3rd, a landslide occurred at the fifth tunnel near Yamakita station on the Tokaido Railway just as a freight train reached the place. The result was that the

locomotive was slightly damaged and the tunnel was closed. After about three hours the obstacles were removed.

S. MASADA, a bluejacket of Yokosuka Naval Station, has been sentenced by Court Martial to nine years' confinement with hard labour on a charge of robbery.

SOME Tokyo papers report that about seven hundred Russian bluejackets now in detention at Hamadera and other places were to be released at Kobe on May 5th.

SINCE the outbreak of the war up to the present time, the deaths of Russian prisoners in Japan number 140, and at Port Arthur, Dairen and other places 1,400.

It is reported from Takamatsu that five members of the Toyama Prefectural Council have been arrested on a charge of having accepted bribes from contractors.

A. DOHI, (25) a coppersmith, residing at Otamachi, Yokohama, on April 29th committed suicide by drinking a quantity of poison. The cause is said to be heavy debts.

OWING to trouble between the Governor and the Kurume City Assembly as to the election of a mayor, the Minister for Home Affairs has ordered the dissolution of the assembly.

A PASSENGER who arrived at Moji on May 2nd says that in the neighbourhood of Yingkow, floating mines are often observed and dense fogs have continued for several days past.

SOME cases of scurvy have appeared among the Russians in detention at Matsuyama and Osaka. Dr. Okada left Hiroshima on April 30th to investigate the cause of the disease.

It is officially reported that during the year 1903, the births throughout the Empire numbered 1,540,737; still born, 154,177; deaths 940,037; marriages, 373,607; and divorces, 66,417.

THE Nippon Yusen Kaisha, says the *Asahi*, has ordered from shipbuilders in England two steamers each of some two thousand tons. They will be put on the run between Japan and North China.

THE Nippon Kyosai Kwasha, of Nagano prefecture, has been ordered to wind up its business and to pay a fine of five hundred yen on a charge of having carried on life insurance business without a license.

TOKYO papers report that the Kaiser has presented, through Prince Karl Anton, fifteen thousand marks to the family of Lieutenant Ishihara who was killed at Port Arthur while attending on the Prince.

A COOLIE named T. Morimoto (28) was arrested on April 29th by the Harbour police at the Western Hatoba. The charge was that he had stolen 150 bundles of raw silk from the German mail steamer *Preussen*.

POSTHUMOUS honours have been conferred on 551 officers who died at the battle of Mukden. They receive the Golden Kite of the fifth and seventh classes as well as the Rising Sun of the third and seventh classes.

MR. DEN, Vice-Minister for Communications, arrived on April 27th at Seoul from Manchuria, where he had inspected the railway and other transport lines. He will leave the Korean capital for home after 4 or 5 days.

THE growth of wheat and barley this year throughout the Empire is excellent, and the crop is expected to be very prolific. The *Asahi*

reports that the crop in Saga prefecture will probably be double that of last year.

PRINCE KARL ANTON will leave Tokyo on May 7th for western cities on his way home. On the 5th and 6th he will give farewell dinner parties in Shiba Palace, inviting Prince Kan-in and other notables.

PRINCE FUSHIMI left Tokyo on May 4th by the 6 p.m. train for Kyoto to be present at a general meeting of the Butoku Kwa, which society aims at reviving the military morale of ancient times. He will return within three weeks.

A FILE of illustrated postcards and pictures injurious to social order, which were recently confiscated at many booksellers' shops, were burned on May 3rd in the compound of the Tokyo Metropolitan Police Office.

TOKYO papers say that Count Arco Valley paid a visit at 5 p.m. on April 30th to Mr. O-oka, President of the Tokyo City Assembly, conveying the condolences of Prince Karl Anton on the death of his (Mr. O-oka's) daughter.

MR. S. HAYASHI, Japanese Consul at Bombay, telegraphed on May 1st to the Department of Foreign Affairs that business in cotton is entirely suspended and that steamers have delayed their departure for Japan War risks advanced 1½ per cent.

T. YOSHIDA, a socialist, was arrested on the evening of April 27th while delivering a speech in the Imakin Club, Kanda, Tokyo. The charge is that he had obtained money by menace from a priest of the Buddhist temple Saikwoji, Asakusa, Tokyo.

DURING April, says the *Official Gazette*, the average prices of bonds on the Tokyo Exchange were as follows; pension, yen 95.50; naval, yen 81.80; redemption, yen 83.20; war, yen 83.20; 5 per cent. yen 78; and Tokyo city, yen 92.70; all face value being yen 100.

THE tea traders of Yokohama held a conference on April 27th at their club and settled a standard price for new tea: *Tenka-ichi* (best) yen 60 to 65; *Mare-kashira* (superior), yen 44 to 45; *O-kashira* (choicest) yen 37 to 38; and *Nami-mono* (medium) yen 32 to 33.

THE *Jiji* says that an American engineer employed by the Osaka Gas Company was assaulted on April 27th by coolies and sustained a severe injury in his back. He was inspecting some works at Yokohori-cho, at the time of the assault. Subsequently 13 men were arrested.

A FORMOSAN correspondent reports that some savages have appeared at a village near Palisha in Giran prefecture, where two of them were killed by underground mines. It is said that mines are always laid in places where barbarous natives are expected to appear on raiding expeditions and that by this means their attacks are prevented.

DURING February, the income of the Nippon Railway and thirty-five other private railway Companies was yen 1,385,608 from passenger trains, yen 1,280,770 from freight trains, and yen 134,368 from sundries. The figures show an increase of yen 136,677 over last year. The length of railways this year is 3,263 miles.

THE *Kokumin* has a telegram from Peking that Prince Leopold decided to leave on April 30th for the front to attend the Russian Army. He intends to make his way to Chankiakaw, and then traverse the Gobi desert. Thus he will reach Siberia via Kuloh, outer Mongolia. Another paper reports that for travelling purposes he has purchased a number of camels.

## THE BALTIC SQUADRON.

Friday, April 28, a.m.

The whereabouts of the mysterious squadron remains obscure. There are many rumours but none is confident. Whether Rojestvensky is loitering in the interval of some 300 miles between Kamranh and Hainan, or whether he is frankly using the ports of the latter island, is purely matter of conjecture. It is alleged that the harbours of Hainan offer special facilities, and that whether the Russian Admiral chose the northern or southern port, he could count on his ships being invisible to passers-by. But this latter seems an incredible conjecture. Ten or fifteen vessels might perhaps conceal themselves, but when the operation has to be performed by thirty or forty it assumes a different complexion. Wherever Rojestvensky be—and we have little doubt that his hiding place will speedily be discovered—all agree that his plan is to wait for the Third Squadron, and after junction with it some suggest that he will possibly endeavour to take advantage of the fogs which begin to prevail in the China Seas from the month of May. Underlying this last forecast is an idea that to avoid a fight is the first object of the Russians, but although it may be taken for granted that if they could get their mob of vessels unscathed to Vladivostock, and could there make leisurely dispositions for subsequent enterprises, that result would please them best, still it must be equally assumed that they have in prime view the recovery of the command of the sea, and that they will not deliberately choose the risk of navigating in a fog to the risk of fighting. After all, Rojestvensky can not accomplish much by interneging his war-ships at Vladivostock. That is not what the Tsar has sent him eastward to do.

Meanwhile, as we have already suggested, the Third Squadron also is beginning to be mysterious. If it passed the Sunda Strait on the 22nd instant, as was confidently reported, and if it thereafter proceeded northward, it would have been navigating seas thickly frequented by merchant steamers, and must have been sighted and reported. But there has not been a word about the Squadron since that first message, which thus remains strangely unconfirmed. The belief is therefore that the Third Squadron did not pass the Sunda Strait on the 22nd and has not yet passed it. There is an alternative supposition, namely, that the Squadron did pass the Strait and that thereafter Nebogatoff steered at once for the Macassar passage, his instructions being to proceed to some island in the Pacific where Rojestvensky will meet him. Assuming that programme, it would be intelligible that Rojestvensky himself should also have disappeared from immediate observation, since he too would have steamed eastward *via* the Bashi Straits and would now be ploughing the waters of the wide Pacific towards his rendezvous with Nebogatoff. The same comment applies to Rojestvensky as to Nebogatoff. If the latter's passage up the China Sea could not fail to be observed and reported, neither could the former's passage down that Sea. Hence it is impossible to place any credence in St. Petersburg's statement that the Second Squadron is to join the Third in the neighbourhood of Batavia, and that the two will then steam for Vladivostock. Indeed the mere provenance of this programme would be enough to discredit it, for the last thing to be expected from St. Petersburg is a true revelation of Rojestvensky's plans.

Since the above was in type news of Rojestvensky's whereabouts has been received.

Saturday, April 29.

The Baltic Squadron is, of course, at liberty to cruise off the coast of Indo-China without molestation. Very little apprehension need be entertained by Rojestvensky that the Japanese will go there to seek him. But in the meanwhile he is burning coal and consuming supplies. It does not appear that he is lying at anchor. The expression used in the official telegram of the 28th instant to describe his doings indicated that he was moving hither and thither in the region between Kamranh Bay and Cape Valera, and consequently he was burning coal much of the time. Even though he anchored his vessels—supposing him to be within reach of a lawful anchorage—he would still have to keep his fires alight and his men fed. Three weeks have now passed since he made his way through the Straits of Malacca and appeared in Far Eastern Seas. Evidently he is waiting for the Third Squadron, and as the Third Squadron has not been sighted anywhere since it left Jibouti, there is no means of computing when it will join him. Meanwhile the Hongkong authorities are exercising keen vigilance to prevent unlawful furnishing of supplies to his ships, and though Saigon probably follows a different course, it is evident that the question of coal and stores must be serious. The prolongation of the present situation is decidedly embarrassing for the Russian Admiral, and we should not be surprised if at any moment he took everything his transports could furnish, and made a dash for Vladivostock with the best ships of his Squadron.

The British Government has gone so far as to stop the departure of the troops in garrison at Hongkong when their reliefs came in the usual order of things.

Sunday, April 30.

A German steamer which has arrived at Shanghai reports that she saw the Baltic Squadron steering south on the 23rd April, but she does not mention where this observation was made. It is rumoured in Shanghai that one of the ships said to have been captured by the Russians was the *Orlando* (?) bound for Moji from Saigon.

Another Shanghai report says that although a part of Rojestvensky's Squadron is cruising off the coast of Annam, his chief ships are lying snugly in Lingshui-wan, a bay on the south-east of Formosa.

Steamers are said to be constantly plying between Saigon and the Baltic Squadron, and the statement is repeated that fifty thousand tons of coal are stacked at the French port for Rojestvensky's use.

A steamer which left Hongkong on the 24th of April and reached Moji on the 29th reports that the departure of the Baltic Squadron from Kamranh Bay was a purely nominal operation. The ships are lying at the Condore Islands and at another island on the north shore of the Bay. The Condore Islands are French territory. The same steamer says that German and French steamers are constantly plying between the squadron and Saigon, and that there is a suspicious depot of ten thousand tons of coal in Java, where also strange steamers are seen.

What is to be understood by Reuter's statement that the Squadron did not leave Kamranh Bay until the 26th of April? Taken in conjunction with St. Petersburg's denials that France really addressed any remonstrance to Russia or imposed any restrictions upon Rojestvensky's doings,

it looks much as though a deliberate attempt were being made to sow seeds of trouble between France and Japan; or, perhaps, that Russia is anxious to dispel any European notion as to coldness on the part of her ally. Whatever be the motive of the canard-mongers, the public will be very reluctant to believe that there has been any deliberate breach of faith on France's part. We may, indeed, take it for granted that Rojestvensky has remained within easy reach of the shores of Annam—the necessity of having means of communication and of procuring stores would dictate that course—and we may also take it for granted that he is not cruising all the while, but that he slips into a convenient anchorage whenever occasion offers, which is probably very often. One can conceive that France is not bringing much zeal to the discharge of her neutral obligations though she is avoiding any violation of the letter of the law. As to the allegation, however, that her statements to Japan were deliberately deceptive and that Rojestvensky was allowed to remain in Kamranh Bay until the 26th, it is not to be easily believed.

With regard to the Third Squadron, said to have been sighted off Penang on the 27th ult., the distance from that place to Cap Valera, where Rojestvensky is supposed to be lying, is 1,200 miles. Consequently if the Third Squadron steams at 10 knots an hour, it should take just 5 days to effect a junction, and thus the whole fleet would be united on the 2nd of May. Thereafter interesting developments might be expected. London thinks—according to the *Hochi Shimbun*'s telegrams—that after being joined by the Third Squadron Rojestvensky will stand out into the Pacific, but London does not say how he would occupy himself there. Hongkong is reported to be betting that the great encounter will take place off Luzon. There is plenty of scope for betting.

Monday, May 1.

Telegrams received by the *Jiji Shimpō*, the *Asahi Shimbun* and the *Hochi Shimbun* state that the Third Baltic Squadron passed Singapore on the night of the 29th ultimo. It had been expected that the passage would take place sooner, but some people in Singapore shrewdly guessed that in order to conceal its movements as much as possible the Squadron would slow down so as to reach the Straits of Malacca during the night of the 24th, which is precisely what happened. The number of vessels is variously put at 27 and 22. Hongkong reports that one of the cruisers seemed to have been damaged.

Saigon is said to be incredulous about the alleged seizure of two rice-laden steamers, but Japanese journals report the receipt of telegrams in Yokohama saying that one of the two was consigned to Messrs. Jardine Matheson and Company, the other to Messrs. Samuel Samuel and Company.

Vessels arriving in Hongkong report that on the 26th instant they saw Rojestvensky's squadron in Kamranh Bay, and one ship states that one of the Russian vessels is undergoing repairs in Saigon. This may be one of the destroyers which collided recently when visiting a merchant steamer.

The conflicting reports as to the doings of the Squadron are beginning to become intelligible, but hypotheses are needed. It will be remembered that according to the French official statement Rojestvensky left Kamranh Bay on the 22nd. Then on the 24th a Reuter's telegram said that the *Svetlana* cruiser, the *Orel* hospital-ship and 12 transports were still in the Bay, and finally Reuter informed the public that the

squadron had left the Bay on the 26th, which latter statement was confirmed from other sources. What seems probable is that the main part of the Squadron—the battle-ships and the heavy cruisers—left Kamranh on the 22nd, but proceeded only a short distance up the coast, preserving communication all the while with another section—the cruiser *Svetlana* and the other ships mentioned above—which remained in the Bay until the 26th, and then followed the main squadron. If that was the state of affairs, it is not surprising that some Japanese journals should complain of the want of practicality shown by France in enforcing her neutrality. The Baltic Squadron may have put one foot outside the French vestibule but so long as it kept the other inside, it enjoyed nearly all the advantages of the mansion's shelter. At all events the now obviously obsolete three-miles' limitation is enabling the Russian Admiral to have, in effect, the benefit of a naval base in French territory, where he can equip his Squadron and re-organise it.

These suspicions are very strongly put forward by several writers who urge that the Japanese Government should address renewed remonstrances to France. Of course it can not be denied that Rojestvensky is making a rendezvous, to say the least, at some point in the immediate vicinity of French territorial waters. Possibly even the three-mile limit it is not observed by him, but however that may be it is hard to imagine that he can find safe anchorage without violating French neutrality.

Increased credence seems to be given to the theory that Rojestvensky, after being joined by the Third Squadron, will linger in the neighbourhood of Annam until the foggy season sets in, when he will essay to pass the straits of Tsushima unobserved. But there are two difficulties connected with that programme. One is that in order to be ready to take advantage of the fogs prevalent in the China Seas, he must approach much closer than Annam. Fogs do not last more than three or four days at the outside, and the Russian Squadron must necessarily move very slowly when navigating in a fog, for however reckless it might be of injuring neutral ships by collisions, it would have to think of the safety of its own units. Therefore if this fog project is to be adopted, Rojestvensky will have to come up a great deal closer than the coast of Annam, and when he does that dangers from another source will commence. Besides there are the cyclones. These generally begin at the end of May and there is scarcely a month from that time until October free from such scourges. With reference to this the *Kokumin* publishes a table showing the number of cyclones that visited the China seas during the period 1880 to 1901:—

May .....	24
June .....	35
July .....	66
August .....	63
September .....	78
October .....	55

A cyclone in the China Seas is something much fiercer than the typhoons we experience in Japan. Rojestvensky must take into account this element of the situation.

The passage of the Malacca Straits by the Third Squadron on April 29th is confirmed. But there is no intelligence as to the number of the ships composing the Squadron.

The statement that the Second Squadron was still in Kamranh Bay must not be taken as referring to the main body of the Squadron. It may be regarded as certain that the main force of the Squadron left the Bay on

the 22nd of April. Thereafter the vessels proceeded in a direction which appears to be known but is not disclosed, and were observed going in and out, making occasional but not continuous use of a temporary anchorage.

Tuesday, May 2.

The fact that the Third Squadron passed the Straits of Malacca on the 29th ultimo is now generally accepted, but it is thought that the Squadron is not moving at a higher speed than 8 knots, and that, consequently, it cannot effect a junction before the 3rd or possibly the 4th.

Meanwhile rumours continue to arrive suggesting that Rojestvensky is still abusing French neutrality. The *Nichi Nichi Shimbun* has a telegram saying that his squadron did indeed leave Kamranh Bay on the 22nd instant, but that, after a short cruise in the offing, a portion of it re-entered the Bay and remained in constant communication with another portion outside. The fact is that everyone is perplexed to understand what Rojestvensky has been doing since the 22nd of April. It is inconceivable that his ships should have been under weigh throughout the 12 days which have elapsed, and if he goes in to anchor here and there, his anchorages must be within French territory as there are no other positions suitable for that purpose. But on that hypothesis he is abusing French neutrality just as much as though he were lying all the time in Kamranh Bay. The *Nichi Nichi* does not profess to believe these rumours. It clings to the conviction that France is doing her duty loyally. But evidently it is suspicious, for it says that if the rumours prove well founded, France will have been acting in a most unfriendly way towards Japan, and her conduct may possibly lead to very lamentable consequences.

Wednesday, May 3.

The Third Squadron has now become a mystery. Nothing whatever has been heard of it since its reported passage of the Malacca Strait on the 29th of April. Did it really pass the Strait? That is what naval men now doubt, more than doubt. Berlin telegraphed on the 17th of April that the Squadron had been sighted on the south of Ceylon. Then followed the report of the *Catherine Apar* that the Russians were at a point 60 miles south of Penang on the 27th of April. Now if the *Catherine Apar*'s people spoke accurately, the Squadron should have passed Malacca Strait on the 29th, which is precisely what it was reported to have done. But the report appears to have been of a decidedly vague character. The event was said to have taken place during the night, and no eye-witness of it has been found, so that, not unreasonably, a strong suspicion is now entertained that the story had its origin in nothing more substantial than Singapore's expectation of the Squadron's passage at that very time. The sum of the matter is that Nibokadoff and his ships have now become another unknown factor in the situation.

As for the Second Squadron some accounts put it near its old haunt on the Indo-Chinese coast; some represent it having already steamed away towards the Philippines. The most circumstantial statement comes from the people of the steamer *Stettin*, which, arriving at Hongkong, reported that she had seen some 30 of the Russian ships anchored in Honko Bay, and that they had coal-bags piled on their decks to a height of some 15 feet. That is explicit enough, but it may be reconciled with the

Philippines story by assuming that Rojestvensky's vessels are not remaining in one group. If they were divided into two or three sections, each seeking where it could an anchorage without absolutely losing touch of the main squadron, the conflict of accounts would be intelligible.

Shanghai says that Rojestvensky is furnished with good Chinese pilots who can take his ships through all parts of the China Seas. Meanwhile the fogs have commenced. A chartered steamer of the Nippon Yusen Kaisha reports that she was enveloped in fog all the way from Shanghai to Nagasaki.

Japanese journals are again growing bewildered as to Rojestvensky's intentions. A few days ago the public had agreed to think that the Russian Admiral would linger in Cochin-Chinese waters until Nebogadoff's ships joined him and that the united fleet would then make a dash for Vladivostok. But now many theories are propounded; such as that Rojestvensky does not mean to fight at all; that he merely seeks to menace the Japanese communications; that he is intended to serve as a factor in negotiations for peace, and so forth and so on. But in what respect has the situation changed so as to warrant all these doubts? The only alteration we can see is that the Third Squadron's time of arrival has become uncertain. Granted that two days ago Rojestvensky was awaiting the coming of Nebogadoff, why should he not be still waiting to-day? Perhaps the idea underlying these doubts of our Tokyo contemporaries is that the access of strength which Nebogadoff's vessels would bring, is not worth the long delay entailed by waiting for them. That is a theory hard to endorse. Every additional ship is of importance when the strengths of the combatants are so nearly balanced. It is very conceivable that Rojestvensky may hope to entice the Japanese down to Indo-Chinese waters, but it is not conceivable that he should devote any very lengthy period to that essay. If he lingers much longer on the coast of Annam, the question of French neutrality will present itself as forcibly as ever; more forcibly, indeed, for France having now publicly recognised her responsibility, any abuse of it would show added flagrancy. Rojestvensky can not remain in South-Chinese waters unless he uses the ports available there, and if he uses them he is violating French neutrality. His tether is not interminable. Very soon he must show his hand.

#### THE NAVAL SITUATION.

It is stated that the Russians have purchased in Shanghai several steamers which are to proceed to Batavia with coal and stores for the Third Squadron. The inference is that Rojestvensky intends to lie in French ports of Indo-China until the Third Squadron joins him, and that the latter is coming by the Straits of Sunda. Meanwhile there is nothing new about this Third Squadron. Obviously the news that it had passed the straits of Malacca on the 29th ultimo was incorrect, as the Japanese naval authorities rightly conjectured.

The *Jiji Shimpo* has a telegram from Shanghai saying that Colonel Emerson, of the *New York Herald*, and Colonel Krieglstein, of the *Lokal Anzeiger*, have chartered a steamer called the *Wuchang* nominally for the purpose of viewing the naval engagement, but really with the same object as that pursued by Mr. Bennet Burleigh when he chartered the *Sampson*. Mr. Bennet Burleigh managed to get himself much talked of

during his visit to the East. He was about as ill-adapted for association with the Japanese as any man could possibly have been, for to great natural roughness of disposition and conspicuous lack of the refined politeness which is counted so important in Japan, he added unequivocal methods of domineering which might have served well enough in intercourse with timid savages but were not a good recommendation in this country. Possibly to these elements of his career as war-correspondent in the Far East, he owes some of the many strange stories told of his doings. But in the context of Colonels Emerson and Kriegelstein Mr. Bennet Burleigh's name ought not to be quoted, we think, for it is within our own knowledge, whatever the former two correspondents may now have done in Shanghai, they were recently endeavouring to effect a *bona-fide* arrangement, during their presence in Japan, to charter a vessel for the purpose of viewing the naval operations.

A steamer which reached Hongkong on the 3rd is said to have telegraphed *via* Shanghai that she saw a portion of Rojevsky's Squadron heading for the Bashi Straits on the 2nd. But this story commands no credence.

### "BUSHIDO."

An incident has occurred which illustrates the mood of Japanese soldiers. Four Russian hospital nurses who had been employed in the *Kasan* during the siege of Port Arthur, received permission after the capitulation to return home. They were about to land when, owing to some accident which is not explained, they fell into the sea and were in danger of drowning. Seven Japanese soldiers who happened to be in the vicinity, saved their lives after considerable exertions. Thereafter General Balashoff, Chief of the Russian Red Cross organization at Port Arthur, addressed to Major-General Iseji, commandant of the fortress, a letter warmly thanking the seven Japanese, enclosing a sum of 100 roubles for each of them, and saying that on his return to Russia he would recommend them for the life-saving medal. This letter bore date of March 31st. Major-General Iseji replied on the 5th of April. His answer is published:—"I beg to express thanks for your kind consideration. I intimated to the soldiers in question that they might receive your gift, but although I pressed them repeatedly they declined to accept any material reward. Their alleged reason was that they had not been animated by any expectation of reward when they saved the lives, but had merely obeyed the instinct of not failing to succour others in mortal danger. It was simply their duty as *bushi*. Were they to accept any reward, it would, on the contrary, be repellant to their feelings and opposed to their sentiment as soldiers. To those unacquainted with the nature of *bushido* this may be difficult to understand, but the men are firmly persuaded that except from their own sovereign they ought not to accept rewards for such acts. I abandoned the attempt to make them alter their minds, and I would beg of you, Sir, that, being assured they appreciate your kind intention, you should accede to their desire and leave their hearts in peace. With regard to the question of the Russian Government granting decorations to these men, I believe that they would gladly receive such a distinction after peace has been restored and when due permission has been obtained from the Japanese Bureau of

Decorations." On the 8th of the same month General Balashoff replied to this letter. He said that he fully appreciated and respected the military spirit of the brave Japanese soldiers in declining the reward he had sought to bestow on them, and he begged that the seven men might be sent to his quarters as he desired to thank them personally. He added that at a future date he would report the facts to the Emperor and would take steps to have a special medal granted to the men for saving life. As for the 700 roubles, he was anxious that they should be transmitted to the Japanese Red Cross Society and he asked Major-General Iseji to be the medium of conveying the money. It need scarcely be said that the money was handed over as desired and that the seven soldiers were sent to be thanked personally by Balashoff. The last time the public heard of this Russian officer was when he essayed to effect an arrangement, apparently unreasonable, for guaranteeing Russian hospitals at Port Arthur against Japanese artillery fire. By and bye some of the many penmen to whom this war gives occupation will doubtless turn their attention to its graceful incidents, for these would make a portly and attractive volume.

### INDO-CHINA AND JAPAN.

We commend to the attention of Frenchmen an article which appears in the *Nippon* of the 28th April. It deals with the subject of French apprehensions as to the future of Indo-China in the event of Japan emerging victorious from the present war. There are many Frenchmen to whom the bogie of the Yellow Peril presents itself as a reality. A great many. They do not, perhaps, reason very closely about the spectre's manner of materialization or mode of operation. Their uneasiness is vague, but none the less uncomfortable, and it takes the form that, somehow or other, if Japan become the leader of the Orient, Indo-China will not remain in French hands. It is with that apprehension that the *Nippon* deals in a quiet practical manner. It invites the French to reflect calmly whether they are exercising this Yellow Phantom by alienating the goodwill of its alleged representatives. Is it wise to encourage the growth of a danger in order to avert its consequences? Japan is the youngest addition to the comity of nations. The eyes of the school she has just entered are upon her. One need not credit her with any special moral excellence to see that her desire and even her necessity must be to walk circumspectly for many a year to come; to abstain from any act which might convert into antipathy the hardly won sympathy of Occidental nations. Would it not be wiser to count on that manifest obligation and to cultivate Japan's friendship rather than to alienate her by displays of marked distrust and to anger her by acts of manifest injustice?

That is the *Nippon's* article, and we venture to think that it merits attention.

### WATER-POWER FOR TOKYO.

The enterprise of supplying water-power to Tokyo has at length been taken up seriously, and as the names of Baron Shibusawa, Mr. Yasuda, Mr. Okura and Mr. Asano are connected with the work, its practical consummation may be regarded as pretty certain. The projectors held a meeting on the afternoon of the 26th ultimo in the Imperial Hotel. Their plan is to buy up and unite the water-power owned by the

Tokyo Water-power Company and the Buso Electric Company, and to start a large concern under the name of *Tokyo Denryoku Kaisha*, with a capital of 6 million yen. At the meeting on the 26th ultimo Professor Fujioka delivered a detailed lecture on the subject of water-power, and, after subsequent discussion, a committee of 7 promoters was appointed, namely, Baron Shibusawa, Mr. Asada, Mr. Okura, Mr. Asano, Mr. Tachikawa, Mr. Nakano, and Mr. Okochi. The committee then elected Mr. Asada as their chairman, and empowered him to take all necessary steps for inaugurating the enterprise. The two companies which are to be bought up possess water-power representing 34,000 horse-power at the Sagami River, 6,400 horse-power at the Fukara River and 1,600 horse-power at the Nakatan River. It is proposed to deal first with the Sagami, and to include the others at later dates as required. The calculation is that 16,200 horse-power is immediately saleable in Tokyo, namely, 12,085 kilowatts which being sold at 4 *sen* per kilowatt per hour would give an annual income of 1,650,560 yen, and as the running expenses are estimated at only 300,000 yen, a very large margin remains and a dividend of 19 per cent., might be looked for. At present the cost of a kilowatt of electric power is from 6 to 7 *sen*, so that the proposed rate of 4 *sen* would be a great gain to the electric tram and lighting companies.

The above estimate seems to us very optimistic. In the first place it is doubtful whether Tokyo would at present take twelve thousand kilowatts of water-power electricity; in the second, it is certain that the tram companies would not buy electricity at 4 *sen* per kilowatt when they can generate it themselves at about 3½ *sen*; in the third place the calculation as to running expenses allows only some 4½ per cent. for depreciation and reserves; and in the fourth place the sum allotted for initial outlay seems too small.

### THE PEACE RUMOURS.

If we may infer the mood of the Japanese people from the writings of the leading journals, gratitude is felt for the alleged endeavours of President Roosevelt to put an end to the war, but it is held that even though several of the great Powers of the Occident openly display their desire for the restoration of peace, nothing can be effected in that direction without the initiative of the chief parties concerned. Japan is fighting for permanent peace and she will not accept any patched up truce. It is for Russia to approach her. Until Russia recognises that her chances of emerging victorious from the war are hopeless, and until she comes to her adversary with proposals for peace, Japan must fight on. The destruction of Russia's armies in Manchuria and the crippling of her newly despatched squadron are the immediate objects of Japan. Until she attains those objects or until Russia sues for peace there can be no relaxation of effort. In so far as the efforts of the Powers tend to limit the area of the war, their value is of the highest order; especially just at present, when Russia, in her extremity, may not only resort to any act however lawless, but may even deliberately endeavour to draw other nations into the vortex. But so far as intervention in the cause of peace is concerned, it can not have much direct utility. Russia must ask for peace if she wants it, that is the view taken, in effect, by both the *Fiji Shimpō* and the *Shogyō Shimpō*.

## MANCHURIA.

Saturday, April 29.

The *Chuo Shinbun* thinks that the middle of May will see the opening of the renewed campaign in Manchuria. No special reasons are assigned, however, for this forecast, though it appears to us very probable. In the *Asahi's* correspondence we read that the Russians, after their recent defeat at Kaiyuan, and their subsequent retreat to Nienhuachieh, retired as far as Kuyushu and Yehhoching on the Kirin road and as far as Pamienching on the Fakuman-Changchun road. Along the line between Yehhoching and Pamienching they have some ten thousand troops, but as the distance between the two places is about 40 miles such a force is insignificant.

It does not appear to be believed in Japan that if Kuropatkin has resigned, the reason is a difference of opinion with Linevitch such as the telegram attributes to him. The two men are certainly of very different dispositions: one being the personification of caution, the other a man of impulse and strong resolves. But how can Linevitch be thinking of succouring Vladivostock by an offensive movement, unless he has revived the idea of an invasion of Korea from the direction of the Tumen? We do not ourselves think that programme by any means inconceivable from one point of view now that the Baltic Squadron has materialized. But it would be a mad programme unless Linevitch could secure his communications with Harbin, and how could he possibly do that under existing circumstances? At any rate the section of Japanese military opinion quoted by the *Fiji Shimpō* does not credit Linevitch with any project of assuming the offensive for Vladivostock's sake, and thinks rather that his resignation—which appears to be credited—is due to the difficulty of serving under his former subordinate.

The Hungtutz in the pay of the Russians are putting in an appearance now and again in the eastern part of the field, but their forays against Japanese provisions and horses are not successful.

The railway is not yet restored as far as Tieling. It will be opened to traffic by the 4th of May.

Monday, May 1.

The *Fiji Shimpō* has a Shanghai telegram from Harbin saying that up to the end of March 2,100 men reached Harbin daily, and that the greater part of them proceeded to Vladivostock. The information is bewildering. Nothing is said as to the number of days during which this remarkable feat of transport was accomplished, nor anything as to the provenance of the troops in question.

Otherwise the situation in Manchuria is represented as unchanged.

Tuesday, May 2.

Mr. Hu, Chinese Representative in St. Petersburg, has telegraphed to his Government that the new Russian levies, 200,000 men, who are to be sent to Harbin and Kirin, are undisciplined troops, likely to be guilty of great excesses against the Chinese inhabitants. He therefore urges that the Governors of Kirin and Harbin should be warned to take due precautions. So far as we can see, however, no precautions are possible. The only effective measure would be to remove the inhabitants *en bloc* to China proper, and the Russians would not allow that even were it practicable.

The citizens of Mukden, pleased with the kindly treatment they are receiving at the hands of the Japanese soldiery, have contributed a sum of 100,000 yen to the Soldiers' Relief Society.

It is stated that the Russians are suffering from want of provisions, fodder and horses. They are adopting extensive measures to supply this last deficiency, but the Chinese being unwilling to sell, it is found necessary to coerce them, and for that purpose requisitioning parties of Russians are moving through the country.

Thursday, May 4.

The Russians in the eastern part of the Manchurian field are reported to be steadily retiring towards Vladivostock in the face of the Japanese advance. Frequent skirmishes are said to be taking place, but they have not caused any change in the situation. These skirmishes are probably the origin of Linevitch's report that the Japanese have been driven from five positions consecutively, but no importance nor any credence is attached to the report in Japan, where it is regarded merely as an attempt to restore the complexion of the situation in Russian eyes. Mischenko's wound is reported to have healed, and he is again at the head of the Cossacks.

The dangers of navigation to Yingkow have been increased by heavy fogs prevailing since the middle of April. These added to the knowledge that mines are floating about in the neighbourhood of the Miao Islands, necessitate such caution that vessels no longer continue under weigh at night.

Friday, May 5.

A few days ago General Linevitch reported that on the night of the 29th of April his troops attacked the Japanese at a place which, as he wrote it, was not easy to identify, with the result that the Japanese were driven from five positions consecutively and the place fell into Russian occupation. From the *Nichi Nichi Shinbun* we now learn that the place in question was Tungghwa, which, as our readers may remember, lies due east of Hsingking (*vide* our map of April 23rd), but as to the place having been captured by the Russians, that is a myth. It is true that during the night they effected an entry into a part of the town and did some damage to the streets, but seeing the approach of a strong Japanese force they retired precipitately. Tungghwa is adequately held and there is not the slightest fear of any successful Russian enterprise against it.

## GENERAL KAWAKAMI.

For some months past people passing near the Tayasu Gate, on Kudan-zaka, in Tokyo, noticed the construction of a granite pedestal on which was ultimately erected a fine bronze statue of an officer in the uniform of a General. This statue was unveiled on the 28th ultimo. It is to the memory of the celebrated General Kawakami, Chief of Staff during the war of 1894-5, organizer of the armies that took part in the campaign, largely responsible for its strategy, and subsequently the planner, if not the actual author, of the scheme of military expansion to which this country owes the victories of the present war. Like many distinguished Japanese Generals Viscount Kawakami impaired his constitution by excessive application to duty, and to the profound grief of the nation illness carried him off. The friends and admirers of the great strategist and organizer took steps to have a statue

erected. They easily collected a sum of 7,668 yen, and the work of modelling the bronze was entrusted to the well-known sculptor Okuma Ujihiro. The figure is 8 feet high; it weighs a little more than a ton, and the height of the granite pedestal is 13 feet. The artist has represented his subject standing in an easy pose and holding his hat in his right hand. Major-General Iguchi, chairman of the Committee of Construction, chose the 28th of April as a suitable time for the unveiling ceremony, in consideration of the fact that the victories the empire is now winning must be regarded as the fruits of the seed sown by General Kawakami. It was further decided that the ceremony should be of the simplest and least expensive nature, since such would certainly have been the wish of the distinguished officer himself. Nevertheless a great number of notables assembled at the appointed time, and their presence invested the ceremony with a most imposing character. The unveiling was performed by Viscountess Kawakami. Owing to her impaired sight she had to be guided to the place, but in spite of that disadvantage she performed her part with all the unconscious grace for which Japanese ladies are remarkable. An address was read by Baron Noda. It spoke in brief but eloquent terms of the immense services rendered to this country by the deceased, and of the nation's gratitude for brilliant results which, though General Kawakami had not lived to see them, must undoubtedly be attributed largely to his genius. A reply would have been read, in the ordinary course of things, by the deceased General's eldest son, Captain Viscount Kawakami, but as that officer is serving at the front, the duty was performed by his father-in-law, Viscount Ito.

## ENGLAND'S PART IN THE RECENT SETTLEMENT.

The *Fiji Shimpō* has an interesting article on the recent settlement with France. It thinks that the Kamranh-Bay question might have become very prolonged had not England approached the French Government on the subject. Until the exact facts as to Madagascar are known our contemporary refrains from discussing that incident, but for the rest, it frankly expresses the opinion that if there have been any apparent laches on France's part in the discharge of her neutral obligations, they have not been deliberate, but have merely been due to a certain measure of perfectoriness prompted by her natural desire to assist her ally. The Kamranh problem, however, threatened to become acute when happily England stepped in, and the Paris statesmen, in deference to their country's newly established *entente* with Great Britain, could not but listen attentively to what the latter said. The *Fiji* takes this to be a proof that England is determined to fully discharge all the obligations imposed by the alliance, and that if any third Power attempt to interfere, it will at once find itself confronted by England. What has further to be noted is that, if England's intervention be considered, it becomes obvious that France must regard herself as having given assurances to England as well as to Japan, which means that she will be all the more careful in abiding by her statements. Therefore the *Fiji* thinks that no serious note need be taken of St. Petersburg's denials as to having received any intimation from Paris. In short, the *Fiji* is persuaded that France is acting with good faith, a view which we entirely endorse.

# FURTHER DRAFTS ON THE TERRITORIAL ARMY.

The *Official Gazette* of the 21st April published an Imperial Ordinance—No. 153—empowering the Minister of State for War to make further drafts upon the Territorial Army. As the Ordinance requires some explanation we shall translate it paragraph by paragraph.

Art. I.—The first article says that "the Minister of State for War shall be competent to enact the necessary regulations for re-drafting into the reliefs (*hoju-kei*) the following classes of men serving in the Territorial Forces:—

(a) Those serving in the First Territorial Army.

By this are understood those who have finished their service as Second Reservists (*gobikei*) and those who, having been called out as reliefs, have finished their period of service as such.

(b) Those who have served six weeks with the colours and have been drafted immediately into the Territorial Forces.

Six-weeks'-service men are those having certificates of graduation from Normal Schools, and teachers in public or private Elementary Schools. According to the Japanese military system such persons are drafted into the Territorial Forces after six weeks' service with the colours. They will now be liable to be enrolled among the reliefs.

(c) Those who, having finished their period as Second Reliefs, have been drafted into the Territorial Forces.

According to the law originally in force, the period of service as First Reliefs was 7 years 4 months, and that as Second Reliefs 1 year 4 months. This law was changed last year in the sense of abolishing the distinction between First Reliefs and Second Reliefs, and making the total period of liability to be called out as reliefs 12½ years.

(d) Those who, being in excess of the number of conscripts required, have been drafted into the Territorial Forces.

This refers to those who, at the time of conscription, have not drawn any of the lots for service.

In time of war or emergency it shall be competent for the Minister of State for War to make, in accordance with the system of re-drafting into the reliefs, such regulations as may be necessary for re-drafting any of the Territorial Forces not enumerated in the above categories.

This simply means that in case the prescribed categories prove to be not exhaustive, the Minister of State for War may take steps to bring the omissions into the new system.

Art. II.—In calling out men of the Territorial Forces the Minister of State for War shall be competent to employ the ordinary enrollment system, and to conform with the provisions of the Army Enrollment Laws with reference to enrolling complements or reliefs. Provided that the Minister of State for War shall be competent to determine the time for exceptional enrollment and for disbanding.

The above Ordinance became operative from the day of promulgation. It will probably be difficult for lay readers to comprehend its provisions, and we may therefore explain briefly that it places at the disposal of the War Office for the purpose of filling vacancies in the ranks of the army in the field—all the units of the First Territorial Army. A youth in Japan becomes liable for conscription at the full age of 20. Then, if called out, he serves 3 years with the colours; 4½ with the First Reserve (*yobi*) and 10 with the Second Reserve. Then, at the age of 37½ years, he is drafted into the Territorial Forces, with which he serves until he is 40. There is a First Territorial Army and a Second Territorial Army, but the distinction between

them need not be immediately regarded. It will be remembered that an important Ordinance was issued last year, and that it was generally spoken of as rendering the territorial forces liable for active service in the field. That was a sufficiently instructive explanation for ordinary purposes. But the accurate fact was that the period of service prior to entering the Territorial Forces was extended by five years. The previous system had been thus:—3 years with the colours; 4½ years with the First Reserve (*yobi*) and 5 years with the Second Reserve (*gobi*). Thereafter a man entered the First Territorial Army and his military service was virtually at an end. In other words, supposing that he joined the colours at the age of 20—full age, not the age according to the Japanese method of counting—he passed into the First Territorial Army at 32½ years, having been borne on the active roll for 12½ years. But last year's Ordinance lengthened the period with the Second Reserve from 5 to 10 years, and thus, on the one hand, deferred the age of being drafted into the Territorial Forces from 32½ to 37½, and on the other, added to the available field army all men who though already in the First Territorial Army, had not completed 5 years' service with it. Now what the Ordinance just promulgated does is to extend the liability to the whole First Territorial Forces also, so that whereas men previously ceased to be liable at the age of 37½ years, they now remain liable until the age of 40.

Another point must be noted. When conscripts are called out, a certain proportion of them are placed on the roll of "reliefs." Men on the relief list are liable to be summoned to service with the colours at any moment during a period of 12½ years. Then they pass into the First Territorial Army (at the age of 32½), and have hitherto ceased to be liable for further service in the field. But these also become henceforth liable. So also do the six-weeks'-colour-service men and the men that have escaped the lot, at the time of conscription as explained above.

Yet another change has been made. It relates to the Second Territorial Army; namely, that all units of that Army whose period of service would have expired on the 1st of May next or at any subsequent date, will continue to be liable for service.

Here it is necessary to explain the difference between the First and the Second Territorial Armies. The First consists of all that have served with the colours and with the Reserves, as well as of all that have been actually called out as Reliefs. The Second consists of all other classes, as six-weeks'-service men; men that have been borne on the roll of reliefs for 12½ years but have not been actually called out; men that have escaped the lot at the time of conscription and so on.

It is understood that the power vested in the Minister of War by this Ordinance will not be immediately exercised, and, indeed, may not be exercised at all: the measure is merely precautionary. What the Ordinance effects immediately is to remove any arbitrary element from the method of summoning men from the Territorial Army to the colours. The plan hitherto pursued has been to divide the total required number unequally among various districts and to leave local officials to make the selection arbitrarily. But the second Article of the Ordinance directs that the Minister shall

follow the regular system applicable in the army under normal circumstances.

It is not permissible to discuss here what addition the above Ordinances make to the numerical potentiality of the Japanese field army.

## THE YASUKUNI FESTIVAL.

A detail is published of those who, having died in battle or of wounds, were the objects of the Shokonsha ceremony at the Yasukuni Shrine, Kudan, Tokyo, on the 3rd and 4th instant. The detail is:—

ARMY.	
Major-General .....	1
Colonels .....	12
Lieut.-Colonels .....	36
Majors .....	116
Captains .....	254
Lieutenants .....	345
Ensigns .....	327
Persons ranking with officers .....	220
Total officers .....	1,311
Rank and File .....	27,688
Total for Army .....	28,999
NAVY.	
Post Captains .....	6
Commanders (ranking with Lieut. Colonels) ..	4
Commanders (ranking with Majors) .....	19
Captains .....	23
Lieutenants .....	14
Second Lieutenants .....	36
Persons ranking with officers .....	47
Total .....	149
Bluejackets .....	1,738
Total .....	1,887
The Emperor and Empress have subscribed 3,000 yen towards the outlays for the festival.	

Unfortunately both the Emperor and the Empress were unable to attend the Shokonsha festival on the 4th. His Majesty is still somewhat indisposed and the Empress is laid up with a cold contracted two days ago. The Emperor was therefore represented by Prince Fushimi and the Empress by Princess Kanin.

It is stated that among the deceased officers and men whose spirits were worshipped at the Yasukuni festival there are 1,726 military men and 751 naval who possessed the Order of the Golden Kite. This shows that one man in every 16.8 of the Army's dead and one in every 2.5 of the Navy's enjoyed that much valued distinction.

## A STRANGE CANARD.

On the 1st instant the *Tokyo Asahi Shimbun* received a telegram from London that the Tokyo correspondent of *The Times* had telegraphed to that journal in the sense that the Anglo-Japanese alliance would not be continued after the war. This is a very singular mistake. It has evidently caused some anxiety to our contemporary for a representative of the latter is said to have interviewed the British Minister on the subject, when His Excellency visited Osaka on the 1st instant. The Minister rightly conjectured that if any telegram had been sent by *The Times'* Tokyo correspondent it must have been intended to contradict the rumours prevalent in St. Petersburg as to the probability of a Russo-Japanese alliance after the war. The fact is that no telegram was sent. A letter from Tokyo has doubtless appeared in *The Times*, combatting the idea of a Russo-Japanese entente and showings that the heart of the Japanese people is with Anglo-Saxondom. By what blunder the gist of this letter has been telegraphed to the *Asahi* in a sense precisely the opposite of the truth, we can not understand.

## KOREA.

The transfer of the machinery of communications in Korea to Japanese hands has long been talked of and is now an accomplished fact. Korea adopted the postal and telegraph systems of the West, but in her hands they proved a complete failure. We read in the *Kokumin Shinbun* that she has 16 first-class post-offices, 30 second-class, and 31 telegraph-offices, with from 200 to 300 minor stations. But her organization is limited to one phase of the work, and many important towns and commercial places are entirely omitted. Further, whereas other States contrive to make their posts and telegraphs profitable, they are a source of steady loss to the Korean Treasury, which has to disburse a sum of about 300,000 annually on this account, and being perennially unable to make ends meet, finds this special burden very onerous. The Japanese Government aims primarily at making Korea financially solvent and at promoting the development of her resources. For the latter purpose a really efficient system of communications is essential, and there is no practical reason why its organization should augment the perplexities of the Treasury. The only sound course seems to be that which Japan has adopted, namely, to take over the whole system, expand it, develop it and re-organise it. The responsibility is considerable and doubtless some initial outlay will be necessary, but matters would have been virtually hopeless had they remained in Korean hands. The transfer, it will be observed, is not permanent, neither does Japan seek to monopolise any profits that may accrue as a result of her superior management. She promises that when the state of Korean finances warrants restoration of the control of communications they shall be restored, and she further promises to share with Korea any profits that may accrue in the interim. More than that the Korean Government can not reasonably expect. Of course the whole procedure adds materially to Japan's political influence in the peninsular empire, and from that point of view it will be denounced by publicists to whom licence in a pigsty seems a more delectable goal than orderly civilization in a palace. The experiment of leaving Korea entirely free to manage her own affairs has proved terribly costly to Japan. It has involved her in two great wars, and she would be acting the part of a mad nation if she allowed matters to drift on in this disastrous groove. It is Korea's fate that her geographical position lends to her vital importance in Japan's eyes; importance much more intimate than Egypt has for England. If the Koreans can not discharge the responsibilities of their situation and do not even recognise them, Japan has to step into the breach. Academical ideals are very pretty things, but they are poor safeguards for imperial interests.

Dr. Morrison, who has just visited Korea, reported the result of his observations telegraphically to *The Times*. He speaks in very high terms of the activity and practicality shown by the Japanese. *The Times*, commenting on his report, compares Korea, in its relations to Japan, with Egypt in its relations to England, and says that any nation might be proud to have achieved what Japan has achieved in the peninsular empire. This news is telegraphed to the *Asahi Shinbun*.

The *Nichi Nichi* says:—"Work upon the sunken cruiser *Varyag* has proceeded rapidly of late. Preparations have now been completed for raising her, and the operation

will be attempted, according to present intentions, on the 19th instant when there is a high tide."

A branch of the Seoul-Fusan Railway is to be constructed to Ulsan. Surveys will shortly be undertaken. The distance is 35 miles.

The Korean Government has nominated to act as its Consul in Hawaii, Mr. Saito, the Japanese Consul there.

With regard to the Belgian Consul-General's application for a mining concession, the Korean Government has replied that it will take occasion to consider the matter.

## RAILWAYS.

One of the financial precautions adopted by the Japanese Government on the outbreak of the war was to suspend the prosecution of all public works capable of being delayed without palpable loss. It was an unfortunate necessity for it checked the development of the country's resources at a time when all sources of income called for exploitation. On the whole, however, the Government had no choice. We now read in Tokyo journals that at a Cabinet meeting on the 28th of April, it was decided to exempt from the ban of suspension the Okaya-Shiojiri section of the railway from Tokyo through Kofu to Suwa in Shinshu and thence to Shinano; that is to say, the so-called East-Central Road. The length of line concerned is only 16 miles 76 chains and much of the work has already been completed. We may mention that the West-Central Railway is that running north-east from Nagoya into Shinshu, and connecting at Shiojiri with the East-Central which runs north-west from Kofu. At Shiojiri there is another junction also, namely, with the line which starts from Shinonoi station on the Karuizawa-Echigo road and runs southward. The Maizuru line, being required for strategic purposes, was 'excepted from the ban of suspension; so was the O-U connecting line (from Awamori to Akita) and so also was the Fujimi-Okaya road, with reference to which the Treasury, in consideration of local petitions, agreed to make special financial arrangements. The decision now adopted with respect to the Okaya-Shiojiri section is said to have been dictated not merely by local interests but also by considerations of State economy. Shinshu is the great silk-producing region of Japan, but goods exported thence have to cross the Usui Pass to get to market, and every season there is a block more or less troublesome. Echigo's oil, also, suffers from want of carrying facilities, and the well-owners are now talking of laying a pipe over the Usui summit. By building the Okaya-Shiojiri line these difficulties will be overcome for the most part. The heaviest piece of work on the line is the Utou tunnel at the Ono Pass. It has a length of 5,422 feet. But the work of piercing had been completed before the ban of suspension was pronounced, and so had the brick lining through a distance of 2,000 feet. There remain, therefore, 3,500 feet, and at the rate of 10 feet daily this portion would be finished in a year, so as just to anticipate the opening of the silk season in 1906. It is stated that in 1904 from the 1st of June until the 10th of July, an interval of 40 days, the cocoons sent from Shiojiri to Okaya weighed 2,837 tons, or 69,326 *koku*. Under existing circumstances the carriage of this silk costs 20,994 *yen*, of which 10,447 *yen* has to be spent in getting the produce across a valley measur-

ing only 4 miles where an iron-rope carrier exists. The saving effected by this last arrangement is such that without it the total cost of carriage would be over eighty thousand *yen*. When the railway is completed, however, the charge will be 68 *sen* per ton, making a total of 1,929 *yen*, and effecting a saving of nineteen thousand *yen*. It is also stated that of 1,700 loads of cocoons which went by rail over the Usui Pass during the same period of 40 days last year, 1,360 loads—namely 4,760 tons or 116,317 *koku*—would go by the Shiojiri-Okaya line, and as both roads are State undertakings, the diversion of a part of the traffic from one to the other would not affect the combined earnings, whereas it would contribute greatly to the convenience of sericulturists. The outlay required for finishing the 16 miles of road is 600,000 *yen*.

## THE BANQUET TO MR. H. W. DENISON.

The banquet in honour of Mr. H. W. Denison's completion of his 25th year in the service of the Foreign Office was held, as previously announced, on the 1st instant at the official residence of the Minister of State for Foreign Affairs. Among the guests were Marquis Yamagata, Count Matsukata, Count Okuma, Viscount Aoki, Baron Sone, Mr. Tsuzuki Keiroku, Mr. Kato Takaaki, Mr. Kurino, Dr. Hatoyama, Mr. Asada, Mr. Chinda, Mr. Hayashi, Mr. Sato, Mr. Yamaza, Mr. Ishii, Mr. Matsukata, Mr. Nabeshima, Mr. Nishimura, Mr. Adachi, Mr. Satehara, Count Mutsu, Mr. Honda, Mr. Ichiki, Mr. Kurachi, Mr. Sakata and Mr. Yoshida. The Staff of the Foreign Office took occasion to present Mr. Denison with a very beautiful silver vase and the Emperor sent him a magnificent lacquer box. The *Nichi Nichi Shinbun* and the *Kokumin Shinbun* publish most appreciative articles on the topic of Mr. Denison's services. The *Kokumin* calls him the *kakuwataru kanshi* (hidden gentleman) of the Foreign Office. Ministers and Vice-Ministers might change, but outsiders and incomers alike appreciated Mr. Denison's value. As for himself, he remained always quietly, strenuously and unostentatiously working. He might almost have been called the hermit of the Foreign Office. He never claimed any merit for himself but was always ready to accord it to others, yet it may truly be said that not one question of real moment came before the Foreign Office is the settlement of which he did not act an important part. The Japanese nation appreciates him.

## LAST YEAR'S BARLEY CROP.

The following figures are published with regard to last year's barley crop:—

Area under Cultivation.	Yield in Koku.
1904.....	1,800,393 cho.....
1903.....	1,000,046 cho.....

Compared with an average year, the figures for 1904 show an increase of 4,859 *cho* in area under cultivation, and 316,741 *koku* in yield, the last representing an addition of 16 per cent.

In the Japanese term *mugi* there are included *omugi* (barley) *hadaka-mugi* (rye) and *komugi* (wheat). The figures relating to these three separately are:—

	Increase or decrease as compared with 1903.	Increase or decrease as compared with an average year.
Barley.....	19.6 per cent.....	+ 5.6 per cent.
Rye.....	63.6 per cent.....	+ 1.3 per cent.
Wheat.....	105.8 per cent.....	+ 5.1 per cent.
Average.....	45 per cent.....	+ 1.6 per cent.

PRINCE KARL VON ANTON.

The Mayor of Tokyo and the Municipal Council entertained Prince Karl von Anton at the Koyokwan on the 28th April. It was the Prince's desire that all ceremony should be dispensed with and that everything should be in Japanese style. The hosts therefore wore Japanese costume, and a purely Japanese dinner was served. The Prince sat on Mr. Ozaki's right and Baron Komura on his left. There were some 24 guests in all, the German Minister, the leading members of the German Legation Staff, Dr. Baelz and Mr. Mosle being among the number. According to reports published by Japanese journals the entertainment was most successful, the greatest hilarity and good fellowship prevailing. The Prince did not leave the Koyokwan until half-past ten though his equipages had been ordered for an hour earlier.

At 10 a.m. on the 30th ultimo Prince Karl attended service in the Tsukiji Cathedral, and thereafter proceeded to the Belgian Legation where he lunched. In the afternoon he visited the family of General Nozu at Akazaka, and expressed his thanks for the many kindness shown to him by the General in the field. That evening he dined at the residence of Prince Kanin. On the 1st instant at 7.30 a.m. the Prince was to take the train at Shimbashi for Kamakura, returning in the evening, but it is possible that the inclement weather disturbed that programme. The Prince has contributed a sum of 600 yen towards the expenses of the Yasukuni festival.

On the evening of the 2nd instant General Terauchi, Minister of State for War, gave a banquet at his official residence in honour of Prince Karl Anton Von Hohenzollern and Prince Kanin. Among the guests were the Belgian Minister, the German Minister, the Staff of the Prince, the secretary of the German Legation, Field Marshal Marquis Yamagata, General Viscount Sakuma, General Baron Okazawa, and other officers of the Army Department and the Head Quarter Staff. General Terauchi proposed the health of the Kaiser in the following terms:—

"I deem it a great honour that their Imperial Highnesses Prince Karl Anton von Hohenzollern and Prince Kanin have kindly consented to be present this evening. Since last November, during a period of some six months, His Highness Prince Karl was a close observer of the progress of the war in regions where the conditions and the climate were of an exceptional nature, yet the Prince did not suffer at all from illness. That is a source of much satisfaction to my countrymen as well as to foreigners, and we are specially rejoiced to think that the Prince sets out for home in the best possible health. It is a fact well known here and abroad that Japan owes much of her civilized achievements to Germany, and, above all, that she has taken many of her military models from that Empire. We therefore deem it a special honour that the Prince, accompanying our troops, has observed their actual operations in the field. His Highness' observations will be of benefit not merely from a military point of view, but also as an evidence of the ever-increasing amity between the two Empires, to the health of whose Sovereigns I have now the honour to raise my glass."

The above having been translated into German, Prince Karl rose and replied:—

"I am most grateful for the kind recep-

tion given to me this evening by the Minister of State for War, and I shall never, so long as I live, forget the cordial welcome extended to me everywhere by Japanese officials and the Japanese people. I rejoice that the relations between the two Empires are ever increasing in cordiality, and I have the honour to propose the health of His Majesty the Emperor of Japan."

After the banquet the Prince met in the reception salon Colonels Hongo, Hayashi, Asogawa, Yamaguchi and Kato, all of whom received their military education in Germany, as well as a number of other Japanese officers who had enjoyed the same advantage in a greater or less degree. The entertainment then took the form of a "beer-kwai." Afterwards took place the ceremony of "marching past" in the garden, Prince Karl standing at the saluting point and Major-General Nagaoka, Vice-chief of Staff, commanding the parade. Then the members of the Prince's Staff, under the command of Major von Bronzu, marched past General Terauchi, and the party broke up at 11 p.m.

Prince Karl is to leave Tokyo on the 7th. He will be received in farewell audience at the Palace to-day and will lunch with the Emperor, Prince and Princess Kanin, Marquis Tokudaiji, General Terauchi, Baron Komura and the German Minister being among the guests.

The Emperor of Germany has just instructed Prince Karl Anton von Hohenzollern to perform a most gracious act in his Majesty's name. Our readers remember that Lieutenant Ishibata Bunjiro, of the Japanese infantry, was killed last year in the trenches at Port Arthur while in the act of conducting some foreign military attacks round the besiegers' works. The German Emperor has now directed Prince Karl to present to the family of the deceased officer a sum of 15,000 marks (about 7,300 yen), and the Prince has asked the Minister of State for War to intimate the fact to the Ishibata family.

JAPANESE IMMIGRANTS IN BRITISH COLUMBIA.

Of course the renewed attempt of the people of British Columbia to pass an exclusion act against Japanese immigrants has attracted some attention in this country, but the question is journalistically treated in a manner which does great credit to Japanese common sense and balance of mind. Thus the *Fiji Shimpō* discussing the matter says:—"This restriction has its origin in the fact that ignorant labourers dislike the competition of cheap Japanese labour, and it is consequently a question not worthy of much attention. If the problem is often brought up in the local assembly, it is because the labourers have a certain influence on the local elections and politicians, being under the necessity of utilizing that influence, seek thus to win popularity. The British Government does not approve of such doings, and has shown special solicitude since the conclusion of the alliance to secure smooth relations, which shows how much importance it attaches to the spirit of the alliance. We Japanese are grateful for the friendly treatment extended to us by England. With reference to this there is one thing that we ask of our countrymen abroad. As a consequence of the Russo-Japanese war, foreigners unacquainted with the true facts regard the Japanese as a race to be feared and have conceived a disposition to stand apart from them. At such a time the common people are apt to give ear to exclusion talk, and if further the

attitude of Japanese towards foreigners is defective in circumspection, the result may be just like putting logs on a fire and fanning it. Looking at the Japanese papers published in San Francisco, we find their tone sometimes very deficient in calmness. From the fact that some of them apply the term *keto* to foreigners the in disposition may be partly inferred. The prevalence of such a disposition is not without origin. We consider that the responsibility for it rests rather with a certain class of scholars and educationists in our own country. But at any rate that men while they are actually living in foreign countries and engaging in profitable transactions with foreigners, should behave in such a manner is extremely irrational. An old proverb says "when one is at Rome one should do as the Romans do," and assuredly when one is living in a foreign country and carrying on one's business there, one should obey its laws as a matter of course, should conform with its manners and customs and in society and business transactions alike should pay due regard to amity and smoothness. These folk when they return to Japan live in an atmosphere of high collar, as the saying is, and pose as foreign gentlemen, yet they call foreigners *keto*. It can not be regarded sane conduct, and though one may condone it as merely the folly of a moment, it has the effect of making foreigners to more dislike us. We recommend Japanese residing in foreign countries to act so that people may recognise the fact of the Japanese being worthy of friendship."

Such language on the part of the *Fiji* is certainly returning good for evil. Whatever be the source of Japanese disposition, whether it be the teachings of Buddhism or the tenets of the Confucian philosophy, many foreigners might find in it an example to be imitated. Continental Europe cries out against the Yellow Peril; Australia, the Pacific Slope and British Columbia legislate in the sense of practising against the Japanese that exclusive policy for which the West used to denounce Japan so vehemently; the leading Japanese journal replies by reminding its countrymen that politeness and friendliness are the duties of civilized peoples.

BISHOP TURNER.

The new Bishop of the Anglican Mission in Korea, the Right Rev. A. B. Turner, D. D., is visiting Tokyo on his return from England to his Diocese. By a happy coincidence Bishop Turner arrived a few days before the opening of the triennial Synod of the Nippon Seikokwai, now in session in Tokyo, and was persuaded to prolong his visit so as to be present at it. The increasingly close connection between Japan and Korea is clearly recognized by the Bishop as having an important bearing on missionary work in his Diocese; and it is in every way a matter of congratulation to the Bishops and other members of the Synod that they have this opportunity of meeting him.

It is interesting to note that Bishop Turner's arrival at this juncture brings the number of Bishops of the Anglican Communion now staying in Tokyo to eight. These include the six Bishops of the Nippon Seikokwai and the right reverend Bishop Schereschewsky, formerly Bishop of Shanghai.

Bishop Turner is to preach next Sunday at the 11 o'clock English service in St. Andrew's Church, Shiba on Missionary Work in Korea.

## RELIGIOUS LIBERTY IN RUSSIA.

The retirement of that most bigoted and intolerant of prelates, the recent procurator-general of the Holy Synod in Russia, was probably because he found it impossible to agree with the reforms which the Tsar was doubtless then contemplating. These reforms, according to telegrams received at the Foreign Office in Tokyo, are of a sweeping nature. They amount to nothing less than granting freedom of conscience. The provisions are:—

1.—That neither punishment nor deprivation of public or private rights shall be extended to persons who leave the Orthodox Greek church to embrace some other form of Christianity.

2.—That persons outside the pale of the Orthodox Greek church shall be divided into congregations to which definite rights and privileges shall be accorded.

3.—That measures shall be taken to mitigate the sentences of persons undergoing sentence for crimes connected with religion.

4.—That, for the rest, all existing restrictions in matters of religion shall be removed.

5.—That priests of the Roman Catholic and Mohammedan faiths shall be granted certain privileges and shall be exempted from compulsory military service.

If this reform be genuine, its importance can scarcely be over-estimated, and the whole civilized world will welcome it as a marked departure from the barbarous system of religious intolerance hitherto prevailing throughout the length and breadth of the vast Russian Empire. The sufferings of the Jews will now be at an end in Russia at all events, always supposing that the principle of tolerance is carried into practice. What will strike all observers in connexion with this new departure is the contrast it presents with Russia's attitude towards Japan. M. Pobedontschef, in the day of his power, addressed to the Tsar a document urging him to wage war with all the resources of his might against the Japanese, whom he denounced as "filthy apes" because they were outside the pale of Christianity. Further under the direction of that fierce old advocate of the stake and the faggot the Russian press engaged in a crusade to prove that the Mikado was anti Christ and that all his subjects should be exterminated as one exterminates noxious vermin. But now even the Mohammedans are to be recognised as religionists whose priests are worthy of special privileges in Russian dominions and are virtually classed with Roman Catholics. What then shall be said of Buddhism which a large section of Occidental opinion has now learned to recognise as the parent of Christianity? Russia must henceforth abandon her savage attitude towards the religion of Japan. It is time that she should do so. The truth is, the plain truth, that whereas charity is the very essence of Christian doctrine, the practice of Christian nations is eminently uncharitable.

The Tsar has also remitted the re-payment of sums due by various districts in consideration of relief extended to them in times of famine, during the period from 1887 to the birth of the Tsarevitch. It is reported that the total thus remitted amounts to 75 millions of roubles, a lordly act of munificence.

Later and more detailed news shows that Buddhism is explicitly included in the religions to whose followers tolerance is extended by the recent *ukase* in Russia. Roman Catholicism, Mohammedanism and Buddhism are distinctly enumerated. Nothing is said about the Jews, but it may be assumed that their creed is included among "other forms of Christianity." This *ukase* certainly marks an epoch. It should be welcomed by the whole world, for every civilized man must condemn religious intolerance in what-

ever shape and must sympathise with its victims. It is impossible not to recall the utterances of the Russian religious press last year, doubtless under the inspiration of the notorious Procurator-General, and to contrast with them this most commendable proclamation of liberty of conscience.

## PORT ARTHUR.

Tokyo journals agree in stating that unexpectedly good results have attended the preliminary operations connected with raising the sunken ships at Port Arthur. It is expected that six out of the seven will be saved. Work has already been commenced on the *Bayan* and another vessel—probably the *Amur*, which blocks the entrance to the dock. It is stated that the injuries suffered by the *Bayan* below the water line are insignificant. This ship, it will be remembered, is a first-class armoured cruiser of 7,800 tons, laid down in 1899. Work will be commenced on the other vessels on the 5th of May and will be completed, according to present expectations, by August.

A telegram from Yingkow says that a mine had drifted thither from Port Arthur and had been observed, but before any step could be taken to annul its destructive capacities, a junk entering the river struck the mine and was shattered, six unfortunate Chinese being killed by the explosion.

As for Port Arthur, it is alleged that the clearing operations have been carried on successfully. Free traffic is now established between the port and Dairen, the ships sunk at the entrance to the harbour having been removed and the mines that threatened this particular line of navigation having been taken up. The prospect of raising and restoring some of the sunken war-ships is spoken of with confidence, and certain smaller craft have already been brought within measurable distance of becoming serviceable.

Another statement comes as to the hope of successfully raising six out of the seven war-ships sunk in Port Arthur. The *Bayan* and two others will probably be floated during the summer. There is a small war-ship lying completely uninjured in the dock, and as soon as the water is drained out, she can be quickly rendered serviceable. Among the seven ships spoken of we presume that only four are battle-ships, as the *Sevastopol* is sunk outside, and the *Tsarevitch* and *Petrovsk* are accounted for otherwise.

Instructions have been issued for the temporary suspension of navigation to Yingkow. This is because of the fogs now prevailing, and of the great danger caused by floating mines.

## RAILWAY EXPANSION AND REVENUE GROWTH.

The London *Statist* published last month a railroad supplement containing very excellent studies on American railroad properties. In the introduction the *Statist* discusses the vexed question whether or not capital expansion on American railroads has outrun earnings. The conclusion is that the tremendous capital expansion of the past ten years is infinitely small as compared with the growth in earnings. The figures given represent the entire American railroad world:

	Liabilities.		Increase, per cent.
	1903.	1894.	
Stock.....	\$6,355,207,335	\$5,027,604,717	26.46
Bonds .....	6,722,216,517	5,605,775,704	19.91
Unfunded debt	448,199,448	382,927,834	17.04
Current.....	648,434,976	438,911,691	47.74
Sinking funds, etc. ....	115,201,683	...	...
Total.....	14,289,259,959	11,455,220,008	24.74
Excess of assets .....	572,851,585	353,205,987	25.86
Total.....	14,862,111,544	11,808,425,973	25.86

In the following remarkable table it is shown that the net capital per mile of road has actually decreased in the past nine years.

	1903	1894	Inc. per ct.
Mileage.....	206,886	178,054	12.82
Capital.....	\$13,525,623,300	\$11,016,308,315	22.78
Investments..	2,653,851,625	1,651,366,198	60.76
Net cost ...	10,871,771,675	9,364,942,117	16.09
Capital per mile.....	65,377	61,871	5.67
Investment per mile...	12,828	9,274	38.96
Net capital per mile....	52,549	52,597	*.09

\* Decrease.

The relationship between the capital growth and the expansion of earnings is finally established by the following table, showing earnings in the same period:

	1903	1894	Inc. per ct.
Gross .....	\$1,908,857,000	\$1,066,943,000	78.91
Expenses .....	1,316,340,000	749,186,000	75.70
Net .....	\$592,508,000	274,757,000	86.41
Per cent. on cost of R.R.	5.27	3.28	60.67

Thus, the capital spent on all the railroad properties in the United States earned in net in 1903 was 5.27 per cent., against 3.28 per cent. in 1894. Actual capital outlay on the railroads, not including investments, expanded 16.09 per cent., while net earnings expanded 86.41 per cent.

## NOTES ON CURRENT EVENTS.

It is indeed remarkable, as Englishmen in Hongkong are said to be remarking—according to Nagasaki telegrams—that the Japanese have completely succeeded in hiding the whereabouts of their Squadrons. So thorough has been their secrecy that even conjecture has not found material to construct a canard. That is in itself an evidence of much skill and also a proof of the loyalty of the people. But it must be noted in justice that Rojstvensky is hiding himself pretty effectually just at present. Of course he has a much wider area for playing the game; a great many more holes wherein to thrust his head. London thinks that the game of hide-and-seek would come to an end if Rojstvensky were not harassed by want of coal and provisions. In fact it is to obtain supplies that he is loitering, not to conceal his whereabouts.

A gentleman whose nationality is somewhat vaguely described as "South European" has sent to Marquis Oyama a fowling piece which belonged to Napoleon the First. It was accompanied by a letter explaining that Napoleon, desiring to punish Russia's lawless conduct, led an army to Moscow, but was unfortunately broken and compelled to retire. Fortune, however, has now changed. Japan has come into the position of punishing Russia. The writer of the letter concludes by saying that after mature reflection he had come to the conclusion that Marshal Oyama would be the proper person to receive the fowling piece,

and he accordingly sends it. 'Tis a delicate suggestion, which, we trust will fall upon barren soil.

Colonel and Mrs. Wood left Tokyo on the afternoon of the 27th instant. A large number of notable ladies and gentlemen assembled to bid them farewell, among them being the Ministers of the United States, Germany and Belgium, Marchioness Oyama, representatives of Marquis Ito, Marquis Yamagata, Count Matsukata, Count Katsura, and Baron Komura, Mr. and Mrs. Nagasaki, Mr. Sonoda, &c. The character of the send-off bore testimony to the great popularity won by Colonel and Mrs. Wood during their residence in Tokyo.

M. Cassini is said to be much dissatisfied because, as he alleges, the steamers of various Powers, and the warships also, are giving open information about the doings of the Baltic Squadron. Washington regards the complaints of the Russian Ambassador with indifference; as well it may, since to expect that the world should enter into a conspiracy of silence for the sake of promoting Russia's belligerent plans, is not altogether reasonable.

On the 29th of April the Treasury issued 25 million yen worth of Bills for the purpose of paying off two loans, one of 10 million yen issued on the 15th of December and one of 15 millions issued on the 31st of January. The rate of interest is 1.9 sen daily, being 0.2 sen higher than the previous rate.

The *Hochi Shimbun* has quite an article about the relations of the Russian naval and military officers, which it represents as being of the worst possible, so much so that the naval men now prisoners in Japan are hoping for Rojestvensky's defeat, since his victory would contrast injuriously with their own discomfiture. There is a great deal more in the same sense, but we find it very difficult of credence, and at any rate the dross that inevitably makes its appearance when poor human nature is smelted in the fire of adversity, has few interesting features.

The authorities in Hongkong are said to be taking very stringent measures to enforce the neutrality of the colony. It must be a difficult matter, seeing that the port is free, but whatever is possible will assuredly be done. One report speaks of mines having been laid in the harbour, but that is not easy to believe.

On the 26th of May, 1904, the Prize Court at Sasebo declared the confiscation of the Russian S. S. *Argun* (2,458 tons.) Against this decision the East China Railway Company appealed, but on the 24th ultimo the High Prize Court gave judgment rejecting the appeal, and the steamer, her cargo and a small sum of money (311 roubles) found on board became the property of the Japanese Government.

It is believed in Tokyo that although the return home of the British Ambassador in Washington is true, and although it may be true also that the French and German Ambassadors are returning, the talk about mediation is merely the outcome of various rumours suggested by the situation and appended to the fact of the Ambassadors' return.

The President of the United States does not fail in continuity of policy. What he begins, that he pursues, unflinchingly. America took the lead in obtaining the world's recognition of China's neutrality in this war, and we now learn (*Asahi's* telegrams) that

the United States Minister in Peking has been instructed to make strong representations to the Chinese Government with reference to the necessity of adopting precautions against the escape of any of the Russian vessels now interned in Chinese waters. This is not merely a suggestion to China, it is also an intimation to Russia that if Admiral Rojestvensky deliberately violates the neutrality of China he will have to reckon with America. The Baltic Squadron must soon leave the coast of Annam, and then it will have no harbour of refuge unless it seeks one in either China or Japan.

General Fitzhugh Lee, whose death at Washington is reported in the telegrams, commanded after the Spanish War the Department of the Province of Havana and Pinar del Rio, Cuba, up to 1901. He was born in Virginia, being the son of Commodore S. S. Lee and Anna Maria Mason; married Miss Ellen Barnard Fowle, of Alexandria, Va. Educated at West Point, he served in the U.S. Army, and afterwards at the secession of the Southern States in the Confederate States Army; rose to the rank of Major-General, and commanded the Cavalry Corps of his uncle, Gen. R. E. Lee's army; was U.S. Consul-General to Cuba until war broke out between Spain and that country; Major-General of Volunteers in command of 7th Army Corps, Spanish-American War; was afterwards made a general officer of the regular army, U.S. He was the author of: "The Life of Gen. Robert E. Lee," and other publications.

The new floating dock constructed at the Mitsu Bishi yard in Nagasaki, is to be launched to-day, and will be completely finished by June, when it will be towed to Kobe where it is to be stationed. The dock is capable of accommodating steamers of 5,000 tons. Its construction in the Mitsu Bishi Yard is one of the greatest feats hitherto achieved by that enterprising concern.

The Waseda team has had its first encounter in America. Its opponents were the lads of the Leland Stanford University. Waseda was defeated by three to one.

#### MUSICAL COMPETITION.

The second musical competition arranged under the auspices of the Yokohama Literary Society took place in the Van Schaick Hall on Saturday afternoon. Out of the thirteen candidates entered, eleven presented themselves at the examination room, a gratifying improvement on last year. The work was of a uniformly satisfactory grade, but again the examiners had to deplore that so little attention had been paid to scales and arpeggios, the groundwork of all real musical knowledge; in studies and pianoforte pieces, however, fewer faults were to be found among the older candidates, and the younger ones also gave signs of bright promise in these lines. The examiners were Miss Orth, Mrs. A. Bellamy Brown, Mr. W. Karl E. Vincent and Mr. S. W. Argent, and the plan followed last year in determining marks was again pursued. The result of the examination was as follows:—

DIVISION II.	
First prize.....	Muriel Cain.
Second prize.....	Georgie Kenderdine.
DIVISION III.	
First prize.....	Bertie Cahusac.
Second prize.....	Georgie Tresize.
Certificate.....	Iris Irvine.
DIVISION IV.	
First prize.....	Jocelyn Beart.
Second prize.....	Norah Tipple.

Parents and teachers may see the full marks list by applying to Mr. Wallace, No. 79.

#### THE LATE DR. EDKINS.

The Rev. J. Edkins, D.D., who died in Shanghai on March 23rd, was born nearly 82 years ago near Stroud, in Gloucestershire. He took his degree at the London University in 1843, and arrived in Shanghai in connection with the London Missionary Society in 1848. He was welcomed to China by Dr. Medhurst (the father of Sir Walter Medhurst) who was the first Protestant Missionary in Central China. In 1861 Dr. Edkins pushed north from Shanghai after the cessation of hostilities in connection with the Taiping rebellion, and first at Chefoo for a short time, then at Tientsin, and finally at Peking, he laboured energetically and successfully, earning the respect and love of his colleagues as well as of others who were privileged to know him. About the year 1880 he accepted an important position in the Government department of the Chinese Imperial Customs. He, however, kept up his connection with the London Missionary Society, and the last two or three years had charge of the service every Sunday afternoon in the London Mission Chapel in Shanghai. Dr. Edkins was married three times, his third wife surviving to mourn his loss.

Dr. Edkins has left behind him, says the *North China Daily News*, a reputation for profound scholarship and persevering industry, of which the many able works from his pen bear eloquent testimony. He was recognised in every land as an authority of the very highest rank on all subjects pertaining to China—its history, philosophy, philology, and culture. Up to the very last his unimpaired powers were devoted to "his favourite studies, and this he was able to do by reason of the excellent health he enjoyed. Although over 80 years of age he was hale and vigorous, and gave one the appearance of being nearer three than fourscore years of age. Of his kind and affectionate nature, it is scarcely necessary to speak; all who knew him loved him, and now that he has left us he will be long missed and mourned, when his familiar face is no longer seen at the religious, philanthropic, and educational meetings that he so loved to take part in, and where those who attended were instructed and helped by his wise words and kindly presence.

#### ST. GEORGE'S BALL.

St. George's Ball, given in the Public Hall on Friday night (St. George's Day, April 23rd, fell on Easter Sunday this year) was a most delightful affair. Between 400 and 500 people were present, and the proceedings were graced by the presence of Sir Claude and Lady Macdonald, Sir Henry Tichborne, Mr. and Mrs. Barclay, the local Consular Corps, etc. The decorations were most uniquely charming, the floor excellent and all the arrangements were well thought-out.

Committee:—Messrs. James Walter (President), L. J. Healing (Vice-President), E. Edisson (Hon. Treasurer), H. J. Sharp (Hon. Secretary), H. M. Arnould, A. B. Brown, E. C. Davis, F. L. Elliott, and C. Thwaites.

Stewards:—Messrs. F. J. Abbott, H. F. Arthur, F. H. Bugbird, F. S. James, J. Williamson Jones, H. W. Kilby, H. W. Lea, Duke Marshall, W. S. Moss, W. H. Percival, A. C. H. Potts, W. Y. Showler, E. P. W. Skrimshire, and K. Wilson.

At Supper, the President of the St. George's Society proposed the toast of St. George and Merrie England, which was most heartily drunk.

The annual report and year-book of the Royal Society of St. George is to hand. This society, of which the President is the Earl of Halsbury (Lord Chancellor of England) and which has no fewer than forty-nine vice-Presidents whose names are among the best known in the country, has for its primary object an all-English observance of St. George's Day and all that is thereby implied. It was founded in 1894, four years before our local St. George's Society came into existence, yet we do not in the reports from all quarters of the world see the name of Yokohama. Perhaps the matter has been overlooked.

## THE THREE-MILE LIMIT.

IT is not surprising that the three-mile limit should begin to find strong denouncers. The provision is absurdly obsolete. It was based originally on the range of the biggest ordnance mounted in forts or carried on war-vessels. No Power was supposed to be able with cannon-shot to reach an enemy who remained at a distance of 3 miles. Could any rule be more flagrantly at variance with the facts of modern ballistic warfare? A 12-inch gun is now capable of fairly accurate and very destructive shooting at a range of 12 miles. No Admiral would venture to anchor his ships within 12 miles of a hostile fortress armed with the most powerful modern artillery, and it follows obviously that the command of waters adjacent to a coast has been correspondingly extended. Yet the three-mile limit is gravely advanced as the natural boundary of a state's jurisdiction, and thus we witness the spectacle of the war-ships of one belligerent lying within ten minutes' reach of a neutral power's port and equipping themselves for an attack upon the fleets and merchantmen of another belligerent. The extravagance of such a situation has never been forced practically on the attention of the world until the present juncture, and as the Japanese are the sole sufferers, we do not wonder at the strength of their protest against a law plainly inconsistent with actual conditions. The *Fiji Shunpo* is very outspoken. It urges the Government to raise this question, and to adopt the contention that the obligations of neutrality are not fulfilled by mere observance of the letter of an obsolete and ineffective law. Times have changed and international usages must change with them. This three-mile limit has escaped attention because no occasion arose to demonstrate its fatuity, but the occasion is now flagrant, and we certainly think that the Japanese should not sit with folded hands until a Hague Tribunal, at some nebulous date in the remote future, sees fit to deal with an anomaly which has not yet troubled the great Powers of Europe *en bloc*, and has furnished a distinctly convenient subterfuge to two of them. International law is not a coded science. It has no universally recognised text, but of all human institutions none is more forcibly informed by the spirit of justice. What is manifestly just, that is manifestly lawful as between two nations. It is not manifestly just, it is, on the contrary, manifestly unjust, that relying on an entirely antiquated custom Japan's enemy should receive from a neutral Power assistance which greatly augments the fighting strength of that enemy. We endorse the *Fiji's* view that now, while the crisis is actually in sight, is the most vital moment for raising the problem. Under normal circumstances it would probably be treated as an academical question by Western nations and might be consigned to a pigeon-hole for decades. But in the face of such a vivid object lesson

this war is furnishing, there would be hope of rivetting attention. This is not intended for a moment to suggest that France's good faith should be queried. France has pledged her word, and, as the *Nichi Nichi Shinbun* justly says, she may be trusted to keep it. But of course she will not set aside the provisions of any law or the sanctions of any custom that can be plausibly invoked for the benefit of her ally.

## GERMAN VIEWS ABOUT JAPAN IN CHINA.

THE Director and President of the Deutsche Gesellschaft in Shantung recently delivered in Berlin lectures which show that among the German residents at Kiaochow, and presumably in other parts of China, very strong apprehensions are entertained as to the part Japan is likely to act should she emerge successful from the present war. We have had occasion already to comment on lectures in a like sense delivered in Berlin, and their cumulative effect is to suggest that a marked anti-Japanese feeling exists among at any rate a considerable section of the German mercantile community in China. But it has not hitherto been possible to discover that this antipathetic sentiment had any basis of solid reason, and on no occasion has the lack of logical explanation been more conspicuous than on the occasion of the recent lecture in Berlin, for without any exception the statements advanced by the lecturers in support of their accusations bore the plain stamp of untrustworthiness. Herr VON KRABNER, the Director of the Society, was particularly noticeable for advancing assertions which indicated credulity on his own part rather than a sinister purpose on the part of the Japanese. Thus, after a preface couched in too general terms to be either convincing or controvertible—a preface to the effect that Japan, taking advantage of the Occident's absorption in the Manchurian campaign, had been establishing her predominance both politically and commercially in China—Herr VON KRABNER proceeded to say that she is now carrying on by means of proclamations and Chinese newspapers a grand anti-foreign campaign. An assertion of that nature must be capable of direct proof or its author is quite unjustified in making it. It is more than doubtful, however, whether Herr VON KRABNER could adduce a single proclamation issued by the Japanese in the sense affirmed by him, or point to a solitary newspaper utterance inspired by them. Indeed his allegation bears the stamp of error, for the Japanese have no authority to issue proclamations in China and do not issue them, and it would be obviously impossible for any foreigner to trace to its source the inspiration of articles in Chinese newspapers. A very cruel and unreasoning injustice is done to Japan by such wild accusations. Anti-foreign feeling is the last mood that can be attributed to her. Unfortunately no publicist can hide from himself the fact that since mediæval times racial prejudice has never

been more powerful than it is at present, but the field of its display is the Occident, not the Orient, and its victims are Orientals not Occidentals. Germans like Herr VON KRABNER are conspicuous exponents of the humiliating truth. Japan's one notable interference in Chinese affairs was in 1900 when she sent her soldiers to Peking to rescue the foreign Legations from danger of destruction at the hands of an anti-foreign Chinese mob; and her battalions, together with those of Great Britain, were the only troops among the allies that submitted to be commanded by a German General rather than jeopardise the *entente* between the Powers. With very bad grace then does a German constitute himself her accuser of anti-foreign feeling. Japan is now the one active champion of the open door in China and of equal advantages and opportunities for all. She is allied with England for the explicit defence of that liberal policy. Germany was once a party to a similar alliance ostensibly for the same objects, yet before the ink on the agreement was dry she declared that three large Chinese provinces were excluded from its scope—provinces where Russia was then seeking to establish exclusive pre-eminence—and that its real purpose was to secure for herself a special political title in the Yangtze Valley. With very bad grace then does a German constitute himself Japan's accuser of anti-foreign feeling. Herr VON KRABNER's next charges are even more striking. "Japan," he is reported to have said, "is fomenting the hatred of the Chinese even against her British ally by informing them that the British are enslaving and brutalizing the coolies in South Africa." Not one whisper of any such conduct on Japan's part was heard until Herr VON KRABNER stood up before a Berlin audience and made his monstrous announcement. "Monstrous" is the only appropriate adjective, for there is not, there can not be, one tittle of proof, and to all acquainted with the Japanese the story is quite laughable. But even that was not the whole of Herr VON KRABNER's romance. He had more to tell. "In addition to this anti-foreign campaign," he averred, "Japan is promoting an anti-dynastic movement, with the object of eventually placing YUAN SHIKAI on the Throne of China." Ever since the South-African war Englishmen have been obliged to modify their estimate of German judgment. The German used to be thought eminently a man of great acumen and sound intelligence, who subjected all evidence to careful analysis before basing any verdict on it. We ourselves still retain the same estimate of the typical German; but since that wonderful, most wonderful, arraignment of the British Government and the British Army obtained the signatures of 160 German pastors five years ago, and since men like Mr. VON WARTEGG and now Mr. VON KRABNER have shown us how completely some Germans can be swayed by emotion and prejudice even in the

gravest matters, we are compelled to narrow the range of our faith in Teutonic intelligence. Herr VON KRABNER must either be a deliberate panderer to sensationalism, which we can not suppose, or he must be incapable of distinguishing between trustworthy evidence and the wildest "bunders." How did it happen that a society of grave men like the members of the Deutsch-Asiatische Gesellschaft permitted themselves to form an audience for such a visionary? The President of the Society, Dr. VOSBERG-REKOW, showed an equal measure of anti-Japanese feeling, but he did not deal in fables so palpably silly as those of Mr. VON KRABNER. Japanese trade competition was what he inveighed against. The Japanese, he explained, had monopolized the camphor trade and were gradually obtaining the control of the shipping interests in the Yangtze. They were competing not only against Germany but also against Great Britain. "To his own knowledge," he added, "they had mapped out a comprehensive plan for the construction of a new Chinese fleet which was to have its head-quarters at Tientsin, converted for the purpose into a vast naval arsenal." Speaking as Englishmen, we have doubts whether a unit of the population of our country's most strenuous commercial rival should denounce Japan for venturing to compete with his own nation; or whether a subject of a State which is startling the world by the vastness of its naval programme and which is governed by an Emperor who proclaims that war-ships are the best guarantees of peace; remembers the duty of consistency when he cites it as a sin on Japan's part that she advises her neighbour to have a fleet. These things are too palpable to be worth expatiating on. But there is one point which men like Mr. WARTZEGG, Mr. KRAENKER and Mr. VOSBERG-REKOW might with advantage consider: it is that one-sided friendship can not endure. Whatever may be Japan's goodwill towards Germany—and we believe it to be sincere—it will not survive these repeated assaults by prominent Germans. If a man be persistently treated as an enemy, he ends by becoming an enemy. That is quite inevitable. Yet these German publicists seem to take no note of it, and by and by when they have effectually alienated Japan's regard and have inspired her with the suspicion and dislike they themselves so unequivocally display, they will perhaps point to her mood as evidence of their perspicacity, forgetting that it is solely of their own making.

#### RUSSIAN FORCES IN MANCHURIA.

WE find the following in *The Times* of March 23rd:—

According to M. Dru, the St. Petersburg correspondent of *Echo de Paris*, "the Russian army now numbers over 200,000 men. Its organization has been re-established, and it is at present in a position to offer serious resistance to the Japanese." He explains that this reorganization has been achieved by the incorporation of 70,000 reservists who had

arrived since the commencement of the battle of Mukden. These have gone far to make up the losses of the operating army, which the General Staff has now ascertained to be about 105,000.

M. Dru gives "exact details of Russia's proposed scheme for the reconstitution and increase of her army." Seven army corps to be shortly mobilized in Moscow, Kiev, Warsaw, Yurief, and the Caucasus are estimated to yield over 200,000 men. "These corps will leave skeleton cadres in the garrison, in which the reservists will be enrolled. The latter will, therefore, be called to the colours for service, not in the Far East, but in Russia. This removes the difficulties of mobilization and enables the Empire to maintain intact a permanent army in Russia." The addition of the 10th Cavalry Division, fractions of three brigades of artillery, and 100 battalions of infantry will raise the total to nearly 350,000 men, which, added to the operating army of 250,000 at present in Manchuria, will constitute a force of 600,000 men, apart from the troops guarding the railway and the garrison of Vladivostok. This force will be divided into four armies, and these armies into two groups. One group will be commanded by Linevich and the other by Kuropatkin, while the Grand Duke Nicholas Nicolaievitch will be Generalissimo with Sukhomiloff as Chief of the Staff. This force will occupy the bend formed by the Sungari river, "which constitutes an admirable position for the establishment of an enormous intrenched camp."

M. Dru adds that it will take at least four months before the bulk of this force can be assembled below Kharbin. The Guards will not leave for Manchuria for the present "on account of the domestic situation."

According to this estimate the Russians will have an army of six hundred thousand men in Manchuria by the end of July, that is to say, some three months hence. This figure is worth analyzing. In the first place the Russian General Staff is said to have ascertained that the losses of the operating army in the battle of Mukden were about 105,000 men. "Losses" is a somewhat vague term. In this context its meaning should be men killed, taken prisoners, or so severely wounded as to be incapacitated for further service during the following four months. As to the killed and the prisoners we know their numbers; fifty thousand prisoners and thirty thousand killed, speaking roundly. Here then we have a total loss of 80,000 men, and if the Russian Staff's figure of 105,000 be correct, the badly wounded aggregated only 25,000. That is altogether incredible. No one ever heard of a battle in modern times where the killed outnumbered the wounded. At the very lowest calculation there must have been 3 wounded for every 1 killed: in fact, the experience of this war shows that 5 to 1 is nearer the true ratio. Let us take, however, 3 to 1. Then the result is

Killed.....	30,000
Wounded.....	90,000
Prisoners.....	50,000
	170,000

It will be seen that such a figure can scarcely be reconciled with the 105,000 of the Russian staff, and one is obliged to confess that the Russian staff's record hitherto does not encourage implicit faith in its accuracy. Then again, we observe that, independent of the Vladivostok garrison and the troops guarding the railway, Russia is supposed to have 250,000 effectives in Manchuria to-day, including 70,000 reservists which arrived between the commencement of the battle of Mukden and the date of M. Dru's telegram, namely, March 22nd. It may be true that this number of effectives are in the field, and we shall presently show

why it may be true. But in the mean while what we note is that this calculation attributes to the Siberian Railway a carrying capacity of 70,000 per month, or between 2,000 and 3,000 daily. The Siberian railway has surprised all prophets of its limitations. It has done wonders. But even with full knowledge of its achievements, British military experts calculated, at the very time of M. Dru's telegram, that its carrying capacity could not exceed 35,000 monthly, and we are now told that it transported just twice that number in the month beginning February 20th and ending March 22nd. Now it is not inconceivable that the railway may have performed that great feat in a moment of crisis, but may we reasonably suppose that such a rate of transport could be kept up continuously for four months? If so, the estimates of European experts are laughably erroneous, and were never more erroneous than at this very time when experience has furnished ample data for correcting them. Let us, nevertheless, again stretch our credulity and accept the hypothesis not only that the railway did actually carry seventy thousand men in one month at a pinch, but also that it can keep up that performance. Then in, four months, from April to July inclusive, it will have carried 280,000. But M. Dru's figure, or rather the figure of Russia's "proposed scheme," is 350,000. An additional 70,000 is just thrown in casually. And these suppositions involve the further assumption that Russia has such a huge body of men all prepared for despatch, with all their paraphernalia and the enormous stores that would have to accompany them. If she be capable of such stupendous feats now, why has she hitherto refrained from achieving them. Why in the course of 15 months has she failed to put into the field an army not much larger than the army she is now about to put there in four months? Here, however, a new set of facts confront us. They are furnished by General SAKAROFF, who, when about to leave the Ministry of War, gave a wonderful detail of the things the Siberian Railway had actually accomplished from February 1904 to March 1905. It had carried to Harbin, he said, 761,867 soldiers, 13,087 officers, 146,408 horses, 1,521 guns, and 351,000 tons of stores. General SAKAROFF's exact expression as to the period covered by this transport work was "since the beginning of the war," and consequently, in order to estimate the total Russian force sent to Manchuria, we must include the army which was already there when the war commenced, an army of 70,000 at least. Then we get the colossal figure of 840,000 men of all ranks as the army Russia has actually placed in the Three Provinces. Where is that army now? What has become of it? M. Dru quotes the Russian General Staff as stating that there were 250,000 effectives in Manchuria at the end of March. It would seem then that nearly six hundred thousand had been placed *hors de combat* during the preceding

thirteen months. All this is profoundly bewildering. We appear to be dealing with myths.

#### FRANCE AND JAPAN.

THE most cursory glance at the situation from Japan's stand point must convince any ordinarily impartial observer that there are only too strong reasons for a recrudescence of the excitement recently caused by the doings of the Baltic Squadron. Thirteen days have now passed since ROJESTVENSKY'S ships left Kamranh Bay. They left it in consequence of an explicit admission that their continued presence there would have been a violation of French neutrality, and their departure was accompanied by an unequivocal declaration on France's part that she intended to observe strict neutrality. Where have the Admiral and his ships been during these thirteen days? From three independent sources telegrams have reached official quarters showing that up to the 29th of April, namely, up to the eighth day after their departure from Kamranh, the Russian war-ships were lying snugly in Honko Bay. In other words, they left one French port merely to enter another at a distance of some forty miles. But it need scarcely be said that if their presence in Kamranh Bay was unlawful, so also is their presence in Honko Bay. There is not a particle of difference between one place and the other from the point of view of French neutrality. In fact, if the latest reports as to ROJESTVENSKY'S whereabouts be correct, a conspicuous farce has been played: a pretence of neutrality has been made by ordering the ships out of one port and opening another simultaneously to receive them. We do not by any means allege that this is the case. Our confidence in France's good faith has not yet been shaken, especially when we observe that the situation is much more imperative for her now than it was prior to the Kamranh incident, for whereas she might then have pleaded her own municipal laws—however irreconcilable they were with the plain principles of neutrality—, she is now shackled by her clear admission that to allow any one of her ports to be used by a belligerent for the purpose of equipping himself against an enemy, is to associate herself with the former and against the latter. It is to us impossible to imagine that France is deliberately following such a course as that. But under what aspect must the facts present themselves to the Japanese people? The declaration made by the Government in Paris on the occasion of the Kamranh incident was that due steps had been taken with regard to the presence of the Russian vessels in a French port, and that efficient measures would be adopted to prevent any repetition of such an incident. The matter is of such importance that we quote the reply, although it must be still fresh in the minds of most of our readers:—

On receipt of intelligence that the Baltic Fleet had reached Kamranh Bay, the French Government immediately conveyed instructions to the Governor-

General of Tongking that the rules relating to France's neutrality must be strictly enforced. Thereafter Japan's protest having been received, further instructions were conveyed to the same Governor-General that he must direct the Russian Squadron to leave French territory with the utmost possible celerity, and the Governor-General answered that in compliance with these instructions he had already taken suitable steps.

Further, the French Government addressed a request to the Russian Government that the latter should issue instructions for the withdrawal of the Baltic Squadron from French territory, and the Russian Government answered that it had already issued such instructions.

The French Government has already adopted the necessary measures to ensure strict respect being paid to its neutrality, and it guarantees similar measures in future.

The French Government has informed Japan that according to a report received from the Governor-General of Indo-China, the Russian squadron left Kamranh Bay on the 22nd instant, for an unknown destination.

Nevertheless, as the *Jiji Shimpō* justly says, before the ink is dry upon the pen that wrote the above reply, we have ROJESTVENSKY and his ships repeating in Hongko Bay the outrage which they perpetrated in Kamranh Bay. Let the Japanese nation be the most patient and the most long-suffering in the whole world, can it be supposed capable of regarding these things with indifference? There is nothing clandestine, nothing surreptitious, about the action of the Russians. They do not confine themselves to lying quiet in a French port and filling up their bunkers with coal and their store-rooms with provisions by the aid of secretly conducted communications. On the contrary, they openly use the French port as a basis for warlike operations, not only against Japan but also against the commence of neutrals, for their warships issue from Honko Bay to stop and search merchantmen passing in the offing. Suppose that Great Britain were situated as Japan is and that Japan's ports were similarly utilized by the squadrons of a Power openly at war with England. Is there the least room for doubt as to the view that Englishmen would hold or the steps the British Government would take? The British Ministry would inevitably adopt one of two views, namely, that Japan had openly allied herself with England's enemy or that the Japanese authorities were incapable of exercising their country's sovereignty within Japanese territory. That is precisely what the *Jiji Shimpō* writes in a strong and justly indignant article—an article re-inforced by the published opinions of a number of students of international law which our contemporary has collected. The only conceivable excuse that France can now make, says the *Jiji*, is that the incidents at Honko Bay are unknown to her; an excuse which would be tantamount to acknowledging that when the Government in Paris, on the 21st of April, explicitly guaranteed the adoption of measures such as should prevent future violations of French neutrality, it gave a promise which it possessed no efficient means of performing. Such an explanation might carry some slight weight in the case of a Power like China, which is not furnished with naval strength sufficient to watch the whole of its long coast line. But how can any excuse of the kind be set up in

defence of France, the second naval Power in the world, especially when the unlawful events are happening within a few hours' steaming of the centre of her Indo-Chinese territories? It would be quite extravagant to expect a continuance of Japan's patience in the face of such provocation, and surely the French officials in Tokyo, who daily read the columns of the Japanese press and presumably report their tone to Paris, must see how attenuated the thread has become by which Japan's long-suffering is now sustained. The old proverb "Even Hotoke, when his face is thrice slapped, gets angry," is quoted by the *Asahi Shimbun*, which declares that Japan has now been abundantly flouted and that the elementary principles of self-defence compel her to take peremptory action. The *Nichi Nichi Shimbun* says that this procession of Russian ships from one French port to another is like the *kompira-mairi* of Japan, where a troop of mendicants travel from town to town of the 53 *shuku*, on the Tokaido, dancing and begging as they go. From Kamranh the Russians went to Natran and from Natran to Honko, so that, in effect, they are using for naval base not one French harbour alone but the whole of the French Indo-Chinese littoral. As for the *Chuo Shimbun*, it thinks that to approach France again with protest or complaint would be futile. The only course for Japan is to notify England that France has joined forces with Russia and that the conditions contemplated by the Anglo-Japanese alliance have arisen. Other Tokyo journals are equally emphatic, and thus once more we are confronted by the same unhappy and highly critical situation that existed a fortnight ago. Not indeed exactly the same, for the Japanese are now evidently more exasperated than ever, and it is obvious to the most casual observer that public opinion may at any moment force the hand of the Foreign Office. None the less we cling to the hope that some explanation may be forthcoming. What form it may take we can not pretend to conceive, but that France is deliberately acting with bad faith or that her officials are displaying such incompetence as would be implied by ignorance of ROJESTVENSKY'S doings, we can not for a moment believe. As for the Russians, there need not be any discussion of their conduct. If the reports quoted above be trustworthy, ROJESTVENSKY is wittingly violating French neutrality in the most flagrant and shameless manner.

A curious course has been taken by those interested in some of the coal shipments to Vladivostock. The steamers carrying the coal are not insured against war risks, while the coal is fully insured; consequently those who have interests in the hulls and not in the cargoes have interposed to prevent the steamers from going on to Vladivostock. But the shippers of the fully-insured cargo want the cargo to go on—since their profit depends on its safe delivery or capture—and, as the steamers are at present hung up *en route*, they have served notice of abandonment on the underwriters of war risks on the coal. The situation is unprecedented.

## SECURED DEBENTURES TRUST LAW.

(LAW NO. 52 OF THE 38TH YEAR OF MEIJI.)  
PROMULGATED BY IMPERIAL ORDER ON THE  
11TH MARCH, 1905.

TRANSLATED BY J. E. DE BECKER.

(CONCLUDED FROM NEXT ISSUE.)

Art. 77.—The agreement mentioned in Articles 74 and 75 shall be made in writing and signed by the representatives of the trustor company and the trustee company, and the trustor company and the trustee company shall respectively give public notification thereof without delay. Provided, however, that a separate notice shall be given to each of the known debenture holders and the person who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

The provisions of Articles 20 and 21 apply *mutatis mutandis* to the deed of agreement mentioned in the preceding paragraph.

Art. 78.—The right of security in accordance with an agreement of trust can be exercised only for all the debenture-holders.

Art. 79.—In the case of the trustor company being liable to repay periodically a portion of the debentures, should the repayment have been delayed until a period of two months has elapsed, the trustee company may, in accordance with a resolution passed at a meeting of debenture holders, demand that the trustor company shall make payment within a specified period of time, and further notify the trustor company that should it fail to make payment within such period, the benefit of time (期限利益) will be forfeited in respect to the whole amount of debentures.

Should the trustor company fail to make payment within the period mentioned in the preceding paragraph, the benefit of time will be forfeited in respect to the whole amount of debentures.

The demand mentioned in Paragraph 1 shall be made in writing.

Art. 80.—When the trustor company has lost the benefit of time according to the preceding Article, the trustee company shall, without delay, give public notice thereof. Provided that a separate notice shall be given to each of the known debenture-holders and to the persons who have undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

Art. 81.—The provisions of the preceding two Articles apply *mutatis mutandis* to cases where the trustor company has delayed the payment of interest on debentures until a period of three months has elapsed.

Art. 82.—When the debentures have not been repaid when due, or when the trustor company has been dissolved without settling the debentures, the trustee company shall, without delay, enforce the right of security in accordance with a resolution passed at the meeting of the debenture-holders.

The provisions of Article 354 of the Civil Code do not apply to a pledge of movables created by an agreement of trust.\*

Art. 83.—The trustee company may, by virtue of an executory exemplification granted in favour of the whole of the debenture-holders, make either a compulsory execution in respect to the security, or an application or delegation for an auction in accordance with the Auction Law.

In the case of the preceding paragraph, any protest against the creditors may be brought against the trustee company.

Art. 84.—Unless otherwise specially provided in the agreement of trust, the trustee company has power to perform all acts necessary for obtaining satisfaction of the claim for debenture-holders.

Art. 85.—The trustee company may, in accordance with resolutions passed at a meeting of debenture-holders, grant a period of grace for payment, grant exemption in respect to liability which has arisen on account of non-performance, or make an amicable arrangement in respect to the whole amount of debentures.

\* Civil Code, Art. 354.—If the obligation existing in favour of the pledgee is not performed, he may, provided there is a reasonable ground for the doing so, apply to the Court to have the thing pledged at once appropriated for the performance according to a valuation by experts. The pledgee must give previous notice of such application to the debtor.

Art. 86.—The trustee company may, in accordance with a resolution passed at a meeting of the debenture-holders, perform acts of procedure or do all acts and deeds appertaining to bankruptcy proceedings on behalf of the whole debenture-holders.

Art. 87.—When the trustee company has completed the acts mentioned in Article 82 or 85, or in the preceding Article, a public notification thereof shall be given without delay. Provided that a separate notice shall be given to each of the known debenture-holders, or persons who have undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

Art. 88.—The money received by the trustee company for the debenture-holders shall, without delay, be delivered to each debenture-holder according to the amount of his claim.

Should the trustee company have consumed the money mentioned in the preceding Paragraph on its own account, the provisions of Article 647 of the Civil Code apply *mutatis mutandis* thereto.\*

When any debenture-holder is not well known, or when a debenture-holder refuses to receive, or is unable to receive, the money, the trustee company shall deposit the money mentioned in the preceding paragraph for such debenture-holder.

The trustee company may, if necessary, delegate to the party who has undertaken the whole amount of debentures in accordance with paragraph 1 of Article 29 the acts mentioned in Paragraphs 1 and 3.

Art. 89.—Should the trustee company be in default as regards acts to be performed by it for the whole of the debenture-holders, the competent authorities may, upon application of a meeting of the debenture-holders, select and appoint a special representative to perform such acts.

In cases where the interests of the debenture-holders and the trustee company mutually conflict, should it be necessary to do any acts, either judicial or otherwise, on behalf of the whole of the debenture-holders, the same rule applies as in the preceding paragraph.

Art. 90.—When any acts, either judicial or otherwise, are performed on behalf of the whole of the debenture-holders in accordance with this law, it is not necessary to designate each individual debenture-holder separately.

Art. 91.—The trustee company may charge the trustor company a proper remuneration in respect to the management of the trust affairs.

Unless otherwise specially provided for in the agreement of trust, the provisions of Paragraphs 2 and 3 of Article 648 of the Civil Code apply *mutatis mutandis* to an agreement of trust.†

Article 92.—The trustor company is liable to pay all the expenses properly defrayed by the trustee company in dealing with the trust affairs, together with interest from the day on which such expenses are disbursed; also to compensate the latter company for any and all loss or damage entailed upon it without any fault on its part.

The trustee company may apply to the trustor company for payment in advance of expenses necessary for the management of the trust affairs.

The provisions of the preceding two paragraphs apply *mutatis mutandis* to the party who has undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29.

Art. 93.—The material security of an agreement of trust possesses validity in respect to any claim to which the trustee company may be

\* Civil Code, Art. 647.—If a mandatory spends for his own benefit money which he ought to deliver to the mandator or to use for him, he must pay interest thereon from the day when he spent it. If any further damage arises, he is liable to make compensation for that.

† Civil Code, Art. 648.—If a mandatory is to receive compensation, he can claim it only after the mandate is performed; but if compensation is determined by periods, the provisions of Art. 624, 2 apply correspondingly.

If the mandate terminates for some cause not attributable to the mandatory, before it is completely performed, the mandatory may claim compensation in proportion to what has been done.

Civil Code Art. 624. (Paragraph 2). Compensation determined by periods can be demanded at the end of each period.

entitled according to the provisions of Paragraph 1 of the preceding Article.

The trustee company has the right to receive satisfaction of the claim mentioned in the preceding paragraph out of the security in preference to debenture-holders.

Art. 94.—Should the trustee company, either intentionally or owing to negligence on its part, have either destroyed the material security, or impaired the value thereof, the competent authorities may, upon application of either the trustor company or a meeting of the debenture-holders, order a proper amount of money to be deposited by the trustee company. In this case the trustor company is deemed to have created a right of pledge in respect to the money so deposited.

The right of pledge mentioned in the preceding paragraph is regarded as a material security under the agreement of trust.

Art. 95.—The trustor company, the representative appointed according to Paragraph 1 of Article 64, or debenture-holders having more than one-tenth of the whole amount of debentures, may, at any time, inspect the conditions under which the trustee company keeps custody of the security.

Persons holding debentures to bearer may not make the inspection mentioned in the preceding paragraph unless they have deposited their debentures with the trustee company.

Art. 96.—The provisions of Paragraph 3 of Article 298 of the Civil Code do not apply to the right if pledged under an agreement of trust.\*

## CHAPTER VIII.

## SUCCESSION AND TERMINATION OF TRUST AFFAIRS.

Art. 97.—The trustee company may resign from its duties by determining upon another company who will take over the trust affairs, either according to the provisions of the trust agreement, or by the consent of the trustor company and a meeting of the debenture-holders.

When the company which is to take over the trust business is a foreign company, the provisions of Paragraph 1 of Article 17 apply *mutatis mutandis*.

Art. 98.—When there is an unavoidable cause, the trustee company may resign from its duties upon obtaining the permission of the competent authorities.

Art. 99.—When the trustee company has acted contrary to its duties, or it is inadequate to the task of dealing with the trust business, or when other proper causes exist, the competent authorities may, upon the application of the trustor company or of a meeting of the debenture-holders, discharge the trustee company from its post.

Art. 100.—Should the trustee company have either resigned or been discharged from its post, according to the provisions of the preceding two Articles, or should its charter have been cancelled, or should it have been dissolved, the competent authorities shall appoint in its place another trustee company to take over the trust business.

Art. 101.—Succession to the trust business under Article 97 will become valid in accordance with a written agreement to be prepared and signed by the representatives of the trustor company, the former trustee company and the new trustee company.

When the agreement mentioned in the preceding paragraph is entered into, each company shall, without delay, send in, in writing, a report thereof to the competent authorities.

Succession under the preceding Article will become valid upon a written order being delivered by the competent authorities to the former and new trustee company.

Art. 102.—With regard to the succession of the trust business, in case it is effected according to Article 97, the trustor company and the former and new trustee companies; and in the case of its being effected according to Article 100, the trustor company and the newly entrusted trustee company, shall each give a public notification thereof without delay. Provided that a separate notification shall be given to each of the known debenture-holders and the person who has undertaken the whole amount of debentures.

tures in accordance with Paragraph 1 of Article 29.

Art. 103.—The newly entrusted trustee company determined according to Article 97, or appointed according to Article 100, shall deal with the trust business subject to the stipulations agreed upon by the former trustee company.

Any rights and obligations appertaining to the former trustee company, either on behalf of the debenture-holders or the trustor company, are transferred to the newly entrusted trustee company as from the time of the resignation, discharge, cancellation of charter, or dissolution of the former trustee company. Provided, however, that this does not apply to any liability which has arisen in consequence of a breach of contract or tortious acts on the part of the former trustee company.

Art. 104.—When a person, acting in bad faith, has acquired possession of a pledged thing owing to an unlawful disposition on the part of the formerly entrusted trustee company, it is deemed that the newly entrusted trustee company has been deprived of the possession of same by such person.

Art. 105.—The directors, representative member, liquidator, or bankruptcy administrator of the former trustee company shall transmit to the newly entrusted trustee company all things held in their custody either on behalf of the trustor company or debenture-holders, and all papers and documents relative to the trust business; and otherwise shall perform all acts necessary to the transference of the trust business to the new trust company.

When the transmission mentioned in the preceding paragraph has been completed, the companies concerned shall jointly notify the competent authorities thereof in writing.

The written report mentioned in the preceding paragraph shall be accompanied by an inventory of the things so transmitted.

Art. 106.—The supervision of succession affairs appertains to the competent authorities.

The provisions of Paragraph 2 of Article 16 apply *mutatis mutandis* to the supervision specified in the preceding paragraph.

Art. 107.—When the trustee company has concluded the trust business, a complete account thereof shall be made out, and publicly advertised.

#### CHAPTER IX.

##### PENAL PROVISIONS.

Art. 108.—Persons who, in contravention of the provisions of Article 5, have carried on a trust business relating to secured debentures shall be punished by a fine of from yen 10 to yen 1000.

Art. 109.—In the following cases, the managing members, directors, liquidators, bankruptcy administrators, special representatives mentioned in Article 89 of a company, or the representative of a foreign company, are punishable by a fine of from yen 10 to yen 1000:—

- (1) When the provisions of Article 6 have been infringed;
- (2) When the provisions of Article 8 have been infringed;
- (3) When an order of the competent authorities issued in accordance with this law has been infringed;
- (4) When an inspection by the competent authorities to be made in accordance with this law has been obstructed;
- (5) When the provisions of Paragraph 1 of Article 17, or Paragraph 2 of Article 97 have been infringed;
- (6) When matters to be entered in the debenture certificates have not been entered; or when false entries have been made;
- (7) When in the case of the trustor company having issued debentures certificates have been delivered without observing the procedure provided for in Article 36;
- (8) When the preservation or foreclosure (enforcement) of a right of security created in accordance with Paragraph 1 of Article 70 has been neglected;

\* Art. 298.—(Paragraph 3.) If the lienholder acts contrary to these provisions, the debtor may claim the extinguishment of the lien.

(9) When the provisions of Paragraph 1 of Article 88 or Paragraph 3 of the same Article have been infringed;

(10) When the inspection to be made in accordance with Paragraph 1 of Article 95 has been obstructed;

(11) When the transmission of affairs specified in Paragraph 1 of Article 105 has been neglected;

(12) When, in case of a matter which should be carried out in accordance with a resolution of a meeting of the debenture-holders, it has been carried out without or contrary to such resolution;

(13) When a false report has been given to, or a fact concealed from, a meeting of debenture-holders or its representative.

Art. 110.—In the following cases, the managing members, directors, liquidators, bankruptcy administrators, persons who have undertaken the whole amount of debentures in accordance with Paragraph 1 of Article 29, the representatives contemplated in Article 64, the special representatives mentioned in Article 89, or the representative of a foreign company, are punishable by a fine of from yen 5 to yen 500:—

- (1) When a report, public notification or notice specified in this law has been neglected, or untrue public notifications or notices have been made;
- (2) When papers which are to be delivered according to this law have not been delivered, or any untrue entries have been made therein;
- (3) When papers, the inspection of which is permissible in accordance with this law, have, without valid grounds, not been opened for inspection;
- (4) When papers which should be kept according to this law have not been kept, or matters to be entered therein have not been so entered, or untrue entries have been made.

Art. 111.—The provisions of Articles 206 to 208 of the Law of Procedure in Non-contentious Matters apply *mutatis mutandis* to fines specified in this chapter.\*

##### SUPPLEMENTARY PROVISIONS.

Art. 112.—When a signature is to be affixed in accordance with this law, the writing of the name and the affixing of a seal may be substituted for such signature.

Art. 113.—In case of applying for the registration of the formation of a *Gōmei Kaisha* (a company formed by members having unlimited liability) and a *Gōshi Kaisha* (a company formed by members some having unlimited liability and some limited liability) carrying on the trust business relative to secured debentures, the application shall, in addition to the papers mentioned in Paragraph 2 of Article 179 of the Law of Procedure in Non-Contentious Matters, be accompanied by a formal charter granted by

\* Law of Procedure in Non-contentious Matters Art. 206. The matters provided in Arts. 84, 1107, of the Civil Code and Art. 22 of the Law concerning the Operation of the Civil Code and Arts. 18, 2, 261, 262, 533 of the Commercial Code and Arts. 6, 2; 7, 2; 18, 2; 21, 2; 30, 2; 31, 4 and 35, 2 belong to the jurisdiction of the District Court of the place where the person to be fined has his domicile.

Art. 207.—The decision imposing a fine must be made by a decree containing the grounds for such decision.

The court must before giving a decision hear the statements of the parties and must require the public procurator to give his opinion as to the matter.

The parties or the public procurator may make immediate complaint against such decision. Such complaint has a suspensive effect.

If the court of complaint gives a decision in conformity with the application of the parties concerned, the costs of the proceedings on complaint and the costs which in the first instance have been put to the charge of the person concerned are chargeable to the public treasury.

Art. 208.—A decision imposing a fine is enforced by an order of the public procurator. Such order has the same force as a "title of debt."

The execution of a decision imposing a fine is made according to the provisions of the Sixth Book of the Code of Civil Procedure; but it is not necessary to serve the decision before execution is made.

the competent authorities, or a certified copy thereof.\*

The preceding paragraph also holds good when application is made for the registration of a charter to carry on the trust business relative to secured debentures which has been granted to an already established company.

Art. 114.—With regard to matters which are to be registered in connection with a trust company, if the same are matters relative to which a charter is required from the competent authorities, the period of time within which the registration thereof is to be made is calculated from the day on which the written charter has arrived.

Art. 115.—When the competent authorities have ordered the suspension of business, or cancelled a charter in accordance with the provisions of Articles 11 or 12, the Registry Office shall register such fact in conformity with the request of the competent authorities.

Art. 116.—Application for the registration of debentures issued in accordance with this law shall, in addition to the papers mentioned in Article 191 of the Law of Procedure in Non-contentious Matters, be accompanied by a deed of trust.†

Art. 117.—Should any changes occur in registered matters relative to debentures issued in accordance with this law, registration thereof shall be applied for without delay by the directors of the trustor company or a member representing it.

Applications for registrations mentioned in the preceding paragraph shall be accompanied by papers proving such changes.

Art. 118.—With regard to the registration of the creation of a right of security under a trust contract, the trustee company will be the party entitled in the registration.

Art. 119.—In case of applying for the registration of the creation of a right of security under a trust contract, with regard to the statement of the amount of the loan in accordance with Articles 116 or 117 of the Law of Concerning Registration of Immovable Properties, it will suffice to designate the whole amount of debentures.‡

Art. 120.—The time at which this law is to be put into operation will be determined by an Imperial Ordinance.

\* Art. 179—(Paragraph 2). To the application must be annexed the partnership contract and, if any one of the partners is a minor or a married woman, a document showing that the consent of the person whose consent is required to the minor or the married woman becoming a partner has been given.

† Law of Procedure in Non-Contentious Matters Art. 191.—To an application for the registration of the issue of debentures the following documents must be annexed:

1. The last balance-sheet;
2. A document showing that an invitation for subscriptions to debentures has been published;
3. A document showing that the whole amount of the debentures has been paid in;
4. The debenture list;
5. The record of the resolutions of the general meeting of the shareholders in regard to the invitation of subscriptions for debentures.

‡ Law Concerning Registration of Immovable Properties Art. 116.—In an application for the registration of the creation of a pledge or of a repledge the amount of the obligation, and if the act constituting the ground of registration contains any provisions as to its duration of the time of performance, as to interest, as to a penalty or indemnity or as to conditions annexed to the obligation, or the provisions of the provisos of Art. 346 or Art. 370 of the Civil Code or any provisions different from those of Art. 356 or Art. 357 of the Civil Code, such provisions must be stated.

Art. 117.—In an application for the registration of the creation of a mortgage the amount of the obligation, and if the act constituting the ground of registration contains any provisions as to its duration or time of performance, as to interest, as to the time of its coming into existence, as to the period of payment or as to a condition annexed to the obligation, or any provisions under the proviso of Art. 371 of the Civil Code, such provisions must be stated.

A youth named T. Sato has been arrested at Yokosuka and removed on May 2nd to the Yokohama District Court. The charge is that he photographed views at the naval station.

## BY WHARF AND WAVE.

The British steamer *Highlander*, when attempting to enter Moji on the morning of the 3rd, ran ashore on the northern point of Mutsure Island. Steps are now being taken to float her off.

The big floating dock, constructed at the Mitsu Bishi Yard in Nagasaki, was successfully launched on the morning of the 4th instant, and will soon be towed to Kobe where it is to be permanently used.

The Captain and five of the officers of the wrecked steamer *Mars* arrived in Yokohama by rail from Hakodate late on Monday evening, and next day attended at the British Consulate to undergo the usual formalities as to subsistence, etc., during their stay here. In view of the probability of a Board of Trade Enquiry being held at the Consulate as to the loss of the vessel the usual reticence prevented any of the more minute details concerning the wreck and the sufferings of the crew being brought to light at present. It was however gleaned that the *Mars*, following in the wake of the *Taromha*, entered the Kunigiri Channel without being observed by the *Akitsu-shima*, the Japanese cruiser which had captured the *Harberton* only a day or two previously, and was hugging the land when she became thoroughly encased in the ice. She was in that position for seven weeks, and being a staunch vessel repelled the attacks on her bow by the innumerable ice-floes which drifted in a southeasterly course for the most part, and was enabled to wear the drift successfully until one floe more massive than the rest crashed into her and parted her forward plates. The whole ship quivered and a terrific snowstorm coming on in the teeth of a full gale she parted in three or four separate places and gradually settled down.

It was a work of extreme peril to get out the boats but four of them were successfully launched and made for the land. Under the lee of a somewhat narrow beach fronting a mountainous range the whole of the crew found a safe haven, and it was in the attempt to reach the steamer again for provisions during a lull in the storm, that the boat containing Mr. Potter, the second officer, and Mr. Stubbs, the second engineer, drifted seawards and was not afterwards seen. Then there came the perilous journey to the nearest port of communication, and over the snowy mountain passes the balance of the crew plodded on, every now and again meeting a police outpost and entering small villages where they state every possible consideration was shown them.

The boat, as has already been reported, was picked up after eleven days in the open sea with both officers frozen to death. They were young men belonging to the North of England with promising futures before them, and their deaths are referred to by their brother officers with the sincerest regret.

The *Mars* was commanded by Captain Shirley, and was a steel vessel of 2,497 tons register, owned by the Venus Shipping Company, Limited, of Newcastle-on-Tyne. She was built at West Hartlepool in 1898, and with her 5,000 tons of the very best Welsh coal lies now a total wreck within two hundred yards of one of the inlets of the Kunigiri Channel.

Much of the excitement which has been caused generally by the reports regarding the capture of rice-laden carriers bound to Japan by the Russian fleet was relieved by the arrival of the *Queen Louise* on Saturday. Favoured by fine weather she took a zigzag course northward and kept out of the ordinary track, meeting nothing on the way until she had got to the northward of Singapore, when she was hailed by H.M.S. *Alacrity*, the Admiral's tender on the China Station. After the usual exchange of signals a German man-of-war was seen in the distance, and a few hours later H.M.S. *Sutley* hove in sight, but from that time right through the *Queen Louise* had an uneventful passage.

When the *Queen Louise* left Rangoon there was quite a large fleet loading for Japan, and asked as to the probability of the capture of those

now en route the Captain said the Saigon telegraphic reports as to the seizure of two of them were to be discredited. At least that was his opinion. There was one steamer, the *Lincolnshire*, now overdue, which left Rangoon four days ahead of the *Queen Louise*; if there was any capture at all it was probably that vessel, but she would by taking a winding course necessarily be a few days late and there need be no apprehension of any danger to her until the lapse of a few more days.

On coming ashore our representative heard that the *Lincolnshire* had made Kobe safely and might be expected in Yokohama to-day.

The *Sheikh*, now in port, took a direct course upward, and nothing was seen of the *Lincolnshire*, or even the *Sarraco*, which arrived safely in Kobe last week. The *Queen Christina* now in Yok-kachi had also an uneventful passage upward, and other reports which have reached here show that at present the carriers now on their way have every prospect of a successful run.

There were over thirty steamers in Rangoon loading for Japan when the *Queen Louise* left, and with those under charter and loading at Moulmein and Bassien makes a total of about fifty. Five of these vessels passed Elephant point on April 1st.

A case of small-pox has appeared among the crew of the British steamer *Queen Louise*, which arrived at Yokohama on April 29th with 48,000 bags of rice from Rangoon. The ship was removed on Sunday to Nagahama for disinfection.

A telegram from Sapporo reports that owing to floating ice, the British steamer *Glamy* went ashore on April 30th off Tokoro. It is said that this ship has been chartered by a Japanese.

The steamer *2nd Keishin Maru* (370 tons), collided with the steamer *Kise Maru* (160 tons) on the night of April 28th at the entrance of Irii, in Kumamoto Prefecture. The latter having sustained severe damage sank, and the former also was damaged and ran ashore to escape sinking. Passengers and crews are safe. The *2nd Keishin* was on her way from Osaka to Wakatsu, Kyushu, and the *2nd Kise* had just left Irii for Nagasaki.

The Captain of the *Henri Bolkov*, which was stopped by the Japanese in Yunigiri Straits on the 7th April, wishes us to correct some statement in our report published on April 14th concerning his vessel. In the first place he says there was no chase, and no shots were fired. The cargo on board consisted of flour destined for the starving people of Khorsakoff, Saghalien, and was not composed of canned beef, etc., for Vladivostok; while there was no dynamite on board. The owners are the East Asiatic Company of Copenhagen.

The S. S. *Comeric*, which arrived in port on Saturday, has beaten the record for long passages under steam. She loaded in New York and Philadelphia a duplicate cargo to that which was in the holds of the *Knight Commander* when she was sunk by the Russians last year and left the former port on December 23rd. In order to avoid the Baltic Fleet she rounded the Cape, put into Durban for bunker, and came up within the track of sailing vessels to Singapore arriving there after a ninety-three days' passage. Coaling again she proceeded onward to Moji where she discharged over one thousand tons of iron bidge material. She reports a pleasant passage throughout, and never sighted any of the Russian Fleet either at the Cape or in the Indian Ocean.

On April 24th, fire occurred on board the steamer *Matsumaye Maru* (618 tons) having 14,800 cases of kerosine oil on board. At the time she was passing Heguri-shima, Yamaguchi prefecture. In order to escape sinking, the vessel ran ashore, but all her cargo was burned and the hull severely damaged. The hull was insured with the Tokyo Marine Insurance Co. for yen 35,500, and the cargo, with the Nippon Marine Insurance Co. for yen 42,200.

On the night of April 28th fire broke out on board the P. and O.'s chartered steamer *Spithead*, which arrived on the previous day at Kobe with

thirty thousand bales of cotton from Bombay. About eight thousand bales were destroyed. The fire was got under by 1 a.m. on April 29th. The *Kobe Herald* puts the damaged cargo at ten to twelve thousand bales.

## ORGAN RECITAL AT UNION CHURCH.

The organ recital at Union Church on Thursday afternoon proved to be the most successful of the series held this season, and attracted a very large congregation. The selections from Mendelssohn's Oratorio "Elijah" took up the greater portion of the programme, being composed of about two-thirds of the entire oratorio, and the manner in which the chorus work was accomplished demonstrated that much conscientious practice had been done during the rehearsals. Mr. Griffin conducted, Mr. W. Karl Vincent being at the organ. The heaviest burden of the solo work fell upon Mr. Somerton, who took the *Elijah* part, and never has he been heard to finer effect, oratorio music being evidently his forte. From the opening recitative, "As God, the Lord of Israel liveth" right through the trying Baal music until the close, his voice rang out true, clear and expressive, answering all the demands made upon it, and one very much regretted that the nature of the building in which the Oratorio was sung forbade a public demonstration of thanks. Mr. Somerton was ably seconded by the other soloists, Mrs. Irwine, Mrs. Harrison, Miss Burdett Leach and Miss Mendelson; but Mr. Cooper we must own was rather disappointing, his voice lacking the timbre and quality demanded by oratorio.

The air "Woe unto them who forsake Him" gave the first opportunity to Mrs. Harrison and she took full advantage of it, but she was even more delightful in the unaccompanied trio with Mrs. Irwine and Miss Leech, "Lift thine eyes." Yet her greatest triumph was in the immortal "O, rest in the Lord." This was simply perfect, the singer realising the beauty of the theme to its fullest extent. Of the choruses the opening "Help, Lord," was sung very spiritedly, but even better were those generically known as the Baal choruses. These went with a fire and intensity of expression seldom heard in the Far East; in comparison, "Thanks be to God" was good; "He, watching over Israel" was very fair, and the final one of all, "He that shall endure," though bravely rendered, showed signs that the singers had been taxed to their fullest capacity.

Mr. Vincent's work at the organ was as usual matchless. He contented himself with three selections, "Capriccio" (*Lemaigre*), "Berceuse" (*Delbruck*) and Gavotte from 18th Sonata (Martini), the last two at the request of members of his choir, and a grand recessional of Rubenstein's.

The ladies and gentlemen taking part, beside the soloists mentioned above, were:—

*Soprano*, Mrs. Brown, Mrs. Cain, Mrs. Kenderdine, Mrs. Thwaites, Mrs. Tresize, Mrs. McBeth, Miss Griffin, Miss Dunstan, Miss Saunders, Miss Bunting, Miss Wyckoff, Miss E. Bunting, and Miss Hayashi. *Contralto*, Mrs. Brockhurst, Mrs. Wilson, Mrs. Howe, Mrs. Bennett, Mrs. Bagnall, Miss Clausen, and Miss Thompson. *Tenors*, Mr. Pollard, Mr. Griffin, Mr. Ellis, Mr. Graham and Mr. Quinton. *Basso*, Rev. E. S. Booth, Mr. Grimble, Mr. McBeth, Mr. Wallace and Mr. Wilson.

## FIRES.

An outbreak of fire occurred at 9.30 a.m., on April 28th at Take-machi, Shitaya, Tokyo, burning down thirty houses.

Early on the morning of April 28th, fire broke out in the Kure theatre, Kure, destroying six buildings in all. The damage to the theatre is estimated at fifty thousand yen.

The *Asahi* has a telegram from Himeji to the effect that at 8.30 p.m. on April 30th, fire broke out in the barracks of a cavalry battalion, destroying the building.

The well-known Buddhist temple Kakurin at Kanazawa, was destroyed by fire on the morning of May 3rd.

## JAPAN-KOREAN AGREEMENT.

The Imperial Governments of Japan and Korea, finding it expedient from the standpoint of the administration and finances of Korea, to rearrange the system of communications in that country, and, by amalgamating it with that of Japan, to unite the two systems into one common to the two countries, and, having seen the necessity with that object in view, of transferring the post, telegraph and telephone services of Korea to the control of the Japanese Government, Hayashi Gonsuke, Envoy Extraordinary and Minister Plenipotentiary of Japan, and I-hayeng, Minister of State for Foreign Affairs of Korea, each invested with proper authority, have agreed upon and concluded the following Articles:—

Art. I.—The Imperial Government of Korea shall transfer and assign the control and administration of the post, telegraph and telephone services in Korea (except the telephone service exclusively pertaining to the Department of the Imperial Household) to the Imperial Japanese Government.

Art. II.—The land, buildings, furnitures, instruments, machines and all other appliances connected with the system of communications already established by the Imperial Government of Korea, shall by virtue of the present Agreement, be transferred to the control of the Imperial Japanese Government.

The authorities of the two countries acting together shall make an inventory of the land, buildings and all other requisites mentioned in the preceding paragraph which shall serve as evidence in the future.

Art. III.—When it is deemed necessary by the Japanese Government to extend the communication system in Korea, they may appropriate land and buildings belonging to the State or to private persons; the former without compensation and the latter with proper indemnification.

Art. IV.—In respect of the control of the communication service and the custody of the properties in connection therewith the Japanese Government assume, on their own account, the responsibility of good administration.

The expenses required for the extension of the communication services shall also be borne by the Imperial Government of Japan.

The Imperial Government of Japan shall officially notify the Imperial Government of Korea of the financial condition of the system of communications under their control.

Art. V.—All appliances and materials which are deemed necessary by the Imperial Government of Japan for the control or extension of the system of communication shall be exempt from all duties and imposts.

Art. VI.—The Imperial Government of Korea shall be at liberty to maintain the present Board of Communication so far as such retention does not interfere with the control and extension of the services by the Japanese Government.

The Japanese Government, in controlling and extending the services, shall engage as many Korean officials and employees as possible.

Art. VII.—In respect of the arrangements formerly entered into by the Korean Government with the Governments of foreign Powers concerning the post, telegraph and telephone services, the Japanese Government shall in behalf of Korea exercise the rights and perform the obligations pertaining thereto.

Should there arise in the future any necessity for concluding any new convention between the Government of Korea and the Governments of foreign Powers concerning the communication services, the Japanese Government shall assume the responsibility of concluding such convention in behalf of the Korean Government.

Art. VIII.—The various conventions and agreements respecting the communication service hitherto existing between the Governments of Japan and Korea are naturally abolished or modified by the present Agreement.

Art. IX.—When in future as the result of the general development of the communication system in Korea there is some adequate profit over and above expenditure defrayed by the Japanese Government for the control and maintenance of the old services and for their exten-

sions and improvements, the Japanese Government shall deliver to the Korean Government a suitable percentage of such profit.

Art. X.—When in the future an ample surplus exists in the finance of the Korean Government, the control of their communication services may be returned, as the result of the consultation of the two Governments, to the Government of Korea.

## THE LAW COURTS.

## SAKE BREWER FINED.

S. Okura, a sake brewer, residing at Kitajima-cho, Tokyo, was sentenced on April 27th in the Tokyo District Court to a fine of yen 26,660. The charge was that he had illegally manufactured 60 koku of brandy.

## CLAIM FOR LIFE INSURANCE.

A case instituted by K. Miyamoto of Kagawa prefecture against the Yokohama branch of the Mutual Life Insurance Co. of New York, claiming twenty-three thousand yen and interest at the rate of 5 per cent. per annum from December 1st 1903 till the execution of judgment, came up again on April 28th in the Yokohama District Court before Judge Nakanishi.

The Court showed to plaintiff's Counsel a statement presented by Dr. Masujima, Counsel for the defendant firm. The statement declared that his qualification for representing the firm had ceased owing to alterations in the Yokohama agent.

Plaintiff's Counsel stated that his client did not wish to have the case further adjourned as the result of a petty dispute between defendants and their Counsel, and that defendants should be considered as absent or unrepresented. Accordingly the Court should give judgment in accordance with the Code of Civil Procedure.

After consultation, the Court delivered judgment in favour of plaintiff.

## CLAIM FOR DAMAGE.

In the Yokohama District Court, a case instituted by the American Trading Company against R. M. Sloman, Hamburg, (whose Yokohama agents are Messrs. C. Illies and Co.) claiming yen 485.36 came up on April 29th before Judge Yasuda when judgment was delivered dismissing plaintiff's claim.

The Yokosuka Prize Court has delivered decisions on petitions lodged by the owners of two British steamers *M. S. Dollar* and *Wyfield*, and two Austrian steamers *Burmah* and *Siam*, and by the shippers of their cargoes asking for the release of the prizes, confiscating them all. The *M. S. Dollar* (4,216 tons) with fodder was captured on Jan. 27th; the *Wyfield* (3,235 tons) with barley, wooden materials, etc., on Jan. 30th; the *Burmah* (3,071 tons) with 4,000 tons of Cardiff coal, on Jan. 25th; and the *Siam* (3,160 tons) with British coal, on Jan. 31st, all in the North Sea on their way to Vladivostok.

## BAVIER V. JEWETT.

In the Yokohama District Court a case instituted by Mr. Edward de Bavier (who, being absent in Switzerland, was represented by Mr. H. V. Gielen) against Mr. J. H. Jewett petitioning for cancellation of registry of the firm of Messrs Bavier and Co., came up again on May 3rd before Judge Nakanishi, when judgment was given dismissing Plaintiff's petition and ordering him to bear costs.

## CLAIM AS TO DISTRAINT.

In the Yokohama District Court, the hearing of an action lodged by Cheong Fenshi, a Chinese merchant and one other, who petitioned for the cancelling of the seizure of a house by Mr. Paul Helm, was resumed on May 4th before Judge Yasuda, when Mr. P. S. Bent, and a Chinaman were examined as witnesses.

Mr. Bent deposed that on May 17th, 1899, he, on behalf of Mr. J. H. Jewett, No. 264, leased two pieces of ground on lots Nos. 121 and 122 to four Chinamen—Chun Minchi, Ah Teck, Ming-Lok-ton, and Hep Shing—but he could not speak to the conditions of the lease as he left the original in his office. With regard to the copy

of the lease produced by plaintiff's Counsel to the Court, Mr. Bent said that it might be correct as it had been copied from the original by his employee before it was given to the lessees. The lessees built houses on the ground but witness did not know whether the buildings were jointly held by the Chinamen.

Ah Teck stated that in June about seven years ago, he and three others—Chun Minchi, Ming-Lok-ton and Hep Shing—leased the ground on lots Nos. 121 and 122 from Mr. Jewett. Subsequently they built houses there on their joint accounts. The buildings were registered in the Yokohama City Office in the names of witness and Chun Minchi though the property were jointly owned by the four. The reason was that one of the partners died and another declined to participate in the registry. He, however, did not remember the reason for this. The property was held by the partners under the name of Kunchang Kungsu. In Chinese "Kungsu" means company or partnership. Cheong Fenshi, plaintiff in this case, collected the house rent and paid the ground rent to Mr. Jewett, and later another Chinaman, Cheong Yuenking, attended to the same duty.

At the conclusion of witnesses' examination, Plaintiff's counsel asked the Court for leave to examine Cheong Yuenking, referred to by the Chinese witness, and Defendant's Counsel asked leave to summon Cheong Fenshi as a witness. The Court granted the request of the former and adjourned the hearing till May 18th.

## YACHTING.

The Yokohama Yacht Club started the season on Saturday with races for the Cruising Class and Larks. Owing, however, to the scarcity of wind, no boat of either class managed to complete the course before the time limit had expired. The cruisers started at 2 p.m., and *Wanderer* was first to clear the harbour entrance. After rounding Tsurumi mark for the first time, *Nina* assumed the lead, but the wind then failed altogether, and for the next hour it was a mere drift. *Asagao* gave up early, and went home, but the others eventually picked up a very light breeze, and rounding the Lightship, ran back to the mark boat off Tsurumi, *Nina* leading from *Wanderer*, and *Kathleen* bringing up the rear. When *Nina* began the reach in from Tsurumi homewards, it looked as if she might get home in time, but the wind again petered out, and she got inside the harbour entrance at 4.58, with only two minutes to go before this limit. Throughout the afternoon, the wind, when there was any at all, was very light and uncertain, and some surprise has been expressed at the behaviour of the owners of some of the 21 raters, who, with the wide bay open to them, thought fit to come dodging round the course with the competing boats, and were not sufficiently sportsmanlike to keep to leeward.

## YOKOHAMA CHESS CLUB.

The Chess Championship for the trophy presented by the President of the Chess Club was concluded on Saturday night, so far as the regulation number of games was concerned, but owing to a tie another match will have to take place. Mr. Bruce Mitford and Mr. Geiser, the for tie championship and a deciding match will have to be played. The points were as follow:—Bruce Mitford, 12 points, E. Geiser, 12; A. E. Pawsey, 10½; R. F. Herzog, 10; M. Beart, 9½; W. F. Balden, 6; A. V. C. Maher, 6; G. Hamann, 5, and Capt. Weston, 1.

In the final heat of the Chess Handicap Tourney Mr. M. Beart beat Mr. A. E. Pearson. Mr. Beart therefore takes first prize and Mr. A. E. Pearson 2nd prize.

The first and second prizes for the handicap tournament will be sets of Staunton chessmen with boards whilst the championship trophy, presented by the President, Mr. J. Griffin, is a very handsome silver "rook."

A hundred and fifty workmen engaged to take part in the work of floating the Russian warships left Moji on May 3rd for Port Arthur.

## THE GIANT AND THE GIRL.

## PART FIRST.—THE DUEL.

I saw one stand  
In the wide North Land,—  
Burly and big was he,—  
He set one foot on the eastern strand,  
One foot by the western sea.  
Burly and bulky and big was he,  
Bearded and brawny and broad.  
Now I'll take what I will,  
Quoth he, and ill  
For the man who prates of fraud!  
And, quoth he, there is harm  
In the swing of my arm  
To whom my march would stay.  
When I whirl my mace  
What man from his place  
Shall rise to turn me away?  
They were venturesome men  
To encounter me when  
I have set my hand on the prey!

And I looked to the East, and I looked to the West,  
And I looked to the South and the North,  
And never a man with the heart in his breast  
To adventure a finger forth.  
But each to his neighbor waxed bold to say,  
In a quite incidental and casual way,  
If I were not so terribly busy to-day  
I should smite that Giant swarth.  
Or at least I'd say Shoo!  
To the big Bugaboo,  
And make him unhand all his pelf.  
But you know how it is with yourself.

Then I saw one stand  
In the Morning Land,  
Slender and slim was she;  
Smooth was her face,  
And a girl's her grace,  
As she stood by the sheen of the sea;  
Smooth and slender and slim and slight,  
Cheek of the sunrise and eyes of the night;  
But girls are for love, and men are for fight.  
Is the heart of the Maiden a heart of might—  
The Maid of the Isles of the Sea?

She looked to the West, and she looked to the East.  
And she looked on the Giant come forth to feast.  
Is there never a man of mail, quoth she,  
To make yon braggart quail? quoth she;  
I'm nought but a girl,  
But I feel my lip curl  
To hear such a cowardly tale, quoth she;  
My hand may be light,  
And my arm may be slight,  
But I yield to no churl,  
For to parry and smite  
Is one of the lessons they taught me well,  
And my steel is the blade  
Which the good smith made.  
In the brave old days ere the Taikun fell.  
The Soul of the Samurai, quoth she.  
When this sword shall flash  
That man will be rash  
Who will venture his head too high, quoth she.

I am Lord of the North  
Whence the frost comes forth,  
And the bitter wind and the snow, quoth he;  
At my good right hand  
Shall winter stand;  
We'll be ill to overthrow, quoth he.  
The Maid of the Isles  
Will husband her smiles  
When the glass is at twenty below, quoth he;  
From the Arctic night  
Where Death stalks white  
The bitter blast shall blow, quoth he,  
And maiden or man  
Let meet it who can!  
We'll smite to the death the foe, quoth he.  
The strength of the Main  
Shall my cause maintain,  
Quoth she, I am child of the Sea and the Sun.  
No foeman I shun.  
The South is with me  
And the heart of the Sea,  
And Summer, mighty and mild, quoth she.  
At the shout of the Gale  
Yon's cheek may pale,

When the Deep is roaring wild, quoth she,  
And by Stroke of the Sun  
Have fields been won,  
And the shield of the mighty defiled, quoth she.

I trust, quoth he, in sinew and thew,  
In my shoulders brawny and broad, quoth he,  
I trust in the wild, white storm which blew,  
Whose pitiless stroke  
The Corsican broke;  
And eke I trust in God, quoth he.  
I wield the sword  
Of the Czar and the Lord,—  
The Gods of the Orthodox Church, quoth he,  
And I'll not be left in the lurch, quoth he;  
The might of the Pagan,  
Shall crumble like Dagon,  
When the incense is drifted,  
And the Ikons are lifted  
Each to its own little perch, quoth he.

I trust, quoth she, that the God of Might,  
If a God there be, is a God of Right.  
He can teach, 'tis said, if the heart is white,  
The hands to war and the fingers to fight.  
Thro' the arm of a girl His arm can smite.  
I know Him not, but if God there be,  
God of the Land and God of the Sea,  
Lord of the Hosts of Earth and Heaven,  
Lord of the Stars and the Planets Seven,  
He will fight for them that fight for me.  
For God Most High must be God Most True,  
And from holy Heaven thro' the stainless blue  
His eyes the heart can search, quoth she,  
Of a man or a matter. And verily  
To the flame of His eyes my cause I trust,  
For my hands are clean and my quarrel just.  
So I lean on the Lord, the Lord of Truth,  
If a God who is really God may be.  
It may hap He is not the God, forsooth,  
Of the Holy Orthodox Church, quoth she.  
And if else, I trust in my trusty Electer.  
In my Star of Fate, and my Battle Spectre  
That walks in the mirk of war, quoth she,  
And in Hachiman, Mars and Thor, quoth she.  
My hand may be slender; my heart is stout,  
And knows not to quail at the battle shout,  
However the fray be sore, quoth she.

## INTERLUDE.

Now need thou my words, if my speech hath  
savour,  
Thou who would'st find in His presence favour,—  
As surely His message, as true its flavor,  
As the word of a Priest by the Sacred Laver—  
If He find one who stands  
With his heart and his hands  
For the Just and the Right,  
With his face to the Light,  
And does his straight duty  
With main and with might,  
Tho' a pagan thrice over  
God chooses him Knight,  
God counts him His lover,  
God finds in him beauty,  
God reckons him white.

But unless there is Truth in the heart of a fellow.  
He counts him a heathen, a white or a yellow,—  
As the Book itself teaches, from cover to cover.  
'Tis little He cares  
For priests or for prayers,  
Be they prayers of paper or prayers of breath,  
For the wheel that turns,  
Or the incense that burns,  
Or the white man's shibboleth.  
He reckons of worth  
In Heaven or Earth  
The loyal soul that conquers Death.  
For neither a cult of Stones and Sticks,  
Nor a cult of Ikon and Crucifix,  
Is matter to Him of the least satisfaction.  
Who would make Him his fellow in any ill action,  
And with praises profane His white glory be-  
smirch,  
Finds His rod and His staff are but ferule and  
birch,  
Tho' his standing be good in the Orthodox  
Church.  
As a word from the Lord  
Is the Saying assured.  
In the heart of thy heart is its token.  
Quothéleth hath heard and hath spoken.

## PART SECOND.—THE DUEL.

Am I fallen, also! so low quoth he,  
To be hearded by such a foe, quoth he,  
And to meet blow for blow  
From a rosy-cheeked lass, with her tresses a-flow?  
Then have at thee! Know  
That thy flesh I'll bestow  
On the bird and the beast. To the Fiend you go,  
And to all the ill angels that wait you below!

But she showed her white teeth,  
As a mischievous smile set her face all a-wreathe,  
And her hand stroked Electer asleep in his  
sheath;  
And her lip was all curly  
To see him so surly.  
And she answered, Sir Burly,  
Do you not think it early  
To be counting your spoils  
And the fruit of your toils?  
Better look to your foils!  
To boast when you gird on  
Your armor, your Grace,  
Is a thing never heard on  
The Isles. To his face  
I defy who defiesth,  
Or Gog, or Goliath.  
I would not be the first time  
A Giant had a worse time  
For being a bit of a brag, quoth she.  
I'll have my sling with me,  
And I think to bring with me  
A pebble or two in my bag, quoth she.  
But 't is ill to rely  
On an old-fangled thing  
Like a stone and a sling.  
In an up-to-date war,  
Or on sea or on shore,  
One needs as good weapon as money can buy.  
So the East strung my bow,  
And the West shaped my arrow,—  
I doubt if your Bigness has seen its "marrow,"—  
No clumsy wrought flint from barbarian barrow,  
But a stinging steel barb from the forges of  
Yarrow,  
With its feather a quill from the campus of  
Harrow.

I heard the West lauding,  
The East all applauding,—  
For fighting is fine  
When its over the line,  
And one suffers no fear of marauding,—  
But my heart cried, God bless her,  
And deign to possess her  
In the curve of His hand, tho' she be no Confessor!

And the Great Gray Hawk was true to her,  
And the White War Pigeon flew to her,  
And the Raven gave his clue to her.  
The fish of the sea they schooled for her,  
E'en the Earthquake Carp he cooled for her  
His hot heart, which he ruled for her.  
The summer rains did fall for her,  
The waves of the sea were all for her,  
And all the winds they blew for her.  
The very lightnings ran for her,  
The very worms they span for her,  
And the rice and the flax they grew for her.  
They brought her all that hands could hold,  
They piled her lap with better than gold.  
She must not suffer hunger or cold,  
Quoth they, till the end of the fray be told.  
And never such harvest was known to man  
Since the ancient days of Inari San.  
Even blustering Winter grew mild to her,  
His face was the face of a child to her.  
Each old Gaffer Gray  
Who stood watching the fray  
Up in Manchury Land, was heard frequently say:  
The Maid of the Isles  
Must have wonderful wiles,  
The heart of old winter himself she beguiles;  
He's as genial as Santa Claus each time she smiles  
No mention appears  
In a cycle of years  
That are set in my journal  
Of a season so vernal.  
And, indeed, it is told that when winter felt surly  
The chill of his frown always fell on Sir Burly!

So the battle was joined  
And I heard the steel clashing,—  
The blue sparks were flashing.

Now help and protect her,  
Each Star and each Spectre—  
Achilles and Hector!—  
Nay, Thou, no Respector  
Of persons or peoples,  
Pagodas or steeples!  
Forth flamed her Electer,—  
Fore-doomed what it touches!  
One moment it blazed,  
And in dust he fell dazed.—  
While out of his clutches  
His treasure purloined  
Flew broken and scattered.  
And beaten and battered  
And shaken and shattered,—  
'T was recompense such as  
He never expected,—  
Disgraced and dejected,  
And shorn of his tassel,  
With his spear splints for crutches  
He limped from the field  
Thro his deserts congealed  
To his Holy-Rock Castle,  
The sadder, but wiser we hope, for the fray.  
And 'twill be a long day  
Ere he comes forth to prey  
On the banks of the Hun,  
And the shores of Ryojun,  
While Yamato, alert,  
With her slender waist girt,  
Stands guard on her highlands,  
Fair Maid of the Islands,  
Keeping watch of the high lands.

## ENVOY.

So she fought for her hand,  
And she stood for her Land,  
And she smote for her future and ours who stand  
With hot eyes a-gaze,  
And glad hearts amazed,  
To see Maid so slender  
Shine forth in such splendor  
Of valor. Be praise  
To the Highest always,  
Who did gird her and send her,  
Sustain and defend her,  
And who laid the green bays  
On her brow! And the day,  
Self-poised, self-reliant,  
She bearded the Giant,  
Broad, bushy, defiant,  
And rescued the prey  
From the clutch of the spoiler,  
Be remembered for aye!  
No weapon could foil her,  
No threat could abash her!

The rest of this Lay—  
Lo, is it not writ in the New Book of Jashar?

SELRAQ LLADNEQ YENDYS.

Yokohama.

## CHINA.

According to a *Hochi Shimbun* telegram from Peking the United States Representative has officially informed the Chinese Government that America will assist in enforcing China's neutrality. It appears improbable that any such explicit declaration has been made, though we take it for granted that as the Washington Government made itself conspicuous in securing general recognition of China's neutrality at the outset, its good offices will not be wanting to consummate that useful purpose.

The *North-China Daily News* remarks that the late Russian Minister at Peking, M. Paul Lessar, had been a serious invalid for years and it seemed that only his devotion to duty kept him alive. He was young as diplomatists go, being only in his 54th year. An Engineer by profession, whose work had lain mainly in Central Asia, he came into prominence first at the time of the Penjdeh affair, his knowledge of the locality making him a most valuable assistant to the Russian Ambassador in London. He was appointed Councillor of the Embassy, and was at times Chargé d'Affaires, his intellect and personal manners making him very popular in London.

He succeeded M. de Giers at Peking and, versed though he was in every art of Russian diplomacy, he has had a hard task to uphold his country's interests in all the difficulties caused by the war with which he had no sympathy; and he goes to his rest with nothing but admiration for his dauntless energy and unfailing courtesy.

## NEWS OF THE WEEK.

During April, 295,568 tons of coal were exported from Moji.

Lieut.-Colonel Yamamoto and eight others have been promoted colonel.

W. Chitanoff (24), a Russian soldier, escaped from detention at Hamadera, near Osaka, on April 26th. He is still at large.

The *Jiji* has a telegram under date April 29th from Shanghai to the effect that the Russo-Chinese Bank has purchased the two steamers *Muchong* and *Taiwan*.

Mr. Takahashi vice-President of the Bank of Japan, arrived on April 30th at New York from London which he left on the 21st of the same month.

Five *kin* of new tea was put on the Nagasaki market on May 22nd. The nominal price was *yen* 25 per 100 *kin*; this rate is the same as in the previous year.

The death is reported of Sir John Budd Phear, who was Judge of the High Court of Judicature, Bengal, 1864-86, and Chief Justice of Ceylon 1877-79. He resided at Exmouth and took a large interest in the public affairs of Devonshire.

A meeting of the presidents and chief public procurators of the District Courts throughout the Empire was held on May 1st in the Department of Justice, when Mr. Hadano, Minister, was present and gave an instructive speech. The conference will continue for about a week.

On May 1st, a thunderstorm was experienced at Matsuyama and other western cities, damage being done to buildings and cultivated fields. A Karatsu telegram says that owing to the storm, a boat with nine students from an academy was capsized. They are still missing.

The Athletic Sports of the K. R. & A. C. took place on Saturday. Everything passed off successfully. The challenge cup for the mile handicap was finally won by Mr. Sillius, the holder who was carried up amid much enthusiasm to receive it. The Ladies' Purse for the quarter mile handicap was secured by A. F. Guterres, the half mile handicap by S. Stephens and the 100 yards by J. Kuhn. The prizes were distributed to the winners by Mrs. Kerr.

In connexion with the approach of the Baltic squadron, the premia in marine insurance has generally risen. The rates are now:—

	Original rate.	New rate.

A moderate-sized audience gathered in Van Schaick Hall on Monday evening when Mr. Lindpainter, the only professional photographer in Port Arthur throughout the siege, exhibited his unique series of photographs. The pictures gave a capital idea of the destructiveness of modern shells, of the horrors of war, as well as of its grandeur, but the evening would have been more enjoyable had the views been fewer in number. There were too many "damaged Chinese houses in the old town," and after a while the audience grew bored. The introduction of two Korean photographs was also an irrelevancy that might well have been spared. The photographs were described in an interesting way by Mr. C. Wilmer, late of Port Arthur.

## COUNT OKUMA ON THE SITUATION.

The Shimpoto committee for the investigation of political affairs held a meeting on Thursday afternoon, Mr. Seki occupying the chair. Count Okuma addressed the meeting. Referring to the hostilities, he said that the destructive power of war was tremendous. Of about a million men who had been sent to the front during the past 15 months, at least 300,000 were sick or wounded and 50,000 were dead. But as we had been able to crush the main force of the enemy, our national spirits were still maintained. Should the war, however, continue for a long period, it was not impossible that the nation would become tired of it, or lapse into an indifferent optimism, against which we ought to guard ourselves. Peace rumours were afloat after the fall of Port Arthur and after the battle of Mukden, but these rumours proved groundless. On the contrary, Russia had announced her determination to continue the war, General Dragomiroff recalling the 'Thirty Years' and the One Hundred Years' War and Captain Klado advocating the despatch of the fourth and fifth Squadrons to obtain the control of the sea. Thus the prospect of attaining a final victory in a short time had disappeared, and we were confronted with the necessity of converting our field armies into garrisons, in order to endure the prolonged warfare. It was to be feared that the nation, disappointed in its hope of crushing Russia at once and imposing on her an indemnity, might become despondent. The speaker feared neither the enemy's forces, nor his financial power, nor any intervention in his favour, nor a war of exhaustion. But it was apprehensible that our people might become tired of the war. The greatest desideratum at the present moment was to prepare the people's minds for a prolonged war. Referring to Japan's diplomacy, the speaker quoted the *London Times*, which stated that the irreproachable efficiency of the Japanese military power having been established by the events of the past year, Japan had now to prove her diplomatic power. A Japanese attack on St. Petersburg and Moscow being out of the question, we had hereafter solely to rely upon our diplomacy. If there had been skilful diplomacy on the part of Japan a few months ago, the Baltic Fleet might not have crossed the Indian Ocean. There is a section of people who hold the belief that the Russian Fleet can be easily destroyed. But the issue of naval warfare depended more upon luck than upon the tactics and bravery of the fighters. Witness the fact that last summer the Vladivostok squadron defied our superior force, owing to the fog, and blockaded Tokyo Bay, though only for one or two days. When the Great Armada was defeated by England, Philip II. of Spain said that the defeat was not due to the fighting, but to the wind, which even the mighty power of Spain could not control. The battleship of to-day was not easily to be sunk by gunfire or torpedoes. Nothing was more mistaken than the idea that the Baltic Fleet could be destroyed at one stroke. Our countrymen should be cautioned not to view things too lightly. At times diplomacy was more efficient than a million of troops. It could often conclude a war with despatch and glory. The speaker had no desire for a time serving peace or a peace like an armistice. He only desired to say that if a method existed by which a victory might be won without fighting, that method must be adopted.

The Count proceeded to say that the present war was being fought not only for the sake of the Japanese Empire, but for the cause of humanity and civilization, and our soldiers who were killed in the conflict were sacrificed for that cause. Our laws were quite imperfect in extending substantial assistance to the families suffering from the war and the power of various charitable associations was too inadequate to relieve their distress. It was therefore advisable that members of the Shimpoto should draw up before the coming session of the Diet a better plan for relieving these families. With regard to the financing of a long war, the Count said the increase of the taxes yielded 150 million *yen* and the postponement of public works 50 million *yen*, totalling 200 million *yen*. Of this sum, 50 million *yen* should be paid as interest on the war loans, and the remainder as expenses for maintaining our garrison in Manchuria. In the event of this programme being adopted, Japan could continue the war indefinitely. The most essential thing at present was that the people should be thrifty. But he had heard that various pleasure resorts had prospered since last January. It was therefore advisable that the people should be again reminded that the nation was bearing heavy taxes and paying a very high rate of interest on account of the great national struggle. As there was no likelihood of any great battle taking place hereafter, there was also no necessity of increasing the taxes or floating a foreign loan. But the manner in which the nation would

meet post-bellum expenditure was a subject worthy of further investigation. The speaker then referred to a speech made by Viscount Yoshikawa, the Home Minister, who said that the victory of the Japanese force was due to constitutional government and those views the speaker endorsed. The unity of the nation was alone due to the same cause. But he wanted to give two more reasons for the victory. The first was the enactment of the Conscription Law in 1873, and the second the enforcement of the compulsory educational system the same year, at which time there were no countries, except Germany and the United States, in which compulsory education was in force. This system brought about the national unity in every department of life. Even in economic circles, the spirit of the united nation was evident, in its readiness to furnish the enormous war expenditure. Of late, some adverse criticism had been passed on the morale of the Diet. The speaker believed that the Diet might be improved by an amendment of the Election Law, and he hoped that the national energy, which had proved itself so powerful in the present war, would be used, after the conclusion of the war, in improving everything in Japan. If the Japanese soldiers could be taken, as the German Emperor was gracious enough to say, as a model for the German soldiers, the speaker believed it was not impossible that we should furnish the world with a model in politics, literature, ethics, and other things. The speaker urged this ideal upon the members of his party in their work in political circles.—*Japan Times*.

#### CORRESPONDENCE.

##### ACKNOWLEDGEMENT.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—We wish to gratefully acknowledge the excellent detective work that the Yokohama and Tokyo Police have done in connection with the burglary that took place on our premises some two months ago.

The Yokohama Police immediately took the matter in hand and yesterday we were informed by the Metropolitan Police that the thief had been traced, a former employee, to Tokyo and finally arrested, the majority of the stolen goods being recovered.

We wish to publicly acknowledge our sincere thanks for the good work done.

W. H. BOYD & CO.

Yokohama, May 2nd, 1905.

#### TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

##### KING EDWARD IN PARIS.

London, April 27.

King Edward maintains incognito whilst in Paris. He dines with President Loubet on Sunday, and will remain in Paris two or three days. The visit is regarded as a important political event and as an affirmation of the *entente* with regard to Morocco *vis-a-vis* Germany.

##### NEW RUSSIAN MINISTER TO CHINA.

M. Pokotiloff, Director of the Russo-Chinese Bank, has been appointed Russian Minister to Peking.

##### U.S. COTTON CROP.

The United States cotton crop is an extraordinary one and exceeds the world's record by 2½ million bales.

##### ALLEGED DEFECTS IN BRITISH NAVAL GUNS.

London, April 28.

An article in the London *Daily Graphic*, signed "C.B.," states that the 12-inch wire-guns on the British battleship *Majestic* have given out after firing the equivalent of forty full charges, though the life of the gun is estimated at from 150 to 200 rounds. Fifteen out of the thirty-seven newest and most powerful British battleships are armed with the same guns, including the *Albion*, *Glory*, *Ocean*, and *Vengeance* on the China Station. The gun reserve is totally inadequate to replace these guns.

The writer alleges that shells burst inside seven out of the sixteen big British-made guns on board the Japanese battleships during the naval battle on August 10th last, indicating that they, too, are worn out. These facts practically reduce Britain's battleship strength by one quarter. The latest pattern six-inch wire-gun has also failed under experiment. The article further points out that Great Britain is the only Power that is manufacturing wire-guns.

Later.

The British Admiralty deny the *Daily Graphic's* story. They admit, however, that two of the *Majestic's* guns cracked after firing 66 and 76 full charges respectively, owing to the soft steel of the inner tubes, but state that all the other guns afloat are perfectly serviceable, one having fired 162 shots before being relieved.

##### ANTI-JAPANESE LEGISLATION VETOED.

The Canadian Government has disallowed the British Columbian anti-Japanese legislation.

##### MR. CARNEGIE AND THE SCHOOL-MEN.

Mr. Carnegie has given ten million dollars' worth of Steel Corporation Bonds to

provide superannuation annuities to college professors in the United States and Canada.

##### RENEWED DISTURBANCES IN RUSSIA.

London, April 29.

Official reports from the Caucasus describe numerous encounters between the peasants and troops. The former are armed with pick-axes and bludgeons and occasionally with revolvers. Many peasants have been killed and wounded by the Cossack charges.

Serious disorders have broken out at Cheliabensk, on the Siberian railway, and troops have been sent there from Ekaterinenburg.

##### GERMANY, FRANCE AND MOROCCO.

The determined and deliberate policy of Germany in Morocco is regarded in Paris as becoming an increasingly grave factor in European politics, even warranting the watchfulness by France of her eastern frontier.

##### A STRANGE REPORT.

Admiral Rojestvensky finally left Kamranh Bay on the evening of the 26th March.

##### THE THIRD SQUADRON.

Two squadrons of eight and seven vessels respectively, presumably Admiral Nebogoff's, were sighted on Thursday night sixty miles off Penang steering for Singapore.

##### SCHWAB TO BUILD NEW RUSSIAN NAVY.

Mr. Schwab, the American steel magnate, has left St. Petersburg. It is stated in New York that his visit to Russia resulted in an arrangement to construct several 16,000 ton battleships of a novel type. Schwab guarantees 20 per cent greater efficiency than anything now afloat.

##### NEW RUSSIAN RAILWAY.

Russia has decided to construct a railway from Tomsk to Tashkend.

##### BRITISH FLEET TO VISIT BREST.

London, April 30.

A British fleet is to visit Brest from the 10th to the 17th of July.

##### KING EDWARD.

King Edward has left Marseilles for Paris amid a great popular ovation.

##### MORE PEACE RUMOURS.

It is announced in Washington that the British ambassador sails for home tomorrow, and that the German and French ambassadors follow. It is believed in diplomatic circles that they will unofficially communicate to King Edward, the Kaiser Wilhelm and President Loubet, President Roosevelt's earnest desire to end the war at the earliest possible moment. It is further believed that the impending naval engagement, whatever its result, will offer an opportunity for initiating peace negotiations.

##### NEW TYPE OF BRITISH WARSHIP.

Mr. A. H. Lee, Civil Lord of the Admiralty, speaking at Gosport, said that the British Admiralty lays down in the autumn at Portsmouth the first of a new type of battleship which will be the most powerful in the world. It will be built within the shortest possible time known and will embody considerable alterations in design, the result of the lessons of the Russo-Japanese War. The reason for the recent lull in construction was to enable these ideas to be considered and utilized.

##### NEWS FROM THE FRONT.

London, May 1.

General Linevitch reports that two Russian forces on the night of April 29th, simultaneously attacked the Japanese near the town of Tunkhusian, driving the Japanese from five consecutive positions and occupying the position of Tunkhusian.

**DESTROYERS FOR THE FAR EAST.**  
Six destroyers are leaving Gibraltar for Malta to be docked, prior to proceeding to China.

#### BULGARIA.

Reuter's correspondent in Paris states that the question of rendering Bulgaria an independent kingdom has been brought before the European Governments, and has not so far been received with any strong disfavour.

#### EASTER IN ST. PETERSBURG.

The Easter midnight services at St. Petersburg passed off quietly, and no disturbances are expected to-day.

#### KING EDWARD IN PARIS.

London, May 2.

King Edward and President Loubet exchanged the most cordial visits during the afternoon. Crowds, waiting patiently in the rain, cheered the King with remarkable fervour.

M. Delcassé called upon His Majesty and had a twenty minutes' interview with him.

The King also received Admiral Fournier and congratulated him on the way in which he had conducted the North Sea Commission Enquiry. His Majesty conferred on Admiral Fournier the order of St. Michael and St. George.

A State banquet was held at the Elysee in the evening.

#### QUIET IN ST. PETERSBURG.

Easter day was quiet in St. Petersburg and no disorders were reported from the provinces.

#### THE BALTIC SQUADRON.

A Reuter's telegram from Tientsin says that the Baltic squadron (including Nebogatoff's division) are near Hainan.

#### RUSSIAN DOMESTIC AFFAIRS.

Imperial ukases have been issued remitting arrears on Government loans taken up by peasants during the bad harvest years from 1857 to the year of the birth of the Tsarevitch. The arrears are estimated at 7½ millions sterling. The ukases remove most of the disabilities attaching to unorthodox sects with reference to freedom of worship and civil rights, and include Mahomedans and Buddhists, which are no longer officially set down as heathens. No provision, however, is made as to the relaxation of Anti-Semitic restrictions.

#### RUSSIAN BUREAUCRATIC CONCESSIONS.

Ukases by the Tsar establishing practically complete religious freedom for all creeds, have been received with enthusiasm throughout Russia and hailed as the greatest modern concession to liberal thought.

#### WARSAW.

At Warsaw cavalry charged and infantry fired upon a May-day procession carrying red flags, 31 being killed and 15 wounded.

#### DISTURBANCES IN RUSSIA.

London, May 3.

The disturbances in Warsaw have been renewed; hussars have fired on the crowds killing four persons and wounding many. A bomb was thrown among the military patrol in the chief street, upon which the troops fired three volleys.

The bomb that was thrown killed two Cossacks and a police constable, wounding two ladies.

Many were killed and wounded by the volleys of the troops but the number is at present unascertainable. The troops at once surrounded the whole district.

#### THE DISTURBANCES IN POLAND.

Reuter's agent telegraphing from Warsaw says that in the fighting yesterday the troops not only fired but also used the butts of

their rifles and their bayonets and swords, breaking the heads and limbs of women and children and inflicting terrible injuries. The troops at Kalisz in Poland entered a church in which the congregation were singing patriotic songs. A fight ensued and women and children were killed. In consequence of the bloodshed a general strike has been proclaimed throughout Poland and Volhynia.

#### DESTROYER DAMAGED.

During the manoeuvres off Berehaven on Monday night the destroyer *Syren* ran on a reef and broke her back. No lives were lost.

#### ALIENS IN ENGLAND.

London, May 4.

In the House of Commons the Aliens Bill was read a second time, being passed by 211 to 59. Mr. Balfour said the country was amply justified in determining the conditions under which citizens of other nations would or would not be admitted.

#### CHINA NEUTRALITY.

It is stated by the *Washington Post* that the British Government has addressed a note to China in terms identical to those used in a note from Washington impressing upon the Chinese Government the necessity of observing strict neutrality.

#### FRANCE AND AMERICA.

The new American Ambassador to France, in presenting his credentials to President Loubet, said he rejoiced at the development of ideas which had latterly led to a rapprochement between France and the mother country.

An allusion of this character by the American Ambassador on such an occasion is most unusual and is regarded as a weighty expression of American feeling.

(RECEIVED IN TOKYO.)

#### THE BALTIC SQUADRON.

A telegram from Hongkong dated April 30th says that according to a report carried by a steamer which had just reached that place, her people saw the Russian Squadron of 37 vessels at 9 p.m. on the 27th of April anchored in Honko Bay about 50 nautical miles north of Kamranh Bay. Two scouting vessels of the Squadron followed the steamer and having inquired as to her cargo and her destination, allowed her to proceed.

A telegram from Hongkong dated the 2nd instant, says that the master of the German steamer *Devawongse*, which had just arrived, reported that on the 29th of April at 4 p.m. he saw a Russian Squadron of 28 vessels anchored in Honko Bay. A cruiser came out from the squadron, overhauled the steamer, made inquiries as to her points of departure and destination, as well as her cargo, and then allowed her to continue her voyage.

A telegram despatched from Hongkong on the 2nd quotes a telegram sent on the same day by a ship's master in Saigon to the effect that the Baltic Squadron was still in Port Deotte (?) on the north of Honko Bay.

[If the above telegrams be trustworthy, and their consensus is remarkable, it would follow that France's declarations as to the strict observance of her neutrality are quite illusory, and that the order issued to Rojestvensky to leave Kamranh Bay had no practical value, since he was allowed to proceed to another French harbour a few miles northward, where he remained from the 22nd of April until the close of the month, and where he seems to be still remaining. The greatest hesitation must be felt in crediting such a state of affairs, for not only would it convict France of an almost inconceivable act of bad faith, but it would also expose her to grave consequences. We certainly shall not lightly abandon our confidence in the integrity of the French Government, but at this moment the appearances are very bad.—Ed. J.M.]

(RECEIVED AT THE FOREIGN OFFICE.)

#### THE BALTIC SQUADRON.

According to trustworthy intelligence the Baltic Squadron, on the 27th instant, was lying between Kamranh and Valeric at a considerable distance from the coast.

(Cape Valeric is in Honko Bay about 70 nautical miles north of Kamranh.—Ed. J.M.)

#### THE THIRD SQUADRON.

The steamer *Catherine Apar*, which arrived at Penang on the 28th ultimo, reports that on the 27th at 8.30 a.m., 15 vessels, warships and others, were sighted at a point 60 miles south of Penang. They were steering eastward.

[These are probably the Third Squadron.—Ed. J.M.]

#### SUPPRESSING EMOTION.

According to reports received lately from St. Petersburg, apprehensions are entertained that disturbances will occur during the Easter holidays. Consequently the residences of all the Grand Dukes, the Government buildings and the banks are guarded by strong forces of soldiers. Numbers of large landed proprietors also are leaving St. Petersburg.

A St. Petersburg telegraph agency says that the Governor of St. Petersburg has issued the following proclamation for the preservation of public peace:—"Any person, no matter who, that raises a disturbance shall not escape punishment. And any one planning a disturbance or uniting for that purpose will be severely dealt with."

#### REPORTING THE WHEREABOUTS OF THE JAPANESE FLEET.

News has been received from Hongkong that on the night of the 27th ultimo the British steamer *Akarii* (?), lying at anchor there, was purchased by the Russians for the purpose of reconnoitering the doings of the Japanese Fleet. She has taken in ballast, and, pretending to be a merchant ship, will navigate the coasts of China, Formosa and the Philippines. She is a vessel of 3,330 tons and has a speed of 14 knots.

#### SMALL-POX.

Singapore, April 30.

The Government of the Straits Settlements decided on the 24th of April to regard Shanghai as a place infected with small-pox.

#### PEST.

Foochow, April 30.

Pest has broken out in the neighbourhood of the west gate and outside it. There are symptoms of its increase.

#### JAPANESE IMMIGRATION.

Ottawa, April 29.

The Japanese Consul-General telegraphs that the regulations and so forth with regard to restricting Japanese immigration enacted by the Government of British Columbia on the 8th of April, were all disallowed on the 29th of April.

#### RUSSIAN AFFAIRS.

The various local governors have issued the following proclamation:—"Baseless rumours are circulated that disturbances will occur during May, but the people are warned not to credit them. Persons fomenting disturbances will be dealt with in the most stringent manner, and anyone projecting disturbances will be treated with the utmost severity."

The issue of the above is a plan to quiet people's minds. During the past few days there has been a feeling of much uneasiness among the Russian people, and some are urging the local officials to take measures for quelling the disturbances which are expected to arise.

#### TROUBLES IN RUSSIA.

Disturbances occurred again in Warsaw

on the 1st instant, and were attended by blood-shed. A Wolff's telegram says that some 5,000 workmen accompanied by their families and carrying red flags made a threatening demonstration, whereupon they were attacked by cavalry and infantry and two volleys were fired, over a hundred persons being struck down. The mob at once fled, but were again fired on, and the result was that the killed and wounded amounted to about 500. All the shops were shut.

At Lodz also a similar collision took place between the workmen and the troops, and the town is said to have been much disturbed.

In St. Petersburg, with the exception of the explosion of a bomb in a house, the streets were quiet and there was no disturbance.

According to newspaper reports the Easter holidays passed quietly in St. Petersburg with the exception of a bomb which exploded harmlessly in a private house, but terrible blood-shed was witnessed in Poland on the 1st of May, though the particulars are carefully concealed.

A Reuter's telegram says that there was bloodshed in Warsaw on the 1st of May owing to a collision between the troops and the workmen. A squadron of cavalry drew their swords and charged into the crowd, and several volleys were afterwards fired, with the result that 31 men were killed, many wounded and about 50 taken prisoners. According to the statements of eye-witnesses the attack made by the cavalry was not provoked by the workmen.

According to another Reuter's telegram from Warsaw there was a renewed collision between the troops and the workmen. A bomb was thrown among a patrol of Cossacks, killing three Cossacks and one policeman.

#### THE BALTIC SQUADRON.

The German steamer *Andre Rickmers*, which arrived at Hongkong on the morning of the 3rd, reports that on the 30th of April she saw three battle-ships, with their lights extinguished, using search-lights at a point 20 miles south of Cape Valera.

The English war-ship *Woodford* (? *Woodlark*), at 3 p.m. on the 28th of April, saw 3 Russian transports at anchor off the Marconi Station of Saigon. At St. James Point 12 large German steamers were at anchorage and were receiving stores from other vessels.

#### (RECEIVED BY TELETYPE "HOCHI SHIMBUN") RUSSIAN AFFAIRS.

London, April 30.

Very great numbers of persons are leaving St. Petersburg to avoid the threatened disturbances.

The strike in Poland continues.

#### THE BALTIC SQUADRON.

A telegram from St. Petersburg says that Rojstvenky wishes to engage the Japanese in the Formosan channel but the Tsar, fearing the fogs, has ordered him to voyage on the east of Formosa.

London, May 3.

The French Admiral left Saigon yesterday. His destination is not known, but the step is believed to be an answer to Japan's renewed protests.

In St. Petersburg it is alleged that Rojstvenky's whereabouts and the object of his movements are unknown, but the supposition is that he is occupied with the task of finding a basis.

There were 250 casualties in the Warsaw riot. A disturbance is about to occur again in Moscow.

## WILD WITH ECZEMA

And Other Itching, Burning,  
Scaly Eruptions with  
Loss of Hair.

## Speedy Cure Treatment.

Bathe the affected parts with Hot Water and Cuticura Soap, to cleanse the surface of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply Cuticura Ointment freely, to allay itching, irritation, and inflammation, and soothe and heal, and lastly take Cuticura Resolvent Pills, to cool and cleanse the blood. A single set is often sufficient to cure the most torturing, disfiguring, itching, burning, scaly, pimply humours, eczemas, rashes, irritations, and chafings, with loss of hair, when all else fails.

The agonizing itching and burning of the skin, as in eczema; the frightful scaling, as in psoriasis; the loss of hair and crusting of the scalp, as in scalled head; the facial disfigurement, as in pimples and ringworm; the awful suffering of infants and the anxiety of worn-out parents, as in milk crust, tetter, and salt rheum,—all demand a remedy of almost superhuman virtues to successfully cope with them. Such are the CUTICURA remedies, the purest, sweetest, most speedy and economical curatives for the skin, scalp, and blood ever compounded. Mothers are their warmest friends.

## Millions of Women Use Cuticura Soap

Assisted by CUTICURA OINTMENT for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes and chafings, in the form of baths for annoying irritations and inflammations of women, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and many sensitive, antiseptic purposes which readily suggest themselves, as well as for all the purposes of the toilet, bath, and nursery.

**CUTICURA RESOLVENT PILLS** (Chocolate Coated) are a new, tasteless, odourless, economical substitute for the celebrated liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials, containing 60 doses.

CUTICURA REMEDIES are sold throughout the world. Australian Depot: R. Towns & Co., Sydney. British Depot: 7 & 8, Charterhouse St., London. French Depot: 2 Rue de la Paix, Paris. German Depot: 10, Unter den Eichen, Berlin. Italian Depot: 10, Via del Corso, Rome. Spanish Depot: 10, Calle de San Francisco, Madrid. Swiss Depot: 10, Rue de la Paix, Geneva. U.S. Depot: 10, N. 3rd St., Philadelphia.

## SUGAR.

The market is quiet; no special feature to report.

Brown Takao	Y. 10.30 to 10.60
Brown Manila	10.80 to 11.80
Brown Daitong	9.10 to 9.60
Brown Canton	10.50 to 12.50
White Java and Penang	13.40 to 14.40
White Refined	15.40 to 18.00

## INDIGO.

Nothing to report.

Java, Medium to best	210.00 to 260.00
Calcutta, Medium to best	140.00 to 220.00
Madras (Kewah), Medium to best	100.00 to 140.00
Madras (Dry Leaf), Medium to best	—

## EXPORTS.

## TEA.

A few samples have come in but the market is not yet open.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 13TH, 1905.

## BIRTH.

On Thursday, May 11th, at 22 Bluff, the wife of C. E. BRUCE-MITFORD, of a Son.

## MARRIAGE.

At St. Mary's Church, Saffron Walden, Essex, on March 25th, 1905, EDWARD RAYMOND THOMPSON to ELSIE MABEL WATTS.

## DEATH.

At Liaoyang, Manchuria, on the 23rd April, ETHEL MARGARET COOMBS, wife of Dr. A. MACDONALD WESTWATER, United Free Church of Scotland Mission, and daughter of the Rev. J. W. Coombs, of Nice, Riviera.

## SUMMARY OF NEWS.

A RUSSIAN in detention at Himeji has escaped, and is still at large.

THE Emperor and Empress have almost recovered their normal health.

PRINCE KAN-IN has been appointed an attaché of the Imperial Headquarters.

THE Crown Prince and Princess will return from Hayama within a few days.

FORTY-EIGHT workmen of the Naval Arsenal were sent on May 10th to Port Arthur.

ON the night of May 9th, fire broke out in Tamachi, Akita, destroying 213 buildings.

THE death is announced of Mr. G. Ono, formerly President of the Nippon Railway Company.

IN connexion with the appearance of the Vladivostok torpedo-boats, the Teikoku, Nippon, and Tokyo Marine Insurance Companies have

decided not to insure vessels and cargoes for the Japan Sea.

MR. R. ICHIKAWA, of the Yokohama Specie Bank, has been appointed manager of the Mukden branch.

FIRE broke out on the night of May 6th at Nobechi near Aomori destroying fifty-five buildings.

THE younger Prince Fushimi will leave about May 13th for Korea as a special envoy to the Korean Court.

ON the morning of May 5th, a pointsman was run over by a locomotive at Shimbashi station and instantly killed.

PRINCE KARI ANTON arrived at Kyoto from Hakone on the morning of May 10th. He put up at the Kyoto Hotel.

FROST and hail were experienced on May 5th in Kofu, Gumma and other districts causing some damage to mulberry leaves.

THE spring boat races of the Yokohama Commercial School will take place on the afternoon of May 21st off Kaigan-dori.

EARLY on the morning of May 7th, at Nagoya a locomotive and two freight cars collided, the result being that the latter were smashed.

THE death is announced of Mr. H. Orita, a member of the Upper House. The funeral took place on May 11th in the Aoyama cemetery.

A SHIMONOSEKI telegram reports that owing to dense fog, the departure of vessels was postponed on May 7th by warning of the local authorities.

FIRE broke out on May 7th in the Ishikawa Police Station, in the district of South Tsugaru near Aomori, destroying it. One person was killed.

FOUR lighters with coal collided with the Mitsui Bussan Kaisha's chartered steamer *Hero* at Moji the result being that all sank and the *sendo* of two are missing.

FIRE broke out on the afternoon of May 3rd in village of Kamigo, near Aomori, burning down 50 buildings including the village office, a school and a police station.

DURING April, 146 *kwan* (one *kwan* is about 3.75 kilos) of gold bullion was imported from Korea, from which 84 *kwan* of pure gold was obtained at the Osaka Mint.

SOME Japanese journals believe that Mr. I. Ishidzuka, a Councillor of the Formosan Government, will be appointed Governor-General of the Civil Administration in Manchuria.

THREE Russian officers who were released on parole at Port Arthur arrived on May 8th at Nagasaki on their way to Shanghai. They had been in hospital on account of wounds.

A TELEGRAM from Taipeh, says that the Japanese inhabitants—200 in all—of the Pescadores have left for Kelung by the *Wakaura Maru*. Many will return home by the same steamer.

ANOTHER rice-laden carrier, the *Maria Rickmers*, arrived in port on Tuesday from Rangoon having called in at Karatsu for coal. She reports more favourable weather in the South China Seas, and on her upward journey sighted one of the Russian Hospital ships some little distance

north of Singapore. This vessel appeared to be cruising without any special course, and disappeared over the horizon in a southerly direction.

A SHANGHAI merchant named Yongtze Kong, now in Tokyo, has donated fifty thousand *yen* to the Japanese Government towards the war funds.

THE *Kokumin* has a telegram from Hongkong stating that the *Hongkong Daily Press* has chartered the steamer *Telemachus* as a press ship. She left Hongkong on May 7th.

THE *Times* of Ceylon reports that the Directors of the North German Lloyd Company propose to pay a dividend of 2 per cent. for the past financial year, as against 6 per cent. for the previous twelve months.

BARON OURA, Minister for Communications, will leave on May 14th for Ujina, where he will embark on the 17th for Korea in order to be present at the opening ceremony of the Seoul-Fusan Railway.

S. NAGAMATSU and M. TAKIHARA, two gardeners, residing in Kitagata, have been arrested by the Bluff police on a charge of having stolen some three thousand plants from the compound of Messrs. L. Böhmer & Co., No. 28, Bluff.

THE German Admiralty Court has sentenced Lieutenant Lisch of the battleship *Braunschweig* to sixteen months in the penitentiary and expulsion from the Navy for maltreating subordinates and offering them inducements to commit perjury.

THE hearing in the Hague Tribunal with regard to the house tax affair will be resumed on May 15th. The *Hochi* reports that the Japanese statement against the protest of the Powers was transmitted by telegram on May 5th to the Japanese Commission.

THE *Jiji* has a telegram from Otaru, Hokkaido, to the effect that on the morning of May 9th, eight reports resembling gun shots were heard from a direction Northwest of the Shukutsu Light House. The paper adds that these is no official report confirming the fore going.

ACCORDING to the Associated Press General Linevitch has pilloried a number of officers who displayed cowardice during the battle of Mukden, publicly disgracing them by posting their names at all the division headquarters, while some were ignominiously drummed out of camp.

BURGLARS are very active at Kamakura these days; not a night passes without some house being entered. Indeed, last week four houses were entered in one night. The police force at Kamakura numbers five men, and it would seem that steps should be taken to increase the staff without delay.

ON account of the condition of his health and the fact that the evidence against Maxim Gorky is not stronger than against hundreds of others, who have not been arrested in connection with the disturbances of January 22, it is understood the Russian Government has abandoned its intention of bringing him to trial.

ON May 9th, Count K. Hirotsawa left Yokohama by the *Mongolia* for America and Europe where he intends to investigate commercial and industrial conditions. He is the son of Mr. Hirotsawa, the well-known statesman, who was assassinated after the Restoration. After his father's death, his heir was promoted in rank.

## THE BALTIC FLEET.

Friday, May 5.

Further evidence is forthcoming as to the doings of the Baltic Squadron. Two ships—previously spoken of as one—which have reached Shanghai, namely, the *Debat* and the *Wonghi*, report that on the 29th of April they saw 29 Russian vessels lying in Natron Bay. There were seven battle-ships, and these, as well as the auxiliary cruiser *Kaiserin Frederic*, were in the act of coaling from another steamer. A ship of the *Dimitri Donskoi* type visited the *Debat* and the *Wonghi*, compelling them to stop and submit to examination. The Russians have erected a wireless-telegraphic station on the banks of the river Saigon. This would explain the allusion made to the Saigon telegraphic station in the report sent in by a British war-ship.

The place "Diot" or "Diotte" hitherto spoken of, is now identified at Phu-yen, another excellent anchorage on the Indo-Chinese coast, northward of Honka.

Hongkong wires that the French telegraphic office in Haiphong has refused to transmit any messages from that place to Hongkong, and this fact, taken in conjunction with the undisturbed creation of a wireless-telegraphic station on the banks of the Saigon suggests that the French local officials are lending direct aid to the Russians.

A telegram to the *Nichi Nichi* from Shanghai transmits a Saigon message to the effect that the Squadron is in Phu-yen Bay, and that it will remain there, or at some other convenient port in French territory, until joined by the ships under Nebogatoff. The same message says that telegrams sent from Saigon are strictly censored by the French.

The *Kokumin Shinbun* has a telegram from Singapore saying that on the afternoon of the 4th the Third Squadron was sighted at a point 180 miles from Singapore and that it was expected to pass the straits that night, though it is difficult to see how such a distance could be negotiated in the time mentioned.

A Chinese official telegram, transmitted by Shanghai, is quoted as saying that the Baltic Squadron was lying in Lingshiu-wan on the 1st instant. Lingshiu-wan is a port on the south of Hainan, and if Rojestvensky has gone there, he is now engaged violating Chinese neutrality just as he has been violating French for nearly a month past. The Hainan idea, however, is not consistent with other intelligence, unless as we suppose—a very reasonable assumption—that the Russian Admiral has divided his forces, and that what the Chinese speak of as the Squadron is really only a part of it.

A telegram from Hongkong shows that although the bulk of the British fleet has gone to Singapore, strict watch is being kept by torpedo-craft both inside and outside the harbour. The trade of the place is said to have suffered considerably.

The Chinese Minister in Washington has handed in to the United States Government a written declaration that none of the Russian vessels interned in Chinese waters will be allowed to put to sea. It would seem that, so far as her naval capacities permit, China is endeavouring to do her duty in this matter. She has several cruisers at Woosung watching the Russians.

It need scarcely be said that the Japanese press continues to write in very strong terms about the extraordinary licence enjoyed by Rojestvensky. The *Yiji* declares that France and Russia are deliberately testing the efficiency of the Anglo-Japanese alliance, and

that these doings of the Russian Admiral are as great an insult to England as they are an outrage to Japan. Should they be tamely submitted to, France may be found pursuing a course still more openly hostile. The Japanese Government should not hesitate to inform the British Government that France has ranged herself on Russia's side as an active enemy of Japan and that the situation contemplated by the alliance has actually come into existence. France is responsible. It is by her flagrant indifference to her neutral obligations that this intolerable situation has been created. The *Chuo Shinbun* says that Japan has been abundantly fooled. Rojestvensky's transfer from Kamranh Bay to Honko is as though a squadron were to move from Yokosuka to Tokyo. There is no question of refuge from stress of weather. Rojestvensky, with consummate indifference to appearances, is deliberately using his cruisers to visit neutral merchantmen passing within reach of his anchorage. He thus openly employs French territory as a base of warlike operations, add to this that the French local authorities are exercising a strict censorship of telegrams, and it is seen that France has virtually placed her territories in a state of siege for the assistance of a Power engaged in war with Japan. If such things are to be tamely suffered, diplomacy will have proved itself a useless weapon. The *Yomiuri Shinbun* asserts that France could not possibly have pursued any line of conduct more thoroughly calculated to destroy Japan's confidence in her. "With false statements she has thoroughly befooled us. If this be not the acme of forfeited confidence, by what name shall it be called?" (*Kyogi no gen wo hasshite motte ware wo hanro sen kore wo shiishin no kyoku to iwazu shite hata nan to iwan ya*). Protests are out of date in the face of such events. Japan, obeying the dictates of self-defence, must take the matter into her own hands, as she did in the case of the *Ryeshitetsu*. The *Asahi Shinbun* does not write editorially but it publishes, with evident approval, an opinion expressed by a Japanese international jurist. He adduces the action taken by England towards Sicily in 1839 in connection with the sulphur-monopoly question, and the action taken by the same Power against Brazil in 1860 when the latter refused to recognise its responsibility with reference to the *Prince of Wales*. England adopted a practical and effective course. She placed an embargo on the ships of the offending states. A less violent measure would be to suspend, by official order, all transactions of every kind with France pending a conference to settle the question. But that method would not be sufficiently expeditious to meet the exigency of the case. The best plan would be that every French vessel navigating Japanese waters or any waters within the scope of Japan's naval strength, should be placed under an embargo. If France regarded that as an act of war and adopted corresponding measures, then England would be drawn in. Japan has made every possible effort to limit the arena of the contest and now the whole responsibility of extending it will rest with France. As to sending out ships to attack the Russians in French waters, that is a matter of naval strategy with which this juriconsult does not profess to deal.

From this *resumé* our readers will gather the state of Japanese public opinion; a state of very high tension. If we could discover any intelligent means of mitigating the excitement, we should raise our voice in that sense. But the whole affair is quite bewildering. If

the news coming from all quarters be correct, it is impossible either to overlook or to extenuate France's responsibility. She cannot be considered to have erred through incompetence, and there remains only the faint hope that the reports have been grossly perverted by the various senders of intelligence and that Rojestvensky with his squadron is not in French territorial waters at all. To that hope we cling, and we may add our conviction that should the Japanese Government be in possession of irrefutable evidence in the sense of the published rumours, it will know how to deal with the situation in conformity with the Empire's best interests.

Saturday, May 6.

A telegram from Singapore dated the 5th says that the Third Squadron passed the Straits of Malacca on that morning, and an English steamer is said to have sighted the Squadron off Penang on the 5th. Hongkong also sends a message that on the 4th Nebogatoff's ships were seen between Penang and Singapore. These various reports seem to indicate that the Squadron has at length approached.

With regard to the Second Squadron and its lawless doings the *Kokumin Shinbun* says that the Japanese Government has presented a strong protest to France. A telegram from London to the *Asahi Shinbun* represents M. Delcassé as having replied to M. Motono's question in the sense that the French Government believed Rojestvensky and his ships to have entirely left French territorial waters.

The Japanese press continues to write in a very strong tone.

The *Nippon* has a striking article in which it contends that upon England rests the responsibility of preventing any third Power from interfering in the war. There is such a thing as excessive reluctance to invite a man to do his duty, and when hesitation is carried to that point, an insult is done to the duty itself and to its proper performer. Such is the case with regard to the Anglo-Japanese alliance. Too much hesitation about invoking the aid of the alliance would amount to an implied admission that it is not capable of rendering any aid at all. The straightforward and simple plan for Japan to pursue at this juncture would be to appeal to England, and to ask her to act in accordance with her engagements. Now is the time to test the value of the alliance. If France be permitted to continue as at present rendering substantial assistance to Japan's enemy and if the alliance be not employed to correct such an unlawful state of affairs, then the assertions of those that claim value for the alliance are empty talk (*kugen*) and the alliance is a mere ornament (*kyashoku*). France's action is a direct flouting of the alliance and a ridiculing of Great Britain. Japanese diplomats ought to know by this time what are the views of the British Government. The time has passed for protests addressed to France. What has now to be done is to ask England to fulfill her treaty engagements; to ask her plainly and direct. To determine whether the alliance has any practical value is a necessary premiss to the action Japan herself will take.

The *Asahi Shinbun* thinks that France's declarations with regard to Kamranh Bay having been now proved to be wholly deceptive, the entire responsibility for what ensues must rest on her shoulders. If reprisals be adopted, as certain juriconsults recommend, or even if war be declared, France will have to thank herself. It will have been she that made this unhappy result inevitable.

Japan has behaved with the utmost patience. She has suffered breach after breach of French neutrality to pass with a mere protest, sometimes even without a protest. But long-suffering has its limits. France's Indo-Chinese dominions are rich in fine harbours, and all of these are now practically without control. Her men-of-war, of which she has an abundance, are scattered about at places remote from the points where their manifest duty calls them, and even those that happen to be on the Indo-Chinese coast are hidden away in Saigon. Her neutrality is a mere pretence. It is impossible to imagine that these things are happening through her mere inadvertence. She must be a deliberate party to them. The management of her telegraphs alone is sufficient to demonstrate her complicity. Not one solitary message has come across her land wires with reference to the doings or the whereabouts of the Baltic Fleet. There is an evident conspiracy of silence, and all the telegraph officials must be parties to it. Besides, Saigon is openly serving as a source of supplies for the Squadron. That is manifest to the whole world, and can not be hidden from France. Patience in the face of such provocation is not possible. Japan must act and act promptly.

The *Nichi Nichi Shimbun* has a leading article under the heading of *dansen naru shochi wo seyo* (adopt a resolute course). It sets out by saying that the fine ports of French Indo-China are obviously placed at the disposal of the Russian ships, alike as bases of supply and as rendezvous. Unhappily Japan must now make a radical change in her attitude of trust towards France. Quoting the French reply to the Kamranh Bay incident, the *Nichi Nichi* asks whether any one is so silly as to imagine that the pledges then given by France referred to Kamranh Bay only. France knows perfectly well that they did not. She is rendering negative assistance to Japan's enemy and under the circumstances such negative assistance is fully equivalent to positive assistance. Upon her rests the whole responsibility of forcing this matter outside the realm of diplomacy. If it suits the Japanese plan they are now fully at liberty to send ships to attack the Russians within the French ports of Indo-China. They are at liberty to have recourse to reprisals. They are at liberty to use French harbours precisely as the Russians are using them. They are at liberty to make these events the foundation of a heavy claim for indemnity against France. The Japanese Government has only to take its choice. "We do not doubt that England has spared no pains to preserve the peace of the world in connexion with the matter, though nothing has been officially published in that sense. But it is not for Japanese officials to neglect the taking of appropriate measures on their own part merely because England is in the background. And indeed the public announcements made by the Government show that it is sensible of the fact. The sentiment of the nation is now roused to an extreme point, however, and there should not be a moment's delay in acting resolutely."

The *Yorozu Choho* wonders what M. Harmand is doing at this juncture. Many times in the past he has shown himself a good friend of peace; has addressed several wise counsels to Japan and has endeavoured to strengthen the relations between this country and his own. Where is he now, or what is he doing?

Sunday, May 7.

Apprehensions are entertained in China

that the Russians will seize Sanmun Bay in Chekiang as a base of operations. Sanmun Bay would certainly be a most convenient place, for it is well northward of the Formosan Channel and may be said to be within easy striking distance of Japan. But there are two considerations which militate against such action on the part of the Russians. One is that since virtually the whole of French Indo-China with its numerous and commodious bays is at the disposal of the Russians, there does not seem to be any valid reason why they should go elsewhere; the other, that although they treat French neutrality as a mere pretence and not even a pretence, and although the necessity of conforming their own practice with their professions troubles them little, they are not likely to flagrantly and deliberately violate China's neutrality inasmuch as the United States and Great Britain have shown some disposition to enforce it.

The quality and potentialities of the Third Squadron are discussed with an evident sense of relief by Japanese newspapers. There had been very conflicting statements as to the composition of this squadron, but it is now definitely known to consist of the following:—

*Imperator Nicolai I.*—9,700 tons; laid down in 1886; speed on trial trip 15.9; chief armament two 12-inch guns; four 9-inch and eight 6-inch.

*Admiral Oushakoff.*—4,126 tons; laid down 1892; speed on trial trip 16 knots; chief armament three 10-inch guns; four 9-inch and four 6-inch.

*Admiral Seniavine.*—Sister ship of *Oushakoff*.

*Admiral Apraksin.*—do do  
*Vladimir Monomach.*—5,754 tons; laid down 1881 and re-armed 1897; engines renewed 1898; speed 15 knots; chief armament five 6-inch guns.

These vessels can not manœuvre with Rojestvensky's best ships. They are slow and comparatively old. Two months have been required for them to reach Singapore from Jibouti (which they left on the 7th of March), and they arrive in Far-Eastern waters just at a time when heavy winds must be expected. It is evident that rest, coaling, refitting and provisioning will be necessary, and we shall probably see another Kamranh incident.

Referring to a London telegram in the sense that French war-ships have already been sent to warn the Russians out of Indo-Chinese waters, the *Jiji Shimpō* says that if anything of the kind has taken place, it must have been subsequent to the 1st instant. Up to the 1st there were lying in Saigon the flag-ships of the two French Admirals, some 17 cruisers and battle-ships, about 12 minor craft and 2 submarines. It is known that this force was anchored in Saigon up to the first, and its quiescence in the face of the imperative duty of activity for the purpose of enforcing France's neutrality is clear constructive evidence of complicity with the lawless doings of the Russians.

Meanwhile the attacks upon France are maintained by the press of Japan. The *Jiji Shimpō* calls upon the French Government to abandon its double-faced policy; its attempts to run with the hare and hunt with the hounds. If it desires to help Russia, if it considers that France's interests dictate that course, let the step be boldly taken. The present attempts to disregard neutrality, while evading by various subterfuges the consequences of such disregard, are unworthy of the honour of France or of the chivalry attributed to her. She ought indeed to ponder seriously whether she may not ultimately be found to have paid too high a price for the privilege of succouring her distressed ally; whether to have completely estranged the new Power of the Orient may not prove in the end an injudicious choice. But at any rate she owes it to herself to aban-

don the tortuous course she is now pursuing.

The *Yorozu Choho* enumerates the counts of the charge against French sincerity. First, the French alleged that the Russians had left Kamranh Bay on the 22nd of April, but it turned out that only a section of the squadron had taken its departure; secondly, the French knew that 45,000 tons of coal was stored at Saigon, and knew that it was intended for Rojestvensky's use, whence it follows that from the first they were prepared to connive at his abuse of France's neutrality; thirdly, whereas Honkohe Bay is only 50 miles from Kamranh, the French pretended that they did not know of Rojestvensky's presence at the latter place; fourthly, while professing to take measures for enforcing the observance of her neutrality, France did not even inform herself of what was going on in the immediate vicinity of her Indo-Chinese capital; and fifthly, while on the one hand not interfering with the establishment of a wireless telegraphic station by the Russians within French territory, the French placed the whole of their own telegraphic system under control in Russian interests. Thus France has deceived Japan; has made waste-paper of her own solemn declarations; has forfeited all title to confidence and has insulted Japan. The French people used to be honoured as the incarnation of liberty and integrity. They have now fallen to the rank of a shameless, untrustworthy and dishonest nation. Why should Japan hesitate a moment? There is not a shadow of reason for any further consideration.

The *Yorozu Choho* does not rank as a leading journal but its utterances are here quoted as indicating the views of a certain class of people.

Tuesday, May 9.

The report carried to Hongkong by a French steamer is only partially credited—the report that Rojestvensky had left the coast of Indo-China and put into Galon Bay and Yulin Bay in Hainan. It is observed that neither of these places affords anchorage suitable for big vessels and thus, although for the sake of appearances the Russian Admiral may have sent some of his ships outside French territorial waters, the bulk of his Squadron are believed to be still in Banfon Bay or elsewhere on the Indo-Chinese coast. Meanwhile the Third Squadron is making its way to join him, but evidently the ships of the Third Squadron will require re-fitting and re-coaling before they can again put to sea, and it becomes a question whether France, in utter defiance of her neutral duties, will continue to allow her harbours to be used for such purposes. The French Government's conduct in all this matter defies comprehension. One excuse, and one only, is offered, namely, that in the presence of an ally who does not hesitate to abuse her hospitality in the most shameless manner, France is placed in a very delicate position, since to adopt vigorous measures might involve an open rupture with Russia, and nothing short of vigorous measures can restrain Rojestvensky's lawlessness. But has not that excuse been worn threadbare long ago? Was it not pleaded for its full value at Madagascar where, whether the Russian vessels lay within or without the obsolete three-mile limit, they were in constant communication with the shore and were able to use French territory for all purposes of equipment and supply just as though it were Russian territory? France may owe something to sentiment but she has also a debt to duty. By her emotional reluctance to hurt

Russian susceptibilities she has done a terrible wrong to Japan, and by dread of treading on the shadow of her friendship with Russia, she has fatally trampled on the substance of her friendship with Japan. *The Times*, as telegraphically reported in the *Fiji Shimpō's* columns, observes that whatever steps England has taken to secure observance of her neutrality, similar steps might have been taken by France, but at the same time the great English journal hopes that Japan, making full allowance for France's embarrassing position, will not resort to precipitate measures. Every lover of peace must echo this hope, though as for France's embarrassing position we are bound to say that its extenuating force has been urged to a degree which far exceeds the bounds of reason. The plain fact is that without the assistance given to her by France, Russia could never have sent a new Squadron to the Far East. Short of actually using cannon and rifles in the cause of her ally, France has rendered almost every possible service, and her wholly unexpected action has upset all the calculations which Japan may be supposed to have legitimately made when she entered upon this war. No one has ventured to urge that the steps adopted by Great Britain to enforce her neutral obligations are in excess of her plain duty or of the requirements of the situation, yet as between British methods and French methods the contrast is too great to admit of any comparison. How the complication will end we dare not predict, but that it will be found to have materially changed the face of Far-Eastern future politics is only too much to be feared.

Shanghai telegraphs that the steamer *Chefoo* is believed to have become the property of the Russians and that she is about to sail for Guam. This fact, if credible, would suggest that Rojestvensky intends to despatch one of his squadrons at any rate to Guam. But at Guam he will have the United States to deal with and no breaches of neutrality will be there permitted.

Hongkong telegraphs that owing to suspension of telegraphic communication with Saigon, there is no way of verifying the rumour that Rojestvensky, driven out of Banfon, has repaired to Galon and Yulin. But a telegram from the Governor of Kwangsi to Peking says that 3 Russian warships have been sighted in the offing, some 30 miles from Galon, and that the coast of Hainan is being carefully watched.

Wednesday, May 10.

It is generally believed that Rojestvensky and his ships are still lying comfortably in the numerous bays that indent the shores of Indo-China between Honkohe and Natran. There they are 700 miles from Singapore, and it may be expected that they will be joined by the Third Squadron to-day or tomorrow. But as Nebogadoff's ships have been at sea since March 7th they will require several days to coal and equip, and it seems to be scarcely doubted that these days will be spent in the Indo-Chinese ports. Meanwhile there is a constant coming and going of steamers between Honkohe and Saigon, whence ample stores of coal and provisions are being transported for the use of the Russians. It is said that Admiral Bayle in the *Montcalm* with 5 other vessels has left Saigon and is cruising along the Indo-Chinese coast. The gallant Admiral has at length become conscious of the fact that he has some duty to perform other than that of lying for weeks inactive in harbour while great naval events are transpiring almost within gun-range. But his sudden activity does not appear to have produced any

result. Of course there is nothing more to be said about French neutrality. With the exception of the *Asahi Shimbun* the Japanese journals are virtually silent. They see no use in repeating a twice-told tale. If the facts be as they are said to be, France's neutrality is the veriest farce. She is openly assisting Japan's enemy. The *Asahi* may well ask where justice is to be found and what has become of international law. We have heard it said that an excuse has been semi-officially made for France on the ground that she is powerless to compel Russia's obedience. Such a pretext was alone wanting to complete the farce. Rojestvensky understands that the war-ships of his country's ally will not employ force to procure compliance with their Government's mandates. But is force necessary or even the menace of force? Is it conceivable that this extraordinary, this scarcely conceivable, situation could exist were the French Government in earnest and did the French local officials believe it to be in earnest? Truly one can not deny the Japanese assertion that France is as little careful of neutrality as though neutrality did not exist. Persuaded that no force exists to call her to account, she is deliberately giving a free hand to Russia and is permanently antagonizing Japan.

Shanghai telegraphs that several steamers are engaged loading coal presumably for the use of the Baltic Squadron, and that the Japanese Consul-General has warned the Chinese Government that such proceedings are a violation of neutrality. But what is neutrality? France has now upset all theories and the boundless licence introduced by her into international practice may be quoted as a precedent for any act.

Dense fogs prevail in the China Sea; such fogs as have not been seen for years. Altogether the inclemency of this spring is quite unusual.

Thursday, May 11.

In the interesting telegram sent yesterday morning by Reuter the French Government is reported as have said, in reply to a protest from Lord Lansdowne, that it had not only sent positive instructions to the Indo-Chinese authorities to enforce neutrality but also that these authorities seemed to be unremittently enforcing the instructions. The French Government must be singularly ill-informed, for according to all the information received in Japan, Rojestvensky's ships are outraging French neutrality as deliberately and as flagrantly as ever. They are still using French ports as harbours of refuge and rendezvous, are still obtaining supplies from French towns and are still enjoying the exclusive privilege of availing themselves freely of French telegraphs. In a word, they are openly converting Indo-China into a base of warlike operations against Japan. It is not necessary to assume that the Quai d'Orsay is acting in this matter with deliberate bad faith, but when, in the presence of such facts, a statement is officially advanced that the Indo-Chinese Authorities are unremittently executing the instructions sent to them from Paris, there is no escaping the conviction that a farce of the most dangerous nature is being acted in the Far East. The view taken by *Le Matin* is apparently that the fault lies with Rojestvensky, who is treating French neutrality as though it had no existence. But if that plea have any weight at all, it signifies that a great Power like France, the second naval Power in the world, is not competent to protect her-

self against the lawless acts of a desperate man whose only hope of extricating himself from a terrible dilemma is to stir up a general conflagration. Will any one be found to gravely advance such an excuse on France's behalf; an excuse tantamount to declaring her unable to discharge her international obligations?

Meanwhile it will be eminently satisfactory to the Japanese to learn that England is fully recognising her duties as an ally and that Lord Lansdowne has made strong representations in Paris. There will not be wanting at this juncture critics and politicians who will seek to discredit the Anglo-Japanese alliance and to allege that had it any practical value in France's eyes, she would never have allowed herself to drift into a situation which, short of actual armed intervention, amounts to war with Japan, and which, even should it be peacefully composed, as we most earnestly hope it may, will have inflicted an irreparable injury upon an empire that France has many solid reasons for conciliating. But in the face of such attempts to bring the alliance into disrepute, we are persuaded that Japanese statesmen will discern one fact very clearly; namely, that could Russia utilize this opportunity so as to destroy the Anglo-Japanese alliance, she would have secured for herself an advantage much greater than any accruing from the aid given by France to Rojestvensky. It is not the mere question of French neutrality that is at stake. Rojestvensky's lawless conduct, his recklessly contumelious attitude towards French sovereignty, may be, and probably are, inspired by far-reaching political aims as well as by strategical considerations.

The *Fiji Shimpō* draws an emphatic distinction between Japan's feelings towards Rojestvensky's Squadron as a fighting force and her feelings towards France, which is aiding him in such an unlawful manner. The Japanese have no fear of Rojestvensky. They regard with perfect calm his entry into the arena. Their money market has not exhibited any fluctuations owing to his presence. Their navy is ready and confident, and they desire nothing better than that he should come on at once and try conclusions. But they are very much disturbed by France's conduct. They find an active ally of their enemy at their very portals. France has allowed the Russians to shelter in her ports; to make of them a rendezvous; to re-equip there; to refresh themselves after the fatigues of a long voyage, and to prepare for battle. The one great crippling feature of Rojestvensky's position, his want of a naval base, has been effectually remedied by France's disregard of her neutrality. The advantage thus conferred upon the Russians is incalculable; the injury done to Japan irreparable. This nation's patience has now been strained to breaking point. There is no enmity towards France in Japan's breast. She has always regarded France with friendly and admiring eyes. But the question now is one of self-preservation. If this assistance be continued to the Russians, the unwelcome necessity of resorting to extreme measures will be forced upon Japan. Alluding to England's action and to the writing of *The Times* the *Fiji* says that these things are what might have been expected from an honourable ally. Japan's indignation is at red heat and however reluctant she may be to extend the limits of the conflict, the choice will soon have been taken out of her hands.

The Third Squadron is said to have passed Saigon on the 8th. If so, it should have joined Rojestvensky by this time.

Shanghai reports that the Commissioner of Customs has put an embargo on the sailing of five steamers, the *Wuchang*, the *Taiwan*, the *Hsishan*, the *Mailda* and the *Wingpon*. This is said to have been done at the instance of the Japanese Consul-General, who represented that these vessels were chartered by Russia for the purpose of carrying coal to the Baltic Squadron. Another account, however, says that the coal has been impounded by the French Consular authorities, whose competence to take such a step we venture to doubt. It will also be remembered that the *Wuchang* is the steamer recently reported to have been engaged for the use of correspondents.

Very rough weather is said to be prevailing in the China Sea; so rough that the possibility of the Third Squadron joining the Second is thought doubtful by some onlookers. But if Rojestvensky has a snug berth in French ports whither Nebogoff has only to enter and effect a junction, the difficulty is not apparent, and, under any circumstances, can be only temporary.

The latest intelligence is that on the 6th instant the Baltic Squadron was still lying in Honkohe Bay. There must be an end to this very soon. A Power less profoundly patient than Japan, would have ended it long ago.

We believe that Tokyo has not received any confirmation of Reuter's news as to Lord Lansdowne's protest.

Friday, May 12.

There is further evidence, furnished by the crew of a ship that recently entered Hongkong from Saigon, to the effect that the latter place has been used as a base of supplies for Rojestvensky's Squadron, and that there has been almost unremittent transport of coal and provisions thence to the Russian ships. A number of newspaper correspondents had arrived there before the steamer sailed, but they found it impossible to transmit any intelligence, the telegraphic service being strictly censored in Russian interests. There was a report that a number of pilots had left Saigon to join Rojestvensky, as he dreaded the perils of attempting to navigate the China Sea without such assistance.

Rumour, as yet unconfirmed, suggests that Rojestvensky has left Honkohe and is now either at Hainan or on his way thither. But in official circles this is said to be discredited.

There is still no definite news as to Nebogoff having joined Rojestvensky, and on the whole the probability is that the junction has not been effected.

Meanwhile the Japanese press continues to write in a dignified but very strong strain. The *Asahi* speaks in the warmest terms of England's action with regard to Kamranh Bay and declares that nothing could be more welcome to Japan than this practical proof of her ally's loyalty and sincerity. But no sooner was the Kamranh incident closed in a manner which, though far from satisfactory might at least be tolerated, than the Honkohe incident occurred under even more aggravated circumstances. Nothing is more earnestly desired by Japan than that the limits of the war should be circumscribed. She would be most reluctant to drag in her ally. A situation has now arisen, however, which not only possesses high importance from a strategical point of view, but is also a crucial test of the value of the Anglo-Japanese alliance. If France attacked any practical importance to the alliance, she would not behave as though it had no real existence. In effect, she has put her foot

on the alliance and is showing that she regards it as an altogether ineffectual document. Japan must therefore ask England to clearly demonstrate that the alliance has real potency for the purpose of excluding a third party from intervening in the war.

The *Nichi Nichi Shinbun* declares that France is acting an undignified part. With her mouth she is making professions of neutrality; with her hands she is doing nothing whatever to carry out her professions. On the occasion of the three-Power intervention after the war with China, France behaved in a straightforward manner. She openly associated herself with Germany and Russia. It was appreciated in Japan that the French Government had virtually no choice, and the sentiment of resentment in this country against French procedure did not survive very long. Very different is her conduct now. It lacks any element of manliness. As a great self-respecting Power her duty is to definitely espouse Russia's cause or to reject it, instead of presenting to the world the spectacle of a State halting between two stools, professing one thing with the lips and simultaneously showing total inability to abide by her professions. Far-seeing politicians in Japan fully appreciated when they saw this crisis approaching that it was fraught with elements of the greatest danger. But they still trusted that France would make good her promises and fulfil her obligations. Unhappily she has not done so. Nothing now remains except for the Japanese Government to translate its futile protests into acts. The London *Times* has expressed views which Japan recognises as the voice of the British nation and for which she is profoundly grateful. But if France will not be warned by any representations, however strong, other means must be resorted to.

The *Fiji Shimpō* quotes the statements of a Japanese official who says that probably France had not originally any intention of violating her neutrality, but by pursuing a policy of drift she has created an intolerable situation and one most dangerous to the peace of the world. There are those who plead that she is powerless to deal with Rojestvensky's lawlessness. They insult her by such an excuse. France is one of the greatest Powers in the world. She has ample means of enforcing her sovereignty and discharging her obligations. If she took any earnest and unequivocal measures there is no conceivable possibility of the Russian Admiral defying her. At any rate, as a Sovereign State she must shoulder her responsibilities. Unless this situation be speedily resolved, Japan will be compelled to invoke the active interference of her ally, England. The *Fiji Shimpō* then proceeds to express its own opinion. For the first time it admits that the task before the Japanese navy is a heavy one, since the two Russian squadrons must be faced. The nation has the fullest confidence in its sailors but it appreciates their difficulties. It is France that has created this situation. She is, in effect, at war with Japan, since she is allowing Japan's enemy to use French ports as bases of hostile operations. No excuse that she can offer is of the slightest value in the face of such facts. At any moment it may become necessary for Japan, should strategical considerations suggest such a course, to treat as Russian naval bases any port where Russian ships-of-war are found. Should that necessity arise Japan will be faced by a new enemy. It will follow necessarily that the Anglo-Japanese alliance must come into active operation, but under any

circumstances the Japanese navy must be prepared to discharge heavy duties.

The *Yomiuri Shinbun*, referring to Lord Lansdowne's protest in Paris, expresses the conviction that Great Britain deferred any intervention at first because she placed full confidence in France. She did not believe it possible that in the face of such reckless conduct as that of Rojestvensky the French Government would refrain from taking efficient measures. But when the conviction of the Quai d'Orsay's insouciance or incompetence, call it which we may, was borne in upon England's mind, she at once moved in a manner worthy of her own dignity and of her loyalty to her ally. It is probable also that the strong feeling of the British nation, as unequivocally expressed by *The Times*, had much influence on the Government. As for France, since it was declared from the outset that she intended to preserve strict neutrality, no injury need have been done to her alliance with Russia had she frankly and resolutely discharged the obligations which she had openly shouldered. But by hesitation and unwise yielding, she gradually created a situation hard to manipulate effectively without endangering her relations with her ally. Out of that dilemma she is now offered an honourable exit by England's protest, and by Rojestvensky's unequivocal contempt for her neutrality. She can now put down her foot, if she be so disposed, and can act in a manner worthy of a great Power, thus ending a situation which, if it continue much longer, must carry the war far beyond its present limitations.

The *Nippon*, while unable to form any opinion as to what may be ultimately signified by French neutrality, is quite convinced that this crisis will not draw France into the belligerent arena. She knows that she would have to face a combination of sea power much more preponderating than is even the military power of Japan at present in Manchuria compared with the power of Russia. She will stop short of that suicidal course. And now that England has stepped in with a strong protest, France will appreciate that the time has come to abandon her equivocal attitude. Professions will no longer suffice. If she makes further professions without supplementing them by action, she will fall from her high place of international confidence to the rank of a fifth-rate Power. The Japanese do not suppose that she ever entertained any deliberate intention of violating her neutrality, and they will be all the readier to resume their old relations of friendship if she now by a resolute course proves that they are right in not doubting her motives.

The *Kokumin Shinbun* preserves strict silence.

The *Yomiuri Shinbun*, discussing the proposal to abandon all trade transactions with French citizens, finds the measure a natural expression of Japan's indignation, but notes that its material result would not be large and that it is perhaps unsuited to the occasion. The *Yomiuri* advocates some stronger demonstration of popular opinion but does not define the form it should take.

#### THE VLADIVOSTOCK SQUADRON'S DOINGS.

Monday, May 8.

The exploit which the Vladivostock Squadron has now to place to its illustrious record is the burning of a small sailing vessel of 204 tons. She was called the *Yawata Maru*, No. 3, and her owner was Mr. Ukon Gonyemon of Osaka, who has been particularly unfortunate in this war. He was the proprietor of the *Yawata Maru* No. 2

which, with the little *Ansei Maru*, was similarly burned by the Russians on the 20th of last June. It will be remembered that on the occasion of the burning of the two last-named vessels the Russian sailors indulged their predatory instincts, for they robbed not only the ships but also their crews. The *Yawata Maru* No. 3 was on her way from Rijiri to Tsuruga in Echizen. She had a crew of 11 and was carrying a cargo of 250 bags of salt. The master has been carried off a prisoner by the Russians, who in addition to their highly civilized habit of sinking harmless little vessels owned by private individuals and engaged in peaceful commerce, do not hesitate to capture and carry into durance non-combatants of every class.

It seems quite clear, as Japanese journals point out, that these doings of the Vladivostock ships are intended to cooperate with the movements of the Baltic Squadron. In addition to lending her ports to the Russians for the purposes of refuge, rendezvous, refitting, obtaining supplies and carrying on acts of war, France is placing her telegraphs at the disposal of Japan's enemy, and Rojestvensky is thus enabled to preserve constant touch with Vladivostock. It is a pretty chapter of international usage. Vladivostock, therefore, sends out its vessels to commit savage outrages against private property, in the hope of thus exasperating the Japanese and drawing them away from the portals of the Sea of Japan, in order that the Baltic Squadron may slip through without having to do what brave men should desire to do, engage their enemy and seek to recover the command of the sea. It is quite on the cards that if the burning and sinking of harmless little vessels fail to draw the Japanese into this palpable trap, the Russians may have recourse to other measures, not unfamiliar to them, namely, the raiding of the northern coasts of Japan and the killing of women and children. Such is the prediction of some of our Tokyo contemporaries and they warn their countrymen to be prepared for these things. But we more than doubt whether the Russians, whatever be their extremity, will resort to devices calculated to evoke the execration of all civilized nations.

There is some doubt as to whether the four torpedo craft which burned the *Yawata Maru* were destroyers or torpedoers. Vladivostock is not known to have any destroyers, yet the lengths of the boats, as described by telegram, seem to suggest something larger than torpedoers. Possibly Vladivostock may have built some destroyers with materials sent over the railway, and possibly—may we not say "probably"?—the dimensions of the Russian craft were exaggerated by onlookers.

The place where the event occurred is 360 miles from Vladivostock. Therefore it may be assumed that the Russians left port on the 3rd instant.

Tokyo journals urge the people of Japan not to be at all perturbed by this occurrence. Acts so totally opposed to what is called the civilized practice of warfare are certainly calculated to enrage any nation which has uniformly sought to conduct its military and naval operations in conformity with the highest standards. But to enrage the Japanese nation and betray its naval officers into some indiscreet enterprise is precisely what the Russians aim at achieving. They must be left to practise their barbarous devices. Japan's naval officers will hold steadily to their plan, and the Japanese people know how to be patient.

Tuesday, May 9.

The crew of the *Yawata Maru* have arrived at Awamori. They say that when their little vessel was surrounded by four Russian torpedoers she had on board 300 bags of sand-ballast and 250 bags of salt. The Russians lowered a boat with 3 officers and 6 men, and, coming to the *Yawata*, called out in Japanese *sare, sare* (get out). Thereupon the sailors of the *Yawata* proceeded to lower a boat and collect their belongings, but as had been the practice of the Russians on former occasions, they robbed the men of everything worth robbing, including a small sum which had been carried to meet expenses on the voyage. The sailors managed to recover the captain's watch, his certificate, the vessel's charts and her compass, but these Russian gentlemen, who seem to be bent on acting the part of pirates as closely as possible, carried off everything else. They obliged the master of the *Yawata* to go with them as a prisoner in one of the torpedo craft, and they then poured a quantity of kerosene over the little sailing ship, after which two shells were discharged at her, one missing its mark, the other setting her on fire. The sailors rowed away.

Wednesday, May 10.

There has been no further appearance of the Vladivostock ships and an impression gains ground that the cruisers did not emerge from port and that nothing has been attempted beyond a raid of torpedo-boats. As to this raid, it can not be called in any sense a valiant performance. The Russian torpedoers took care not to approach Soya or Tsuruga where they might have fallen in with hostile vessels. They confined themselves to the sea in the neighbourhood of Sutsu, and as their objective was a poor little sailing vessel, the whole exploit was a miserable business. They are likely to issue out again, of course, and at any rate they have given to Japan a reminder of their existence as a factor in the naval situation. The Sea of Japan is said by one authority to have been covered from the 4th instant with a heavy fog, thickest as one approaches the coast of Japan and gradually getting thinner in the neighbourhood of Vladivostock. But in the *Asahi* we read that for the past two days there have been high winds and heavy seas, which are not consistent with the idea of fog.

It is supposed that the Russians have formed a new naval base at some point along the coast northward of Vladivostock; a point 150 or 160 miles from the shores of Hokkaido. Thence the four torpedoers emerged to achieve the splendid exploit of burning a sailing craft of some 200 tons and robbing her crew, and thither they returned. Every one expected that the *Rossia* and the *Gromoboi* would make their appearance again in the field of action and that the four torpedoers were not alone. But up to the present nothing has been heard of the two big cruisers, and it begins to be doubted whether, after all, they are fit for sea. But that is a view hard to hold. We can not forget the success that attended Russian operations of repair at Port Arthur. The *Retvizan*, in the first torpedo attack, had a big hole blown in her side and her engines were thrown out of alignment; the *Tzarevitch* had her rudder blown off and her steering-gear damaged; the *Pallada* had a rent made amidships and her boilers were injured. Yet, after 5 months, the three ships were at sea again and fit to resume their places in the battle-line. Nine months have elapsed since the *Rossia* and the *Gromoboi* received their terrible handling from Kamimura's

cruisers, and as Vladivostock has excellent facilities for repair, the ships ought surely to be in fighting trim by this time. We incline rather to the belief that the Russian ships did not emerge because the time for emerging had not come. Their object will be to coordinate their movements with those of Rojestvensky and Nebogatoff. In August they met with disaster by taking the sea too late. Had they been near the Tsushima Straits on the 10th of August when Togo was fighting his battle off Port Arthur, they might have influenced the situation and fared better than they did by steaming down on the 14th. The more sensible view is that taken by the *Nichi Nichi*, namely, that the *Rossia* and the *Gromoboi* are fit for action; that the *Bogatyr* is still *hors de combat*; that there are 9 torpedoers in port at Vladivostock; that the materials for 3 destroyers have been received but not put together, and that there are 5 or 6 submarines but in what condition is not certain.

Thursday, May 11.

The master of the British steamer *Baron Feury* (?), which left Niigata on the 3rd and arrived at Moji on the 9th, made the following responsible statement:—"On the 5th instant at 9 p.m. at a point 20 miles north-east of Mishima, we sighted two white lights full on the port bow, the foremost a large light, the hindmost a small one. Afterwards one white light was sighted full on our port bow. The steamer's course was then S.S.E. and she was travelling at a speed of 6 miles. The lights on both our bows gradually drew near during a space of some 4 hours and a half, until the distance separating them from us did not exceed 2 miles. Then they changed their course to E.S.E. and at 2 a.m. we lost sight of them. The night was very dark and we could not in the least distinguish the outlines of the ships."

These are the facts of the rumour that Russian war-ships had been seen near Mishima (Yamaguchi Prefecture).

#### A QUESTION OF PATENTS.

An interesting judgment has just been given in an appeal from a decision by the examiners of the Patents Bureau in Tokyo. The Japanese Patents Law says that a patent can not be granted in the case of an article which has been publicly known or publicly used prior to the date of application. This rule was set up by the examiners in bar of an application for patenting a motor-car. The applicant—Mr. Thomas Walter Barber (as we read the transliterated name)—, a British subject, was represented by Mr. W. Silver Hall, and the examiners ruled that as the car had been patented in England in 1901, it must be held to have become publicly known prior to the application in Japan, which was made in 1903. But the tribunal of appeal took a different view. It decided that Japanese laws must be held to apply to things within the boundaries of the Japanese empire, and consequently the mere fact of prior registration in a foreign country could not be set up in bar of registration in Japan unless explicit proof were adduced that the particulars of the patented invention had become publicly known in Japan. Therefore the judgment of the examiners was reversed and the appellant won his case. It is evident that the examiners took an untenable view, for were their principle carried into practice, the effect would be that unless an invention were patented in the first place in Japan, it could never obtain protection in this country. Under such circumstances international conventions relating to patents and trade-marks would lose all practical value.

## MANCHURIA.

It is evident from recent reports—as the *Asahi* observes—that the Japanese forces in Manchuria are now advancing in five columns. Three of these are in the west of the field; two in the east. The western columns are moving along the roads from Fakumun to Chengkiatun, from Changtu to Fenghua, and from Kaiyuan to Itungchou. The exact points reached in the advance along these roads are not clear and probably will not be made clear until strategical convenience sanctions publicity. In the east of the field the starting point of one column is Yingpan, on the east of Fushun, and the starting point of the other is Tunghua. These columns are apparently converging in the Kirin direction. It is not implied that they have yet commenced their final advance, but all preparations seem to be now complete. Preparations in such a case signify organization on an immense scale, for the movement represents nothing less than the march of 5 great armies with a front of 150 miles.

The Russians are said to have an army corps on the Kirin road, and another corps, or something less, on the Fenghua road, with some 25,000 cavalry patrolling in the interval. They seem disposed to endeavour to check the Japanese advance along these routes, and if such be their intention a collision can not be long delayed. Their total strength is estimated at 250,000 men of all arms, a very formidable army if skilfully handled.

In *The Times* of March 28th we find the following:—

M. Hanotaux contributes to last Sunday's *Gironde*, the leading Bordeaux paper, an interesting appreciation of the present situation in Manchuria. After pointing out that the inferiority of the Russian army has been due to the fact that it has but one base of operations—namely, the Trans-Siberian Railway—and that the Japanese General Staff thus always knows where to find it, he shows that the extraordinary audacity of the Japanese turning movements follows quite naturally as a logical consequence, and that Kuropatkin's so-called apathy had the same origin. It has all along been impossible for him to manoeuvre in the complete military sense of the word. M. Hanotaux raises the question as to whether Linevitch will be freer in his movements. He thinks that, now that the field of operations is going to change, fortune may to a certain extent smile on the Russians, for henceforth Japan's sole base of operations will likewise be the Trans-Siberian, and the Russian army will have greater facility in manoeuvring. The double base of the Sungari and Kirin imposes upon the Japanese a double objective; and the intervention of the Vladivostok army in the Japanese rear is possible.

It is this hope of retrieving recent disasters which M. Hanotaux thinks is now probably inspiring the attitude of the Russian Government in its decision to continue the war. Intervention at present would be quite out of place, in M. Hanotaux's opinion, for Russia is in one of those situations in which Governments and peoples must consult merely their own interest and honour.

M. Hanotaux is a man of high reputation and his opinions deserve all respect. But, whatever conviction his views may carry in their original expanded form, the above epitome of them certainly lacks perspicacity. Why has the Trans-Siberian railway ceased to be the Russian base of operations and why has it suddenly become the Japanese base? In so far as concerns their relation to the railway the two combatants are now in precisely the same position they always occupied. We fail to see any double objective for the Japanese; or at least any new double objective. Vladivostok takes the place of Port Arthur and Harbin that of Mukden. There is no other change. The Japanese are not by any means clinging to the railway. That is precisely what they are not doing. They are advancing in five power-

ful columns by five different roads. So far are they from clinging to the railway that their front extends over a distance of from 100 to 150 miles. They know exactly where to find the Russians. Indeed they can locate the enemy more accurately than ever, for it is an absolute necessity that the Russians should hold Harbin and also that they should hold Vladivostok. The Changchun-Kirin line which Linevitch is now guarding measures 85 miles. If he be driven eastward from Changchun, he uncovers Harbin; if he be driven westward from Kirin, he uncovers Vladivostok. It is he that labours under the disadvantage of a double objective, namely to cover both Harbin and Vladivostok. Kuropatkin can not be said to have had a double objective. A victory might have opened a road to succour Port Arthur; a defeat would not necessarily have driven him off his line of communications. But for Linevitch a defeat means that he must abandon either his line of communications or Vladivostok, and not only Vladivostok but with it the Amur Region. From a strategical point of view the position of the Russian General appears as perplexing as it could possibly be; for his ultimate line of retreat must take him away either from his prime base or from the districts where Russia's main interests are now located; that is to say, either from the Harbin-Baikal line or from the Amur-Vladivostok region. As for the intervention of the Vladivostok army in the Japanese rear, which contingency M. Hanotaux foresees, it is surely a less tangible peril than was the intervention of the Port Arthur army in the Japanese rear. If Russia be building her hopes on any such analysis of the situation as that made by M. Hanotaux, it does not appear that her future is bright.

A telegram to the *Asahi* says that the Russians in the eastern section of the field are steadily retreating before the Japanese, and are concentrating at Kirin.

## KOREA.

On the 3rd instant the Korean Government discussed three important problems, namely, the opening of the whole coast-wise trade, the recall of Korea's foreign representatives, and the employment of Japanese labour for the reclamation of Korean waste lands. The *Yonmu Shinbun* says that the discussion showed an almost unanimous attitude of assent. Mr. Stevens and Mr. Hagiwara were present.

There is talk of another change of Cabinet in Seoul. The present Premier Min Yong-hwa, has shown himself incompetent to preserve unity in the Ministry or to carry out the agreements made with Japan. He will probably be succeeded by Chin Sung-hao, who recently visited Japan in the suite of Prince Wi.

The Government of Korea has at last taken practical steps for recalling its Representatives at foreign courts.

Prince Fushimi (junior) is to visit Korea for the purpose of acknowledging the courtesy of the Korean Court in recently despatching an embassy of congratulation to Japan, and also for the purpose of attending the official opening of the Seoul-Fusan Railway.

The Russians in north-eastern Korea are said to be in great straits for provisions, and to be resorting to forced requisitions. On the other hand, a belief appears to be growing that they have resolved to resort to offensive tactics as the best means of defending Vladivostok. A force of some fifty thousand men is said to have been collected in the neighbourhood of the fortress, and

about fifteen thousand of them have been pushed forward to the Tumen. The advance guard of this body is within a few miles of the Japanese outposts in that part of the field, but doubts are entertained whether any serious intention of fighting exists on the Russian side. It will be observed, however, that these indications receive some confirmation from the recent report as to a difference of opinion between Linevitch and Kuropatkin, a difference which led to the latter's final resignation. Linevitch was in favour of just this manoeuvre, namely, defending Vladivostok by an offensive campaign, and Kuropatkin advocated a different programme. It would be far from a reckless plan to march a force into north-eastern Korea if the command of the sea were wholly, or even partially, in Russia's hands, and should Linevitch entertain serious hopes of such a change in the naval situation, he may be now making preparations to take immediate military advantage of it. The chief objection to any Russian invasion of the peninsula from the direction of Possiet Bay is that there would result a long coastwise line of communications exposed to constant danger from naval enterprises if Japanese ships had easy access to the shores of Hamyongdo. In fact, that objection would be imperative. But if Rojestvensky manages to guard the coast-line, the case would be very different.

It is again reported that the Russians are assembling in north-eastern Korea with the apparent intention of an invasion. Three thousand are said to have reached Chhosan, on the right bank of the Yalu, but Chhosan is not on the north-east of Korea, unless there be two places of the same name.

The Korean Government are said to have decided that the freedom of the coast-wise trade shall be granted to the Japanese, but some time will still be required to arrange preliminaries.

Apparently the recently fixed reduction of the military establishment is to be carried still farther. There are not to be any provincial troops, and the only organized body will be three battalions of guards in Seoul. This project, however, seems to be still under discussion only.

The guards of the French Legation in Seoul, 25 men in all, were withdrawn on the 9th instant, and they will be followed soon by the English guards, says the *Nichi Nichi's* correspondent. Five men remain to guard the Russian Legation.

Some difficulties have arisen about the transfer of the posts and telegraphs to Japanese hands. The trouble is due to a difference of opinion in the Cabinet.

## PRINCE KARL.

On the 5th instant Prince Karl visited the Palace. The Emperor, being indisposed, was unable to meet the Prince, and His Majesty was represented by the Prince Imperial. There were present at luncheon Princes Yamashina, Kacho and Kanin, the German Minister, Marquis Ito, Marquis Yamagata, Marquis Tokudaiji, Baron San-nomiya, Baron Komura, General Terauchi, Baron Yamamoto, Viscount Ito, &c.

On the 6th the Prince lunched with Marquis Yamagata at the latter's Meguro villa, and on the 7th he left Tokyo by the 10.30 a.m. train.

Prince Karl gave a farewell entertainment at the Shiba Detached Palace on the 6th instant. Mr. Ozaki, Mayor of Tokyo, was among the guests, and the Prince handed to him a sum of 500 yen to be used for any municipal purpose approved by Mr. Ozaki.

## CHINA.

Saturday, May 6.

It is stated (*Nichi Nichi's* Peking correspondent) that when the Chinese Government recently came to the decision to build, on its own account, a line of railway from Peking to Changkiakow, the Russian Government immediately instructed M. Lessar to apply for a concession for a Russo-Chinese line from Kiakta to Kulong and from Kulong to Changkiakow. This application threw the Peking Government into a state of considerable perturbation. China has had ample experience of what is involved in railway concession to Russia. She possesses an abundance of political shrewdness but even though she were the most thick-headed of nations she could not fail to read the object lessons of the East Chinese Railway. In truth one is astounded at the magnificent assurance of Russia in preferring such a request. It shows that St. Petersburg's plans of empire are perennially expansive. All the loss and suffering that have been entailed by Russia's attempts to turn to fullest account the political potentialities of a modern railway, have not deterred her in the least. She is just as ready now as she was before her interrupted disasters of 1904, to undertake the same aggressive enterprises against China from Mongolia that she undertook seven years ago from Manchuria. Truly there is something stupendous, something awe-inspiring in this spectacle of immortal greed. One asks, is it never to be checked or appeased? Is the Far East condemned by fate to be the scene of perennial conflicts because Russia's appetite for expansion is insatiable? In the case of the Kiakta-Changkiakow road China gained a moment's respite by M. Lessar's demise. But she feels that M. Pokatiloff will take up the threads his predecessor so assiduously wove into a pattern of empire, and that the trouble is merely deferred not ended. China is not strong enough, or thinks herself not strong enough, to indulge in the luxury of saying a flat "no" to such a state as Russia. Perhaps she has more strength than she imagines but we strongly suspect that her recourse in this dilemma will be to abandon her Peking-Changkiakow road.

M. Pokatiloff is expected to reach Peking in June. He is travelling *via* Siberia and Mongolia, a fact which does not tend to allay the apprehensions of Peking officials.

An attempt has been made to murder Wang Chih-chun, Governor of Canton. The assassin succeeded in inflicting a wound but happily not fatal.

It is stated that just before his death M. Lessar sent to St. Petersburg a long telegram saying that the best plan for Russia is to continue the war.

Tuesday, May 9.

A telegram from Peking to the *Jiji* says that Chao Erh-hsun has been appointed Governor of Mukden in succession to General Tseng. The new official has no very notable record. He has served as prefect of Kuei-yang; as judge-commissioner in Anhui and Shansi and as financial commissioner in the New Dominion. He returns from mourning to assume the duties of the somewhat difficult post to which he is now appointed.

The Russian Representative in Peking continues his pressing applications to have the boundaries of Mongolia definitively fixed. His alleged object is to limit the arena of the war, but of course his real purpose is quite plain, namely, to place a neutral area along

the railway westward of Harbin, and thus to guard Linevitch's communications with Europe. Russia has not the faintest sense of humour. Actually at the very moment when she herself is violating the most elementary rules of neutrality in Indo-China, we find her clamouring in Peking for the establishment of a neutral zone which would inure solely to her own strategical advantage. Her diplomacy is clumsy to the point of ridicule. So long as the Japanese were on the south of the Shaho and outside Port Arthur, she had not a word to say about the neutrality of the West-Liao regions or of Chinese ports, because from both that region and those ports she was drawing supplies for her own use. But when Port Arthur had fallen and when her position at Mukden became liable to turning movements from the west, then immediately we heard her outcry about the neutrality of Chefoo, of the Miao Islands and of the West-Liao region. Again in the days when Mongolia served as a source whence her own armies drew supplies of horses, cattle, sheep and fodder, not a whisper was heard about defining its borders and enforcing its neutrality. But now when by converting Mongolia into a buffer state the railway westward of Harbin would be guaranteed against being cut by the Japanese, Russian diplomats are clamouring for neutrality. Is it not all an exquisite farce?

The German Representative in Peking is reported (*Hochi Shimbun*) to have complained to the Chinese Government that the native press has been attributing sinister designs to his country in Shantung. He has requested that contradictions of these designs shall be published, and he is also said to have called on the Japanese Minister for the purpose of conveying assurances that Germany's policy in Shantung is of the most legitimate character. It is to be regretted that the very mischievous and erroneous statements made by prominent Germans before learned societies of their countrymen can not be subjected to censorship such as the German Representative asks for in the case of Chinese newspapers.

Mr. Lin, the great capitalist of Fuhkien and Formosa, is reported to be at the head of an association of Chinese business men who have put up a capital of four million taels for the purpose of securing railway concessions in Fuhkien, in preference to Frenchmen who are seeking to secure similar concessions. That is a very legitimate manner for the Chinese to exercise their patriotism. By this time they must be fully alive to the fact that every railway concession granted to foreigners within the limits of the Chinese Empire is destined to be a source of political trouble if not an actual factor of aggression.

Thursday, May 11.

The Chinese Government is reported to have determined to open Changkiakow and Kulong to foreign trade and to have already issued the necessary instructions.

The new-Governor-General of Manchuria, Mr. Chao, has had farewell audience with the Empress Dowager, who is said to have instructed him to establish good relations with the Japanese and to spare no pains to establish order in the regions under his control.

Japanese journals report that 52 Chinese students have just graduated from the Police School of Japan. Of these students 34 are from Peking and 18 from Hupeh. They have received practical instruction in the discharge of police duties. There remain still

studying in the same school the following numbers:—

Peking Students .....	8
Hunan " .....	18
Szechuan " .....	27
Hupei " .....	53
Kiangsu " .....	20

Total.....126

There is a telegram (*Asahi*) from Peking that the Dalai Lama intends to leave Kulong for Llassa on the 17th instant, but it is thought probable that he will remain in the former place long enough to have a meeting with the new Russian Minister to China, who is travelling to his post *via* Siberia.

Sir Ernest Satow, British Minister at Peking, having declined to transmit to the Foreign Office a telegram signed by more than seventy British merchants, with regard to the Mackay treaty, Mr. Edward S. Little writes to the *N.-C. Daily News* that he has sent the telegram direct to Lord Lansdowne. It is worded as follows:—

"British merchant draw Government's attention to fact China ignores Mackay Treaty rendering same ineffective. In most essentials China actively opposes currency, mining, taxation, navigation stipulations. Beg British Government insist on Treaty being made immediately operative."

The public, Mr. Little adds, will probably be interested to know that the same telegram has been forwarded to the China League with the special request that Members of Parliament, who are also members of the League, will urge the question on the Government in the House of Commons. I understand also that the China Association has wired to its London Committee, requesting them to back up this telegram.

H.M.S. *Centurion* while outside Hongkong harbour on the night of the 15th April received a large number of wireless telegraphic messages which her officers were unable to decipher on a first and second reading. It is not known whether they were ultimately read, but the messages were evidently not intended for her.

The second ordinary meeting of the China-Borneo Co., Ltd., was held on the 15th April, when \$1 per share dividend was declared.

The number of bodies "dumped" in Hongkong during 1904 was 1,171, 12.8 per cent, of which were plague infected.

The French cruiser *Sully* remains on the rocks near Saigon and the reports as to the probability of getting her off are conflicting.

H. E. Sheng Kung-pao, Director-General of the Imperial Chinese Railway, turned the first sod of the Shanghai-Nanking Railway on April 25th, at Shanghai.

On the 22nd April, says the *North China Daily News*, the *Sinwenpao* came out with an editorial in which the main idea was that, as it was almost a physical impossibility for the interned Russian warships to leave the harbour, the constant dispatches from the Acting Japanese Consul-General to the Shanghai Taotai about the suspected intentions of the officers and crews of the Russian vessels to make a dash of it to join their comrades of the Baltic Armada, were, to say the least, superfluous. To this the Japanese Acting Consul-General replied by addressing a dispatch on the 24th to the Shanghai Taotai, protesting against the *Sinwenpao* editorial and saying that it has been purely a matter of friendship for the Chinese to put them on their guard against any possible defiance of Chinese neutrality, since China has been too weak to enforce her neutral rights on the interned vessels and their officers and crews. Moreover, since the Russians refuse the Chinese authorities their right to personally inspect what is going on board their ships, how is anyone to know for certain that the Russians have not since secretly made good the various important parts of gun and engine mechanisms that had been taken away by Chinese authorities at the vessels' disarmament? Any properly-minded Chinese would appreciate the

help the Japanese Consular authorities have afforded the Chinese Government here, but the writer of the dispatch is hardly surprised at the tenor of the *Sinchen-pao* editorial, since he long before observed that paper has turned pro-Russian in its policy. As the Japanese Acting Consul-General, however, considers that there is an intention in this editorial in question to vilify him, he cannot permit it to pass unquestioned, since by doing so it might create doubts of an unpleasant nature in the minds of the general public, and moreover might militate against the friendly spirit which has always characterised Japan's attitude towards China. In view of this, therefore, the Shanghai Taotai is requested immediately to instruct the Shanghai Taotai to instruct the Mixed Courts Magistrate to summon the editor of the *Sinchen-pao* so that he may be severely punished for any remissness of which he may be guilty, and also that he may be made to apologise to the Acting Consul-General for his conduct.

The Chinese Minister at St. Petersburg, has telegraphed to the Waiwupu with regard to the sentence on the sailor Ageef belonging to the Russian cruiser *Askold*, for the accidental killing of the Chinese, Chou Seng-yu on Shanghai Bund last year, that the Russian Government has consented to increase his sentence to eight years' imprisonment with hard labour.

A Peking dispatch to Shanghai papers reports that the Empress Dowager has lately been feeling quite unwell, suffering from insomnia and considerable rheumatic pains, and that the efforts of the members of the Imperial College of Physicians to relieve her Majesty have so far been futile.

The *Hongkong Daily Press* says that three white women and their half-caste children, who were assisted by Customs officers to escape from their Chinese homes up the West River, arrived at Hongkong on the 22nd ult. Two are Australians and the third a Chilean. They were duly married, but found when they got to their husbands' homes that they were only second wives, and were ill-treated by the first wives accordingly.

Shanghai papers contain stirring accounts of the baring of the Indo-China S.N.C. steamer *Yuenwo* on the Yangtze below Tungchow. Of the ten foreign passengers on board all escaped, but a number of Chinese—varying from 40 to 60—are missing. The *Yuenwo* is a steel twin-screw steamer, 273.5 feet in length, 40.5 feet in breadth, 13.1 feet in depth, and of 2,522 tons' gross and 1,538 tons' net register. She was built in 1888 by Messrs. S. C. Farnham and Company for her present owners. She was still burning on April 26 when the *Suian* passed her.

A mission composed of English and Chinese officials has started on a journey to the Burmo-Chinese frontier north of latitude 24 degrees 35 minutes. The English Commissioners are Mr. Hilton, Consul at Tengyueh (Moulmein), and Mr. Leverson, Deputy Commissioner of Bhamo. They will meet the Chinese Taotai of Tengyueh at Kurlung. The British representatives will be accompanied by an escort of forty Gurkhas with a native officer, and some military police. The Taotai will have an escort of the same strength. The object of the expedition is to examine the conditions on the frontier, but no delimitation is contemplated. It will return to Burma in June.

The *N.-C. Daily News* learns from a letter from Hachoa, Che, that on April 18 Mr. James V. Latimer, of the American Baptist Missionary Union, went outside the West Gate to see a procession. While standing in the company of spectators he was attacked by six or eight carriers, who had stopped to rest. He was struck in the face and about the back and shoulders; also once over the head with a carrying pole. He was able to break away and run; and was followed for about a mile by ten or twelve men. By fording one canal, and ferrying another, and by hiding in a bamboo thicket for a couple of hours, he was eventually able to make his way back into the

city. The attack was wholly unprovoked and was, apparently, simply, an outburst of anti-foreign feeling. In the trouble Mr. Latimer lost a kodak, and a Chinese friend, who was also attacked because of his being with a foreigner, was beaten and robbed of his watch, ring, umbrella, and money.

Regarding the new Russian Minister at Peking, a writer in the *North China Daily News* says: M. Pokatilow is very well known to the people attached to the Court, and while in Peking during the period following the Boxer troubles was especially friendly with the Empress Dowager's most powerful favourites such as the Chief Eunuch, Li Lien-ying, the Taoist Abbot of the White Cloud Temple (Paiyun Kuan) and the Buddhist abbot of a Monastery, both of Peking, (the latter personage being also a favourite protégé of Prince Ching). These three are acknowledged by all China to wield exceptional power and influence over the Empress Dowager, influence that is known as "backstairs," and, therefore, though felt, is still unseen. With such very powerful friends and allies at his back, the Russian Foreign Office could not have made a better selection, under the present circumstances, than the Director of the Russo-Chinese Bank and whatever of prestige Russia may have lost in Peking during the present war is likely to be recovered by the new Minister, and on a larger scale.

A Peking dispatch translated by the *N. C. Daily News*, states that the late Feng Ch'uan, Imperial Resident to Lhasa, met his death, as a matter of fact on the 5th of April at a place called Hungtingtse (Red Pavilion) in Patang district, which is about 450 miles north-west of Tachienlu, Su, as the crow flies. Owing to the distance and the bad hill roads, the news of his late Excellency's death did not get to the Szechuan Viceroy at Chengtu until a fortnight afterwards, and was not reported to the Throne by the latter until the 21st of the month. It appears that the late Imperial Resident, who had been ordered by special decree from Peking to make a detour from his journey to Lhasa and proceed to Patang to investigate a recent murder of a Chinese military officer and five or six soldiers by Lamas in that district, suddenly came across, on the 5th of April, a body of Tibetans at Hungtingtse who made a pretence of opposing his way. Upon attack being made on the Tibetans they gradually retreated, followed by the late Resident and his guard of about a hundred and twenty men, until the latter had got into a narrow gorge, when the Tibetans faced back and charged the Chinese. In the meanwhile an ambushed force of Lamas suddenly appeared in the rear of the Resident's party while others above them above the gorge began hurling down rocks on the doomed Chinese. The result was that the Resident and the majority of his party were killed and only about eight or nine men made prisoners. A party of Lhasa Tibetans who accompanied the late Resident's train were also nearly all killed by their compatriots, but the few who escaped finally succeeded in getting to Tachienlu in a half-starved condition and reported the news of the catastrophe to the officials. From the almost incoherent tale brought by these there are hopes that the Resident may have been only wounded and perhaps spared by the Patang Tibetans, but the chance seems small as these people are habitual brigands and constantly rebelling against the Chinese authority. The leader of the punitive expedition sent by Viceroy Hsi Liang to the Taining Lama Monastery to avenge the deaths of the late Imperial Resident and the Chinese officer and his party of half a dozen soldiers, reports that upon the arrival of the expedition at the Monastery the Lamas fled into the mountains, leaving the cattle and goats. These were all taken possession of by the troops and the base of operations against the rebellious Tibetans of Patang who had aided the Taining Monastery Lamas in killing the late Imperial Resident and his party. In the meanwhile General Ma, who is at the head of the Expedition, has sent up a Tibetan officer to Patang, which is about 120 miles from the Monastery, to call upon the Tibetans there to hand over any prisoners in

their possession and deliver up for punishment their leaders who were guilty of the murders. Failing this, the General declares that he will march upon Patang and lay waste the whole district and spare none of its inhabitants. The severe measures of the Chinese at Taining Monastery (the scene of the first murders) is stated to have struck terror into the hearts of the Tibetans living round about that portion of Eastern Tibet.

Several big wins by punters both on the pari-mutuel and in the sweepstakes, are recorded at the Shanghai Spring Races. The biggest win was on the third day, in the "Nil Desperandum Cup," when *Subterfuge*, a total outsider, came in first. Only one ticket had been taken for a win and five for a place. The lucky holder of the "win" ticket received \$1,201.50. In the cash sweeps the first prizes varied from \$800 to nearly \$16,000.

Although, says the *North China Daily News*, there seems to be a feeling that the Dalai Lama of Tibet who ran away from the British Expedition last year has been deposed and the Panshen Lama of Tashilumbo appointed to take his place, a Peking correspondent, writing on the subject of evident reluctance of the Dalai Lama to leave Urga for Lhasa, states that he has not been formally deposed by the Imperial Government and that he is being sent back to Lhasa to resume his post of Chief Buddhist Pontiff there. Our correspondent further states that, in spite of his solemn promise to the Imperial Resident of Urga, Mongolia, and the Assistant Tibetan Resident at Hsining, Kuri, to start from Urga for Lhasa on a certain date, the Dalai Lama still lingers in Mongolia and refuses "to budge." This made the two Manchu officials exceedingly wroth, with the result that they recently presented a joint memorial to the Throne complaining of the dilatory movements of the Dalai Lama and his broken promise, and recommending that he be formally deposed from the Pontificate as a punishment for his remissness—a step doubtlessly eagerly desired by this Tibetan who does not seem to be desirous of returning to Lhasa, which may mean going back to his death. The recommendation to depose the Dalai Lama has, however, been promptly refused by an Imperial Rescript which also commanded the memorialists to send the Tibetan back without further delay.

The captain of the R.I.M.S. *Hardinge* was summoned at the Hongkong police court recently for neglecting to put rat flanges round his ship, while lying alongside the wharf; the excuse made was that the ship enjoyed the status of a man-of-war and was not amenable to the bye-law, but this was overruled by the court; defendant was dismissed with a caution.

The Messageries Maritimes have been fined \$50 in the Hongkong Police Court for burning coal on the steamer *Tonkin* of such poor quality as to cause a public nuisance.

The Tientsin correspondent of the *N.-C. Daily News* writes as follows:—One cannot pass through the Japanese Concession here without being impressed with the activity of that nation. Many new buildings are under construction or nearing completion, ponds and waste land are being filled in, much of it being well back from the river and one would think not likely to be built upon for some time to come. But even so, it is a great blessing to have it filled in, and thus decrease in our more immediate vicinity the unsanitary conditions. So far as we are aware, not so much is doing in any of the other concessions, perhaps more in the French than in any other. Last year the Russians built a large Consular building in their Concession, which is on the east side of the river opposite the British. A few buildings are being erected in other Settlements. While there are no special indications of speedy peace yet all are hoping for it soon, and more or less expecting it in view of the present situation in the north and in Russia. Business has been much affected by the war, and it may

be that peace will bring about the return of better times in the north.

The *N.-C. Daily News* of May 2 asserts that the China Navigation Co.'s steamer *Wenchow*, Captain Puckett, while on a voyage from Shanghai to Chefoo, met with an adventure which is almost unique in the annals of shipping. She left Shanghai on the 20th of April and arrived at the N. E. Promontory at 9.18 a.m. on the 23rd. Alceste Island was passed at 9.40 a.m., and twenty minutes later the Captain and chief officer, who were on the bridge, keeping an eye open for mines, discerned a black object two points on the port bow, which on examination proved to be a whale blowing. While watching it, it sounded, and a minute after struck the *Wenchow* on the port bow under water, shaking her from stem to stern. It then passed under the bottom of the ship, causing her to quiver all over, and got foul of the propeller, almost bringing the engines up standing for two or three revolutions, as the blades slashed into the huge mass. Clear of the ship it reared its enormous head out of the water for fully 50 feet, spouting blood and colouring the sea all round. Down it dived, lashing the sea into red foam with its tail. Then up again and over, showing the fearful gashes on its side. Down and up it rolled and tumbled in its death throes, each succeeding movement getting weaker. The last those on the *Wenchow* saw of the whale it was lying quivering on the surface of the water. It was judged by those on board to be over 100 feet long.

#### POWER STATION OF THE TOKYO ELECTRIC RAILWAY COMPANY.

On the forenoon of the 6th instant the fires were lit for the first time under the boilers at the Tokyo Electric Railway Company's Power Station. The building of the station was commenced last year at Shibuya in the Azabu district of Tokyo. It is a solid brick structure of the best type, and the machinery placed in it is universally pronounced by experts to be the finest of its kind in the Orient. The great firm of Dick Kerr and Company has furnished the machines, and the whole of the work has been carried on under the supervision of a highly skilled engineer of long experience, Mr. Schultz. It is a matter of common knowledge that among the four electric railways of Tokyo, the Denki Tetsudo Kaisha makes incomparably the best showing, alike as to road-bed, rails, cars and general equipment. Thus far only a small section of the line has been opened; a section not yet sufficiently extended to tap the populous districts included in the area of the Company's charter. But in two or three months, when the whole road has been completed and the power station is in full working order, there can be no reasonable doubt that the Denki Tetsudo's enterprise will prove fully as profitable as that of any similar company in Japan. The lighting of the fires on the 6th instant was preceded by a Shinto ceremony of purification; the ceremony of exorcising all malign influences. Shinto rites scarcely differ appreciably whatever be the occasion of their performance. There is the offering of sacred meats; there is the reading of a document—it may be an invocation to the tutelary deities; it may be a threnody for the dead; it may be a prayer for prosperity—; and there is the placing of sprays of *sakaki* on the altar. The funeral ceremony is probably familiar to all our readers, and it will therefore suffice to say that, to ordinary observers, the ceremony at the Power Station on Saturday last differed from a burial service only in the language of invocation and in the rite of purification with a branch of *sakaki* carrying pendent periapts.

After the Shinto priest had done his part, Mr. Schultz rose and explained that they had met to-day to see the fires lighted for the first time in the Power Station. Mrs. Hama, wife of the Chief Director, had kindly consented to start the furnaces, and he trusted that they would burn with uninterrupted vigour for many tens of years while the Company flourished and grew always more prosperous. He begged Mrs. Hama's permission to present to her a small memento of the occasion (a gold girdle-clasp set in brilliants), and he then handed her a brass rod (afterwards to be replaced by a silver one) with a mass of burning tow at one end. The doors of the furnaces were then thrown open in succession by Mr. Kodama, the Japanese electrical engineer of the company, and Mrs. Hama applying the torch, eight fires were speedily roaring under the huge boilers. It is understood that the ceremony of starting the engines will take place in a few days. The Power Station is most conveniently situated, being within a stone's throw of the railway and on the banks of a stream which furnishes an ample supply of water.

#### SHIPPING DISASTERS.

The Nippon Yusen Kaisha's S. S. *Fushiki Maru* reports having sighted floating mines at two places, namely, 120°30' E. Long. and 38°10' N. Lat.; and 122°20' E. Long. and 37°36' N. Lat. It is further stated that dense fogs prevail in the seas of China and Japan, rendering navigation very perilous.

The S. S. *Hokuto Maru* (3,220 tons), the property of the Itaya Company of Hakodate, ran on the rocks near the Tsushima lighthouse on the 8th instant. Her crew were taken off by the *Wakamatsu Maru*.

It is reported that the *Chuyetsu Maru* has come in contact with a floating mine, but the extent of the injuries suffered is not stated.

This steamer collided with a floating mine near the Miao Islands and suffered such injury that she escaped sinking only by running ashore. There were no casualties to life or limb.

The British steamship *Adato*, Captain Brodie, which arrived at San Francisco on April 10th, twenty-four days from Karatsu, had a narrow escape from destruction by fire while in mid-ocean. On March 28 in latitude 47 north and longitude 174 east, a stove in the cabin was accidentally overturned and the vessel at once caught fire. A furious gale was blowing at the time and a tremendous high sea was running. For four days the fire raged, and before the crew succeeded in extinguishing the flames the vessel had been damaged \$15,000. The *Adato* was in ballast and consigned to the O. & O. Steamship Company.

Owing to dense fog, four vessels collided on May 7th in Moji Straits. The *Fiji* reports that the fog was very heavy, more dense than has been experienced for ten years past, so that many ships were collected in the Straits awaiting clear weather.

The British steamer *Highlander*, which went ashore on May 4th in the neighbourhood of Mutsure island has been floated. Some damage has been caused to the hull.

The Osaka Shosen Kaisha's steamer *Chiga Maru* stranded on the morning of May 7th off the village of Torii, Iwami province, having been driven ashore by a sudden storm while at anchor in a dense fog at Kinetaki. She sustained some damage. The 5th *Heian Maru* saved the passengers and crew as well as a portion of the

cargo, after which she towed the ship to Oonsen-tsu.

According to Tokyo journals, the P. & O. steamer *Banka* arrived on May 8th at Kobe from Bombay with cotton. This ship went ashore on the previous day in the neighbourhood of Oishima off Kitaura, Yamaguchi prefecture, and sustained damage about the bow. Having shifted a portion of the cargo, she floated and reached Mutsure island where temporary repairs were made.

The *Asahi* has a telegram from Moji to the effect that the steamers *Sendai Maru* and *Kotohira Maru* and ashore on the afternoon of May 7th of Dairi. Both sustained damage.

The steamer *Hokuto Maru* (3,278 tons), returning from Korea struck a rock off the northern shore of Tsutsu-ura, Tsushima, at 3 a.m. on Monday and was wrecked. Her crew, numbering 20, were taken off by the *Waka Maru* and reached Moji on Tuesday.

#### A STRANGE INCIDENT.

On Monday, May 10th, the Tokyo police visited the house of a well known resident of Tsukiji and instituted a careful search, at the same time placing a guard and detaining, if not actually arresting, one of the European inmates. Wild rumours are in circulation, but we refrain from reproducing them, and confine ourselves to stating that the charge preferred is illicit correspondence with the enemy. As the persons implicated occupy high social positions and enjoy wide popularity, it is to be sincerely trusted that the accusations against them may be found without basis.

#### NOTES ON CURRENT EVENTS.

The annual meeting of the Jizenkai Hospital was held on the 28th April, at the Red Cross Building, which was kindly lent for the occasion. Madame Sufu, the President, was in the chair. The Report for the year was read, and proved very interesting, details of the help afforded to needy and distressed persons being given. A statement of accounts was also given. It is only possible here to say that the receipts for the year were yen 3,688,455, expenses, yen 2,580,149, leaving a balance of yen 1,108,306. The Japanese ladies have made strenuous efforts this year to help the funds and have raised yen 8,963,393, which amount is invested in Government Bonds. This brings in something over 40 yen per month. They hope to increase the sum during the year to yen 10,000, which is to be kept as an Endowment Fund for the Hospital.

Their Majesties the Emperor and Empress have contributed a sum of ten thousand yen to the Army Department of the Young Men's Christian Association. Our readers are aware that since August last the Association has been conducting work on very practical lines for the comfort, recreation and instruction of soldiers at the various important military bases in Manchuria. Reports of the measures organized and of the success attending them have appeared from time to time in the columns of the press. The work has received the hearty endorsement of the officers in the field and has now been recognised in this munificent manner by Their Imperial Majesties.

It has been more than once reported that the Japanese authorities approached Russia on the subject of an exchange of prisoners, but that Russia showed no disposition to respond. Now, however, the mood of the

Russians seems to have changed and rumour says that an exchange is likely to be effected soon. There are not many Japanese prisoners in the hands of the Russians. So far as we can ascertain the number in January totalled 464, but among these only 261 were combatants. It is a custom quite peculiar to Russia to detain non-combatants in captivity, and a question will naturally arise whether an exchange of non-combatants against combatants is permissible.

The *Katori* is to be launched on the 4th of July. Prince Arisugawa will be present at the launch, his trip to Germany being completed at the time.

The subscriptions to the Fifth Loan total 490,666,225 yen, of which 28,880,250 yen was above the minimum price. Subscribers will receive from 16 to 17 per cent. of their applications. It is worthy of note that the subscriptions to the Fourth Loan totalled only 480 millions.

While dealing with a Russian shell in a store at Maruyama, Moji, on the morning of the 7th instant, an explosion took place, resulting in the death of 2 men and 4 women, and the wounding of 2 men and 9 women.

An accident occurred at Mayebashi also on the afternoon of the 6th. Three sheds at Iwahama, used for the manufacture of powder, blew up, killing 3 men and 3 women and injuring 3 men and 2 women. As the scene of the explosion was at a considerable distance from the powder-magazine, the latter escaped intact.

The *Official Gazette* of the 8th instant contains an Imperial Ordinance directing that civil governors and other administrative officials shall be appointed in the occupied districts of Manchuria. Nine classes of officials are specified, including engineering experts, interpreters, police and gendarmes. This is the system that the Japanese adopted in the war of 1894-5. We observe that the salary of a governor is to vary from 3,000 to 4,000 yen annually.

The following intimation sent to a client by one of his tradesmen may serve to show how useful the dictionary may be when scanned with discrimination:—

Roof Maker  
Slates. Shingles. Tiles.  
Roofs. Plaster

With the above kinds and I am wishing to get a work of the General roofs and also that is to make for the rains. Leak or a repair But this cost it can be very cheap and at fast. there fore No relative at more or less. Please get me a business

April 1905  
The Residence

The Naval Authorities have warned ship-masters not to navigate within six nautical miles of the coast of the Pescadores, as there are temporary dangers to be apprehended.

The *Official Gazette* announces that 144 men of the Russian sanitary and medical corps and 2 non-combatants who had been temporarily detained as prisoners are to be sent home. They were handed over to the French Consul in Kobe on the 22nd of April. The detail is 3 surgeons; 2 civil officials; 78 nurses; 62 sanitary officials and a merchant.

The Japanese Admiralty advertises the sale of 22 steamers sunk outside Port Arthur. Tenders are invited. Each tender must be accompanied by surety money amounting to 5 per cent. (fractions of yen being counted as yen) of the amount of the tender, and no tender must be for less than 2 ships. All

particulars may be obtained by application to the Kansai Hombu at the Naval Department up to the 25th instant.

The preliminary settlement of the accounts of the concert held at the Uyeno Academy of Music on the 29th ultimo for the benefit of the Tokyo School for Foreign Children shows that the event was most successful financially as well as in other respects. The net profits, including the gracious contributions of Their Imperial Highnesses the Princesses Kanin, Nashimoto, Higashi-Fushimi, Yamashina and Kuni, amount to considerably more than yen 1,200, which will suffice to guarantee the establishment of the School Dormitory and its management for the first year.

The School is to be congratulated upon having secured the services of the many friends whose efforts made the concert musically and socially, as well as financially, such a brilliant success.

It is reported by telegram from Nagano that three young persons—two women and one man—committed suicide on May 9th by throwing themselves into the crater of Asama volcano.

#### YACHTING.

It will be remembered that the race for the Cruising Class on the opening day of the season was not completed, owing to scarcity of wind. The majority of owners of the yachts concerned did not wish the race to be sailed on Saturday, the 6th, but to meet the wishes of the minority a private race was arranged over the Widow Buoy course. *Asagao* joined in, although her owner had intended to go cruising. There was a fresh southerly wind blowing, and *Kathleen* did not start, *Asagao* and *Wanderer* only facing the music. The big yawl was beaten very badly by *Asagao*, the latter leading from the start, and increasing her distance all round the course. She completed the course in quick time, finishing about an hour ahead of *Wanderer*. *Maid Marion* having not yet completed her fitting out for the season, there was no race in the 39 rating class. The Larks were down for a race but did not go.

The Mosquito Club had a race around the figure of eight course. *Pele*, *Winsome* and *Sunbeam* started. It was a good contest between *Pele* and *Winsome* all the way round, the former eventually winning. Just after crossing the finishing line *Pele* was unlucky enough to split her sail.

#### UNION CHURCH.

A general meeting of members and congregation of the Union Church was held on Wednesday afternoon at the Van Schaick Hall, the Rev. E. S. Booth presiding.

The Chairman explained that in addition to the annual general meeting held in February it was customary to hold general meetings in May and October, when any reports in connection with the working of the Church might be presented.

The Secretary (Mr. J. McBeth) read the minutes of the last annual general meeting and also of the extraordinary general meeting held in April last, the same being unanimously adopted.

The Treasurer's statement of receipts and expenditures since the last annual meeting was read and accepted, as were one or two other reports.

The "body of seven" elected at the extraordinary general meeting for the purpose of raising funds and acquiring a site on the Bluff for the erection of a Church, school and manse reported that a lot had been purchased on No. 49 Bluff upon favourable terms. Yen 4,000 was to be paid at the beginning of next month, the remaining amount being paid in instalments extending over a period of two years. The Ladies' Auxiliary had handed over yen 1,600 of the sum promised (yen 2,000) and the balance would be handed over in a few days. The treasurer, Mr. D. H.

Blake, said they would have enough to meet the sum it was necessary to pay on the 1st of June.

The committee appointed at the extraordinary general meeting for the purpose of considering the constitution of the church as affected by the new conditions brought about by the election of the "body of seven" reported through Mr. Pollard. He said they had met and carefully considered what steps were necessary, and had found two clauses which clashed with the resolutions passed, so that their work could not be considered as yet finished.

After remarks by the Chairman it was decided that the revision committee should continue to act until matters were finally set upon a sound legal basis.

Votes of thanks were passed to Mr. W. Karl Vincent and Mr. J. T. Griffin for their work in connection with the recent organ recital.

Several speakers referred in eulogistic terms to Mr. Vincent's excellent work in the musical affairs of the Church, and it was unanimously resolved to increase his honorarium.

After some discussion upon various other matters, the meeting closed with the Benediction.

#### ORGAN RECITAL.

The Evensong Service at Christ Church, on Thursday, at which Rev. W. P. G. Field officiated, was followed by an organ recital which was listened to with rapt attention by a large congregation. Mr. Hugh Horne was organist and it is the merest justice to say that his share of the programme was performed with the finest taste and with deep expression. Undoubtedly, however, the numbers that most effectually reached the listeners were the solos of Mrs. Lee Lee and Mrs. W. A. Harrison. Liddle's rendering of "Abide with me" the former lady sang most admirably, indeed comment except in terms of the very highest praise would be presumptuous. Mrs. Harrison's glorious voice was heard to great effect in "O Divine Redeemer," and Mr. Maitland rendered with the happiest appreciation the number that fell to him. Altogether the programme was sincerely enjoyed by those who listened to the music and it may fairly be hoped that the offertory has furnished a substantial accretion to the Church funds. We append the programme:—

1. .... Adagio. (Concerto I)...Mendelssohn.
2. .... "Abide with me." .....Liddle.  
Mrs. Lee Lee.
3. .... Cantilene.....Salome.
4. .... "Four serious songs." No. 3...Brahms.  
"O Death, how bitter art thou unto him that dwelleth in peace, to him that hath joy in his possessions, and liveth free from trouble, to him whose ways are prosperous in all things, to him that still may eat. O Death, how welcome thy call to him that is in want and whose strength doth fail him, and whose life is but a pain, who hath nothing to hope for and cannot look for relief."  
Mr. N. G. Maitland.
5. .... Toccat.....Dubois.
6. .... Hymn No. 165, "O God our Help." .....
7. .... Prelude and Fugue.....Mendelssohn.
8. .... "O Divine Redeemer." .....Gounod.  
Mrs. W. A. Harrison.
9. .... "And the Glory." (Messiah).....Handel.

#### MEMORIAL DAY.

A meeting of American ladies was held on Thursday forenoon at the American Naval Hospital under the presidency of Mrs. Bellows to consider suitable means of celebrating Memorial Day. There was a large attendance.

The report and accounts for last year were read and adopted and a Committee for the present year's celebration were elected as follows: Committee for Collecting Flowers—Mrs. James Walter (President), Mrs. Swain, Mrs. Austin, Mrs. Colton, Mrs. Manley, Mrs. Thorn, Mrs. Pollak, Mrs. D. L. Smith.

Mrs. McIvor was entrusted with arrangements as to music.

Mrs. Thorn was elected Honorary Treasurer, and Mrs. Branham, Honorary Secretary.

It was decided to celebrate Memorial Day by holding services at the American Naval Hospital on May 30th, at 2 p.m. The services will probably be conducted by Rev. E. S. Booth.

## RUSSIA'S PROGRAMME IN MANCHURIA.

**O**CCASIONAL offered to comment recently on a programme said to have been mapped out by the Russian General Staff, the main feature being that re-inforcements totalling 400,000 men were to be sent to Manchuria with all possible speed. The expectation was that this great force could be carried to Harbin in four months, so as to reach the field by the end of July, and that the armies confronting the Japanese would then aggregate 600,000. This estimate did not bear very close scrutiny. It rested on two large assumptions: the first, that the Siberian railway could transport over 90,000 men monthly with all their stores; the second, that during four months the position in Manchuria would remain such as to permit the incorporation of these re-inforcements into duly organized bodies. Neither hypothesis appeared tenable, and it is therefore not surprising to find the St. Petersburg correspondent of *The Times* telegraphing to that journal on March 27th:—

General Linevich's army is now apparently prepared to hold its ground, but it is doubtful whether it will persist in view of the impending occupation of Kirin by General Kawamura, who would thus threaten Linevich's communications.

The General Staff are busy preparing plans for a summer campaign. There is no longer any question of the original project of sending out 400,000 men. All such ambitious plans have been definitely abandoned. It is proposed to conduct Fabian operations in the hope of exhausting the enemy. Linevich has nominally six European corps, five Siberian corps, and one cavalry corps, which, with the re-embarked reinforcements now arriving, represent under 250,000 men. The calling out of last year's reserves, ostensibly for the annual training, has really been ordered with a view to manning the depot battalions which are providing drafts for Linevich's reduced regiments. The War Office further proposes to send 50,000 men selected from various corps to stiffen the army in the field. These makeshift measures are all that are possible in view of the disturbed condition of the country, which renders mobilization highly imprudent.

General Dokhtoureff, who was to start to-morrow to join the staff of General Kaibars, died yesterday evening as the result of a stroke from running upstairs in the War Office to thank the Minister for his appointment. General Dokhtoureff was 70 years of age, and had been the hero of several campaigns. He begged that he might be allowed to go to Manchuria because he wished for a soldier's death.

Commenting upon the above editorially *The Times* says:—

The telegram from St. Petersburg which reaches us this morning demonstrates with exceptional impressiveness the intimate connexion between the internal situation in Russia and the prosecution of the war. All the grand schemes for despatching a fresh host 400,000 strong, who, under the generalship of a Grand Duke, should hurl Oyama's armies back upon their ships, have been abandoned. The War Office are busy with their plans for a summer campaign, but it is to be a campaign of most modest aspiration and proportions. Its object is to be nothing more ambitious than to exhaust the enemy, and no suggestion is made as to how even this much can be accomplished, unless the enemy chooses to renounce the prudence which has hitherto distinguished his strategy. The forces at the disposal of the Russian commander will be small enough even for the purpose of marking time. It is hoped to scrape together 50,000 chosen from different units in order to stiffen the field army. There is not much starch in reinforcements of that kind, of which the officers and men neither know each other nor their future comrades. Drafts are also to be supplied from the depot battalions of the regiments at the front, and these are to be replaced from last year's reserves which are being called out, nominally for their annual training. By the aid of these dribbles it is hoped to bring up the 250,000 men or less who are supposed to remain with Linevich, if the reinforcements now arriving be reckoned, to a strength sufficient for the fulfilment of the revised plan of

campaign. The reason, we are told, for this surprising confession of weakness, in the face of all Europe and of all Asia, by one of the greatest of military Powers is the domestic situation. They have come to see at St. Petersburg what has been pointed out as obvious in these columns for many weeks, that, in the present condition of Russia, mobilization on a grand scale would be rash in the extreme.

That is exactly the question—how is the waiting policy to be carried out? How are the Japanese to be worn down? The drama in Manchuria has not resolved itself into a game of chess in which each side must attend the other's good pleasure to move. The choice of time is with the Japanese, and will remain with them unless the Russians can create a situation completely turning the tables. It was conceivable that Fabian strategy might have been usefully employed by KUROPATKIN had he avoided anything like a decisive battle and fallen back steadily towards Harbin, completely wrecking the railway behind him and gathering constantly, as he went, large accessions of defensive power. But the actual situation now is that the Russians have been driven with crippling losses from all their fortified positions in southern and central Manchuria, and that they, not the Japanese, are to-day the *corpus vile* of the wearing-down process. There is a limit to their retreat and that limit is the Harbin-Vladivostock line. By and by it will be necessary for them to choose between abandoning Harbin and saving their communications with Russia, or clinging to Harbin at the risk of being cut off from their source of supplies. It must be remembered that hitherto in order to sever the enemy's communications the Japanese would have had to place themselves in his rear since he has always been fighting with his front at right angles to the railway. But very soon he will have the railway parallel to his front, and a simple outflanking movement will then disconnect him either with Vladivostock or with Lake Baikal. To talk of a waiting game under such circumstances is unintelligible. The waiting will not continue a day longer than Japanese convenience dictates. Nearly two months have elapsed since the battle of Mukden, and only now, apparently, are the Japanese resuming their advance. It would seem that LINEVITCH intends to prepare for their onset along the Kirin-Changchun line, but the course he contemplates if he be driven from that line has not been discussed by military experts. Vladivostock would be the natural direction of retreat, but it is imperative that the railway westward of Harbin should be covered, which involves leaving Vladivostock to its fate. To say that the situation in Manchuria has become quite hopeless for Russia from a strategical point of view would be no exaggeration. The fact should be recognised, for its recognition would go far to dispel the apprehension entertained in some quarters that Russia can prolong the war indefinitely. She can indeed refrain from making peace, but it would be at the cost of losing the Amur region; in other words, losing her whole empire-building work done during the past

sixty years. Such a loss need not be vital, but it would certainly be irreparable, and thereafter what compensation could Russia expect by remaining under arms?

## NAVAL LESSONS OF THE WAR.

**T**HE well known writer on naval topics, Mr. H. W. WILSON, has a most interesting article on the above topic in the *Monthly Review*. It is the first general summary of the kind that has been published. "The British Admiralty," Mr. WILSON says, "has been in the closest touch with all that has happened, but the results which it has ascertained have naturally not been communicated to the world, though the influence of the war is plainly to be seen in various new departures of British naval policy." Accordingly, Mr. WILSON undertakes to sun up the lessons as they present themselves to him. His method of calculating the relative strengths of the two navies is not quite clear. He assigns to the Russians 7 first-class battle-ships and to the Japanese 6, but he gives to the former only two modern armoured cruisers against 8 belonging to the latter. Yet surely the *Bayan*, the *Gromovoi*, the *Rossia* and the *Rurik* were "modern armoured cruisers," and cruisers, too, of a very high type. Then again, Mr. WILSON puts the "other cruisers" of the Russians at 9 and those of the Japanese at 16. But his figures require amendment:—

	Japan.	Russia. Mr. Wilson's Figures.	Russia. Real Figures.
Battle-ships .....	6	7	7
Armoured Cruisers .....	8	2	4
Other Cruisers .....	16	9	19
Destroyers .....	19	23	25

The inferiority on the side of the Russians was in armoured cruisers only, and they were superior in battle-ships and cruisers.

Mr. WILSON thinks that the first lesson taught by the war is the advantage of a prompt offensive. The sudden attacks delivered by Japan at Chemulpo and Port Arthur deprived Russia of all chance of obtaining the command of the sea with the fleet she had then in the East. But, we note with surprise that Mr. WILSON seems to imply some censure of Japan for not following up this success by an immediate attack upon Dalny. Something similar and with equal appearance of unreflection, has been said of Port Arthur. How could Dalny or Port Arthur have been taken? The only route open to an attacking force was an over-sea route, and surely a moment's thought will show any one that to carry a large force of troops over-sea to Dalny and land them there on the morrow of the torpedo exploit at Port Arthur, would have been the most extraordinary and reckless feat ever essayed, even assuming that the Japanese, or any other nation, could have made arrangements for such a coup. Armies can not be summoned from the empyrean and can not be supported upon air. Dalny and Port Arthur were both strongly fortified places which no war-ships could have approached. Still less could a flotilla of trans-

ports carrying soldiers and military stores have ventured within range of their guns. It is really curious that such comments should be made.

Another point which Mr. WILSON does not understand, being insufficiently informed, is the fact that when Admiral KAMIMURA had the *Gromovoi* and the *Rossia* apparently at his mercy, he did not sink them, as he had sunk the *Rurik*. According to Mr. WILSON "the undoubted explanation was that he feared to uncover the Straits of Korea, and turned back to meet the Port Arthur fleet," which, says Mr. WILSON, "seems to have been another error, for a pursuit of the battered ships would have placed him in a position to meet any Russian refugees off Vladivostok." The true reason of Admiral KAMIMURA's apparent want of thoroughness was a very simple one: his ammunition had given out. He found himself in command of vessels virtually as helpless for offensive or defensive purposes as deal boxes, and not knowing what stores of spare projectiles the *Gromovoi* and the *Rossia* might possess, he naturally sheered off. It was a splendid chance forfeited by a pure accident, and had Mr. WILSON been familiar with the fact, it would have furnished a new lesson, namely, that, in time of war, ships should have their magazines full whatever prospect may lie immediately before them.

Concerning the tactical lessons of the war one of the most interesting, as noted by Mr. WILSON, is the comparative inefficiency of the torpedo. The Japanese used the torpedo as skilfully and as boldly as any sailors in the world could have used it. Yet what did they accomplish? In their first great essay at Port Arthur, where the Russian vessels were at anchor and the Japanese craft had slowed down to 5 or 6 knots, only three hits were made with 23 torpedoes. Then on three other occasions determined attacks were made with the torpedo but the results were virtually nil. Finally, the long and protracted assaults that had to be made against the *Sevastopol* showed that against a ship properly protected the torpedo is almost powerless. It is true that the size and weight of torpedoes may be increased, but then larger vessels will be needed for employing them, and thus the final conclusion is that "the danger to be apprehended from destroyers and submarines appears to be much less than has been supposed."

With the mine, however, a different record has been achieved. Its work has been terrible. At the head of its victims stand the *Petropavlosk* and the *Hatsuse*. In the case of these two ships the mines appear to have exploded right under the magazines, which were thus fired, and the big ships were rent in two. Of minor vessels the victims were, on the Russian side, the *Boyarin*, the *Yenisei*, the *Boby*, the *Gilyak*, the *Gremiastchi* and several torpedo-boats and destroyers. On the Japanese side the *Heiyen*, the *Saiyen*, the *Miyako*, the *Kaimon* and one torpedo-

boat. As for the *Yashima* her fate still remains wrapped in obscurity, but that she no longer figures in the fighting line seems certain. To the credit of the mine, therefore, stands incomparably the longest list of victims. But the circumstances under which mines can be used are now found to render them so dangerous to neutral commerce that we shall probably see the Hague Tribunal pass some strongly restrictive legislation after the war.

Another thing proved by the war is the high value of protection and heavy ordnance. The battle-ship and the armoured cruiser emerge with all the honours, and in view of the great ranges at which all the actions were fought, it is evident that anything smaller than an 8-inch gun is comparatively worthless. This is a lesson of the greatest importance to the Japanese. Their battle-ships are badly armed according to the new experience, for against only four 12-inch guns in each vessel there are a number of 6-inch pieces of little value for long-range fire. England's new battle-ships will carry nothing smaller than 9.2-inch weapons. "The effect of the war on the navies of the world," says Mr. WILSON in summing up, "will inevitably be to stimulate the construction of battle-ships and large armoured cruisers, and to increase the attention already given to organization."

#### THE SAMURAI'S CREED.

AN essay on the philosophy of *harakiri* appears in the *Independent* for April 13th and is reproduced elsewhere in these columns. It is a very interesting exposition of the views entertained by the Japanese themselves on a subject which has provoked much discussion among foreigners. Strangers, observing the apparent unwillingness of Japanese officers and soldiers to survive incidents regarded in the Occident as normal to battles and campaigns, are apt to infer that life has little value in Japanese estimation, and on this inference have based criticisms unfavourable to the civilization of the new great Power in the East. Mr. ADACHI, the writer of the essay in question, partially admits this deduction. He says that in the eyes of his countrymen human life is only as one page in the great volume of existence, and he implies that to obliterate the page is but to turn over to a new and more glorious leaf. Therein he expounds the philosophy of the Zen sect of Buddhism, whose tenets had much to do with the education of the *bushi*. The *Zen-shu* religionists taught and teach that the world and all things belonging to it are mere phenomena, deriving their apparent reality from the spirit of the observer. The higher a man rises above such an environment, the less importance does he attach to it and the closer does he get to the true philosophy of existence which assigns to moral obligations an importance far outweighing all earthly associations. The rule of conduct resolves itself, therefore, into an

analysis of what constitutes a moral obligation, and it is here that a difference of opinion really exists between Occidental and Japanese points of view. An Occidental holds that life is sacred and should never be sacrificed if it can possibly be preserved. A Japanese holds that life, mere continuance in mundane being, is a small thing compared with the dictates of duty. We thus reach another point of divergence. A European will tell you that duty—whatever its definition—is fully discharged when its continued performance would entail death. There may be exceptions, but that is the broad principle. And if pressed for a fuller analysis, he will tell you that since man can not gauge the future uses of his life, he has no right to surrender it so long as any chance of safety offers. The Japanese reply is that precisely because no such forecast is possible, a man is bound not to look beyond the requirements of the task immediately before him. If from statements of theory we turn to the practical operation of the two creeds, there is some strong testimony: on the one hand, the testimony of the South-African war when surrender in order to save life unquestionably weakened the fighting capacities of both combatants; on the other, the testimony of the Russo-Japanese war when the principle of subserving life to surrender is obeyed by men constituting the best type of fighting material the world has ever seen. If the proof of practice were conclusive, we should have here reached a conclusion. But a rejoinder may be made that the Japanese carry their system to excess; that valuable lives are squandered on the altar of an ideal. It may be so; probably it is so. No system that ever suggested itself to human intelligence is capable of adaptation to all occasion. The Japanese argue, however, that to err on the side of devotion is better than to err on the side of self-preservation. Discretion, they say, is a dangerous factor to admit into such affairs. The soldier who runs away in order to fight another day is not a soldier at all in the sense they attach to the term. Nor can any one deny that if the aim of war be to win victories in the most rapid and decisive manner, *bushido* furnishes material unequalled for that purpose. The gift of animal courage is probably distributed pretty equally among all nations, but the courage to use men as they must be used if great successes are to be achieved in battle seems to have been impaired by Occidental civilization. It is extremely doubtful whether any English Admiral would have assigned to his officers and men such a task as the blocking of Port Arthur, or whether any English General would have deliberately made the sacrifices that were accepted by the Japanese at Liaoyang. Yet, after all, can there be any question which is the more logical mode of warfare? A Japanese General knows that the sanction of public opinion will never be withheld from him because he asks his soldiers for the lives which they placed at their

country's disposal when they became soldiers, and a Japanese soldier knows that he will never obtain the sanction of public opinion if he avoids a soldier's fate. The outcome of this dual knowledge is a grand instrument of war. Occasionally, perhaps, there has been a needless sacrifice. But who can tell? Who will venture to affirm that the self-inflicted death of this Japanese officer or of that may not, by nerving the arms of his comrades, have contributed more to his country's cause than his life, if preserved, could possibly have contributed in the future? It is difficult to determine which, if any, element is superfluous in a system that has produced such results as the world has seen in this war.

#### MONTHLY SUMMARY OF THE JAPANESE RELIGIOUS PRESS.

The question of what amount of change is desirable and possible in doctrine and practice is in one form or other troubling all Protestant Churches. What Dr. Takagi has been writing week after week in the *Gokyo* about the Methodist Churches in Japan applies to other bodies. One sees in the religious world precisely the same thing as is perpetually witnessed in the political world. When there is great uncertainty in the minds of leaders of thought as to the result of active interference, things are allowed to drift until a big crisis is reached. Dr. Takagi is of opinion that there is grave danger to the Protestant Church in Japan in ignoring the fact that educated laymen, while still professing Christianity, have not the slightest respect for the doctrines still habitually taught from the pulpit. Dr. Takagi thinks that the Church cannot afford to lose the sympathy and the services of her most intellectual sons and daughters and that since no Church can claim infallibility, it is incumbent on all earnest-minded teachers to examine the articles of their creed afresh in order to determine whether some of them may not be relinquished. Relinquishment of articles of faith has gone on more or less in most Protestant Churches during the past 50 years as knowledge has advanced. Dr. Takagi's attempt to deal with a grave situation in a business-like, honest manner must commend itself to all right-minded Christians. Dr. Takagi's contention is that the separation of educated laymen from the Church will not only be a great loss to the Church, but will almost certainly end in the entire rejection of Christianity by these laymen. We should say that nothing is more sure than that the majority of Japanese Protestant Churches will not consent to have their creed fixed for them by Foreign Mission Boards many years hence. The claim to revise the creed is being put in by one Protestant body after another. To this claim some missionaries reply, "Revise as much as you see fit." While others point out that they cannot obtain the permission of the home bodies to allow such liberty to Japanese converts. Anyhow, as Dr. Takagi observes, the question can't be everlastingly shelved as too unpleasant to be gone into. It is the church's duty to try and find a satisfactory solution for the problem, and Dr. Takagi's recently published articles, now 8 in number, have this object in view. An epitome of articles I. and II. was given in our last Summary. We now proceed to deal with several of his subsequent articles. In Art. III. Dr. Takagi protests earnestly against the folly of pursuing the policy of drift. He quotes from the letter of Mr. Takaki Nobutake, (published in No. 693 of the *Gokyo*), who questions whether the present is a suitable time for inaugurating reform. Things don't succeed unless the time is ripe for them, says Mr. Takaki. It is not within our power to

force the pace in these things. To this the editor of the *Gokyo* replies that no great religious reform has been brought about quite suddenly without any previous preparation in the minds of men. Luther was successful because there were many people in Europe who had been inclining to his opinions for over a century. It is perhaps true to say that the great Reformation of the sixteenth century began with John Wycliffe in the fourteenth century. It takes a long time to prepare men's minds for changes. Though reforms cannot be placed on a permanent footing till the time is ripe for their being carried into practice; thorough discussion of their nature and scope is most desirable. Dr. Takagi tells us that after a most exhaustive analysis of the contents of the letters sent in he finds that the following assertions are confidently made and supported. (1) That the intelligence of the churches to-day is defective. (2) That there is dissatisfaction with the ministers and evangelists in office. (3) That the spirit of churches is not what it ought to be. (4) That there is defective organization. (5) That the policy adopted by the Church as a whole to-day is out of harmony with modern existing conditions. (6) That our modern Christians are lacking in essential qualities. (1) Taking up the first point, Dr. Takagi quotes passages thereon from the various letters published in Art. IV. and then proceeds to epitomize the opinions thus:—It is maintained that whereas 20 years ago the Church of Christ in Japan led public opinion on a variety of subjects, it now no longer pretends to fulfil that function. It contents itself with the reiteration of rusty, orthodox doctrines. It fears the higher criticism. It condemns free inquiry. It scents heresy from afar and denounces anybody suspected thereof. At theological colleges references are made to the new criticism and new interpretation of the Bible, and at these institutions some young men imbibe new ideas, but when they become preachers they do not feel at liberty to give expression to their real convictions. They are expected to repeat the old shibboleths and state doctrines for which they know there is no solid foundation. Some of them make a point of denouncing investigation and the increase of knowledge as inimical to faith. The burden of their message is "believe, believe." It is no wonder that they alienate educated men. Some readers of these articles, continues Dr. Takagi, may be disposed to think that the writers quoted are overstating the real situation. Such is not our conviction. We believe they represent the real position of affairs in the Church generally (*Aruiwa tan ni san shi sha* [三四者] *no shigen* [私言] *ni sugiu to nasu nimo aran ka naredozo, kore wa jitsu ni waga kuni no kyōkai no genji ni shite, ikan nagara wagahai wa shoshi no in tokoro ni dōi sezaruru bekarasu*) When one looks back 10 or 15 years one sees how different was the position occupied by the Protestant Churches to what they occupy now. In the days when Dr. Eby used to lecture in Tōkyō, when Mr. Uemura Masahisa's *Shinri Jpan* was the talk of everybody, when the learned philosophical articles that appeared in the *Rikugō Zasshi* month after month drew the attention of scholars to Christian Theology, educated laymen in the Church felt quite different from what they do to-day. The church has become dormant. There is next to nothing being done to make the Bible better known to the outside world. How poorly provided the country is with valuable commentaries on the Bible! Here we have Mr. Ueda Bin, an unbeliever, who only values the Bible as a fine literary repository, reminding us of our neglected duties as Christian scholars, of our obligations to make biblical thought known in the country. Our ministers are content to preach the most ordinary of sermons Sunday after Sunday to the few Christians who congregate in the Churches. Some will say there is Mr. Uchimura Kanzō. Does he not edit a Biblical Exposition (*Seicho no Kenkyū*)? He does, but the trouble is that he shows no signs whatever of being acquainted with modern Biblical criticism and hence what he writes will not satisfy thoughtful men. In Osaka a new publication has been issued called *Seicho Kōgōroku*, which promises well; but looking elsewhere, we find nothing but a dreary waste where we might reasonably

expect high Christian thought. No Protestant magazine has been started to replace the *Rikugō Zasshi*. Outsiders like Mr. Kuroiwa Shinroku give the world their ideas on the deeper questions of life in a form that wins thousands of admirers. Mr. Kuroiwa's *Tenjinron* has run through over 200 editions, and yet the author is a *home* newspaper writer. There is enthusiasm among agnostics and materialists, but our churches make no effort to keep abreast of modern thought. Is it any wonder that educated laymen should turn their backs on them?

The *Kirisutokyo Sekai* (Congregational) advocates the establishment of a Theological University. In a leading article on this subject it maintains that the Church in Japan has not kept pace with the progress of education during the past ten years. In 1887 the Lōshisha was no whit inferior to the Keiōgijin and the Waseda Semmon Gakkō, and there were persons who thought that it lost nothing by comparison with the Imperial University even, says the *Kirisutokyo Sekai*. But where is Christian education to-day? Quite behind in every respect. When our Mission schools were first started they showed up well in comparison with secular schools. But to-day a comparison of the graduates of these schools with those of secular schools would not reveal any superiority on the side of Christianity. Even in the case of female education where we claim to have effected so much, we have our doubts as to the alleged moral superiority of the girls who graduate at mission schools. (*Shika mo jijitsu ni chō shite kwanishi* [實私] *gakkō no sotsugyōsei to Mission School no sotsugyōsei to wo hikaku suru ni hadashite kansen taru yūriten wo sono toku ni uye ni miru koto wo mite juu, sukumaden mo ōko* [—] *uo ginon nari to iwazarubekarazu*.) We do not wish to be understood, continues the *Kirisutokyo Sekai*, as regretting that in secular education Christian schools have been left behind. On the contrary, we rejoice that education has so far advanced as to render such schools to a large extent unnecessary. We are not advocates of the Church's attempting to compete with the Government and private schools conducted by outsiders in secular education. If she can get hold of the graduates of these schools and influence them for good it is as much as we can expect of her. But in the matter of high Theological training, the Church ought certainly to move ahead. In Germany, England and America there are Chairs of Divinity at the great Universities. But we can hardly hope to establish a Chair for teaching Christian Theology at either of our Imperial Universities. Hence the necessity of the various bodies combining to found a Divinity College that shall be qualified to take rank with the colleges which form parts of our Imperial Universities. The need of highly educated pastors for our Churches is felt to-day more than ever before. Supposing that a graduate of the Imperial University wishes to take a course in Theology, there is no institution in this country to which such a student could be sent. A high class Divinity Hall is not only needed for the training of pastors, it is required as a centre and a source of Christian literature. Why is it that among us Protestants so few high class books are published? Why is it there is no serious attempt to bring out a better translation of the scriptures than that now existing? Ordinary Christian Ministers are far too busy to devote leisure to the writing of books or to extensive translation. The want of a first-class theological training college prevents our getting hold of highly educated young men for the ministry. The intellectual status of our ministers is at present too low to suit the times. We must take steps to raise it or be left behind.

In an article discussing the mental training which the nation will need in the future the *Kirisutokyo Sekai* (No. 1,122) contends that notwithstanding all that has been written in praise of the Bushidō, it will never prove adequate to purify the Japanese home, to raise the status of women, to adjust the various relationships of life as they need adjusting. The Bushidō has been compared to the Stoic philosophy, but in some important respects it is less explicit than was that philosophy and less suited for

\* This journal is now regarded as a Unitarian organ and hence, we presume, would not be deemed a safe medium of expressing Methodist thought.—(WRITER OF SUMMARY.)

application in time of peace to domestic and business life, says this organ. As a code of morals it has a certain narrowness of view which was no doubt the result of the special feudal influences which controlled its development.

\* \* \*

The *Nichipō Sōshi* (Protestant Episcopalian) commenting on Mission Schools and the alleged widespread immorality among students, says:—It is asserted by newspaper writers and by a number of other people, including police authorities, that the behaviour of a large number of boys and girls attending Government schools is disgraceful and that even Primary School lads are gradually getting corrupted by the examples set them by older boys. There is a kind of panic among officials over this subject. But is it one of the consequences of the ultra-secularization of education. Our Mission Schools ought to be able to turn out a number of boys and girls whose superior character should form a striking contrast to the ordinary Middle School student. But unfortunately the tendency of Mission Schools in recent times has been to go in for numbers and showiness rather than for training Christian young men and women. By putting the Bible on the shelf and teaching English the number of pupils may be largely increased. But this is not what Mission Schools exist for. They should be content to turn out a few first-class Christians.

The *Nichipō Sōshi* says that the success of the Japanese in the war has helped the cause of Missions as far as England is concerned. There are those in England who have affirmed that England's alliance with Japan makes it obligatory on her part to preach the Gospel to the Japanese and thus render them fit for the discharge of the new duties which their high rank among Eastern nations will impose on them.

\* \* \*

The *Koyō* (Roman Catholic) continues to publish Christian casuistry questions and their answers. We quoted a few of these last month. We now add a few more. They reveal the working of the minds of Roman Catholic Christians and the teaching of the Roman Catholic Church in Japan. Question XIII concerns the purchase and subsequent sale of a scroll. A Christian in a country town purchases at a second-hand shop a pretty scroll for 3 yen. He takes it to Tokyo and is told by connoisseurs that it is worth over 100 yen. Two years after he finds himself heavily in debt, and succeeds in selling the scroll to a foreigner connected with one of the Legations for 150 yen. Is this Christian under any obligation to give a part of the money to the original owner of the scroll? The answer is an emphatic no; as in the first sale the price was fixed by the seller. Many of the questions relate to fast-days. Here are a few specimens. According to the rules of the Church men engaged in arduous labour are excused from keeping fast-days, as it interferes with their work. Supposing that a workman gets a holiday and the holiday falls on a fast-day, is he to fast? The answer is: yes, if he can do so conveniently. If by abstaining from food he unfits himself for work the following day, then he is not under any obligation to do so. But Christians who are in doubt on such a point should apply to a priest for advice. Question XV runs thus: Are school-teachers and such like persons exempted from fasting? They spend a number of hours in arduous work. The answer is yes. They are regarded by the Church in the same light as those engaged in manual labour. Mental work and manual are all one. They both cause weariness that makes fasting injurious. Question XVI concerns fasting during journeys. The Church exempts, says the inquirer, travellers on foot from fasting. But what about those who travel in jinrikisha or railway trains? Must they fast? The answer is yes, if they are not too tired to do so. Travelling causes great fatigue to some and abstinence from food in their cases is not desirable. The course to be adopted must depend largely on the amount of physical strength a Christian has. Anyhow, the Church allows a little food in the morning even on fast-days, and with strong persons this should suffice. The next question asks whether all old persons are exempt from

fasting, however strong they may be. The reply is in the affirmative. According to a rule of the Church a man at 60 and a woman at 50 are not under an obligation to fast. Fasting in their cases not being good for health, however strong they may feel or seem to others to be. Are people, asks Question XVII, who in order to avoid fasting undertake some non-urgent arduous work or set out on a journey guilty of sin? The answer is yes; since they are creating circumstances to prevent their obeying the laws of the church.

The *Koyō* (No. 330) has an article entitled "A Dispute in the Religious World" which draws attention to fundamental differences of opinion between religious teachers. We give the substance of the article below. In Europe, America and Japan outside the Roman Catholic Church opinion on religion may be said to have divided off into two schools of thought. There are those who say that religion depends chiefly on feeling and those who affirm that it depends chiefly on the intellect. Most of the Protestant sects hold the former view in one form or other; while Buddhism especially and certain Protestants champion the latter view. Those who favour the first named theory state their argument pretty much as follows. Religion is principally emotional. A man or woman who approaches religion for the first time is prompted by a feeling of dissatisfaction with his or her lot, with the amount of comfort to be had in this life, entertaining the notion that appeal to a higher Power will bring solace to him or her. When in trouble such persons appeal to religion. It becomes their one comfort in life. They don't reason about it. They just accept it for the sake of the comfort it brings them. This is one kind of proof that religion as it exists to-day consists chiefly of feeling, or sentiment. Then, again, consider the relations that certain persons allege to exist between them and the Being they call God or Buddha; it is all a matter of emotion. They cannot by means of their intellect understand this Being at all; nothing whatever that concerns such a Being is clear to their minds, but they feel that they are communing with Him nevertheless. All the proof of the existence of God that they need is their own feelings. Religion, then, with this class of minds consists of feeling only, and the intellect occupies an entirely insignificant and subordinate part even if it is allowed to assert itself at all.

To the above considerations the defenders of the opposite theory referred to above reply in the following terms. There is nothing more unreliable than human emotion, and to trust to it principally for guidance in religion is most dangerous, opening the road to the wildest superstitions. Man's mind is composed of three distinct faculties: the intellect, the will and the emotions; and so when a man is seeking for a religion that shall satisfy his whole nature, he cannot afford to ignore his reasoning faculty as though it were inferior to his emotions. There is nothing more fickle, erratic and thoroughly unreliable than feeling. To base religion principally on it must involve the acceptance of gross errors as a substitute for truth.

If reliance is chiefly to be placed on the intellect, rejoins the emotionalists, how is it that people find that intellectual research and activity does not lead them to religion? No amount of thinking can make religion plain. One can only get to know religious truths by experience, that is, by feeling. Among Buddhists and Protestants this problem has never been solved and never will be, says the *Koyō*. To Roman Catholics the question is no problem at all. The Roman Catholic religion draws a line between the human part and the Divine part in the religious progress of individual souls. It teaches that up to the time of a man's entering the Church his intellect must be his chief guide. He must examine the evidences for the truth of a religion by this means. If he fails to do this, then nothing can save him from becoming the victim of plausible counterfeits of the one true creed. But having satisfied himself that our Church is the only true vehicle of Divine Revelation, the only means of bringing him into contact with Divine influences, he will enter it. After doing so he will accept without question the teaching of the Church. He will not allow his intellect to question any part of the Divine

Revelation. With the Church to guide him, he can never go astray. Once inside our church and this troublesome question of the prominence to be given to intellect or to feeling vanishes. The Roman Catholic believer commits his soul to the safekeeping of the Church and his whole nature is controlled by the spiritual influences which the Church brings to bear on it. To allow the intellect and the feelings to go on battling for ever as is the habit with the adherents of other religions and of other Christian sects is to confess impotence to solve a question that the Roman Catholic Church solved ages ago. In the solution of this question lies one of the proofs of the truth of Roman Catholicism.

\* \* \*

The *Seikyō Shimpō* (Greek Church) writers are keen observers of passing events and evidently read newspapers and magazines with considerable attention, and hence their articles are not of the high and dry sort found in some Christian organs. In not a few religious periodicals there is little but a wearisome reiteration of doctrines that are perfectly familiar to everybody, and the writers seem quite unconscious of what the great outside world is saying or thinking. The editor of the *Seikyō Shimpō*, the Rev. K. Ishikawa, Mr. Yamada Matsujō, and several other writers on the staff of the magazine, are not men of this type. They deal with interesting topics and urgent questions.

The great increase of immorality among Japanese school girls Mr. Ishikawa takes to be an indisputable fact. But he sees no use in penning severe articles against the young maidens who so easily go astray. The root of the evil he thinks to be with the lads and young men who associate with weak-minded school girls. Mr. Ishikawa says that modern Japanese writers follow those of Tokugawa days in regarding women as the chief cause and source of immorality, whereas the women are just what the men have made them. The present outcry against school-girls, says the *Seikyō Shimpō*, will certainly lead many parents to keep their daughters away from school, and thus it may happen that the many benefits conferred on the women of the country by education will be lost to them. The abuse must be attacked at its root, which is the license allowed to school boys at the age of 16 or 17.

Mr. Yamada Matsujō writes in the April 1st *Seikyō Shimpō* on Christian Literature. He thinks that neither of the three sections of Christendom in this country has paid sufficient attention to the subject. The desirability of having a Japanese translation of the scriptures that while faithfully giving the meaning of the original shall possess literary merits of a high order is felt to a certain extent by Protestants, Roman Catholics and the Greek Church Christians; but the efforts made to supply such a translation, says Mr. Yamada, have been very feeble. What Christian literature there is to-day mostly consists of translation. Christian books written in an attractive and powerful literary style practically don't exist in the language. The majority of Christians seem to have no literary taste. They are content with defective and misleading translations of the sacred scriptures. With a view of reaching a higher level the Roman Catholics some years ago engaged the services of Mr. Takahashi Gorō, a Protestant, to translate the 4 Gospels from the Vulgate. But this measure was not altogether successful and did not meet with the support it merited. In the Greek Church we have for a long time used the translation of the New Testament made by Bishop Nicolai and a Japanese assistant some years ago. Of the old Testament only the book of Psalms has so far been issued, though other portions, are, we hear, ready for the press. The criticism of this translation we prefer to leave to other religious bodies. Large portions of the Greek Church liturgy have been issued, amounting to over half of the whole. In the translation of the Bible the question of style in a country like this is a very difficult one. In connection with this is the experience of Dr. R. Morrison, the veteran English Missionary and lexicographer, who laboured in China so many years, has special interest. When he was about to commence the preparation of a Chinese

version of the Scriptures he was much exercised as to the best style to follow. Speaking generally, there are three styles of writing in China. (1) The Classical, (2) The Colloquial, and (3) A style that occupies a middle place between these two. The classical style is that of the *Gokyo* (五經) and the *Shisho* (四書). The Colloquial style is that in which modern novels, tales, biography, &c., are written. It is also the style of the *Shing-yu* (聖諭). (3) The style that ranks midway between the classical and the colloquial is that employed in the *San-kuo-che* (三國誌). At first Dr. Morrison decided that style No. 2 was to be preferred on account of its wide intelligibility, but later on he reached the conclusion that to give the Chinese the Bible in this language would be to rob the Sacred Writings of the solemn dignity which it is essential they should ever retain, and so he finally determined that the style of the *San-kuo-che* should be adopted for his translation of the scriptures. Now, one would suppose that to the Protestant translators of our Japanese Bible the same difficulties would present themselves. How have they solved them? In a most unsatisfactory manner. They have given us a Bible that though easily understood is entirely lacking in dignity of diction, in impressiveness of style. And the hymns in use in Protestant churches and the extempore prayers of their pastors are in point of language most inferior and, moreover, the translation of the Bible is here and there incorrect. Protestants should pay more attention to sacred literature, concludes Mr. Yamada.†

In an article entitled *Fukunisho ni arawaretaru ni Kirisuto* (The two Christs that appear in the gospels) written by Mr. Y. Ishida and published in the March number of the *Rikugō Zasshi* it is maintained that there is a pessimistic Christ and an optimistic Christ an Essene Christ and an Anti-Essene Christ in the Gospel record. In the course of a longish article Mr. Ishida makes the following observations. It is alleged by many modern Christians that, in opposition to Buddhism, Christianity is essentially optimistic; but nothing seems more certain than that primitive Christianity was pessimistic. Entire separation from the world, self-denial, asceticism, celibacy—these were its distinctive characteristics. To the early Christians it seemed that the most important part of Christ's message to the world was, "Forsake father and mother, wife and children, brother and sisters and all worldly possessions if you would enter the Kingdom of God." To applicants for admission to the select company of his disciples, Christ invariably said, "Be prepared for poverty, reproach, and worldly discomfort," that is, he preached asceticism. To the early Christians the "world" and "sin" were synonymous terms. The "flesh"

\* This term is used in various senses in China. It sometimes refers to a book on political morality composed by a late Emperor and paraphrased on certain days of the month by a Vice-Governor. But it often stands for an Imperial proclamation only. It is customary for high officials to use the *Shing-yu* as a text for instructing under officers once a fortnight.—(WRITER OF SUMMARY.)

† As this subject is important and Mr. Yamada's language is very strong we give his *ipsissima verba* thus:—*Shikaru ni sōchō* (莊重) *kinen no yōsō wa kore wo kakitaru wo mōte, sono buntai samman* (敬重) *mushumi ni shite, kuōru ni goyaku no umai wo mōte su. Ai kaku no gotoki buntai no Baiburu wo yomi, setsuaku* (拙惡) *naru sambika wo utai, shikashite gen ni mo, bun ni mo arizaru isshu no heitai no sokuseki kito wo shō* (誦) *su. Sejin ga Kirisuto Kyō bungaku ni taishite tsume ni chōshō wo kuōru wa mata ichi ni naki ni aranu. Protestant uo shintōtaru mono suberakaku sansai* (三省) *suru tokoro aru beki nari.* "But it (the Japanese Bible) is wanting in the essential elements of solemnity, dignity and impressiveness, and is written in a style that is slovenly and insipid, and in addition to this, it contains mis-translations here and there. This is the kind of Bible the Protestants read. Then they sing badly composed hymns and repeat extempore prayers in an eccentric style of language that is neither colloquial nor classical. So it is not altogether without reason that Christian literature is treated with scorn by the outside world. Protestant Christians should give earnest attention to this subject."

was always in opposition to the "spirit." The service of mammon meant rebellion against God. To them Christ seemed to preach poverty as essential to the appreciation of the higher truths of the Gospel. But we see in the Gospels another Christ; a Christ who mixed with publicans and sinners, who attended a wedding feast, who blessed little children that belonged to worldly people, and who bestowed on them the highest of encomiums when he said, "Of such is the Kingdom of Heaven"; who watched with interest the domestic life of Martha and Mary; who in many other ways showed sympathy with the customs of his country; and especially with the difficulties encountered by various classes of the Jewish community. The two Christs are not irreconcilable to each other by any means, in fact, it is the combination of optimism and pessimism throughout its teaching that constitutes the chief strength of Christianity and saves it from extinction. Life is neither all good nor is it all bad. Thorough renunciation of the world by the Church of Christ would defeat the chief end of Christianity, the leavening of the whole lump of society with its own leaven. The admiration of nature's many beauties, love of art and the like are encouraged by certain parts of Christ's teaching. What then is the Christian ideal? To be in the world and yet not of it. To mingle with mankind, but to refuse to succumb to what is evil. Christianity is neither optimistic nor pessimistic. It neither altogether renounces the world nor approves of it. Total separation from the world and total absorption in it are alike objectionable. It would seem then that the early Christians did not altogether understand the Christ of the Gospels as he is understood by Christians to-day. Modern thinkers cannot whole-heartedly follow a religion like Buddhism that is essentially and unalterably pessimistic.

#### SPRING MEETING OF THE NIPPON RACE CLUB.

FIRST DAY, FRIDAY, MAY 5TH.

PATRONS:—H.I.H. Fushimi-no-miya, H.I.H. Arisugawa-no-miya, and H.I.H. Kanin-no-miya.

PERMANENT COMMITTEE:—Sir Claude Maxwell MacDonald, K.C.B., G.C.M.G., President; Dr. E. Wheeler, Vice-President; Baron A. d'Anethan, Count Von Arco-Valley, A. Bianchi, Esq., V. Blad, Esq., A. J. Easton, Esq., B. C. Howard, Esq., M. Ichihara, Esq., S. Isaacs, Esq., L. Mottet, Esq., K. Mori, Esq., R. D. Robison, Esq., B. Runge, Esq., Governor Sufu, F. Strahler, Esq., T. Thomas, Esq., T. Taniguchi, Esq., and A. G. M. Weale, Esq.

EXECUTIVE COMMITTEE:—V. Blad, Esq., Chairman (Absent); A. J. Easton, Esq., Acting Chairman; T. C. Anderson, Esq., J. de Cuers de Cogolin, Esq., D. Marshall, Esq., K. Mori, Esq., F. M. Tegner, Esq.

HONORARY CLERK OF THE COURSE:—A. J. Easton, Esq.

HONORARY TREASURER:—T. C. Anderson, Esq.

SECRETARY:—Geo. Hood, No. 72.

The opening day of the Spring Meeting was favoured with bright and cheerful weather, though in the latter part of the afternoon the wind blew somewhat bleakly over the high-lying course and clouds began to gather. The turf was in capital condition after the recent rains and succeeding sunshine, and made good running. The attendance was fully up to the average for a first day and excellent sport was afforded by the eight events on the programme. A new departure was made in abolishing the interval for tiffin and starting the first race at 1.30 p.m. instead of 12.30 as on former occasions. As to whether the change was an improvement, opinions varied, but the eight events were concluded in good time—by 5.15. In the first race, for the Champagne Cup, only two starters appeared, neither of whose owners were previous winners, but two events, the first Australian and the first China Griffins, produced fields of thirteen and twelve respectively, and showed very good sport. Bamboo proved to be an exceptionally good China pony, and scored two wins, the second time in a field of twelve runners. Hyacinth justified the high opinion entertained of her quality, disposing of the other Australian Griffins with ease in the five furlong spin. Chitose's win in the Melbourne Stakes was

a surprise to those who had watched the form of Texas in the practice galops, and Daylight's and C.O.D.'s victories in the seventh and last races respectively were also unexpected by "the fancy." The Town Band, as usual, performed a selection of music on the Lawn during the afternoon and the arrangements were satisfactorily carried out by the officers of the day, who were: Judge, Mr. V. A. Caesar Hawkins; Clerk of Scales, Dr. E. Wheeler; Starter, Mr. D. Marshall; Handicapper, Mr. F. H. Bugbird; Timekeeper, Mr. F. J. Hall; and Stewards, Messrs. E. C. Davis, G. Barclay and M. Blümer.

A new rule had been posted up at the Pari Mutual, which read as follows:—When two or more horses belonging to the same owner run in a race all the chances on such owner's horses will be pooled together and payment made to holders of tickets on all the winning owner's horses.

The various events were as follows:—

1.—THE CHAMPAGNE CUP, (Presented by Messrs. C. H. Munn & Co.); for Australian Subscription Horses of 1901 and thereafter that have not run at more than two meetings; to be won three times in all by horses the *bona fide* property of same owner or owners, with yen 300 added by the Club until the cup is finally won, when the second horse will receive the added money; weight 145lb. Entrance yen 5. One Mile.

Mr. Swarby's Parisienne, 145lb. .... (Sugiyama) 1  
Mr. Alexander's Miyoshino, 140lb. .... (Kawasaki) 2

Only two contestants appeared for this event, neither of the former winners of the prize sending a representative to the post. Parisienne started favourite but Miyoshino also found many supporters. The favourite got away with the best of the start, Miyoshino's jockey unaccountably holding back. Parisienne increased her lead on the way round and won as she liked by half a dozen lengths. Time 1.55½.

PARI MUTUEL.—Parisienne 717, Miyoshino 335. Total yen 4,734. Parisienne paid yen 6.50.

2.—THE PEKIN STAKES, value yen 350, the second to receive yen 50; for all China Subscription Ponies; weight as per scale; winners in Japan at date of entry 5lb. extra, of 3 races excluded. Entrance yen 5. Three-Quarters of a Mile.

Mr. H. Kashiwagi's Bamboo, 147lb. .... (Higaki) 1  
Mr. Virginia's Flounder (late Fluchling), 155lb. .... (Mr. Dietrich) 2

Mr. Tytherleigh's Coot (late May-duke), 155lb. .... (Mr. Easton) 3

Mr. Astral's Sunbeam (late Torpedo), 155lb. .... (Sugiyama) 0

Mr. May's May-oui (late Hanabusa), 153lb. .... (Mr. Andreis) 0

Coot was the first favourite with Flounder next, Bamboo made the running after a capital start, with Flounder next, and held the lead to the finish, winning easily by four or five lengths, Flounder second and the favourite, Coot, a poor third. Time 1.35.

PARI MUTUEL.—Sunbeam 74, May-oui 77, Coot 431, Bamboo 247, Flounder 260; Total yen 4891. Bamboo paid yen 20.

3.—THE COLONIAL PLATE, value yen 600, the second to receive yen 150, and the third yen 75. For All Subscription Horses and Country Breds; Winners of 3 races or less at date of entry Weight for Age, of more than 3 races 3lbs. extra for each win over 3 wins, not exceeding 15lbs. in all. Entrance yen 5. Three-Quarters of a Mile.

Mr. Green's Kachidoki, 137lb. .... (Tsubouchi) 1  
Mr. H. Kashiwagi's Izumo, 146lb. .... (Goto) 2

Mr. May's May-mie, 143lb. .... (Mr. Catto) 3

Mr. Alexander's Ohgon, 132lb. .... (Kawasaki) 0

Kachidoki was made the favourite in the Pari Mutual but the others all found friends. The favourite got away first, with May-mie close up, and the two kept very close together till the straight when Izumo ran into second place, Kachidoki finishing about a length to the good, and May-mie third. Time 1.20½.

PARI MUTUEL.—May-mie 293, Ohgon 195, Kachidoki 733, Izumo 250. Total yen 6619. Kachidoki paid yen 9.

4.—THE FIRST AUSTRALIAN GRIFFIN RACE, value yen 450, the second to receive yen 100. For Australian Subscription Horses of Spring 1905; Weight for Age; Entrance yen 5. Five Furlongs.

Mr. G. Barclay's Hyacinth, 137lb. .... (Horikoshi) 1  
Mr. H. Leleber's Flame, 137lb. .... (Omino) 2

Mr. J. Higginbotham's Ten-nin, 137lb. .... (Miyagawa) 3

Mr. Friends' Daybreak, 137lb. .... (Hakodate) 0

Mr. Astral's Yokohama, 140lb. .... (Higaki) 0

Mr. Norfolk's Puritan, 137lb. .... (Mayeda) 0

Mr. S. Sato's Iwate, 137lb. .... (Sugiyama) 0

Sir Claude M. MacDonald's Gollywog, 137lb. .... (Fujiwaki) 0

Mr. Sport's Dekimas, 137lb. ....(Sugiyama) 0  
Mr. Tatsuta's Hotei, 137lb. ....(Takahashi) 0  
Mr. Green's Chiyoda, 137lb. ....(Tsubouchi) 0  
Mr. H. Kashiwagi's Asahi, 137lb. ....(Goto) 0  
Mr. Lefroy's Eileen, 137lb. ....(Jimba) 0

The big field of thirteen griffins turned out for this trial race, Hyacinth being a hot favourite. After two attempts a fair start for such a crowd was effected. The favourite got away with a jump and led the field, gradually increasing her lead to the finish and winning as she liked from Flame, who had run into second place and finished three lengths ahead of Ten-nin, third. Time, 1.07.

PARI MUTUEL.—Daybreak, 92, Ten-nin 25, Yokohama 42, Puritan 15, Iwate 21, Flame 17, Gollywog 12, Hyacinth 607, Dekimas 168, Hotei 43, Chiyoda 9, Asahi 11, Eileen 16. Total yen 5,242. Hyacinth paid yen 7.50.

5.—THE FIRST CHINA GRIFFIN RACE, value yen 250, the Second to receive yen 100, and the Third yen 50. For China Subscription Ponies of Spring 1905; weight as per scale. Entrance yen 5. Three-quarters of a Mile.

Mr. H. Kashiwagi's Bamboo, 147lb. ....(Higaki) 1  
Mr. Northfolk's Pagoda, 153lb. ....(Mr. Dietrich) 2  
Mr. J. Koerting's Gulyasch, 147lb. ....(Horikoshi) 3  
Mr. Astral's Sunset, 147lb. ....(Sugiyama) 0  
Mr. Burghdunum's The Miller, 150lb. ....(Mr. Mottu) 0  
Mr. Swarby's Gogai, 147lb. ....(Uchi) 0  
Major Trick's Petit Canard, 147lb. ....(Hakodate) 0  
Mr. Sport's Conundrum, 144lb. ....(Sugiyama) 0  
Mr. Cotton's Dairen, 144lb. ....(Rikizo) 0  
Dr. Wheeler's Formalin, 141lb. ....(Omimo) 0  
Mr. Alexander's Harukaze, 150lb. ....(Kawasaki) 0  
Mr. Green's Kobe II, 145lb. ....(Tsubouchi) 0

All the entrants, twelve in number, faced the starter. Gulyasch and Bamboo were both fancied for this race, the former, however, carrying the most money. A very poor start enabled The Miller to get away with a lead of a length or two but Bamboo displaced him in the lead at the Trees. Coming down the Straight Pagoda ran into second place and challenged the leader, but Bamboo, going well in creased his lead and won by three lengths or more from Pagoda who finished a length or two before Gulyasch, the favourite. Time 1.38.

PARI MUTUEL.—Sunset 10, Pagoda 21, The Miller 134, Gogai 11, Petit Canard 49, Gulyasch 603, Conundrum 20, Dairen 84, Formalin 9, Harukaze 12, Kobe II 25, Bamboo, 532. Total yen 6,799. Bamboo paid yen 13.

6.—THE MELBOURNE STAKES, value yen 550, the Second to receive yen 100; for Australian Subscription Horses of Autumn 1904; weight for age; winners of 3 Races at date of entry excluded; of less than 3 Races 3lbs. extra for each win. Entrance yen 5. Three-quarters of a Mile.

Mr. N. Kawakita's Chitose, 143lb. ....(Sugiyama) 1  
Mr. Cotton's Texas, 137lb. ....(Rikizo) 2  
Mr. May's May-nooth, 137lb. ....(Mr. Catto) 3  
Mr. Swarby's Folly, 137lb. ....(Sugiyama) 0  
Texas carried most of the money but May-nooth and Chitose also found friends. A capital start was made, and the four ran well together to the Shakespeare when Texas showed a little ahead of Chitose. Turning the corner however, Chitose got to the front by a little, and after a fine race down the Straight won cleverly by about half a length, a length between Texas and May-nooth. Time 1.23.

PARI MUTUEL.—May-nooth 61, Folly 87, Chitose 636, Texas 534. Total yen 5,931. Chitose paid yen 9.50.

7.—THE SECOND AUSTRALIAN GRIFFIN RACE, value yen 450, the Second to receive yen 100, and the Third yen 50; for Australian Subscription Horses of Spring 1905; weight for age; winners at the Meeting excluded. Entrance yen 5. One Mile.

Mr. Friends' Daylight, 137lb. ....(Hakodate) 1  
Mr. H. Lefebvre's Flash, 137lb. ....(Horikoshi) 2  
Mr. N. Kawakita's Kurama, 137lb. ....(Sugiyama) 3  
Mr. H. Kashiwagi's Hinode, 137lb. ....(Goto) 0  
Flash was the favourite. Daylight got away first, on the rails, but was overhauled by Flash at the Houses. Daylight however again ran to the front and won a good race by a couple of lengths, with Kurama third, a length behind the favourite, Flash. Time 1.55.

PARI MUTUEL.—Daylight 264, Kurama 83, Flash 683, Hinode 39; Total yen 4,810. Winner paid yen 18.

8.—THE CRITERION PLATE, value yen 400, the Second to receive yen 100; for All China Ponies; weight as per scale; Subscription Ponies 5lb. allowance. Entrance yen 5. Three-quarters of a Mile.

Mr. Finales's C. O. D., 142lb. ....(Takahashi) 1  
Mr. Tytherleigh's Coot, 145lb. ....(Mr. Easton) 2  
Mr. N. Kawakita's Wakashima (late Ashtaka), 142lb. ....(Sugiyama) 3  
Mr. J. Higginbotham's Ten-yu, 142lb. ....(Mr. Mottu) 0  
Mr. May's May-king, 147lb. ....(Mr. Catto) 0  
Mr. Samuel's The Spirit, 150lb. ....(Mayeda) 0  
Mr. Virginia's Flounder, 145lb. ....(Mr. Dietrich) 0

Wakashima was first favourite and May-king next. After a good start C.O.D. made the running, with Coot close up. C.O.D. kept the lead and after a fine race down the straight with Coot, won, cleverly by half a length, the favourite third, a length behind Coot. Time 1.38.

PARI MUTUEL.—Ten-yu 38, May-king 383, Wakashima 508, C. O. D. 131, Coot 21, The Spirit 12, Flounder 46. Total yen 5,103. C. O. D. paid yen 39.

## SECOND DAY, SATURDAY, MAY 6TH. THE EMPEROR'S CUP DAY.

The weather conditions on Saturday, the Ladies' day, were anything but propitious. All day a strong south-westerly wind blew in gusts, raising clouds of dust in the enclosures at the Racecourse, while for the latter part of the afternoon a deluge of rain appeared imminent, though only a very brief shower actually fell about 5 p.m. The number of ladies amongst the visitors was consequently not up to the average, and those who braved the weather were glad for the most part to take advantage of the shelter of the Grand Stand. Amongst the visitors was a strong contingent from the Foreign Legations in Tokyo. Several of the events brought out fairly large fields and all the races were well contested, so that visitors could not complain of the sport afforded. The Ladies' Purse, the blue ribbon of the meeting, was won once more by Mr. Mottu, on Mr. Kawakita's excellent China pony Wakashima, and the coveted prize was presented to him by Mrs. Warming, who said:—

"I have been asked to present you with this purse with the compliments of the Ladies of Tokyo and Yokohama, who all, I am sure, like myself, feel flattered when called upon to admire and uphold manly sport. You have just ridden a splendid race and I congratulate you on your energy and keenness which have enabled you to win this much coveted prize. May you be as successful on many coming race days as you have been to-day. Mr. Mottu, on behalf of the Ladies of Tokyo and Yokohama I have much pleasure in handing you this souvenir."

Mr. Mottu, in a graceful little speech expressed his thanks and a regret that the Ladies' day had not been more satisfactory as regarded the weather. Later in the day Mr. Mottu scored another victory on Wakashima, by winning the China Derby, a mile and a half race. The Emperor's Cup was presented after the race to the owner of Kachidoki, the winner, by Baron Sannomiya, Master of Ceremonies, and at the close of the presentation three cheers were called for His Majesty the Emperor by Sir Claude Macdonald, President of the N.R.C., which were heartily given by all present.

The events were as follow:—

1.—THE THIRD AUSTRALIAN GRIFFIN RACE, value yen 450, the Second to receive yen 100. For Australian Subscription Horses of Spring, 1905; weight for age; winners at the meeting excluded. Entrance yen 5. Three-quarters of a Mile.

Mr. J. Higginbotham's Ten-nin, 137lb. ....(Miyagawa) \*  
Mr. N. Kawakita's Kurama, 137lb. ....(Sugiyama) \*  
Mr. H. Kashiwagi's Hinode, 141lb. ....(Goto) 3  
Mr. Friends' Daybreak, 137lb. ....(Hakodate) 0  
Mr. Astral's Yokohama, 140lb. ....(Higaki) 0  
Mr. H. Lefebvre's Flame, 132lb. ....(Omimo) 0  
Sir Claude M. MacDonald's Gollywog, 137lb. ....(Horikoshi) 0

Mr. Satsuma's Britannia, 132lb. ....(Fujisaka) 0  
Mr. Snipe's Ibuki, 137lb. ....(Kawasaki) 0  
Mr. Green's Chiyoda, 137lb. ....(Tsubouchi) 0  
\* Dead Heat.

This was considered a fairly open event, Flame and Britannia being, however, most fancied by backers. Tennin and Kurama jumped to the front after a very fair start for so large a field, and with Chiyoda close up the way all round. Entering the Straight a little behind Tennin, Kurama gradually closed up with the leader and finished a fine race a dead heat, with Hinode, who had displaced Chiyoda in the distance, third. Time 1.25.

PARI MUTUEL.—Paid yen 47.50 on Tennin and yen 16 on Kurama.

2.—THE YOKOHAMA DERBY, value yen 600, the Second to receive yen 150 and the Third yen 75. For All Subscription Horses and Country Breds; winners of 3 races or less at date of entry, weight for age; of more than 3 races 3lbs. extra for each win over 3 wins, not exceeding 15lbs. in all. Entrance yen 5. One Mile and a Half.

Mr. H. Kashiwagi's Izumo, 146lb. ....(Goto) 1  
Mr. Tatsuta's Suma, 149lb. ....(Takahashi) 2  
Mr. R. Schmidt-Scharff's Annemarie, 137lb. ....(Mr. Mottu) 3  
Mr. R. Loonen's Rose de France, 149lb. ....(Horikoshi) 0

Suma and Annemarie were the most favoured of the four starters. After a good start Rose de France made the running and led by a length on first passing the stand, with Izumo next. Between the hill and the Houses the field closed up and ran well together till entering the Straight when Izumo drew away and gradually increasing her lead, won by about three lengths from Suma, with Annemarie a short length behind the latter for third place.

PARI MUTUEL.—Paid yen 33.

3.—THE LADIES' PURSE, presented. The Second to receive yen 200, and the Third yen 100, for All China Subscription Ponies; weight as per scale with 5lbs. added; winners at date of entry 5lbs. extra for one win, 7lbs. for two or more wins; winners at the Meeting 5lb. extra; to be ridden by Full Members of the Club, or Visitors, whose names must be sent in to the Committee before the Meeting and approved by them. Entrance yen 5. One Mile.

Mr. N. Kawakita's Wakashima, 159lb. ....(Mr. Mottu) 1  
Mr. Duplex's Raubgraf, 157lb. ....(Mr. Dietrich) 2  
Mr. May's May-oui, 163lb. ....(Mr. Andreis) 3  
Mr. Swarby's Gogai, 152lb. ....(Mr. Marquetti) 0

Wakashima started a hot favourite, carrying more than half the money in the Pari Mutuel. Raubgraf made the running for a quarter mile, when the favourite got to the front and won as he liked by several lengths from Raubgraf; May-oui a poor third. Time 2.13.

PARI MUTUEL.—Paid yen 8.50.

4.—THE EMPEROR'S CUP, presented by His Majesty the Emperor. The Second to receive yen 200 and the Third yen 100. For all Subscription Horses and Country Breds; winners of 3 races or less at date of entry weight for Age; winners of more than 3 races at date of entry 3 lbs. extra for each win over 3 wins, not exceeding 15 lbs. in all; Australian Subscription Horses in Japan for their Second Meeting 3 lbs. allowance; Horses that have started at previous meetings but have not won a race 5 lbs. allowance, allowance accumulative; Australian Subscription Griffins 12 lbs. allowance; winners after closing of entries to carry 5 lbs. extra, cumulative. Entrance yen 5. One Mile.

Mr. Green's Kachidoki, 137lb. ....(Tsubouchi) 1  
Mr. Alexander's Ohgon 132lb. ....(Kawasaki) 2  
Mr. May's May-mie, 143lb. ....(Mr. Catto) 3  
Mr. Swarby's Parisienne, 157lb. ....(Sugiyama) 0  
Mr. N. Kawakita's Hitachi, 152lb. ....(Sugiyama) 0  
Mr. G. Barclay's Hyacinth, 125lb. ....(Horikoshi) 0  
Kachidoki and Hitachi were the favourites, being nearly equally backed. After several tries the horses were sent away to a very poor start, of which Ohgon, Kachidoki and Parisienne got the best and galloped together to the rise from the dip. At the Shakespeare Parisienne fell behind and Hyacinth came into third place. At the Trees Kachidoki shook off Ohgon and increasing her lead, won by several lengths from Ohgon, with May-mie, who passed Hyacinth in the Straight, a fair third. Time 1.49.

PARI MUTUEL.—Paid yen 12.

5.—THE FOURTH AUSTRALIAN GRIFFIN RACE, value yen 450, the Second to receive yen 100, for Australian Subscription Horses of Spring 1905; weight for age; winners at the Meeting 7 lbs. extra. Entrance yen 5. One Mile and a Furlong.

Mr. H. Lefebvre's Flash, 132lb. ....(Omimo) 1  
Mr. Friends' Daylight, 143lb. ....(Hakodate) 2  
Mr. S. Sato's Iwate, 137lb. ....(Sugiyama) 3  
Mr. H. Kashiwagi's Asahi, 137lb. ....(Goto) 0  
Mr. Sport's Dekimas, 137lb. ....(Sugiyama) 0

Flash was first favourite and Daylight second. The latter showed in front for the first quarter mile, when Flash came up and took the lead, which she held to the finish, winning by two lengths from Daylight, with Iwate, lengths behind, third. Time, 2.11.

Later on Flash was disqualified on an objection raised against foul riding on the part of her jockey, and the race was awarded to Daylight. The evidence clearly proved that Flash interfered with three horses in the race by pulling across them to take the rails from Daylight, who was leading, the latter's rider having therefore to pull back and go outside. The rider of Flash acknowledged that he was ignorant of the Rule with reference to crossing another horse, although it is printed in his licence.

PARI MUTUEL.—paid yen 10.

6.—THE SYDNEY STAKES.—Value yen 500, the Second to receive yen 100. For Australian Subscription Horses of Autumn 1904; weights for Age; winners of 3 races at date of entry excluded; winners of less than 3 races 3lbs. extra for each win; winner of Melbourne Stakes, First Day, excluded. Entrance yen 5. One Mile and a Furlong.

Mr. Cotton's Texas, 137lb .....(Rikizo) 1  
Mr. Alexander's Miyoshino, 140lb.....(Kawasaki) 2  
Mr. May's May-nooth, 137lb. ....(Mr. Catto) 3

Only three starters appeared, of whom Texas was favourite, and an easy winner. May-nooth ran close with the favourite till after negotiating the hill, when she had to be pulled up by her rider, having picked up a stone, which lamed her. Texas cantered in five lengths ahead of Miyoshino. Time 2.12½.

PARI MUTUEL,—paid yen 8.

7.—The CHINA DERBY, value yen 450, the Second receive yen 100. For All China Ponies; Weight as per scale; Subscription Ponies 5lbs. allowance; Winners at the Meeting 7lbs. extra; Entrance yen 5. One Mile and a Half.

Mr. N. Kawakita's Wakashima, 149lb.(Mr. Mottu) 1  
Mr. Finale's C. O. D., 149lb. ....(Takahashi) 2  
Mr. Tytherleigh's Coot, 145lb .....(Mr. Easton) 3  
Mr. J. Higginbotham's Ten-yu, 142lb.....(Kawasaki) 4  
Mr. May's May-king, 147lb. ....(Mr. Catto) 5  
Mr. May's May-oui, 148lb .....(Mr. Andries) 6  
Mr. Virginia's Flounder, 145lb .....(Mr. Dietrich) 7

Wakashima started first favourite, though a goodly number of backers fancied Coot. Wakashima got the lead almost from the start and kept it to the finish, winning by several lengths. Coot and C.O.D. had a tussle for second place, the latter just obtaining it by a length. Time 3.26½.

PARI MUTUEL,—Paid yen 12.50.

8.—The SECOND CHINA GRIFFIN RACE, value yen 250, the Second to receive yen 100 and the Third yen 50. For China Subscription Ponies of Spring 1905, Weight as per scale. Winners at the meeting excluded, Entrance yen 5. One Mile and a Furlong.

Mr. J. Koetting's Gulyash, 147lb.....(Horikoshi) 1  
Mr. Burghdunum's The Miller, 150.(Mr. Dietrich) 2  
Mr. Cotton's Dairen, 144lb. ....(Rikizo) 3  
Mr. Astral's Sunset, 147lb .....(Sugiyama) 4  
Mr. Norfolk's Pagoda, 153lb .....(Hakodate) 5  
Major Trick's Petit Canard, 147lb.....(Mr. Mottu) 6  
Mr. Sport's Conundrum, 144lb. ....(Mr. Mottu) 7  
Dr. Wheeler's Formalin, 141lb.....(Omimo) 8  
Mr. Alexander's Harukaze, 150lb.....(Kawasaki) 9  
Mr. Green's Kobe II, 147lb. ....(Tsoubouchi) 10

Ten ponies faced the starter and were kept waiting for about half an hour by Kobe II., who got away without his rider and dodged a little army of bettoes all round the course before he could be driven into the compound. When at last the field got away, The Miller made the running with Petit Canard and Sunset close up. Gulyash, the favourite, came through his horses near the Shakespeare and before entering the Straight obtained the lead and won by about a length from The Miller, who had run a very good race from the start; Dairen third. Time not taken.

PARI MUTUEL,—Paid yen 8.50.

### THE LAW COURTS.

#### CLAIM FOR DEPOSIT.

A case in which Y. Sakamoto, a merchant in Tokyo, claims a thousand yen from Mr. V. Menil, No. 166, Yamashita-cho, Yokohama, came up in the Yokohama District Court on May 5th before Judge Nakanishi.

Plaintiff was represented by Mr. Suzuki and defendant by Mr. Watanabe.

Plaintiff's counsel stated that in May, 1903, his client ordered defendant to dye certain pieces of *unsai* cotton to be employed for soldiers summer coats, and the parties made a formal contract. The Japanese deposited with defendant a thousand yen which was a portion of the estimated cost of the dyeing, and at the same time he presented the colour sample to the dyer. After the cloth was finished the colour was found different from sample, so that the whole of the *unsai* cotton was rejected by the Military Clothing Office. This failure he attributed to the negligence of defendant. The contract should be regarded as null and void and consequently the deposit of one thousand yen should be repaid to plaintiff.

Defendant's Counsel declined to admit that the colour was different from sample, and contended that the Japanese merchant promised the French dyer to deliver at least a hundred pieces of cotton in June, 1903, but he did not do so. Therefore, Mr. Menil sustained a loss in keeping his vats unemployed for a long time and thus suffered damage estimated at over two thousand yen. Owing to this loss, Mr. Menil would not return the deposited money.

The parties produced evidence in Court, after which plaintiff's Counsel asked for leave to examine M. Ikeda and K. Amemiya of Tokyo as

witnesses. The Court granted the request and adjourned the case till May 17th.

#### CLAIM AGAINST THE O. & O. CO.

In the Yokohama District Court, a case instituted by a Chinaman named Lee Huan Tang, No. 164, against Mr. B. C. Howard, Yokohama agent of the O. & O. Steamship Company, claiming yen 108.90 came up again on May 5th in the Yokohama District Court when Judge Nakanishi gave judgment dismissing plaintiff's claim and ordering him to bear costs.

The Yokosuka Prize Court has given decisions confiscating the British steamers *Easby Abbey* (4,963 tons gross), *Venus* (3,558 tons) and *Aphrodite* (3,949 tons) and their cargoes. The *Easby Abbey* with 4,000 tons of Cardiff coal, was captured on March 3rd, the *Venus* with 5,222 tons of Cardiff coal, on March 4th and the *Aphrodite* with 5,600 tons of Cardiff coal, on March 6th, all in the North Sea of Japan on their way to Vladivostok. They were the 43rd, 45th and 46th respectively captured.

#### MISS DE WETTE v. S. H. KUHN.

In the Yokohama District Court, an action lodged by Miss Sophie Anne Barbe De Wette, a Belgian subject, of No. 16, Yamashita-cho, Yokohama, against Mr. S. H. Kuhn, an Austro-Hungarian subject, whose residence according to the complaint is not known, began on May 8th before Judge Yasuda.

Plaintiff was represented by Mr. H. Sato, and defendant was not represented.

At the outset of the hearing yesterday plaintiff's Counsel asked the Court to give decision declaring the marriage between Miss De Wette and Mr. Kuhn invalid and ordering the defendant to pay forty yen monthly until the daughter of the parties shall attain twenty years of age. As to the grounds of the claim, plaintiff's Counsel stated that by mutual consent, Miss De Wette and Mr. Kuhn agreed to enter into a contract of marriage, and asked Rev. E. S. Booth, an American missionary residing on the Bluff, Yokohama, to solemnize the ceremony. But the mother of defendant and the parents of the plaintiff strongly opposed the parties' intention on the ground that the defendant is a Jew, and Miss De Wette a Christian, and that at the time of the proposed marriage, the parties had not reached legal age, Belgian law providing 24 years as the limit, and Austro-Hungarian law 21 years. In these circumstances, they could not obtain the consent of their parents (the father of the defendant was dead). At the request of the parties, however, Rev. E. S. Booth performed a religious ceremony on January 14th, 1903, when they were not accompanied by any of their direct relatives. Previous to the ceremony, Mr. Kuhn had promised Mr. Booth that he would register the marriage with the Japanese authorities in accordance with the relative laws. After the marriage, the parties lived together and the defendant told the plaintiff that he had so registered the marriage. On March 18th, 1904, plaintiff was delivered of a daughter upon which the defendant paid a visit to Mr. Booth and confessed that he had not made the necessary registry. He also asked what he should do. This showed, counsel contended, that the marriage was accomplished by deceit on the part of Mr. Kuhn. The defendant further deceived Miss De Wette in saying that he had registered the marriage in a Japanese office. Subsequently the plaintiff found that the statements by Mr. Kuhn as to registry of the marriage and of the birth were untrue. As to the validity of the marriage, Mr. Sato held that it must be regarded as invalid in accordance with Arts. 775 and 778 of the Japanese Civil Code as the parties were residing in Japan when they were married. In December, 1904, the parties commenced to live separately, Miss De Wette taking with her the child. Previous to the separation, defendant promised to pay plaintiff forty yen every month as the expense of bringing up their daughter until she should reach her majority. Mr. Kuhn, however, paid only one term—40 yen—in December, 1904, and he left the country in January this year.

Plaintiff's Counsel produced a letter referred

to above as the promise of Mr. Kuhn to pay an allowance.

The Court—Under what provisions of the Code of Civil Procedure do you claim an allowance?

Plaintiff's Counsel—It should be for damage inflicted by the desertion of the defendant without making provision for their child, and the amount yen 40, was agreed upon between the parties.

Mr. Sato asked the Court to include in the record the prosecution by Mr. Kuhn against Miss De Wette—or his wife, Mrs. Kuhn—for adultery, and said that it was dismissed by the Public Prosecutor on the ground that the marriage between the parties was invalid. That record should afford guidance in the present action.

The Court rejected the request and intimated that it would give judgment on May 12th.

#### CLAIM FOR DAMAGE.

The hearing of a case initiated by Mr. F. G. Thomas, liquidator of the bankrupt estate of Messrs. H. C. Morf and Co., against B. Kobayashi, claiming yen 1,241.26 was resumed on May 11th in the Yokohama District Court.

As there has been an alteration in the organization of the Court, the parties repeated the statements they gave in previous hearings, after which Plaintiff's Counsel produced the record of another case between the same parties in the Tokyo Appeal Court, and contended that Defendant made a contract on Feb. 8th, 1898, to purchase from Messrs. Morf and Co. 50 cases containing velveteens; on March 2nd, 30 cases containing the same goods; on March 8th, 5 cases of plush cloth and 15 cases of velvet. These goods arrived in Yokohama in November of the same year, but the defendant refused to take delivery on account of a fall in the market.

Defendant's Counsel stated that after investigation his client found that G. Hiramatsu and S. Hirai, employees of the bankrupt firm, made the contract using the name of Defendant, such speculative business being a habit among *banto* employed by foreign firms. Counsel further held that no contract was made by Defendant. The false contract was not produced by Plaintiff; if it was taken into Court, criminal proceedings must be taken against the two Japanese employees. Defendant's Counsel asked the Court for leave to summon an expert to testify as to the commercial usage regarding the obligation of defendant in such a case. The Court decided to examine a foreign merchant and adjourned the hearing till May 30th.

#### CLAIM FOR MERCHANDISE.

In the Yokohama District Court, the hearing of a case instituted by Mr. Thomas Bernstein, a Russian merchant, No. 124 Yokohama, against Miss Helene Schmidt, No. 106, claiming yen 73.75 for wine, etc., sold to her was resumed on May 11th before Judge Iyeiri when a Japanese was called as a witness. On the protest of Plaintiff's Counsel, the Court decided not to examine him. The hearing having been concluded, the Court decided to deliver judgment on May 13th.

#### NEWS OF THE WEEK.

We understand the A. D. C. hope to stage "Our Boys" on May 25th at the Public Hall, Yokohama.

The collection taken at the Organ Recital given in the Union Church on Thursday amounted to yen 212.60.

A telegram from Maidzuru reports that an officer belonging to the defence forces has been missing for some days.

Mrs. Richardson, a British volunteer nurse, returned on May 9th from the front, arriving Ujina by the *Kosai Maru*.

The crews for the "Born in Japan" v. "The World" four-oar rowing race to be held at the Spring Regatta on May 27th are as follows:—"Born in Japan" J. Helm (stroke) P. E. Nicolle (3), D. Weed (2), and L. Stornebrink (bow).

"The World" H. E. Hayward (str.) J. S. Cartwright (3), H. G. White (2), and R. C. Bowden (bow).

Mr. G. Hayashi, Japanese Minister at Seoul, who is now in Tokyo on official business will return to his post on May 10th.

A suspected case of plague has appeared at Hamaguri-cho, Fukagawa, Tokyo. The patient is a youth named C. Sato, the eldest son of a coolie. He was removed on the morning of May 10th to the Honjo Hospital.

The Yokohama Men's Reading Room Association hope to give an "At Home" early in June when friends will have an opportunity of seeing the new furnishings and decorative scheme which Mr. Kennan's lecture made possible.

Mr. Den, Vice-Minister for Communications, arrived on May 6th at Shinonoseki by the *Dairen Maru* from Korea. According to him, the machinery of communications was being transferred from the Korean to the Japanese authorities and the work would be completed in June. From July 1st, the organization will be taken up by the Japanese.

In the compound of the Isejima Shrine, Yokohama, public bodies of the city on May 5th held a *Kito-kwai*—supplication—for the future happiness of the officers and men who have died at the front. At 10 a.m., representatives assembled in the City Hall, Honcho, and an hour later started for the hill where the rites were performed. High officials of the local government offices were present. During the service, bombs were sent up on the hill, and all the streets were dressed with the national flag. At night, the usual lantern decorations and illuminations were shown throughout Honcho and other prominent streets. Several small processions were organized in the evening.

#### CORRESPONDENCE.

##### THE MEANING OF "SHASAI."

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—I see in both Mr. de Becker's and the *Japan Times*' translation of the Law of Trusts that Shasai continues to be translated Debenture, and I venture to say that I consider this wrong. In talking with a number of Japanese I find they consider the English word debenture to be the loan or debt itself, and not simply its certificate.

In Article 35 the word Saiken 債券 occurs. This I contend is the proper word for Debenture, but both Mr. de Becker and the *Japan Times* translate this "Debenture Certificate," though in Article 52 Mr. de Becker calls it "Debenture," and the *Japan Times* has it as "Certificate."

I would like to know whether these translators wish to imply that the Law refers to two distinct documents i.e. Shasai=Debenture, and Saiken=Debenture Certificate?

I do not wish to discredit the translators' work, it fills me with admiration, but I should like, if possible, to get at the real English legal meaning of the word Shasai.

I remain, Sir, Yours faithfully,

IGNORAMUS.

##### THE MINING LAW.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—In your issue of the 28th ult., you published a letter signed "Ignoramus," and as the question he raises may probably be of some interest to students of Japanese, I would endeavour to explain it as follows:—

The word *shu-yo* (收用) — "to take and use"—as employed in the *To-chi Shu-yo Ho* (土地收用法) — "Law Relating to the Acquisition of Lands for Public Use"—refers to a legal act performed by one to whom the power has been lawfully delegated, in exercise of the right of "Eminent Domain" possessed by the State to condemn private property to public use, and to appropriate the ownership and possession of such property for such use, upon paying to the owner a just compensation to be ascertained according to law.

There are two technical terms denoting acquisition. The word *shu-yo* (收用) is employed when the estate is permanently acquired and paid for outright on the basis of a remuneration determined in accordance with the provisions of the law; while the word

*shi-yo* (使用) is employed when the estate is only used and a rental paid in respect thereto on the basis of rents current in the neighbourhood.

The word "purchase" in its ordinary acceptance refers to the act of acquiring property by payment of a pecuniary consideration, but in its legal sense it embraces every mode of acquisition of estate known to the law.

For the above reasons the term *shu-yo* may be variously translated "purchase" or "employed by purchase," or "compulsory purchase." No doubt the word "expropriation" is more or less correct, but not exactly.

The fact is the term *shu-yo* has been specially coined for the purposes of the Japanese law relating to the acquisition of lands for public use, and I cannot find any one single English word that will convey its exact significance. If "Ignoramus" will read the provisions of the *To-chi Shu-yo Ho* (Law 19, 22nd year of Meiji) Article 1, he will get the idea of the terms *shu-yo* and *shi-yo*.

I quite agree with "Ignoramus" that a Legal and Scientific Dictionary is much wanted, but the question is how many purchasers would there be for such a work; and what practical use would it be when finished? To simply consult a dictionary and to slavishly adhere to its definitions would probably result in considerable confusion. It is not sufficient merely to know a word but it is necessary to know its meaning and history, and the principles of the laws in which it is employed, and this practically involves devoting oneself entirely to the studies of the legal profession.

With a view to attempting the compilation of a dictionary of legal terms, I have prepared a list of several thousand words arranged in alphabetical order and written both in *romaji* and Japanese. If any qualified gentleman can be found willing to devote himself seriously to the task of working this material up into a legal dictionary, I shall be only too happy to place it at his disposal as it stands, because I have not the leisure to devote to the completion of the task.

With regard to any further explanation which "Ignoramus" desires, I would suggest a visit to his lawyer, who will, no doubt, be pleased to furnish him—professionally and in consideration of a suitable honorarium (the Cincian law being obsolete!)—with all necessary information and advice.

Yours obediently,

J. E. DE BECKER.

Yokohama, May 5th, 1905.

##### THE FLOATING DOCK.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—With reference to the article which appeared in your issue of the 3rd inst., on the "Launching of the Kobe Floating Dock from the yard of the Mitsu Bishi Co., Nagasaki, I should like to state, as the representative of Messrs. W. H. Allen Son & Co., Ltd., that the complete pumping plant for this dock was manufactured in England by them. The pumping plant consists of seven vertical-spindle centrifugal pumps. These vertical-spindle pumps are now being extensively adopted for dock work, for which they are most suitable, the pumps being able to be placed at a lower level than the engines and yet be direct-coupled to the same by means of a vertical shaft, which can be of any desired length, the engines in this case being of the horizontal type, instead of the vertical type generally used for centrifugal pumps, and consist of a compound engine for each pump, with the cylinders arranged at right angles to one another. It was specified that six of these pumps should deliver 11,000 tons of water in 165 minutes against a head of 24 feet, that is, 2,500 gallons per minute each. These pumps are of exactly the same type as Messrs. Allen have supplied to the floating docks at Durban and Bermuda and to the graving dock at Colombo, now in course of construction. The new dock at Chatham was supplied by them last year with two sets of similar pumps, only on a much larger scale, the two pumps being capable of discharging 66,000 tons of water against a head of 38 feet in four hours. The adoption of this type of pump by the Mitsu Bishi Dock Co. illustrates once again the desire of this firm to keep abreast of the times.

I am, dear Sir, yours faithfully,

VIVIAN SANGUINETTI.

Tokyo, May 5th, 1905.

##### CHRISTIANITY IN JAPAN.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—With considerable interest, I have read and re-read your article of Feb. 11th on "Christianity in Japan." It was perhaps well that such a word of caution be given. And it is quite likely that some Japanese will not "respect the ideals of Christianity" because of the practical type it presents for her observation "in the acts of the Russians in this war," and "in the acts of her Christian teachers themselves." So far as that is concerned, no one, Chris-

tian or non-Christian, outside of Russia approves of these deeds.

Have you not, however, allowed this to over-influence and over-weigh? All Christendom hat, had discernment enough to recognize these intolerant, bigoted, even ferocious deeds as the result of a perverted and corrupt type. And due weight has been given to the dictum that "war is hell." Cautious men do not attach much importance to the heated words and deeds of a time of intense passion. Doubtless many Christians in Russia even deeply regret these very things which you call "practical types." Even "the man on the street" who is utterly negligent of Christianity, observes these distinctions. The writer has heard non-Christian men in America observe time and again that you can not lay up Russia's actions against Christianity.

Do you not, therefore, do injustice to the discernment of our Japanese friends when you expect them to be largely influenced by the type of Christianity Russia presents? And do you not do violence again to their discernment when you think they will fail to recognize the intensity of passion in a time of war?

Moreover, the Japanese are reasonable enough to recognize "practical types" of Christianity presented in their own land. What about the loyalty and bravery of her Christian soldiers and sailors? What about the sympathy of the whole Christian body in Japan, expressed in the practical type of gifts for the relief of the widows and children of the brave fellows whose lives have been given in sacrifice to country? What about the "comforts" prepared under the supervision of Mrs. Yajima, and approved by the Government? What about the unselfish work of the Young Men's Christian Association in the army camps? What about the kindly efforts of missionary and Japanese Christians in the army hospitals? Will not the Japanese see in all these things, rather than in the corrupt types presented by Russia, the real animus and spirit of Christianity? For our part, we prefer to honour the discernment and reasonableness of the Japanese by so thinking.

Faithfully Yours, HARVEY BROKAW.

Williamsport, Pa., U.S.A., April 8th, 1905.

##### WAR STAMPS: A SUGGESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to make a suggestion which perhaps might prove helpful to the charity work going on just now. Would it not be profitable to issue war stamps at the price of 5 *sen*, 10 *sen* and so on to fifty *sen*, which might be attached to the envelope besides the regular postage fee? The profit thus obtained might be contributed to the funds of the relief society for the families of men serving at the front. I feel almost sure that these stamps would not only be bought on a large scale in this country, but that they also would be in great demand by stamp collectors abroad.

Yours, etc.,

A. B.

Tokyo, May 9th, 1905.

##### DE WETTE V. KUHN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I shall be greatly obliged if you will permit me to correct certain mis-statements made at the recent hearing of this case. I refused my consent to my son's marriage, not because of the difference in religion, but because I did not consider the marriage suitable. My son did all he could to have the marriage registered, but the Japanese authorities refused to recognise the union as legal because the Consul for Austria-Hungary declined to register it—the latter alleging as his reason that my son had not done his duty to his country, having refused to serve as a soldier.

Yours, etc.,

(Mrs.) B. KUHN.

Yokohama, May 10th, 1905.

##### THE "MARS" DISASTER.

COURT OF ENQUIRY.

A Board of Trade Enquiry into the circumstances attending the wreck of the British steamer *Mars* on March 17th off Cape Maimoto, Kunishiri, Kurile Islands, was opened on Friday morning at the British Consulate. Mr. Hobart Hampden, the Vice Consul, sat as President, and with him were Captain Robertson of the steamer *Kishu*, and Captain Clark of the steamer *Lincolnshire*, sitting as assessors. The extension of the protest made by Captain Samuel Shirley, George Frederick Everley Pope, chief mate, and Martin White, third mate, was put in and read. It stated that the vessel left Barry Dock on November 25th last bound to Vladivostok via the Suez Canal with a cargo of coal. She was staunch and strong, well manned and victualled, the cargo properly stowed and the hatches well secured, and in every respect fit to perform the voyage. Nothing worthy of remark happened until

December 29th when the day opened with the wind and sea rapidly gaining strength and the vessel rolled heavily. This continued until January 1st when the weather improved. They arrived at Singapore on January 6 and bunkered. After leaving that port the vessel encountered heavy weather which continued onwards till, on January 22, when they were experiencing the full force of a southerly gale with heavy seas. The vessel shipped large quantities of water and laboured and strained violently. On the 28th a fresh gale from the N. N. W. sprang up, and repeated squalls caused the vessel to pitch and lurch violently. The 27th opened with a moderate breeze and sea, and the vessel was then in Kunishiri Straits. At 6 a.m. the lighthouse at Cape Morimoto was bearing S. S. W. distant 11 miles. From 5 a.m. to 7 a.m. they met large patches of broken field ice which struck the vessel heavily across the bows. Later the patches were less frequent and violent and by noon the steamer got clear. At 6.10 p.m. they ran into another large block of ice, after which they found she was making water in the fore peak. As the ice appeared to be stretching right across the bows they steered to the northward. The engines were eased and on examination it was found that the peak was considerably damaged, the plates were buckled, seams started, and rivets loosened. The ballast donkey engine was unable to keep the water under and the crew was set to work baling and ultimately working the coal from No. 1 to No. 4 holds. The 31st January found them with the vessel fast frozen in the ice. The engineers and carpenter were employed stopping the leaks in the fore peak, and a hole was drilled in the bulkhead and a flap valve fitted to enable them to work from the deck as the peak pipe appeared to be leaking badly in No. 1 tank. This continued till February 18th when the day closed with thick blinding snow squalls, and a vast field of ice drifting across the stern of the vessel struck the rudder carrying away the wheel and chain. As the vessel grounded the bolt on the port side of the cross head struck the port guide of the screw steering gear, breaking off both bolts in the cross head, bending and breaking the port guide. The 19th opened with the wind fresh from the westward, clear weather, vessel frozen in, surrounded by ice, and drifting towards Cape Morimoto, stern pointing eastward. It was about noon on that day that the vessel struck the rocks. The ice began to crack and break round her and she swung round and went broadside on to them. At that time the soundings showed 30 feet of water from the stem to abreast of the saloon and the same quantity aft. A large sunken rock laid astern shelving down to the vessel's keel. Boats were swung out and steps taken to abandon the vessel, the engineers reporting that the main engines had been moved out of position. Three boats with provisions landed near the lighthouse and various journeys were undertaken to and from the vessel till she finally broke in two. It was during the evening of March 19th that the final attempt was made to reach the shore. The boat manned by the Master, mate, second engineer and steward set out, but a vast floe coming down upon them the boat was stove in and began to take in water. They pulled for the land before a strong northerly wind and choppy sea. The boat at dawn appearing to be about 15 miles from the Lighthouse. They made little progress, every one now being weak and almost exhausted, having no food save two bottles of preserved fruit and two of sauces, with a few uncooked beans. By noon the boat had drifted on to the ice again and they hauled it on to a small floe intending to stop the leak. At 1.30 p.m. they launched the boat again and continued rowing, and by four o'clock the 2nd mate became unconscious and delirious, the 2nd engineer being also very weak and well nigh exhausted. The day closed with the boat still endeavouring to make the land. At 1.10 a.m. the following day John G. Stubbs, the 2nd mate, expired and two hours afterwards the 2nd Engineer died. They then pulled the boat on to a block of ice and buried the bodies. After resting, the surviving members of the boat's crew started at 7 a.m. to walk to the shore, but finding the ice breaking up they turned back and got the boat into clear water. They eventually touched land at 3.45 p.m. at a point at Tok-i Sing. On March 26 Captain Shirley with four quartermasters visited the steamer. She had then opened out about 18 feet. Her stern and amidships were then resting on the rocks, and the afterhold was full of water rising and falling with the tide. The two following days attempts were made to get on board the vessel, but owing to the ice it was impossible to do so. On April 3rd Captain Shirley went round to Atsuya intending to again board the wreck, but it was still surrounded by ice, and the two ends of the vessel were submerged, the bridge only being above water, but nothing was seen of the funnel, that having evidently gone overboard. The Captain then returned to Shironuka and remained till the 23rd when they left for Hakodate.

Samuel Shirley, the master of the *Mars*, in the course of his evidence, said in answer to the President that he was perfectly satisfied with the conduct of his officers and men, and that they had behaved themselves remarkably well under the painful circumstances which had surrounded them. He had had the latest charts obtainable regarding the voyage he was undertaking, and the disaster which had befallen the vessel was due wholly and solely to the elements. The officers and engineers were engaged on the ordinary articles while the crew signed for the run out, but when the vessel reached Singapore the Consul would not allow the crew to be discharged in the usual way and as they were lascars they were sent to Calcutta, and a crew of Chinamen were shipped. The agreement contained the usual Federation clauses as to the limits of the voyage, and the articles were signed under the ordinary Board of Trade conditions. On reaching the Kunigiri Straits he met with small blocks of ice continually increasing in size, and as they were placing the vessel in danger he thought it best to keep to the Northward in the hope of clearing the obstructions. From what he had learned since he found that he was right in his surmise, for the Captain of the *Tacoma* had told him that he had passed to the northward some days previously and found the sea clear of the ice. He had a consultation with his officers and they decided upon the best course to take, as it was impossible to go to the southward under the extremely dangerous conditions in which they were placed. They were about three miles from the Lighthouse when she struck, and they endeavoured to get her off but as soon as she moved she swung round and commenced filling up. The engine room and No. 2 hold had about twelve feet of water half an hour after she touched the reef, and the condition of the steamer was such that they decided to abandon her. They made several journeys to the vessel but found it was useless to think of doing anything with her for she was then a total wreck.

The President: Did you receive any instructions from your owners to try any particular route?

Witness: No, it was left to my discretion.

Where there any defects in the ship which contributed to the mishap?—No, Sir!

Can you give the locality of the wreck?—Yes! She is in 44.28 N. 146° E. The lighthouse keepers say that the reef runs out seven miles instead of three.

Had you any sailing conditions? Yes! I had the newest edition of the Japan Directory.

In further answer to the Court the witness said that the lighthouse keepers said that there was an unusual quantity of ice floating in the channel this year and that the severe weather had been much earlier than in previous years. From the moment the vessel became encased in the ice every effort was made to secure the safety of the ship. He received every assistance from his crew and the best discipline was maintained. He did not make any enquiries at Singapore as to the state of things in the North and nobody said anything to him as to whether the passage was open or not. He had spoken to several Captains who were going to try to force the passage, and who had stated they had a lot of experience, but he did not think some of them had made the attempt. He could not say whether any other steamers had got through, neither had he heard anything about the *Romulus*. His opinion was when he started out that the Japanese were still keeping a watch round there and guarding the channel, and he believed that it was only because the Japanese warship was a little to the southward with another prize that he did not get captured. He considered he had acted with the greatest caution, and had had much experience in sailing through icy seas.

The President: What is your opinion as to the cause of death of the two officers?—They died from want and exposure. In a blinding snowstorm I was rubbing the second mate's face with snow for hours. I had his body across my knees for some time trying to keep the life in him. He died from the bitter cold and exposure.

The President: I have received a telegram from the Consul at Hakodate stating that under all the circumstances of the case no one is to blame.

W. J. Lamb, the third engineer, then gave evidence that the engines were in good condition and that they were in no wise responsible for the loss of the ship.

Mr. Pope, the Chief Officer, and Martin White gave evidence that everything was done that could be to save the ship, and Adolphus Jones, the quartermaster, spoke as to the satisfaction of all on board as to the action of the Master.

The finding of the Court was delivered at 4 o'clock. It ran as follows:—

The loss of the *Mars* was caused by that vessel being surprised by ice in Lat. 45° 26' N. Long. 146° 20' E. on the night of January 27, 1905, thereafter drifting in the grasp of the ice, and at the mercy of tide and weather, first in a southern direction and then eastward along the coast for a period of

17 days until she was carried to the rocks near Cape Morimoto in Lat. 44° 28' N. Long. 146° 35' E. and there became a total wreck.

The vessel was well found, in good condition, and free from any defect which could have contributed to the casualty. In approaching the question of the master's responsibility it is to be remarked that the advent of the ice was exceptionally early this year and at first the appearances were deceptive. When, on the evening of January 27th, the master had reason to believe he had passed the ice, and when unexpectedly the floes descended upon the vessel at night it was already too late to turn back; the ice already hemmed the ship in, and escape had become impossible. Throughout the difficulties and dangers preceding, attending and following the wreck discipline was maintained. The master handled his ship in a proper and seamanlike manner and acted with energy and fortitude. The Court absolves him from blame, as also the other officers and men, who are to be commended for their conduct at a time of great stress and hardship. A most regrettable incident which followed the wreck was the loss of two lives, John E. Stubbs, the second officer, and Edmund Porter, the 2nd engineer, who had in the first instance safely landed, and when the ship was finally abandoned were in the last boat to leave. Under the circumstances detailed in the foregoing narrative this boat took 44 hours to make the land and the above named officers died from exposure. They met their deaths in the performance of their duty, and no blame attaches to any one in connection therewith.

### THE PHILOSOPHY OF HARAKIRI.

By ADACHI KINOSURE.

Said an American friend of mine the other day: "There is one thing I do not understand about your soldiers. It is the *harakiri*. Why should you make any effort to kill yourselves? It would cost life, ammunition and trouble; what is the reason that you would not give that job to your friend the Russian?"

"When our men start out to the 'battle-field,' I said, 'they enter the gateway made famous by Dante. With the soldiers of Nippon to enlist means to give their lives to the country. After that, all they want is to make their lives count for the utmost. The power of endurance, the education of the stomach and of the muscle, the skill in handling the modern machinery of war—all of these, most certainly, the Nippon army takes a thorough account, just as the armies of the West. Only our army goes a step further. The homeland of the soldiers and his Majesty, whom they serve, expect of their soldiers a little more than a mere human could accomplish. You know quite as well as I that there is a power in man which is quite beyond the boasted understandings of modern science."

"Now, the strength of the Nippon army is not so much in the quantity of muscle, neither is it in the nature of the men, nor even in the Spartan training which they receive. I do not hesitate to say that the real strength of our army—that which accomplishes the feat which appears to the Western eye not far short of being miraculous—is psychic."

"When the Nippon soldier commits *harakiri* he does so because he is convinced that his death awakens this mystic force in his comrades; because he believes that by his death this real strength of the Nippon army is so much the more strengthened. You yourself, if you were convinced that by dying you could strengthen the army of your nation much better than by living, would you not yourself die rather than live?"

"But how, in what way, does this *harakiri* work this miracle?" was the next question from my American friend.

"The explanation lies in the traditions of the *samurai*. It is as deep and extensive as the *bushido*."

"In the first place, then, you must know that the distinction of the *samurai* lies in the fact that he is the master and the arbiter of his own life, and this even in the hour of humiliation and dishonour. And that is the reason that when a *samurai* was found guilty of a crime in the braver days of our country he was not executed as other criminals. To them was extended the courtesy of the 'three-inch-and-half,' which is the length of a dagger by which he committed the rite of *kappuku*, as the ceremony of the *harakiri* is commonly called among the *samurai*. Now, even in battlefields it has been considered something of a shame for the *samurai* to be slain by the sword of his opponent. The *samurai* has always prided himself in knowing the season and the hour in which he should die; just as the cherry flower in the ancient flower lore of our land is reputed to see the hour when it is bravest and best for her to scatter. It is written in the code of the *samurai* that he shall never survive dishonour. And remember that nothing is more dishonourable than a

failure—it matters not how adverse the circumstances may be—of accomplishing the duty toward the State and the Emperor. These are questions of sentiment, to be sure, and the civilized might say of them that they are foolish. But we of the primitive race and training might be permitted to retort and say that it is not a whit more foolish than that a peaceful citizen should shed his blood upon a battlefield in trying to kill his neighbour of another country, who, like him, is fighting for the cause, or a blunder, as is often the case, for which he himself had not the slightest blame. Foolish or wise, it is certainly very absurd for any one to close his eyes against the existing condition of things.

"Moreover, in the military annals of our country it has always been held that the death of an officer at the hand of the enemy reflects discredit upon the men under him, who have not been able or thoughtful enough to prevent such a shameful death to their officer.

"An officer, his sword broken, fatally wounded, committed *harakiri* in front of Liaoyang. The men under him dashed ahead like a band of demons with one thought of avenging the death and of carrying to completion the work he had left undone. This officer knew these things:

"First, he knew that the bullet had pierced through his heart; he knew that his life was like unto a candlelight in front of a stormy wind; second, he knew, also, that as long as his breath was within his body his men would cling around him in their desperate efforts to save him from hostile bullets and hostile swords; third, he knew, also, that his men looked upon him as a *samurai* of the first water. They were the men fostered upon the old ideals of the Nippon soldier. Every one of his men would rather have given their lives than have discovered a jarring note in the make-up of their commanding officer. Rather than find their officer lingering like a coward, reluctant of this earthly life, they would have given their lives if they could but apologize thereby for the fault of their commander. Every officer is an embodiment of his men's ideals. Their officer who expects them to look upon the earthly life quite as lightly as upon a particle of dust, when the question of the State, of the honor of the flag, is at stake, is, to their way of thinking, a man who also looks upon life even lighter than they themselves are required to look upon it. The all-important thing upon the battlefield for the Nippon soldier is to accomplish his duty. Through the combination of circumstances a Nippon soldier finds himself powerless to carry out the work to completion. He is not expected to spend time and thought in apologizing for the unkindness of fate or the combination of circumstances. He faces one fact—namely, the failure of accomplishing his duty to the State. He finds himself utterly useless. He takes upon himself to shed the useless abode of himself. Fourth, moreover, he knows, also, that under the circumstances to him was given one opportunity to make himself either a good or a coward in the eyes of his men and in the eyes of the army.

"And this, then," remarked my American friend, "is simply a question of sentiment; there is no rational basis therefor? And you, yourselves, then admit that the practice of *harakiri* is unreasonable, that it is not consistent with the ideals of the civilized life?"

"Perhaps," said I, "only remember that the Nippon officers of to-day in Manchuria are not put at the head of their men to argue the rationality or the irrationality of the heroic tradition of their country. To them certainly is not given time sufficient to revolutionize the sentiments and ideals of the army. By taking his life when he finds his body utterly useless for the purpose to which he is dedicated he takes it himself. This act proclaims him in the eyes of his men a master of life, a man to whom death is a mere incident. Fifth, he knew also that by so doing he would not only inspire his men with a fire as from above, but his example in showing himself a *samurai* of the old standard would inspire the morale of the entire army to the extent that his example would count more than the reinforcement of a thousand men; for if you could fire the enthusiasm of men to such a pitch that a thousand men could accomplish miracles which are beyond the power of five thousand men, your death, which, after all, is the death of one individual, is counted for the reinforcement of many thousands.

"Moreover, it would be easier to the Western way of looking at things to understand the philosophy of *harakiri* if the West could see into the question of life and death as the Far East looks upon it. There, in the benighted land of the sun and of heathenism, we hold that there is one entity in the universe and we call it life. It is the *noumenon* of which all the empirical world is nothing, a mere expression, the world of phenomena. Life, we say, is something that is super-sensual. You have never tasted, smelt, heard or touched life. When one says he has killed a man, or when you see a flower plucked and withered, you have seen the passing away of one of the myriad phenomena of the true entity, the life of which

you have no empirical knowledge. Now, death, to our way of thinking, is nothing but a mere destruction of one of the innumerable expressions of life. With us, then, to die is quite as trivial an affair as to sleep. Upon our transport *Kinsu Maru* and as a fog-wrapped moon was sailing over the midnight sky of April 25th-26th, 1904, under the storm of shells from the Vladivostok squadron, you could find Captain Shima at the head of his fellow officers unsheathing his sword. With the calmness of and quite as solemnly as he who presents his respects to his prince he seated himself upon the deck of the sinking vessel. He performed the rite of the *harakiri*. To-day the men of the Nippon army talk of him as one of the guardian ghosts of the land of the gods.

"In the first place he saw that his life was useless. He would either be a Russian prisoner or go down with the ship. He had dedicated his life when he left his home to serve under the imperial colours. He had not dedicated his life to squander away his hours in a Russian prison. He knew the moral effect of his death after the ancient rite of the *samurai*. He knew that if he cast away his body, his life, which is imperishable within him, will assume another form, and he will continue the work which he has left undone. Death was nothing to him, the accomplishment of his work was everything to him. Face the situation yourself. Could you have done otherwise than what he did to himself?"

"Commander Hirose wrote upon a piece of paper with his own blood the following: 'Through nine cycles of existence shall I come back to earth till I see my work accomplished.' He wrote it on the day when he started upon his first attempt at bottling up Port Arthur. Not many days ago, in the city of Tokyo, in the Aoyama cemetery, you could see Admiral Togo attending the funeral rites of the men who had died before Port Arthur, and here is his address to the spirits of the dead:

"Since the opening of the war, for over ten moons, both you and I have all passed in and out between life and death over the field of battle. Many were the things that I expected from your able hands, and already you have, shouldering upon yourselves the glory of having served the country with your lives, started on the far away journey," etc.

"If those sailors who had served under him were facing him at that hour he could not have spoken to them in a more intimate style. In the eyes of the Admiral, as well as in the eyes of all of us, the men who have passed into heroic memory are as vividly existent as any of their surviving comrades. You of the West say that you believe in the immortality of the soul, and so do we; only we go a little farther than merely saying it. Because we look upon life and death from the standpoint of the larger zone of which the earthly life is nothing but a page, and a very small one, too, are we to be considered misguided and benighted, mere heathen to be pitied? Now, with this conviction, which is common throughout the Far Eastern land, our men commit the *harakiri* with a rather cheerful grace. Our men go into action. Upon the battlefield they are not surprised to meet death; in fact, that is the only thing they expect to meet there. It is this high, and perhaps over-sensitive, regard—superstition, if you will—for the higher honor of the fighting men that makes of a company of Nippon soldiers a force which is irresistible. All the knowledge of modern medical science has never been able to translate a mere mortal into a miracle worker. Over and over again history has testified that that enthusiasm which thrills the hearts of Nippon men, which has thrilled the hearts, fired the enthusiasm, of generations of *samurai* gone by, has once again translated an army of mere mortals into something akin to an army of gods. It is to maintain this sense of honor, it is for the preservation of this supreme fire that quickens the spirit and electrifies the enthusiasm of the Nippon soldier, that many officers among us throw away our lives, as you would call it, in performing the rite of the *harakiri*."

"But it is such a painful thing to go through," remarked my civilized friend. "Is there not another form less painful and much more comforting to the common sense, and much more in harmony with the conscience of the civilized Occident that might serve this purpose quite as well as the old rite of the *samurai-harakiri*?"

"Perhaps. Of one thing I am quite sure—that if such were to be found, desirable and happy as indeed it would be, it would take more than a few days to introduce this as a substitute for the time-honored and painful rite of the *harakiri*."

#### JAPAN'S TASK IN KOREA.

(FROM THE "N.-C. DAILY NEWS.")

Japan has before her the delicate and difficult task of placating Korea, and winning the hearts of this conservative people. It will cost nothing to take possession of Korea and of Korea's government, but

it will tax all her skill to win Korea's heart and confidence.

There is in the peninsula to-day, there has been for a thousand years, an ingrained dislike of Japan and the Japanese. As naturally as the Korean says Kong-ja-nim (The Master Confucius) he says of Japan Wai-nim (倭西) or Keu-gajie-nim (Contemptible wretch). It is in most cases an unreasonable, foolish dislike, but it is a part of his bone and fibre and breaks forth from him on all occasions.

Down through Korea's official records Japan has been marked 倭 with no character to do her honour or single word written in her favour. She holds a lower place even than the Mongols or Manchus.

Turning to a history written about 1485 by order of King Sung-jong I find the first mention of Japan runs thus "In the year Shin-mi (50 B.C.) the Japanese (倭人) sailed over and plundered our coast, but when they heard of the virtue of our illustrious King they withdrew ashamed." Unfortunately, to-day, Japan will have no occasion to withdraw on any such grounds.

Again in the year 417 A.D. the brother of the King of the Silla, or Kerim as the state was frequently called, was held a hostage in Japan. How he came there I know not but the fact would seem to indicate that Silla was a subject at that time to the Eastern Empire. Great was the mourning on the King's account. He himself spoke of his brother as the loss of his strong right arm. "Who was the man could set him free?" A minister by the name of Pak Ché-sang volunteered. Said he, "You might expect to win over other states by fair words, but not Japan, to outwit her is the only hope. My life is at the King's pleasure and such meagre gifts as I have. One request only: Please imprison my wife and family when I am gone."

He took ship at Yul-po and his wife wept bitter tears at the parting.

"This must not be," said he, "I have given my life for my country and your part is to act though I had been a rebel and was escaping from life King."

The Japanese were in doubt at first about this fugitive, but hearing that his wife was imprisoned, and seeing him act his part so well, they believed, and ere long he became a minister in full standing in the Silla Empire. Little by little he laid his plans and one day, unexpectedly, he smuggled the king's brother away and sent him westward home through a thick fog where he eluded all attempts at capture. Pak himself was caught and the whole weight of the Emperor's wrath fell on him.

He asked "How did you dare to act so and set this man free?"

Pak replied "I am the servant of Kerim and my king so desired it."

"You are my servant," said the Japanese, "what do you mean by Kerim?"

His Imperial Majesty then prepared five kinds of punishment and with these in full view he said,

"If you'll consent to be my servant I'll reward you."

Pak replied "I may be a dog or a Kerim pig, but a servant of Japan never. I would gladly accept whip or rod from Kerim but would scorn office from Japan."

The Japanese King then stripped his legs of flesh and made him walk barefoot over sharpened reeds,

"Now whose servant are you?"

"I am Kerim's."

He made him dance on red hot irons and the question was again asked "whose servant?"

"Kerim's" was the last reply.

He was burned alive, and to-day a shrine stands in South Korea in his honour, and people who know scarcely anything else of Korean history talk of the immortal Pak, who died at the hands of the "perfidious" Japanese.

The great invasion of 1591 is still referred to as though it had happened yesterday or the day before. In those days they burned down the huts and drove sharpened stakes through the helpless children, and mothers still, when youngsters cry, say "Ch'ung-chung-i will catch you," Ch'ung-chung-i being Kato Kyomasa, the General of the first division. Records regarding Japan are a tale of woe only and lead one well along into the region of present day thought, where the natural heart of the Korean is all against the Japanese.

A Chinese army might march through this country, plunder it from coast to coast, and commit all kinds of outrage, but its evil deeds would be forgotten tomorrow. A hundred thousand Japanese might pass along the same way, silent as the dumb except for their tramp; paying for every bag of rice and every string of eggs, molesting no one, orderly and well-behaved, perfection itself, and yet be talked of as a plague, "Wai-nim," thieves, robbers, wretches.

Recent events such as the murder of the queen in 1895 and the demand for waste lands, have unfortunately deepened the conviction that Japan is Korea's natural enemy, and here the matter hangs.

What are the causes of this unnatural and extravagant dislike of the Japanese on the part of Koreans?

Let me say first—disposition. The Korean says that the Japanese is deceitful and untrustworthy. No land could possibly make a greater showing for bribery and corruption than Korea herself. On no piece of ground have men deceived and been deceived more universally than in this peninsula. No Government ever existed that was more infected with rottenness to the bones, cheating, lying, defrauding. But Korea has grown accustomed to and unconscious of her own way of doing such things and sees only the faults of others.

"But," they say, "Japanese are such small people, little in thought and disposition and are so exacting about particulars." This is true; the Japanese are past-masters of detail, as is proved by the present war. Nothing is forgotten. To the smallest items everything is planned for, and no doubt their success is largely due to this. Korea on the other hand is the most careless country imaginable. She never dreams of planning definitely or of carrying out exactly. "Any old way" is quite sufficient for her purpose. This is one characteristic that divides these peoples widely, and until Korea is willing to learn from Japan and come somewhat to her way of doing things she will never amount to anything.

Another matter that divides them is their difference in customs and ceremony. The Japanese are a most punctilious people, not only in forms of expression but in genuflections and scrapings. Korea has not a shadow of this, except from the servile class. She stands erect and says "Peace," and there it ends. She will push by in the rudest way, she will puff smoke into your face and expectorate all round the horizon without regard to king or courtier. So different is she from Japan in all matters pertaining to forms of deportment. The Korean puts down all of Japan's polite expressions to innate deceit. Why should a man bow twice to you if he does not intend to deceive or to knife you? Why should any human being suck in his breath so unless he is going to tell a lie? Japan's way is not Korea's, and therefore it is at once open to doubt and suspicion. Because of his lack of ceremony and seeming rudeness the Korean often meets with a sharp open hand from the lower class Japanese, and, as he never dreams of the cause, he proclaims himself horribly outraged. One is a land of outward ceremony and one is not. Still Koreans are really a polite, considerate, and well-meaning people. They do not know how to express it in ceremonial form, but everyday life with them soon convinces one of this fact.

Another great dividing barrier is dress. In Japan as we all know the freest easiest custom imaginable prevails. A man is never hanged for appearing in public in simply a loin-cloth or for even going stark naked. In Korea, however, to act thus would be dreadful. Koreans never expose their bodies in any such way. A woman shows off her breasts in triumph to proclaim the fact that she is the mother of a son, but to expose the body otherwise is the mark of a barbarian. I once journeyed with an Englishman who pitched his tent up on the hillside away from the village, where he would be unmolested. His habit was to strip on a snowy morning and to pour cold water over himself right there in view of the public. Anyone could see him on the hillside going through the delightful exercise. Of course all the village turned out to see. I lived in an inn and slept meanwhile. The village elders called on me and said:

"You are a civilised guest and act as men ought to act, but the honourable gentleman up on the hill yonder outrages the whole wide world by standing there naked and pouring cold water on himself. Think of our women and girls."

I remarked that I was mortified beyond words to express, but that the gentleman had an inside mind that required cold water all over his outside body every morning and that if they would not look at him it would be well.

"What country is he from?" they asked.

"From Yung-guk" (England) I replied.

"Dear me, we thought England civilised."

"So it is," I said, "but this honourable gentleman has lived long in Japan and drunk much Japan water, hence his present ways." That explained it all. The Japanese were barbarians, and no man, not even an Englishman, could live there and not degenerate. So it is; Japan is responsible for everything.

The Chinese have smuggled along the coast and fished *bêche-de-mer* for years. I have sat on the rocks and watched them, and yet only the Japanese are fish thieves and pirates.

Still another reason for this dislike is the fact that their ideals are different. Japan is a land of *jūjutsu* and the two-handed sword. Mere babies of the sunrise Empire wear soldier caps, carry make-believe guns and shout "Banzai." Their world is the battlefield and their ambition is to rout Kuropatkin. The Korean has no such thought. The goal of his desire is scholarship where he can pose as Confucius or the Yellow Emperor, and lecture his fellow-citizens

in the language of the ancients. One is the land of the sword and one is the land of the pen. With what contempt the Korean regards the Japanese cross-strokes and down-stroke and short-stops and dots. Not one of them will do. Every one of them is lacking in strength, finish, and form. The rascal may rout 400,000 Russians, but he is not civilised, "see how badly he writes that character and even the horizontal stroke one."

Korea is saved from insular disgrace by being stuck fast to the mainland, while in this Japan fails also. The Japanese are referred to as "island savages" or barbarians, while Korea is "little China." Among all the thousands of Chinese characters that express respect and honour, Japan accorded not one of them, but is referred to by the ideograph 倭 (dwarf) a miserable character, undignified in thought and sound. Away back before the invasion of 1591 the King of Korea dreamed that he saw coming in at the Palace gate a wench with a rice sheaf on her head. He called the soothsayers in and made inquiry: "A she-man with a rice sheaf on her head." The soothsayers pondered over it and at last brought forth the character, first the man (人) then rice (禾) and underneath it the female sign (女), making in all (倭) and thus Japanese invasion was first announced.

In religion too they differ. Buddhism has been regarded by Korea as the lowest form of cult for 500 years. Not a priest in Korea, be he ever so learned, but has shot at him day by day lowest forms of address. He may be an old man and gentle as the spring zephyr, but gray hairs are forgotten in his case and he is commanded with a "Ya!" by the commonest riff-raff of the country. A land where Buddhism flourishes must of necessity be an inferior land. Korea, the land of the Master (Confucius), can never come to terms with the land of Sakamoni.

In the matter of surnames likewise in which Korea is so particular they differ also. Kim (金) and Yi (李) and Pak (朴) and Ch'ung (鄭) and a few others hold sway. Usually but a single character is used for surname, and that always in accord with what China has sanctioned, but in Japan no such civilized custom prevails. A man may have one character for surname, or two, or three, or four. Such surnames as were never dreamed of, are being printed in all the newspapers. Even General Hasegawa is ruled out by reason of his name. "Long (長) Valley, (谷) Stream. No excellence of ability can quite atone before Korea for such a surname as this. Some men are even named Miyama (Dog-mountain). A name like this would make a Korean give up the ghost.

This is the way Korea reasons. To win a hundred fights against Russia means nothing in view of Japan's disposition, customs, dress, ideals, and religion. She is hopelessly short of stature and unacquainted with the eternal fitness of things.

To sum up the whole matter Korea's view of Japan is based, not wholly, but to a large extent, on prejudice, ignorance, and superstition. A dislike of Japan is a part of Korea's bone and fibre and to eradicate it will tax Japan's skill to the utmost. She is wise, however, in her day and generation, and doubtless will win in this fight too.

ESSON THIRD.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

### KING EDWARD ON THE CONTINENT.

London, May 5.

After lunching with the Marquis de Breteuil yesterday the King had over an hour's interview with M. Delcassé, of whom one of the guests said that he returned to the Foreign Office manifestly highly pleased. Considerable importance is attached to the incident, in French official circles, especially in view of the fact that King Edward had twenty minutes close conversation with the German Ambassador after the dinner at the Elysee.

### THE KING'S RETURN.

Mr. Balfour, Lord Lansdowne and Mr. Akers Douglas met the King at Victoria Station and at His Majesty's desire presented a reprint. The King had some minutes conversation with them before driving off.

### A GERMAN ORDER.

The German Representative is instructed

to present to the Sultan (? of Morocco) the Grand Cross of the Red Eagle set in brilliants.

### THE ANGLO-JAPANESE ALLIANCE.

Viscount Hayashi presided at the dinner of the Japan Society. Lord Redesdale, toasting the Mikado, extolled the remarkable achievements during his reign and expressed the hope that when the time came to renew the Anglo-Japanese alliance it would be renewed in no grudging spirit.

### RUSSIA AND SOUTH AMERICAN WARSHIPS.

London, May 5.

The *Times*' correspondent at St. Petersburg states that the report that Russia has acquired the Chilean and Argentine navies continues to be denied, but it is intimated, from a good diplomatic source, that these warships will be brought to the Baltic, to serve as a nucleus for a new navy in case Admiral Rojestvensky comes to grief.

London, May 6.

The Argentine Government denies the sale of warships. It says it is willing to sell them but would not dare to deliver them during the war.

### NAVAL MANOEUVRES POSTPONED.

The official grand naval manoeuvres of the British Navy arranged for next month have been postponed as they may cause inconvenience if carried out as planned. If not carried out entirely it is thought they may still afford lessons which it was apparently desired to inculcate by the worldwide manoeuvres mentioned in a telegram of Dec. 10th last. The postponement is possibly due to the desire to have a large fleet in home waters on the occasion of the visit of the French Squadron.

### THE UNREST IN RUSSIA.

London, May 7.

Despite the police prohibition a great secret meeting of delegates of numerous provincial Zemstvos has been held in Moscow to formulate the principles for the establishment of a national assembly.

### STRENGTHENING THE SQUADRON.

Reuter's Melbourne correspondent learns that H.M.S. *Cadmus* has been ordered, along with H.M.S. *Clio*, to join the China station.

### THE POSTPONED MANOEUVRES.

Later.

The countermanding of the British naval manoeuvres is evoking speculation of every description, but it is generally understood that it is due to the continuance of the war and to an apprehension that world-wide manoeuvres such as were intended would cause a delicate situation while the battle fleets of Russia and Japan are at sea. Besides it would be inconvenient to deplete the China Squadron at the present moment.

### THE TZAR AND HIS OFFICERS.

London, May 8.

The Tzar addressing 1,150 cadets who have been promoted to be officers, at Tzar-selo, mentioned that they had been promoted four months earlier than usual owing to the heavy loss of officers in Manchuria.

### RACE HORSE SALE.

Bass, the owner of Sceptre, has bought the stallion Cylene for 30,000 gns.

### DISTURBED RUSAW.

London, May 9.

There is a strong anti-Semitic feeling in Warsaw in consequence of the Jewish shopkeepers and cab-drivers ignoring the socialists' manifesto.

Prominent persons are persuading the Governor to investigate the disturbances of

the 1st of May with a view to allaying popular irritation.

#### "THE TIMES" ON FRENCH NEUTRALITY.

London, May 9.

A significant article appears in *The Times* declaring that no more deplorable error can be committed by France than to suppose that the complaints of Japan can be treated lightly. While everything must be done to prevent any rupture of the present *entente*, France must remember that Great Britain can have no choice but to comply with her obligations if the facts alleged by the Japanese are established and Japan calls upon Great Britain to fulfil the conditions of the alliance.

#### THE POSITION OF FRANCE.

The Japanese Minister at Paris (Mr. Motono) had a prolonged interview with M. Delcassé on Sunday. The markets are weak on account of the international situation.

#### BRITISH REPRESENTATIONS TO FRANCE.

It is understood that Lord Lansdowne has made earnest representations to France with reference to the necessity of a strict observance of neutrality.

An official statement issued at Paris declares that the French Government not only sent positive instructions to the authorities in Indo-China to enforce the neutrality regulations but have unremittently seen to the execution of those instructions.

#### ROJESTVENSKY'S DOINGS.

London, May 9.

In reply to Mr. Joseph Walton, M.P. for the Barnsley Division of Yorkshire, Mr. A. J. Balfour, the British Prime Minister, stated in the House of Commons that the French Ambassador had supplied him with the following information: As soon as Rojestvensky's presence at Kamranh was known, representations were sent to St. Petersburg, the result of which was that the Tsar himself ordered instructions to be telegraphed to Rojestvensky to leave Kamranh Bay immediately. The Russians were subsequently reported at Honkohe Bay a few miles north, when Admiral Jonquières was sent there to inspect. He found Rojestvensky's Squadron there, though not within territorial waters. Thereupon the Governor-General of Indo-China, who had been instructed to see that neutrality was respected, sent the Resident at Nhatrang to ask Rojestvensky to leave, and Rojestvensky promised to leave on May 3.

As regards assistance from French authorities at Kamranh Bay, Mr. Balfour was informed that only two Frenchmen were there, neither of whom was an official but both were only holders of concessions from the French Government.

#### THE QUESTION OF FRENCH NEUTRALITY.

London, May 10.

The Japanese Minister in Paris, M. Motono, in his interview with M. Delcassé, pointed out to the French Government the facilities accorded to Russia for concentration and victualling on the coast of Indo-China.

M. Delcassé assured the Japanese Minister that France scrupulously respected her neutrality.

The papers admit that the situation is unsatisfactory, but do not consider it critical. ADMIRAL ROJESTVENSKY SAILS.

London, May 11.

It was reported from Nhatrang on the 9th of May that Admiral Rojestvensky, who has been cruising off the Bay of Banfong for several days, left to-day with the whole of his fleet.

#### SIBERIAN RAILWAY BLOCKED.

The circum-Baikal railway is blocked owing to avalanches.

#### PROPOSED RUSSIAN PARLIAMENT.

The Russian Minister of the Interior has drafted a scheme, liable to modification, for the establishment of a form of parliament. It would consist of two houses, whereof the lower consists of 550 elected deputies, while the existing council of the empire would constitute the Upper House.

#### PRINCE ARISUGAWA IN ROME.

Prince and Princess Arisugawa have been received at the Quirinal, Rome.

#### THE MACDONELL INCIDENT.

The House of Commons has rejected a vote of censure moved by Sir H. Campbell-Bannerman in connection with the Macdonnell incident.

(Received at the Imperial Head Quarter; 6th inst.)

#### NEWS FROM MANCHURIA.

Our troops advancing northward from the Tunghwa direction, gradually drove back the enemy's cavalry, and on the 1st instant reached Tiao-yutai (about 28 miles north of Tunghwa).

In the Changtu direction on the forenoon of the 4th about 2 sotnias of the enemy's cavalry accompanied by Hunghtsz approached Sufangtai and Rhshihlipau (some 8 miles north of Changtu) but were driven back by our troops. The enemy left 2 dead, 2 wounded and 4 riding horses.

Our troops which are advancing from the Fakumun direction northward towards Feng-hwa, drove back the enemy at Rhsiaotun and Tahsiatun (about 32 miles north of Fakumun) on the 4th instant, and at 7 p.m. occupied Papautun.

[This brings the Japanese within 20 miles of Feng-hwa.—Ed. J.M.]

(Received at the Imperial Head Quarters.)

#### BATTLE OF YINGEPIENMUN.

On the 9th instant at 10 a.m. a force of the enemy consisting of about two regiments of infantry, five sotnias of cavalry, and one battery of artillery advanced against our position at Yingepienmun from the direction of Nanshanchingtsz, which is some 15 miles east of Yingepienmun. From about 2 p.m. they attacked resolutely under cover of artillery fire. They pushed up to within 100 metres of our position. Our troops in occupation of Yingepienmun returned the fire, inflicting heavy losses, and at 4 p.m. the enemy retired in the direction in which they had come. In this fight the enemy left 60 dead and 160 wounded on the field. Further, a number of killed and wounded, in Chinese costumes, were carried off on stretchers. The enemy's total loss cannot have been less than 400. We had one soldier killed and 50 wounded.

There is no change in other parts of the field.

(RECEIVED AT THE NAVAL DEPARTMENT.)

#### THE VLADIVOSTOCK RAID.

The Mayor of Sapporo telegraphs as follows:—"On the 5th instant at 11.30 a.m. four torpedo-boats of unknown nationality surrounded a sailing ship off Mochida and were heard to fire two shots. The sailing vessel took fire and the torpedo-boats stood out to sea steering in a northerly direction. Boats were sent out to succour the vessel but they were unable to accomplish anything owing to the state of the wind and the tide."

The Chief of the Hokkaido Administration telegraphs as follows:—"The torpedoers mentioned in my last report were Russian.

Three of the four were about 100 feet long each, and the fourth was 130 feet. They were all two-funnelled. They approached Mochida Cape from the offing, and surrounding the sailing vessel, ordered the crew to leave her. They then threw kerosene on the deck and discharged two shells which set her on fire. They made a prisoner of the master and steamed off northward, but the crew, ten in number, have arrived safely at Kotaniishi.

#### THE THIRD SQUADRON.

News has been received in a trustworthy quarter to the effect that the Third Squadron, consisting of the *Nicholai First*, the *Oushakoff*, the *Apraksin*, the *Seniavine*, the *Vladimir Monomakh* and 7 transports, passed the Straits of Malacca before dawn on the 5th instant.

(RECEIVED AT THE FOREIGN OFFICE.)

#### AUSTRALIAN POLITICS.

The question of extending the franchise to women has long been on the tapis in Queensland (Australia). A bill has now passed both houses of the legislature and has received approval, conferring the franchise on all females from 20 years upwards. From the date of this new law's promulgation female voting will become an accomplished fact.

#### THE BALTIC SQUADRONS.

The master of the French S. S. *Hongkong* which arrived at Hongkong on the 5th instant from Haiphong, reports that the French Government has ordered Rojestvensky's Squadron to leave Banfong Bay, and that he is now about to change his anchorage to Hainan Island. Part of his ships are already on their way thither and another part should have arrived there. This intelligence was received on the 3rd at the Haiphong office.

A telegram from Singapore says that the Third Russian Squadron passed Malacca on the 4th at 3 p.m., and on the 5th at 5 p.m. passed Singapore. Ten vessels, 6 of them being war-ships, were seen from Singapore but owing to the state of the weather the exact number of ships could not be distinguished.

#### GERMANY AND NEUTRALITY.

The Police Officials at Lübeck have put an embargo on a torpedo-boat under construction by the Germania Company at Kiel, apprehending that it is intended for export to Russia in violation of German neutrality. The boat was to have been taken apart at Kiel and sent by rail to Lübeck, whence it would have been shipped to Helsingfors in Finland.

#### AIMS OF RUSSIAN IMPERIALISTS.

According to a Russian telegraphic agency, the Imperial party at Moscow published on the 5th inst., a manifesto, of which the following is the gist:—

The object of our party is to secure the continuance of tranquillity. If the Emperor deems it necessary to adopt a stronger course than at present our party will always lend assistance to the Government. The reforms should be carried out after domestic disorders have ceased and after victory has been gained over Japan. As for the nature of reform, its object should be to strengthen the unlimited power of the despotic government; to make the country great and at the same time to freely develop the moral enlightenment of the people and to add continually to the peace and prosperity of the farmers and artisans, thereby promoting the independence of local finances and making the Empire greater and more powerful.

## PRINCE ARISUGAWA.

Prince and Princess Arisugawa arrived at Naples on the 7th inst.

## GENERAL KUROPATKIN.

The *Standard's* St. Petersburg correspondent says that General Kuropatkin will soon retire to his native place in the interior of Russia, and that, according to a statement made by the War Office, General Sarbaeff, now commanding the Fourth Siberian Army, will succeed him.

## ADMIRAL CHIROFFSKY.

The Central News Agency Correspondent in St. Petersburg wire that Admiral Chiroffsky will have command of the Fourth Squadron.

## RUSSIAN REFORM MOVEMENT.

According to intelligence from Moscow the representatives of the provincial zemstvos now in session there adopted the following resolutions on the 8th instant:—(1) By 127 votes to 8 that the ordinary system of election be adopted. (2) By 87 to 49 that the elections be direct. (3) By 107 to 29 that there be two houses. A proposal that the house of representatives be merely an office for answering questions was rejected, and so were two proposals that the representatives be elected by each class of the people separately and that the elections be secret. These decisions were prompted by an apprehension that the agricultural class, having little political intelligence, might be awayed by the administration or the local officials.

Referring to the optimistic view held by some persons that the Government would make all needful concessions without being pressed by the people, a representative pointed out the error of such a view and cautioned the people not to be deceived by the Government's promises.

It is said that the persons present at the above meeting entertain the belief that unless the present bureaucracy be suddenly attacked by the people's party, it will continue to wield power for 2 or 3 years longer.

## THE RUSSIAN SQUADRON.

With reference to the behaviour of the Russian Squadron in Honkohe Bay, the French Minister of Foreign Affairs on the 7th instant made to the Japanese Representative in Paris a reply of which the following is the gist:—

"Since the Kamranh Bay occurrence the French Government, adopted due measures to instruct its civil and military officers that a strict watch must be kept along the coast, and that should any war-vessels or merchantmen of a belligerent Power attempt to enter French territorial waters, they must be ordered to depart. Further, on receipt of intelligence that the Third Russian Squadron was drawing near, the French Government again adopted due measures to instruct its naval officers that a look-out must be kept and that every precaution must be adopted to prevent either war-ships or merchantmen of a belligerent state from entering France's territorial waters. A communication was addressed to the Russian Government also in that sense."

Subsequently to giving the above reply the French Government informed the Japanese Legation in Paris that an official report had been received from the naval authorities in Indo-China in the sense that, on the morning of the 9th instant, not one Russian war-ship or merchantman was visible within Honkohe Bay or immediately outside it.

## THE RECENT RAID.

General Linevitch reported to the Russian Emperor on the 7th instant that, on the 5th

instant, Russian torpedoers, in addition to the Japanese sailing vessel previously surrounded by them, captured another sailing vessel 15 miles off the coast of Japan, and, having taken off her crew of 9 men, sent the vessel to Vladivostock.

## CIRCUM-BAIKAL RAILWAY BLOCKED.

A telegram from Irkutsk to St. Petersburg says that the circum-Baikal Railway has become impassable owing to a landslide.

## MARTIAL LAW.

The same news agency reports that martial law has been proclaimed in Wilna, Grodno and two other towns.

(RECEIVED IN TOKYO.)

## NEW RUSSIAN BATTLESHIP.

The new Russian battleship *Paul I* is to be soon launched. She will be commanded by Captain Yakufureff, one of the survivors of the *Petropavlovsk*. The *Paul I* will have a displacement of 16,630 tons, a speed of 18 knots, and a principal armament of four 12 inch and four 8 inch guns.

(RECEIVED BY THE "HOCHI SHIMBUN.")

## THE BALTIC FLEET.

Hongkong, May 4.

A ship's crew who arrived here this morning, say that on the 28th of April they saw 40 Russian ships at Banfon. The *Peterfrei* and another cruiser were keeping guard outside. Further, a ship called the *Hein* which arrived from Bangkok, saw the Russians at Banfon on the 30th of April.

(Banfon is on the north of Binkan Bay and the south of Hanko Bay. The part within Banfon Bay near the shore is Hanko Bay. In fact, Banfon is the entrance to Hanko).

Four battle-ships belonging to the Third Squadron and several ships of war have been sighted in the Malacca straits, according to a telegram. This morning a steamer is said to have sighted the Third Squadron near Penang.

[We can not find that there is any official news of the Third Squadron reaching Penang. Nevertheless the *Hochi's* intelligence may be correct.

It is stated in Tokyo that certain transports having been observed carrying northward the coal stored at Saigon, an inquiry was addressed to the French local officials as to whether the coal was intended for the Baltic Squadron. They replied certainly not, and explained that the coal was for transport purposes. It may be inferred that the Baltic Squadron is at some point north of Saigon.

As for the statement that the Baltic Squadron, or part of it, is in Lingshuiwan on the south coast of Hainan, there are very good reasons for doubting whether such is the case. This bay has a length of 15 miles and a depth of 4 miles. In the middle there are several sand-banks, and on the west near the Bay are two very small islands, between which and the shore there is no good anchorage. Near these islands on the bank of a river there is a town of some size called Tongkin, and at the west point on the south of the Bay stands a light-house. The Bay is completely open to the south-east, and not only does it not offer any safe anchorage at any time, but also just at present it is particularly perilous on account of cyclones. Nothing seems less likely than that the Russians should have chosen such a harbour, and doubtless the reports circulated that they have done so are inspired by some special motive.]

## THE ARGENTINE STORY.

London, May 6.

News from St. Petersburg says that three steamers with marines and ammunition on board are leaving Kronstadt and that their object is to take over the war-ships purchased by Russia from the Argentine Republic.

## JAPAN AND FRANCE.

*Le Matin* denies that there has been any conference between the Secretary of the Japanese Legation and M. Delcassé with regard to the neutrality question.

## CONTINUED DISTURBANCES IN POLAND.

The disturbances continue in Warsaw and Lodz.

(RECEIVED BY THE "ASAHI SHIMBUN.")

## THE VLADIVOSTOCK RAID.

Tsugaru, May 6.

The *No. 3 Yawata Maru* has been fired on but her crew are safe. The light-houses at Inaho, Hiraiso and Kamitake have extinguished their lights. A telegram has been received that the Russian vessels subsequently passed Rijiri Island going north.

## SOUTH AMERICAN WARSHIPS.

London, May 5.

It is publicly denied that Russia has acquired the war-ships of Chili and Argentine, but in diplomatic circles the rumour is that these ships have entered the Baltic and are to form the nucleus of a new Russian navy should Rojestvensky's Squadron be destroyed.

## RUSSIA WANTS TO SELL RAILWAYS.

It is reported that Russia wants to sell her three most profitable railways for 800 millions sterling.

## THE VLADIVOSTOCK CRUISERS.

Hakodate, May 11.

A sailing ship, the *Yeioku Maru*, which entered Esahi this morning at 7 o'clock reports that on the 9th at a point 20 miles N.W. of Fuka-no-ura, in Awomori Prefecture, 2 Russian war-ships were sighted steering towards Hakodate. One had 3 masts and 4 funnels; the other two masts and 4 funnels. The *Yeioku Maru* was stopped and visited but allowed subsequently to proceed.

## AMERICAN TOPICS.

It has been decided to appoint three foreigners as members of the advisory board, or consulting engineers, of the Isthmian Canal Commission, one from Great Britain, one from Germany, and a third from France. Each of these governments has been asked to designate an engineer for the board.

It is announced that the Canadian Government has decided to grant a bounty of \$6 per ton to encourage steel shipbuilding in that country. The city of Halifax and the other municipal authorities, some time ago, offered a joint cash subsidy of \$300,000 to any company that would establish a shipbuilding plant at Halifax.

Richard Creedon, a labourer of New York, met one of the strangest accidents that could possibly happen to a man a few weeks ago. While working in the Brooklyn and Manhattan subway lines and while attempting to stop a leakage with bags of sand, the whole roof was blown out and the tremendous force of the compressed air drove him through the hole and twenty feet above the water of the East river. He was rescued by bystanders.

Paul Leroy-Beaulieu, the French economist, throws some light on the much discussed question of where the gold output of the world has gone since 1890. He says that of the \$2,800,000,000

gold shown this year in the reserves of the world's banks of issue, and in that of the United States Treasury, a little more than one-half has been accumulated since the great expansion in gold output, or since the above date.

The Baldwin Locomotive Works during the month of March broke not only its own record for a month's production, but that of any single locomotive works in the world. During that month the company completed 216 new locomotives, of which 216 have been shipped to the buyers, and the other ten were ready for shipment. The Baldwin Works are still very busy, and nearly 15,000 men were working day and night, so April promised to be also a heavy one.

Professor Charles Frederick Chandler, dean of the school of mines of Columbia University, has fallen in love at the age of 70 years. His engagement has been announced to Augusta Berard, daughter of the late Charles Berard of New York. As a consulting and analytical chemist, Professor Chandler stands at the head of his profession. He has held the chair of chemistry at Columbia since 1864, and was retained recently to analyze the air in the subway when physicians declared that it held dangerous impurities.

The terms of a quit claim deed filed in the recorder's office at Clayton, Mo., recite that an estate of \$10,000 is to go to one of the four single daughters of H. W. Hough who remains unmarried. According to the deed, the sisters are to share equally as tenants in common while they remain single. If one marries her interest is to inure to others. If all marry but one, she is to have the fee simple to all the property. If, however, she, too, marries, she is to be deprived of all interest in the property. In that event, the deed stipulates, "the whole of the property shall vest in either of them who shall be a widow."

The number of tourists and other visitors who have "done" Mexico during the past winter, has broken all previous records. It is a noticeable fact, too, that each succeeding year witnesses a decided improvement in the character of this influx of strangers. Gradually there is manifested more interest in industrial and commercial conditions and opportunities in proportion to the passion of examining old churches and historic mounds, looking through pawn shops, visiting bull fights and purchasing antiquities of more or less doubtful authenticity. The change is encouraging.

Professor William Bailey of Yale University publishes in the *World To-day* his statistics of the expenses of Yale students. Bailey concludes: "For every dollar spent by the poorest men the wealthiest spend \$8.43. They spend a little over four times as much on stationery, six times as much on necessities, eighteen times as much on pleasure and eighty-two times as much on tobacco and intoxicants. This shows the danger of too liberal an allowance in its clearest light. Except for travelling, clothing and books, there are but slight differences in the amounts spent on those things which are indispensable by a man with an allowance of \$100 and his classmate with \$2,000. The proportion which goes to pleasure and intoxicants is entirely too large. It not only demands a large expenditure of time that could be better applied to college work, but it renders the student less fit to do the studying required."

#### COMPARATIVE TEST OF BOILERS.

H. M. S. *King Edward VII.* returned to Devonport on Feb. 24th after a series of exhaustive steam trials, and competitive tests of the relative value of the two types of boilers fitted in her, viz., the Scotch cylindrical and the Babcock and Wilcox's water-tube boilers. So far as coal consumption and development of horse power are concerned, the water-tube boilers proved their superiority, as is shown by the following table of the results of four trials, each of eight hours' duration, which took place that week:—

	Babcock & Wilcox boilers.	Scotch cylindrical boilers.	Babcock & Wilcox boilers.	Scotch cylindrical boilers.
Boiler steam pressure gauge	196	191	188	190
Revolutions	66.4	65.2	87.1	84.3
Air pressure	Nil.	Nil.	0.8	0.95
Indicated horse-power	3,739	3,634	7,510	6,689
Coal consumption I.H.P. (lbs.)	174	1.8	1.87	1.88
Water lost, tons	8.48	7.9	Not taken.	6.52

During the trials the gun crews were exercised at quarters with the dummy guns, to test their value as training instruments for rapidity of loading. The results were highly gratifying. In the test of the 6in. gun dummy, fifteen rounds were loaded and expended by an untrained crew in 1.35 min., and the maximum expected, viz., ten rounds in one minute, was attained. The trial of the main machinery was in the highest degree satisfactory, the engines working with perfect ease throughout. The joints of the pipes and all the parts which entailed accuracy and mechanical care stood every test to which they were subjected. Messrs. Harland and Wolff, the engine contractors, and their officers are to be congratulated on the splendid results attained.

In the course of the debate on the Navy Estimates in the House of Commons, Mr. Pretyman, Civil Lord of the Admiralty, observed that the Admiralty hoped to effect a further reduction in expenses next year, but, on the other hand, there might be an increase. The trial of oil fuel had now passed the purely experimental stage, and now not only ships, but squadrons, were able to burn it. Every ship now under construction would be built to carry oil as well as coal. The two would be burned in combination. As to boilers, the Boiler Committee at first recommended that ships should be fitted in the proportions of one-fifth cylindrical and four-fifths water-tube boilers. Further experiments, however, convinced them that the Yarrow and Babcock and Wilcox types of water-tubes were so efficient that cylindrical boilers could be dispensed with, and accordingly the ships under construction were being fitted with these water-tube boilers only. The Admiralty did not contemplate any return to the Belleville type.

# FOR BABY'S SKIN SCALP AND HAIR

## Something for Mothers to Think About

EVERY CHILD born into the world with an inherited or early developed tendency to distressing, disfiguring humours of the skin, scalp, and blood, becomes an object of the most tender solicitude, not only because of its suffering but because of the dreadful fear that the disfigurement is to be lifelong and mar its future happiness and prosperity. Hence it becomes the duty of mothers of such afflicted children to acquaint themselves with the best, the purest, and most effective treatment available, viz., THE CUTICURA TREATMENT.

Warm baths with CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, gentle anointings with CUTICURA OINTMENT, to instantly allay itching, irritation, and inflammation, and soothe and heal, to be followed in the severer cases by mild doses of CUTICURA RESOLVENT PILLS (see below), to cool and cleanse the blood, are all that can be desired for the alleviation of the suffering of skin-tortured infants and children and the comfort of worn-out, worried mothers. A single set is often sufficient to cure when the best physicians fail.

## Millions of Women Use Cuticura Soap

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itching, and chafing, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, in the form of washes for clearest weaknesses, and for many sensitive, antiseptic purposes which readily suggest themselves to women, especially mothers, and for all the purposes of the toilet, bath, and nursery.

CUTICURA RESOLVENT PILLS (Chocolate Coated) are prepared to meet the wants of delicate women, and sensitive children, and are pure, sweet, and tasteless. They are beyond question the most successful blood purifiers and humour cures yet compounded.

CUTICURA PREPARATIONS are sold throughout the world. Australian Depot: R. TOWNS & Co., Sydney. British Depot: 27-29, Charterhouse Sq., London. French Depot: 2 Rue de la Paix, Paris. Forras Dose and Cases. Other, Sole Proprietors, Boston, U. S. A. "All about the Skin," free.

## WASTE SILK.

Small daily doings—but there is no life in the market and the remaining stock is of undesirable qualities.

FORM OF SKIN DISEASE.**

Manufactured only at 54, New Oxford St. (into 553, Oxford St.),  
London. Sold by all Chemists and Medicine Vendors.

Bovril is an ideal food  
for the strong and the  
weak. Bovril imparts  
extra vigor to the healthy,  
greater strength to the  
ailing. Bovril is, more-  
over, a true friend in the  
kitchen. It adds nourish-  
ment, and gives a delight-  
ful "twang" to soups,  
sauces, gravies and  
entrées.

### VESSELS ON THE BERTH.

For KEELUNG, via Moji (from Kobe), 3rd, and  
18th every month, at Noon, the "SATSUMA MARU."  
—Nippon Yusen Kaisha.

For BREMEN and Hamburg, via ports, May 13th, at  
9 a.m., the "ROON."—H. Ahrens & Co., Nachf.

For NEW YORK, via ports and Suez Canal, about  
May 13th, the "ERROLL."—Dodwell & Co., Ltd.

For HONGKONG, via Kobe, Inland Sea, Nagasaki,  
and Shanghai, about May 15th, the "EMPRESS OF  
CHINA."—Canadian Pacific Railway Co.

For VICTORIA, B.C., and Tacoma, Wash., May  
15th, the "LYRA."—Dodwell & Co., Ltd.

For SHANGHAI, via Kobe, Moji, and Nagasaki, May  
17th, at 2 p.m., the "BENVORLICH."—Nippon Yu-  
sen Kaisha.

For CANADA, United States, and Europe, via Van-  
couver, B.C., May 19th, at Noon, the "EMPRESS  
OF JAPAN."—C. P. R. S.S. Co.

For SEATTLE, Wash., via Victoria, B.C., May 19th,  
at 2 p.m., the "KANAGAWA MARU."—Nippon Yu-  
sen Kaisha.

For NEW YORK, via ports and Suez Canal, about  
May 20th, the "AFRICAN PRINCE."—American  
Trading Co.

For MARSEILLES, via ports, and Shanghai, May  
20th, at 7 a.m., the "ERNEST SIMONS."—M. M.  
S.S. Co.

For MARSEILLES, London, and Antwerp, via Kobe,  
Moji, Hongkong, Singapore, Penang, Colombo,  
and Port Said, May 20th, at Noon, the "BANTU."  
—Nippon Yusen Kaisha.

For BRISBANE and Sydney, via Hongkong and New  
Guinea, May 20th, the "PRINZ SIGISMUND."—  
H. Ahrens & Co., Nachf.

For SAN FRANCISCO, via Honolulu, May 20th, at  
3 p.m., the "CHINA."—P. M. S.S. Co.

For HONGKONG, via Kobe, (Inland Sea), Nagasaki,  
and Shanghai, about May 23rd, the "KOREA."—  
P. M. S.S. Co.

For MARSEILLES, London, and Antwerp, via Kobe,  
Shanghai, Hongkong, Straits, Colombo, and Port  
Said, May 23rd, at Daylight, the "SOCOTRA."—  
P. & O. S.N. Co.

For HAVRE, Hamburg and Bremen via ports, May  
23rd, at Daylight, the "C. FERD. LAEISZ."—C.  
Illies & Co.

For PORTLAND, Ore., May 25th, the "ARABIA."—  
P. & A. S.S. Co.

For HONGKONG, via Kobe, Moji, and Manila, about  
May 30th, the "PLEIADES."—Dodwell & Co., Ltd.

For AUSTRALIA and New Zealand (from Kobe), May-  
31st, the "CHANGSHA."—Butterfield & Swire.

For HONGKONG, via Kobe, (Inland Sea), Nagasaki,  
and Shanghai, about June 1st, the "COPTIC."—  
O. & O. S.S. Co.

For AUSTRALIA, via ports (from Kobe), June 2nd,  
the "EASTERN."—Carnegie & Co.

For SAN FRANCISCO, via Honolulu, June 3rd, the  
"DORIC."—O. & O. S.S. Co.

For VICTORIA, Seattle, Tacoma, Wash., June 3rd,  
the "NINGCHOW."—Butterfield & Swire.

For CANADA, United States, and Europe, via Van-  
couver, B.C., June 3rd, the "ATHENIAN."—Can-  
adian Pacific Railway Co.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 20TH, 1905.

## BIRTH.

On the 13th inst., at No. 172 Yamashita-cho, Yokohama, the wife of E. M. HOBART-HAMPDEN, of a Son.

## DEATH.

On the morning of the 13th inst., at No. 179-E Bluff, Yokohama, DONALD, the beloved son of Mr. and Mrs. W. D. Stuart Edwards, aged 3 years and 2 months.

## SUMMARY OF NEWS.

THE destroyer *Hatsushimo* ("first frost") was launched on May 13th at Yokosuka.

A CASE of small-pox was reported on May 11th among the crew of the British steamer *Kintuck* at Nagasaki.

THE *Kanagawa Maru* arrived on May 13th at Moji with yen 450,000 of Japanese gold coins from Shanghai.

GENERAL BARON KAWAMURA, Commander of an Army in Manchuria, has been promoted to the Third Senior Rank.

CAPT. PRICE KUNI, who has been at the front since the outbreak of the war, will return before the beginning of July.

MR. T. SATO, a police-inspector of the Yokohama Central Police office, has been appointed to the Korean Police Bureau.

IN the Yokohama District Court, G. Kikuchi and K. Taniguchi, two jailers of Negishi Prison, Yokohama, were sentenced on May 15th to four years' imprisonment with hard labour and six months' police surveillance. The charge was that

they sold the private clothes of convicts. The accused lodged an appeal on May 16th in the Tokyo Court.

NINE guns, seven ammunition wagons and sundry other spoils captured at Mukden were brought on May 12th to Moji.

THE dividend for the second half year of 1904 declared by the Hokkaido Railway Co. is 3 per cent., or 6 per cent. per annum.

ON Sunday, 245,000 *kin* of new tea was put on the Yokohama Market; 204,800 *kin* were sold, and 243,500 *kin* went into stock.

COLONEL ISHIWARA has been appointed staff officer of the Eleventh Division (Marugame) and he left Kochi on May 12th for the post.

THE death is announced of Zit Seng Foo, the comrade of the Shanghai Branch of the Hongkong and Shanghai Banking Corporation.

FOUR Russians who recently escaped from prison at Fukuchiyama were arrested on May 11th at Shirosaki, Tajima province, near Kobe.

AN official telegram says that on the night of May 12th fire broke out in a village of Oukai, Yamagata prefecture destroying 52 buildings.

A DEAD rat infected with plague was found on May 13th at Hamaguricho, Fukagawa, Tokyo, where two cases of the disease had been reported.

A CASE of plague has appeared in Kanda-machi, Naniwa, Osaka, the patient being a young girl three years old. She died on the night of May 9th.

PRINCESSES TSUNE and KANE, the daughters of the Emperor, returned on May 15th from Odawara, arriving at Shimbashi by the 2.10 p.m. train.

THE friction between Lord Kitchener and General Elles, the military member of the Viceroy of India's Council, is of the acutest character.

THE *Jiji* publishes a telegram from Moji that at the present time, floating mines are repeatedly observed in the Gulf of Pechili, and dense fogs are being experienced.

MAJOR-GENERAL IMAHASHI, who had been under treatment in the Himeji hospital, having recovered, left there on May 14th. By the evening train he started for Tokyo.

THE Nippon Yusen Kaisha will hold an ordinary general meeting on May 26th and will declare a dividend for the last half year of 6 per cent. or at the rate of 12 per cent. per annum.

THE construction of a railway between Seika and Kolston (20 miles) a portion of the Taipei-Tainan Railway, Formosa, having been completed, traffic was opened on May 15th.

R. YAMAGISHI, a bookseller of Tokyo, has been sentenced in the Tokyo District Court to one month's imprisonment on a charge of having published several pictures injurious to public order.

THE steamer *Chuyetsu Maru*, which recently sustained severe damage by coming into contact with a floating mine off Port Arthur, was brought to Dairen on May 16th to undergo repairs.

M. TANIDO (32) formerly an employee of the Oriental Palace Hotel, Yokohama, has been arrested by the Kaga-cho police on a charge of having stolen a gold watch from one of the guests—the name being given by the police as

Miss K. Miller—while he was employed at the hotel. On searching his dwelling, several valuable articles, which are suspected to have been likewise stolen, were found.

CAPTURED steamers still under examination by the Yokosuka Prize Court are: the British ships *Scotsman*, *Apollo* and *Harborton*, the American *Tacoma*, the German *Romulus* and Norwegian *Nery Balkow*.

MAJOR-GENERAL NAKAMURA having recovered from the wounds which he sustained at Urlung-shan, Port Arthur, returned on May 10th from Atami, and was appointed to the Military Education Department.

ABOUT noon on Saturday, fire broke out in the compound of the Yokohama Railway Station causing damage to thirty-five bales of American cotton. It was put out before further damage was sustained. The cause was tobacco ashes.

COUNT M. ASUKAI and VISCOUNT HONAMI of Kyoto, says the *Hochi Shimbun*, have been punished in the Nagoya Appeal Court with four months' imprisonment with hard labour, and fined yen 50 respectively, on a charge of fraud.

THE Seoul-Fusan Railway Company intend to present four porcelain vases to the Korean Court in commemoration of the opening ceremony of the railway which will shortly be celebrated. The vases were forwarded on May 14th from Tokyo to Seoul.

THE OSAKA SHOSHIN KAISHA's chartered steamer *Teucer* arrived on March 11th at Nagasaki with about two hundred passengers from Takao, Anping and other ports of Formosa. Many of them are women and children. According to the crew, the general state of the island is quiet.

THE Japanese Admiralty has decided to sell by tender on May 12th the German steamer *Romulus* (2,640 tons gross) which lies off the village of Misawa, Kamikita, near Sapporo, stranded. She was captured on February 25th on her way to Vladivostok with 3,500 tons of Cardiff coal.

THE steamer *Sarthe*, which the Naval Department recently purchased, has been renamed *Sarukashi Maru*, and the German steamer *Soverus*, which was captured on Feb. 24th, *Shibetoro Maru*. The former belongs to the Sasebo Naval Station and the latter to the Kure Naval Station.

MR. NOGUCHI ICHITARO (known as Neisai in literary circles), a well-known poet of Tokyo, who was suffering from brain fever, died on May 12th. He was 39 years old. The funeral took place on May 14th at the Aoyama Cemetery. He was the eldest son of the late Mr. Noguchi Shoyo, a widely known Chinese scholar in Tokyo.

THE captain of the British steamer *Woodford* now in port has sent to the Harbour police a dirty Japanese cloth, a silver watch and a purse containing a small amount of money which were found on board the ship on the night of May 12th. The police believe that the property may belong to a thief who was discovered by the crew that same night but escaped capture.

YOKOHAMA was visited on Thursday forenoon soon after ten o'clock by a rain-storm which exceeded in violence and duration any recent down-pour. The storm lasted some twenty minutes and its effect was to fill some of the streets in the Settlement above the pavements, the drains failing to take away the water quickly enough. No actual damage has been reported, but so sudden was the descent of rain that a considerable quantity of water found its way into the basement of the Hotel de Geneve and had to be bailed out.

## THE BALTIC SQUADRON.

Friday, May 12.

The *Kokumin Shinbun* says that news having been received in Peking of the arrival of Rojestvensky's ships at Hainan, the Japanese Representative urged upon China the importance of enforcing her neutrality. But what can China do in the way of enforcement? The Russian Admiral has shown himself wholly unscrupulous as to the neutrality of other nations, and, having exhausted France's patience, he will probably now commence his trespasses in Chinese ports.

Meanwhile there is a lull in the receipt of news about the movements of his vessels. Assuming that he is no longer at Honkohe, it would follow that he left that place at some time between the 7th and the 9th for he certainly was still there on the 6th. As to Hainan, there is no general belief in his presence there yet, though some of his cruisers may have gone thither. One report, which still awaits confirmation, says that after leaving Honkohe Bay Rojestvensky proceeded south. At any rate it is strange that if he steamed away on the 9th his squadron has not yet been sighted.

Hongkong says that not only are the Indo-Chinese telegraphs under strict censorship, but that messages are actually held up without the knowledge of their senders. It also says that the Governor-General is sincerely desirous of enforcing French neutrality, but that his subordinates sympathise so strongly with Russia as to defy his orders.

The *S. S. Coromandel* which has just reached Singapore, says that on the 9th instant she saw 22 Russian warships and 10 transports at anchor in Vangong Bay (?) and at midnight on the same date she sighted 4 Russian ships off Padran Point (?). By "Vangong" may be meant "Vangan" which is the western entrance to Haitan Strait, but that is very doubtful; and as for "Padran Point," we can not identify it at all.

Saturday, May 13.

There is a dispute about the detention of the German steamer *Taiwan* at Shanghai. The *Taiwan* has a cargo of Cardiff coal in bags. There can not be any reasonable doubt that the coal is intended for the use of the Baltic Squadron. The Taotai applied to the German Consul-General to detain her. He answered that Shanghai being a Chinese port, it was for the Chinese authorities to detain the vessel if they pleased, in which case they would have to bear the responsibility. The master of the steamer declares that the coal is not intended for the Russians, and threatens to claim damages if he be longer detained. To that the Taotai has replied by asking for guarantees that the steamer will not supply coal to the Russians. The German Consul-General declines to call for any such guarantees.

Sunday, May 14.

According to the *fiji Shinbun* a telegram has been received in Tokyo saying that although the French Government announced the departure of the Baltic Squadron from Honkohe Bay on the 9th instant, or to speak more correctly, declared that no Russian vessels were to be seen inside the Bay or in its vicinity on the morning of that day, the ships were actually seen in the Bay on the afternoon of the 9th. The *Asahi Shinbun* also alleges that according to information received in a trustworthy quarter, the ships were at Banfon on the 9th. There may appear to be here a contradiction in the places named, but as a matter of fact Banfon is the name

of a bay at the southern entrance of Honkohe. The entrance to Honkohe is guarded by three islands, the largest, Kua, being on the north and the two others at the south. The space inside the two smaller islands takes the form of an inlet having Honkohe point for its innermost cape. This space is Banfon Bay. Inside Honkohe point lies Honkohe Bay. Again, the space inside the large island of Kua and the mainland is called Binkoi Bay. Thus the various references recently made to Honkohe, Banfon and Binkoi are all indicative in reality of the same place.

Hongkong alleges that the French local officials are endeavouring to enforce their country's neutrality, but that Rojestvensky is evading their efforts by cleverly shifting his anchorages while nevertheless enjoying the benefit of the shelter of the Indo-Chinese coast.

The hospital ship of the Third Squadron arrived at Saigon on the 13th instant. This vessel necessarily belongs to the category enumerated by the French Government's reply as being forbidden to enter France's territorial waters. It will be interesting to learn whether she was ordered out of Saigon.

Another telegram from Hongkong alleges that the British ship *Cahrus* (?) is now at Saigon where she is transferring ammunition to the Russian ships. That is quite incredible.

It is not believed in Tokyo that two of the Russian cruisers have reached Vladivostok as St. Petersburg reports. No sign of any Russian ship has been seen at any of the portals of the Sea of Japan.

Monday, May 15.

Shanghai telegraphs that the place is virtually a Russian base. Steamers are purchased and sent out, some with supplies, others to reconnoitre and one to cut the Japanese sub-marine cable. The effect upon the trade of the place is said to be serious. Meanwhile the Commissioner of Customs has refused clearance papers for the steamers *Constantine* and *Taiwan*, in compliance with instructions that clearances are not to be granted to any steamers carrying coal unless the Consul of their nationality gives a written assurance that the coal is not for the use of either of the belligerents. The Russian organs in Shanghai are very vehemently condemning this veto, and are endeavouring to intimidate the Chinese Government by declaring that it will expose itself to all kinds of claims and that China is fast becoming as subservient to Japan as Korea already is.

In two trustworthy sources in Tokyo news was received on Monday forenoon that the Baltic Squadron—the Second Squadron—after leaving Honkohe Bay on the 9th instant, probably in deference to French protests, subsequently returned thither and were quietly at anchor in the Bay on the 12th instant. That is exactly what Rojestvensky did at Kamranh Bay, and his proceedings gave rise to just the same perplexity as they did for a moment at Honkohe. He steamed out of Kamranh on the 22nd of April, having lain there since the 12th of that month; he returned on the 24th, and finally left on the 26th, to repair to Honkohe Bay, 40 miles farther north.

This intelligence imparts a character of complete farcicality to the alleged neutrality of Indo-China and to the protestations of the Government in Paris. As the question is now assuming a character of unhappily the gravest importance, we republish the statement of the French Government made to

the Japanese Representative in Paris on the 7th instant and supplemented on the 11th:—

"Since the Kamranh Bay occurrence the French Government, adopted due measures to instruct its civil and military officers that a strict watch must be kept along the coast, and that should any war-vessels or transports of a belligerent Power attempt to enter French territorial waters, they must be ordered to depart. Further, on receipt of intelligence that the Third Russian Squadron was drawing near, the French Government again adopted due measures to instruct its naval officers that a look-out must be kept and that every precaution must be adopted to prevent either war-ships or transports of a belligerent State from entering France's territorial waters. A communication was addressed to the Russian Government also in that sense."

Subsequently to giving the above reply the French Government informed the Japanese Legation in Paris that an official report had been received from the naval authorities in Indo-China in the sense that, on the morning of the 9th instant, not one Russian war-ship or transport was visible within Honkohe Bay or immediately outside.

It is true that the Russian Government has virtually denied an important part of the Paris declaration, but as between Russia and France there can be no difficulty in assigning the credit of veracity. At all events no one ventures to allege that the French Government did not, by the above official announcement, formally pledge itself not to allow Russian war-ships or transports to enter its territorial waters, or that it did not adduce the departure of the Baltic Squadron from Honkohe Bay as an evidence that French neutrality had been asserted.

Yet now Rojestvensky is once more anchored in the Bay, thus openly evincing his supreme contempt for Japan's protests and his firm conviction that France has no serious intention of discharging her neutral obligations. Rojestvensky is in daily communication with his own Government by telegraph and it follows that he must be acting with his Government's approval. Is it because St. Petersburg has deliberately resolved to behave in this arbitrary manner that the Russian Foreign Office denies any change in the neutrality situation or the adoption of any official steps by France "since the transmission of Japan's first protest." A more perplexing state of affairs it would be difficult to conceive. The one fact which emerges clearly is that Russia is doing just as she pleases, and is freely using Indo-Chinese ports as bases of war-like operations against Japan. Nothing could be more correct than the official attitude of the *Quai d'Orsay*; nothing more strikingly futile. Paris is making immaculate announcements and assurances to Japan; St. Petersburg is denying them. France is proclaiming a definite policy of the strictest neutrality; Rojestvensky and the French officials in Indo-China are making a mere plaything of her proclamations. And Japan is all the while suffering grievous wrong.

Tuesday, May 16.

It is thought certain that a portion of Rojestvensky's Squadron is at Hainan, namely, some of his transports and guard-ships. The telegraph is said to be not working, but whether there has actually been a break-down or whether the Chinese authorities are deliberately suspending the passage of messages, can not be ascertained. At all events the Russian Admiral, having outraged French neutrality to his heart's content, is now violating Chinese. Not that he has abandoned the former lawless practice. On the contrary, he continues to use Honkohe as a Russian port. Meanwhile it appears that the French local authorities are still exercising a strict censorship of the telegraphs in the interests of Russia. Correspondents of Hongkong journals who have proceeded to Kamranh Bay are unable to

get any messages sent across the wires. It is unnecessary to descant upon the significance of such conduct on the part of the French officials, if it be true.

The case of the *Taiwan* at Shanghai appears to be still a subject of controversy. She flies the German flag, and the German Consul, while not denying that she may carry coal to the Baltic Squadron, insists that not until she is proved to have done so can any steps be taken against her. The Chinese, on the other hand, reasonably ask for some guarantee that she will not violate neutrality. These facts are sent by the *Asahi's* correspondent. If correct they seem to indicate that the German Consul is seeking to promote rather than to prevent breaches of neutrality.

The length of time spent by the Third Squadron in reaching Singapore after passing Penang is regarded as showing that some of the ships have suffered more or less injury. But indeed the movements of this Third Squadron are a mystery. What has become of it? It ought to have joined the Second Squadron long ago, but there is as yet (Tuesday morning) no news of its having done so. A theory is entertained in some quarters that Nebogoff and his old, slow vessels have been ordered to make straight for Vladivostok, and are now creeping up towards Soya Strait. That is possible. But certainly they can not yet have passed the Strait. To get to it they must first make their way through Kunajiri Strait. It was when she made Kunajiri en route for Soya that the *Novik* was reported, and the Japanese immediately steaming round from the west of Tsugaru Strait, intercepted her. We may therefore be sure that Nebogoff has not passed Soya. Indeed there is every reason to think that the Russians will give Soya a wide berth. Their choice must lie between Tsugaru and Tsushima.

Things are reported to be very quiet at the Pescadores. Most of the women and children have been sent away, and the male inhabitants have formed themselves into a militia of 300, one part of which is to look after conflagrations, another to help the sick or wounded, and the third to succour the remaining women and children.

#### Wednesday, May 12.

It is evident that Rojestvensky has pursued at Honkohe Bay exactly the course adopted by him at Kamraah. He left the latter on the 22nd of April and returned on the 24th of last month; and all the evidence goes to show that he left Honkohe on the 9th of May and returned thither on the 11th. Whether he is lying there now or has made some fresh excursion, we do not know.

As for the Third Squadron, it is believed to be somewhere in the neighbourhood of the Condore Islands, which form an integral part of Indo-China.

Hongkong continues to allege that all the telegraphs in Indo-China are under strict censorship in Russian interests, and that no intelligence of Rojestvensky's movements is allowed to be sent over the wires unless it be misleading intelligence. This is one of the strangest features of the situation. It seems to show that the French local officials are deliberately conniving at Rojestvensky's breaches of neutrality and are themselves actively espousing the Russian cause in a manner irreconcilable with the most elementary principles of fairness or justice.

At Singapore several steamers, British, German and Norwegian, which are suspected of supplying coal to the Baltic Squadron, have been forbidden to leave the port.

The Authorities at Hongkong also are

said to be exercising the strictest surveillance for the purpose of preventing any export of fuel or provisions for the belligerents.

Moji is said to have sent only some 4,000 tons of coal to Saigon during February, whereafter there has not been any demand. But the statement is contradicted by facts, for an immediate result of the newly imposed veto was the detention of the steamer *Hatas*, which was just about to sail for Saigon with some 4,000 tons of fuel, alleged to be for use by pacific Frenchmen. The *Hochi Shinbun* says that the Miyashima Firm, by which the *Hatas* was chartered, is under contract to export 180,000 tons of coal during the present year nominally for French use, and that the firm is much embarrassed by the issue of the recent veto.

From Peking comes news that Russian ships have been seen in the vicinity of Halmun Bay near Swatow, and that torpedo-boats have been sent thither and other steps taken to assert China's neutrality. These statements are said to have been telegraphically conveyed by the Governor of Kuangtung. It is probable that Rojestvensky, since he pays no attention whatever to French neutrality and since he does not hesitate to make France an object of ridicule, will have small compunction in his behaviour towards China. We are not surprised to learn that the Peking Government is much perturbed by the conviction that the Baltic Squadron has no intention of respecting Chinese neutrality. Poor China! She is veritably between the devil and the deep blue sea.

A French steamer reports having seen some Russian ships in the vicinity of the Paracels Islands.

Viceroy Chou-fu seems to be adopting a very resolute course in Shanghai. He has ordered the Taibai to veto the exit of any ships if suspicions are entertained concerning them.

The *Chuo Shinbun* says that the Japanese Government has again addressed a protest to the French Government, and the *Niroku* asks what is the use of repeating these verbal protests. What would the *Niroku* do, we should like to know.

There are reports from Europe that a fourth Baltic Squadron is soon to set out, but not much credit can be placed in this rumour. The *Slava*, which was to have formed part of the Third Squadron, is only now making her trial trip.

The Japanese press is editorially silent about the Baltic Squadron and its doings. Probably the papers feel that nothing remains to be said.

#### THE "SHANTUNG'S" EXPERIENCE.

The Taikoo Sugar Refinery Company's steamer *Shantung* arrived in harbour on Wednesday morning with a full cargo of rice from Saigon. She left that port on the 3rd instant having on her downward trip met the Russian fleet cruising about fifteen miles off the Annam Coast. The vessels were enfiling in single column, closing in and widening out at short intervals, with several cables length between each. Passing through the breach the *Shantung* was challenged, and the reply that she was bound to the French port was satisfactorily received, and she proceeded onwards without any molestation. The whole of the vessels seemed to be in a dirty condition generally, the hulls having the appearance of being considerably weatherbeaten, and as they rolled to the sea heavy sea weeds and thick barnacles could be observed stretching along the sides. They were stripped for action, only boat awnings on the bridges, and the torpedo nets of such as had them were ready for lowering. The old Admiral *Nachimoff* towered up ahead of the column with her long tiers of guns, and the *Russ*, the Admiral yacht present-

ed to Rojestvensky by Count Stroganoff, passed up and down the lines as a patrol, her clipper bow standing out in bold relief and engaging the heavy swell with seeming pride. Inside Saigon were four of the Russian Volunteer Fleet, which had been waiting there for over three weeks for coal and provisions, which had been refused them, but on the 2nd instant permission had been given them to receive supplies, and on the day the *Shantung* left port they had commenced to take in coal and all kinds of provisions. Outside Saigon on the 4th instant there were from 25 to 30 German steamers laden with Welsh coal awaiting orders, and there were a few others a mile or two to the South which had discharged their cargoes, and were also awaiting fresh instructions, it being generally accepted that they would be ordered to load up at some of the intermediate ports on the Eastern Asiatic coast as soon as a definite plan of onward progress had been decided upon.

The Saigon provision dealers are reaping a big harvest over the appearance of the Armada in Annam waters, and fabulous prices are being charged for foodstuffs, every possible help being given to the Russians.

#### Thursday, May 18.

Telegrams from Hongkong received just as we go to press suggest that the Russian Squadron has finally left the coast of Indo-China and is passing out into the Pacific through the Ballintang Channel, namely, between Luzon and the Batan Islands. The Associated Press correspondent in St. Petersburg professes to have learned on good authority that the destination of the Squadron is Petropavlovsk, or in other words, Avacha Bay on the south-east of Kamchatka. That may be true, but we cannot regard Petropavlovsk as his final goal. What is possible, however, is that he intends to pass the Kurile Strait, then hold a westward course as far as the north of Saghalien, and finally steaming down between Saghalien and the mainland, reach Vladivostok via the Gulf of Tartary. It would be a long journey of some 6,000 miles, but possibly there are stores of coal at Petropavlovsk where Rojestvensky could call en route. Four thousand miles' steaming would take him to the Kamchatkan littoral, and he could easily do 4,000 with the stores of coal he took in at Indo-China. If that be his programme nothing more is likely to be heard of him for 17 or 18 days, by which time he should reach Petropavlovsk, supposing him to steam at the uniform rate of 10 miles an hour. Then if he stays a week at Petropavlovsk before resuming his journey, he might enter Vladivostok at any time between the 20th and the 25th of June.

But it does not at all follow that because he has passed out into the Pacific through the Ballintang Channel his purpose is to steer for the Kurile Strait. We have frequently suggested that he was not likely to steam up the Formosa Channel, which is emphatically a zone of danger, and that there was always a very strong probability of his entering the Pacific through the passage between the Philippines and Formosa, thereafter heading for some one of the straits of Tsushima, Tsugaru or Soya. If Tsushima be his bourne, and if he left Honkohe on the 14th instant, then as the distance thence to Tsushima is 2,300 miles via Ballintang, he ought to reach the strait in 10 or 11 days; namely by the 24th or the 25th. If he steer for Tsugaru, he has to cover 3,600 miles, approximately, and he will not be off the strait until about the 30th. If, finally, he intends to try the Soya passage, he should be on the ground by the 31st of May or the 1st of June.

If the Manila telegram be correct and also that of the French cruiser, Rojestvensky's

Squadron must be divided into widely separated sections. For supposing him to have left Honkohe on the 14th, he could not reach the Ballintang Channel before the 19th, and could not possibly have been sighted from Manila on the 15th. Thus the leading section of the Squadron seen from Manila must have been some 4 days ahead of the main body. That suggests one of two things: either that Rojestvensky does not expect to have to fight at all, or that he intends to fight in sections.

News carried to Hongkong by steamers indicates that Rojestvensky is lingering on the coast of Indo-China but keeping well outside the three-miles' limit. That much latitude can not well be denied him in the existing state of international law. But what if he be overtaken by one of the cyclones that ravage the China Seas at this season? Will he then be granted the renewed hospitality of Honkohe Bay or some other French port?

The departure of the steamers *Taiwan* and *Matilda* from Shanghai has been vetoed in deference to the vigorous protests of the Japanese Consul. It has been further decided that no steamer carrying Cardiff coal will be granted clearance papers by the Customs Authorities unless she gives adequate security that her cargo is not to be supplied to either of the belligerents.

The reporter of the *China Mail* boarded the German steamer *Forstich* in Hongkong on May 9th and obtained the following note:—

After their long trip out, during which calls were made at several ports, the *Forstich* was picked up by a Russian man-of-war off the French coast and escorted to Kamranh Bay about April 20. There they found about 30 ships, mostly war vessels, and no time was lost in commencing to unload their cargo of coal. Discharging had not been completed, however, when the Russian ships decided to move round to Honkohe Bay and the collier accompanied them and completed her discharging there leaving early on the morning of May 5. They had plenty of chances of observing the Russian ships very closely and confirmed the statement that they were in good condition. They were plentifully supplied with men and well armed and the transports were also armed and carried large numbers of men. The officer did not form a very high opinion of the Russian sailors and thought that they were stupid and slow. He doubted if they knew much about the war at all and was convinced that they were having the time of their lives and did not mind how long the war lasted. They went about their duties in a not very seaman-like manner and from some manoeuvres that he saw he considered that the ships were only fairly well handled. The health of the fleet was apparently excellent from the fact that only one hospital ship accompanied it and there were at that time no cases of sickness. The Admiral seemed to be drilling his men and several times took the largest ships out to sea for a cruise and returned again during the night. After dark the torpedoes and other small craft went out and scouted round the entrance of the bay. He considered that the Russian Admiral was well informed as to the movements of the Japanese but did not think that he at present contemplated making a run for the north.

#### AN ALLEGED GERMAN ESCAPE.

Thursday, May 18.

The *Fiji Shimpō* seems slightly disposed to treat seriously the report that Germany has raised her flag at Haichou. It refers to various questions which have recently been under discussion between Berlin and St. Petersburg, though it does not for a moment profess to believe that Haichou has been occupied. Other journals suggest that Germany may be treading the same route pursued by her at Kiaochow, namely, occupying Chinese territory by way of diplomatic protest and then retaining possession of it by way of extending the German empire. But it is not credible that the public would have remained in complete ignorance

of any complication warranting such a measure. The explanation probably is that a German war-vessel has been surveying the northern coast of Kiangsu, and that a party of marines landing and raising a flag to fix a trigonometrical point have been mistaken for territory-grabbers.

A representative of the *Fiji Shimpō* waited on the German Minister in Tokyo and sought his opinion. The reply was that the alleged occupation could not be credited and probably had its origin in some exaggeration or misapprehension.

The *Asahi Shimbun*, however, is evidently inclined to believe the story. It says that Haichou Bay is the best harbour between Kiaochow and Shanghai and that Germany has long coveted it. Moreover, the steamer *Chefoo* was sent thither last month with provisions and building materials.

We mention these views because they show that suspicion is easily excited where certain Powers are concerned, but we adhere firmly to the conviction that the Haichou tale is a mere canard. Germany is not in the least likely to fly in the face of her convention with England, and in the face of the policy which the Kaiser is now so loudly proclaiming.

Telegrams received in Tokyo on Wednesday afternoon show that the alleged occupation (*senryo*) of Haichou by Germany was nothing more than an operation of surveying (*sokenryo*).

Friday, May 19.

Tokyo journals are by no means disposed to dismiss as groundless the rumours of a German occupation of Haichou Bay. They allege that the visit of a German man-of-war to the Bay is beyond all question. They want to know what she is doing there. One telegram says that she landed marines who carried on gun-practice. That, if it occurred, was certainly unlawful without the permission of the Chinese Government. A plausible conjecture is that since Germany is pressing for the privilege of engaging in the coastwise trade between Kiaochow and Shanghai, and since Chou-fu, Viceroy of the Two Kiang, is opposed to the application, a German war-ship has been sent to make a demonstration at one of the intervening ports. Another conjecture is that this demonstration is connected with Germany's demand for permission to construct an overland line of telegraph from Tsingtau to Shanghai, and yet another refers to the proposed building of the Tsin-Ching railway. But in view of the fact that the German war-ship is said to have left Haichou, there is not much more to be said, we think. Germans in Shanghai are represented as alleging that the vessel was sent thither in connexion with some complication arising out of a service of steamers established by a German firm between Tsingtau and Haichou, but the German Consular authorities profess ignorance of this. We believe that the story of the occupation is wholly discredited in official quarters in Tokyo.

In this context may be mentioned a report that a Chinese official, travelling by the German railway in Shantung, was recently suspected of being a Japanese spy, and was compelled by the Germans to alight, whereafter he was subjected to much indignity. The affair resulted in the removal of the German station-master, but apparently had the supposed Chinese official been a Japanese, the Germans would have supported the station-master. It is a curious incident, so suggestive that without confirmation we hesitate to credit it.

#### A GERMAN JOURNAL.

Hamburg is one of the greatest commercial marts in Germany and the *Hamburger Nachrichten* is Hamburg's leading journal. What this journal recently found to say about the war is the following:—

"It is certainly to be conceded that the Japanese are foes who, in very respect, must be taken far more seriously than in time past the Boers were taken by the English. We think such an outcome of the war to be likely. That (Russia's final triumph) we desire and hope for above all things, not only in the interest of Russia, but in the interest of Europe and the whole civilized world. Much as has been said and written hitherto regarding the grave danger which final victory for Japan and her establishment as the dominant Power in East Asia—that is, as protector and guide of China and of her 400,000,000 inhabitants—would involve for Europe and Europe's most important economic and political interests, we are convinced that all these considerations convey but the faintest idea of the greatness of the peril in store for the white race and its civilization in the event of Japan's obtaining the upper hand. The well-known admonition: 'People of Europe! defend your holiest possessions!' would then acquire a new significance, far transcending any conception of it hitherto current. Evidence is already to hand that even the United States of North America, which, like England, let all its sympathies go out to Japan notwithstanding its official neutrality, and deemed its interests served by a triumph of Japan over Russia, is now contemplating with a certain anxiety the risk even to itself arising from an enduring Japanese success in the Far East."

As an unequivocal declaration of racial prejudice this diatribe has never been surpassed. Europe is to combine for the purpose of crushing Japan simply because the Japanese are not a European race. There is no other reason. The *Hamburg Journal* does not attempt to give any other reason. It quotes the Kaiser's famous—may we not say "infamous"?—words written beneath his most uncivilized picture, "People of Europe! defend your holiest possessions"; but the admonition is veritable bathos in the face of the fact that modern Japan represents European ideals and has assimilated the best products of European progress, always excepting the barbarous racial prejudice which informs the writings of newspapers like the *Hamburger Nachrichten*. Into what paltry insignificance do interchanges of princely visits or the conferring of ribbons and stars sink as factors of international amity compared with utterances such as the above! The *Hamburg Journal* and the large section of German public opinion which it and its congeners must be assumed to represent, are labouring with all the ability that providence has unhappily bestowed on them to create a yellow peril, but ostracising Japan, by making her a pariah among Western nations, and by proving to her that the only consideration she can ever hope to win, must be won at the point of the sword and the muzzle of the rifle.

#### THE KING OF ENGLAND AND THE RUSSIAN PRISONERS.

It is mentioned in Japanese papers that a high official of the Imperial Household Department having recently sent to the King of England twelve pictorial post-cards representing scenes connected with the Russian prisoners at Matsuyama, His Majesty replied by letter through a private secretary. The secretary, who dates his letter from Buckingham Palace, says that the post-cards were immediately submitted to the King, who, after examining them carefully, expressed much satisfaction at the evidence they afforded of the excellent treatment given to the Russian prisoners by the Japanese. The letter is dated April 3rd.

THE PRESS ON THE SITUATION IN  
INDO-CHINA.

Saturday, May 13.

The view universally held by the Japanese press this morning is that in spite of the declarations of the French Government the Russian ships are still in Honkohe Bay; or, if not in Honkohe Bay, that they have merely moved out in nominal deference to the French pronouncement and have betaken themselves to some neighbouring port of Indo-China, where their continued presence would be just as great a breach of neutrality as ever. This belief is not based on definite evidence. It is due to the fact that no news has been received of Rojestvensky's appearance elsewhere, whereas, had he left Honkohe, he must necessarily have been sighted at some other point. It is also due to a consideration of past events. The French Government's protestations about Kamranh Bay were quite as unequivocal as their protestations about Honkohe, yet not even in the case of Kamranh were those protestations translated into effective action, and, further, the Russians were suffered to transfer themselves to Honkohe, another French harbour, and to lie there uninterrupted for a space of 15 days. Would it not be extremely credulous, the Tokyo papers ask, to assume that the sequel of the Honkohe incident is not the same as was the sequel of the Kamranh affair. As for the places unidentified in connexion with late advices, namely "Bangon" and "Pataran," it now appears that they are both on the south of Kamranh Bay, and the inference is that Nebogadoff's squadron was then making its way up the coast of Indo-China to join Rojestvensky.

It is plain that the Japanese are much incensed about this whole affair. They feel, as the *Fiji Shimpō* says, that they are being made the victims of paltry evasions. M. Delcassé's answer lays much stress on the point "territorial waters." Doubtless he intends to pretext the old-fashioned limit of 3 miles. If that limit be applied strictly, the absurdity would arise that the entrance of Honkohe Bay being 7 miles across, a vessel lying exactly in the middle would enjoy a space of one mile which might be said to be outside the limits of French territorial waters. That is obvious silliness. Besides there are islands in the fair way of both Kamranh and Honkohe Bays, and the three-miles radius would have to be measured from these islands also. Japan is not so silly as to be put off with such quibbles. She wants to know whether France intends to allow the Russian Squadron to make use of the coasts of Indo-China for purposes of equipment, rendezvous and communication. That is the question. It must not be obscured by recourse to paltry technicalities. The facilities enjoyed by Russian ships owing to the accessibility of French ports constitute assistance of a material character for the prosecution of a campaign against Japan, and so long as such facilities are granted, just so long is French neutrality non-existent. Neutrality has a purpose; it is not a gew-gaw to be sported with. Its purpose is to prevent one belligerent from receiving substantial aid from a neutral to the detriment of the other belligerent. Such aid could not possibly take any form more real or more vital than that taken by the aid Rojestvensky is receiving from France, since without that aid he could never have attacked Japan at all. In the face of such facts meticulous subterfuges about 3-mile limits are only an insult to the

commonest intelligence. The unobscurable fact is that bays and inlets surrounded on three sides by French territory and thereby secured from inclemencies of weather as well as dangers of attack, are freely used by Russian war-vessels; that the shores washed by the waters of these bays and inlets are freely accessible to the Russians for carrying on communications in connexion with their belligerent operations, and that provisions and fuel are supplied to the ships from these shores. No one can honestly pretend for an instant that such a state of affairs is consistent with the most elementary principle of neutrality. France may now honestly intend to enforce a new system, but she has no just reason to be offended if, in view of the past, the Japanese await the evidence of facts and decline to trust that of words. It is unnecessary to quote at length the comments of other Japanese journals. They agree that the French Government has made some *amende* and has thereby averted the immediate crisis, and they agree that England acted the part of a loyal ally. But they point out that France clings to the provision as to territorial waters, and that there can be no feeling of confidence until clear testimony is forthcoming as to her interpretation of that provision. Japan wants substantial realities not academical hair-splitting. She wants to know that her enemy is not receiving material aid from a neutral. The fact is what concerns her, not the fashion.

The proposal that the united chambers of commerce should agree to suspend all commercial transactions with French citizens has been withdrawn in deference to the advice of the moderates. Political parties, however, are beginning to busy themselves. The Progressists have already passed a strong resolution condemning France's attitude, and the *Seiyū-kai* have decided to send a deputation to the Premier, after which they will determine their own line of procedure.

The *Nippon* has a somewhat prolix article urging a necessity which must be obvious to every one, namely, that Japan must avoid taking any active step without full assurance that she carries England with her. Whatever wrong may be suffered at France's hands, it would be calamitous to challenge her open enmity at this juncture unless the coöperation of England could be counted on.

Sunday, May 14.

*Le Temps* is reported to have editorially advised Japan to deprive the Baltic Squadron of the advantages of the Indo-Chinese coasts by attacking it there. Naturally Japanese journals are much amused by this suggestion, which indeed is somewhat ridiculous. The idea of the French journal seems to be that France is not able to discharge the duty of asserting the neutrality of the whole Indo-Chinese coast, but the obvious significance of such a statement is that France admits her inability to assert sovereign rights within her own dominions.

The Council of the *Seiyū-kai* held a meeting on the 13th instant with reference to the neutrality problem. Messrs. Matsuda and Hara reported that they had had a three-hours' interview with the Premier on the 12th instant, and had convinced themselves that the Government was adopting a proper course with regard to this question and that France was really desirous of duly performing her neutral obligations. They had also learned that the conduct of Great Britain in connexion with the matter was loyally adapted to the circumstances. Therefore it was decided by the Council that no further steps need be taken for the moment. Representatives of the Tokyo press and

the news agencies met in the Kairakuyen, Nihonbashi, on the night of the 12th instant and passed the following resolution:—

"In spite of the French Government's recent assurances that the laws of neutrality should be strictly enforced, the Russian squadron is allowed to freely take measures in French territorial waters for promoting the convenience of its plan of campaign, and is not prevented from performing repeated acts of that nature. This is manifestly rendering warlike assistance to Russia and we are unable to endure such lawlessness. Therefore we shall move public opinion and will invite England also to put an end to this situation."

Monday, May 15.

There is reason to fear that Rojestvensky and his ships were still lying in Honkohe Bay on the 12th inst. The steamer *Derwent* passed within 12 miles of the Bay on that day, and saw over 17 vessels anchored in the Bay. Among these vessels only 7 were battle-ships, from which it is conjectured that up to the 12th instant no junction had yet been effected between the two squadrons. It is stated that the main occupation of Rojestvensky at present, apart from procuring coal and provisions, is to maintain constant telegraphic communication with the Russian Admiralty. From the latter he receives full information—or, at least, the fullest information obtainable—about the movements and whereabouts of the Japanese fleet. Saigon is his ultimate basis of telegraphy, but he also employs the wireless telegraph, for which purpose he has erected a station on the shore, that is to say, within French territory.

It is not unnatural that in the face of such events excitement should be growing in Japan. There have been two meetings, one consisting of non-parliamentary members of the Progressist Party, the other of students of the Waseda, Keiogijuku and other Universities. At both of these meetings, as well as at an assembly of the Koshin Club, which consists of independent members of the Lower House, resolutions were passed protesting strongly against France's method of asserting her neutrality. The resolution of the Koshin Club was very circumspect. It declared that France's last reply was satisfactory, but that should her subsequent practice fail to comply with her professions, there would be no occasion for the Japanese Government to renew its protests: it must immediately take active measures. The other two meetings did not shrink from boldly declaring their conviction that France's action is quite inconsistent with any reasonable theory of neutrality.

Tuesday, May 16.

It need scarcely be said that the news of Rojestvensky's return to Honkohe Bay is regarded by the Japanese press with profound astonishment and indignation. The *Fiji Shimpō* does not doubt the sincerity of the French Government's declarations made in answer to Japan's protests. In Paris there is a genuine desire to see the obligations of neutrality honorably discharged. But St. Petersburg has declared that any attempt to carry the Paris promises into effect will be regarded by Russia not merely as unfriendly but as a hostile act. France is thus impaled on the horns of a dilemma. She recognises her duty and has publicly formulated it. But to discharge it she would have to sacrifice her alliance. She has announced the issue of stringent instructions to her Indo-Chinese officials forbidding the entry of any Russian war-ship or transport into French territorial waters,

but Russia, on the contrary, insists that her war-ships and transports have the right to coal and provision within French waters. In a word, Russia declines to allow France to be neutral and insists on treating French declarations and orders as mere waste paper. We have thus says the *Figaro*, the spectacle of this great and hitherto universally respected Power, France, treated with deliberate contumely by Russia, forfeiting the confidence of the world and stripped of her titles of civilization. It is a regrettable spectacle but Japan is not responsible and France must take the consequences.

The *Asahi Shimbun* declares that the peace of the world is now again threatened. The only difference between the situation to-day and the situation of last week is that whereas the responsibility formerly seemed to rest on France alone, it is now seen that Russia's lawless and reckless conduct is equally concerned. Russia is defying France, is treating her official declarations with contempt and is interpreting her neutrality with absolutely arbitrary reference to Russian convenience alone. It is pitiable to see a great state like France flouted thus openly. Yet, when we go to the base of the matter, the fault lies with France. The defects of her system of neutrality are coming home to her. Had she laid down suitable regulations and enforced them from the outset, this trouble would not have occurred. Nevertheless her existing regulations would have sufficed had they been firmly carried out, for although they do not include the 24-hours' clause, they do distinctly say that French ports must not be used as a base for belligerent operations. Let the French Government ask the Russian to say for what purpose the Baltic Squadron has been using Indo-Chinese ports during more than a whole month. There can be only one answer. As for Russia's behaviour, it exceeds the range of comment. She is deliberately defying France. Rojestvensky's return to Honkohe Bay and St. Petersburg's declaration that it did not propose to permit any strict enforcement of France's neutrality were evidently parts of a concerted line of action. Russia is flouting her own ally, challenging Japan's and deliberately threatening the peace of the world which is now far more imperilled than it ever was.

The *Kokumin Shinbun*, however, writes in a very calm strain. It does not attempt to defend France's action or to explain the incidents which are astonishing the world. The line it takes is, broadly speaking, that the object of the Anglo-Japanese alliance is, not to draw any third Power into the conflict, but to prevent anything of the kind. The Japanese naval authorities were always more or less prepared for this Indo-Chinese episode and they have doubtless laid their plans accordingly. There is no reason whatever to be perturbed. Should the limits of the conflict be now extended the terms of its settlement will be similarly enlarged. If other Powers are drawn into the strife, other Powers also will sit in the council chamber at the hour of final discussion. Does Japan desire that? Would it conduce to her interests and promote her purposes? Thus, in effect, the *Kokumin* strongly recommends its nationals to possess their souls in patience. France, our contemporary believes, would rather break with Russia than with England, but it would be most unwise policy to force the choice upon her.

We (*Japan Mail*) agree entirely with the *Kokumin*. Most assuredly Japan is suffering a great injustice, but as between the practical

effects of this breach of French neutrality and the consequences of resenting it arms in hand, the difference is immense. Resentment is natural, yet to be carried away by it to the extent of forgetting expediency would be calamitous. Which European Power would be the sole gainer were this war extended so as to embrace France and England? That is a point worth considering.

The perplexing feature of the situation in Indo-China is the difficulty of reconciling the avowals of the French Government in Paris with the inaction of its officials in the East. Even Rojestvensky's conduct is almost inexplicable, for one can scarcely conceive that if he were aware of the orders issued from Paris he would nevertheless deliberately steam into French territorial waters. Still assuming him careless of everything save the achievement of his own naval purpose, one can imagine him defying France who, he probably believes, would not under any circumstances resort to actual violence for the purpose of imposing her will on her ally. But what are we to think of the French Government? M. Delcassé has announced *urbi et orbi* that French officials in the Far East have been explicitly instructed not to permit any Russian war-ship or transport to enter the territorial waters of Indo-China, and has further announced that a French squadron, visiting Honkohe Bay with the object of enforcing the order, found on the 9th instant that the Russian ships had left the Bay. Yet by the 12th instant they had returned thither. It is out of the question that Paris should be ignorant of these things; Paris which is in daily communication with Saigon. It is equally out of the question that St. Petersburg should be ignorant, for the French wires are at Rojestvensky's service. Therefore M. Delcassé knows that his assurances to Japan were converted into a farce almost before the ink with which they were written had dried, and the Tsar knows that his naval officers are openly flouting the legitimate exercise of his ally's sovereign authority. Surely a strange situation.

#### AN OPINION IN ST. PETERSBURG.

At the end of March the Paris correspondent of *The Times* sent the following note to that journal:—

The St. Peter-burg correspondent of the *Main* says that every one now considers that the war has lasted long enough. In this connexion he sends a striking estimate of the Russian losses, both in men and money, during the last 14 months. The official figures give a total of 162,000 men killed, wounded, or taken prisoners in the engagements preceding the battle of Mukden. At Mukden 175,000 were killed or placed *hors de combat*. This, added to the 7,000 sick per month, makes an approximate general total of 435,000. The same correspondent concludes that Linevitch cannot have at his disposal at present more than 300,000 men. As for the expenses, 900,000,000 roubles (£90,000,000) is given as the cost of the Manchurian Railway with the keeping up of the line, the losses caused by the Chunghuses, the construction of the city and port of Dalny, the organization of the maritime service in connexion with the railway, and the item of Port Arthur. War expenses and foreign loans amount to 570,000,000 roubles (£57,000,000). State securities 150,000,000 roubles (£15,000,000), the loss of 1,486 guns 10,000,000 roubles (£1,000,000), confiscation of merchantmen 10,000,000 roubles (£1,000,000), and the loss of the fleet 160,000,000 roubles (£16,000,000). Thus including the recent internal loan, the war has cost, so far, two milliards of roubles (£200,000,000). Yet 5,000 Russian wounded are dying weekly at Kharbin largely owing to want of proper care.

The correspondent of the *Matin* looks forward to peace for the month of May.

The above estimate of Russian losses in men would account for the great number (760,000) said to have been sent over the

Siberian Railway from the beginning of the war, as compared with the number now supposed to be available for Linevitch's fighting line. But it appears to us that the sum assessed for war expenses, namely, 72 millions sterling in all, is much too small. Japan spent nearly if not quite that amount from February 1904 to the end of March 1905, and there can be no question that Russia's outlays were much larger than Japan's.

The peace rumours referred to in the above and so much talked of during March, were ultimately shown to have been started in St. Petersburg with the evident intention of persuading the world that Japan was in a suppliant mood. What purpose inspired such a manoeuvre remains still a matter of conjecture, but the most agreeable interpretation is that Russia wanted to prepare an easy path for herself to tread. As for the prediction of the correspondent of *Le Matin* that the month of May would see peace restored, who can say that it would not have proved true had not France, by allowing her neutrality to be grossly abused, called into existence a new element of resistance on Russia's side? Our own conviction is that had not Rojestvensky been helped by France into the arena, this sanguinary war would now be very near its end.

#### THE GERMAN PRESS AND PRINCE ARISUGAWA.

German newspapers are quoted in a Foreign Office telegram as alluding in enthusiastic terms to the visit of Prince Arisugawa, which they hope will have the effect of radically improving the relations between the two empires. When peace is restored, they say, Japan's position will be very high among the nations of Europe, and it is appropriate that the intercourse between her Imperial Family and that of Germany should be close. The *Allgemeine Zeitung* observes that the open door is Japan's policy in the Far East, and beyond the open door Germany desires nothing. Therefore that journal trusts that the Prince's visit may be regarded as a happy augury of the prevalence of the open-door principle in trade.

Germany has of late been distinctly assiduous in associating herself officially with the open-door policy, and her adherence to its principles is very much to be welcomed. But neither the declarations made in that sense by the Government nor the utterances of the press can effectually remove the unpleasant impression conveyed by the addresses that German business-men recently delivered before important societies. These addresses suggest only too plainly that German merchants in the East are not disposed to accede to Japan the same measure of trade freedom as they claim for themselves, and that they regard with distinct apprehension the outcome of granting equal trade facilities to the people of the newly arisen Power in the Far East. So long as such utterances are placed on record it can scarcely be expected that the hopes now expressed by the German press will be realized, nor shall we be accused of unfriendliness to Germany if we say that what is wanted to correct the sentiment between herself and Japan is, not an interchange of princes' visits, but the abandonment by German merchants of their distrustful and harsh attitude towards Japan.

## MANCHURIA.

Saturday, May 13.

The Russian attack at Yingepienmun was evidently a reconnaissance in force. A great deal of misfortune attends these reconnaissances in Russian hands. They repeatedly entail losses which are not in the original programme. Apart from that, however, the Russians are under a very urgent necessity to employ every possible means of reconnoitering the movements of the Japanese in the east of the field. They are perplexed to discover the Japanese plan of campaign, and vague rumours have long been current of an important flanking operation which would sever the communications between Vladivostok and Harbin. Linevitch must be absorbingly anxious to find out whether such an operation is in progress, and if so, what its dimensions are. Therefore we may expect to hear of constant efforts in that direction. The loss of four or five hundred men is a heavy price to pay for collecting information, but to remain in ignorance would probably be more costly.

Wednesday, May 17.

Since the battle of Mukden Japanese engineers have been busily reconstructing the bridges and relaying the rails of the Shaho-Tiehling railway. On the 7th instant the line was opened to traffic and several trains are now travelling daily between Liaoyang and Tiehling, a distance of 80 miles. Tiehling is a centre of communications, both by land and by water, in northern Manchuria, and is a main emporium for south Mongolia also. Another section of the line, as far as Kaiyuan (23 miles) is expected to be opened shortly. We take these particulars from the *Asahi Shimbun*.

Thursday, May 18.

Rumours continue to come in the sense that the Russians are preparing to evacuate Harbin and retreat to Chita. That would be indeed a drastic measure. It would take the Russians entirely out of the arena of operations, and would leave not only the whole of Manchuria but also Vladivostok and the Amur region at the mercy of the Japanese. The distance from Harbin to Chita is much greater than the distance from Port Arthur to Harbin, which fact is sufficient to show what would be involved in a retreat to Chita. There is much difficulty in crediting this rumour. By abandoning the Amur region and Saghalien Russia would be giving up all the fruits of her forward policy in Eastern Asia since the days of Muravieff, and by leaving Vladivostok, to be invested she would be virtually condemning herself to exclusion from the Pacific, since she would have no naval base whatever in Far Eastern waters. It is true that the Japanese could scarcely follow her to Chita; but what are we to say about a method of fighting which consists in placing yourself out of reach of the enemy's assaults and beyond your own attacking range? That is very like abandoning the field altogether.

The *Jiji Shimpō* has a telegram from Yinkow saying that dysentery and typhoid are rife at Harbin; that there are about 300 fresh cases daily; that very few of the patients recover, and that a very bad panic prevails in the Russian army.

In direct contradiction to the above rumours as to the evacuation of Harbin, there is news (*Nichi Nichi Shimbun*) that the Russians are exerting their whole strength to carry out defensive works. They

are fortifying the Hailungching-Yehhoching-Pamienching line, and they are also constructing big works in the neighbourhood of Kirin, Changchun, Fenghua and Hwaiteh. In fact, their policy seems to be the checking of the Japanese advance pending the arrival of fresh troops from Russia. That is much more conceivable and intelligible than the policy indicated by the above rumours, namely, the evacuation of Harbin and retreat upon Chita.

Friday, May 19.

The *Asahi Shimbun's* information from the front in Manchuria is that the three Japanese columns advancing from Kaiyuan, Changtu and Fakumun, respectively, are confronted by a Russian army of considerable strength—it recently received 20,000 re-inforcements—with its left at Yehhoching, its centre at Supingchien and its right at Hsiashien. On the immediate north of Yehhoching near Huoshihling there is a fine commanding position facing southward. Here the Russians have constructed defensive works including two or three forts. Similarly on the north of Supingchien lies Tapingling (marked Pinglingching on the map) where a range of hills some 20 metres high, extends for a distance of about 4 miles. This also is an excellent defensive position and has been strongly fortified. Further, a fort has been built in the neighbouring village of Panlamun. On the immediate south of Pamienching runs a river, not wide or deep, but having high, steep banks along which entrenchments have been constructed by the Russians. Altogether, therefore, the pending engagement in this quarter is likely to be severe. If our readers consult the map of April 23rd, they will find that the Yehhoching-Supingchien-Pamienching line, along which the Russians are deployed, extends about 42 miles.

The main positions in rear of this line are Itungchou and Fenghua. There constant arrivals of re-inforcements are taking place. Spies report that after the battle of Mukden and up to the 31st of April the fresh troops which reached Harbin numbered some 60,000. The Russians are running military trains as far as Supingchien.

## COAL.

A very marked deficiency has of late been observable in the supply of coal in the Japanese market. Thus the Kyushu mineral, which in April was procurable at Moji for from 5 to 6 yen per 10,000 *kin*, has suddenly risen to as much as 10 yen. At the fall of last year great stocks of the mineral were on hand. In Kyushu alone about a million tons were piled up, whereas now there are not more than 120,000 or 130,000 tons at Moji and Wakamatsu, and the reserves at the various mines are said not to exceed 100,000 tons in all, which quantities are already contracted for. Hokkaido and Iwaki do not make a more favourable showing. What is the cause of this deficient supply? The *Shogyo Shimpō* propounds that question and answers it thus:—Exports are not responsible. Prior to the advent of the Baltic Squadron considerable quantities of coal certainly left the country, but the price of the Japanese mineral rules lower at present in Hongkong, Singapore, Australia and India than it does in Japan, and, as a matter of fact, the total exports during the current year have been 580,000 yen smaller than those of the corresponding

period last year. One cause is doubtless the reduced carrying power of the railways. Great demands have been made on the transport capacities of the lines in connexion with the war, and the rolling stock has proved unequal to meet these demands while simultaneously discharging its ordinary functions. For example, Tokyo's daily consumption of coal gives employment to 500 waggons of the Nippon Tetsudo whereas at present only 400 cars can be allotted to the task. There is, however, a more potent factor at work, namely, the development of Japanese industries since the fall of Port Arthur and the Mukden victory. Electric railways, gas-works, cotton-spinning factories have all become exceptionally active, and their demand for coal is proportionately great. It is estimated that during March the demand on these accounts showed an increase of 30 per cent. compared with the corresponding period of last year. Besides, there has been a largely augmented consumption at the arsenals and dock-yards of the army and navy, and in connexion with railways laid or working in the belligerent area. The principal coal mines are putting out supplies three times as great as last year's, yet the quantity threatens to be insufficient. In 1904 all exports of the mineral to Manchuria were virtually suspended, but now they are far more active than ever. The opening of the Seoul-Fusan Railway alone must make a conspicuous difference. Our contemporary does not expect, however, that the present state of the market will continue. So far as concerns the transport capacities of the railways, no improvement need be anticipated for some time, but the lines are adding to their rolling stock and, besides, maritime carriers are beginning to lend assistance. Then the consumption of coal for domestic purposes will be reduced by the advent of warm weather, while, at the same time, the various mine-owners are taking measures to increase their output. The Tankō Kaisha of Hokkaido, for example, is about to open a new shaft. Altogether, therefore, it may be assumed that the period of scarcity is over, though the whole incident suggests that as Japanese supplies of coal fail the importance of China's vast carboniferous fields will become more than ever prominent.

## THE VLADIVOSTOK SQUADRON.

In official circles implicit credence does not seem to be placed in the report that two Russian war-ships have been seen steering towards Hakodate. The description of the ships would seem to indicate the *Rossia* and the *Gromovoi*, but the whole thing is hazy, and in view of the fact that already two similar reports have been proved baseless there is a disposition to distrust this latest story. If the *Yutoku Maru* was really visited by the Russians, that would dispel all doubt, but even the fact of the alleged visit is queried. Meanwhile another report comes from the Nippon Yusen Kaisha's coasting vessel *Hirari*. She says that between 6 and 7 p.m. on the 10th she saw, at a distance of 18 or 19 miles, seven columns of smoke proceeding apparently in the direction of Sado. It is difficult to dismiss all these reports as baseless.

Meanwhile nothing has been heard in Japan of the sailing vessel which the Vladivostok torpedoers are said by Linevitch to have conducted thither as a prize. The statement may be true, but it is certainly strange that no ship is anywhere reported missing.

## THE RUSSIAN BRIGADE ORDER.

Saturday, May 13.

Among Russian documents captured by the Japanese, it is officially announced that there was found a brigade order numbered 3 and dated the 9th of the second month 1905 (corresponding to the 22nd of March). The place of the order's issue was Shwilo-patal, and it formed part of the archives of the First Brigade of the Thirty-first Division. It ran thus:—"Soldiers are warned that before attacking they must stab to death any Japanese soldiers they find lying on the ground, especially those lying face upwards. This is because Japanese soldiers, pretending to be wounded, allow our skirmishers to pass and then fire on them from the rear. Some of them also call out "here" or "come here," especially on dark nights, and care must be exercised as to this. They even call out the numbers of our companies for purposes of deception. Pass-words should be employed by our troops for distinguishing friend from foe, and such pass-words should have one or two *l's* in them, as *liulika*, for example, since there is no *l* in the Japanese language and it can not be easily pronounced by the Japanese."

It is declared that all this story about Japanese soldiers pretending to be wounded and firing on Russian skirmishers from behind is a pure invention, and that the fable was concocted for the purpose of effecting the slaughter of Japanese wounded without actually ordering such an atrocity in so many words. Certainly people sighted with only ordinary powers of imagination will find some little difficulty in conceiving that soldiers should behave in the manner ascribed by the Russians to the Japanese.

Tuesday, May 16.

A Japanese expert in military and international law discusses the recently discovered order issued to the troops of the First Brigade of the Thirty-first Division of the Russian Army, the order that all Japanese soldiers found lying upon the ground, especially those with their faces upwards, should be stabbed to death. But there does not appear to be much occasion for discussion. Such instructions to soldiers are permissible in savage warfare only. Should it come to the notice of a commanding officer that his men have suffered from treacherous acts on the part of the enemy, acts of the kind described in the Russian order, namely, feigning death or wounds in order to gain an undue advantage, his plain duty is to prefer a complaint to the General on the other side, and in the event of the complaint failing to secure attention, there might be a necessity to resort to an extreme measure. But the Russians do not seem to have addressed any complaint whatever to the Japanese. The general order directing the wholesale slaughter of the wounded was the first notice the Japanese had, and unless the order had fallen into their hands as it did, they would have remained in total ignorance as to this official sanction of shocking barbarity. When confronting a savage or semi-savage enemy with whom all civilized communication is impossible, there may be imperative occasion to employ drastic object-lessons. Such incidents have occurred in war more than once. But with opponents who, like the Japanese, conduct war in strict obedience to the most enlightened canons and are easily accessible for all interchange of communications, the unprefaced issue of an order like the above is brutal. Yet, we venture to predict, the incident will attract very little notice.

Europe and America seems to have agreed that there shall be no criticism of Russian abuses in this war. From the sanguinary struggle at Homutang on the 1st of May, 1904, till the Battle of Mukden eleven months later, the records show instance after instance of terrible cruelties perpetrated by Russian soldiers. Nevertheless, although detailed publication has been frequent, no general impression appears to have been produced. Many allusions have been made to the matter in these columns. Not because we believe the Russian soldier to be exceptionally wanting in kindness of disposition. Those that know him best do not attribute to him any specially ruthless tendency. But it is our conviction that just as Japan is expected by Western nations to live up to a standard of international morality which they themselves do not seriously try to attain, so in their own conduct towards her they practise and sanction a degree of licence which they would not think of exercising towards one another. The Russians have been influenced also in the present war by a species of religious fanaticism. They have had the doctrine preached to them that the extermination of the Japanese is a pious duty, and probably their soldiers have often acted upon that principle. They are not to be called to account, however, at the bar of public opinion. It seems to be agreed that there shall not be any severe scrutiny of their methods of conducting war.

## KOREA.

Mr. Min Yong-hwan and two other Korean Ministers have resigned. These gentlemen are the first victims of the Baltic Squadron, if reports may be credited. In the approach of Rojestvensky they see a hope of evading the arrangements for the transfer of the machinery of communications to Japanese hands and for the granting of coastwise facilities to Japanese ships. But their opposition has entailed their own removal from the Cabinet. If Korean statesmen had any policy more rational than that of out of the frying pan into the fire, one could sympathise with their opposition to the "Japanizing" of their country. But when the choice lies between Japan and Russia, one fails to see where patriotism comes in.

The *Kokumin* quotes a person who has just returned from Korea as saying that although the Russians withdrew some time ago to the left bank of the Tumen, they have again crossed the river and sent a force of 4,000 men as far south as Kilju. There are no troops of theirs at Sonjin (15 miles south of Kilju), but the Vladivostock torpedoers occasionally put in an appearance there. The Koreans, however, have laid aside their apprehensions since the advent of a Japanese force, and are quietly proceeding with their agricultural pursuits. Nearly all the oxen in this part of the country were requisitioned by the Russians last year. It is stated that the Russian forces at Possiet Bay have been increased.

The Korean Government has at length agreed to extend to Japanese ships the privilege of engaging freely in the coastwise trade of the island empire. It was necessary for the Emperor to bring pressure on the Cabinet in order to overcome the latter's hesitation. Were there the least prospect of Korea developing a mercantile marine of her own, she might justly desire to reserve her coastwise trade, but her helplessness want of enterprise places her in a special category.

## FORT ARTHUR.

It is stated that closer examination has disclosed the fact that in addition to the vessels known to have been sunk in Port Arthur, no less than 80 steam-launches have also been found, and that, further, an enormous number of rifles, pistols and other articles of war are reposing on the bottom. At Dairen the water is muddy and objects can not be discerned, but the bed of the Port Arthur harbour being rocky, it is comparatively easy to make investigations. Divers have disclosed the above facts, and it is thought that the Authorities will now be obliged to enlist the assistance of outsiders in order to raise all the matters sunk by the Russians. A party of 400 expert divers have already started from Sascho. The fact that a great number of small-arms must have been put out of sight somehow or other was suspected from the first, since the number of rifles found in the fortress was actually less than the number of the prisoners. But the recent discoveries appear to indicate a state of affairs much more signal than might have been anticipated.

The *Fiji* says that the work of raising the ships in Port Arthur is proceeding rapidly. Two steamers were raised a few days ago, one of 10,000 tons and one of 4,000. They are new vessels and will not require much repair. A force of blue-jackets has been sent from Sascho, probably to navigate these vessels to Japan.

An officer who has just returned from Port Arthur to Moji is quoted as saying that six Russian war-vessels, from battle-ships downwards, sunk at Port Arthur, are very little damaged and can certainly be utilized. The *Pallada*—armoured cruiser, 6,630 tons—he specially mentions as likely to be fit for use very soon.

## FIGURED MATTING.

Following up its legislation to check the adulteration of *habutaye*, the Japanese Government, on the 15th instant, issued the following regulations with regard to figured matting (*hana-gosa*):—

I. Figured matting may not be exported unless it has undergone examination at the Inspection Hall. But this restriction does not apply to such kinds of figured matting as are indicated by the Minister of State concerned.

II. Persons applying to have figured matting examined must pay the examination fees.

III. The amount of the examination fees and the manner of collecting them shall be fixed by the Minister of State concerned.

IV. In the case of figured matting exported without examination or after the mark of examination has been removed, a fine of 200 *yen* or under shall be imposed.

The above ordinance is to go into operation from the 1st of June next. It does not apply to figured matting which, prior to the promulgation of the Ordinance has been examined and marked in accordance with the regulations of guilds or associations organized under the provisions of the Law of Principal Staples Guilds.

In the *Official Gazette* which contains the above, full sized reproductions are given of the various marks of examination. The marks of the first and second classes are "A (passed)" and "B (passed)," respectively, and then follows the mark *P* in a circle, which signifies merely "passed." There are also the marks "(rejected)" and "(corr'd)," as well two marks signifying shortage of length, viz., (1 yd. sh.) and (2 yds. sh.)

## THE TSUKIJI AFFAIR.

Tuesday, May 16.

Reuter is obviously misinformed as to the alleged action taken by the French Government in the case of Captain Bougouin. There can not have been any official demand for evidence. Since the abolition of consular jurisdiction this kind of diplomatic interference with the course of justice is not tolerated. The law must take its way, and until publicity is permissible in the ordinary routine of judicial procedure, the nature of the evidence forthcoming will not be submitted to the French Representative or to any other diplomatic official. Meanwhile it is certain that pending such publication Captain Bougouin's numerous friends will remain entirely convinced of his innocence, which is the just and proper mood. They may rest assured, also, that the fullest justice will be done in his case. Captain Bougouin was almost as much liked and trusted by the Japanese themselves as by other nationals, and there will be not less anxiety in Japan to see his reputation cleared than there is in France.

We may mention here that some misunderstanding seems to exist with regard to the object of secrecy prescribed by law pending the public trial of a suspect. That object, we apprehend, is to guard the reputation of an innocent person against the scandal which inevitably attaches to the mere fact of arrest. Until guilt is definitely proven the assumption of innocence is unequivocal, and the ideal system of criminal procedure is one which shrouds as far as possible from public observation the apprehension and preliminary trial of a man who may ultimately be found altogether guiltless. That principle does not appear to have been appreciated by the foreign local press of Japan. While the leading Japanese newspapers carefully refrained from mentioning any names or stating any charge in connexion with this lamentable affair, the Tokyo correspondent of a Kobe journal telegraphed all the names and particulars as far as they could be ascertained, and certain Yokohama journals did not hesitate to reproduce the intelligence, thus showing that their previous silence had been due to ignorance not to deliberate and proper reticence.

Thursday, May 18.

The *Japan Daily Advertiser*, a journal usually edited in the fairest and most enlightened spirit, has a very strong article about the treatment of suspects in Japan. "When," says our contemporary, "the facts which we are now prohibited from publishing in regard to the recent arrest of foreigners, become a matter of common knowledge, it is very probable that there will be aroused in every Anglo-Saxon breast a deeper regret than ever that Japanese law has been based upon the French principle that a suspect is to be regarded and treated as a criminal until he proves himself innocent. The thing is so manifestly an outrage upon every sentiment of justice upon which all Anglo-Saxons have been nurtured, that any conspicuous illustration of its workings is sure to arouse indignation, which will not be tempered by the fact that the French boomerang has turned to plague its inventors. If the rigours of Japanese law, which it is well known permit of no discrimination and no variation from its letter, have been visited upon Captain Bougouin, in the well known delicate condition of his health and in spite of his brilliant record and universal popularity, it will constitute just such a conspicuous illustration, and arouse anew the Anglo-Saxon sense of the flagrant injustice and

inhumanity of the principle upon which Japanese law is based."

All this is very perplexing. We doubt, indeed, whether our contemporary had given the matter due thought before penning this very strong indictment. When a man is arrested in Japan on suspicion he is not regarded or treated as a criminal. A criminal is called *shujin* under the Japanese Code of Criminal Procedure; a suspect is called *keiji no hikoku-nin*. There is all the difference in the world between the two terms. Again, the place where a condemned criminal is incarcerated is called *kangoku*; the place where a suspect is detained is called *miketsukan*. Here too there is all the difference in the world, for whereas the former means "prison" the latter signifies literally "undecided place" (house of detention). A man who has been consigned to the *kangoku* is treated as a convict, being in fact a convict. He has to comply with all prison rules, eat prison fare and, if so ordered in his sentence, perform hard labour. A man confined in the *miketsukan* is permitted to live just as he would in his own home, with the single difference that he is not free to go abroad. The particular suspect to whom our contemporary alludes is understood to be sleeping on a bed specially sent from his own house and to be receiving his meals from a foreign hotel. These facts will show that our contemporary labours under a very grave misapprehension, and that nothing could be further from the truth than to allege that a suspect in Japan is regarded and treated as a criminal until he proves himself innocent. The two salient differences between Japanese and Anglo-Saxon procedure is that in Japan the preliminary examination and everything connected with it are *in camera*, and that a suspect is not allowed to be represented by counsel. The latter feature is condemned by many critics, though it means, not that a suspect may not have the benefit of counsel to advise him, but merely that he may not be represented by counsel before the examining magistrate. The former feature, however, is designed to avert publicity; an obvious desideratum since men arrested on suspicion may be subsequently released as innocent, and in such cases it is most desirable that even the fact of arrest should be concealed, if possible. This indeed, is a plain illustration of the error committed by those who imagine that a suspect in Japan is regarded and treated as a criminal until he proves himself innocent. The secrecy of the preliminary proceedings is suggested precisely with the object of discriminating between the suspect and the criminal.

## ONE OF THE OLDEN TIME.

By the death on March 31st of the Dowager Duchess of Abercorn, whose descendants, it has been well said, make up of themselves a miniature "Burke's Peerage," a venerable and charming personality has passed away. She was the mother of 14 children, and her direct descendants are said to number 245, of whom something like 160 survive. Five of her seven sons are living and hold leading positions in the world of politics or public affairs, and also five of her seven daughters, those who predeceased their gracious and accomplished mother being the Countess of Durham and the Countess of Mount Edgcumbe. The daughters living are the Dowager Countess of Lichfield, the Duchess of Buccleuch, the Countess of Winterton, the Marchioness of Blandford, and

the Marchioness of Lansdowne. It was only last year that, in her latest great-grandson, the son of the Marquess and Marchioness of Hamilton, a successor to the Dukedom of Abercorn was born. Her descendants include two dukes, Abercorn and Marlborough, the heirs to the dukedoms of Leeds and Buccleuch, the ultimate heir to the dukedom of Devonshire, through Mr. V. Cavendish, M.P., whose wife is a daughter of Lady Lansdowne, and the heirs to the marquises of Lansdowne and Waterford. Among her great-grandsons were no fewer than five prospective dukes. It is also interesting to remember that 15 of her descendants took part in the South African war. That the Dowager Duchess was one of the beauties of the Victorian era there is abundant testimony. Before she was in her teens she attracted attention at a children's party given by King George IV. at the Brighton Pavilion, and it was at another children's ball—this time at Carlton House—that the charming Lady Louisa Russell, the youngest daughter of the Duke of Bedford, first met her future husband. She was then only 14, but it is related that the young folks made arrangements for the alliance which was duly celebrated in 1832. The Duke of Abercorn was less than two years older than his wife and made his mark as Viceroy of Ireland in very troublous times. Although the Duchess took a prominent part in the social life of her time, she was a woman of strong religious feeling. At one time she was addicted to the prophetic ministry of Dr. Cumming, and *The Times* recalls the current joke that, whereas other mothers of marriageable daughters invited desirable young men to their opera-boxes, Lady Abercorn would ask them to share her pew in Crown-court.

## BARON ROSEN.

We learn with the greatest satisfaction that Baron Rosen is to succeed Count Cassini as Russian Ambassador in Washington. The sympathy felt with Baron Rosen in Japan has always been profound and general. It has been well understood that if the action of any Russian official could have prevented a breach of the peace, Baron Rosen would have been that official. We can not tell whether Baron Rosen fully appreciated the quality of Japan's resolution, or whether he advised his Government in a sufficiently warning sense. It may be that he too shared the characteristic Russian conviction as to Japan's total impotence *vis-à-vis* the Colossus of the North. That is a secret which must remain entombed in St. Petersburg's official archives. But that no man more ardently desired peace than Baron Rosen or entertained friendlier feelings towards Japan, is certain. Fate directed events with sinister injustice when he became vicariously responsible for the outbreak of war, but none the less it might reasonably have been feared that since diplomatic justice is proverbially blind, his official career was ruined. But happily the apprehension has not been confirmed by events. He goes as Ambassador to Washington in place of Count Cassini who is relegated to the comparative obscurity of Madrid. Count Cassini is an official who, so far as we can judge, has been conspicuously wanting in all the qualities of diplomatic ability. He has been eminently a carrier of fuel to the fire of international ill-will, and we rejoice to think that his sphere of mischief will henceforth be circumscribed. Russian interests in America will have a very different guardian in Baron Rosen.

## THE FRENCH MINISTER'S ANNOUNCEMENT.

On the 12th instant the following notice was posted at the French Consulate in Yokohama by order of the French Minister in Tokyo:—

Tokyo, May 12, 4.10 p.m.

Contrary to the telegraphic information published yesterday morning, I am in a position to declare that the relations between France and England are more intimate and cordial than ever, and that the correctness of our attitude is recognised and appreciated everywhere in England.

It will be seen that in some important respects this notification is directly opposed to news previously telegraphed from London. The discrepancy is all the more remarkable inasmuch as the views expressed by leading English journals, notably *The Times*, were telegraphed verbatim and there could not be any reasonable doubt as to the accuracy of the intelligence. M. Harmand has not only the competence but also the right to describe the nature of the relations between his country and Great Britain, and we heartily reciprocate his satisfaction at their intimacy and cordiality. But we doubt his competence and we question his right to pronounce what is "recognised and appreciated everywhere in England." It is distinctly misleading to affirm that "the correctness of France's attitude is recognised and appreciated everywhere in England." The impression conveyed by such an assertion is that the British nation sees nothing to condemn in the nature of the neutrality observed by France in Indo-China; which is equivalent to denying the existence of any sense of justice among Englishmen. Probably M. Harmand will say that in thus constituting himself the interpreter of English feeling, he has in mind only Great Britain's view of France's last reply to Japan's protests. With that limitation it may indeed be said truly that the correctness of France's attitude is recognised and appreciated. But that limitation is not applicable in this context, for M. Harmand explicitly defines his statement as being "contrary to the information published yesterday morning," and the information published on the morning of the 11th was as follows:—

London, May 9.

A significant article appears in *The Times* declaring that no more deplorable error can be committed by France than to suppose that the complaints of Japan can be treated lightly. While everything must be done to prevent any rupture of the present *entente*, France must remember that Great Britain can have no choice but to comply with her obligations if the facts alleged by the Japanese are established and Japan calls upon Great Britain to fulfil the conditions of the alliance.

## THE POSITION OF FRANCE.

The Japanese Minister at Paris (Mr. Motono) had a prolonged interview with M. Delcassé on Sunday. The markets are weak on account of the international situation.

## BRITISH REPRESENTATIONS TO FRANCE.

It is understood that Lord Lansdowne has made earnest representations to France with reference to the necessity of a strict observance of neutrality.

An official statement issued at Paris declares that the French Government not only sent positive instructions to the authorities in Indo-China to enforce the neutrality regulations but have unremittently seen to the execution of those instructions.

## THE QUESTION OF FRENCH NEUTRALITY.

London, May 10.

The Japanese Minister in Paris, M. Motono, in his interview with M. Delcassé, pointed out to the French Government the facilities accorded to Russia for concentration and victualling on the coast of Indo-China.

M. Delcassé assured the Japanese Minister that France scrupulously respected her neutrality.

The papers admit that the situation is unsatisfactory, but do not consider it critical.

(FROM THE "JIJI SHIMPO.")

## GREAT BRITAIN AND FRANCE.

London, May 8.

In connexion with the alleged breach of neutrality

by France, the Marquis of Lansdowne, British Minister for Foreign Affairs, has presented to France a strong note in which he said that should the allegations of Japan be true in fact and should she in the sequel ask Great Britain to enforce the obligations imposed on her by the Anglo-Japanese Alliance, the latter could have no course open except to comply with Japan's request.

The *Times* believes that the French Government and people have been sufficiently warned as to the situation, which is growing grave. Japan has shown her desire to limit the sphere of the war between herself and Russia. This limitation, however, is conditional to a certain extent, and it is not to be expected that Japan will be willing to limit the war if a third Power fails to fulfil its obligations.

(FROM THE "ASAHI SHIMBUN.")

## RUSSIAN ABUSE OF FRENCH NEUTRALITY.

London, May 8.

The opinion is gaining ground that the Russian aim is to embroil France and Great Britain. If Japan can be tempted to commit an overt act against France, Russia will then find an escape out of her present difficulties.

Lord Lansdowne, the British Secretary of Foreign Affairs, has made strong representations to the French Government, in connection with the continued abuse of French neutrality.

The *Times* admits the gravity of the situation, remarking, "We cannot afford to treat the Japanese Press with indifference." Public feeling in England is staunch in its support of the Alliance at all costs.

This information referred to the situation prior to the publication of France's second reply, and is consequently quite independent of M. Harmand's announcement unless we extend the latter so as to include England's view of the incidents which have occurred in Indo-China as well as of the attitude ultimately assumed by France. It is for this reason that we call M. Harmand's statement misleading, for we emphatically deny that the English nation regards the Indo-Chinese story as reconcilable in any sense with the dictates of justice or with the spirit of international law, and we venture to express the opinion, M. Harmand *non obstante*, that the French nation itself does not differ materially from the English in its estimate of that story. The "attitude" of the French Government is one thing. *Qua* attitude it is unimpeachable, and all of us applaud it as worthy of France. But there is an enormous interval, an interval as wide as that which separates heaven from earth, between the attitude of the Cabinet in Paris and the apparent acts of French officials in Indo-China, and we begin to be very apprehensive lest in France's case to-day, as in Russia's two years ago, the man at the front, by obeying his sympathies in defiance of his duties, may bring about a terrible calamity.

## CHINA.

The *Asahi Shimbun* has an important telegram from Shanghai to the effect that the Canton men at that place have held a meeting with reference to the Chinese exclusion legislation of the United States. They passed the following resolutions:—

- (1) That all purchases of American imports should be suspended.
- (2) That all Chinese subjects in the employ of Americans as compradores or secretaries should resign.
- (3) That no labour should be provided for loading or unloading American ships.
- (4) That copies of these resolutions should be sent to all Chinese in America, and that the Chinese Representative in Washington be urged not to sign any convention pointing to discrimination against his countrymen.

The Fuhkien Chinese were to hold a meeting on the 15th instant for the purpose of passing similar resolutions.

Another telegram says that the Canton citizens are equally excited and that this affair is likely to assume serious dimensions. Indeed it is plain that if the Chinese be

roused to united action they may take reprisals which will prove most inconvenient to American trade. Nor can we be at all surprised that the greatest resentment should be felt with regard to this exclusion policy.

On Saturday a telegram received at the head office of the Nippon Yusen Kaisha announced that the steamer *Sobranuse*, when at about 8 miles off Port Arthur on the 12th instant at 11.30 a.m. struck a floating mine and sank. Boats put off from Port Arthur and succeeded in saving 67 out of 89, crew and passengers. The passengers totalled 28, of whom 18 seem to have been rescued, 5 Japanese and 7 Chinese being lost, and of the crew 8 Japanese and 2 Chinese seem to have perished. The steamer was an old boat—built in 1884—of 1232 tons. She had been chartered from her Chinese owners by the Nippon Yusen Kaisha.

The place of the accident was north latitude 38° 39' 50" and east longitude 121° 13' 30". It has now been announced by the authorities that great danger must attend any attempt to navigate the space comprised between the parallels of north latitude 38° 20' and 39° 10', and the meridians of east longitude 120° 55' and 122°. All vessels are advised to give this area a wide berth.

A telegram to the *Asahi* from Shanghai alleges that the Russians are apparently seeking to send home some of their able-bodied seamen and to detain in their place the maimed men released by the Japanese from Port Arthur. That would be a pretty trick; a worthy way of repaying Japanese magnanimity.

The Fuhkien population of Shanghai have added to the resolutions adopted by their Canton fellow-residents, as reported in our last issue. The additions are that no Chinese youths shall attend American Schools, and that no Chinese subject shall act as cook or servant in an American household. These resolutions, however, are not to have effect for the space of two months, during which it is hoped that the United States will abandon the objectionable legislation.

Two Chinese are awaiting trial at Weihaiwei for the alleged murder, or manslaughter, of another Chinese. The accused are the brother-in-law and son-in-law of the deceased. Mr. H. P. Wilkinson, Crown Advocate, is preparing the indictments, and after they are ready Mr. J. C. E. Douglas, who in the absence of Mr. F. S. A. Bourne, has been appointed acting Judge of the Weihaiwei Court, will go up to that place to try the charges. Mr. Ellis will appear for the defence.

The members of the Shangpu (Ministry of Commerce) have been lately conferring with regard to the immediate establishment of a Mining and Railway School as an annexe of the Ministry. The teaching staff will be composed of the best that can be engaged from abroad, and it is proposed to make it compulsory for all members of the secretariat of the Ministry to attend classes, so that in course of time they may fit themselves for posts as superintendents and inspectors of mines and railways under the jurisdiction of the Ministry.

The report of the China Agency of the British and Foreign Bible Society for the year 1904 is an interesting record of what this old-established Society has done in the way of disseminating the Scriptures during the past year. There are about a dozen sub-agencies and principal depôts in widely-separated districts of the Empire, in addition to which there are also eight depôts under the superintendence of missionaries. The total issues for the year were as follows:—16,923 Bibles, 38,643 Testaments, and 1,135,785 portions, making a total of 1,191,351 as compared with 1,447,475 in 1903. The circulation for the year was 14,074 Bibles, 40,523 Testaments, and

1,032,836 portions, making a total of 1,808,333 for the year as compared with 933,965 for 1903. The contributions to the centenary fund reached a total of \$10,618.06, of which \$4,589.59 was contributed by foreigners and the remainder by Chinese. This sum, however, includes \$480.69 contributed to the centenary fund in 1903.

The news has just reached Shanghai of the death in England of Mr. H. R. Hearn, who was for many years a partner in the firm of Messrs. Alfred Dent & Co. Mr. Hearn arrived in Shanghai in the sixties and was connected with at least one other firm before he joined that with which his name is principally associated. A keen business man, both on his own behalf and that of the public, he was a good sportsman also, and he was for some time President of the Shanghai Cricket Club. Few men have been more personally liked, and he took with him the sympathy of all when, suffering from severe physical affliction, he left for home about four years ago. Mr. Hearn never married.

The steamer *Whampoa*, which until recently belonged to Messrs. Butterfield & Swire, left Shanghai on May 6th for Europe, taking a number of Russians who have lost their reason through the horrors of war. Elaborate precautions were taken for their safety, the vessel having been placed in the hands of Messrs. Farnham, Boyd & Co. at the Old Dock in order to have padded cabins, etc., fitted up. Wire-netting was put up all round the ship to prevent any of the lunatics from jumping overboard. A number of soldiers also went to act as an escort to these unfortunate men. It is said that no less than 3,000 Russians have become demented as the result of the fighting in Port Arthur and round Mukden.

Students of Chinese prior to 1900 were accustomed, says the *N.-C. Daily News*, to call the Boards of Civil Appointments, Revenue, Rites, War, Punishment and Works, the "Six Great Boards," institutions which have been in existence in China for nearly twenty centuries. After the events of 1900, the decrepit Tsungli Yamen, or Foreign Office, which was established about thirty-five years ago, was abolished and the Waiwupu or Ministry of Foreign Affairs, added to the six already existent, making seven in all. In 1903 the Shangpu, or Ministry of Commerce, came into existence, and now after much unnecessary procrastination, in view of the schools and colleges of modern learning springing up everywhere, it is decided to establish a Wenpu, or Ministry of Education, making Nine Great "Boards," or Ministries in all. It has been found that without such a Ministry, the officials in charge of colleges and schools in the provinces have persistently ignored instructions sent them by the Hsiowu-ch'u, or Bureau of Education, in Peking, under the two Chancellors of the Peking University, and these two high officials have therefore obtained their Majesties' approval to the creation of a Ministry of Education, which will then bring all colleges and schools under its jurisdiction. The first President of the new Ministry, it is reported, will be Yung Ch'ing, the present Manchu Chancellor of the Peking University.

#### "THE STATESMAN'S YEAR BOOK."

The table given by "the Statesman's Year Book" for 1905, showing the strength of the Japanese Navy, has attracted some criticism in Tokyo where one journal, accepting this publication as accurate, is disposed to blame the Naval Authorities for observing reticence in Japan with regard to matters which are well known in Europe. But to us the most notable feature of the "Statesman's Year Book" for 1905, so far as its Japanese section is concerned, is the obsolete and misleading character of its information. When it undertakes to describe the organization and establishment of the army, it does not even embody the important changes made last year, nor are its numbers more modern than 1900.

As for its remarks about the Navy, they are based chiefly upon the experiences of the China-Japan War, now ten years old, and so much at sea is it when the present war occupies its attention that one is quite perplexed to understand where it can have obtained its data. For example, it tells us that the *Hatsuse* and the *Yoshino* were "torpedoed" by the Russians and that the *Yashima* was sunk by "mines." It is scarcely conceivable that the compilers of a book enjoying a high reputation should be so ill-informed. The *Hatsuse* was never "torpedoed" nor was the *Yoshino*. The former ship, as every schoolboy knows, was sunk by a mine and the latter by a collision. As for the *Yashima*, no definite information has been published about her. She may have fared as the "Year Book" states. Then, again, the volume puts the number of Japan's armoured cruisers at "7 or 8," a delightfully vague statement, and in its numerical table does not assign to her any other cruisers whatever. Such looseness and inaccuracy throw discredit upon the whole work.

#### DEATH OF DR. WEIPART.

News has been received in Tokyo of the death of Dr. Weipart by his own hand—a pistol was used—at Bordeaux last month. No particulars are given nor is any cause assigned. It is a profoundly sad event. That this brilliant scholar, universally beloved and with a fine career before him, should have taken his own life is as inexplicable as it is shocking. Dr. Weipart was in the prime of life. He was one of the most learned students of the Japanese language and of everything relating to Japan in the world.

#### THE HOUSE TAX.

The House Tax Tribunal met at the Hague on the 15th instant and closed its meetings. It is expected that judgment will be given towards the close of June. There had been some prospect of the Tribunal having to postpone its sitting owing to Mr. Motono being detained in Paris on account of the French neutrality question, but happily he was able to attend, and there is now a prospect of this weary business coming to an end.

#### NOTES ON CURRENT EVENTS.

We read in the *Fiji Shimpō* that great success has attended the opening of the naval factory at Minegori in Yamaguchi prefecture where coal briquettes are produced. Recently Cardiff dust-coal has been used, and although the machines have only just begun to work, about 150 tons of briquettes are produced daily. One or two years hence when the factory is in full working order, it will be able to produce 150,000 tons of briquettes yearly, which will suffice for the ordinary purposes of the Navy, and by slightly increasing the plant, a supply sufficient for time of war can be obtained.

The final result of the subscriptions to the fifth domestic loan is:—

	Yen.
Above the selling price .....	29,437,275
At .....	468,823,950

Total..... 498,261,225

This makes the ratio of allotment 16 per cent.

Another case of pest has occurred in Hamaguri-machi, in the Fukagawa suburb.

On this occasion the victim was a boy of twelve. The place of the occurrence was within 300 yards of the house where a little girl died a short time ago. The Tokyo Municipality announces the opening of the pest hospital in the Honjo district.

There has been a marked appreciation of quotations on the share market. The settlement of the complication with France and Baron Rosen's nomination to Washington are assigned as reasons.

These considerations must be supplemented in the case of the Tokyo Electric Railway Company by the fact that another section of the line has been opened, and has brought a very large increase of traffic. This had been foreseen by all persons acquainted with the conditions of the line.

A telegram to the *Fiji Shimpō* from London says that the Emperor of Germany, addressing his officers, declared that in view of the repeated defeats suffered by Russia, the duty of checking the Yellow Peril might devolve upon Germany. We greatly doubt the truth of the telegram. Only a few days ago, His Majesty—of whom even his warmest admirers must admit that he prepares a great many surprises for the world—informed the public that the Japanese were a special dispensation of Providence, and that their role in the great organization of the universe was to punish the backsliding of the nations from Christianity as Attila the Hun and as Napoleon the First had punished them. One or other of these utterances assigned to His Majesty must be erroneous, and as the latter does not bear the impress of an invention, we are inclined to assign that character to the former.

The number of Russian prisoners now in Japan is stated to be:—

General Officers .....	10
Staff Officers .....	70
Junior Officers .....	884
N. C. Officers .....	8,558
Rank and File .....	50,769

Total ..... 60,291

No definite statement has been published as to the prisoners taken in the battle of Mukden, but it would appear from the above total that they were not so numerous as was at first stated. It will be remembered that after the original report a rumour was received to the effect that the same returns had been counted twice over by accident, and that the real total would have to be accordingly reduced, but the exact dimensions of the reduction have not been stated.

Prince and Princess Arisugawa were received in audience by the King and Queen of Italy on the 9th instant, and their Majesties returned the visit the same day. These meetings are said to have been most cordial. Subsequently the Prince and Princess dined at the Palace. The King conferred on Prince Arisugawa the highest Italian order, and also decorated several of his suite. On the 10th instant the Prince visited the barracks in the King's company, and His Majesty subsequently accompanied the Prince to the latter's hotel. On learning of these things the Emperor of Japan conveyed a warm message of thanks to the King of Italy. On the 13th instant the Prince and Princess left Rome for Paris.

Their Majesties the Emperor and Empress have contributed a sum of 1,000 yen to the prison-door relief work of the Christian association organized by Mr. Hara Taneaki. Mr. Hara's enterprise commenced in 1898

in connexion with the amnesty granted on the occasion of the funeral of the late Empress Dowager. He has had the assistance of Count Hijikata, Viscount Okabe, Baron Shibusawa, Mr. Miyoshi Taizo and Mr. Shimada Saburo, and his organization has assisted 653 persons.

His Imperial Highness Prince Fushimi (Junior) who proceeds to Korea in recognition of the recent visit of a Korean Prince to Tokyo, left Shimbashi yesterday at 6 p.m. He will be present at the official opening of the Seoul-Fusan Railway on the 25th instant.

The new destroyer *Hatsushimo* was launched at Yokosuka on the 13th instant.

Quite a considerable disturbance is reported from Hiroshima. It arose out of a trivial act of insubordination on the part a Russian prisoner, and it ultimately assumed the dimensions of a struggle between large numbers of men. Four of the Japanese guards were slightly hurt.

The largest known diamond in the world has reached London and been placed on exhibition. The extreme dimensions of the stone, which has been named the "Cullinan" diamond after the chairman of the Premier Diamond Company, are about 4 in. in length,  $2\frac{1}{4}$  in. in height, and  $2\frac{1}{4}$  in. in breadth, its girth being  $8\frac{3}{4}$  in.,  $9\frac{3}{4}$  in., and  $11\frac{1}{4}$  in. according to the position in which the measurements are taken. It is remarkable in that its base is almost perfectly flat, and it has two other areas of considerable size which are also flat; this suggests that it may be merely a piece broken off from a still larger stone. Its total weight in its present uncut condition is  $3,025\frac{3}{4}$  carats, and it is thought that it will cut down to a very deep brilliant weighing about 1,200 carats and free from flaws, with "chips" ranging from 20 carats downwards. The cost of cutting is estimated at £30,000, and one million sterling is spoken of as its total value, though it is obviously premature to say much on that point until a purchaser has been found. In regard to purity and colour it is considered to be of high quality.

Tokyo journals announce the gift of a large quantity of cholera belts to the troops at the front by Miss Bovill. A letter addressed by that lady to Lt. Colonel Horiuchi of the Head Quarter staff, is quoted. We learn from the letter that a friend of the writer and her aunt, the Countess of Grafton, desiring to contribute something which would be of use to the soldiers, sent from England a large quantity of flannel which Miss Bovill, following the example set by Mrs. Colonel Hume, caused to be made into cholera-belts. It appears that the tradesman who packed the flannel obtained some inkling of its destination for he planned to the roll a card bearing the words, *Nippon bansai bansai*!

It is stated that the coal taken by the Japanese Port Arthur totalled 100,000 tons; consisting of Cardiff briquettes, 30,000; common Cardiff, 50,000, and Japanese coal 20,000. The value of the whole is assessed at 1,900,000 yen.

The *Asahi's* London correspondent telegraphs that in St. Petersburg naval circles Rojestvensky's success is regarded as assured. Captain Mahan, however, does not take that view, neither does Admiral Freemantle. Assuredly had Rojestvensky not been able to freely use the ports of Indo-China as bases for re-equipment, rendez-

vous and communications, his circumstances would be radically different from what they are. But even with that great advantage resulting from the flagrantly imperfect nature of French neutrality St. Petersburg's confidence is decidedly sanguine.

At some time last year the *Spectator*, in one of its many emotional moods, avowed a conviction that Providence seemed to have Russia under special charge, since in every crisis of her national existence a great general was found to lead her hosts, a Skobeloff, a Todleben or a Kuropatkin. That appreciation was penned after Kuropatkin had accomplished what the onlooking world chose to regard as a signal feat; after he had been driven from the strategical centre of Manchuria which he had spent months fortifying, but in losing the position had not lost his army also, which saving clause constituted his sole merit. It was then the fashion to decry the Japanese Generals, and to pronounce them lacking in all the great qualities of leadership. Most curious did the public's judgment appear, seeing that the Japanese captains had invariably been victorious, the Russian invariably vanquished. The verdict is changed now, however, radically changed. And of Kuropatkin the hardest things are said by old General Dragomiroff, who has always been considered the leading military authority in Russia. "Kuropatkin's reputation," we read in the Paris correspondence of *The Times*, seems to Dragomiroff quite undeserved. He has, in the latter's opinion, none of the qualities of a commander-in-chief, although at the head of a brigade or division he might have been a success. He is lacking in both audacity and intuition, as well as in continuity of purpose. He invariably revoked his orders, he broke up his army corps, and, from a jealous fear lest he himself should not have all the honours of victory, he avoided choosing competent subordinates.

General Dragomiroff's nephew goes further still, accusing Kuropatkin of being an ardent self-advertiser. The old general is even reported to have said, "If a single one of the Japanese generals had had any real comprehension of this war and known how to divine the character of the Generalissimo, the Japanese armies would have long ago been at Kharbin."

Mr. Tajima, who is well known to the public in connexion with his beautiful publications the *Shimbi Daikwan*, "Masterpieces of Motonobu," "Masterpieces of the Kōrin School," etc., has just returned from a protracted trip to Europe and America. During his absence the *Shimbi Daikwan* and his other periodicals have necessarily been suspended, but we learn that he is now engaged upon the preparation of three magnificent volumes which will appear in June, July and August respectively, namely *Nansō Meigwa-yen* (No. III), *Korinka Gwashu* (No. III) and *Motonobu Gwashu* (No. III). He has further signalled his return by resuming the publication of the remarkably artistic and charming pictorial post-cards (*fuzokugwa no yehagaki*) previously noted in these columns. Three Sets have just appeared, "Geisha in the Four Seasons" (No. 7), "Girls of the Upper Classes," (No. 8) and "Familiar Figures" (No. 9). These are all most attractive, and we strongly recommend our readers to order them from the "Shimbi Shoin, 52 Nicho-machi, Shitaya, Tokyo."

Work on the grand trunk line of Formosa, temporarily suspended on account of the

war, was resumed vigorously some time ago, and having been carried on day and night, was to be brought to a conclusion on the 15th instant. This means that Keelung and Takau—separated by a distance of 250 miles—are now in railway communication, and that a traveller leaving Taipei at 6 a.m. finds himself in Tainan (200 miles) at 9 in the evening. The permanent bridges have not yet been fully completed, but temporary structures are available. The journey from Keelung to Tainan can not be performed in one day—a night's stoppage at Changhua is necessary. It seems only yesterday that we were hearing of these various places in connexion with insurrections and riots.

The Japanese Government has forbidden the export of coal to Indo-China for the present.

No one will be surprised that the Japanese Government has thought fit to interdict all export of coal to Indo-China. There are ample reasons to believe that coal purchased in this country and carried to Saigon nominally for the uses of ordinary trade, is furnished to Russian war-ships. The easiest way to put a stop to that abuse is the way now adopted. Doubtless the veto will greatly inconvenience the Messageries Maritimes, which keeps a depot of Japanese coal at Saigon. That is to be regretted, but the directors of the great French S.S. Company will themselves be ready to recognise the imperative character of Japan's act.

An Imperial Decree dated the 12th of May and numbered 160, declares the law of siege applicable to the whole of Formosa in view of the fact that the island has become continuous with the belligerent area. The decree goes into operation from the day of its promulgation. The Governor-General of Formosa, or in his absence the officer commanding the garrison, is nominated to direct matters connected with the new order.

Telegrams indicate that the anti-Semitic riot at Jitomir involved the deaths of 120 Jews, and that the troops were subsequently guilty of most lawless acts. No one can pretend to think that Russian administration has not been fully tried in the balance and found wanting. One may decline to sympathise with violent methods of self-assertion, but truly there seems to be no room for anything else in Russia.

Floating mines have accomplished another disaster. At 9 p.m. on the 11th instant the Osaka Shosen Kaisha's S.S. *Maiko Maru* (1,178 tons) struck one of these engines of destruction and sank in 50 minutes. Her crew were all saved by the *Aichi Maru*. The place was north lat. 35 25' and east long. 120 55'.

Prince Karl left Nagasaki on the 16th instant. The Prince was present at a farewell banquet given in the Nagasaki Hotel by Colonel Nagayama, Viscount Matsudaira and the other members of the committee who had attended on him during his travel. He spoke in very warm terms of the welcome he had received from the Sovereign of Japan and her people; he declared that he would never forget it, and he wished to the Japanese nation all prosperity and success and to the Japanese empire a brilliant career. He sent presents of money to the municipalities of the various Japanese towns visited by him, and to those who had attended him throughout his travels he handed handsome souvenirs.

## THE NEUTRALITY QUESTION.

FRANCE has again made a declaration which, so far as words go, is of a most unequivocal character. No warship or transport of either belligerent is to be allowed to enter her territorial waters. That is a more drastic veto than any other Power has hitherto issued. Even the strictest neutrality has been supposed to be satisfied with the twenty-four hours' limit, but France apparently has adopted the rule that admission shall be denied *in toto* to the war-ships or transports of a belligerent. The only inference is that the French Government has recognised the magnitude of the injustice Japan was suffering by ROJESTVENSKY's licence, and in order to put an end to all opportunities for such outrages, has adopted a canon of neutrality unprecedentedly severe. This may be taken as proof of a fact recognised by thoughtful Japanese throughout the complication, namely, that France has not deliberately connived at the flagrant violations of her neutrality perpetrated by the Russian Admiral. She has merely drifted from one thing to another, not foreseeing what an immense evil ROJESTVENSKY would take for every little inch granted to him. That is the most friendly view to entertain of France's procedure, and naturally there is in every responsible quarter an earnest desire to regard France's case with friendly eyes since the results consequent upon an open rupture with her would be calamitous in many respects. But, on the other hand, it is not surprising to find that the declarations of the Quai d'Orsay are regarded with much distrust by the organs of Japanese public opinion. Such newspapers as the *Fiji Shimpō* and the *Nichi Nichi Shimbun* justly recall the fact that this is not France's first profession of strict neutrality, whereas as yet there has not been a single evidence of her taking practical steps to enforce her promises. She has informed the Japanese Representative in Paris that no sign of the Russian ships was to be seen in Honkohe Bay or its vicinity on the 9th of May. The Russian ships entered Kamranh Bay on the 12th of April, and it is regarded, apparently, as a due assertion of French neutrality that they should not be in Honkohe Bay on the 9th of May; an interval of virtually a whole month. For a whole month they have been using French ports as naval bases, where they equipped themselves for attacking Japan. Was all that time needed for France to awake to a consciousness of the terrible injury she, as a professed neutral, was inflicting on one of the belligerents, and of the immense advantage she was conferring on the other? And even now there is no guarantee that the newly proclaimed neutrality will be enforced. A month ago any official declaration from France would have received immediate and implicit credence. But it can not be forgotten that on the very morrow of her announcement about Kamranh Bay, ROJESTVENSKY calmly returned to

that port. He left it on the 22nd of April by way of nominal deference to France's professions. He returned to it on the 24th just as though no such professions had ever been made, and he remained there until the 26th, then finally, in his own good time, taking his departure for another French harbour 40 miles distant. The public are now informed that he was not to be seen in or about this second harbour on May 9th. Is there to be a second rehearsal of the Kamranh comedy? Is the Russian Admiral to return to Honkohe after a day or two; or is he merely to repair to some other French port of refuge a few miles distant? There are those that endeavour to defend France by quoting her municipal laws. Municipal laws are entirely out of place in this context. A country can not escape its international responsibilities by pleading its own municipal laws. What Japan asks for is common justice. What she demands is that a neutral Power shall not place at her enemy's disposal such facilities as greatly augment his belligerent capacity. What she demands is, not that some technical triviality about a three-mile limit shall be satisfied, but that France, in her character of neutral, shall not permit the Russian Squadron to convert her harbours into naval bases for re-equipment, rendezvous and refuge. It is a perfectly plain issue. When France has evinced a genuine determination to supplement her promises by corresponding performance, Japan will be re-assured. Until then the Japanese nation sees itself in the presence of a diplomatic nebula which may apparently assume any shape that the Russians choose to give it. France is in a difficult position. That is granted and fully appreciated. But Japan is in a difficult position also. For her the paramount consideration must be that she is suffering vital wrong. When a man's house is feloniously confagrated, he does not pause to examine whether the incendiary employed some alien hand to hold the torch or whether he undertook the task himself. The destruction of the house is the paramount fact of the situation. Does France really intend to act up to her professions, or does she intend to take refuge behind some technicalities of three-miles limits or unimplemented instructions? These are the questions now asked by leading Japanese journals. They are distrustful, and truly a review of the career of ROJESTVENSKY since he left the Baltic amply justifies this mood of distrust. At the same time it is evident that the good intentions of the French Cabinet are not doubted. France, as represented by her Minister of Foreign Affairs, has now publicly declared that to allow Russian vessels to enter and make use of her territorial waters is to inflict a wrong upon Japan, and she has also publicly declared that if such entry or use be hereafter made it will be because of dereliction of duty on the part of her own officials, or because of deliberate violation of her neutrality by the Russians. That much

at all events is certain, and in the face of such certainty it is scarcely conceivable that the outrage witnessed during the past month will be continued or repeated.

## RUSSIA AND FRANCE.

AGAIN we are informed by Reuter that the Foreign Office in St. Petersburg is endeavouring to discredit France by denying that, in spite of her assurances to the Japanese Government, she has taken any steps to assert her neutrality, or that any change has occurred in the situation. It will be remembered that when the Quai d'Orsay made its first reply to Japan's protest—a reply couched in conciliatory and frank terms—St. Petersburg was reported to have adopted a similarly strange course, alleging that France had done no thing to implement her declarations and that no intimation had been conveyed by her to the Russian Government, though M. DELCASSÉ distinctly affirmed the contrary. One can not be certain what degree of credence should attach to this news sent by Reuter. If it be true, the plain inference is that Russia seeks to embroil France in the war. The public will naturally hesitate to endorse such a conjecture. France's entry into the arena could not materially benefit Russia, for it would at once summon England to Japan's aid, and we need hardly discuss what that would involve for all the belligerents. There has been propounded in some quarters a theory that Russia desires to extend the dimensions of the struggle in order to find a comparatively easy exit for himself, but truly one fails to see how that object would be promoted by adding Great Britain to her enemies. Therefore this news from St. Petersburg must be received with the utmost reserve. Whatever basis of truth it has is probably limited to the easily comprehensible fact that the Russian Government desires to justify ROJESTVENSKY's proceedings, and to maintain that there has not been any real violation of France's neutrality. So far as England and Japan are concerned, we believe that both are equally reluctant to witness any extension of the area of strife. Indeed there is only one of the great European Powers to whom such a catastrophe would be welcome. Nevertheless much diplomatic skill and patience will be necessary to avert it. The sheet-anchor of those that hope for a peaceful settlement is the eminently correct and conciliatory attitude of the Paris Cabinet. Nothing could be better in tone or less equivocal in terms than M. DELCASSÉ's assurances. Unless and until the most authentic facts can be adduced in proof of wilful negligence on France's part such assurances must command all credence. As to the fact that ROJESTVENSKY's ships are reported to have been lying in Honkohe Bay on the 12th instant, we must wait for confirmation or contradiction. It may be that in spite of the clear and conscientious desire of the French Government to do the right thing, French

officials in Indo-China have no disposition to obey any instructions calculated to embarrass Russia. That would not excuse France, but it would explain a great deal. Japan has undoubtedly suffered a heavy wrong, and if it is to be continuously inflicted on her she can not tamely endure it. The use of French territory by ROJESTVENSKY as a basis of communications for the purpose of planning and coördinating the movements of his squadrons is a fact in which even the most partial advocate must recognise a gross and flagrant breach of neutrality. But the question has now reached a stage where anything like agitation or intemperance on the part of the public would be worse than mischievous. The Governments in Tokyo, Paris and London may be trusted to find a satisfactory solution if such a solution exists.

#### THE QUESTION OF THE DAY.

OUR readers will have perceived from our translation of the announcement made by the French Government to the Japanese that a point of great obscurity existed. It was this. The announcement speaks of Admiral JONQUIÈRES having cruised along the coast of Indo-China from St. Jacques Bay as far as Tourane, which is in 16° north latitude. Had the Admiral simply stated that throughout that interval he did not discover any Russian ship of war or transport, the announcement would have been clear enough. But he goes on to describe Xuaneday, which is 50 miles above Honkohe, as the most northerly port available for the anchorage of war-ships. Xuaneday is not marked on any map in our possession, but from the indications given as to distance we infer that it is in the immediate neighbourhood of, if not identical with Phu-yen. At any rate the inference is that the French Admiral's cruise did not extend beyond Xuaneday, which place is in north latitude 13°, approximately. A Havas telegram, however, received at the French Legation and communicated to the *Fiji Shimpō* and the *Kokumin*, intimates that Admiral JONQUIÈRES' cruise extended as far as Tourane, in 16° north latitude, and that in the whole space between that place and St. Jacques Bay he found no trace of Russian ships. That explanation appears to be accepted by the Foreign Office in Tokyo also, and we gather plainly from the Admiral's telegram that Xuaneday (50 miles north of Honkohe) is the last point on the Indo-Chinese port where a war-ship, steaming north, can find suitable anchorage. Considering that the Indo-Chinese coast extends as far as north latitude 22°, it seems strange that no port of refuge should exist in the whole interval between latitude 16° and the northern limit, but of necessity the French Admiral is more competent than any one else to make a conclusive declaration as to that. The *Fiji Shimpō* seems disposed to doubt the sincerity of the declaration, and to read between its line some traces of

evasion. But, after all, the main point is that there can no longer be the smallest uncertainty concerning France's present interpretation of her neutral obligations. She has declared to the world in the most unequivocal manner that she considers her neutrality violated if Russian war-ships or transports enter her territorial waters for the purpose of coaling or provisioning. More than that can not reasonably be expected of her. It is true that this recognition of her duties comes very tardily; comes after ROJESTVENSKY has practically enjoyed the hospitality of her ports for some five weeks at the most critical period of his enterprise, and after he has in the most arbitrary manner, converted the coast of Indo-China into a basis of warlike operations against Japan. The French Government will probably say, however, that its own rendering of its neutral responsibilities was never equivocal, and that the whole fault lies with the Russian Admiral's lawless conduct. That may be. No one can confidently undertake to decide which is the true version. But as matters now stand one of two conclusions is inevitable. The first is that France has radically modified her rules of neutrality in view of their obvious insufficiency and after a great injustice has been proved against them. The second that her rules were always correct but that, owing to the negligence of her officials in failing to enforce them or to their defiant violation by ROJESTVENSKY, they have proved almost wholly impotent. Every one must be anxious, meanwhile, to rest content with the reflection "better late than never" in such a case as this, and to forget the great wrong that has been done to Japan.

The next question is China's neutrality. Tokyo journals seem to be apprehensive that ROJESTVENSKY, having shown himself altogether reckless of French neutrality, will treat China's with equal indifference, and that complications of a most serious nature will arise. As to that there is one point to be observed. ROJESTVENSKY and the St. Petersburg Government seem to have contended that their action throughout was not in violation of French neutrality as outlined in her regulations, and probably an unscrupulous special pleader who paid no attention whatever to the true spirit and purpose of neutrality, might be able to construct an argument out of the loose language of France's neutrality laws. But in China's case there is no ambiguity. China has pledged herself to the 24-hours' limit, and if ROJESTVENSKY attempts to use her ports, or rather to abuse them, as he has done in the matter of the Indo-Chinese harbours, there will be no margin for prevarication or subterfuge. Will he openly resort to procedure which must proclaim him an outlaw and a wholesale law-breaker? It is doubtful. Yet he must find ports of refuge. Unquestionably the situation has now become most critical for him. When he passed the straits of Malacca no one doubted his intention of resolute-

ly advancing north and engaging the Japanese fleet in a desperate struggle for the mastery of the sea. But now very strong doubts may well be entertained of his intentions. Forty days have elapsed since his ships steamed proudly and defiantly past Singapore. He has had ample time, more than ample time, to do all the coaling and equipping that is possible to him. Already indeed he has begun to exhaust his renewed stock of fuel and provisions, nor can he have any prospect of fresh and adequate supplies. Yet there is no sign of his coming north to put his fate to the test. It has been supposed that he is waiting for the Third Squadron, but a situation now confronts him in which the exhaustion of his own resources by waiting may easily counterbalance whatever accession of strength the Third Squadron would bring him. And where is he now to wait? Indo-China is closed to him. He must perforce consider it closed at length. China alone remains, and if he makes use of Chinese ports he will be a malefactor in the eyes of the world. His only alternative is to steam out into the Pacific and head for one of the northern passages.

#### RUSSIAN PRISONERS IN JAPAN.

According to the *Official Gazette* of May 17th, Russians prisoners in Japan at the end of April were stationed at the following places:—

	Generals.	Staff Officers.	Junior Officers.	Non-Commissioned Officers.	Men.	Total.
Narashino ...	—	—	—	423	2,571	2,994
Sakura .....	—	—	—	49	251	300
Takasaki ...	—	1	19	103	417	541
Sendai .....	—	1	36	198	1,839	2,074
Shizuoka ...	—	6	103	3	107	219
Toyohashi ...	—	—	40	3	37	80
Nagoya .....	8	2	100	186	921	1,217
Hamadera ...	—	—	51	4,142	23,681	28,174
Otsu .....	—	—	—	253	1,244	1,497
Fushimi .....	1	—	15	179	1,335	1,530
Yamaguchi ...	—	3	47	103	4,447	600
Kumamoto ...	—	—	24	159	799	982
Kurume .....	—	—	—	193	1,256	1,449
Kanazawa ...	—	4	35	697	4,844	5,580
Tsuruga .....	—	—	—	84	408	492
Sabae .....	—	5	15	1	19	40
Himeji .....	—	—	—	350	1,834	2,184
Fukuchiyama	—	—	—	151	949	1,100
Matsuyama .	1	47	374	530	3,091	4,043
Marugame ...	—	—	—	35	315	350
Osato .....	—	—	—	173	828	1,001
Kokura .....	—	—	23	144	957	1,124
Fukuoka .....	—	—	2	419	2,317	2,738
Total .....	10	70	884	8,559	50,768	60,291

The prisoners in hospitals at Kokura are not included in the foregoing figures.

#### "THE FAR EAST"

This magazine, of which the third number is now to hand, seems to improve in interest. The article "On the upper Hoangho" by L. Filchner is most readable and the observations made by this indomitable explorer and his companion Dr. Tafel should be of the greatest value. The late Dr. Edkins has a note on "The Hebrew Bible in China," distinguished by evidences of his wonderful erudition. A description of the convicts at Saghalien by C. F. Kleye will, we doubt not, be read with appreciation and Mr. Bach's note on the country and people of Pakhoi and its hinterland will attract. The number is altogether a very attractive issue.

# THE IMPERIAL DONATION TO THE FUNDS OF THE Y.M.C.A.

(CONTRIBUTED.)

It was announced in these columns on the 8th inst., that their Majesties the Emperor and Empress had been graciously pleased to contribute the sum of ten thousand yen to the Army Department of the Young Men's Christian Association. One cannot but feel the greatest admiration for such magnanimity on the part of their Imperial Majesties. It is perhaps pertinent to ask ourselves whether any European sovereign would be equally liberal to a party of Buddhists sent by a rich Buddhist sect to teach his troops how to play ping-pong, how to use the harmonium, &c., &c.; supplying Buddhist tracts and sacred writings to those who asked for them. We are very much afraid that there would be a big outcry in England, for example, against assisting Buddhist propagandists in such a direct manner. Of course the applicants for royal assistance would say to King Edward—"Your Majesty, these Buddhists are quite satisfied to amuse the troops without converting them. Religion is not pushed in any way. It is, on the contrary, placed in the background as much as possible. The social entertainments and the preaching services are kept quite distinct. Your Majesty is only asked to subscribe towards the former, for of course as Head of the Church and Defender of the Protestant Faith, your conscience would not allow you to fill the coffers of the priests of an alien creed." Would our English King be convinced by such arguments, and would he subscribe? We doubt it very much. He would say, if the troops want the magic lanterns and the violin playing, if they want paper and envelopes and novels to read, why cannot our Christians provide them?

It is not improbable that there will be people in England, America and elsewhere who will misinterpret the significance of this gift of their Imperial Majesties, and argue that it shows a leaning towards Christianity. Let such people not deceive themselves. It shows nothing of the kind. It shows, on the contrary, how very successfully the Army Department of the Young Men's Christian Association has secularized its work among the soldiers, how inoffensive, unaggressive, and intensely tolerant Christianity as manipulated by them has become. So far has the toning down of the creed been carried that the ruler of a great non-Christian people, a Monarch who has an ancient creed of his own that is radically different from Christianity, still feels that without doing violence to his inmost convictions he can help forward the social work conducted by the representatives of an alien faith. The example set by their Majesties will no doubt be followed by leading men all over the country. The feeling that Japanese gentlemen have on this subject is just this. Foreign missionaries and others have been laying out large sums of money in providing recreations for our troops. It is our duty to reimburse them as far as possible. We cannot accept this help as a form of charity. That would be undignified on our part. Neither can we accept it as ordinary missionary effort, as part of the machinery needed for making converts; for we are not prepared to say that our troops would be any better than they are now even were they all baptized. As a religious movement we can't support it, but as a secular and social movement we can do so, and were it carried out by Mahometans or Parsees our feelings would be the same.

But when we turn to another aspect of this interesting incident and ask how much Christianity is there in the whole of the Manchurian Social Entertainment work, the truthful answer is, very little indeed. Ping-pong is not Christianity, neither is music. Magic lantern slides don't convert anybody. The connection of all the forms of recreation which the Young Men's Society are providing for the troops with the Christian creed cannot be seen by ordinary people. And it is because this is so that the Japanese can afford to be liberal with their money

without doing violence to their own consciences. But that this handsome donation by their Imperial Majesties shows astonishing liberal-mindedness and common-sense on their part must be admitted by everybody. Few if any Christian Monarchs would display the same magnanimity under parallel circumstances. We do not wish to be understood as disapproving of the giving of social entertainments to the men at the front or of providing comforts and conveniences for the soldiers, but only to point out that there is nothing essentially and exclusively Christian about such work.

## THE JAPAN BAPTIST CONFERENCE.

The annual session of the Japan missionaries of the American Baptist Missionary Union was held in Arima, May 7-11. There were about thirty in attendance, not including visitors. Among the visitors were Rev. W. L. Curtis (Cong.), of Osaka; Miss Holland (C. M. S.), of Osaka; Mrs. and Miss Holbrook, of Kobe; Miss Sainz, of the Baptist Mission in the Philippines; Mr. M. G. Boynton, of Yamaguchi, whose beard was a unique feature; and Mr. and Mrs. Geo. E. Briggs, of Boston, Mass. The last mentioned were on a visit to their brother, Rev. F. C. Briggs, of Kobe, and often favoured the conference with their delightful music. The session as a whole was an unusually pleasant and profitable one, at which much was accomplished.

The conference began on Sunday, May 7th, with a series of religious services, which filled the day full. These included a morning prayer service conducted by Rev. A. A. Bennett, D.D.; a sermon by Rev. F. C. Briggs; a service for over one hundred soldiers, to whom Dr. Bennett and Rev. C. K. Harrington made addresses; a vesper service led by Rev. F. W. Steadman; and a sermon by Rev. W. B. Bullen, a new recruit, who reached Japan last fall. Besides these Sunday religious services, every morning and afternoon session was opened with at least half an hour of devotional exercises.

The business sessions were also interspersed with papers, as follows: "Money and Missions," \* by Rev. J. L. Dearing, D. D.; "Helps and Hindrances to Closer Fellowship between Missionaries and Native Christians," by Miss M. A. Whitman; "Helps and Hindrances to Spiritual Growth among Japanese Christians," by Miss Lavinia Mead; and "Mission Work as Viewed from Far and then from Near," by Rev. Fred Merrifield, another new recruit.

The business sessions of the Conference began on Monday, May 8, and were held each morning and afternoon, except on Thursday, when a morning session was enough to finish up. The officers of the Conference were as follows:—

President ..... Dr. Bennett.  
Vice-President ..... Dr. Dearing.  
Secretary ..... Mr. Scott.  
Statistician ..... Mr. Hamblin.  
Preacher (1906) ..... Mr. Steadman.  
Alternate (1906) ..... Mr. Merrifield.  
Executive Committee. { Mr. Scott.  
                                  { Mr. Axling.  
                                  { Miss Mead.

It is unnecessary to go into details concerning the business of the conference. The reports were in general encouraging, although it was quite apparent that the force of workers is insufficient to attend properly to the work which is opening up.

It was very gratifying to learn that the plan for co-operation by the American Baptist Missionary Union and the Southern Baptist Convention in ministerial education had been approved by both the home boards. It will probably go into effect by another year, when the joint Board of Trustees will take over the management of the Theological Academy at Yokohama.

Duncan Academy, Tokyo, has entered upon a new era through official recognition of the Department of Education as a Semmon Gakko (Special School). The privileges of admission into higher institutions and postponement of conscription naturally follow this recognition; but as the process involves red tape, it may take several months. The academy has also in-

creased its usefulness by means of an extension to its recitation-hall.

The girls' schools all made encouraging reports, which showed that female education under Christian auspices has a very important place. The schools in Tokyo and Himeji have been rendered more efficient by additions to their buildings. The kinder-gartens also are in a good condition and are proving valuable auxiliaries to the Sunday schools and churches, especially in reaching mothers.

The reports of evangelistic work were most encouraging from almost all sections of the Empire. Special emphasis was, of course, laid upon the many "open doors" in connection with the work of comforting the soldiers in hospitals. There were many testimonies to the good influence of Anglo-Saxon sympathy for Japan in removing barriers of prejudice.

Rev. and Mrs. W. B. Bullen were permanently designated to Sendai; and Rev. F. G. Harrington was instructed to devote his time to translation work principally.

A plan for a kind of Tremont Temple in Tokyo met with the heartiest approval; and the sum of 25,000 yen was asked to start the work.

The social evening, with its music, poems, etc., was very interesting. A special feature was the granting of a diploma to Miss Grace A. Hughes, who is the first to complete the course of study adopted a few years ago. C.

## YOKOHAMA GENERAL HOSPITAL.

Financial Report on the working of the Yokohama General Hospital for the period from November 1st, 1904, to April 30th, 1905.

## DO WE BELIEVE?

(COMMUNICATED.)

Most people are agreed in thinking that newspaper controversy on religious subjects does no good, that is, that nobody is either enlightened or convinced by it. This, we should say, depends very much on the spirit in which the controversy is carried on and on the mental calibre and education of the writers who take part in it. Rather a noted discussion on the subject of Christian belief was carried on in the columns of the London *Daily Telegraph* for three months at the close of last year. Messrs. Hodder and Stoughton have now published in book form the principal letters that were written. The discussion was started by a correspondent calling himself "Oxonienis." He says that the Church Congress assumes that people are all Christians, that they all believe. "But do we believe? and if so, what? Are we all Christian, and if so in what sense of that ambiguous term?" He says that all forms of Christianity postulate a future life, infinitely more important than this life, but that hardly anybody acts as though he believed this. The ideals of Christianity as set forth in the Sermon on the Mount and illustrated by the life of Christ are, says "Oxonienis," "poverty, humility, absence of revenge, self-sacrifice, innocence, purity of thought as well as action and love towards enemies." The ideals of the world in all Christian countries are "wealth, ostentation, notoriety, self-assertion, selfishness, compromise (the ideal of the politician) and fashionable impurity." Which of these two creeds do the majority of Englishmen believe, "Oxonienis" asks. They are absolutely antithetical and contradictory. The letter was immediately answered by a correspondent signing himself "X." To the question "Do we believe?" He answers, "No. What realistic mind dare speak for the majority and affirm the contrary?" But "X" thinks that while belief in dogma is gone, devotion, which he thinks to be of the essence of religion, still remains. It is stated that among the communications sent in, some of which were published and some suppressed, there were many more letters from believers than unbelievers and that those written by the latter displayed lack of acquaintance with what has been said by the educated on both sides of the question. Over thirty years of observation of newspaper controversy the world over has convinced us that as a rule the men who are best qualified to write in defence of agnosticism and who themselves are agnostics of a noble type, inferior in no respect to believers in Christian supernaturalism, do not as a rule take the trouble to state their opinions in newspaper columns. Some of course have no time to do so. Consequently it happens that vociferous conservatives shout down everybody else. The London controversy made one thing quite clear and that is that the majority of those who still call themselves Christians care not one jot for forms or creeds. "Almost all admit tacitly or explicitly," says the *Spectator*, "that unless the Church will comprehend those believers whose creeds are shorter than any formula of any Christian sect, her numbers will be woefully small." This means that the majority of professing Christians are nothing more than very liberal-minded Unitarians and that the supernatural basis of Christianity is no longer deemed essential—Christian morality can fall back on the firmer basis of utility and rationality, says public opinion in England.

If such a discussion does nothing else, it should help to enlighten the clergy as to the real state of thought among the laity. Education has become so general that there are very few subjects if any on which modern clergymen can enlighten scholarly laymen. Hence the habitual absence from church, and the gulf that divides clergy from laity. As the old doctrines no longer draw large audiences, other attractions are mingled with Christian services. Christianity everywhere as far as the Protestants are concerned relies more and more on secondary influences for its popularity.

## THE LAW COURTS.

## DE WETTE v. KUHN.

The case instituted by Miss Sophia Anne Barbe De Wette (otherwise known as Mrs. Kuhn, wife of Mr. S. H. Kuhn) against Mr. S. H. Kuhn petitioning for affirmation of the invalidity of the marriage between them and claiming an allowance for a certain period came up again in the Yokohama District Court on May 12th when Judge Nakanishi gave judgment dismissing plaintiff's action.

The Yokosuka Prize Court gave a decision on May 11th as to the German steamer *Severus* (2,133 tons) confiscating the hull and cargo on the ground that no petition had been lodged during the time notified by advertisement. This steamer was captured on Feb. 23rd in the Soya straits by the converted cruiser *Hongkong Maru*. The same Prize Court has given another decision as to the German steamer *Palos* (2,398 tons gross) confiscating the hull and cargo. She was captured on Feb. 10th in the neighbourhood of Hokkaido on her way to Vladivostok laden with materials for ship-building, food-stuffs, etc.

## OHARA v. WRIGHT.

A case lodged by T. Ohara against Mr. W. N. Wright, proprietor of Wright's Hotel, claiming yen 18.25 for gravel, sand etc., supplied and work done in laying a concrete floor in a stable belonging to plaintiff, came up again on May 16th in the Yokohama Local Court.

Judgment was given on March 30th in favour of plaintiff on account of the absence of defendant's Counsel, and the latter subsequently presented a protest and the case was reopened.

K. Sadzaki, a contractor, was examined as an expert witness. He stated that the work rendered by plaintiff might be imperfect, but the quantity of line, cement, sand, etc., supplied was insufficient, being only half of that commonly needed.

Plaintiff said that he did the work with the materials Mr. Wright had supplied him and that Defendant specified the quantities. Plaintiff further contended that he was not a contractor but a workman so that he had no responsibility for the insufficient quantity of the materials. He merely worked at his best. After the completion of the work, he asked Mr. Wright for payment but the latter refused it. Plaintiff went to the Kaga-cho Police Office, together with four other workmen, and asked the authorities to advise defendant to make payment, but was unsuccessful.

While admitting the cost of materials, defendant's Counsel contended that the number of workmen mentioned by plaintiff as having been employed in the work seemed excessive, and his client would not pay for them.

At this stage, the Court exhorted the parties to settle the dispute amicably out of Court. Defendant's Counsel said that his client was willing to do so, but Plaintiff refused to make an amicable settlement when Counsel approached him.

Plaintiff replied that he would take time for consideration. The Court adjourned the hearing for ten days.

## PRIZE COURT DECISIONS.

On May 15th, the Sascho Prize Court gave a decision regarding the British steamer *Silviana* confiscating the hull and 6,534 tons of Cardiff coal which formed her cargo. The ship was captured on February 19th in Korean waters on her way to Vladivostok. Another decision was given on the same day, on a petition lodged by Captain Eckart of the Russian Army, who is now in Matsuyama as a prisoner, asking for the release of 67,000 roubles. The Court confiscated the money. The money had been shipped in one of the captured steamers and was destined for Vladivostok.

The Sascho Prize Court decided on May 16th to confiscate the Dutch steamer *Wilhelmina* together with her cargo of 6,897 tons of Cardiff coal. This vessel was captured on January 16th in Korean waters.

The owner of the British steamer *Bawtry* and

shippers of her cargo have lodged in the Sascho Prize Court petitions asking for the release of the hull and goods concerned. This ship (2,407 tons gross) was captured on January 17th in Tsushima strait on her way to Vladivostok with ship-building materials, etc.

Viscount Tanaka, President of the Supreme Prize, Tokyo, has delivered a decision on an appeal lodged by the Kamchatka Commerce and Industry Company, owners of the steamer *Talia*, against the judgment given by the Yokosuka Prize Court confiscating the hull. The Court dismissed the appeal on the ground that the ship did not leave Hakodate within the due days provided by the Imperial Edict.

This steamer was captured by Lieutenant T. Tajima, an officer of the Imperial Japanese cruiser *Takao*, on April 13th 1904, at Hakodate while she was undergoing repairs in the compound of the Hakodate Dock Co.

## CLAIM FOR RETURN OF DEPOSIT.

In the Yokohama District Court, the hearing of a case in which Y. Sakamoto, a merchant in Tokyo, claims a thousand yen from Mr. V. Menil, Yokohama, was resumed on May 17th before Judge Nakanishi when two Japanese named M. Ikeda and K. Narushima were examined as witnesses.

M. Ikeda stated that he was one of the witnesses who placed their signatures to the contract produced by plaintiff as evidence.

Sakamoto, the plaintiff, received an order from the Military Clothing Office for thirty-thousand pieces of *musai* cotton dyed a yellowish brown. He opened negotiations with Mr. Menil as to the dyeing. Having obtained from Mr. Menil a certain sample of the dyed cotton showing the required colour, Plaintiff presented the sample to the office, and the specimen was accepted. Subsequently Plaintiff made a contract with Mr. Menil for dyeing the cloth and deposited a thousand yen as guarantee with the latter. Witness believed that if the Military Clothing Office cancelled the order, the contract between the parties would become null and void. *Nusai* cotton of a yellowish brown is only used as summer clothing for the soldiers and there is no demand in the common market for it. Mr. Menil was well informed of the fact. Referring to the contract of the parties, witness said that the responsibility as to the dyeing was to be borne by Mr. Menil, and that Mr. Menil had no right to refuse the refunding of the deposit without consultation with the witnesses who attached their signatures to the contract. After the contract, May, 1903, Plaintiff handed to Mr. Menil a few pieces of the cotton, and the latter dyed them in accordance with sample. When the dyed cotton was delivered at the Military Office, it was found that the work was imperfect. With regard to the testing the authorities exposed the cloth to rain for some days when the colour is said to have been spoiled. The authorities, therefore, cancelled the order.

K. Narumiya deposed that he also attached his signature to the contract. However, he did not participate in the business. He did not know whether Plaintiff had delivered a hundred pieces of cotton to Mr. Menil before June 10th, 1903, which was provided for in Art. 10th of the contract. He was asked by Mr. Menil nothing about a deposit of a thousand yen. Plaintiff did not deliver the cotton cloth to Mr. Menil as the official order had been cancelled and as a result any deposit should be paid back to Plaintiff.

As the conclusion of the examination of witnesses, the Court adjourned the hearing till May 20th.

## RUSSO-CHINESE BANK v. DOURILLE.

The hearing of a case instituted by the Russo-Chinese Bank against Mr. P. Dourille, No. 164, Yokohama, claiming yen 26,676.77 and interest at the rate of 6 per cent. from May 21st up to the execution of judgment, began on May 18th in the Yokohama District Court before Judge Yasuda.

Plaintiff was represented by Mr. Nagashima and Defendant by Mr. Ideura.

At the outset of the hearing, Plaintiff's Counsel asked the Court to give the bank a permit to seize

the property of Defendant. He then stated that Defendant drew two drafts of *Francs* 28,252.90 and 28,449.15 on Oct. 1903, and another for *Francs* 13,858.05 on Oct. 19th in the same year aggregating *Francs* 70,560.10 in all—payable six months after date respectively in Lyons—and he received yen 26,676.77 from the Russo-Chinese Bank by discounting the three bills in accordance with the current rate of exchange. The bank sent the bills to its branch in France to collect. When the drafts were presented to the firm upon which they were drawn in Lyons, they were refused. On June 20th, 1904, Plaintiff informed Defendant that the drafts had been dishonoured and asked him to refund the bank. After negotiations between the parties, Defendant gave a promise on July 2nd to repay the whole amount within a certain time. Subsequently the bank asked Mr. Dourille to hypothecate some property in Shanghai as guarantee of the promise. On July 2nd, Mr. Dourille consented to the request. On August 6th the bank again asked Mr. Dourille to furnish security in Yokohama for the same purpose, and Defendant complied. On the due date, Plaintiff asked Defendant for payment without success and since then the matter has been left untouched though the bank has urged payment repeatedly.

Defendant's Counsel presented a protest in which he said that the bank belonged to subjects of a non-treaty country, and consequently Plaintiff must deposit with the Court the costs provided in the Code of Civil Procedure. Otherwise, Defendant has no responsibility in the case.

Plaintiff's Counsel contended that the dispute between the parties arose before the interruption of the international relations between Japan and Russia so that the case did not fall within the provisions of the Code with regard to costs.

The Court retired for some minutes for consultation after which it ordered Plaintiff to make a deposit within ten days. The Court then adjourned the hearing.

#### GIEN v. CHAO WEI-LI.

In the Yokohama District Court, an action instituted by Mr. H. V. Gielen against a Chinaman named Chao Wei-li petitioning for affirmation of purchase of an estate from Defendant came up on May 18th before Judge Yasuda.

Plaintiff was represented by Mr. Ideura and Defendant by Mr. Saito.

Plaintiff's Counsel stated that on Nov. 1st, 1900, Chao Ming-ye, predecessor of Defendant, borrowed thirty thousand yen from Mr. L. MacMillan on a guarantee of 596 *tsubo* of ground bearing ten brick or wooden buildings, on lot No. 156 Yamashita-cho. On Feb. 14th, 1901, the due day for payment of debt, the Chinaman asked Mr. Gielen to take his place. On July 26th, 1902, Plaintiff paid the debt of Chao Ming-ye to Mr. MacMillan. At this stage Plaintiff's Counsel explained that the contract between Mr. MacMillan and the Chinaman referred to the sale of the property and not to a loan or guarantee; thus when Mr. Gielen redeemed the Chinaman's property from Mr. MacMillan, the contract was accordingly transferred to Plaintiff. As one of the formalities of the contract, Mr. MacMillan gave a statement to Mr. Gielen on Oct. 31st, 1903, that the property had been sold to the latter. This transaction was made in accordance with British law as Mr. MacMillan is a British subject. Afterwards the Chinaman agreed to the sale of his property to Plaintiff through Mr. MacMillan. In November, 1903, the Chinaman died while the parties were negotiating the registry and conveyance of the property at the Japanese office concerned. Defendant, the heir of the late Chinaman, however, refused to allow the registry.

Defendant's Counsel contended that his father did not sell the property to Mr. MacMillan or to Mr. Gielen though he had borrowed from them money on guarantee.

The parties produced their evidence and asked the Court to adjourn the hearing for further preparation of evidence.

The Court granted the request and decided to resume the hearing on June 8th.

#### CLAIMS AS TO DISTRAINT.

An action instituted by Chao Fen-sih and one

other Chinaman petitioning for the cancelling of the seizure of a house by Mr. P. Helm came up again in the Yokohama District Court on May 18th when a Chinese merchant named Cheong Ta-king was summoned as a witness.

Under a protest from Defendant's Counsel that witness was a relative of Plaintiff's the examination did not take place.

The Court intimated that the hearing was concluded and judgment will be delivered on May 20th.

#### YACHTING.

The race for the Cruising Class on Saturday was over the Widow Buoy course, for the "Nina" Cup. Three yachts entered, and *Kathleen* turned the outer mark nearly two minutes ahead of *Wanderer*, *Asagao* being 12 seconds behind the latter. The wind was light to moderate, and somewhat variable. On the run home *Wanderer* gained on *Kathleen*, being only 20 seconds behind at the Lightship. Times at the finish were:—

*Wanderer*... 5-10-19... receives 2 mins. 5-8-19.  
*Asagao*... 5-11-57... scratch... 5-11-57.  
*Kathleen*... 5-12-48... receives 12 mins. 5-0-48.  
*Kathleen* takes the "Nina" Cup.

The 21 raters raced over the same course, and were timed at the Widow Buoy as follows:—

<i>Pele</i> .....	3:24.30.
<i>Sunbeam</i> .....	3:26
<i>Winsome</i> .....	3:26.10.
<i>Edna</i> .....	3:28.20.
<i>Chocho</i> .....	3:35.20.

*Witch* capsized early in the race, some of her gear fouling at the Harbour Entrance. During the journey home, *Winsome* improved her position, and *Edna* also ran up, both passing *Sunbeam*. Times at the finish:—

Furnish.	Club time.	corrected	record	prizes.
<i>Pele</i> .....	4:45.10	scratch	4:45.10	9 1st.
<i>Winsome</i> .....	4:45.21	do	4:45.21	8 2nd.
<i>Edna</i> .....	4:48.46	do	4:48.46	7
<i>Sunbeam</i> .....	4:48.52	do	4:48.52	6
<i>Chocho</i> .....	5-8.41	1 min. 36 secs.	5-7.5	5

Four Larks went out, and were timed at the finish as follows:—

No.	Record	Points.
No. 3.....	3:45.54	9
No. 4.....	3:39.52	12 Prize.
No. 5.....	3:41.42	11
No. 11.....	3:47.35	10

#### IMPERIAL RECOGNITION OF THE Y. M. C. A.

With regard to the Imperial donation of yen 10,000 toward the Y. M. C. A. army work, we find the following in the *Jiji Shimpō*: "Though the Christian religion is of recent introduction, the improvement it has effected in the moral condition of the nation, and the influence it has had on the minds of the people are very great. No one can deny the great good accomplished by the believers of that religion in establishing many charitable institutions, in assisting the progress of the nation, and in promoting the happiness of the poor and helpless. There are already many schools and colleges, both for boys and girls, in the country, which are supported entirely by the Christians. As for the charitable institutions, excepting those which are established by the public, it is not too much to say that all are the result of Christian enterprise. These had their origin during the time of peace. Now in the time of war, the Y. M. C. A., an association of Christians, was the first to send its members to the front in order to comfort the soldiers by various means, and the good which it has done for them cannot be estimated. Such enterprise needs money as well as ability. However earnest they may be, if they are not supplied with enough funds their effort cannot bring ample results. It is very likely that this is what the Emperor feared and consequently it induced him to make this donation."

The funeral of Colonel Ninomiya and twelve other officers who died at the battle of Mukden will take place on May 21st at Aoyama Cemetery.

#### SPRING MEETING OF THE NIPPON RACE CLUB.

PATRONS:—H.I.H. Fushimi-no-miya, H.I.H. Arisugawa-no-miya, and H.I.H. Kanin-no-miya.

PERMANENT COMMITTEE:—Sir Claude Maxwell MacDonald, K.C.B., G.C.M.G., President; Dr. E. Wheeler, Vice-President; Baron A. d'Anethan, Count Von Arco-Valley, A. Bianchi, Esq., V. Blad, Esq., A. J. Easton, Esq., B. C. Howard, Esq., M. Ichihara, Esq., S. Isaacs, Esq., L. Mottet, Esq., K. Mori, Esq., R. D. Robison, Esq., B. Runge, Esq., Governor Sulu, F. Strahler, Esq., T. Thomas, Esq., T. Taniguchi, Esq., and A. G. M. Weale, Esq.

EXECUTIVE COMMITTEE:—V. Blad, Esq., Chairman (Absent); A. J. Easton, Esq., Acting Chairman; T. C. Anderson, Esq., J. de Cuers de Cogolin, Esq., D. Marshall, Esq., K. Mori, Esq., F. M. Tegner, Esq.

HONORARY CLERK OF THE COURSE:—A. J. Easton, Esq.  
HONORARY TREASURER:—T. C. Anderson, Esq.  
SECRETARY:—Geo. Hood, No. 72.

#### THIRD DAY, FRIDAY, MAY 12TH.

The third day of the Spring Meeting was favoured with splendid weather and there was consequently a large attendance of visitors on the Grand Stand and Paddocks, the ladies, particularly, finding this a far more satisfactory day than the previous Saturday, the proper ladies' day. The course was scarcely dry and springy enough to allow of record running, but some very good racing was shown and some surprises sprung upon the supporters of the favourites. In the second race Flounder's win upset many a backer's book and Folly's victory in her match with Miyoshino was another surprise. In the China Griffins Handicap a rank outsider pulled off the race, in Gogai, and paid his few backers in the Pari Mutuel the thumping dividend, for Yokohama, of yen 253.50. The events were as follow:—

1.—THE COSMOPOLITAN PLATE, value yen 500, the Second to receive yen 100, and the Third yen 50; for all Subscription Horses and Country Breds; Handicap. Entrance yen 5. One Mile.

Mr. H. Kashiwagi's Izumo, 141lb. .... (Goto) 1  
Mr. May's May-mie, 136lb. .... (Mr. Catto) 2  
Mr. Green's Kachidoki, 150lb. .... (Tsubouchi) 3  
Mr. Alexander's Ohgon, 140lb. .... (Kawasaki) 0

Kachidoki started a warm favourite and May-mie also found friends. Some difficulty was experienced in getting the four starters away, but in the fifth or sixth attempt a good level start was made. Izumo took a slight lead after the first quarter, with May-mie near. Entering the Straight Izumo came up and took the lead, and kept it to the finish, beating May-mie, who had run into second place by a short length, about the same between second and third. Time 1:51.5.

PARI MUTUEL.—Paid yen 17.

2.—THE ALL CHINA SUBSCRIPTION HANDICAP; value yen 250, the Second to receive yen 100, and the Third yen 50. For all China Subscription Ponies. Entrance yen 5. One Mile and a Quarter.

Mr. Virginia's Flounder, 140lb. .... (Mr. Dietrich) 1  
Mr. May's May-oui, 140lb. .... (Mr. Andreis) 2  
Mr. Finale's C. O. D., 150lb. .... (Takahashi) 3  
Mr. Astral's Sunbeam, 125lb. .... (Sugiyama) 0  
Mr. J. Koertings's Gulyasch, 150lb. .... (Horikoshi) 0  
Mr. Tytherleigh's Coot, 145lb. .... (Mr. Easton) 0  
Mr. H. Kashiwagi's Bamboo, 150lb. .... (Higaki) 0

Bamboo was a strong favourite. After a good start Bamboo came to the front, and passed the Stand first time with a lead of a length, with Flounder next. This order was maintained till entering the straight when the favourite fell back and a fine race ensued between Flounder, May-oui and C. O. D., the former winning cleverly by a short head from May-oui, with C. O. D. third, only half a length behind. Time 2:43.

PARI MUTUEL.—Paid yen 133.

3.—THE SUBSCRIPTION AUSTRALIANS' HANDICAP, value yen 450, the Second to receive yen 100. For Australian Subscription Horses of Autumn 1904, and Australian Subscription Horses of Spring 1903. Winners after publication of Handicaps to carry 10lbs. extra. Entrance yen 5. Three-Quarters of a Mile.

Mr. Friends' Daylight, 142lb. .... (Hakodate) 1  
Mr. Cotton's Texas, 137lb. .... (Rikizo) 2  
Mr. Sport's Dekimas, 140lb. .... (Mr. Catto) 3  
Mr. J. Higginbotham's Ten-nin, 135lb. .... (Miyagawa) 0  
Mr. N. Kawakita's Chitose, 143lb. .... (Sugura) 0  
Mr. N. Kawakita's Kurama, 135lb. .... (Jimbe) 0  
Mr. H. Lefebvre's Flame, 135lb. .... (Mr. Dietrich) 0  
Sir Claude M. MacDonald's Gollywog, 115lb. .... (Fujisaki) 0

Mr. G. Barclay's Hyacinth, 150lb. .... (Horikoshi) 0

Texas and Hyacinth were most favoured and Gollywog next. After a lot of trouble and lost time a poor start was effected, Daylight and Dekimas getting the best away. At the Shakespeare Texas came through and challenged Daylight, who, however, kept the lead and won by about half a length, with a length between Texas and Dekimas. Time, 1.23 1/2.

PARI MUTUEL.—Paid yen 36.50.

4.—The AUSTRALIAN SUBSCRIPTION HORSES OF AUTUMN 1904 RACE, value yen 450, weight for age; winners at the Meeting excluded. Entrance yen 5. One Mile.

Mr. Swarby's Folly, 137lb. ....(Mr. Catto) 1  
Mr. Alexander's Miyoshino, 137lb. ....(Miyagawa) 2  
This event resulted in a match between Folly and Miyoshino, of whom the latter was the favourite. Miyoshino went to the front after the rise from the Dip and, running easily, kept a lead of three lengths or more until half way down the Straight, when the favourite, apparently hard held, allowed Folly to come up and win by a short head. Time, 1.57.

PARI MUTUEL.—Paid yen 9.50.

5.—The AUSTRALIAN GRIFFINS' HANDICAP, value yen 450, the Second to receive yen 100. For Australian Subscription Horses of Spring 1905; winners at the Meeting excluded. Entrance yen 5. One Mile.

Mr. H. Lefebvre's Flash, 147lb. ....(Horikoshi) 1  
Mr. S. Sato's Iwate, 132lb. ....(Sugiura) 2  
Mr. H. Kashiwagi's Asahi, 153lb. ....(Goto) 3  
Mr. Friends' Daybreak, 132lb. ....(Hakodate) 0  
Mr. Astral's Yokohama, 123lb. ....(Miyagawa) 0  
Flash and Daybreak started favourites. Iwate got the best of the start with Flash next. Iwate led to the Trees, when Flash came up, and coming down the Straight got away from Iwate and won by two lengths, or more. Asahi finished third, three lengths behind Iwate. Time, 1.56 1/2.

PARI MUTUEL.—Paid yen 10.

6.—The CHINA GRIFFINS' HANDICAP, value yen 250, the Second to receive yen 100 and the Third yen 50. For China Subscription Ponies of Spring 1905; winners at the Meeting excluded. Entrance yen 5. One Mile.

Mr. Swarby's Gogai, 130lb. ....(Nakamura) 1  
Mr. Cotton's Dairen, 145lb. ....(Rikizo) 2  
Mr. Sport's Conundrum, 137lb. ....(Mr. Mottu) 3  
Mr. Astral's Sunset, 137lb. ....(Sugiura) 0  
Mr. Norfolk's Pagoda, 155lb. ....(Mr. Dietrich) 0  
Mr. Burghdunum's The Miller, 155lb. ....(Sugiura) 0  
Major Trick's Petit Canard, 140lb. ....(Hakodate) 0  
Dr. Wheeler's Formalin, 134lb. ....(Horikoshi) 0  
Mr. Alexander's Harukaze, 145lb. ....(Kawasaki) 0  
Mr. Green's Kobe II, 134lb. ....(Tsubouchi) 0

The Miller was first favourite in the field of ten that weighed in for this race. Formalin opened with a circus of his own and after shedding his rider, Horikoshi, went round the course on his lone till he came to the rise from the Dip, where he took the outside rail, turning a somersault, picked himself up, and started quietly grazing. Thence he was led back to the stables. Meanwhile the others were started, Gogai getting away with a lead, and Kobe II next, Dairen third. Gogai still led at the entrance to the Straight, and though Dairen and Conundrum made a good try they could not collar Gogai, who won by three lengths; Dairen second, and Conundrum a fair third. Time 2.14 1/2.

PARI MUTUEL.—Paid yen 253.50.

7.—The ALL SUBSCRIPTION AND COUNTRY BREDS RACE, value yen 500, the Second to receive yen 100; weight for age. Winners at the Meeting excluded. Entrance yen 5. One Mile.

Mr. Alexander's Ohgon, 137lb. ....(Hakodate) 1  
Messrs. R. Schmidt Scharff's Annemarie, 137lb. ....(Mr. Mottu) 2  
Mr. Tatsuta's Suma, 137lb. ....(Takahashi) 3  
Suma started a hot favourite. Ohgon got away first and at the half-mile led by four or five lengths, the other two level. Entering the Straight, Annemarie came away from Suma and tried to get up to the leader but failed, Ohgon winning by three lengths from Annemarie, the favourite a fair third. Time 1.50 1/2.

PARI MUTUEL.—Paid yen 21.50.

8.—The ALL CHINA PONIES' RACE, value yen 400, the Second to receive yen 50; weight as per scale. Winners at the Meeting excluded. Entrance yen 5. One Mile.

Mr. Duplex's Raubgraf, 147lb. ....(Mr. Dietrich) 1  
Mr. Tytherleigh's Coot, 150lb. ....(Mr. Easton) 2  
Mr. May's May-king, 147lb. ....(Mr. Catto) 3  
Mr. J. Higginbotham's Ten-yu, 147lb. ....(Mr. Mottu) 0  
Mr. Samuel's The Spirtle, 150lb. ....(Mayeda) 0

Raubgraf was made first favourite, while Ten-yu, May-king and The Spirtle were also well backed. Raubgraf got away first and led all the way round, Coot came up a little at the entrance to the Straight but could not collar the leader, who won by about two lengths, with May-king third, three lengths behind. Time, 2.12 1/2.

PARI MUTUEL.—Paid yen 13.50.

The fourth and last day of the Spring Meeting was favoured with perfect weather, the sun opening brightly while a pleasant breeze tempered the atmosphere. The attendance of visitors was probably larger than on any of the three preceding days and though there were no very large fields nor bumper scoops made by backers some good sport was witnessed. The prizes were fairly distributed, Mr. May being the only owner to score two wins during the day. Among riders Mr. Catto and Mr. Dietrich were the most successful, having two wins each to their credit and the latter also one second place, Raubgraf, in the China Winners' Handicap, made we believe the only record of the meeting, beating Miyajima's record of Spring 1898 for a mile and a furlong, of 2.33, by 2 min. 31 1/2 secs. The arrangements generally were satisfactorily carried through by the Stewards,—of course with the usual inevitable growls anent the starting—and the day closed what may be considered a most successful meeting of the Race Club.

The events were as follow:—

1.—The GRIFFIN WINNERS' HANDICAP, value yen 600, for Australian Subscription Horses of Spring 1905; forced entry for winners at the Meeting of yen 10. One Mile and a Furlong.

Mr. H. Lefebvre's Flash, 145lb. ....(Mr. Dietrich) 1  
Mr. Friends' Daylight, 145lb. ....(Hakodate) 2  
Mr. G. Barclay's Hyacinth, 140lb. ....(Horikoshi) 3  
Mr. J. Higginbotham's Ten-nin, 130lb. ....(Miyagawa) 0  
Mr. N. Kawakita's Kurama, 128lb. ....(Jimbo) 0

Flash was first favourite and Daylight next in public favour. Flash was left behind at the start and Hyacinth went to the front with Daylight next. Flash pluckily pulled up her lost lengths at the start and after passing the Trees got to the front and increasing her lead by every stride down the straight won by three lengths from Daylight, who had displaced Hyacinth for second place on the turn to the straight, the latter finishing third, four lengths behind Daylight. Time 2.12 1/2.

PARI MUTUEL.—Paid yen 11.50.

2.—The CHINA WINNERS' HANDICAP, value yen 600. For All China Ponies; forced entry for winners at the Meeting of yen 10. One Mile and a Furlong.

Mr. Duplex's Raubgraf, 150lb. ....(Dietrich) 1  
Mr. Virginia's Flounder, 145lb. ....(Mayeda) 2  
Mr. N. Kawakita's Wakashima, 165lb. ....(Mr. Mottu) 3  
Mr. H. Kashiwagi's Bamboo, 147lb. ....(Higaki) 0  
Mr. J. Koerting's Gulyasch, 145lb. ....(Horikoshi) 0  
Mr. Finale's C. O. D. 147lb. ....(Takahashi) 0  
Mr. Swarby's Gogai, 125lb. ....(Nakamura) 0

Wakashima started first favourite in spite of his heavy penalty of 165 lbs. Gogai got away with a good lead, with Bamboo next in order. After rising the hill Raubgraf ran to the front and Gogai fell behind, while Wakashima ran into second position. In the run home Flounder displaced the favourite but could not get near the leader, Raubgraf winning by four lengths, with a length between Flounder and Wakashima, second and third. Time 2.31 1/2.

PARI MUTUEL.—Paid yen 42.

3.—The AUSTRALIAN AND COUNTRY BREDS WINNERS' HANDICAP, value yen 750. For Australian Subscription Horses and Country Breds; (Subscription Horses of Spring 1905 excluded). Forced entry for Winners at the Meeting of yen 10. One Mile and a Furlong.

Mr. Green's Kachidoki, 145lb. ....(Tsubouchi) 1  
Mr. H. Kashiwagi's Izumo, 150lb. ....(Goto) 2  
Mr. Alexander's Ohgon, 142lb. ....(Hakodate) 3

Kachidoki was a warm favourite. After a capital start the favourite got to the front and, making the running, ran away from the other two all round, winning easily by five or six lengths from Izumo, Ohgon finishing third another half dozen lengths behind. Time 2.08.

PARI MUTUEL.—Paid yen 10.50.

4.—The BRISBANE STAKES, value yen 550, the Second to receive yen 100. For Australian Subscription Horses of Autumn 1904. Handicap. Winners after publication of Handicaps to carry 10lb. extra. Entrance yen 5. One Mile.

Mr. N. Kawakita's Chitose, 140lb. ....(Sugiura) 1  
Mr. Alexander's Miyoshino, 131lb. ....(Hakodate) 2  
Mr. Cotton's Texas, 143lb. ....(Rikizo) 3  
Mr. Swarby's Folly 125lb. ....(Mr. Catto) 0

Texas was the favourite. After a capital start Chitose showed in front, with Miyoshino next. The same order was kept to the finish, for though Miyoshino made a game try to collar the leader Chitose won by three lengths, while four lengths separated Miyoshino from Texas, who finished third, and Folly, who was allowed to beat Miyoshino on Friday, nowhere. Time 1.52 1/2.

PARI MUTUEL.—Paid yen 22.

5.—The CHINA CONSOLATION, value yen 300.

For All China Subscription Ponies that have started at the meeting and not won a race; Weight as per scale; Entrance yen 5. One Mile.

Mr. May's May-oui, 148lb. ....(Mr. Andreis) 1  
Mr. Tytherleigh's Coot, 145lb. ....(Mr. Easton) 2  
Mr. Burghdunum's The Miller, 150lb. ....(Mr. Mottu) 3  
Mr. J. Higginbotham's Ten-yu, 147lb. ....(Sugiura) 0

Coot was first favourite, The Miller made the running till the trees were reached, when May-oui came up and passed him with, Coot close up. In the straight Coot challenged May-oui but could not quite catch him, the latter winning by a length, with The Miller third and Ten-yu last. Time 2.13 1/2.

PARI MUTUEL.—Paid yen 21.

6.—The MIXED HANDICAP, value yen 500, the Second to receive yen 100. For Australian Subscription Horses and Country Breds; (Subscription Horses of Spring 1905 excluded); Winners at the Meeting excluded; Entrance yen 5. One Mile and a Quarter.

Mr. May's May-mie, 127lb. ....(Mr. Catto) 1  
Mr. Tatsuta's Suma, 145lb. ....(Takahashi) 2  
Mr. R. Schmidt-Scharff's Annemarie, 135lb. ....(Mr. Mottu) 3

May-oui was made first favourite, though the other two starters also found plenty of backers. After a good level start May-oui took the lead and kept it to the finish, though Suma made a game try in the straight and came up to the leader's neck on the post, with Annemarie third, several lengths behind. Time 2.22 1/2.

PARI MUTUEL.—Paid yen 10.50.

7.—The CHINA GRIFFINS' SOLACE, value yen 250; for China Subscription Ponies of Spring 1905 that have started at the Meeting and not won a race; weight as per scale. Entrance yen 5. One Mile.

Mr. Burghdunum's The Miller, 150lb. ....(Sugiura) 1  
Mr. Norfolk's Pagoda, 153lb. ....(Mr. Dietrich) 2  
Mr. Cotton's Dairen, 137lb. ....(Rikizo) 3  
Mr. Astral's Sunset, 147lb. ....(Sugiura) 0  
Major Trick's Petit Canard, 130lb. ....(Hakodate) 0  
Mr. Sport's Conundrum, 135lb. ....(Mr. Mottu) 0  
Mr. Wheeler's Formalin, 141lb. ....(Horikoshi) 0  
Mr. Green's Kobe II, 147lb. ....(Tsubouchi) 0

Dairen started first favourite, but several of the others were also fancied, particularly Pagoda and Kobe II. After a very moderate start, The Miller went to the front with Sunset next. At the Shakespeare Dairen ran into second place. In the straight Pagoda came up with Dairen and challenged the leader, The Miller, but the latter was able to hold his own and won by about a length, with Pagoda second and Dairen third, only a head behind the latter. Time 2.16.

PARI MUTUEL.—Paid yen 62.50.

8.—The AUSTRALIAN GRIFFINS' SOLACE, value yen 400; for Australian Subscription Horses of Spring 1905 that have started at the meeting and not won a race; weight for age. Entrance yen 5. Three-Quarter of a Mile.

Mr. Sport's Dekimas, 147lb. ....(Mr. Catto) 1  
Mr. H. Kashiwagi's Hinode, 134lb. ....(Goto) 2  
Mr. S. Sato's Iwate, 137lb. ....(Sugiura) 3  
Mr. Astral's Yokohama, 135lb. ....(Kawasaki) 0  
Mr. H. Lefebvre's Flame, 137lb. ....(Mr. Dietrich) 0  
Mr. H. Kashiwagi's Asahi, 137lb. ....(Higaki) 0  
Sir Claude M. MacDonald's Gollywog, 132lb. ....(Fujiaki) 0

Mr. Green's Chiyoda, 140lb. ....(Tsubouchi) 0  
Mr. Lefroy's Eileen, 137lb. ....(Sugiura) 0

Dekimas was first favourite but Iwate was also fancied. The favourite made the running from the start and kept the lead all round, winning easily by four or five lengths from Hinode, with Iwate a poor third. Time 1.23 1/2.

PARI MUTUEL.—Paid yen 13.

## KOREAN TRADE IN 1904.

We have to acknowledge receipt, from the Chief Commissioner of Korean Customs, of a copy of the report for 1904 on the Trade of Korea, with an abstract of statistics for the years 1895—1904. We extract the following summary which will doubtless be found useful by merchants:

1. General.—The statistics which follow entirely justify the anticipations of last year's Trade Report that, given continued peace within the borders and around the coasts of Korea, the condition of the people would be unusually prosperous and their purchasing power unusually great in the year of war, 1904. The war by which the country has been encompassed, yet hardly touched, has had a forcing influence on trade, and results have been attained which could not have been hoped for under the rule of peace. Korea did not, indeed, enjoy complete immunity from alarms. From the outbreak of hostilities in February until their defeat in the middle of August the Vladivostok cruisers were a standing check on the trade of the east, and, for the greater part of that period, prevented the regular steamers

from Japan from venturing north of Fusan; and the advance of Russian troops down the coast of Hamkyengdo partially cut off that province for a time and sealed the port of Songchin. But after the naval actions at Port Arthur and Chemulpo the 8th-9th of February there was, in all the other provinces and on the south and west coasts, a remarkable feeling of security, born of the belief that the Vladivostok cruisers would not venture through the Tushima strait and that Admiral Togo held the Port Arthur squadron under effective control. The principal highway being thus open and safe, there were not wanting exceptional inducements to trade. Cereals of every kind yielded excellent crops throughout the country, and the requirements of the Japanese forces—and in Hamkyengdo of the Russian forces—created an easy market for these food-stuffs without the trouble and expense of transportation abroad. Native labour, too, was employed on a large scale, and well remunerated, in connection with the movement of troops and the work on the Seoul-Fusan and Seoul-Wiju railways. Many unwonted millions of yen were, thus, in consequence of the war and the railway construction which it so greatly accelerated, distributed among the Korean people. Never before, it is safe to say, has the average Korean had so much to spend, and the Import tables show freely he has spent it and how great and immediate is the advantage to Foreign trade which may be expected to follow any improvement in his circumstances. Another, less gratifying consequence of the abundance of employment and higher wages was the greatly increased cost of living, both for Natives and Foreigners, prices having risen in many cases 50 to 100%.

It is noteworthy that more than half the imports of the year arrived in the last four months.

According to reliable information, the outlay of the Seoul-Fusan Railway Company in Korea, during 1904, was about 7,500,000 yen, while that of the military authorities on the Seoul-Wiju Railway, for ten months, at the rate of 800,000 yen a month, was 8,000,000 yen, and the greater part of this large expenditure undoubtedly went to Korean labourers. Particulars of the military expenditure on transport and supplies are not available.

At the time of writing, the Dai Ichi Ginko notes in circulation in Korea amount to about 3,400,000 yen, showing an increase since March, 1904, of 2,400,000 yen. These notes are more than covered by the reserve, consisting of 1,921,300 yen in gold and Bank of Japan notes and 1,825,000 yen in Japanese Government securities. Among the Dai Ichi Ginko notes in circulation in Korea are fractional notes, of 10, 20, and 50 sen, to the total value of 148,583 yen. These, it is said, have been useful in paying the troops in occupation, and are received as freely as the notes of larger value. At the beginning of the war a supply of special silver notes, of 1, 5 and 10 yen, and 10, 20, and 50 sen was brought in for military purposes, and a quantity of silver yen was sent to Pyeongyang to meet them, but the real destination of these notes was Manchuria and their use in Korea was soon discontinued.

The Korean nickel 5 cent pieces, which at the beginning of the year were exchanged for yen at 130% discount, rose after the outbreak of war, touching 50% discount in February. Thereafter there was a gradual but steady relapse to 130% discount in September, when the coinage of nickels was suspended. It is understood that the next supply of nickels for Korea, will be made in Japan, and that the new nickels will be based on the gold yen, for which they will be made exchangeable for their face value at par. One of the new would thus exchange for two of the old nickels, which it is hoped in this way to withdraw from circulation.

The gross value of the year's trade, not including Gold or Treasure or the trade with non-treaty ports was 53,234,974 yen, divided as follows:

	Yen.
Foreign Goods imported from abroad.....	27,402,591
"    "    "    Native ports.....	4,588,595
"    "    "    re-exported abroad.....	597,211
"    "    "    "    to Native ports.....	4,479,103
Native    "    imported from ".....	4,656,308
"    "    re-exported to ".....	312,356
Exports abroad.....	6,933,504
"    to Native ports.....	4,265,306

53,234,974

It may be objected to this statement that certain pairs of items, such as Native exports to and Native imports from Native ports, form essentially but one movement, and that only one of each pair should be counted. But as the shipping of a package at one port and its landing at another are each a separate operation, involving expense and presumably profit, neither can well be omitted in a complete statement.

The most striking figures are those of the direct Foreign trade. The exports amounted to 6,933,504 yen, which added to the value of the gold exported (5,009,596 yen) gives a total of 11,943,100 yen, and if this sum be subtracted from the net total Imports—

25,805,380 yen—a balance against Korea of 14,862,280 yen remains. Again, however, the value of Railway Material imported (4,632,994 yen) has to be deducted from this balance, and further allowance must be made, to an indefinite amount, for the articles brought in as military supplies or for sale to the troops. But military supplies arrived for the most part by transports, whose cargoes were not reported to the Customs, and when all due allowance is made for the exceptions, and for the Clothing, Provisions and Cigarettes purchased in Korea by or for the troops, there will remain a debit balance much greater than any previously recorded and which can only have been met by labour employed and foodstuffs consumed in the country itself and in Manchuria.

2. Revenue.—The total collection was yen 1,845.10, of which, owing to the one-sided character of the year's trade, no less than yen 1,500,103.20 was Import Duty. The Export Duties, amounting to yen 292,010.15, were the smallest since 1899. Tonnage Dues, yen 53,236.75—despite the large reduction in the tonnage employed as compared with 1903, show some increase, which must be ascribed to the greater number of outside steamers, many of them of large capacity, visiting Korea during the year as carriers of Railway Material. The total increase in Import and Export Duties as compared with the previous year is yen 364,245.38 and in Tonnage Dues yen 4,935.50.

3. Foreign Trade.—(a) Imports.—The total of 25,805,380 yen, representing the net value of Foreign Imports in 1904, leaves all previous totals far behind. It is twice as much as the corresponding total of 1903 and when compared with that of 1903 shows an increase of 8,586,197 yen. Of this increase, some 2,189,000 yen falls to the share of Cotton goods, in the proportion of 816,000 yen to British and 1,373,000 yen to Japanese manufactures. The total of British Cottons imported was 3,767,000 yen, a figure which, while establishing a record for these goods, is but 400,000 more than the total of 1895, hitherto the best year, and it is worthy of note that the increase in value since 1895 is accompanied by same falling off in actual quantity. It may be that a more regular direct service of steamers between Shanghai and Chemulpo, of which there is a good prospect in 1905, would be favourable to the trade in Manchester goods. Naturally, Japanese Cottons have much increased, both in quantity and value, since 1895, for if that was the culminating year for British Cottons it was equally the starting point for the remarkable growth of the trade in Japanese Cotton Manufactures. The latter were imported in 1904 to the net value of 4,134,721 yen. The two important descriptions which in recent years have shown a downward tendency, namely, unclassified Piece Goods (imitation Korean cloth) and Cotton Yarn, come once more to the front; while Sheetings maintain their figures of the previous year.

In the general list there are certain articles, noticeable on account of the increase which they show, which may be grouped together as, in the main, owing that increase to the needs of the troops in occupation and of the smaller army of Japanese engaged on the railways. These are Clothing, Cotton and Cotton Wadding, fresh and cured Fish, fresh and preserved Fruit, Beer, Wines, Saké, Provisions, Soy, and Tobacco in various forms. The combined increase under these heads, several of which have doubled or trebled the figures of 1903 is no less than 2,428,000 yen.

(b) Exports.—The total value of Exports abroad—6,933,504 yen—shows a decrease of some 2,500,000 yen as compared with the previous year. The reason of this, as has already been indicated, was the absorption by Foreign troops of a large part of the products of the country, which were either consumed in Korea itself or taken to Manchuria as military supplies. But for this factor in the trade, it is probable that, as a result of the fine harvests, the Export figures would have surpassed previous records. It is in the shipments of Rice, with their total of 313,388 piculs, as against 1,037,362 piculs in 1903, that the falling off is chiefly seen, the difference in value being nearly 3,000,000 yen. In no year since 1895 has the export of Rice been so small. Shipments of Beans and Peas increased as compared with 1903, yet were not equal to those of previous good years. Owing to a considerable rise in price, however, their value—2,515,467 yen—is the largest on record. The enhancement of values is very marked throughout the list, and is especially noticeable in Cow Hides, of which the value has risen from yen 23.70 to yen 30.10 per picul. This may in part be accounted for by the exceptional output of military accoutrements in Japan and in part, perhaps, by the monopoly of the right to tan and sell Cow Hides conferred on a Korean syndicate in the middle of the year. The exportation of Cattle to Vladivostok was, naturally, discontinued after the war began, and the result is seen in a reduction of 255,000 yen under that head.

(c) Re-Exports.—The large value of Re-exports abroad—597,211 yen—was the effect of temporary conditions, favourable to trade rather than otherwise,

and is not to be taken as a sign of languor in the Korean markets. In the case of almost every item showing a much larger re-exportation than usual the increase is due to shipments to Antung and other points in Manchuria of such articles as the soldiers or their Japanese followers required—chiefly Clothing, Provisions, Liquors, and Tobacco. The re-shipments of Coal for steamers' use were also larger than usual.

4. Coast Trade.—Goods to the value of over of 9,000,000 yen were carried coastwise, between treaty ports, showing a further great advance of some 1,750,000 yen in this branch. Roughly speaking, about one half the total value is assignable to Foreign Goods and one half to Native Goods. Owing, perhaps, to the decrease in Exports, many of which reach the port of final shipment by a coasting voyage, the value of Native Goods carried coastwise is somewhat smaller than in 1903, but in the value of Foreign Goods so carried there is an increase of about 2,000,000 yen, part of which is due to the stoppage of direct steam communication between Japan and Wonsan and the consequent dependence of that port on Fusan for its supplies of Foreign Imports.

In the trade between treaty-ports and non-treaty ports there is a falling off of about 1,500,000 yen, due entirely to the occupation of Hamkyengdo by Russian troops.

5. Shipping.—On the outbreak of war all the larger Japanese steamers engaged in the Korean trade were utilised as transports, and for a time it seemed as if the year's business must suffer for lack of tonnage. The Japanese shipping companies, however, partially replaced their own vessels by chartering Foreign steamers, and, with the aid of outside enterprise, a sufficient tonnage was soon at the disposal of shippers, though the total entries for the year show a decrease of 350,000 tons as compared with 1903, and this notwithstanding an increase in the number of steamers entered. The withdrawal of all Russian vessels after the beginning of February and the partial substitution of European for Japanese steamers have effected a marked change in the distribution of shipping under flags. While Japanese tonnage has decreased by nearly a half there has been a notable gain under the American, British, Chinese, German, and Norwegian flags. The European vessels placed on the regular run by Japanese charterers were mainly German and Norwegian, those engaged in the carriage of railway material chiefly British, and one American steamer, the *Ohio* for which the Nippon Yusen Kaisha were the agents, enjoyed throughout the greater part of year the preference of European passengers between Korea and Japan.

6. Treasure.—The Export of Gold to Foreign countries was less by 447,000 yen than in 1903. This deficiency is nearly equal to that of the total shipments from Wonsan, both direct and via Korean ports. The Wonsan Trade Report, however, states that the shortage in Gold exportation from that port was more than made up for by the paper roubles shipped through the Customs, and estimates that at least as much again in rouble notes—say 600,000 yen—was sent out through the Post Office. Paper money to the value of 8,636,541 yen was imported into Korea. Against this there was an exportation of 1,145,219 yen, of which one half may have consisted of roubles and one half of yen as the net value of the importations of Japanese notes. These very large remittances, in part for the Dai Ichi Ginko and the Railways, were chiefly on account of the Japanese army. What were the further sums—doubtless large—brought in for the army by the medium of transports it has not been possible to ascertain. Silver yen continued to be imported for the use of the Foreign Mines in Pyeongyang and to trickle out of the country again in small amounts.

7. Miscellaneous.—The construction of railways, from Fusan to Seoul and from Seoul to Wiju, was carried on with extraordinary energy during the year, and the former railway was so far completed as to permit of its being thrown open to traffic in the end of December. At the present date two trains a day are running from either terminus, taking about 29 hours for the journey, of which, however, 12 are night hours to be passed by passengers in rest houses either at Taiku (大邱) or Taichun (太田). The actual travelling covers, therefore, about 17 hours for the 275 miles, giving an average rate, including short stoppages, of some 16 miles an hour. When the bridges and tunnels still unfinished are completed, which will probably be about next midsummer, it is expected that the journey will take 12 hours, with no night stoppage. Those who have travelled by this line speak highly of its solidity and of the quality of the workmanship which has been bestowed on it.

The election in Tokyo to fill the vacancy in the House of Representatives caused by the death of Mr. Taguchi Ukichi, resulted in the return of Mr. Hayashi Kenzo (Progressist) who polled 5,306 votes against 3,769 cast for Mr. Ema Shunichi (Seiyukai).

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## CHANGE IN RUSSIAN AMBASSADORS.

London, May 12.

Count Cassini, the Russian Ambassador to Washington, has been transferred to Madrid and has been succeeded by Baron Rosen, late Minister to Tokyo.

## THE BALTIC SQUADRONS.

Admiral Nebogatoff has effected a junction with Admiral Rojestvensky in neutral waters.

Later.

The junction of the two Baltic squadrons is unconfirmed.

## RUSSIA AND FRENCH NEUTRALITY.

The St. Petersburg Foreign Office, in an interview with Reuter's correspondent, said that any change in French neutrality and reputation in response to pressure brought to bear by Great Britain and Japan would be regarded by Russians generally as an unfriendly act.

## A TORNADO.

A tornado has partially wrecked Snyder, near Guthrie, Oklahoma. Five hundred were killed and injured.

## A TERRIBLE DISASTER.

A Chicago express collided with a freight train, partly loaded with dynamite, at midnight, near Harrisburg, Penn. Three terrific explosions took place: the train was shattered; 200 people were killed and injured, and the whole town was shaken.

## LAUNCH OF RUSSIAN WARSHIPS.

London, May 12.

The new Russian battleship *Andree Perovskii* and the gunboat *Chiniwes* were launched at St. Petersburg yesterday and the keel was laid of the gunboat *Teilyak*.

## INCREASING ITALY'S NAVY.

The Italian Minister of Marine has introduced a Bill into the chamber providing for the doubling of the Navy by the year 1907 or 1909.

## SUICIDE OF A KOREAN CHARGE D'AFFAIRES.

London, May 13.

Mr. Yi Han-sung, the Korean Chargé d'Affaires at London, has committed suicide by hanging himself in the Legation.

## THE AMERICAN DISASTERS.

Three hundred persons were killed and injured by the tornado at Snyder and ninety by the railway collision at Harrisburg.

## CAINA AND THE MACKAY TREATY.

Speaking in the House of Commons, Earl Percy, British Under Secretary for Foreign Affairs, said that Sir Ernest Satow, the Minister at Peking, has been requested to obtain from the British merchants in China a detailed statement of their complaints regarding China's attitude towards the Mackay Treaty.

## THE ARREST OF CAPTAIN BOUGOUIN.

London, May 14.

It is stated that France has telegraphed to her Minister in Tokyo for full information about the arrest of Captain Bouguin. Unless the Japanese supply strong presumptive evidence of his guilt, the Minister is to lodge a strong protest.

## DELCASSÉ AND MOTONO.

M. Delcassé, French Minister for Foreign Affairs, yesterday received Mr. Motono, the Japanese Minister, in an interview which lasted half an hour.

## THE NEUTRALITY QUESTION.

It is declared by the St. Petersburg Foreign Office that the neutrality situation is unchanged, France not having taken any official steps since the transmission of the former Japanese protest.

## PUBLIC OPINION.

The belief continues that, despite the absence of a formal declaration, France will not modify her regulations, which will be regarded undoubtedly not only as an unfriendly, but also as a hostile act on all hands. The right of the Russian ships to take in coal and provisions is firmly contested.

## RUSSIAN ADMIRAL SHOT.

London, May 14.

A dismissed orderly fired a revolver at Admiral Razimoff, in St. Petersburg, yesterday, and killed him.

## THE RUSSIAN JACQUERIE.

The peasants of the Sergratch district, Nijni Novgorod, have risen and fired several estates.

## THE BALTIC SQUADRON.

London, May 15.

A steamer which has arrived at Saigon reports that she passed the Russian fleet anchored in Yulin Bay, Hainan, on May 12th.

## MAY DAY IN RUSSIA.

The Russian May-day appears to have passed quietly.

[The report as to the Baltic Squadron is obviously a deception. The Russian fleet was at anchor in Honkohe Bay on the 12th.—Ed. J.M.]

## PRINCE ARISUGAWA.

London, May 16.

Prince Arisugawa has arrived in Paris. DISORDERS IN ST. PETERSBURG.

There were slight disorders in the Vassiliostroff and Sitthensburg quarters of St. Petersburg in the afternoon. Officers ordered the holiday-makers to disperse but were jeered at and hustled towards an artificial lake, where they stood knee-deep. They threatened the crowd with revolvers. Cossacks arrived and speedily dispersed the mob.

## THE MEDITERRANEAN MOTOR RACE.

Later.

Out of seven motor boats that started in the Algiers-Toulon race six were lost. All the crews were saved.

## THE TIBET CONVENTION.

Negotiations for the adhesion of China to the Tibet Convention are still proceeding; they are conducted by the Indian Government on behalf of the Imperial Government.

## THE BALTIC SQUADRON.

London, May 17.

It is claimed in St. Petersburg that the Baltic Squadron has a perfect right to revisit Honkohe under the French regulations.

In reply to several interpellations in the French Chamber of Deputies with reference to the neutrality question, M. Rouvier repeated that French officials in the Far East had been ordered to observe neutrality in the strictest manner.

He asked for a postponement of the debate but the interpellators declared that the Government's orders had been unheeded and insisted upon an immediate discussion. The Chamber, however, by 445 to 84 agreed to adjournment.

## LEFT HONKOHE.

A telegram from Saigon states that the Baltic Squadron has again left Honkohe northward-bound, but no warships have since been seen.

## BOMB-THROWING IN RIGA.

London, May 18.

A bomb was thrown in Riga which severely wounded a police inspector and killed a policeman. A second policeman, who was with them, pursuing the assailants, was shot dead. A regular bomb factory has been discovered in Odessa.

## A GOVERNOR ATTACKED.

A later telegram states that Governor Sokolovsky, of Ufa, was shot in the public gardens of that city. His life is despaired of. His assailants escaped.

## NEW BRITISH GENERAL.

The King of Spain has been appointed a General in the British Army on the occasion of his birthday.

## RUSSIAN REFORMS.

An imperial edict removes the restrictions hitherto imposed on Poles and Lithuanians concerning the acquisition of property in nine of the western provinces. It restores the privilege of election to the Polish nobility and permits the teaching of the Polish language in schools.

(RECEIVED AT THE FOREIGN OFFICE.)

## THE LUBECK AFFAIR.

With regard to the supposed materials for a torpedo-boat recently placed under embargo at Lübeck, it has been determined by experts that they do not bear a contraband character and the embargo has consequently been removed.

## THE THIRD SQUADRON.

A report has been received to the effect that the Third Squadron has joined the second, but another report denies the junction. The matter is uncertain.

## KOREAN WEIGHTS AND MEASURES.

The weights and measures of Korea have been reformed, so as to correspond in the main with the Japanese system. The law of alteration was promulgated in the *Official Gazette* of the 29th of March and will go into force from the 1st of November next. The nomenclature and the divisions of the new weights and measures are as follow:—

Lineal Measures—The nomenclature is the same as the Japanese. From the *jo* downwards the subdivisions are the same as the Japanese but 1,386 *shaku* make 1 *ri*.

Measures of Capacity—These are altogether identical with the Japanese.

Measures of Weight—The nomenclature is *kin*, *ryo*, *sen*, *bu*, *rin* and *mo*. The subdivisions below the *ryo* are decimal, but 16 *ryo* go to the *kin*, so that the latter is equal to 160 *momme* (Japanese.)

## RUSSIAN STRIKERS.

According to a Wolff's telegram a thousand workmen have held a meeting at Revel, where they were joined by representatives from St. Petersburg and by men bearing false names. They decided to organize a three days' strike, during the May festival and to present their new demands to the factory owners, which demands must be granted within 24 hours or the factories will be set on fire. Those present at the meeting paraded the streets, singing and shouting that no resource remained except to relieve their suffering by exercising their own strength, and that they must carry their demands to the Emperor.

The police were deceived by false reports and are searching for malcontents elsewhere.

## DISTURBANCES IN RUSSIA.

The domestic disturbances in Russia have again broken out in various districts. Political assassins and their plots abound, and there have been not a few collisions between the

troops and the people, entailing numerous deaths and wounds. The Government has been employing troops of the Guards and Cossacks to quell the disturbances, and these troops are now weary with moving hither and thither on that duty. In consequence of this unquiet state of affairs, martial law has been proclaimed at Melitopol, Wilna, Gradno and Smorgoni.

#### JAPANESE MINISTER TO BRAZIL.

Mr. Sugimura, Minister Resident in Brazil, has presented his credentials to the President of that Republic.

#### THE BALTIC FLEET.

The French Government has made the following communication to the Japanese Government under date of the 15th instant:—According to a telegram received on the afternoon of the 15th and despatched by Admiral Jonquieres, the Admiral cruised along the coast of Annam from the 13th to the 14th instant for the purpose of determining whether any Russian war-ships were there and requiring them to take their departure should they be found at anchor. The result was that in the interval from St. Jacques Bay on the south to Tourane, which is in 16° N. Lat., and in the interval (we are unable to understand the exact meaning of the telegram—Ed. J.M.) not one war-ship or transport was seen.

#### THE FOURTH SQUADRON.

The Russian Fourth Squadron, consisting of five warships and eight torpedo craft, is to leave the Baltic in about two weeks, it is stated.

According to a St. Petersburg News Agency the Cronstadt newspapers say that orders have been issued to the commanding officers of the ships forming the Fourth Baltic Squadron, to make all preparations for setting out for the Far East by the 14th of June.

#### RUSSIA'S FINANCES.

According to a St. Petersburg telegram, the Russian Government has issued treasury notes for two hundred million roubles, payable after a brief interval. One hundred and fifty million roubles have already been subscribed.

#### ROYAL MARRIAGE.

According to English newspapers the nuptials of Princess Margaret, daughter of the Duke of Connaught, with Prince Gastof Adolf, Duke of Scania, eldest son of the Crown Prince of Sweden and Norway, will be celebrated at Windsor on the 13th of June.

#### BARON ROSEN.

Baron Rosen is expected to arrive in Washington to take up the duties of his post on June 20th.

(RECEIVED AT THE FRENCH LEGATION.)

#### FRENCH NEUTRALITY.

Paris, 7.50 p.m., May 17.

Deputy Tressensee introduced an interpellation to the Chamber with reference to the question of neutrality in the Far East. Premier Rouvier said he had nothing to add to his previous explanation. He could only repeat that he had given repeated orders to the Indo-Chinese authorities to strictly observe neutrality. He asked the Chamber to postpone the debate, and this proposal was adopted by 455 to 84.

(RECEIVED AT THE NAVAL DEPARTMENT.)

#### CAPTURES.

The British steamer *Lincluden* (2,246 tons) and the French steamer *Quandnam* (1,431) were both captured by Japanese war-ships on the 16th instant, the former on the south coast of Korea and the latter near the Pescadores.

(RECEIVED BY THE "ASAHI SHIMBUN")

#### MAY-DAY IN RUSSIA.

London, May 15.

The May-day demonstrations have passed off quietly in Russia.

#### A VIEW OF ROJESTVENSKY'S POSITION.

The *Times*' Paris correspondent asserts on good authority that Rojestvensky's position is not so brilliant as represented. His ships cannot shoot or steam, and must coal before reaching Vladivostock.

#### TRIAL OF A RUSSIAN BATTLE-SHIP.

The Russian battleship *Slava* has been commissioned at Kronstadt for trials.

#### BRITISH PRESS AND ROJESTVENSKY'S DISREGARD OF FRENCH NEUTRALITY.

The British press is not surprised that Rojestvensky's shameless repetition at Honkohe of the dishonorable trick played at Kamranh has caused renewed popular anger in Japan. The opinion is growing that Russia is seeking to drag France into a quarrel with Japan.

#### FRANCE AND HER NEUTRALITY.

The *Times*' Paris correspondent intimates that the French authorities have done more to vindicate their neutrality than is commonly supposed.

#### RUSSIAN VIEW OF THE SITUATION.

The Russian Admiralty affects to believe that Rojestvensky has not infringed the French rules, while the Russian Foreign Office boldly declares that the incident is closed.

#### RAID AGAINST PIRATES.

Yingkau, May 17.

A steamer sent against the pirates on the 14th instant returned to-day. She reports have searched a large area of sea and had an engagement with a number of the pirates. Her machine guns inflicted great loss on them, almost annihilating them. The steamer took two cannon and several rifles from them.

The *Jiji Shimpō* has a similar telegram with the following additional details:—

The steamer attacked the pirates base and took several of them prisoners. She also captured a number of their ships. It may be said that they have been finally disposed of, and that the coastwise navigation will be safe henceforth.

(RECEIVED BY THE "Jiji SHIMPO.")

#### GERMAN PROCEEDINGS IN CHINA.

Chefoo, May 15.

Viceroy Choufu has telegraphed to the Taotai that Germany has hoisted her flag at Haichowkan in Kiangsu, has taken possession of the place by landing marines and has fired a salute. Rumour says that the object of this proceeding is to assist the Baltic Squadron and watch the Japanese fleet, but that is incredible.

[Haichow is marked on some maps simply as Hai. It lies on the north coast of Kiangsu just opposite the island of Yu-chow, and a little above the old estuary of the Yellow River. Of course without most explicit confirmation no one will believe this extraordinary story. We are not aware that any diplomatic difficulty exists at present between Berlin and Peking, and that Germany should seize part of a friendly Power's territory in time of peace is incredible.—Ed. J.M.]

(RECEIVED BY THE "KOKUMIN SHIMBUN.")

#### THE BALTIC SQUADRON.

Washington, May 16.

Count Cassini, the Russian Ambassador in Washington, has complained through the State Department in Washington that Japan

has not given proper treatment to the Russian sick and prisoners taken at Port Arthur and elsewhere.

Hongkong, May 17.

At noon on the 14th instant (Sunday) the Baltic Squadron set out for the north. The French cruiser *Gueydon* (the name in the telegram reads *Giushin* but we do not know any French cruiser of that name on this station.—Ed. J. M.) attests this fact.

A telegram received to-day from Manila says that the leading section of the Squadron is advancing plainly towards Ballintang Channel.

Another telegram received here says that the Russian Squadron is heading north over the open sea.

#### NEWS OF THE WEEK.

Prince Fushimi, special envoy to the Korean Court, left Ujina on May 17th.

Mr. F. Watanabe, a member of the Upper House, has resigned. He was elected for Kanagawa prefecture as a highest tax-payer.

On Sunday, May 14th, 313 invalids returned from the front by the *Kohina Maru*, arriving at Ujina. Sixty of them will be removed to Himeji and another sixty to Kanazawa.

There are said to be eighteen ways of spelling Rojestvensky's name, but as one and all mean in the Russian tongue "Resurrection," great hopes are being built upon his varying syllables.

Rear-Admiral Nakamizo, Chief of Staff at the Kure Naval Station, has been appointed Superintendent of the Maizuru Arsenal. He is succeeded by Captain Nijima, of the Maizuru Naval Station.

Owing to the recent death of its representative, the Korean Legation in London, says a Seoul correspondent, has been closed. The property and documents have been transferred to Mr. Morgan, honorary consul.

An official telegram says that on May 12th, the weather was fine, the temperature at Mukden being 70° F.; at Yingkow, 66° F.; and at Dairen, 60° F. For several days past, in the districts north of Tiehling, a gale was experienced.

A telegram was received in Yokohama on May 15th from the district of Matsuzaki, Idzu province, to the effect that a bale of new cocoons was put on the market and the standard price was yen 4.20 per *kivamme*, or yen 40 dearer than in the previous year.

A Peking telegram reports that on May 15th the Emperor and Empress Dowager gave a dinner to the foreign representatives and their staffs in the Detached Palace in the E-ho garden, and on the following day the wives of the foreign diplomatic officials were entertained.

By the arrival of the S. S. *Tweeddale* from Rangoon on Monday morning, and from other sources, we learn that further charters have been effected for the import of Burma rice from the last of the season's crop with a steady incline in the freights and insurance for the most part inclusive of both war and marine risks. The British India Steam Navigation Company having decided to stop all shipments to Japan for the present, a number of tramp steamers which were intended for the South American export trade have now taken up the running, and the godowns, more especially those belonging to Chinese, are being emptied with all possible speed so as to ensure a safe exportation within the next month or six weeks. The *Tweeddale* was one of those steamers which hazarded the upward trip in spite of the reports that the Baltics were scouting the Indian Ocean and the South China Seas. She made the passage in twenty-one days and a vigorous look-out failed to sight any of the Russian fleet en-route. She brings in 4,500 tons of rice.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 27TH, 1905.

## BIRTH.

At No. 90-B, Yamashita-cho, Yokohama, the wife of R. PRISTER, of a Daughter.

## SUMMARY OF NEWS.

PRINCESS FUSHIMI was delivered of a son, at 6.10 a.m., on May 22nd.

PRINCE KARL ANTON arrived at Shanghai on May 21st on his way home from Japan.

TWO Russian prisoners quarrelled with each other at Kanazawa on the night of May 17th, and one was severely injured with a knife.

THE Osaka City Assembly has decided to spend forty-seven thousand yen in order to purchase rats as a measure to avert plague.

THE Crown Princess returned on May 20th from Hayama, with her third son Prince Teru, arriving at Shimbashi by the 4.25 p.m. train.

TENDERS for the sale of the German steamer *Romulus* were opened on May 12th at the village of Misawa, near Aomori, near which she stranded

after capture. None of the tenders having reached the official estimate, the Admiralty decided to invite new tenders.

MESSRS. T. ITO, S. YAMADA, and Y. HIRANO, officials of the Department of Finance, have been appointed advisers to the Korean Tax Bureau.

THE cofferdam for the *Sully* had perfectly smooth water all the way down and arrived safely at Aldong Bay in 3 days 19 hours from Hongkong.

GENERAL ISHIMOTO, Vice-Minister for the Army, Major-Generals Murata and Iguchi, and Lieut.-Colonel Horiuchi left Ujina on May 21st for Korea.

THE report that a movement has been made in Honolulu, aiming at the refusal of the landing of Japanese workmen, says a telegram to the *Jiji*, is baseless.

A PARIS telegram reports that on May 17th, Mr. Motono, Japanese Minister, gave a dinner party at the legation in honour of Prince and Princess Arisugawa.

A QUANTITY of new cocoons was put on the market at Numadzu, on May 22nd, the nominal price being yen 5 per *kwanme*. The quality is reported to be good.

THE Japanese Admiralty has purchased the foreign salvage steamer *Heracles* and renamed her *Kurihashi Maru*. She is attached to the Sasebo Naval Station.

As the result of the decision given by the Hague Arbitration Court with regard to the house-tax the income of the Yokohama City Office will be reduced by eighty thousand yen yearly.

A CASE of plague appeared on May 21st at Kuroi-cho, Fukagawa, Tokyo, and the patient died the following morning. The victim was a woman named Tamai Toki, 32 years old.

ON the evening of May 21st, a lighter with stone material from Chiba prefecture, capsized owing to a storm off Haneda on its way to Tokyo. One of the two *sendo* on board was drowned.

COUNT Y. YANAGISAWA left Yokohama on May 19th by the *Empress of Japan* for America on his way to London where he is ordered to be present at the tenth International Statistical Conference.

A MOJI telegram says that Midzushima & Co., who were shipping 4,700 tons of coal by a steamer for Hongkong were ordered by the naval authorities on the night of May 23rd to stop the shipment.

TELEGRAMS received in Tokyo, says the *Jiji*, report that owing to the advance of the Baltic squadron northward, the war risk on cotton has further risen yen 3 per cent. from America and yen 4 from Bombay.

THE *Official Gazette* reports that owing to the sinking of the Nippon Yusen Kaisha's chartered steamer *Sobralense*, which struck a floating mine on May 12th off Port Arthur, one letter-bag and five parcel bags were lost.

MR. SHAKU SOYEN, the abbot of the well-known Buddhist temples Yenaku and Kencho in Kamakura, will leave on June 9th for America. His place will be taken by Messrs. S. Miyaji and J.

Fujiwara respectively, and the inauguration will take place on May 28th in the Kencho-ji and on the following day in the Yenaku-ji.

THE Kobe Golf Club have just held their second anniversary tiffin, over which Mr. A. H. Groom presided. The winner of the Annual Challenge Cup this year is Mr. R. H. Clark with 79; Mr. G. Millward winning the Dimpie Cup with 83.

EARLY on the morning of May 23rd, fire broke out in the Choyei theatre at Akita destroying it and seven dwellings adjoining. One person was killed. Another fire occurred on the previous night in the village of Mitoda, Toyama prefecture, burning down 45 houses.

ON the evening of May 23rd, in Osaka harbour, the steamer *Hachisuga Maru* collided with a lighter laden with pig-iron to be delivered at the Osaka arsenal, the result being that the latter immediately sank. All of the *sendo* saved themselves by swimming ashore.

TO celebrate the wedding of the German Crown Prince, which will take place on June 6th, says the *Asahi*, Count Arco Valley, German Minister at Tokyo, will give a grand dinner party on the evening of June 5th at the German Legation, inviting Imperial Princes and Princesses, Ministers of State and other notables.

CAPTAIN R. OKOSHIMA, an officer of the transport corps, was discharged on May 23rd, and deprived of rank—seventh senior. The cause is reported by the *Nichi Nichi* to be that he had arranged private relations with merchants patronized by the military offices and sold goods at the front at a very high price.

ON May 22nd, a Norwegian steamer with 1,800 tons of coal from Karatsu, was stopped by the naval authorities when she was about to leave Nagasaki for Shanghai. She was permitted the same evening to leave. The coal carried by her is of inferior quality so that it can not be used for any purpose except for industrial works.

VISCOUNT N. ODA, says the *Nichi Nichi*, has been prosecuted by Mr. Fujita of the *Hochi Shimbun*. It is said that the Viscount received, at several times, 4,726 volumes of the book *Shaku Doraku* published in the office of the *Hochi* and sold them for yen 3,787 and that he did not pay the cost to the publishing office.

THE directors of the Sanyo Railway Company met on May 20th and decided (1) to commence the construction of a factory at Takatori and to complete the work within three years; (2) to establish four stations on the railway between Atsusa and Omine; and (3) to redeem yen 100,000 debentures by drawing on May 30th.

SOME capitalists in Kofu, Yamanashi prefecture, have promoted an association under the name of the Nippon Tungsten Company for the purpose of mining tungsten in the Mitake mountain. A hundred and eighty thousand yen of the proposed capital, yen 200,000, was paid up on May 20th, and Mr. T. Murakami and four others were elected directors.

MISS TAKA ADACHI, eldest daughter of Mr. M. Adachi, civil engineer of the Yokohama Silk Conditioning House, has been appointed nurse to the sons of the Crown Prince. She was educated in the Yokohama Female School and the Tokyo Female High Normal School. Miss Nobu, one of her sisters, recently married the younger brother of Viscount Ogasawara, a Commander in the Navy.

## THE BALTIC FLEET &amp; ITS WHEREABOUTS.

Friday, May 19.

There are three mutually corroboratory reports. One is from a steamer which entered Hongkong on the 17th, and stated that on the 14th she saw the Russian squadron, consisting of 52 fighting vessels with 10 transports and 2 hospital ships, in the act of leaving Honkohe Bay. The second and third reports are from vessels entering Singapore from Amoy. The first speaks of having seen 42 Russian war-ships with several transports steaming northward at a point 40 miles east of Cape Varela. The second alleges that she sighted the same squadron at 3 a.m. on the 16th at a point in latitude  $13^{\circ} 39'$  north and longitude  $112^{\circ} 28'$  east; that is to say, off Cape Varela. Another statement, this one coming from London, differs as to the number of Rojestvensky's following, but confirms the fact that he left Honkohe Bay on the 14th.

Japanese newspapers do not seriously consider the theory of the Baltic Squadron proceeding into the Pacific and heading for Petropavlovsk preparatory to running across the Sea of Okotsk and reaching Vladivostock by the west of Kamchatka. They agree in thinking that if Rojestvensky really left Honkohe on the 14th—which appears to be tolerably certain—and if he sailed thence northward, he must by this time have been heard of in the vicinity of either Hongkong or Formosa. But he had not been heard of up to the evening of the 18th instant, and they are consequently disposed to think that he is repeating his old tactics; in other words, that he has returned to Honkohe. From Honkohe to Hongkong the distance is some 800 miles, so that, supposing the Squadron to have left the Indo-Chinese coast on the 14th at noon, it should have been off Hongkong by the evening of the 17th, and it would have reached the neighbourhood of Formosa (200 miles farther) by noon on the 18th. These calculations are on the hypothesis of 10 miles an hour. But it is very possible that Rojestvensky may have steamed at a slower rate; 8 miles, for example, in which case he would not pass Victoria before the afternoon of the 18th and would not be up to Formosa till the evening of the 19th. It seems premature, therefore, to form any definite conclusion as to his route. At all events the news from Manila that on the 16th or 17th instant he was sighted heading for the Ballintang channel requires confirmation. If he is indeed bent upon steaming out into the wide Pacific, nothing more may be heard of him for many days. If on the other hand, he has returned to Honkohe, as the Japanese newspapers suspect, or if he intends to return thither, a very grave situation will arise, for neither Japan nor France can be content to let him violate neutral laws so flagrantly.

The *Asahi Shimbun* enumerates the injuries inflicted on Japan by France's neglect of neutral obligations. The first is that the Russian Squadron was able to remain for nearly 5 weeks in secure ports, recruiting its strength and obtaining supplies. The second, that without large replenishment of its stock of coal, it must have necessarily chosen the shortest route to its destination, whereas, having been amply furnished with coal, it can now make a choice of routes and may, if the Admiral pleases, proceed by the most distant and least dangerous route. The third is that by obtaining access to the French lines of telegraph, Rojestvensky has been enabled to communicate with St. Petersburg, Vladivostock and Manchuria, and has thus found facilities for arranging a concerted plan of action.

In this context it is really worth while quoting one of the naivest utterances we have ever seen in print. It is taken from the columns of our quasi-German local contemporary:—

The advent of the Baltic Fleet enables Japan to effect a more crushing blow on Russia than any that country has yet experienced. It enables her to destroy practically the whole of Russia's navy and to reduce the naval strength of that Power, for some years to come, to nil. How great an advantage this would be to Japan need not be discussed. Suffice it to say it would enable Japan to continue her plans in the Far East and establish them on a firm basis unmenaced by any recurrence of aggression. Thus the advent of the Baltic Fleet, probably only rendered possible by the French neutrality regulations, and foreseen and prepared for by Japan, really assists the policy of the Japanese Government.

Of all the palliations of France's conduct that could have been conceived this is the quaintest and most childlike. Any word of comment would impair its beautiful fatuity.

Saturday, May 20.

The only fact which seems to be generally accepted this morning is that the Baltic Squadron left Honkohe on the 14th. It will have been observed that a British steamer which arrived at Singapore on the 18th reported meeting the Squadron at a point represented by  $13^{\circ} 30'$  north latitude and  $111^{\circ} 30'$  east longitude. Such a point would be just opposite Xuaneday, which has been described by the French Admiral as the most northerly port in Indo-China capable of accommodating war-ships. The steamer's people said that they saw the Russians there on the morning of the 16th at 2 o'clock, but if so the steamer could not possibly have covered the distance between the alleged point and Singapore (900 miles) so as to reach the latter on the 18th. Either the date of sighting the Squadron or the place has been wrongly reported, and the former is regarded at the more likely. Assuming then that the steamer sighted Rojestvensky's ships in the offing of Xuaneday at 2 a.m. on the 15th, and assuming that his destination is the Formosa channel, he may be expected to arrive near that region by the 20th instant and news will very soon be heard of him.

Hongkong wires that 150 junks laden with provisions are lying off Saigon, evidently waiting for the Russian ships; presumably the Third Squadron.

Admiral Jonquières is reported as saying that the fighting strength of the two fleets are nearly equal, but that the Japanese have a great advantage in their numerous torpedo-craft and in their skilful and intrepid manner of using them.

The Japanese press is agreed that Rojestvensky left the coast of Indo-China, not for a moment because he was compelled to leave in deference to French neutrality or in deference to French admonitions, but simply because he was "good and ready" to leave. But the Japanese press is too reserved to speak freely of the Rojestvensky-Jonquières comedy which history will certainly set down in its pages. Sober annalists will decline to regard it as a mere coincidence that the French Admiral happened to perform his tour of inspection just at the very moment when the Russian Admiral had removed his obnoxious presence. Jonquières might have cruised along the coast of Indo-China at any time between the 27th of April and the 13th of May, and ought to have so cruised were he animated by a desire to give effect to the public declarations of his own Government. But had

he made such a cruise he would have encountered the great inconvenience of Rojestvensky's Squadron openly violating French neutrality, and he must have embarrassed this dear representative of the "allied and amicable" country by asking him to put to sea before he was quite ready to do so. Therefore this inquisitive cruising was discreetly postponed until news came from Rojestvensky that he had completed his preparations, that he had no further use for Indo-Chinese ports, and that he proposed to depart from Honkohe on the 14th, God willing. Then Jonquières got up steam and commenced his cruise, with the happy result that he was able to report the non-appearance of even one Russian ship throughout the whole length of the course. It was a very pretty comedy, and Rojestvensky and Jonquières may be assured that they will have for audience all readers of history through all time.

The impression now seems to be that Rojestvensky is not disposed to push north and put his fortune to the test of a great engagement. But what is he to do? He has not come to the Far East merely to make a demonstration. Even if he makes his way comparatively scathless to Vladivostock, he would soon find himself embarrassed there, since we may take it for granted that Vladivostock's communications with Harbin will soon be severed, and in any case to hide himself away in Vladivostock can not be the Russian Admiral's aims. After all, this matter presents an aspect which deserves more consideration than it is receiving. Suppose that this Baltic Squadron were not Russian but German, or French, or American or English. Would there be the smallest doubt in the mind of the public as to its course of procedure? Here are two fleets of almost equal strength. No one can venture to affirm confidently which is the stronger. One is the fleet of a Power which has suffered a succession of military and naval disasters and whose fortunes can be materially improved only by recovering command of the sea. To recover that command a decisive battle between the two fleets is essential, and every hour that the battle is deferred adds to the embarrassments and losses of the Power which has been hitherto unsuccessful. Confronted by such a situation could a German Admiral, or a French Admiral, or an American Admiral or a British Admiral hesitate for a day? Would he not hasten with the utmost possible celerity to meet the enemy and strike with all his might to restore the fortunes of his country? Assuredly he would. Were any of the nationalities here enumerated in the place of the Russians, a big naval engagement would be as certain as the change of the seasons. Yet, a Russian Admiral and a Russian Squadron being in question, the public never thinks of accepting the straightforward view, but loses itself in conjectures as to whether Rojestvensky will sneak up to the shelter of a fortress by this backstairs or by that.

Sunday, May 21.

Rojestvensky and his ships have temporarily disappeared from observation. It is difficult to imagine such a mob of vessels managing to elude detection, but, after all, the sea is wide, and by avoiding the regular track of steamers the Russian Admiral may have escaped being sighted. It is plain that he is moving slowly, for had he maintained a speed of anything like 10 knots, he must have been up to Formosa by the afternoon of the 20th at latest.

Probably, therefore, his desire to economise coal has induced him to diminish his speed to 8 or even 5 knots. He is in no hurry. To come into action quickly is evidently the last thing he desires. Of course he may be heading for the Pacific, but whatever he is doing his movements can not long remain hidden.

There is talk of a part of the Squadron being short of coal, but no such theory seems tenable for a moment. All accounts go to show that Saigon served as an undisguised basis of supplies—coal and food-stuffs—while Rojestvensky remained in Indo-Chinese waters. As many as 30 steamers—some say 40—were engaged in the work of preparing the Russian war-ships to attack Japan.

Hongkong wires, on the authority of a man who has just come thither from Saigon, that water is a great difficulty to Rojestvensky. But that story also may probably be classed with the unceasing rumours formerly circulated about lack of supplies at Port Arthur.

The difficulty in connexion with exporting Cardiff coal from Shanghai continues. Peking has the matter in hand now. Meanwhile the shippers are said to be manoeuvring to elude the vigilance of the customs authorities. One device is to unload the coal from steamers into junks which proceed to some port beyond the customs "ken," and there transfer the coal once again to the steamers. It sounds a very circuitous and difficult process.

There is a rumour that the S. S. *Kashlie* (formerly the *Wuchang*) has established a wireless telegraphic station at Tsingtao, the island at the mouth of Kiaochow Bay.

Rumour continues to be busy about the state of Rojestvensky's health. A London telegram to the *Tiji Shimpo* quotes the *Echo de Paris* as stating confidently that the report of the Admiral's nerves having given way is fully believed in St. Petersburg and has created some consternation there. But we have Reuter's message that Birleff's appointment is to Vladivostok only, and that Rojestvensky will continue in command until his ships reach that place. The wisest plan is to credit none of the sensational stories. Such tales are sure to be circulated when the public is in a neurotic condition pending some great event.

The Fourth Baltic Squadron, of whose departure next month there is now much talk, seems to consist of the following:—

	Tons.	Knots.	Launched.
Battle-ship <i>Slava</i> .....	13,516	18	1903
<i>Imperator Alexander II</i> .....	9,744	15.3	1887
Cruiser <i>Pamiat Azov</i> .....	6,674	16	1888
<i>Admiral Korniloff</i> .....	5,863	17.6	1887
<i>Assia</i> .....	2,449	15.6	1874
Converted Cruiser <i>Russia</i> .....	5,383	?	1887
Gunboat <i>Albatros</i> .....	675	21	1896
<i>Vesuvius</i> .....	415	22.2	1892
<i>Bozartick</i> .....	393	21	1892
Destroyers four			

These vessels are, in fact, the remnants of what has hitherto been known as the Third Squadron. The interesting question connected with their journey to the East will be France's attitude towards her neutral duties. If she again interprets her obligations in the strangely partial manner which so nearly led to a rupture with Japan in the case of the Second Squadron, it is impossible to suppose that the gravest consequences will be avoided.

Monday, May 22.

Up to the evening of the 21st there was no further news of the Baltic Squadron. The general belief now seems to be that the

Squadron has passed out into the Pacific through the Bashi Strait; that is to say, between Formosa and the Philippines. The speed of the ships constituting the squadron is very various, and for that reason, as well as on account of economy, Rojestvensky is probably moving very slowly. From Honkoye to the Bashi Straits the distance is 850 miles, and assuming a uniform speed of 6 knots, six days would be required to traverse that distance. Therefore the Squadron should have been in the strait by the 20th, and should certainly have passed through by the 21st at latest. Nothing, however, having been heard of it up to the night of the 21st, we can only suppose that Rojestvensky is carefully avoiding all the ordinary routes of commerce. Had there been foggy or dirty weather one could easily conjecture that even a big mob of vessels like that accompanying Rojestvensky might have slipped through the strait undetected. But the weather has been quite fine, and in official circles it is not thought possible that the ships can have got into the Pacific without being anywhere sighted. Thus the matter is for the moment somewhat mysterious, but as the mystery may be cleared up at any moment conjectures are idle. One point may be made, however; namely, that because Rojestvensky chooses to pass eastward instead of westward of Formosa, there is no reason to assume that he intends to try the Tsugaru or Soya passages in preference to the Tsushima. His obviously wise plan is to avoid narrow waters and for that cause he has eschewed the Formosa channel. But the route to Tsushima via the east of Formosa is not much longer than the direct route via the Formosan Channel, and a matter of a few hundreds of miles would not count if peril could be avoided by making the detour. What is quite probable is that the Russian Admiral is lingering in the hope of finding foggy weather. We may be now tolerably sure that his object is to do as little fighting as possible en route for Vladivostok, and therefore he desires above all things to have the aid of a fog for negotiating the Tsushima passage.

Meanwhile there is reason to think that the Vladivostok Squadron is out. As yet no official statement in that sense has been published, but from Takeshiki (in Tsushima), from Oki and from Iki comes intelligence that on the morning of the 21st a number of ships were sighted in that vicinity. One account says 4, one 3 and another 4 or 5. It seems somewhat premature for the Vladivostok vessels to make their appearance near Tsushima, supposing that they desire to synchronise their movements with those of the Baltic Squadron. The distance from the Bashi Straits to the Tsushima passage is 1,000 miles and even if Rojestvensky, after entering the Pacific, increased his speed to 10 knots, he could not be up to Tsushima before the 26th, supposing that he passes the Bashi Straits on the 22nd. The Vladivostok Squadron's appearance would be equally premature on the assumption that the Baltic Fleet intends to try the Tsugaru strait. Probably it will turn out that the Vladivostok vessels have no intention of closing down on the Japanese, but are merely making a demonstration.

In expert circles it is thought certain that the Third Squadron has joined the Second. Where the junction was effected, however, seems to be unknown. The French may know. Indeed their somewhat uncalled-for declaration that the use of Indo-Chinese ports for purposes of rendezvous would not be

permitted, suggested a post-facto simulation of innocence. Of course, so far as concerns the mere feat of escaping observation, the Third Squadron may have been successful by keeping away from the ordinary route of ships after passing the Malacca Straits. But how did Nebogatoff manage to pick up Rojestvensky? If the junction was not effected in French waters, then assuredly it must have been effected by the aid of French telegraphs, and thus we arrive at the inevitable conclusion that it was by using Indo-China for a basis of operations that Rojestvensky managed to put himself into condition for striking at Japan. Neither he nor Nebogatoff trusted to the chance of meeting on the high seas, even when chance was aided by wireless telegraphy. Each knew exactly what the other was doing, and that knowledge could not possibly have been conveyed except by means of French telegraphs, which, be it noted, were officially closed for the transmission of all messages that might have disconcerted Russian plans.

It is stated in Tokyo that Rear-Admiral Parenago, who is to command the Fourth Baltic Squadron, was formerly captain of the *Oushakoff* and then of the *Sissoi Veliki*. He obtained his flag-rank in 1899, and since then has been chief of the trial-trip inspection committee in the Baltic. The *Slava* will be his flag-ship.

Tuesday, May 23.

There is still no definite official news of the movements of the Baltic Fleet. Two ships which reached Shanghai on the 22nd report having sighted transports in or near the Bashi Straits. One of these ships—the *Changhua*—says that she saw 4 transports all carrying wireless-telegraphic apparatus; and the other—the *Yuensang*—speaks vaguely of a certain number of transports seen on the south of the Straits. In the *Kokumin Shimbun* we find another vague statement that intelligence received "in a certain quarter" indicates the passage of the two Squadrons into the Pacific Ocean, but even the cumulative evidence of these various assertions is not convincing when we recall the fact that the Bashi Straits and the whole interval between the Philippines and Formosa are strewn with islands, where, presumably, the Japanese have stationed look-outs, and that, up to the evening of the 22nd, no message of any kind had been officially received in Tokyo. From the Bashi Straits to Shanghai the distance is 1,200 miles, and we may assume that steamers like the *Changhua* and the *Yuensang* do not habitually travel more than 10 knots an hour. It must therefore have taken them fully six days to reach Shanghai, and if they arrived there at noon on the 22nd, which is the most favourable hypothesis, they must have sighted the Russian transports on the 17th. How Rojestvensky left Honkoye on the 14th, and he can scarcely have covered the distance of 850 miles between that place and the Bashi Straits by the 17th. However, these transports may very well have been two or three days in advance of the main squadron. There is some talk of the Squadron having passed the Straits in a dense fog. One may reasonably doubt, however, whether Rojestvensky would care to essay difficult navigation under such climatic conditions.

Meanwhile it appears to be generally agreed that the alleged emergence of the Vladivostok Squadron is a false alarm. Some one made a mistake. The naval authorities are said to be incredulous that the Squadron is in the Japan Sea.

Later.

Saigon, according to Reuter, continues to be communicative. So long as Rojestvensky was in Indo-Chinese waters the strictest silence was maintained, but now the embargo is taken off the wires and they are sending out interesting information. Thus we learn that the Baltic Squadron has not left the China Sea and that it was anchored at Hainan on the 19th instant, awaiting certain colliers in search of which some auxiliary cruisers had gone back to the Indo-Chinese coast. Of course this may be a pure canard, but it has suggestions of truth in view of the fact that nothing has been seen of Rojestvensky by any watchers on islands in the Bashi group, and that, consequently, he may be supposed to be still lingering in the China Sea. If in the China Sea, then Hainan is the only place where he could hope to lie *perdu* for any time. Hongkong is in regular steam communication with Kiungchow, the treaty-port of Hainan, but the rest of the island is not much visited, and Rojestvensky may have found a refuge there. Some time ago he was reported to be at anchor in Lingshui Bay on the south of the island, and we do not know of any other anchorage except Kiungchow. Lingshui, too, is not by any means a safe place for a fleet to lie. It is altogether open to the south-east, and one of the cyclones that may sweep over the China Sea at any moment during this season of the year, would do terrible mischief to Rojestvensky's armada if it caught him there. Probably he is now violating China's neutrality just as flagrantly as he violated French. But that can not last long. His days of lurking and lingering must soon come to an end.

Wednesday, May 24.

London believes that Rojestvensky is now in the waters of the Philippines. Both the *Jiji* and the *Asahi* have telegrams from London in that sense and both telegrams speak of "the territorial waters" of the islands. It is, however, extremely improbable that the Russian Admiral will venture to violate American neutrality. If he is utilizing the shelter of the Philippines, he is doubtless careful to observe the necessary limits of distance.

This theory would account for the sighting of two steamers—as reported in our last issue—in the act of steaming south-westward from the direction of the Bashi Straits. The *Chuo Shimbun* also has a telegram saying that the process of coaling was actually observed going on off the Luzon coast on the 19th instant.

The *Asahi Shimbun* is disposed to believe that the squadron is actually in the territorial waters of the United States, but it thinks that Rojestvensky will meet short shrift from the American authorities. Our contemporary is puzzled to understand why further coaling operations should be necessary if the Russians filled their bunkers at Honkohe. And indeed this point is perplexing. Ships like the *Borodino* and the *Kniaz Suvaroff* have a coal capacity of 1,200 tons, and with that amount of fuel can steam 8,500 miles at 10 knots. The Luzon coast is only some 800 miles from Honkohe, and therefore these vessels, on arriving in the vicinity of Luzon, should still have nine-tenths of their bunker supply intact. The question of coal probably has not all the importance attributed to it by the general public. One steamer would carry a cargo of coal sufficient to fill the bunkers of five battle-ships of the *Borodino* type.

The *Kokumin Shimbun* gives a calculation

in the sense that if the Russians passed the Bashi Strait on the 21st, then they should be off Soya, which is 3,000 miles distant (presumably our contemporary refers to the Kunajiri passage) by the 10th of June; off Tsugaru (2,750 miles) by the 8th of June, and off Tsushima (1,450 miles) by the 31st of May.

In naval circles, continues the *Kokumin*, two objects are attributed to the Russian Admiral. One is to draw the Japanese into the open sea; the other to obtain a base. With the former object he will refrain from attempting any of the straits leading into the Sea of Japan. With the latter he will probably seize some Japanese island. No island is definitely specified, but the Bonins would certainly be the most likely for such a purpose.

The French mail-steamer which left Saigon on the 21st instant is said to have reported that the *Kieff* and some Russian transports were then in the harbour of Saigon.

Of course the stories as to Rojestvensky being at Hainan may be pure inventions circulated by the French in Russian interests. It is certainly difficult to suppose that Saigon, having maintained absolute silence when silence was in Russian interests, should suddenly become loquacious in opposition to Russian interests.

Thursday, May 25.

The general impression this morning is that Rojestvensky has made his way through the Bashi Straits and is at anchor somewhere in the Philippines. It is thought that in his difficulties he would not hesitate to violate American neutrality, so long as any opportunity of doing so offered itself. But another theory is that the main part of his squadron is at anchor in a bay on the west of Hainan; that some of his ships are cruising slowly in that vicinity, and that his fastest vessels are performing scouting duty in the direction of the Bashi Strait. This second hypothesis is based on the idea that the Admiral has not yet obtained a sufficient supply of coal and that he is waiting for the arrival of colliers. There is no telegraphic communication with the southern parts of Hainan, and the Viceroy of the Liangkwan, in whose jurisdiction Hainan is situated, may not have any means of informing himself as to the whereabouts of Rojestvensky.

There seems to be very little doubt that Nebogatoff joined Rojestvensky in Honkohe Bay. A steamer *en route* for Hongkong saw two coast-defence ships among the Squadron, and these were probably belonged to the *Oushakoff*, *Seniavin*, *Apraksin* group. It will be remembered that a very emphatic French declaration was made against the illegality of the Russians effecting a junction in an Indo-Chinese part. The conjecture at the time was that a junction had already been effected. But it must be admitted that this affair is mysterious. Nebogatoff's Squadron was not large, yet its totally unobserved passage from Singapore to Honkohe seems almost incredible. However, there is no other tenable supposition.

One thing may be taken for granted, namely, that Rojestvensky has not been fruitlessly burning coal since the 14th instant, when he steamed out of Honkohe Bay. Ten days—we count up to the afternoon of the 24th—have passed since then, and in 10 days, even supposing his rate of progress to be but 7 knots, he should have covered 1,700 miles, and ought therefore to be actually at Tsushima, were that this destination; or at whatever island he intends to seize for the purposes of a base,

supposing him to have such intention. It is very difficult to believe that such a mob of ships have made their way through the Bashi Straits unobserved, for it cannot be questioned that watchers are stationed at good points of observation on some of the islands in the channel. If he has passed the straits and is holding a course for Tsugaru or Soya—which straits, we may observe *en passant*—London expects him to prefer to Tsushima—the question of coal ceases to be perplexing. But if he be not pushing on for some definite destination, then he certainly is not cruising fruitlessly in the China Sea: he must have chosen some new port of refuge.

Some writers appear to think that Rojestvensky might constitute himself a thorn in Japan's side by blocking the avenues of neutral commerce. But it is hard to see how he can do anything of the kind in the absence of a base whither to conduct his prizes. Neutral states would certainly rebel if he attempted to hold captured vessels in custody for an indefinite period without bringing them before a prize court. From every point of view Vladivostok must be his aim, and the Japanese, knowing that, will not be tempted, we hope, to do anything but lie in wait quietly for him. He must come on sooner or later.

#### FIELD MARSHAL MARQUIS OYAMA.

The *Kokumin* publishes an interview with Marquis Oyama. From it we learn that the Field Marshal is in excellent health. He is somewhat thinner than he was when he took the field, which fact is a proof of his robust condition as his danger was that of falling too fast into flesh. He says that the military situation is most favourable to the Japanese, the only source of regret being the heavy losses in men. Kuropatkin suffered severely but the troops appear to still retain their confidence in him. His successor, General Linevitch, is not a man to run after fame. He was always opposed to the war and he has many friends among the Japanese, notably General Fukushima who served with him in the North-China campaign. Linevitch is not a military-college man. He rose from the ranks, and is said to be very brave. The Russians have probably lost confidence in their chances of ultimate victory. They have been equally unsuccessful in offensive and in defensive tactics. Their defeat at Mukden must have been a surprise to them. Nothing could have been finer than their defensive works: they were quite impregnable against frontal attack. But of course they became so much lost labour when the position had been turned by a rapid flanking movement. The Russians are extraordinarily clever in retreating. That is illustrated by their small loss of guns at Mukden. They seem to have entrained all the guns with the greatest celerity, leaving the ammunition to its fate. As for Heikautai, it appears to have been a kind of experiment on the part of the Russians. They knew that the Japanese were stout fighters, but they hoped that the cold would conquer them. The fight lasted 50 hours and the Japanese had virtually no sick and no frost-bitten men. It was a complete failure for the Russians. The battle of Liaoyang had left some doubts as to the competence of the Japanese army, but Mukden seems to have completely removed them. All the supplies to the Japanese army were far superior to those of the Russians. This superiority was particularly notable in the matter of winter clothing.

## MANCHURIA.

Friday, May 19.

A telegram to the *Fiji Shimpō* from Yingkou quotes a Chinaman who has just arrived there from Changchun, having made his way through the Russian lines. He says that the left wing of the Japanese army has occupied points 17 miles north-east of Changtu and Fakumun, and is advancing thence, its van being some 13 miles north-east of Kinkiatun and Hsiaotatz. The two armies are now very close, and the Russians are retreating step by step. There will probably be a big battle soon along the Russian lines from Kirin to Changchun.

A Lieut.-Colonel, who has returned from the front, speaks through the columns of the *Asahi Shimbun*. His view is that there will be a big action before the summer rains commence in July. Once the rains commence it is almost impossible to move troops, the roads being wholly impassable for artillery. At the same time this officer flatly denies that the Japanese armies have any intention of halting where they are. He does not assign the greatest operations to the period between this and July, but he does foretell fighting on a very considerable scale. With reference to Russian reinforcements, he appears to think that, judging from the qualities of recent arrivals, the enemy has no more first-class troops to send. In fact his remarks are of an exceedingly critical character.

We read in the *Asahi Shimbun* that a movement of a vigorous nature is taking place in the Hailungching direction also. The Russians, falling back from Tunghu and Hsingking, and having been hastened in their retreat by Japanese attacks, concentrated at Wankautsz (40 miles north of Tunghu). They have, however, withdrawn from that place and are now at Liuhochen and Itunghowa, from 18 to 25 miles northward of Wankautsz. Hailungching is their principal position in this part of the field. Madoriloff is in command there and has lately received re-inforcements numbering from 3,000 to 4,000. It is thought probable that a battle will take place near Hailungching about the same time as the fight further west along the line from Yehhohching to Hsiaosien.

Saturday, May 20.

The weather appears to have been very bad for some time in Manchuria. There has been much rain, alternating with severe dust-storms. These are the dust-storms which history shows to be capable of changing the whole features of a country and defying the colonizing efforts of human beings.

On the 18th the Russians appear to have made a reconnaissance in force on the Fenghwa-Changtu road. They moved down with three companies of infantry, seven or eight sotnias of cavalry and three or four guns. Being merely a reconnaissance, this affair did not develop any interesting features.

A Chinese informant says that General Linevitch has his head-quarters at Changchun, whence he and his staff often ride in the direction of Kirin. Mischenko is at Pamienching. He has completely recovered from his wound.

Sunday, May 21.

Some interesting particulars of the situation in the west part of the Manchurian field are given by the *Asahi's* correspondent. Our readers are aware that the Russian lines of defence now extend from Yehhohching on the Kaiyuan-Kirin road, to Pamienching on

the Fakumun-Huaite road, via Supingchich on the railway. Yehhohching is 28 miles north of Kaiyuan. It is a castle town of some importance, with 300 houses and a considerable reputation as one of the old Manchurian strongholds. Supingchich is 33 miles north of Changtu. It is the place whither the Russian re-inforcements are carried by rail and distributed to Yehhohching and Hsiaohsien, as well as along the line of defences. Supingchich owes its importance to the railway. Originally it was not a place of any special consideration but it has now 150 houses and is a trade centre. On the immediate north of it is a fine defensive position, the Papingling highland. Pamienching is 33 miles from Kinkiatun, which is on the Changtu-Fenghua road. It is known as the gate of Fenghua and has 800 houses. The neighbourhood is flat, but a river running on the south has banks which constitute fine defensive positions. From Pamienching to Supingchich the road is flat and the distance 15 miles. Pamienching derives its supplies from Chengkiatun.

Passing now to the east of the field, and observing that the Japanese van is at Yingepienmun, the next objective *en route* for Hailungching would be Shanchingtsz, which is 30 miles from Yingepienmun and 31 miles from Hailungching. This part of the country is mountainous. There are the extensive highlands which descend to the villages of Tahetsuitsz (*vide*, map of 23rd of April) and Hsiaohetsuitsz affording excellent defensive positions where the Russians are now busily constructing works. Hailungching is surrounded by a mud-wall and has 600 or 700 houses, being thus the principal place in the mountainous region. The facilities for defence are increased by the river Liu, which runs at the base of the above highlands. Hailungching is the point where the roads from Fushun, Yingpan and Tunghua to Kirin converge, and it occupies in the east of the field a position analogous to that of Fenghua in the west. Shanchingtsz is the gate of Hailungching just as Pamienching is of Fenghua. General Madoriloff with some 17,000 cavalry, occupies Hailungching.

Monday, May 22.

All accounts agree that the time for a great forward movement in Manchuria has arrived. Only vague statements are allowed to find their way into print, but we may fairly conclude that the Japanese preparations for renewed advance have been completed. The Russians, on their side, seem to be resorting to the tactics pursued by them throughout the winter in the Mukden lines, namely, repeated small attacks. These essays appear at first sight very futile, but they lose something of the character of uselessness when we remember that the lines of the opposing armies extend to a great distance, and that several reconnaissances may be necessary to preserve touch with the whole of the Japanese front. It is suggested, also, that the Russians are suffering greatly from lack of provisions, and that they are consequently impelled to make raids which assume the character of reconnaissances. Probably very little credit attaches to that theory. If desultory attacks like those reported within the past few days, have any purpose beyond reconnoitering, that purpose is probably to stay the inception of the Japanese general advance, so as to procure time for the completion of defensive works at the main positions. So far as we can now perceive, the Russians intend to offer organized resistance along the Yehhohching-Supingchich-Pamienching line; falling back, if beaten there, to the Itunghou-Huaite line.

It is probable, however, that Fenghua will not be abandoned without a fierce struggle, though any attempt to retain it long might expose its defenders to the danger of outflanking from the west. Indeed, outflanking from the west, namely, from the direction of Mongolia, is what the Russians evidently dread most. They have covered their right with a screen of some 12,000 cavalry under Mischenko, who has crossed the Liao and is operating in the open country on its right bank. It will have been observed that this cavalry, on the 19th instant, made an abortive attempt to turn the Japanese left at Kangping. The attempt was not very determined, and indeed all these Russian attacks show a marked lack of resolution; they resemble demonstrations rather than onsets. We shall probably hear of frequent skirmishes during the next few days, by way of preliminary to a battle. As usual the Japanese plan of campaign is wrapped in complete mystery and to formulate conjectures is idle.

In partial conjunction with the Manchurian campaign note must be taken of the operations in north-eastern Korea. The Russians have evidently been anticipating for some time that an advance would be made by the Japanese against Vladivostok from the direction of Korea. Possiet Bay has therefore become a place of much importance in their eyes, as well as the line of the Tumen River. They have collected a force said to number some thirteen or fourteen thousand in the neighbourhood of Novokievskoe, on the north of the Bay, and here they contemplate fighting a second battle of Nanshan against any force advancing from the west towards Vladivostok. The outpost of this force has been pushed down the Korean coast to Kyongsong (*vide* our map of North-Eastern Korea), where the Russians have 4,000 men. The Japanese outposts are at Kilju, and there have been occasional collisions, involving some losses to both sides. There is also another question connected with this region; a question not directly relating to the defence of Vladivostok. On the north-western frontier of Korea at the base of the Changpaik range of mountains runs a road which ultimately trends westward, leading direct to Tunghwa, where rests the right of the Japanese armies in Manchuria, and northward to Kirin. This line of communications has attracted the attention of the Russians. They have built bridges over the Tumen, and concentrating a force at Euensong, have pushed detachments down to Chongsong, Hoilyong, Musan and as far south as Kapsan. At this last named place they command the Manchurian communications mentioned above. Kapsan is 150 miles from Tunghwa, so that the connexion between the two parts of the field the north-eastern-Korea part and the east-Manchuria part, may seem somewhat remote. But that depends upon the degree of resolution that either General puts into his operations. Linevitch may possibly contemplate the defence of Vladivostok not merely against an advance of the Japanese by the Korean coast-line, but also against an advance from the Tunghwa direction *via* the road at the base of Changpaik, and he may even contemplate an offensive movement by that some road against the Japanese right. Supposing that Kawanura's army marched direct from Tunghwa to Kirin, its communications would be exposed to attack from the direction of Kapsan. It is conceivable, therefore, that there may be developments of a new and interesting character, and that in this section of the field is to be sought the

strategy about which Linevitch and Kuropatkin differed.

Tuesday, May 23.

It appears that, as was probably conjectured at the time, the St. Petersburg reports of an intention to abandon Harbin and fall back upon Chita, were mere talk. It is evident that the programme foreseen from the outset and formulated in these columns immediately after the capture of Tichling is the programme that Linevitch intends to pursue. He will hold the Kirin-Changchun line for all that it is worth and will have a secondary defensive position south of Harbin along the Sungari, or the Girinula as it is there called. In pursuance of this scheme he has laid a line of railway from Kirin to Changchun, and is now busily constructing a military road. Thus we may say that there are three positions, if not four. The first, that is to say the most advanced, is from Yehhohching to Pamienching via Supingchieh, having its main base of supplies at Fenghua. The second is from Itungchou to Huaite; but as to this second it is to be observed that we have no definite intelligence indicating the degree of Russian preparations. The third and principal position is from Kirin to Changchun. It is here, we imagine, that the last great battle in northern Manchuria will be fought during the present season, for if Linevitch be compelled to abandon the Kirin-Changchun line, his defenses along the Sungari are not likely to serve more than a covering function. That, however, is uncertain. Indeed, the only two evident elements of the situation are the lines from Yehhohching to Pamienching, and those from Kirin to Changchun.

There is no distinct explanation offered of the delay made by the Japanese in resuming the advance beyond the Kaiyuan-Fakumun line. Some good reason certainly exists, and will probably prove a very interesting reason when the curtain of secrecy is raised, pending which event conjectures are vain. Meanwhile the Russians are seeking to take advantage of the period of delay precisely as they did while both armies were lying in the Shaho lines. Mischenko's cavalry then essayed turning movements against the Japanese left at Yingkow and at Tashikiao, and Mischenko's cavalry is now essaying similar movements against the Japanese left at Fakumun and Tafangshin. He seems to have some thirty thousand Cossacks under his command—his old number—and he is employing them with precisely the same lack of energy or good results that has attended all his operations. They have made two attacks against the Fakumun-Tafangshin communications, and inasmuch as their retreat was in a south-westerly direction, it is not unlikely that they will soon be heard from again.

Wednesday, May 24.

In the *Asahi* a statement of distances is given; the distances separating the advanced posts of the Japanese armies from the principal Russian bases. The results are:—

Army.	Advanced Post.	Russian base.	Distance.
Kaiyuan Army.	Mienhwichieh.	Kirin.	178 miles.
Changtu "	Tsulushu.	Changchun.	170 "
Fakumun "	Hsiaototsz.	Changchun.	108 "
Hsingking "	Yingemun.	Kirin.	170 "

From this it will be seen that of the three armies in the west of the field the Fakumun army, namely, the Japanese left, is the most advanced.

Meanwhile the Russians, taught by their Mukden experience, are evidently apprehensive of the intentions of the Japanese left.

After Liaoyang and while the two armies were facing each other on the Shaho, Kuropatkin directed special attention to the Japanese right whence Kuroki's turning movements had emanated. But the Japanese baffled his calculations by throwing forward their left at Mukden and now the Russians are using Mischenko's cavalry to check Nogi's army, namely, the left. But, as the *Asahi* proverbially observes, the lamprey does not always lie under the shadow of the willow.

All the Tokyo journals contain what purports to be the view of a Japanese military officer. It is confirmed by the *Chuo's* correspondence from the front. The view is that we are now witnessing the outcome of a difference of opinion between Kuropatkin and Linevitch, which difference having been submitted to the Tsar evoked a decision in favour of Linevitch. The natural and most prudent strategy for the Russians to have pursued after Mukden would have been to withdraw to Harbin and there make preparations for a great and final stand, having their advanced line of defences along the Sungari. They would then have had full leisure not only to recuperate and recruit but also to prepare formidable fortifications, for the Japanese must necessarily have approached slowly and cautiously, struggling against heavy difficulties of transport. That would have been in strict accord with the astute Chinese precept *iku wo motte ro wo matsu* (utilizing leisure while the enemy toils), and that, doubtless, was the policy of Kuropatkin. But Linevitch advocated a different strategy. His plan was to fight a great battle along the Kirin-Changchun line, throwing forward his advanced forces to the south of Fenghua. But it is extremely doubtful whether he can have reorganized his beaten army and prepared his defences sufficiently to warrant such a system. That the Tsar should have approved it is natural enough, seeing that His Majesty must necessarily be captivated by everything which savours of dash and defiance. Probably, too, it is thought undesirable that the advent of the Baltic Fleet in Far-Eastern waters should find the Russian land-forces retiring upon such a distant point as Harbin. But the Japanese officer to whom this analysis is attributed does not approve of Linevitch's choice. Nor indeed can it be approved of by thoughtful persons unless the conditions include something not visible to general observation. The Kirin-Changchun line is 165 miles from Harbin and 97 miles from the Sungari. Again the Kirin-Changchun line is 170 miles from Mukden and the Yehhohching-Pamienching line is 105 miles from Mukden. Let us put this in another way. Linevitch has chosen to take up a position such that his main line is 170 miles from Mukden and his advanced line is 105 miles from Mukden. Should he suffer a defeat in this position, he will have to fall back upon a final basis 165 miles distant with its advanced line 97 miles distant. There is not any material difference. Broadly speaking, Linevitch may be said to have chosen a position mid-way between Mukden and Harbin. But at Mukden the Russians had 400,000 good troops in the fighting line, and they enjoyed for purposes of retreat, the advantage that the break-up of the winter's snow and ice must retard any forward movement by the Japanese on a large scale. They can not muster an equally powerful force on the Kirin-Changchun line and climatic conditions will not assist them if they are beaten. So soon as the Japanese fairly commence their

advance three or four days will bring them to the Yehhohching-Pamienching line, and they force it, another ten days will find them near Changchun. The middle of June, at latest, should see the Changchun battle. But thereafter there will be a long spell of weather favourable for campaigning, and it may be taken for granted that the Japanese preparations will be made with a view to pushing on as speedily as possible. Had the Russians decided to fall back on Harbin and the Sungari line, they need not have anticipated an attack before the middle of July at soonest, and much might have been done in that time. As for their forces, it is calculated that they have 100,000 men on the Kirin-Changchun line, and 100,000 in the advanced line from Yehhohching to Pamienching, or possibly from Itungchou to Pamienching. The men in the front line consist of the I, II and V Siberian brigades of Rifles, the Fourth Army corps under General Asoroff, which has its head-quarters on the north-west of Fenghua, and the Eighth Army Corps which lies astride the railway on the south of Supingchieh. Of course it is not permitted to conjecture what force the Japanese will bring into the field at these points, but readers will perceive that the arena is divided clearly into two sections by the great range of central-Manchuria mountains, and that the Army of General Kawamura, which is operating on the east of that range, does not enter into the calculations so far as immediate prospects are concerned.

Thursday, May 25.

The *Fiji Shimpo* quotes a Harbin correspondent of a Shanghai journal who, writing under date of the 5th May, says that 200 troops are reaching Harbin daily by rail. At that rate the vacancies in the Russian ranks would soon be filled, but it is to be observed that this stream of reliefs is not likely to have continued after the middle of May when the troops detailed for the front under the programme of last winter would all have reached Manchuria.

The Russian Chargé d'Affaires in Peking said to be pressing the Chinese Government for a declaration of the neutrality of Mongolia. He threatens that unless such a declaration be speedily made, Russia will move troops into the district. We have previously commented on the amusing arbitrariness of this proposal. Russia was not in the least degree anxious about the neutrality of Mongolia so long as she drew from thence large supplies of grain, cattle and horses. In fact she treated the place then as though it was definitely included in the belligerent area. But now that its neutralization would serve to protect the flank of the Harbin-Baikal railway, she suddenly becomes a strenuous advocate of neutrality. Unfortunate China, as usual, is the plaything of this versatile aggressor.

#### FLOATING MINES.

The steamer *Curtis*, which arrived at Moji on the 21st, says that between Yingkow, which she left on the 14th, and Kiaochow, which she reached on the 16th, she sighted 13 floating mines. One of them was at the entrance of the Liao River and were near the islands opposite Chefoo.

The number of mines found near the Miao Islands where the Russians alleged that the Japanese had a naval base, suggest that the former really did believe in the existence of such a base, and took much trouble to sow the place with mines. A very legitimate performance to carry out in neutral waters!

## THE JAPANESE PRESS AND THE INDO-CHINA INCIDENT.

The distance from St. Jacques to Tourane is 420 miles. Throughout the whole of this distance the French Admiral says that he made search on the 13th and 14th and saw no sign whatever of a Russian war-ship. Could he have thoroughly searched this long interval in two days? It is very doubtful. Probably his search did not extend beyond Xuaneday, and thus the long stretch of coast further north was left for Rojestvensky's free use. Then again, if there was no sign of a Russian war-ship in Honkohe Bay on the 13th or 14th, how comes it that, according to numerous corroboratory evidences, Rojestvensky set sail from that Bay on the 14th? Did he manage to get his great mob of ships out of the Bay just in the nick of time to elude Admiral Jonquieres' observation? The *Nichi Nichi's* belief is that whatever may be the intentions of the French Government, French officials in Indo-China are determined that Rojestvensky shall enjoy the utmost limit of hospitality. It is time that France did her duty and acted up to her declarations. Her Government is evidently not without admonitions from its own conscience. The Foreign Minister's request for postponement of all debate proves that he did not feel prepared to allow the light of publicity to be thrown on the facts. If France's regulations are not consistent with her duty, let her amend them. She made them and she can alter them. The French nation professes to be anxious for peace. But the French Government is assisting Russia to carry on the war. Had not French aid been extended to Rojestvensky he must either have returned by the way he came or must have advanced at once to fight Japan under conditions highly unfavourable to him. The integrity of the French Government's purpose may not be questionable, but its avowals contrast strangely with its performances.

The *Asahi Shimbun* places credit in the Admiral's report, but notes that, according to that very report, the departure of Rojestvensky's squadron from Honkohe Bay was not in deference to French orders or French interference, but simply in deference to his own convenience. He stayed as long as he pleased at Honkohe and he departed when he pleased. Admiral Jonquieres did not find him there, simply because Admiral Jonquieres did not look for him at any time between the 27th of April and the 13th of May. In fact, Rojestvensky had an undisturbed stay of 17 days at Honkohe, and in the end he was not put out by the French. Apparently the French Government, in asking the Chamber of Deputies to postpone all debate on the subject, had the intention of settling the complication in the interval of respite thus afforded. Whether the settlement is to be effected by now really enforcing the obligations of neutrality or by taking advantage of the fact that Rojestvensky has at length taken his departure in his own good time—that is a question for future consideration. The main point is that the French Government evidently has the intention of settling the matter.

The *Yomiuri Shimbun* laughs at Baron Suyematsu's letter to *Le Matin*, in which he says that Rojestvensky has treated France with contumely and his own Sovereign with disloyalty. It is impossible to believe that all these extraordinary doings could have taken place had not a previous understanding existed between France and Russia. The Baltic Squadron

would never have come to the East unless it knew what to expect. No good end can be served any longer by diplomatic euphemisms like those of Baron Suyematsu. It is a time to speak out quite plainly.

## FRANCE AND JAPAN.

The *Fiji Shimpō* and the *Nichi Nichi Shimbun* both devote powerful arguments to the question of the relations between France and Japan. There is a difference of tone, the writing of the *Fiji* being somewhat more vehement than that of its contemporary, but the line taken by the two journals is similar. They agree in strongly condemning the mood of distrust into which French statesmen seem to have fallen towards Japan. From the point of view of material interests there is nothing to tempt Japan to stretch out covetous hands towards Indo-China. The French themselves have not succeeded in developing this Far-Eastern possession to an inviting state of prosperity. On the contrary, it has only just begun to pay its way, and considering that it is 2,500 miles away from Japan, who has at her very doors a much more fruitful field inviting development by peaceful means, the notion that she should attempt to wrest the place from its present owners by force of arms should not appeal to sensible and logical Frenchmen. It appears to be too easily forgotten that the war now in progress has no element of aggression or provocation so far as Japan is concerned. It is for her purely a war of self-defence, and no one can discover in her history any indications of a tendency to encroach upon the rights of others. On the contrary, she stands for the open door and for universally equal advantages. If the war has proved to the world that she possesses prowess not previously suspected by Western nations, that is no reason to infer that she has developed aggressive proclivities. In France's case it is impossible to doubt that some guilt of conscience is at the root of this distrust of Japan; a distrust which is now inspiring the creation of a great fleet and the forming of new naval bases in Indo-China. France knows that she has treated Japan badly in the matter of neutrality and she imagines that she has thus laid the seeds of an enmity which will be enduring, and which will drive the Japanese to take revenge. In that hypothesis she is altogether mistaken. The Japanese are not a people who foster grudges to all time. They are sensible that France's loose method of discharging her neutral duties has inflicted a great injury on this country, but it is not too late for France to mend, nor it is much too early for the Japanese to forget. France is egregiously wrong in insisting that Japan must be regarded as an enemy.

## PRIZE COURT DECISIONS.

Three decisions have lately been pronounced by the Prize Courts at Yokosuka and Saseho. The first relates to the German S. S. *Severus* (2,133 tons register) with her cargo of 3,845 tons of Cardiff coal. On the 11th of December, 1904, she left Cardiff nominally for Manila. But she never called at the latter place. Making her way through the Philippines she steamed out into the Pacific and then, having passed the Etorup Strait, was captured off Shibetoro by the *Hongkong Maru* on the 23rd of February, 1905. The coal she carried was found to be the best Cardiff, obviously for man-of-war's use, and there could be no doubt that her

destination was Vladivostock. The court decided, therefore, that she practised deception and that she was carrying contraband of war to the enemy. She and her cargo were confiscated.

The second decision related to the British S.S. *Silviana* (2,715 tons register) with her cargo of 5,534 tons of Cambrian coal. She left England on the 14th of December and reached Hongkong on the 4th of February of this year. Then, having obtained clearance papers for Shanghai, she left Hongkong on the 11th of February, and proceeded to the sea off Shanghai, when, suddenly changing her course, she steered for Vladivostock. On the 19th of February she was captured by the *Nikko Maru* in north-latitude 33° 35' and east-longitude 128° 45'. Her confiscation with her cargo was based on the same reasons as those applicable to the *Severus*.

The Dutch steamer *Wilhelmina* (2,791 tons register), carrying 6,897 tons of Cardiff coal, was the subject of the third judgement. She took in her cargo at Shanghai, and obtained clearance papers from the Dutch Consul there, alleging that her destination was Astoria in South America. Leaving Shanghai on the 13th of January, she steered for Vladivostock and was captured at a point some 15 miles east of Chyolyong island on the Korean coast by the *Naniwa* and torpedoer No. 60. She suffers the same fate as the other two steamers.

The German steamer *Romulus* (1,722 tons register) with her cargo of 3,500 tons of Cardiff coal, has been put up for sale as she lies ashore near Awomori. This vessel, it will be remembered, had been injured by floating ice in the Chishima Sea, and was captured near Tsugaru Strait. But while on her way to Yokosuka she began to leak badly and had to be run ashore. Tenders were called for at Yokosuka, but as the highest bid was only 26,000 yen, new tenders are to be sent in on the 25th instant.

The *Lincluden*, which was seized on the 16th instant near the Korean coast, has been released with all her cargo, namely 3,600 tons of barley. She had left Nikoliefsk for Vladivostock, but it was clearly proved that she had abandoned the idea of going to the fortress and was heading for Kobe at the time of her capture. Therefore the prize court ordered her release, while, at the same time, justifying her capture.

## THE HOUSE-TAX QUESTION.

Japanese journals accept the decision in this matter with equanimity and in an excellent spirit. They say, in effect, that having agreed to arbitrate the matter nothing now remains except to smile and bear the result. But they naturally express a hope that greater care will be hereafter exercised in drafting international conventions.

For our own part we regret the decision from two points of view; that of justice and that of expediency. But the question is now settled and the wisest course is to avoid perpetuating by renewed controversy the ill-feeling which the original discussion engendered. We observe that "Centaur," one of our most redoubtable adversaries in former days, suggests that by-gones should now be by-gones. In that we entirely agree. His able and insistent manner of marshalling the arguments for the opponents of the tax never inspired us with the least resentment, and is remembered by us now merely as a stout and proper assertion of every man's right to his own opinion.

## TEXT OF DECISION IN HOUSE-TAX CASE.

The provisions of treaties and other engagements mentioned in the arbitral protocol do not merely exempt land held in virtue of perpetual leases granted by Japanese Government or in its name; they exempt lands and buildings of whatever description constructed or which may be constructed on such lands from all impost, taxes, charges, contributions or conditions whatsoever other than those expressly stipulated in the leases in question.

The principal basis of the decision as set forth in the sentence itself is as follows:—

The question at issue is that of determining whether or not from a fiscal point of view buildings erected on leased lands have by common accord been regarded as accessories to the land. The solution of the question does not depend upon the distinction drawn from an alleged difference as regards the right of ownership in those immovables. The tribunal therefore does not consider the discussion on this point which is based on the principles of civil law. The lands in question were leased for purposes of erecting buildings in certain localities. The obligation to build was imposed under penalty of cancellation of leases. Leases often contained a clause that the buildings shall become the property of the Japanese Government in case the lessees failed to fulfill their engagement. These circumstances offer arguments against the claim that land and buildings constitute entirely distinct objects as between the parties, and from a fiscal point of view the Japanese Government in granting leases acted not merely as the owner of lands but as sovereign. The intention of the parties was therefore the law in the matter and for the correct interpretation of those leases it is necessary to refer to the treatment accorded to lease-holders from the point of view of taxation. In this respect, according to the invariable practice which has existed for a long series of years, not only land but the buildings erected thereon have been exempt from taxes, &c., other than those expressly stipulated in the leases. The Japanese Government maintains that this condition of things resulted from consular jurisdiction, but that contention is not supported by evidence, nor has the Japanese Government ever made any reserve against the Governments of Germany, France and Great Britain as regards the right of taxation under the old treaties. Although this immunity is claimed to have been general, it does not seem to have been of universal application as is shown in the cases of holders of certain immovables in Hiogo. In formulating provisions relating to the abrogation of former foreign settlements the parties have not confined themselves to a simple confirmation of the leases, but have added that no conditions whatsoever other than those contained in the existing leases shall be imposed in respect of such property. This latter clause is drawn up still more clearly in the French Treaty. At all events, the Powers have not used the word "land," in this connection as they should necessarily have done if it was intended to limit immunity to land alone. On the contrary, they used a fairly wide expression to comprise in its entirety the situation created by the leases. As regards leaseholders, the tribunal cannot admit that the German complementary notes are of a nature to place Germany in a less advantageous condition than other Powers. The Japanese Government draws an argument from the fact that the German Government has based the fiscal immunity in question on the ground

that ownership of land is not recognised in favour of foreigners, but it must be considered that from the point of views of taxation buildings have in fact the character of an accessory to land, and, the German Government cannot be presumed to have intended to renounce advantages already conceded in the British Treaty.

Then follow the signatures of the three arbitrators but over Arbitrator Motono's signature there is a positive declaration of his absolute dissent both as regards the reasons given and as regards the decision itself.

## PRELIMINARY PROCEEDINGS IN JAPANESE CRIMINAL LAW.

If the writers who are now busying themselves to prove that the preliminaries of Japanese criminal procedure are all wrong, would explain how a suspect is to be kept in confinement without being a prisoner, their contention might have some semblance of logic. One of these writers makes use of the following language:—

By whatever name a suspect is classified under Japanese law, and whatever verbal distinction be made between the place where he is incarcerated and the place allotted to criminals, he remains a prisoner and suffers all the indignity of a prisoner. As recent events show, not even the most brilliant record and the widest popularity will save a resident in Japan from suffering the indignity of incarceration, while he has the additional painful knowledge that until the preliminary examination is concluded he is cut off from all intercourse with the outside world—severed from all advice, counsel or comfort.

It is a quaint contention that in applying the law of the land a "brilliant record and wide popularity" should secure special treatment for a suspect, and if such discrimination were permitted by Japanese law, we should have these very critics crying out more loudly than any one that the law should be no respecter of persons and so forth. But the point is that the writer we have quoted above seems to have conceived an imaginary system under which a suspect awaiting trial can be detained in custody without being "incarcerated." How is the thing to be managed? We are not aware of any country where any man, after being remanded by a magistrate for trial, is at liberty to go abroad and resume the avocations of his daily life unless he has been released under bail. In Japan, as in England, bail may be accepted and the interval pending public trial may thus be passed in freedom from any restraint, but where bail is not given, then a suspect against whom a *prima facie* case has been established, must remain in a house of detention (*miketsu-kan*) whether he be in England or in Japan or anywhere else. As to the allegation that "until the preliminary examination is concluded a man is cut off from all intercourse with the outside world—severed from all advice, counsel or comfort," it is simply untrue. A suspect awaiting trial may receive as many visitors as he pleases within certain hours.

It is necessary to state here distinctly—a necessity dictated by our experience of the controversial methods adopted by some journalists in this settlement—that we are not defending the Japanese system of criminal procedure without reservations. We, too, disapprove of and have always disapproved of secrecy in preliminary examination and of the rule which forbids a suspect to be represented by counsel. But for the rest, the criticisms that have been recently penned seem to be based on either ignorance or prejudice.

We may repeat, in spite of explicit denials by one of the critics, that it is quite false to say that a suspect is "unable to procure

legal advice." He is able to procure legal advice. He may summon counsel to his place of detention or his friends may send counsel there, and he may consult with counsel freely, always, however, in the presence of wardens. If, before undertaking to write about criminal procedure in Japan, the critics would inform themselves as to the cardinal facts, a clear understanding would be much promoted.

## NEUTRALITY.

The Secretary of the Russian Embassy in London is represented as saying (*Fiji's* London service) that the trouble about French neutrality has arisen mainly because international law on the subject of neutrality is not properly coded, and that it will be very advisable to have a conference for the purpose of coding. So it will undoubtedly. But in the meanwhile this Secretary's comment has the sound of a subterfuge. The international laws of neutrality may lack sufficient precision to deal fully with all the correlated problems, but, after all, the bases of such laws are common sense and common justice, and both common sense and common justice have been flagrantly outraged by recent proceedings. No one can honestly pretend to think that the practice of French officials in Indo-China is capable of being reconciled with any ordinarily intelligent theory of neutrality. The results of that practice have inflicted upon Japan the greatest injury that a belligerent could suffer at the hands of a nominal neutral. Hard facts can not be gainsaid. It is useless now to take refuge in quibbles about written and unwritten laws. Justice is happily superior to pen and parchment. If France's methods of discharging neutral obligations be correct, then England's methods must be denounced as erring grossly in the direction of severity. Even China is setting an example which must put France to the blush. The Viceroy of the Two Kwang has issued an order that no provisions or stores shall be supplied to the Russians, nor shall any vessels proceed to the Russian fleet, from points within his jurisdiction, and the Governor of Fuhkien has adopted a similar step. How does that compare with the fact that during a space of nearly 5 weeks Saigon was openly the base whence great quantities of coal, provisions and stores were carried to the Baltic Fleet, then quietly lying in a French port, or passing from one French port to another?

## PORT ARTHUR.

The *Fiji Shimpō* gives a very rosy account of the prospects at Port Arthur. It says that some 20 steamers and steam-launches have already been raised and some of them are actually in use. As for the war-vessels, the belief is that every one of them is repairable. Even the *Sevastopol*, which lies outside Mantaushan, is expected to be capable of being saved. The only wholly hopeless ship is the *Petrovsk*. She is smashed into three fragments and seems to have been struck by as many mines.

The tenders for sunken ships at Port Arthur are to be opened at the Port Admiralty's office in that place on the 5th of June. It appears that the craft concerned are the 16 steamers sunk by the Japanese for the purpose of blocking the harbour's mouth, and the gunboat and steamer sunk by the Russians to obstruct the entry of Japanese torpedoers.

## FRANCE AND GERMANY.

The *Nichi Nichi Shinbun* has a thoughtful article about the positions of France and Germany in the world. One fact demonstrated by this war is that the old-fashioned notion of complete differentiation between European politics and Far-Eastern politics must be abandoned. The war has materially affected the position of Germany in Europe and the position of France also. Prior to the war Germany was held in check by the pressure of two potential enemies, one on her east, the other on her south. She had to be always on her guard and to maintain an attitude of conservatism. But the disasters suffered by Russia in this contest with Japan have completely relieved the peril on Germany's eastern frontier, and the statesmen of Berlin are now free to "spread themselves." They have already begun to do so, as is proved by the Kaiser's enterprise in Morocco. In fact Germany's position in Europe is now most enviable. Her voice would have almost commanding influence in the settlement of the Balkan question, the Asia-Minor question and all other European problems. It may be expected that she will display renewed activity in the Far East, and that the nations will class her with Russia as one of the great factors of aggression, to be dreaded and if possible restrained. France, on the other hand, has lost her right arm by the enfeeblement of Russia, and would have fallen largely out of credit had not England taken her by the hand. What does this mean? Does it not mean that France has entered the comity of Powers pledged to conserve the integrity of China and the *status quo* in the Far East? She has ceased to be able to count the Russian alliance as a highly valuable asset, but by way of compensation she has acquired the sympathies of Anglo-Saxondom and its allied States, Japan and Italy. The French Government ought to remember these things. It should observe that the same influences which are operative in Far-Eastern politics have become operative in European politics also, and it should observe that no question of Far-Eastern politics can be settled any longer without Japan's concurrence. There can not be any wisdom, therefore, in alienating Japan by fruitless efforts to bolster up Russia's decadent fortunes. France's whole energies should be directed to bringing the present war to a speedy termination, and to cultivating the new relations which its fortunes have provided for her.

## THE JAPAN SOCIETY'S DINNER.

The annual dinner of the members of the Japan Society in Japan was a remarkable affair this year: remarkable not merely for the number of those that attended and the character of the speeches delivered, but also and principally as a demonstration in connexion with the Anglo-Japanese alliance. All the Japanese speakers—General Ierauchi, Admiral Saito, Baron Komura, Count Katsura, Mr. Kato, Mr. Sonoda and Baron Kikuchi—alluded to the alliance in terms which left no doubt as to the warm favour with which it is regarded by all classes of the Japanese nation and the great part it has played in limiting the scope of the sanguinary war now in progress. From the report of the speeches which we publish elsewhere the very cordial expressions used by the speakers may be gathered, but only those present at the banquet can appreciate the character of the reception given to these expressions.

Indeed it may truly be said that the feature of the dinner par excellence was the tribute it offered to the alliance, and the fact has special interest just now because one or two writers of that not uncommon class who read their own thoughts into the demeanour of others, have lately been endeavouring to persuade the British public that the Japanese are tired of the alliance, are exasperated by England's manner of discharging her duties under it, and have conceived some contempt generally for their ally as a combatant quantity. We deem it scarcely worth while to allude seriously to such flagrant misconceptions, but they may be briefly recalled in the context of this remarkable dinner.

Another fact brought into prominence by the banquet was the great popularity of Sir Claude MacDonald among the Japanese. Sir Claude received a most marked ovation when he rose to return thanks for the toast to himself, and the enthusiasm of his audience was even more vehement as he resumed his seat after one of those graceful and pithy speeches which he knows so well how to make. Sir Claude has evidently won the hearts of the Japanese.

## KOREA.

The *Kokumin Shinbun* publishes a Seoul telegram saying that the arrangements for the transfer of the postal and telegraphic machinery to Japanese hands have been successfully carried out.

It is expected that by opening the coast-wise trade to Japanese vessels the Korean Government will derive considerable profit, as there will now be some possibility of checking smuggling operations.

On the 18th instant Prince Fushimi and Mr. Kioura arrived at Fusan, and were received with much pomp.

Prince Fushimi arrived at Seoul on the 21st May and presented the Mikado's letter to the Emperor of Korea on the 22nd. On the 23rd May the Emperor called on the Prince who later received the Foreign Representatives at the Japanese Legation. His Imperial Highness lunched with Prince Wi and a banquet was held that evening at the Japanese Legation. The Emperor of Korea has conferred the highest Order in his gift upon the Prince.

The Japanese Representative in Seoul gave a large banquet at the Legation on the 24th instant. Prince Fushimi and Prince Wi were present, as were also Mr. Oura, Minister of Communications, and General Baron Hasegawa.

On the 25th the official opening of the Seoul-Fusan Railway took place. It appears to have been a very brilliant affair. Invitations were issued to 1,023 Japanese, 144 foreigners (including 52 ladies) and 230 Koreans. Japanese newspapers note that the distance from Tokyo to Seoul, namely, 1,137 miles, can now be negotiated in 61 hours and 13 minutes, at an expense (3rd class) of 14.88 yen.

## MANCHURIA'S ABSORPTION OF JAPANESE MONEY.

General Baron Nishi, hitherto in command of the Second Division at the front, has just returned to Tokyo and been appointed Superintendent of Military Education, a post which partakes, of the character of a sinecure when compared with the very active position which the General held in Manchuria. He has some interesting things to say about the question of re-absorbing the large sums of Japanese money scattered

in Manchuria on account of the war. This subject was recently discussed by Tokyo journals, and their view took the form, broadly speaking, that every possible facility should be given to Japanese merchants desiring to settle in Manchuria, especially Dalny, and that Japanese labour should be employed by the army instead of Chinese. As to the former point Baron Nishi's view is that no commercial opportunities of any consequence exist in Dalny. The place is not a centre of trade and does not promise to be a centre of trade in the near future; there is no accommodation there, or very little; and railway facilities are not available for trade purposes, the line being entirely devoted to meeting the needs of the army. Had any opportunities presented themselves of the nature apparently contemplated by the Tokyo journals which have hitherto discussed this matter the Government would certainly have taken steps to facilitate the coming of Japanese tradesmen, but under existing conditions any enterprise of that nature would entail only loss. As to the labour question Baron Nishi is equally opposed to the journalistic view. He alleges that the expenses connected with employing Chinese labour are much less than those which would be involved in the case of Japanese. The Chinese are on the spot. They have come thither—largely from Shantung—at their own charges, whereas the Japanese would have to be carried to the ground, and that means the employment of special transports and no inconsiderable outlay. Then also the Japanese would have to be fed and clothed by their employers whereas comparatively little need be done for the Chinese in those respects. Finally, it is a misconception to suppose that the Japanese labourer would send all his earnings back to Japan. On the contrary, experience shows that he spends the greater part, if not the whole, on the spot. Not content with the fare provided for him officially, he supplements it by buying food and *sake* from the Chinese, and thus the matter resolves itself into the direct outlay of money by the Government in Manchuria or its indirect outlay through the medium of the labourers themselves. Altogether Baron Nishi is an upholder of the system hitherto pursued by the Government and we have no doubt that he is right. He omits one important consideration in support of his own argument, namely, that the employment of thousands of Japanese in Manchuria would be another means of drawing away the wealth-earning resources of Japan. There is no superabundant supply of manual labour in this country at present. Some, indeed, complain with considerable show of reason that the supply is insufficient, and certainly during the war of 1894-5 when about a hundred thousand men were carried to Manchuria and Korea for the purposes of the land-transport department, much trouble was caused in Japan and the cost of labour rose very inconveniently. Happily owing to good management on the part of the authorities the effects of the present war have not hitherto been severely felt in an economic sense, but one of the means employed to avert inconvenience has doubtless been recourse to Chinese labour. It is, indeed, safe to affirm that these problems have received the fullest attention in responsible quarters, and that the question of recovering monies dissipated in Manchuria was among the points carefully examined at the outset. The experiences of 1894-5 must have proved very valuable in guiding to a decision.

## FOREIGN TRADE OF JAPAN.

Much attention has been attracted by the fact that from the commencement of the present year up to the 15th of May imports have exceeded exports by over 100 million *yen*. The following are the figures:—

	First half of May. Yen.	Jan. to 15th May. Yen.	Excess over same period last year. Yen.
Exports (Commodities) ...	7,456,000	110,490,000	4,508,738
Imports (Commodities) ...	17,984,824	213,005,772	67,285,357
Excess of Imports	10,528,824	102,515,772	—

With regard to the movements of specie the figures are:—

	First half of May. Yen.	January to 15th May. Yen.	Comparison with last year. Yen.
Export of gold...	11,929	5,355,291	—60,595,969
Import .....	864,137	15,757,014	+14,310,434
Excess of Import	872,208	10,401,723	—
Export of Silver, 1,100		46,450	+ 28,279
Import .....	2,136,767	4,570,766	— 716,593
Excess of Import	2,135,667	4,142,316	—

Discussing these returns the *Shogyo Shimpō* says:—"It is notable that never before has the excess of imports during the first 4½ months of the year reached such a figure as 100 million *yen*. Can this state of affairs be remedied in the subsequent part of the year? The exports this season have not fallen off. They show an increase of 4½ millions as compared with the corresponding period last year, which proves that our productive power is developing. Compared, however, with the great growth of imports this increase of exports is a mere drop in the ocean. There is a marked change this year in some of the main staples of trade. Thus indications are discernible that coal is about to be imported from Australia at about 90 *yen* per 10,000 cattie. Then there have been several re-imports of yarns from Shanghai, and copper is beginning to be imported from the United States of America. There are no precedents in the case of any of these staples. It is true that the export of silk promises not to fall short of that of last year, but this can not possibly suffice to correct the general trend of the trade. Of course the war is responsible for the disturbance of the balance. We believe that there will not be any material change in the second half of the year." The *Asahi's* comments are:—"If 5 months have produced an excess of imports to the extent of 100 millions, 12 months, at the same rate, will show an excess aggregating 240 millions. When, in 1898, imports exceeded exports by 160 millions, the fact provoked much discussion as being quite unprecedented, but this year the case is much worse. It need scarcely be said that the influence of the war is chiefly responsible. War material directly imported by the Government does not appear in the customs returns, but very large quantities of woollen cloth, blankets, wool, iron and so forth ordered by the Government figure in the statistics. During the war with China in 1894-5 an excess of imports was similarly seen, but in 1894 it amounted to only 7½ million *yen* and in 1898 to 1½ millions. Last year, on the other hand, the excess was 52 millions, and this year it promises to be over 200 millions. The chief cause obviously being that the present war is on a very large scale and that difficult climatic conditions have to be overcome in Manchuria, this excess of imports does not cause us the least uneasiness. There is also another cause, namely, that the increased customs dues imposed on account of the war go into operation after six months' notice and there is consequently a great deal of anticipatory importation.

Thus in spite of the splendid rice-crop of last year 25 million *yen* of the cereal have been imported since the spring. Moreover, there is a reaction from the pressure exerted by the Government last year in forbidding the Specie Bank to negotiate bills, the idea being to check imports. The error of such interference having been recognised and the foreign loans having been successfully floated, the Specie Bank's hands have been freed, with the result that orders hitherto suspended have been sent forward and there has been an abnormal expansion of imports. A case in point is that of rolling stock for the railways. Hesitation to lay in an ample supply of waggons has resulted in a serious block of traffic, and orders representing some ten millions of *yen* have been sent forward by State and private railways. Habitually the course of Japan's foreign trade shows an excess of imports in the first half of the year and a reversal of this condition in the second half. From June next large exports of silk may be expected, and shipments in advance of the new customs rates will also cease, so that a tendency to redress the balance may be expected. Still if the country's arms continue to be victorious and if money continues to be scattered broadcast on account of the war, there will certainly be much activity in economic circles and many orders for goods will be sent abroad, so that, on the whole, no great decrease of imports can be looked for in the second half of the year.

#### "A MAP OF MANCHURIA EAST-CHINA AND KOREA."

Messrs Furukawa and Mori have compiled a map which the Maruzen Kabushiki Kaisha have published. It shows Manchuria, East China, Korea, the Coast Province and parts of the Transbaikal and Amur Provinces. After the war broke out a great many maps were produced, all of more or less value, but apparently the demand has been satisfied temporarily at all events, for until the appearance of this new sheet we have not heard of anything in the same line during the current year. It can not be said that the maps hitherto published showed any marked superiority. Not one of them ranked so high as the *Taikoku Rikuchi Sokuryō* of the War Department, which appeared in 1894, and certainly it was reasonable to expect that, having been compiled subsequently to the latter, they should not have been inferior to it. We do not pretend to have examined all the sheets issued for the use of European or American readers, but concerning those we have seen the general verdict must be that they are inferior to the Japanese compilation. Messrs. Furukawa and Mori's work is easily the best Anglicised production we have hitherto examined, not excepting "Stanford's Map of the Seat of War." Nevertheless it is not without imperfections, nor, in view of the late period of its publication, is it as good generally as might have been hoped. We venture to think that the authors would have done better had they simply put English names to the War Office map and given it otherwise unchanged to the world. At least Messrs. Furukawa and Mori should have carefully studied the various official reports of skirmishes and battles, and incorporated the results. A few points may be specially noticed. Thus Telissu, not in itself a large place, is printed in large letters, probably because a great battle was fought there, but, on the other hand, Heikoutai, Chinghoching and Yinpan are not marked at all. Perhaps

the map may have been compiled last year before these three places became famous. That excuse can not apply, however, to Hsihoyen (or Kiaotau) where, in the neighbourhood of Yashulin, Kuroki's army fought a bloody combat. We can not find, too, the Kaiping River and we observe that Chingchang (hitherto called Hanchang) is differently situated with respect to Saimatsi (or Samaji) on the official map. Nevertheless it is unquestionable that among all the Anglicised maps hitherto offered to the public this is the best. Of course it can not be compared with small special charts issued to illustrate particular regions—as our own map of April 23rd—, but such comparisons would not be just considering that the map of Messrs Furukawa and Mori is on a very small scale. It is a pity that the authors did not contrive to bring in the island of Sagalien, which is likely soon to present much interest.

#### UNIVERSITY DEGREES.

On the 22nd instant the ceremony of conferring degrees was held at the Education Department by His Excellency Mr. Kubota, the Minister. Six degrees were conferred, and among the recipients were Baron Dr. Kato Hiroyuki and Dr. Kishimoto Tatsuo, who were both created doctors of law. Dr. Kato already holds the degree of literature. He is well known to our readers, but we may mention that Dr. Kishimoto is a man of much repute in Japan and that he studied law in France.

It is stated in connexion with this event that the custom of conferring university degrees was inaugurated in Japan in May, 1878, since which time the following degrees have been granted:—

Degrees in Law .....	74; 5 of the recipients have died.
" Medicine .....	108; 6 do
" Pharmaceutics .....	7; 0 do
" Engineering .....	112; 9 do
" Literature .....	57; 10 do
" Philosophy .....	60; 0 do
" Agriculture .....	15; 0 do
" Dendrology .....	7; 0 do
" Veterinary surgery .....	11; 0 do
Total .....	451, among whom two hold two degrees each.

#### CUSTOM LANDING ARRANGEMENTS.

For some time past the inconvenience and loss of time suffered by importers, due to the defective landing arrangements for cargo at the Customs, has caused much comment and hindrance to business. Chaos is a mild term by which to describe the confusion that prevails, the cargo from one steamer being dumped anywhere or everywhere, while that from several steamers is mixed together and piled one kind upon another without the smallest regard for the convenience of those to whom it belongs or to the nature of the goods. Though want of space is a known factor in the trouble, lack of judgment and want of a system by those Customs officers who direct the landing are the principal causes of the confusion. It appears that a climax has now been reached, and that, as the Customs authorities seem unable to mend matters and complaints continue to be rife among importers, the Foreign Board of Trade has taken the matter up, and passed the following resolution, which will at once be acted upon:—"That a Committee be formed, consisting of two merchants and two shipping agents, to confer with the landing agents regarding the present landing arrangements, and to decide upon any methods which would facilitate the separation of goods according to steamers and o. marks as they are landed from the lighters.

## GERMANY AND CHINA.

A telegram to the *Nichi Nichi* from Peking says that the Germans recently induced Chou Fu, Viceroy of the two Kiang, to lease to them a piece of land outside the Feng Gate of the city of Nanking for the purpose of exercising troops. When His Excellency reported this matter to the *Wai-wu-pu*, no little consternation was caused. The Peking statesmen apprehended that a similar concession would speedily be sought by Russia, France and England, to say nothing of Japan, and that a serious state of affairs would be created. They therefore instructed the Viceroy that he had exceeded his powers in concluding such a compact without reference to Peking, and that steps must be taken immediately to annul it.

Germany is unfortunate just at present in her dealings with China. Justly or unjustly she is establishing for herself the reputation of restless aggression. It is hard to know how much truth or how much fiction there may be in the rumours circulated about her doings, but if this story about a drill-ground be trustworthy, it suggests strange reflections. Imagine Germany or any other Power applying to England for a place to exercise troops outside some big city on the banks of the Humber or the Severn. Why should China be the *corpus vile* of such extraordinary experiments? The whole story however, may prove to be a canard, and therefore for the moment we can only say that either Germany is showing some suspicious restlessness or that rumour is treating her very cruelly. Other Powers have yielded to expansive impulses in the past, and Germany, we presume, is now inspired by a vigorous spirit of growth. She may well be, for the present war has enormously strengthened her position and in some respects she now stands without serious rival in continental Europe. But if she is bent upon a programme of aggressive expansion, she must take the criticism that comes in its train.

## CHINA.

From Shanghai come rumours that several ships, flying neutral flags, are landing Cardiff coal in bags, presumably for the use of the Baltic Squadron. It is also stated that the Russians are manœuvring to substitute able-bodied marines of the *Askold* and the other interned ships, for the Port Arthur invalids who are waiting in Shanghai an opportunity to return to Russia.

The *Asahi* has a telegram from Peking saying that practical arrangements are at length being made for giving effect to the convention of 1894 which provides for joining the Indian system of railways with China *via* Burma. Sir Ernest Satow has just concluded a supplementary convention with Na Tung. We presume that there is here a mistake of date and that the reference is to the Burma convention of 1897, the 12th article of which says:—The Chinese Government agree hereafter to consider whether the conditions of trade justify the construction of railways in Yunnan, and in the event of their construction, agree to connect them with the Burmese lines?

Shanghai mandarins were saying during the second week of May that owing to news of a possible rising of secret society men and salt smugglers in the Taihu Lake district and the fact that a large number of the latter are well supplied with modern rifles, which the troops in Soochow have not, Governor Lu Yuanling has applied to the Kiangnan Arsenal authorities for a thousand

stands of Mauser magazine rifles to arm those of his troops who are still provided with the ancient "Brown Bess."

A Naval College will soon be established at Chefoo, under the auspices of the Peiyang and Nanyang Administrations. There will also be an Engineering College attached, and only graduates from the institutions will in future command the vessels of the combined squadron.

Writing to the *North China Daily News* regarding the prospects of the Hankow tea season this year a correspondent says:—

Various rumours are afloat as to the quality of the forthcoming crop. Of Foochow it is said that the Flowery Pekoes have been hopelessly damaged by the long-continued wet weather. For similar reasons the contiguous Wenchow teas are even worse than usual, which is saying a good deal. But from Hankow, on the other hand, comes the more acceptable news that the crop is superior to that of last season, and much stronger in the cup. Little has been heard of the Kiukiang teas, but it is expected that despite the fact that there are more tea hongs in the Keemun district this year, the total output will be smaller than usual, certainly less than last year. The noticeable feature in the list of the Hupeh and Hunan native tea hongs is the great increase in those producing the commonest Oonahms, Shuntan, Lieling, Kokew, as also the lower Oopacks. There is therefore every promise of a superabundant supply of common tea, and though the total North China yield will possibly prove to be ten per cent less than last year, 1905 will probably be chalk-marked as the largest "common tea" season ever known. Therefore, if there be aught of value in this homily, buyers would not be unwise to "gang warily."

A Tientsin paper recording with pride the Championship win of the Tientsin ex-champion pony Ardpatrik, adds that "in the little matter of the lotteries, the first prize was won by a Tientsin merchant, Mr. F. Perrin Cooper, who drew Ardpatrik. Mr. Cooper, on the afternoon prior to the race, gallantly refused a jocular offer of \$5 for a half-chance. He will net about \$12,000. Mr. Cooper is a partner of the firm of Taylor, Cooper & Co. and is well-known in Japan, especially in Kobe."

Nearly every steamer reaching Shanghai from the North reports meeting floating mines. The experience of the chief officer of the *Hsinchi* was anything but pleasant. The steamer, it seems, sighted a floating mine at 6.45 a.m. on the 14th instant, approximately in Lat. 34° 33' N., Long. 122° 41' E. Capt. Whitelaw had the engines stopped and four rifles were sighted at about 100 yards. After firing for an hour (the mine was struck about once in very ten shots) and being unable to explode it, it was decided to send Mr. P. A. Miller, chief officer, in charge of a boat to examine it. The mine was found to be pear-shaped, with no spikes. On the top were three eye-bolts, and a three-inch wire strap was secured to the top by three shackles, and a seven-inch Manila hawser was made fast for a tow-rope. Once the rope carried away, but was secured again by the chief officer. At 9.15 p.m. the rope parted and as it was dark and foggy Capt. Whitelaw resumed passage to Shanghai. The mine was left approximately in Lat. 33° 01' N., Long. 122° 39' E.

It is reported from Hankow that the Manager of the Hanyang Ironworks, after consulting with H. E. Sheng Kung-pao, has engaged several foreign experts to take charge of the steel and smelting departments of the works, and that these new assistants are expected to arrive at Hanyang in a couple of months' time.

A Peking dispatch, translated by the *N. C. Daily News*, states that the Chinese Government was very much exercised at the news of the action of the Japanese in ordering the establishment of civil administration in Manchuria, and so instructions were sent to the Chinese Minister at Tokio to protest against such a move, it being feared that once established there would be difficulty in getting the Japan-

ese to retire from the places occupied by them. It was also contended that as there are already Chinese civil mandarins in Manchuria there was no necessity for Japanese. This led, we believe, to the recent declaration of the Japanese Government that the civil administration referred merely to the Liaotung Peninsula, which had been leased to Russia prior to the war.

Shanghai papers report a sad accident which occurred in the Soochow Creek at Jessfield. A number of native girls employed at one of the silk filatures in that locality were crossing the creek in a boat, when the boat suddenly filled with water and sank, sixteen of the girls being drowned. The accident is said not to have been due to overcrowding, but owing to the boat having sprung a leak.

It is reported from Peking, says the *N. C. Daily News*, that Yu Chêng-kê, recently promoted from the Taotaiship of the Yuchiang Intendancy of Kuangsi province to be Provincial Judge of the same, will soon be promoted again, this time to the North as Provincial Treasurer of Chihli. This official was a Censor in Peking during the Boxer emute of 1900, and gained notoriety there as a strong supporter of the policy of expelling "Western Barbarians" into the sea "from whence they had come." As such he gained the friendship and patronage of the Boxer leaders, the ex-Prince Tuan and Kang Yi and to such an extent that he is given the credit in mandarin circles of having been entrusted by his two patrons with the drawing up in July of the forged Imperial edicts, ordering missionaries to be driven out of the country, commanding the massacre of all foreigners throughout the Empire and such like sanguinary edicts. When the Boxer movement collapsed and punishments were being dealt out by the Refugee Court at Hsian, under coercion of the Allies, Yu Chêng-kê found the atmosphere of Peking unconducive to his health and went into the seclusion of his village home in the Hunan highlands. So well did he cover his tracks that while his colleague in drawing up some of these forged Imperial decrees Lien Wen-tung was cashiered and dismissed the service, Yu Chêng-kê himself escaped scot free, so that when all was quiet again he returned once more to Peking. Shrewd as ever, he was apparently still of the opinion that Peking was not quite a safe place to remain so soon after the restoration of peace, as any one knowing his antecedents might rake up old scores, report him to the foreign legations and bring sorrow upon his head. A successful intrigue therefore obtained for him appointment in 1902 to the secluded inland prefectship of Hanchung-fu, in Shensi province. Being of a restless disposition, affairs in Kuangsi attracted his attention, and he drew up a scheme—Yu Chêng-kê is a wonderful hand at drawing up schemes—by which the rebels in Kuangsi could be brought to their senses and order restored in the province. As a consequence he was transferred there from Shensi, and being a good talker, persuaded Viceroy Tsên Ch'un-hsien to appoint him acting Taotai of the Yuchiang Intendancy of Kuangsi, with command over a brigade of troops. By lucky operations he managed to gain a few victories over the rebels, and with this prestige, coupled with the admiration for the man felt by Viceroy Tsên, who secretly memorialised the Throne that Yu Chêng-kê was a man of ability above the average, he was promoted within few months Provincial Judge of Kuangsi. Although absent from Peking, Yu Chêng-kê still has a large number of friends among the Conservative Party and these, encouraged by the eulogistic memorial of Viceroy Tsên, are working to get their man promoted to Chihli as Provincial Treasurer. It is to be hoped that should Yu Chêng-kê get the post, the lesson taught by the Allies in 1900 has damped his Boxer proclivities.

The *N. C. Daily News* of May 17th published the following communication from its Ningpo correspondent:—"An awful catastrophe occurred here this noon. About 1 p.m. the steam-launch *Ningpo* was leaving her pontoon crowded with 300 to 400 passengers, most of whom were going

to Changhai to see a famous procession or weir. Just as she was turning round the launch turned turtle and sank at once. Only forty or fifty persons were saved; the rest were drowned. The Bund presented a pitiable sight of weeping women, friends, and relatives. Divers have been set at work to recover the bodies. This is the most terrible disaster that has ever happened on the Ningpo river." The *N. C. Daily News* of the same date also published another account of the disaster, to the following effect:—News has been received from Ningpo that yesterday a steam-launch from Changhai foundered in Ningpo harbour with about 300 persons on board. The launch was only supposed to accommodate some fifty persons, the overcrowding being responsible for the calamity. Only those in the upper part of the launch, about forty persons, were saved. Many people had locked themselves in their cabins, as the boat was so overcrowded, in order to prevent others coming in, with the consequence that when the launch foundered they had no possibility of escape.

#### A NOTABLE SALE OF PORCELAINS.

The celebrated Waggaman collection of Oriental Porcelains was recently brought under the hammer in the United States. It was a collection rich in beautiful and select specimens, though, like all great assemblages whether of persons or of things it included some inferior units. A correspondent writes as follows about the event, which naturally caused much excitement among American collectors:—"The Chinese porcelains were the first sold and I was surprised at the high general range of prices. Less than \$50 (gold) was the exception. Notable sales were:—Black Hawthorn Vase 17½ inches high, \$1600; Kang-hsi Vase Famille Verte 18½ inches high, \$1,000; soft-paste blue-and-white Vase 21 inches, \$1,150; Kang-hsi blue-and-white beaker vase, fine blue but rather dull white, 31 inches, \$2,500. This last was the record price in the ceramics. White porcelain went high. The well-known ostrich-egg vase was a possible exception. The bidding was started at \$1,000, and after a few desultory bids it stuck at \$1,100. Mr. Kirby, the auctioneer, stopped the sale and lectured the audience, calling attention to the history of the piece and the numerous guarantees of authenticity furnished with the vase. On calling for further bids the price ran up to \$2,300, when it was sold. The day of the peach-blossoms seems to have passed. A pair of water receptacles of excellent tone and texture fetched only \$430 and \$490. A charming example, a little amphora-shaped vase of delicate outlines and soft colour, was sold for \$725. A pen-washer of peach-bloom in which the green copper tint predominated, fetched \$1850. It was from the Mary Morgan collection. The *sang-de-bœuf* specimens sold well. One, an incense-burner, with jade ornaments, brought \$1550. The colour of this piece was typical of the best grade of *Langyao*, and its height was 6 inches. Later, a pair of vases 17 inches high with colour of varying tint brought \$1,300 and \$1,460. Of course I am mentioning only the best prices. A few things sold comparatively cheap. I was impressed with the fact that New Yorkers know Chinese porcelains well and are willing to pay for them. With the sixth day of the sale the Japanese pottery and porcelain were reached. Among the bidders were Mr. Freer of Detroit, Sir W. van Horn, a number of Japanese, notably Mr. Uchida, and a few leading dealers. It became apparent at the outset that prices were to range low. In running over the pages of my catalogue I find the

average price to be a little under ten dollars. Four pieces by Mimpei sold for \$4, \$11, \$31 and \$12. Imbe ware fetched from \$2 up to \$12 and \$15. A gourd-shaped vase with brown metallic glaze and silvery patina was the object of some competition and finally went to Mr. Freer for \$190. A water-jar of dark blue unglazed pate carved cleverly to represent a basket sold for \$6. During the sale of the Takatori ware the monotony of low prices was broken by \$50 paid for an *okinono* in the shape of a bas-relief of Fujiyama having both a Chinese and a Japanese mark. The Hirado ware was little appreciated. Excellent examples went for from \$4 to \$27. A bottle-shaped vase with seven boys at play under a pine-tree was knocked down for \$20. A large vase with flaring mouth, decorated with willow-tree and stream in blue, the handles modelled to represent two frogs—the duplicate of a piece in the Walter collection—though broken and repaired, brought \$90. The Kutani ware sold slightly better. A cup by Hozen with gold design on a red ground went for \$55. A little tray decorated with a landscape in rich enamels of green, purple and yellow sold for \$15. Occasional surprises were furnished by the bidding of wealthy buyers. An oviform jar of Shigaraki ware, having a green crackled glaze relieved by coppered and metallic mottling sold for \$570. This was the record price for Japanese ware. Other high figures were \$75 for a Satsuma tea-jar; \$170 for a Satsuma cylindrical vase modelled to represent a joint of bamboo; \$250 for a large white vase of the same ware. Occasionally the products of some particular kiln would bring big prices. Mr. Freer paid \$250 for a *sake* jar of Tamba ware having a blue-black glaze. Sir W. Van Horn bid \$55 for a tea-bowl similar to one figured in Brinkley's volume on Japanese ceramics. It was stamped *kahin shirius* and was decorated with a rising sun in red forming the ground for a white stork in relief in slip. Excellent Nabeshima went begging. A beautiful dish of fine workmanship decorated inside with a scroll of chrysanthemums in green, red, yellow and under-glaze blue, brought only \$5. Inari ware received no recognition. Bowls and plates sold at low prices. Taking the sale as a whole one fact was most evident: the average collector does not yet know and appreciate at their proper values Japanese pottery and porcelain. He will willingly pay big prices for Chinese specimens, but Japanese ware of equal merit, though of different character is either ignored or bought to ornament a plate-rail or some out-of-the-way corner in a country house."

As an interesting commentary on the prices given in American auction-rooms for Oriental porcelain we take from the *Globe* a report of a sale of Oriental and Sèvres porcelain, miniatures, and objects of art, the property of the late Lieut.-Col. E. A. Shuldham, at Messrs. Christie's rooms, King-street, St. James's. There was a fashionable attendance, and the following remarkable prices were secured:—An old Chinese oviform vase, enamelled in famille-verte with silver pheasants among rocks, 17¼ in. high, 1,950s. (Joseph Duveen); an old Sèvres oviform vase and cover, bearing the date-letter for 1763, and painted by Dodin in the manner of Lancret, 16¾ in. high the companion vase being in the Royal collection at Buckingham Palace, 4,000s. (Partridge); and a gold ewer and rosewater dish, made by Charles Duron, of Paris, after a design of the celebrated Flemish artist, Briot, formerly the property of Baron Orchielle Seilliere, £1,100 (Loeffer).

#### NOTES ON CURRENT EVENTS.

A telegram to the *Kokumin* from Washington says that Mr. Takahira, Japanese Representative in Washington, having made inquiries as to the alleged sale of war-ships by Chili and the Argentine Republic to Russia, has received official denials of any such transaction.

The four newspapers against which the police instituted proceedings for publishing matter relating to the arrest of Captain Bougouin, have been acquitted on the ground that they did not insert anything with reference to the offense charged against him, but merely related the fact of his arrest.

Captain Bougouin is still in hospital. He has been there ever since his arrest, and of course his trial can not proceed until he is restored to health.

There is again talk of peace. Whether it means anything or not we can not tell, but the share market has been greatly affected. Some explain the feeling by saying that there has been a success in the field, or that there has been a new landing of troops, or that the Baltic Squadron evidently does not mean to fight. It is all in the clouds.

The *Petit Journal* (*Hoch's* telegrams) attributes to the French Committee on naval affairs the compilation of a report, to be presently submitted to the Chamber, declaring that Japan is France's great potential enemy in the Far-East, and that a consequent increase of the navy must be made at an expense of 200 millions of francs. France is determined to have Japan for enemy. Certainly it can not be alleged that Japan has done anything to promote or suggest the feud. The French will that it shall be so, and when a man is quite resolved to count his neighbour a foe, it is hard for the neighbour to be friendly. To outsiders it looks very silly and very hysterical, nor can we imagine that such a line of policy will redound to France's ultimate advantage.

Rumours are circulating that the five Russian ships interned at Kiaochow have of late become very busy in effecting repairs and that their doings excite suspicion. The steamer *Curtis* has brought this news to Moji, but no one will be disposed to believe that Germany will suffer any such flagrant breach of her neutrality as would be involved in the departure of these vessels, Germany's neutrality has been open to some criticism, but she certainly will not permit any unequivocal disregard of it; nor will the Russians attempt anything of the kind.

In playing off the tie in the Yokohama Chess Club's tourney between Mr. E. Geiser and Mr. Bruce Mitford, for the President's Champion Trophy, Mr. Geiser beat Mr. Mitford by two games to one, and thereby becomes the holder of the trophy for this year.

Joseph Jefferson's death came on April 23rd, in the 77th year of a life devoted to the service of dramatic art. As dean of the American stage he enjoyed during his last years the highest reward that can come from an honourable and successful career—the sympathy and love of the hundreds of thousands of men and women who had been moved to smiles and tears under the spell of his genius. It was not only for the actor, but for the man that this sympathy and love was expressed. Mr. Jefferson's delicate and sensitive nature, and his genial and delightful personality put their stamp

upon every part that he played, and in some of them no other actor has ever succeeded in so portraying the human character. His art was ever gentle and unaggressive, avoiding the swift flights of passion and emotion, but lingering on the mysterious and invisible borderland of smiles and tears. His Rip Van Winkle will ever stand as the highest example of his genius in the sphere of comedy acting. For simplicity of method, spontaneity of feeling and directness of appeal it was unquestionably the most perfect creation of the American comedy stage. It was born of a mind that knew every impulse of human nature and was polished by an art which, in its deftness, concealed art itself. During his long stage career Mr. Jefferson chose to limit himself to but a few roles and the last two generations of theater-goers remember him only as Rip Van Winkle, Bob Acres, Caleb Plummer and Dr. Pangloss. Joseph Jefferson was born in Philadelphia Feb. 20, 1829. He was the son of Joseph J. Jefferson, an actor, while his mother was also a noted actress of that period. He was educated at home and received from both Yale and Harvard the degree of M.A. In 1848 he married Margaret Lockyear, and after her death in 1867 he married Sarah Warren. His first appearance on the stage was made as the child in "Pizarro." His career since then has been closely identified with all that was good on the American stage. In retirement he was an enthusiastic angler; an excellent amateur painter, and an author of no mean ability.

A Wolff's telegram received by the Foreign Office says that the Tsar has deprived Captain Klado of his commission in the Navy. This, we presume, is the result of the court martial which sat to consider the Captain's conduct in publishing to the world his pessimistic views about the prospects of the Baltic Fleet and the general management of naval affairs in Russia. Some people will of course sympathize with Captain Klado and will say that he has been sacrificed for his patriotism and courageous frankness of speech. There is much to be urged in favour of that view, but, in our opinion, it is not by any means a conclusive view. Assuredly an English officer who behaved as Captain Klado has behaved would have received a rebuke of a most unequivocal character from his superior. On the other hand, Captain Klado will have the satisfaction of knowing that he has probably served the best interests of his country, and that may perhaps be ample consolation to him.

The Japanese are said to be showing much activity at the newly opened port of Antung. There are 706 Japanese houses in the settlement, and there is a Japanese population of 3,550. That is to say, 3,550 have actually reported themselves officially, but if those that have not so reported themselves be added, the total would probably reach 4,000.

Mr. Abe, Secretary of the Japanese Legation in London, has just returned to Japan, and the *Fiji Shimpō* has obtained some information from him over the telephone. Mr. Abe saw the Third Baltic Squadron, or its lights at any rate, when he was in Singapore on the 3rd instant. The ships were travelling some 7 knots, and as the mail steamer's speed was 12 knots, it was expected that they would pick up the Squadron again but they never sighted them any more. The same authority alleges that the degree of sympathy shown by the ladies of England with Japan is very remarkable. It is largely due to the newspapers, which always speak

of the Japanese in the highest terms. The Anglo-Japanese alliance is a constant theme of talk in England. Its continuance and extension were advocated first by the Conservatives. The Liberals then kept silence, but when they were challenged they declared themselves favourable, Lord Rosebery going so far as to claim a Liberal origin for the alliance. The general view advocates extending the scope of the alliance.

The fourth case of pest has occurred in the same district as the previous cases, namely, the Fukagawa suburb of Tokyo. It was a child of ten, and it doubtless contracted the disease when attending the Hamaguri-cho school, a pupil of which was the first victim. There is some talk of a cat having been the medium of contagion.

The preliminary trial of Captain Bougouin is stated to have commenced on the 24th instant.

#### THE WORK OF THE Y. M. C. A. IN MANCHURIA.

IS IT CHRISTIAN?

(CONTRIBUTED.)

In the *Weekly Mail* of May 20th, page 539, there appears a contributed article concerning the recent Imperial grant to the Y. M. C. A. for their work in Manchuria, in which the writer seems nervous lest the unwary public should "misinterpret the significance of this gift" and "deceive themselves" into thinking "that it shows a leaning toward Christianity." After roundly asserting thereupon that "it shows nothing of the kind," this writer goes on to kindly enlighten the public as to the true inwardness of the whole matter, and to explain what it really does mean. It shows, according to him, simply, that the Y. M. C. A. have so successfully manipulated their Christianity, and toned down their creed till there is "very little indeed" of Christianity left in it; and he winds up by "pointing out that there is nothing essentially and exclusively Christian about such work."

Perhaps this writer failed to read that letter of Mr. Hibbard, so full of interesting incidents, one of which gave the outline of a conversation with a soldier whose hair he was cutting: the soldier asked what was behind this whole work; the Christian religion, he was told, and "then followed an outline of Christianity." Also he may have failed to read in another letter how a soldier came to Mr. Hibbard just before going into battle and asked to be prayed with, which was done and he went away with a heart seemingly filled with gladness. Further he may have failed in general to note the numberless meetings of a distinctly religious character in which Christian addresses were the whole thing. Possibly he did not see these things, as he does not mention them. But if he did not see them, then the remark is pertinent that he ought to have seen them before he allowed himself to make the sweeping statements above quoted.

If, however, he did see them, but still took the position as quoted, then one is led to wonder whether this writer would agree that there is anything essentially Christian about the work of Mr. Ishii and his Okayama Orphanage (doubtless he has heard of the recent Imperial donation to that); about any of the great charities in the homeland; about any of the institutional churches; about the Salvation Army; about the work of the Good Samaritan; or in the "royal law, thou shalt love thy neighbour as thyself" (Jas. 2.8). The fact is, such a criticism is an interesting illustration of history repeating itself. Two thousand years ago, Jesus told the people of his own generation that they were as hard to please as a group of pouting "children playing in the market place" who refused to play either a merry dance or a funeral, and in a fit of unreason, objected to any game proposed. For John the Baptist came as an anchorite but he was too solemn, then when Jesus

came living as all others around him did, the cry was raised that he was utterly slack in principle. So now, for years, Christianity was accused of being dry doctrine and forgetting to apply its precepts to poor suffering humanity: but now when it undertakes to do some kind acts, then, forsooth, it is no longer Christianity at all!

However, we may comfort ourselves as did our Master of old, "Wisdom is justified of all her children." Indeed this comfort is found just two pages on in this same issue of the *Mail*, where the *Fiji Shimpō* is quoted in words of untinted praise for "the Christian religion, which though so recently introduced into Japan, has effected such improvement in the moral condition of the nation, and has had so great an influence on the minds of the people."

#### WILL ADAMS' TOMB.

Ever since Mr. James Walter discovered, in 1872, the tomb of the Kentish pilot, Will Adams, at Hemimura, near Yokosuka, he has been keenly interested in all that appertains to the "first Englishman to visit Japan." Mainly through Mr. Walter's efforts the tomb was restored some years ago, and now that the place has again fallen into ruins Mr. Walter is moving to secure its complete renovation. Through the cordial co-operation of Sir Claude MacDonald, Governor Sufu and the Minister of Home Affairs permission has been obtained to open the tomb to see whether it is merely a centotaph or a proper grave, Dr. Reiss having contended that Will Adams' remains really rest at Hirado. On Tuesday arrangements for the tomb-opening were completed and Sir Claude MacDonald travelled from Tokyo with Mr. Okada, Secretary to Governor Sufu and was joined at Yokohama by Mr. James Walter and Dr. Wheeler. At Dzushi Lady MacDonald, Governor Sufu and Mr. Page met the train and accompanied the party. Arrived at Hemimura the work of excavation was begun but the virgin rock was reached and nothing had been found. Then an ancient inhabitant of the village vouchsafed the information that 22 years before the tomb had been opened and an urn removed, which urn was re-interred to the right of the present excavation. Search will be continued there, but meanwhile the exploration party had to leave to catch their train. A piece of old brass turned up during the digging, which was handed to the British Minister. We believe that the Japanese Government intend to restore the tomb and make it the centre of a public park.

Fragments of stone such as is quarried at Hirado have been found at the site of Will Adams' grave at Hemimura, and as some bear characters of a peculiar nature they will be submitted to Prof. Tsuboi, the eminent archaeologist, for examination.

#### YACHTING.

A strong south-westerly wind prevented the Larks from going out on Saturday and the 39 raters, of which only two, *Mary* and *Maid Marion*, are in commission, did not leave their moorings. The yachts of the Mosquito Club, however, started at 2.15 p.m., six crossing the line outward but only four finishing, the following being their times:—

	h.m.s.
Chocho .....	—
Yugao .....	—
Pele .....	4.22.08
Winsome .....	4.19.38
Sunbeam .....	4.26.36
Eba .....	4.31.09

The strike at Chicago which began among the teamsters of Montgomery, Ward & Co., has spread all over the city. Scenes of violence have followed upon the lax manner in which the new municipal authority has taken up the case, and now President Roosevelt is said to be threatening to send Federal troops to put an end to the rioting. The new Mayor of Chicago is supposed to dislike corporations and trusts, hence the strikers consider he is on their side.

## ROJESTVENSKY'S DEFIANCE.

SAIGON has been remarkably reticent since the Baltic Squadron appeared off the coast of Indo-China and the first news it sends us can scarcely be called news at all, for the disposition which ROJESTVENSKY is now said to openly avow had already been amply demonstrated by his conduct. It had already become quite plain that he did not intend to pay the slightest attention to French protests, and that, counting on the extreme improbability of France resorting to force for the purpose of restraining the lawlessness of her ally, he was resolved to make of French harbours precisely such use as his own convenience dictated. He is, in fact, a kind of desperate corsair, quite indifferent to the dictates of international law, and not caring in the least for any embarrassment he may bring upon his country's ally. Are we to conclude that he snaps his fingers in the face of his own Government as he does in the face of France? For of course he must be in daily communication with St. Petersburg; or, at any rate, he was in daily communication so long as he remained on the coast of Indo-China. Did the Naval Authorities in St. Petersburg sanction and support his procedure? There can be little doubt that they did. If any one recalls the series of telegraphic items that have emanated from the Russian capital since the crisis commenced, he must recognise that the St. Petersburg Government has been playing ROJESTVENSKY'S game throughout. Not once but several times has St. Petersburg denied the receipt or issue of any French communications on the subject of neutrality, and at the very moment when the crisis seemed most acute, St. Petersburg haughtily declared that it was at an end. Certainly Russia has showed little respect for her ally's fair fame, and one begins to think that, after all, there may be some truth in the suggestion of Russia's desire to embroil France in the quarrel. Such suspicions are incorrect in ninety-nine cases out of every hundred, but if ROJESTVENSKY'S conduct has been deliberately permitted by St. Petersburg and if his contumacious attitude is approved there, it is hard to see how Russia can escape the charge of flouting her ally. At the same time, one fails to see what she could gain by offending France. It is doubtless Japan that she seeks to goad beyond endurance. Her hope is that Japan, losing all patience, will strike a blow such as would compel France to enter the arena but would not draw England into it also. If that be the idea of Russian diplomats they altogether under-estimate the endurance and the shrewdness of the Japanese. The statesmen of Tokyo are evidently persuaded that to extend the limits of the war would be much worse for their country's interests than any injury these can suffer from ROJESTVENSKY'S unchecked lawlessness. They will not play Russia's game for her, and as things now look it seems that the

only loser will be Russia herself, since her conduct can not fail to alienate French sympathies. It has been very hard to reconcile the course of events with any theory of real *bona fides* on the part of the French Government, but we begin now to believe that, after all, France's chief fault has been just such a fault as might have been expected, namely, excessive deference to the graces of courtesy. Unable to persuade herself to treat her ally with impoliteness, she trusted always that her ally would not abuse her goodwill. He has abused it, however, in the most flagrant manner.

## MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

The "character sketches" published in the May *Taiyō* deal with the careers of the late Viscount Torio, Dr. Taguchi, Mr. Obata Tokujirō and Mr. Ohigashi Giletsu. Mr. Toyabe Shuntei, the writer of this part of the *Taiyō*, institutes a comparison between Viscount Torio and the Russian Procurator of the Holy Synod, Contantini Petrovitch Pobedonosteff. The chief points of similarity he makes are: staunch conservatism; opposition to representative forms of government; deep religious convictions accompanied by great intolerance towards men of other creeds; the advocacy of a species of theocracy, God being represented by the reigning Emperor in each case; the desire to withhold all real power from consultative bodies, only using them as a means of giving plausibility to imperial despotism; wide influence outside their special professions.—Torio was better known as a politician than a general, and Pobedonosteff is a statesman first and head of the Church afterwards; earnest endeavour on the part of both men to change the educational policy of their respective countries, so as to give greater prominence to the development of morality, and the relegation of intellectual development to an inferior relative position; ardent, but mistaken, patriotism in both cases; opposition to change on the ground that the Russian Empire as it is and the Japanese Empire as it was after the fall of the Shōgunate are incapable of being improved on—changes are mostly changes for the worse.

Here is what Mr. Toyabe has to say about the late Dr. Taguchi. In his funeral oration Mr. Shimada Shōnan, an intimate friend of the late Dr. Taguchi, said of him:—"He was a gentleman of great self-confidence, whose sentiments were most sincere, a man of wide views and original thoughts, simple in his habits at home, but showing great consideration for others, genial in manner and yet exercising self-discipline, showing wide sympathy and yet holding his own views resolutely. Ah! we have lost a gentleman of a rare type." These words were written from the point of view of an intimate friend, but turning now to Dr. Taguchi's public life, what strikes one most forcibly is his wonderful activity and the persistency with which he pursued his various aims. Alongside of his extensive reading and deep reflection we find the most varied forms of activity. As a rule men of studious habits object to spending a large amount of time in public business of sundry kinds. The life of a mere scholar may have depth, but in breadth and versatility it is wanting. But Dr. Taguchi seems to have found time for study and deep thought while carrying on a number of business enterprises. As to his being a student by nature, the fact that without graduating at the Imperial University he obtained a doctor's degree is perhaps sufficient proof. But if we speak without reserve, then we are bound to confess that to us he seems to have been in no sense an original thinker. He has been regarded as a great economist; but he was no more than a transmitter of the views of the Manchester school of free-traders exactly as they are expounded in English books. He studied history a good deal, but the conclusions

to which he comes are often arbitrary and lack the array of facts as a basis which up-to-date modern historians so much value and methods of study are not those that would meet with the approval of specialists. There is then a little uncertainty as to the position to be assigned to him as a student and a thinker. (*Yajima kare ga shisōka, tokushoku to shite ikubaku nansai (天才) wo yūshitarishi ya inaya zo niwakani ii yasukuranu*). But as to the extent to which he spread himself out in various directions, as to his great versatility, as to the skill with which he practically applied the theories and truths with which his studies had rendered him familiar, there is no question. He was the life and soul of the *Keizai Zasshi*. He was the founder and the chief supporter of the *Keizai Kyōkai*, proposing subjects to the Society for elucidation and discussing them exhaustively himself. But discussion alone did not satisfy him. He took office in various bodies. He became a member of the Stock Exchange and rose to fill an important position there. He sat at District Council Boards, at Municipal Boards, at City Council Boards (*fukai*) and became a member of the Imperial Diet; and was also made an honorary member of a number of learned societies. The multifariousness of his duties was not allowed to interfere with the efficient discharge of each of them in turn. What he did he did thoroughly. Though without the gift of eloquence, he carried on a good deal of public speaking. Though not an ardent partisan by any means, he took interest in party politics, joining and leaving parties and fighting for the principles in which he believed. Though not much of a traveller, in 1900 Dr. Taguchi went to China to collect facts relating to the Boxer disturbances and only last year he visited Korea and Manchuria. Even at the time when he was engaged in preparing books he never neglected any of his public duties. He was the originator and principal compiler of many useful works among which are the following:—*Nihon Jinmei Jisho*, *Nihon Shakai Ji i*, *Kokushitaisei*, *Gunjo Ruijin*, *Seiji Ruilen* [典]. A number of books on Political Economy were published at his suggestion. For 27 years he edited the *Economist*. He wrote verses both in the old style and the new. This unbounded activity is something that no one can forget and it makes us all regret that while all his powers were at their height such a man should have crossed the bourne from which there is no return.

(2) *Mr. Obata Tokujirō*. In connection with the *Keiōgijuku* the names of Fukuzawa and Obata will ever be linked together. Mr. Fukuzawa was the originator of the ideas embodied in the institution; Mr. Obata was the man who carried them out. The one was a complement of the other. Mr. Fukuzawa's ideas unmodified would have proved somewhat hazardous at times. They were skilfully adapted to existing circumstances by Mr. Obata. Born in 1842 in the family of a *samurai* of Nakatsu, Obata was brought up to Tōkyō by Fukuzawa and taught English by him. He became head of the school as early as the second year of Keiō; so that for the space of some 40 years he watched over the fortunes of the school. His loss will be felt very keenly in the Keiōgijuku. Mr. Obata was essentially a teacher. He read a good deal and was a member of the Gakushikaiin. He also took an interest in banking, but he will chiefly be remembered for the moral influence he wielded as an educationist. His life may be described as useful rather than brilliant.

(3) *Ohigashi Giletsu*.—Though when the Ken-sei-tō Cabinet was formed Mr. Ohigashi was appointed Minister of Justice, his name as a politician has long since been forgotten. In the Diet he was one of the silent members and went by the name of the Ōmi Saigō. In the early years of the Meiji era, perhaps partly owing to his close association with the great Saigō, Ohigashi was regarded as a very promising man. But he does not seem to have fulfilled the expectations of the public. It must be remembered, however, that for many years he suffered the consequences of his connection with the Saigō rebellion. After he came out of prison, he found it rather difficult

to make headway in the political world; notwithstanding the generosity extended towards him by the Government. But he managed to get elected as a member of the first Diet and was returned at each subsequent General Election. Considering the insignificant figure he made in the House, people were not a little surprised when at one leap he rose to be Minister of Justice. But he always seems to have been a man with self-confidence, and as he had for a series of years served as a prominent member of the Kensei-tō, his promotion was regarded as a reward for those services. He showed throughout his life considerable indifference to what people said or thought of him, and when attacked was seldom betrayed into using indiscreet language.

\* \* \*

Count Okuma contributes an article to the *Taiyō* entitled *Man-Kan-keiyi-shōken* (My views on the Policy to be adopted in Korea and Manchuria). First the Count dwells on the rapid increase of population in Japan in recent years as a result of the improved sanitary condition of the country and the development of medicine generally, and then goes on to argue that it is impossible to produce sufficient food in these islands to feed even 50 million people, to say nothing of 60 or 70. The fact is, says Count Okuma, that for the last 10 years we have been importing rice and shall need to go on doing so more and more. The other kinds of raw produce that these islands yield are quite insufficient to supply the growing demand of our factories. So we must look to Korea and to Manchuria to furnish us with raw material of all sorts. The area of those two countries is over 3 times the size of these islands and the richness of the soil, the suitability of the climate and their great mineral resources should tempt Japanese to employ capital there in an unstinted manner. Among the many things which the Manchurian climate and soil are especially suited to produce is sugar-beet. It is probable that this industry will in future outdo all others. The climate of Manchuria and the soil differ little from those of Germany. Hence what can be grown in Germany can be grown there. As regards sugar, with good refineries in this country and an unbounded yield of raw produce in Manchuria, we ought to be able to compete with the world successfully. In Europe the Germans have made an enormous success with their sugar-beet growing and are now competing with the sugarcane growing tropical countries. The demand for imported sugar in Japan has in recent years been growing apace, amounting now to over 250,000 tons a year. The figures in another 20 years or so will reach 500,000. If we can in company with the Chinese cultivate the sugar-beet on an extensive scale in Manchuria, it will prove the source of great wealth to us and to the Chinese also. Count Okuma then passes on to enumerate the openings there are in Manchuria for other industries, such as *saké*-brewing, cattle-raising, horse, sheep and pig breeding, and mining. He then points out that the Japanese nation, as distinct from the Japanese Government, must enter into this scheme for utilizing Manchuria, and he goes so far as to recommend his fellow-countrymen to go into partnership with Englishmen and Americans in order to obtain the necessary capital for the development of various industries. There should be no attempt on the part of the Japanese, says the Count, to exclude anybody from a share of the profits to be made. The principle of the open door is the only one that will work well in the long run. One of the objects of the war was the opening up of Manchuria to the world and so under certain conditions the province must of course eventually be restored to China by our Government. But military occupation and participation in civil government as well may be necessary for a good while, as the province has for a long time past been in a semi-lawless state. No industry can prosper unless there is a guarantee that property is secure, and China is not in a position to-day to give that guarantee. There is no saying that later on even Russia may not be converted to the open door policy and may not then open Siberia to the world as we propose to throw open Manchuria. But whatever happens we must not for a moment

suppose that we are going to make our position in the Far East thoroughly stable by mere physical force. Having been successful in arms, we must go on to bid for that economic success without which our position in the world would give grave cause for anxiety. It is not on territorial expansion that we must set our hearts, but commercial and industrial development. We have a grand opportunity given us for spreading ourselves over the neighbouring continent and wielding influence of various kinds everywhere. The Korean and Manchurian problem is economic rather than political, and this the whole nation should realize.

Dr. Ishikuro, the engineer, writing on Port Arthur, says that the clearing of the port of torpedoes, the raising of the ships and general repairs have proved to be a very costly business, and now the question of what further outlay should be undertaken in order to render the fortress stronger than it was in Russian hands is engaging the attention of Japanese naval and military experts. The fortress, says Dr. Ishikuro, was nothing like as secure as Russia intended to make it when the war suddenly broke out. Stowed away in godowns there are to-day an enormous amount of material and appliances of various kinds intended for use in the further strengthening of the fort. So that the question which the authorities now have to settle is this:—Is it advisable to carry out the original scheme of the Russians at any cost that may be involved, or would it be preferable to modify the Russian plans considerably and thereby save much money? Our experts have pretty well made up their minds what it is best to do. But of course, concludes Dr. Ishikuro, I am not at liberty to supply any information on this subject.

\* \* \*

As advertised in these columns, the Sanseidō has recently published a new Japanese-English Dictionary, compiled by Doctors Nitobe and Takakusu. We have examined the work pretty closely and have come to the conclusion that in most cases words have been carefully selected and correctly translated. There are very few misprints and the work contains quite a number of terms that are not to be found in Brinkley's Dictionary; though of course, on the other hand, being a smaller book, it has omitted many words in common use that are given in Brinkley's Dictionary. We think it is to be regretted that the proofs of the dictionary were not read by a foreigner before the work was issued. Doctors Nitobe and Takakusu undoubtedly know English pretty thoroughly, but they are far from knowing it as Englishmen and Americans know it, as is shown by the many slips they make in the use of the definite and indefinite articles and by other imperfections and obscurities. The preface, though very short, contains quite a number of errors. We read—"a task never undertaken in a dictionary of such kind," "care has been taken to give the pronunciation to words of comparatively difficult pronunciation," "When case permits"; "so that students may not need refer to their grammar"; "It is hoped that this little book will be fresh impetus" . . . and do something towards a better mutual understanding of English and Japanese people." In addition to being inaccurate in grammar, we are afraid the Preface cannot escape the charge of being inaccurate as to facts when in its opening words it says:—"The aim of the present work has been to meet all the requirements of Japanese students of English. Not only all the common words in literary and conversational Japanese, but numerous technical terms of which every student must needs know their English equivalents, have also been included." These remarks strike us as being perfectly silly. Where did the writer get the notion that a small pocket dictionary is calculated to meet all the requirements of Japanese students of English? English is of course studied by reading English books and by listening to English conversation, and instead of a student being largely dependent on a Japanese-English Dictionary, he uses it very little, chiefly for English composition, relying on the English-Japanese dictionaries instead. Then why pre-

tend that this dictionary is anything but an extremely curtailed edition, with some useful additions and alterations of Brinkley's work? The knowledge of the Japanese possessed by the writer of this preface must be very poor if he thinks that *one fifth* of the "common words in literary and conversational Japanese" are to be found in this dictionary. In order to test the truth of this statement, let anybody try to understand one of the *Taiyō* articles by means of this dictionary, or a good long newspaper article, or a few pages of such a book as the *Botan Dōrō*. But still, as we said before, the Dictionary is well worth having, and for its size certainly has merits not possessed by any other Japanese-English dictionary. The price is 87 *sen*. Some of the definitions are wanting in clearness. *Omogai* is defined as "head-stall" merely, without mention of the bridle to which it belongs. Some of the definitions have been taken word for word from Brinkley's Dictionary, but the abbreviation is often carried too far, as when *omo-daka* is defined as "prominent in the middle," only. In Brinkley's Dictionary we have the addition "said especially of the form or features of the face." This is necessary to prevent a wrong use of the word *omodaka*. But despite minor imperfections and the omission of many very common words like the much used *Ten'yō* (天晴) for instance, the *Shinshiki Nichi Ei-Jiten* is a handy pocket or desk dictionary.

The Yoshikawa Joint-stock Publishing Company has just issued a "Thesaurus of English Phrases with Japanese Equivalents" bearing the Japanese title *Ei-Wa Ryōkai Jukugo Jiten*. Explanations of the terms and phrases chosen, some 13,000 in number, are given both in English and Japanese. The subscription price of the book is 85 *sen*, if applied for by the end of May.

Dr. Motoda, Principal of the American Episcopalian College in Tsukiji is the compiler of a New Dictionary of Military terms, Japanese-English and English-Japanese. It is called *Heigo Jiten* and claims to be a much fuller and more thorough work than that compiled by Colonel Churchill. It sells at 1 *yen* a copy. We have had on our shelf for several years a very good German-Japanese Military Dictionary compiled by H. Fujiyama and Z. Takata, Teachers in the Military Academy, entitled *Deutsch-Japanisches Militärwörterbuch*, published by the *Doitsu-Gogaku Zasshi-sha*.

The interesting Character Sketches which have been appearing in the *Taiyō* for some time have now been issued in book form under the title of *Jidai Jimbutsu Gettan*. The book is for sale at the Hakubunkan at 70 *sen* per copy. It is illustrated, and 570 pages in length. Mr. Toyabe's writing is certainly very fine.

\* \* \*

As an appendix to No. 4 (Vol. IV.) of the *Kyōiku-kai* a handy short history of the course of events bearing on education during 1904 has been published. The compiler is Mr. Naka Hanjiro. The topics touched on are 33 in number. We glean the following items of information from this little book. The instruction delivered to the Minister of Education in person by His Majesty the Emperor on July 11th, charging him not to allow education to be affected by the war, had the effect of making the Department of Education very cautious as to its action, but its accomplishments in the past year have not given satisfaction. For some time it was feared that our Government would give up the idea of forwarding articles to the St. Louis Exhibition showing the state of education in this country. But eventually the Department of Education collected a number of articles and had them sent off. They were exhibited in a separate building under 8 sections as follows:—(1) Objects connected with Primary Education. (2) Those used in Middle School Education. (3) Those employed in High Class Education. (4) Those used in teaching Art. (5) Those connected with Agriculture. (6) Those used in Commercial and Industrial Schools. (7) Those used in teaching the deaf, the dumb and the blind. (8) And 8 kinds of miscellaneous articles. No pains were spared by the Mombushō and other officials to arrange the objects to the best advantage. No less than 161 articles among all those forwarded

by the Japanese Government as a whole obtained first-class medals. The medals awarded were thus distributed. For educational exhibits, 12; for works of fine art, 6; for polite arts' exhibits, 7; for articles used in industry, 85; for transport exhibits, 2; agricultural, 24; drawings, 1; forestry, 5; mining, 9; marine products, 6; economic exhibits (tables of statistics?), 4; for other things, 2.

Under the heading of "The Work of the Department of Education" during 1904 we have the following items of information. Steps have been taken to prevent the evasion of the conscription regulations by students at Government schools. On January 25th the Minister of Education submitted to the consideration of a Special Committee of officials in the Department a scheme for reforming the school system throughout the country. In connection with this various investigations of the working of the present system were made. On Feb. 24th an order was issued instructing the Directors of Primary schools to start afternoon schools, in order to save expense.\* On Feb. 22nd an order was issued commanding various changes in the curricula of Primary, Normal, Middle and High Class Girls' schools. On March 8th an order was issued to Business Schools of various kinds commanding them to alter their rules so as to meet the special requirements of the districts where they are located. In April the Department sent instructions bearing on the reduction of current educational expenses to all the provinces. The proposed alterations in the school system referred to above have been temporarily postponed owing to the advisability of waiting to see what further changes the state of affairs will render necessary.

There seems to be a very general feeling throughout the country that there is something radically wrong about the system of female education now in vogue. The girls that receive it are said to be thoroughly demoralized thereby. Some say it is the fault of the system of teaching adopted; others that the girls enjoy too much freedom of intercourse with the opposite sex; others, that the lodging-houses where the girls put up are bad and encourage immorality, and so on. There is no end to the charges made against modern female education and the opinion that the total result of the teaching imparted is most discouraging seems to be almost universal. Yet the new class schools are immensely popular, there being five applicants, it is stated, for every vacancy that occurs. An article in the latest number of the *Kyōikukai* discusses the whole question of female education. It says that, not to mention immorality and forwardness unknown to the girls of former generations, the modern school girl is conceited, unpractical and disputatious in her home, and that the feeling of many parents is that the education imparted is doing more harm than good. Furthermore, it is said that the graduates of high class girls' schools do not marry at the usual Japanese age and that many remain single for a very long time and that this is not for the good of the State &c., &c. One reason for these girls' not marrying is the fact that they do not care to ally themselves to a man whose education is not so good as theirs, and another reason, it is alleged, is a certain love of independence and liberty of action, a taste for which they have acquired while at school. The conclusion which the writer we are quoting reaches is that the system of female education now in use needs to be made more practical, more suited to the home life the girls have to live after leaving school.

The discussion on the new methods of spelling proposed by the Mombushō still continues. The Department talks of settling on a simple phonetic system and of ignoring historical spelling. The objection to this plan, say the conservatives, is that the derivation of words would be obscured. Anything is better than the present confusion. The *kana* spelling prevailing among the students has, it is affirmed, by competent authori-

\* The system followed was explained by us in a former Summary.—(WRITER OF SUMMARY.)

ties, never been worse than it is to-day. This is largely the result of the lack of an easily acquired uniform system in the Primary and Middle Schools.

\* \* \*

There is quite a number of magazines in the country which are doing their very best to induce young men to go abroad. They publish from month to month much information bearing on commerce and industry in China, Korea and America. The last number of the *Jitsugyō no Nihon* has a very earnestly written article which dwells on the many openings there are for young men in the neighbouring continent at the present time and offers a large amount of practical advice as to how the business of establishing himself in a foreign country should be set about by a Japanese. The conditions of success, says the *Jitsugyō no Nihon* are (1) whole-heartedness and thorough devotion to work; (2) knowledge and experience; (3) regard for integrity and trustworthiness; (4) great patience and perseverance. It is also necessary that a young man should from the first aim at being entirely independent of others. As regards the business he should take to, that must depend on the training he has received here. As a rule it is better to begin with something that is familiar, even if a change be made later on. But a determination to master the language, to get to know the customs, tastes and ways of the people among whom he lives are very essential. He must, too, be as plucky as the soldiers who have been winning victory after victory. Thus alone can Japan make a great name for herself in the world.

The *Jitsugyō no Nihon* writes much on the discontent manifested among young men. The spirit of pessimism prevails far and wide, says this organ, and a great number of young men seem to have reached a blasé stage before they have commenced the real battle of life. *Kore wa tsumaranai! Are wa kudaranai* are exclamations that may be heard every day. Failure to take an interest in what is going on in the world and to feign or profess superiority to all mundane things are very common among young men who are only just out of their teens. This spirit should be everywhere discouraged and young men should be taught that instead of everything being unimportant, there is weight attached to the most apparently trifling events. The young man, says the *Jitsugyō no Nihon*, who pooh-poohs everything as unworthy of attention is on the road to make himself an object of contempt or pity to all who know him.

\* \* \*

In the April number of the *Shigakukai* (史學界) we find a very interesting article from the pen of Dr. Inoue Tetsujirō entitled "What we expect of Historians," which we hope to deal with next month. Apropos of the changes in names which places taken from the Russians are undergoing. The *Shigakukai* points out that the new names will possess great historical value as a record of Japan's victories. In Dairen, hitherto called Dalny, the streets have been renamed. The principal ones taking the names of the generals who have figured in the war. Thus there is an Oku Machi, a Nogi Machi, a Kodama Machi, and a Fukushima Machi, &c. This, says the *Shigakukai*, as far as Dairen and one or two other places are concerned, is not open to objection, but it is to be hoped that the practice of altering names will be limited to parts to which Russia has given new names and that the old Chinese and geographical divisions will be left untouched. The Ainu names in Hokkaidō are very valuable to the historians and the ethnologist, though they have often been changed by the Japanese Government. The *Shigakukai* goes on to observe that during the past few years a great many histories of the East have been published by specialists. Some of them, like that of Mr. Kubō Tenzai, are very long and others seem to have been designed to serve as school-text books. What is specially wanting are books showing the connection between the histories of one country with that of another. There is also much room for comparison between histories published in Europe and those published in the East.

The *Shigakukai* next refers to a great work lately

issued by the Dōbunkan entitled *Tōyō Rekishi Dai-jiten* (A Copious Dictionary of Oriental History.) The compilers are Mr. Kubō Tenzai and two co-operators whose names are not known to fame, Mr. Y. Nishiyama and Mr. T. Shibata. This is a gigantic work. The publication has stood in the way of the issue of another work of the same kind that had been more than half completed by Mr. S. Yagi. We welcome, says the *Shigakukai*, all literary effort of this kind, specially work that is undertaken from scholarly love of spreading knowledge. There is too much tendency among Japanese modern scholars to wait for patronage before commencing to write useful books. The most successful books, prepared are those in which the author writes from inspiration and aims at making his work a thoroughly reliable authority on the subject treated.

## FACTORY MORTGAGE LAW.

[TRANSLATED BY MR. J. E. DE BECKER.]

Art. 1.—The term "Factory (工場) in this law means a place which is employed for the purpose of carrying on, as a business, the manufacture of, or application of work to (加工) articles, or (the arts of) printing or photography (撮影).

A place which is employed for the purpose of supplying, as a business, either electricity or gas is regarded as a factory.

Art. 2.—A right of mortgage created by the proprietor of a factory in respect to the land to which the factory belongs embraces all things (with the exception of buildings), affixed (附加) to the land in such a manner as to form a single body with it, any machinery, tools or implements provided with or attached (備附) to the land, and other things which are furnished (供) for the use of the factory. Provided, however, that the above rule does not govern cases where otherwise specially provided in the act of creation, or where the act of the debtor can be cancelled by a creditor in accordance with Art. 424 of the Civil Code.

The provisions of the preceding paragraph apply *mutatis mutandis* to the rights of mortgage created by the proprietor of a factory in respect to buildings belonging to such factory.

Art. 3.—In the case of the proprietor of a factory applying for the registration of the creation of a right of mortgage in respect to land or buildings belonging to such factory, he must produce ( lodge ) an inventory of the machinery or tools and implements provided with or attached to the land or buildings and of any other things furnished for the use of the factory, and forming the subject of the right of mortgage in accordance with the provisions of the preceding Article.

The provisions of paragraph 2 Article 22, Article. 35, and Articles 38 to 42 apply *mutatis mutandis* to the inventory mentioned in the preceding paragraph.

Art. 3.—Where any special provision exists such as mentioned in the proviso of paragraph 1 of Article 2, the same shall be stated in the application for the registration of the creation of a right of mortgage.

Art. 5.—A right of mortgage can be exercised in respect to things forming the subject thereof in accordance with the provisions of Article 2 even after such things have been delivered to a third person acquiring same.

The provisions of the preceding paragraph do not obstruct (are without prejudice to) the application of Articles 192 to 194 of the Civil Code.

Art. 6.—Should the proprietor of a factory, upon obtaining the consent of the mortgagee, have separated from the land or buildings things which are affixed to the said land and buildings in such a way as to form a single body therewith, the right of the mortgage is extinguished as regards the things so separated.

Should the proprietor of a factory, upon obtaining the consent of the mortgagee, have given up the machinery, implements or any other things which are provided with or attached to land or buildings, the right of mortgage is extinguished as regards such things.

Should the proprietor of a factory have, for proper reasons, applied for the consent mentioned in the preceding two paragraphs prior to an attachment, provisional attachment or provisional disposition being made on behalf of the mortgagee, the latter may not refuse such consent.

Art. 7.—The attachment, provisional attachment, or provisional disposition in regard to land or buildings forming the subject of a right of mortgage extends to things forming the subject of the right of mortgage according to the provisions of Article 2.

Things which form the subject of a right of mortgage according to the provisions of Article 2 cannot be made the subject of an attachment, provisional attachment, or provisional disposition, unless simultaneously with land or buildings.

Art. 8.—The proprietor of a factory may, for the purpose of making it the subject of a right of mortgage, create a factory estate (工場財團) in respect to one or several factories. The same applies where several factories belong to separate proprietors.

Things appertaining to one factory estate cannot at the same time belong to another estate. A factory estate ceases to exist by the extinguishment of a right of mortgage.

Art. 9.—The creation of a factory estate is made by registering the right of ownership for preservation in the Registration Book of Factory Estates (工場財團登記簿).

Art. 10.—The registration of the right of ownership of a factory estate will become null and void if no registration of the creation of a right of mortgage is made within two months after the former registration.

Art. 11.—A factory estate may consist of the whole or a portion of the following:—

- (1) Land and constructions belonging to the factory;
- (2) Machinery, implements and tools, electric poles, electric wires, various pipes laid for distribution, rails and other appendages;
- (3) Rights of superficies;
- (4) Rights of lease of things with the consent of the lessor;
- (5) Rights of industrial ownership (工業所有權).

Art. 12.—In the case of some of the land or buildings belonging to a factory not being yet registered, the same shall be registered for preservation of the right of ownership prior to the creation of the factory estate.

Art. 13.—Things which form the subject of a right belonging to other persons, or the subject of attachment, provisional attachment, or provisional disposition cannot be made to belong to a factory estate.

Things belonging to a factory estate can be neither alienated (transferred) nor made the subject of rights other than a right of ownership, nor of attachment, provisional attachment or provisional disposition. Provided, however, that this rule does not govern a case where such things are rented with the consent of the mortgagee.

Art. 14.—A factory estate is regarded as a single immovable property.

A factory estate cannot be made the subject of a right other than a right of ownership or of mortgage. Provided, however, that the above rule does not apply where same is rented with the consent of the mortgagee.

Art. 15.—Should the proprietor of a factory have separated from the factory estate a thing belonging to such estate, the right of mortgage ceases to exist as regards such a thing.

The provisions of paragraph 3 of Article 6 apply *mutatis mutandis* to the case of the preceding paragraph.

Art. 16.—The provisions of Article 2, and the provisions of Articles 371, 388 and 389 of the Civil Code apply *mutatis mutandis* to cases where land or buildings belong to a factory estate forming the subject of a right of mortgage.

The provisions of Article 281 of the Civil Code apply *mutatis mutandis* to a case where a dominant tenement belongs to a factory estate forming the subject of a right of mortgage.

The provisions of Article 398 of the Civil Code apply *mutatis mutandis* to a case where a right

of superficies belongs to a factory estate forming the subject of a right of mortgage.

Art. 17.—With regard to the registration of a factory estate, the Local Court or the detached office of such Local Court at the seat of the factory is the competent Registration Office.

The provisions of Paragraph 2 of Art. 8 of the Law of Registration of Immoveable Properties apply *mutatis mutandis* to a case where a factory is situated within the jurisdiction of several different registration offices, or where several factories forming a factory estate are scattered about within the jurisdiction of several different registration offices.

Art. 18.—Each and every registration office shall keep a Registration Book of Factory Estates.

Art. 19.—In the Registration Book of Factory Estates shall be provided one folio for each one factory estate.

Art. 20.—With regard to the Registration Book of Factory Estates, each folio thereof shall be divided into a Registration number column, caption, and two divisions of "A" and "B". The caption shall be provided with a designation column and a designation number column, and each division with a fact column and rank and number column.

In the Registration number column shall be entered the order in which a registration has first been made in the Registration Book in respect to each estate.

In the designation column, the factory estate shall be designated and any changes in respect thereto shall be entered; and in the designation number column, the order in which the registration matter has been entered in the designation column shall be written.

Matters relating to rights of ownership shall be entered in the fact column of division "A."

Matters relating to rights of mortgage shall be entered in the fact column of division "B."

In the rank and number column shall be entered the order in which facts have been registered in the fact column.

Art. 21.—In the application for registration shall be stated the following matters, in addition to those mentioned in clauses 3 to 8 of Article 36 of the Law of Registration of Immoveable Properties:—

- (1) The name and location of the factory;
- (2) Principal seat of business;
- (3) Class of business.

Art. 22.—In case of applying for registration of preservation of a right of ownership in respect to a factory estate, in addition to the papers mentioned in paragraph 1 of Art. 35 of the Law of Registration of Immoveable Properties an inventory of the factory estate shall be lodged.

The inventory described in the preceding paragraph shall comprise the designation of things forming the factory estate and shall be signed and sealed by the applicant.

Art. 23.—Where an application for registration of preservation of a right of ownership is made in respect to a thing which is to belong to an estate, and which has already been registered, the Registration official shall *ex officio* enter in the fact column of the proper division of the Registration folio the fact that application has been made for registration of preservation of a right of ownership relative to a factory estate as belonging to such estate; also the date of acceptance of the application and the serial number of the acceptance.

Should the things mentioned in the preceding paragraph belong to the jurisdiction of another Registration Office, the matters to be registered according to the provisions of the preceding paragraph shall be notified to the competent Registration Office without delay.

The Registration Office notified as specified in the preceding paragraph shall take the steps mentioned in paragraph 1, and a copy of the Registration Book thereof shall be forwarded to the Registration Office which has given the notice. Provided that such copy is not required to comprise matters which have been already cancelled.

The provisions of the three preceding paragraphs apply *mutatis mutandis* to cases where a right of industrial ownership belongs to a factory estate; provided that the notice shall be given to the Patent Office.

Art. 24.—In the case of the preceding Article, the registration official shall insert a public notification in the *Official Gazette* to the effect that persons holding any rights in respect to movables which are to belong to a factory estate, or any creditors in attachment, provisional attachment, or provisional disposition, shall make a statement of their rights within a fixed period of time; provided that such period of time shall be not less than one month and not exceed three months.

The public notification mentioned in the preceding paragraph shall be cancelled without delay, if the application for registration of preservation of a right of ownership has been rejected prior to the expiration of the term.

Art. 25.—Should no statement of right have been given within the term mentioned in paragraph 1 of the preceding Article, such right shall be deemed as non-existent, and the attachment, provisional attachment, or provisional disposition shall lose validity. Provided, however, that cases where application for registration of preservation of right of ownership has been rejected, or where the registration has become null and void, are excepted.

Art. 26.—Should a statement of rights have been sent in within the term mentioned in paragraph 1 of Article 24, the fact shall without delay, be notified to the applicant for registration of preservation of right of ownership.

Art. 27.—Besides cases mentioned in Article 49 of the Law of Registration of Immoveable Properties, an application for registration of preservation of a right of ownership shall be rejected in the following cases:—

- (1) Where it is clear according to the Registration Book, or a copy thereof, or a copy of the original book relating to record, that a thing which is to belong to a factory estate is the subject of a right belonging to another person or the subject of attachment, provisional attachment, or provisional disposition;
- (2) Where the designation of things which are contained in the inventory of a factory estate conflict with the Registration Book, or a copy thereof, or a copy of the original book relating to record;
- (3) Where, in the case of persons who own rights in respect to an immovable property belonging to a factory estate, or creditors in attachment, provisional attachment or provisional disposition, having sent in a statement of their rights, such statement has not been cancelled at the latest within one week after the expiration of the term specified in paragraph 1 of Art. 24, or where it is not proved that such given statement is groundless.

Art. 28.—Should the registration official have rejected an application for registration of preservation of a right of ownership, the entries made in accordance with the provisions of paragraph 1 of Art. 23 shall be cancelled.

Where the fact that an application is made for registration of preservation of a right of ownership has been notified to other registration offices, or to the Patent Office, a notice shall be given without delay to the effect that such application has been rejected.

The Registration Office or the Patent Office which has received the notice mentioned in the preceding paragraph shall cancel the entries made in accordance with paragraph 3 or 4 of Art. 23.

Art. 29.—Things belonging to a factory estate and duly registered (登記) or recorded (登録) can neither be alienated nor made the subject of a right other than a right of ownership, after the entries mentioned in Article 23 have been made.

Art. 30.—When an application for sale by auction has been registered after the entries mentioned in Article 23 are made, no adjudication (rule confirming the knocking down) can be made during such period as an application for registration of preservation of a right of ownership is still unrejected, or such registration has not become null and void.

Art. 31.—Any registration of attachment, provisional attachment, or provisional disposition, or any registration of preservation of a preferential right, made after the entries mentioned in Article

23 have been made, shall lose validity subsequent to the creation of a right of mortgage.

Art. 32.—Should the registration of attachment, provisional attachment, or provisional disposition have become null and void according to the provisions of the preceding Article, the Court shall, upon the application of a person interested, cancel the rule ordering attachment, provisional attachment or provisional disposition.

Art. 33.—No immovable properties which are to belong to a factory estate can be either alienated or made the subject of any right other than a right of ownership, after the public notification mentioned in paragraph 1 of Article 24 has been given.

The provisions of Art. 30 apply *mutatis mutandis* when attachment is effected after the public notification mentioned in paragraph 1 of Article 24 has been given.

In case of attachment, provisional attachment, or provisional disposition being made after the public notification mentioned in paragraph 1 of Article 24 has been given, if the creation of a right of mortgage has been registered, the attachment, provisional attachment, or provisional disposition shall lose validity.

Art. 34.—Should the Registration Official have made registration of the preservation of a right of ownership, the fact that the thing in question has been included in a factory estate shall be entered in the fact column of the proper division of the Registration Folio provided for the registration of the thing which has come to belong to that estate.

The provisions of paragraphs 2 to 4 of Article 23 apply *mutatis mutandis* to the case of the preceding paragraph provided that no copy of the registration book or of the original book relating to records is required to be forwarded.

Art. 35.—Should a registration of the preservation of a right of ownership have been made, the inventory of the factory estate is regarded as a portion of the Registration Book and entries therein as registration.

Art. 36.—Besides the cases mentioned in Art. 49 of the Law of Registration of Immovable Properties applications for registration of the creation of rights of mortgage in respect to factory estates shall be rejected in cases where the period of time mentioned in Art. 10 has elapsed.

Art. 37.—When a Registration Official has registered the creation of a right of mortgage, the registration which has lost its validity in accordance with the provisions of Art. 31 shall be cancelled.

The provisions of paragraphs 2 and 3 of Art. 23 apply *mutatis mutandis* to the case of the preceding paragraph; provided, that no copy of the registration book is required to be forwarded.

Art. 38.—Should any changes have occurred in the matters contained in an inventory of a factory estate, the proprietor shall apply without delay for the registration of the alteration of entries in the inventory of the factory estate.

Application for the registration mentioned in the preceding paragraph shall be accompanied by either the written consent of the mortgagee, or a copy of a judgment which can be substituted for same.

Art. 39.—Where application is made for the registration of alteration owing to changes having occurred relative to a thing belonging to a factory estate, or owing to other things having been newly included in an estate, an inventory containing the designation of the things changed, or of the things newly added to the estate, shall be handed in.

The inventory handed in according to the provisions of the preceding paragraph shall be bound up with the inventory of the factory estate and the joints of the leaves shall be sealed by the Registration Official.

Art. 40.—When application for registration of alteration has been made on account of changes occurring in things belonging to a factory estate, in the former inventory—and by the side of the designation of the things in question—shall be entered the fact that changes have occurred relative thereto and the date of acceptance of the application and the serial number of the acceptance.

Art. 41.—Where application for registration of changes is made owing to other things being included in the estate, at the end of the former inventory shall be recorded the fact that other things have been included in the estate, and also the date of acceptance of the application and the serial number of the acceptance.

Art. 42.—Where application for registration of changes is made owing to any things belonging to a factory estate being destroyed or terminating their connection with the estate, in the inventory—and by the side of the designation of the things forming the subject of such registration—shall be entered the fact that such things have been destroyed or have ceased to belong to the estate, also the date of the acceptance of the application and the serial number of the acceptance. The designation of the things shall be cancelled in red ink.

Art. 43.—The provisions of Articles 23 to 34 and 37 apply *mutatis mutandis* to a case where an application for registration *re* change is made owing to other things being included in the estate.

Art. 44.—Where application for registration *re* change is made owing to a thing which has belonged to a factory estate, and in *re* which registration has been made, having ceased to be included in the estate, in the proper fact column in the registration folio for the thing shall be entered that fact, and the entries mentioned in Arts. 23 and 34 shall be cancelled.

In the case of the thing mentioned in the preceding paragraph belonging to the jurisdiction of another Registration Office, a notice shall, without delay, be given to the competent Registration Office relative to the fact that such thing has been destroyed or has ceased to belong to the estate.

The Registration Office which has received the notice mentioned in the preceding paragraph shall take the steps mentioned in paragraph 1.

The provisions of the preceding three paragraphs apply *mutatis mutandis* to a case where a right of industrial ownership has been extinguished or has ceased to belong to the estate. Provided that the notice shall be given to the Patent Office.

Art. 45.—The attachment, provisional attachment or provisional disposition of a factory estate belongs to the jurisdiction of the Local Court of the seat of the factory.

The provisions of Art. 26 of the Code of Civil Procedure apply *mutatis mutandis* to a case where a factory is situated within the jurisdiction of several Local Courts, or where several factories forming a factory estate are scattered about within the jurisdiction of several Local Courts.

Art. 46.—The Court may, upon application of the mortgage, order individual constituents of a factory estate to be separately offered either by auction or to tender.

Art. 47.—In the case of a registration being demanded according to the provisions of Art. 700 of the Code of Civil Procedure, or of Art. 33 of the Auction Law, should the right of mortgage over the factory estate be extinguished owing to the "knocking down," the Court shall, at the same time, request the competent Registration Office or the Patent Office to cancel entries made in accordance with Arts. 23 and 34 in respect to any land, buildings, ships, or rights of industrial ownership, belonging to the factory estate and to register or record the rights acquired by the successful bidder.

Art. 48.—With regard to the Registration Book of Factory Estates, if a registration *re* preservation of a right of ownership has lost its validity, or if a registration of a right of mortgage has been cancelled, the folio shall be closed.

The provisions of Art. 44 apply *mutatis mutandis* to the case of the preceding paragraph.

Art. 49.—Should the proprietor of a factory or a person who possesses power to perform all acts in his place according to law have, with the object of either alienating or pledging same, delivered or caused to be delivered to a third person any thing which forms the subject of a right of mortgage according to the provisions of Art. 2, he shall be dealt with by major imprisonment for a term of not less than fifteen days and not exceeding two months.

Irrespective of the provisions of the preceding paragraph, should such act come within the purview of the provisions of the Criminal Code, the same shall be dealt with in accordance with the Criminal Code.

Art. 50.—Should the proprietor of a factory have broken or damaged, or caused to be broken or damaged, any thing which has been made the subject of a right of mortgage or which belongs to a factory estate that has been made the subject of a right of mortgage, the punishment contemplated in Arts. 417 to 423 of the Criminal Code shall be diminished by one degree in each case.

#### SUPPLEMENTARY PROVISIONS.

The day on which this law will become operative shall be determined by an Imperial Ordinance.

#### THE JAPANESE LANGUAGE OF TO-DAY.

The following questions have often been put to us: What has been the general effect of modern influences on the Japanese language? To what extent has the language already changed, and to what extent is it likely to change in the near future? To foreigners perhaps all along the most interesting of all questions has been, will the Japanese as a nation discard the ideographs in favour of some simpler system of orthography? The answer is, that public opinion in Japan to-day is not moving in this direction to any great extent and the opposing influences to any such movement seem to gather force as the years roll by. Japanese scholars cling to the Chinese characters more and more and in many ways display an entire inability to carry on complicated trains of thought apart from these idea-expressing media. Spoken language in Japan does not wield half the power of written language. Listeners are dull of hearing and most of the speakers are habitually slipshod in the way they express themselves. Attempts to alter this state of things have practically failed according to the very highest Japanese authorities. For many years much has been written about the desirability of amalgamating the written and the spoken languages, and a style of writing known as *gem-bun-itchi* has been adopted by a few scholars. But, speaking generally, the attempt at amalgamation has made very poor progress and such unification as has taken place has not resulted in an abandonment of the ideographs to any appreciable extent. Thought is still wedded to the written symbols, and the notion that human speech may reach, and often has reached, as among the Greeks, for instance, the very highest state of development without the aid of the pen, and that the training of the tongue and the ear is of infinitely greater importance than the training of the eye—these are truths which the majority of Japanese educated men do not realize at all. On this subject in the course of our reading we have come across a very interesting little article from the pen of Mr. Fukuchi Genichirō, who is one of the very greatest authorities on the language used in the Meiji era and is well informed as to the state of public opinion relating to linguistic reform. The article appeared in the *Shinkōron* a few months ago. It is so important an utterance that no apology is needed for furnishing a literal translation of the whole, as below:—

#### EARLESS AND TONGUELESS JAPANESE.

Regarded from the point of view of progress the divergence that exists between the written and the spoken languages in this country is a national malady that hinders our advance very seriously. What is a constant source of regret to me is the fact that modern Japanese do not practise the art of conversing. Though we are tolerably well provided with hands that can compose and eyes that can recognize good writing when they see it, the ears to listen to conversation and the tongues to produce it are wanting. In attempting to unite the written and the spoken languages it is very important that while the written language is approximated to the spoken language, the spoken language should be approximated to the written language. There are people who find fault with the present *gem-bun-itchi* style as inferior. Such inferiority as exists undoubtedly proceeds

from the present state of the spoken language which writers in this style use. Written language being no more than a photograph of spoken language, if spoken language is not right, it is impossible for written language to be good. To expect to get a clear photograph of an obscure object is foolish. No matter how skillful the artist may be, this can never be accomplished. As regards the inferiority of our spoken language to-day there can be no question. Test the matter by examining the language used in those places which in modern Japan may be said to be the flower gardens of speech.

"The first place that should supply us with models of eloquence is the Imperial Diet. Examine the stenographic record of the speeches of the members, and you will find that the language is utterly incoherent and illogical. In the use of words the members are most careless, nor do they even to a small extent try to approximate their speech to book language.

"The next place where the language used should furnish a standard to the nation is a Court of Justice. But notwithstanding the fact that judges and barristers spend their whole lives in arguing, such oratory as theirs is far too dry to be regarded as a model.

"The third place that ought to furnish a standard of speech is the Academy of Learning (Gakushi Kai-in). This academy, since it consists of scholars only, should in the point of the language used supply a model for the whole nation. But listen to one of the members' addresses and you will find that that which passes for oratory in the Academy is utterly inferior and does no more than reveal the state of slovenliness which speech has reached in this learned assembly. Such is modern Japan. But in the feudal ages things were quite different. Compared with modern speakers the warriors of bygone days were very remarkable men, who paid great attention to the language they used. To illustrate what I mean, when, for instance, the messenger of one *daimyō* was despatched to another *daimyō* or when a *daimyō* had an audience with the Shōgun on some special business, the training that such persons underwent was most elaborate. They committed the verbal messages they had to carry to writing. This was called the Oral Message Memorandum (口上の覺). With this to guide them, they spent three or four days in preparation for delivering the message, committing it all to memory, and when they were quite sure that they were ready, placing the memorandum in their bosoms, they went and delivered their messages. When a messenger had finished his statement of the communication he brought, he was asked whether he had a memorandum of the message. He replied, 'I have,' and thereupon handed it in and withdrew. This is how things were in former times. No end of importance was attached to oral messages.

"I joined the staff of the *Nichi Nichi Shinbun* in 1874. Previously to that I had been thinking that by some means or other I should like to amalgamate the written and the spoken languages, and I carried on various investigations in connection with the subject. But I have not investigated only, I have for the past 40 years been practising the art of amalgamating the two styles. I have taken great pains in endeavouring to approximate my writing to colloquial speech. This you would perceive at once were you to examine what I have written. I have for a long time been endeavouring to make my writing less stilted and formal and more expressive, and so my style has changed gradually, that is, it has come nearer the colloquial. Since in recent years I have begun writing plays I have been more and more convinced of the necessity of this and have puzzled my head any amount to effect my purpose. But I have been utterly astounded at the entire want of attention on the part of the whole nation to speaking and listening. If in writing plays one raises the actors' speeches to a high level, the majority of people do not comprehend them. This proceeds from the fact that in ordinary speech nobody tries to give a poetical or philosophical meaning to words, that is to say, nobody endeavours to use language skillfully. This is because while we

have eyes that know good composition when they see it, ears and tongues we have not. To give an example of what I mean, in that noted drama the *Imoseyama*, written about a century ago, the following sentence occurs:—'After all, the terms parent and child are only names suggested by man's narrow and self-interested point of view; when regarded from Nature's standpoint parent and child inhabit the same world as the maggots that are generated by the thousand; so what reason is there for sparing the life of either?'\* This remark shows an utter lack of natural feeling; but nobody finds fault with it. A little further on in the same play we come across the words: 'In the case of a cherry-tree whose branches have spread awkwardly, it must be pruned and a graft added to the old stock. If this be not done, Dazai's house will be ruined.'† This sentence has much poetic beauty; but just as the public neglected to find fault with the former passage quoted, so it fails to praise this one. Why is there no commendation and no censure? Simply because the words come to the ears of the public as part of a stage speech and do not appear in the form of written language. If the passages in question were read by people instead of being listened to, then it is quite certain that the noisy condemnation of the cruelty of the first passage would only be equalled by the vociferous praise bestowed on the poetic beauty of the second. Because both passages consist of oral speech only, they are treated with supreme indifference. This is an example of the extent to which the faculty of appreciating written language has been developed, while the faculties of listening and speaking are left entirely undeveloped. What we wish to commend to the attention of scholars to-day is just this: Since the approximation of the written language to the colloquial is comparatively easy, we all practise it to a certain extent, but the approximating of the colloquial to the written language being very difficult, we are apt to neglect it. But to this we must pay special regard. If we are bent on bringing about the unification of the written and spoken languages, exercising ourselves in colloquial is more important than exercising ourselves in composing, and for improving our colloquial speech such language as is used in those musical dramas called *gidayū* is well worthy of being taken as a model."

Now there is one serious difficulty in the way of those scholars who desire to act on Mr. Fukuchi's advice: the enrichment and improvement of the colloquial by the introduction of words, idioms and phrases that hitherto have been confined to the written language. It is this: the force and precision and perhaps even the intelligibility of the written forms of language would be lost in the absence of ideographs. The numerous existing homonyms baffle all efforts to make the colloquial use of written forms of speech a thorough success. We entirely agree with Mr. Fukuchi in thinking that there is hardly anything being done to improve the Japanese colloquial. Turning to the pages of such books as the *Botan-Dōwa* and the *Kyō Dōwa* we find that Japanese colloquial speech skillfully used is able to express in a most powerful and thorough manner shades of thought of extreme delicacy. In the former work the vivid manner in which rowdy scenes are portrayed and street talk is given so that one fancies oneself listening to the speakers, show of what colloquial Japanese as used by an Enchō is capable. The *Kyō Dōwa*, the *Shingaku Dōwa* and many other works of the same kind demonstrate the fact that moral philosophy may be made quite clear to the most uneducated Japanese without resort to any other language but common colloquial such as has been used for centuries in the country by people who have a very limited

\* Here is the original: *Hikyō oya to i, ko to iu wa ningen no watakusshi* (親); *Tenchū kara mitu toki wa onaji sekai ni wata ujimushi, nan' no korosu ni shirai ga genarō?*

† *Yedaburi ashiki sakura-ki wa, kille, tsugiki wo itavaneba, Dazai no iye ga tachimasen.* The allusion is to ordering the death of a useless son, Kuganosuke, and adopting another in his stead. This son committed suicide later on, but the play does not tell us of any one that was adopted to fill his place.

knowledge of books. But the feeling of a great many Japanese scholars is that the colloquial used by the *hanashika* and the *sekkyōja* is too discursive for use in lectures and that the book style should be adopted by scholars in ordinary speech as far as possible. This is done in school teaching to a considerable extent with the help, however, of a few explanatory ideographs written on the blackboard to prevent the students from going away with wrong ideas. As long as no attempt is seriously made to find any substitute for the ideographs now in use, Japanese thinking will still remain wedded to the characters and the gulf which now exists between the spoken and the written languages can never be successfully bridged. In the one language thought depends entirely on form, and the eye is the all-important medium relied on for conveying ideas to the mind; in the other language the tongue and the ear suffice for the transmission to the mind of the most elaborate trains of thought. We think it is true to say that throughout the whole of Japan, especially among the student class, there is careless speaking and there is careless listening, and few Japanese admit that there can be any accuracy apart from writing. At all important functions and ceremonies, instead of there being a series of short addresses delivered orally as they would be in the west, document after document is read and solemnly treasured up in memory of the occasion. The nation worships its script and regards colloquial speech as on an entirely lower level than the rounded classical Chinese sentences which impressively roll out one after the other when ceremonies are held. The process of lowering the written language to the level of the colloquial, however, is certainly going on to some extent. The language of the leading magazines and the leading newspapers is far nearer the colloquial to-day than it was 10 years ago and the fashion of introducing colloquial phrases in learned articles is now followed by a large number of noted writers. Mr. Fukuchi himself is an example of a writer whose style has entirely changed within the last two decades. Dr. Katō's and Dr. Inoue Tetsujirō's styles are semi-colloquial and Dr. Inoue Enryō uses more colloquial than either of the above-named writers. But while this is so, there is a general feeling throughout the country that there is a lack of dignity about the newspaper, the magazine and popular novel styles and that such writing should never be allowed to rank as first class literary composition and should never be resorted to on solemn occasions. This sentiment will die hard, if it ever dies. We must confess that we rather sympathize with it. We feel the same veneration for the stately phrases of Imperial Rescripts, and formal written addresses penned by Japan's finest scholars as our forefathers felt for the solemn Latin addresses centuries ago. There is much to be said in favour of retaining for use on very solemn occasions a style of writing that is at once concise, poetical, and most impressive. The veneration which the Englishman feels for the old Bible language the Japanese feels for the Classical Chinese. The charm of this language to a Japanese is the distance which separates it from everyday speech, the *sokugo*. We think would-be linguistic reformers will do well to leave this national sentiment alone. They should concede this one point unreservedly, that archaic language specially suits grave ceremonies and solemn occasions. But in every other style of composition we hope that the attempts at simplification which are being made with considerable success will be carried as far as the genius of the written language allows. W. D.

The steamer *Montrose* entered port on Thursday with a full cargo of Rangoon rice. She came up without meeting either of the fleets, encountering very fair monsoon weather down the Gulf of Martaban and through the Indian Ocean. At the Burma ports telegraphic information from Saigon had been received that in consequence of the imposition of an import duty on rice from the French Indo-China port by the United States Government at the Philippines, a number of steamers had been chartered to proceed to Elephant Point or orders for loading rice for Japan.

## THE JAPAN SOCIETY.

## ANNUAL DINNER.

The annual dinner of the Japan Society of London (Japan Branch) which was held on Monday evening in the large hall of the Imperial Hotel, Tokyo, was even more successful than its immediate predecessor. There was as usual no attempt at decoration beyond the hanging of a few festoons of flags (exclusively Japanese and British) and the draping of the Union Jack and Rising Sun colour above the Chairman's place and over the principal entrance. Sir Claude MacDonald, G.C.M.G., K.C.B., presided, being supported by Count Katsura (Premier), Baron Komura (Foreign Minister), Baron Kikuchi (former Minister for Education), Mr. S. Chinda, Vice-Minister for Foreign Affairs, facing whom were, Lieut.-General Baron Terauchi, Minister for War; Major-General Nagaoka, Viscount Aoki (former Foreign Minister), Vice-Admiral Saito (Vice-Minister of Marine) and other distinguished personages. The vice-chairs were occupied by Mr. M. Zumoto and Mr. D. Goh, and there were considerably over a hundred present.

As the members and their guests were assembling the Imperial Guards Band, stationed in the gallery, played a selection and at intervals during the evening rendered very pleasing music, including "Kimigayo" and "God save the King" at the honouring of the toast of the respective Sovereigns.

An excellent dinner was served by the Imperial Hotel after which the toast list was entered upon. The CHAIRMAN said—

Your Excellencies and Gentlemen,—It is my privilege as Chairman to propose the first toast this evening. It is one which I am sure will be received with the greatest enthusiasm by all present here, by His Majesty's loyal and loving subjects and by all of us who from motives of business, pleasure, or duty, are sojourning in this beautiful land, and enjoying the hospitality of its kind-hearted and courteous people.—(Applause.) I call upon you to drink the health of H.M. the Emperor of Japan, the friend and ally of England.

The toast was drunk with enthusiasm and *Banzai*.

COUNT KATSURA next, in Japanese, briefly proposed the health of King Edward, which was likewise enthusiastically drunk.

The CHAIRMAN at this point announced that just before they sat down to dinner a telegram from the Japan Society of London had been received containing the very important word "*Banzai*." (Applause.)

Captain F. BRINKLEY proposed the toast of the Army and Navy of Japan. He said:—

Your Excellencies and Gentlemen—I deem it a very great honour to have been asked to propose the toast of the Japanese Army and Navy this evening. It is a toast to which I can not possibly hope to do justice, but I have the consolation of knowing that you will all drink it with the utmost enthusiasm however feeble my manner of presenting it.

The foundations of the modern Army and Navy of Japan were laid some thirty years ago. That was a time when this country, having been just brought into full contact with all the achievements of Western scientific progress, was engaged in the wholesale process of grafting these novelties upon her own old civilization. Nearly everything underwent metamorphosis, but there were reasons to think that one at least of the ancient institutions might survive—the institution of the *samurai*. It was clearly foreseen that when Japan entered the society of Western nations it would be necessary for her to adopt the attitude of armed preparation which the peculiar civilization of those nations impels them to consider as the sole safeguard against one another's aggressions. In that event the possession of half a million hereditary soldiers would evidently have been a most valuable asset for Japan. But these considerations did not prevail. The *samurai* went the way of many other old institutions; he was abolished, and the conscription system was established in his stead. Those who can carry their minds back to that era remember vividly with what misgivings this change was regarded, and how many fears were engendered by the spectacle of a small force of raw conscripts being substituted for a big army of veteran *samurai*, who with their fathers and forefathers had followed the profession of arms from century to century. But those fears and misgivings were based on a misconception: the misconception that conscription was a new thing in Japan and that the distinction between the *samurai* and the *heimin* was, if not racial, then

at least radical. But conscription was not a new thing, and that distinction was neither racial nor radical. History shows that in the very early eras every adult male of the Japanese nation was liable for military service and that the distinction of *samurai* and *heimin* was a growth of mediæval times and had its origin in circumstances which did not all differentiate the two classes so far as *moral* was concerned. In fact, in a certain sense, the whole of the Japanese people might be said to be *samurai* in *esse* or in *posse* and it is to that great element of strength, I think, that Japan mainly owes her rapid emergence from a comparatively obscure international position to a prominent place among the leading Powers of the world. (Applause.) When the news of the first blocking expedition at Port Arthur reached Tokyo, I remember that an American diplomatist made this remark: "Why," he said, "we were very proud of ourselves for producing one Hobson, but here in Japan you seem to have a whole nation of Hobsons." (Applause.) That was the thing in a nutshell. A whole nation of Hobsons! It is not easy to beat such a nation. The history of the past twelve months shows that it is a great deal easier to be beaten by them. It has been said that the Japanese do not value life; that the magnificent bravery of the Japanese soldier and sailor in battle is founded largely on a semi-civilized contempt for death. Probably a greater fallacy never was propounded. One need only observe the sunny geniality of the Japanese disposition to know that the mood of these people is as far as possible removed from the sombre fanaticism of reckless self-sacrifice. The Japanese soldier or the Japanese sailor loves his life probably as ardently as any of us do and knows how to enjoy it; but he certainly holds it lighter than the dictates of duty and lighter than the dictates of loyalty; and he is ready to surrender it at any moment if, by so doing, he can benefit his country or contribute to the success of his sovereign's arms. And, at the same time, the Japanese commanding officer knows that he can demand of his men sacrifices from which a European commander would shrink. For the Japanese nation is still sufficiently old-fashioned to understand and appreciate that great successes in war can not be achieved without corresponding sacrifices, and the Japanese commanding officer knows that in judging his acts, his nationals will apply that standard. But the European commander is sensible of always standing at the bar of a public opinion which attaches an extravagant and illogical value to human life, and ruthlessly condemns even successes if they be sanguinary. You have thus, on the one hand, magnificent fighting material and, on the other, perfect freedom in using it, and that is a combination which accounts for many things in the past and will probably account for many more in the future. You have also the Japanese officer. Many years' observation have convinced me that the Japanese officer is almost an ideal type. A man who has no thought or ambition outside his profession; who lives for his profession and in his profession, who in time of peace eschews all ease and luxury, and in time of war is ready to be content with the same fare as the lowest private under his command. That is the true spirit of *bushido*, and among the many relics of her old civilization which Japan has happily preserved, she has no more valuable or admirable possession than *bushido*.—(Applause.)

Let me add one word with regard to the unwonted character of this war. Japanese Admirals and Generals have been required to direct campaigns on sea and on shore and to conduct sieges under circumstances for which military history furnishes no parallel, and their brilliant successes have proved not only that they have mastered the science of war, but also that its development in their hands has been raised to a point of the highest competence; competence to apply its principles unerringly to unprecedented conditions. And in this war the Japanese have proved something else also. They have proved that the most indomitable bravery may be associated with the utmost tenderness of heart.—(applause), and that the graces of chivalry and charity may form permanent parts of the commonest soldier's equipment.—(Lord applause.) Many will say that that is the brightest jewel in the crown of Japan's martial achievements. Perhaps it is.

Excellencies and Gentlemen, I call upon you to drink the toast of the Japanese soldier and sailor—valiant, loyal and merciful.

The toast was drunk with the greatest cordiality.

General TERAUCHI replied for the Army in a speech of which the following is a translation read by Mr. Zumoto:—

Your Excellencies and Gentlemen—Captain Brinkley has discoursed in an interesting manner upon the origin of our Army and Navy, upon the readiness of our soldiers and sailors to lay down their lives at the bidding of their Sovereign and country, and upon other cognate subjects. In so doing he paid a high tribute to our Army and Navy, and it is my pleasant duty to thank him most gratefully on behalf of the Imperial Army.

Captain Brinkley has lived among us for many

years, and during most of that time he has occupied and still occupies a distinguished position as leader and instructor of public opinion. For a thorough knowledge of the country and its affairs, he has few equals, if any. I, therefore, scarcely need say that an appreciation coming from an authority of such unique qualifications is doubly dear and welcome to us.

It was only thirty years ago that the system of hereditary fighters was replaced by the system of conscription. But the principle of universal military service was in operation among us in ancient times. In those times young people used in time of peace to till the soil, but the moment war broke out they took up arms and rallied round the Imperial standard. For, as the study of our history amply demonstrates, loyalty to the Imperial house has been a distinguishing trait of our national character from the earliest times. On the establishment of feudalism, military matters became the exclusive concern of a particular class of people, the *samurai*. But, as Captain Brinkley said, there has never existed any radical, much less racial, difference between the *samurai* and other classes of people. Consequently, upon the adoption of the modern system of conscription all classes simply reverted to what they were in olden times; that is to say they have all become *samurai*, so that the spirit of *bushido*, which appears now to attract the attention of some foreign observers, is displayed by the whole nation without distinction of class. *Bushido* was never an exclusive property of the *samurai* even in feudal times: only he took special care to maintain in full vigour the spirit of that code of morals. On these points I sincerely admire the wonderful penetration with which Captain Brinkley has grasped the real truth.

Now, Gentlemen, *Bushido* is by no means peculiar to this nation, as some persons seem to believe. The precepts inculcated by *Bushido* will be found to be virtually the same as those principles which guide the conduct of gentlemen in other countries. Among the British people, for instance, I have not the slightest doubt that the principal teachings of *Bushido*, such as loyalty to the Sovereign, sympathy for the weak, respect for superiors, and so forth, are as much in active force as among ourselves.

Speaking of the British people, I cannot help admiring the indomitable will with which they triumph over difficulties however stupendous—a trait of character so abundantly proved during the Boer war. I have no hesitation to say that we have much to learn from the *samurai* of other lands, especially from those of England.—(Applause.)

Gentlemen, before sitting down I wish to say a word about the Anglo-Japanese Alliance. The unprecedented success that has attended our arms thus far is doubtless primarily due to the illustrious virtues of His Imperial Majesty and to the spirit of *bushido* that fills the hearts of the whole people. But it should be borne in mind that the utmost assurance and confidence with which the Japanese people have been able to face the present grave crisis in their national career, is in a large measure the result of their trust and reliance upon their strong and powerful Allies. (Loud applause.)

Vice-Admiral SAITO, with whose name the Navy was coupled, said:

Your Excellencies and Gentlemen—You have done me a great honour by inviting me to your dinner to-night, for which I beg to thank you most sincerely. Permit me also to offer you very warm thanks on behalf of the Imperial Navy for the cordial manner in which you all have received it.

I feel proud of the important task you have assigned me to-night, but I regret very much that unhappily the time has not yet come for me to touch upon the topics which fall within my special province and to which you may perhaps expect me to make some reference. Much has already been accomplished, but more remains to be done, and meanwhile we have to ask you to help us keep our lips closed rather than loosened. I cannot, however, sit down without expressing the deep sense of gratitude which not only the Imperial Navy but the whole nation feels toward our Allies, the British people, for their deep and strong sympathies for us and more especially for the inestimable instruction and inspiration which we have received from them in the organization and development of our Navy. The officers and men of our Fleet would not thank me if I should say that they deserved all the high praise which Captain Brinkley has been good enough to bestow upon them. But I know that I am only expressing what they all feel sincerely, when I say that, however little they may have been able to do for the sake of their "fatherland" in the present crisis of their national history, they owe a great deal to their Allies to whom they have ever looked up as their teachers and as their model.

On the call of Sir Claude MacDonald the Anglo-Saxons present rose and gave three rousing cheers for Admiral Saito, General Terauchi and the Japanese Navy and Army.

Mr. K. SONODA proposed the toast of the Cabinet. He said:

Excellencies and Gentlemen,—It is a great honour for me to rise and propose an important toast to-night, a toast which I am sure you will all receive most heartily. It is the health of the Cabinet Ministers of His Imperial Majesty's Government. (Applause.) Unfortunately we are still in the midst of war, and it may not be quite out of place to refer to it in a few words. In the first place I must congratulate the Government on the repeated successes which our arms have achieved both by land and sea. (Applause.) Those successes are no doubt due to the noble virtues of our august Sovereign and the patriotism and valour of our loyal soldiers and sailors. But at the same time I cannot help thinking that they are also due to the diligence and wisdom with which the Government have conducted the general warfare.—(Applause.) Gentlemen, I think it a great shame that while we were peacefully pursuing the work of civilization, doing no harm whatever to other peoples, Russia through her purely selfish and aggressive motives should have stepped in and tried to strangle us.—(Applause.) I believe war in itself is a sin, but when our national existence was threatened as it was we could choose no other course than to take up arms and defend ourselves. So, you see we are not miserable sinners in this case but only poor little self-defenders. (Laughter.) Of course no one can tell about the future; we may get terribly beaten yet, but we are determined to resist with all our power mean aggression and disgraceful oppression and, if necessary, we are determined to fight to the last man, for we would rather have Japan perish than Japan conquered or subdued. If we are doomed to perish we shall have to be content with leaving behind us an everlasting memory of the Land of the Rising Sun whose gallant sons readily shed their blood not only for the sake of their own country but also for the good of the whole world. If we are fortunately to be saved from destruction we will continue to do our best to enlighten ourselves so as to enjoy happiness and prosperity which, I believe, can only be attained by a free, upright, and progressive nation.

Gentlemen, as a humble banker I may be permitted to say a word or two with regard to our financial success. When we consider what a gigantic war it is and how heavy its expenses are it is somewhat surprising that we should not have financially suffered as predicted. Why, we ought to have got bankrupt long before this according to some prophets! But here we are enjoying almost exactly the same sound financial condition as we did before the war. How is that? In my own opinion there are many elements which have brought about this desirable result. To begin with, the country is not after all quite so poor as it is supposed to be. Secondly, the patriotism and unity of the nation have had a great deal to do with it. Thirdly, the success is largely due to the moral and practical support given to us by our worthy allies and other sympathetic western nations. The last not the least important element is the great tact which the Government have employed in carrying out their financial programme.

In conclusion I have to offer the Government another congratulation and that is that notwithstanding the most onerous task entrusted to them for the last two years the health of the Cabinet Ministers has in no way failed.—(Applause.) The present Cabinet is sometimes called "a youthful cabinet" or "a young men's cabinet" and I am glad to find that the experience of the past two years has completely proved it so far as energy and vigour are concerned.

It is hardly necessary to add that the Government have the entire nation at their back and that all classes from the highest down to the lowest are of one mind in prosecuting the war because we all know that our existence as a nation entirely depends on the result of this struggle.

I sincerely hope that our honoured Cabinet Ministers may be able to keep up the same youthful vigour and strength as heretofore until they bring the war to a most successful and glorious termination.

Gentlemen, I now ask you to join me in drinking to the health of the Cabinet Ministers, coupling with it the name of Count Katsura, the Prime Minister.—(Lord applause.)

The toast was fervently drunk.

Count KATSURA, who spoke in Japanese, responded for the Cabinet, his speech being rendered into English by Mr. Zumoto as follows:—

Your Excellencies and Gentlemen—On behalf of my colleagues and for myself I wish to thank you most heartily for the toast which Mr. Sonoda has just so gracefully proposed and to which you have so warmly responded. I consider it a great honour to be your guest to-night—an honour which I value the more because I am well aware of the great services which your Society has rendered in the cause

of a better understanding between East and West, and especially between the peoples of Great Britain and Japan.

Mr. Sonoda referred to the war, and you will pardon me if I follow his example and say a word or two about it. The unbroken series of victories won by our forces on land and sea, are as Mr. Sonoda has said, to be ascribed to the inspiring influence of His Imperial Majesty's illustrious virtues and to the bravery and loyalty of the officers and men of our Army and Navy. At the same time it must not be forgotten that the present auspicious position of affairs is also in a large measure the result of the disinterested patriotism with which the whole nation has come to the support of the fighting forces of the Empire. In other words, for the brilliant success of our arms, thanks are largely due to the people who bear the burdens of war so cheerfully, and who devote themselves to the growth and development of our national resources so indefatigably and so successfully, that the financial strength of the country, I may be allowed to say, has been quite a revelation to the world.

There is another important factor in connection with this war which we ought not to forget. I mean the Anglo-Japanese Alliance. I trust that the candid world will not hesitate to give due recognition to the sincere efforts Japan has made and is making in order to limit the war to the original parties to it. That we have been able to put forth our efforts in this direction without uneasiness or hesitation, that the relations between the different countries have not been disturbed by the war, that the war has not deranged the balance of power—for all this the world has to thank largely the Alliance between Great Britain and Japan. I wish also to take this opportunity of expressing our sense of gratification at the powerful moral support which our esteemed Allies have given us since the beginning of the war.

Gentlemen, the end is still unfortunately far off, but it gives me profound joy and satisfaction to know that the people are more than ever determined to defend the existence of their country to the last drop of their blood. I have no doubt whatever that the principles of justice and righteousness which shall ever guide our conduct will secure for us the increasing sympathy of the Powers, with whom I am happy to say we are on terms of cordial friendship. (Applause.)

Referring once more to the Anglo-Japanese Alliance, it is a matter for sincere congratulation for the sake of both countries, that the three years of its existence have so clearly demonstrated its value that all sections of the British people are united in expressing their deep satisfaction with it.

In conclusion, allow me, Gentlemen, to express my earnest hope that we may continue to be a united people and that we may be able to conduct ourselves in such a way as to retain and deserve, until we bring the war to a glorious termination, the sympathy of our great Allies and the rest of the civilized Powers. (Prolonged applause.)

Baron KOMURA proposed the toast of the Japan Society. He said:—

Mr. Chairman, your Excellencies, and Gentlemen,—Nothing gives me greater pleasure than to propose the toast of the Japan Society. On several previous occasions, a very high and eloquent tribute has been paid to the excellent work of the Society, so that I have hardly anything new to add in recalling to your mind the excellent work and achievements of the Society in the past. I am, however, going to make one remark on a point which I consider quite important. The appreciation most highly valued by the Japanese nation in its present struggle is the sympathy shown by the Anglo-Saxon peoples.—(Applause.) This sympathy depends upon the due appreciation of the ideas and aspirations of either nation, and in bringing to the knowledge of Anglo-Saxon peoples, especially the English people, the true ideas and aspirations of the Japanese nation, this Society has, in a large measure, contributed its share, and it is my sincere hope that the Society will continue its work in promoting and diffusing a better appreciation of the true character and ideas of the Japanese.—(Hear, hear.) I have no doubt that the past history of the Society, and the ability and character of its distinguished members will ensure success—complete success—for the work of the Society. I will conclude by expressing my sincere hope for the future welfare of the Society, and will not detain you longer, as I wish to leave as much time as possible for your worthy Chairman, who is going to speak last. I express again my sincere wishes for the continued success and prosperity of the Society and for the health and welfare of its worthy and distinguished members.—(Applause.)

Mr. T. KATO, who replied for the Society, said:—  
Your Excellencies and Gentlemen,—I am deputed by the Committee to respond to the toast which was so eloquently proposed by my friend Baron Komura. First of all, I have to thank him on behalf of the Society for the nice things which he said of the Society and also for his good wishes for its prosperity.

Baron Komura was perhaps too flattering in his reference to the work which the Japan Society has been able to accomplish in the past. But I think I may claim for the Society without fear of contradiction that it has done much in spreading the knowledge concerning things Japanese among the British people and also among other Occidentals. I say other Occidentals, because, looking at the list of the Society's members, I find many names belonging to other nationalities besides British and Japanese. Great Britain contributes by far the majority of members. Japanese come next in point of number. But there are many other nationals, as I say. In fact, nearly all European nations are represented in the Society, as well as Americans. There are for instance French, German, Italian, Austrian, Hungarian, Swedish, Danish, Dutch, Belgian, Spanish, Swiss and Brazilian members, as well as many members belonging to the United States of America. I have not been able to find any Russian name in the list. (Laughter.) Well, Russia does not know Japan, nor has she endeavoured to know it. Had she known it and its people well, the state of affairs which we now witness between the two countries might not have taken place and the world might have been spared one of the most cruel and sanguinary wars which have been recorded in the history of mankind. It is a great pity that the Russians have not joined the Japan Society in the past and studied and appreciated Japan and its people. Great Britain and Japan know each other well and that mutual knowledge and the respect and sympathy resulting from such knowledge led to a happy alliance to which reference has been made by several preceding speakers and which it must be the universal wish of both peoples to have continued for a long time to come. In thus creating and promoting the respect and sympathy between the two nations, the Japan Society has contributed some small share. At any rate, the members of the Japan Society believe so, and with that belief I trust that the members, especially those belonging to Great Britain and Japan, will persevere in the pursuit of their good purpose. My hope does not stop there, but I further venture to hope that other countries, including Russia, will contribute more members to the Society in future and assist in the attainment of its objects. I cannot but believe that it will serve as one of the means of bringing about feelings of brotherhood between nations which have any stake in this part of the world, and thus securing peace and amity in their relations with one another.

Baron KIKUCHI proposed the health of the Chairman. He said:—  
Your Excellencies and Gentlemen,—I rise to propose the health of our distinguished Chairman, Sir Claude MacDonald. It is not necessary for me to make a long speech; we all know him well and have the highest esteem for him. Esteem is rather a cold word; I want an equivalent for our word *kei-ai*. Will any gentleman be so kind as to give it to me? Well, let us translate it literally and say "respect and love" or "respectful love." It will express, if not idiomatically, at least truly, our sentiment towards Sir Claude. His actual residence among us is not so very long, as far as years go, covering only a little over four years, but when he came to us he was well known not only to the select few but to the public at large. He had already won our admiration and sympathy by the able manner in which he had directed the defence of the legations in Peking. And then these four years—are they not perhaps the most memorable years in our annals, nay, in the annals of the world? I will not mention the fall of Port Arthur or the battle of Mukden, or the destruction of the First Pacific Squadron. Those are doubtless big events. Since olden times there have been many collisions between East and West. The victory has been not to East or West—for we may go round and round the world and which is East and which is West?—nor to the Yellow race or the White—for the colour is only skin deep; the victory in all cases has been, since the days of Salamis and Marathon, to that side which had greater intelligence to guide it and loftier spirit to animate it. The battles of this war, I say, are big events. But I would rather speak of the Anglo-Japanese Alliance. There has been repeated reference to the alliance this evening, but you must allow me also to refer to it. This unique alliance between two great nations of the East and the West was concluded in the hope of securing peace in the Extreme East, and although it has unfortunately failed in doing this, it has, however, been of inestimable value in limiting the extent of the war—in reducing it to the irreducible minimum of two combatants. Of Sir Claude's share in bringing about this alliance it is not for me to speak here; but this I will say that he has been most anxious that this alliance should be endorsed by the public opinion of both countries and that there should be nothing, however slight, to mar the good understanding be-

tween the two nations. He has ever worked hard to promote friendly and cordial relations between his countrymen and ours; and therefore it must be a source of deepest gratification to him, as indeed to all of us, that at the present moment, as Count Katsura has truly remarked, the alliance, after three years of a severe test in the fiery furnace of experience in time not of quiet and peace but of anxiety and trouble, has the unanimous support of every section of community in both Empires. Gentlemen, I have the honour to propose the health of our Chairman. May he long remain with us to continue the good work.

Sir CLAUDE MACDONALD in reply said:—

Your Excellencies and Gentlemen,—I beg to thank you from my heart for the enthusiastic manner in which you have received the toast of my health proposed in such gracious and kindly terms by my distinguished and learned friend Baron Kikuchi. It was only when a list of to-night's toasts was forwarded to me by our able and energetic Secretary, Mr. Go, that I remembered that the great pleasure of being your Chairman to-night, carried with it the penalty of listening in abashed silence, to a list of my virtues set forth in engaging array by the skilled hand of a valued friend. Gentlemen, last year, it was Mr. Kato Takaaki who was the executioner, I beg his pardon—the valued friend, and much as I admire their skill, and much as I appreciate your kindness, I am sure that a third year in succession, would altogether ruin my modesty, and exhaust your patience. Therefore, please Mr. Secretary, next year a new Chairman. But before I sit down I should like to add a few words as pendant to what I said on this occasion last year. Speaking of the Anglo-Japanese Alliance, I reminded my hearers that the alliance had been entered into in the earnest hope that it would make for peace. Unfortunately this hope was not realized, but I added, that if by its means two friendly nations could be drawn together in bonds of closer and firmer friendship and if the horrors of war could be prevented from spreading to other countries the Anglo-Japanese Alliance would not have been made in vain. A year has passed since I spoke those words and I am sure that events have shown that the Anglo-Japanese Alliance has not been made in vain. Most surely have the two nations been drawn together in bonds of the closest and firmest friendship, and we have only to cast our minds back to the events of the past year, and especially of the past few weeks, to recognize how great has been the influence of the Alliance in restricting the area of hostilities. That this may continue to be the case until a lasting peace reigns over this fair and smiling land is I am sure, the heart-felt wish of all of us here to-night.

Viscount Aoki, speaking in Japanese, proposed that a Society be established in Tokyo for the investigation of things British to be called the England Society. It was decided to ask the Committee who organized the dinner to consider the practicability of the scheme.

#### Y. C. AND A. C. ATHLETIC MEETING.

The Spring athletic meeting of the Y. C. and A. C. was held on Saturday afternoon at the Cricket Ground. The earlier part of the afternoon was beautifully fine, but later a strong wind made matters somewhat unpleasant. There was a large gathering of spectators, the attendance of ladies being exceptionally large, and the light spring costumes made the scene particularly bright.

The various events proved very interesting and were in nearly every case keenly contested, there being two or three extremely close finishes. The 220 yards was well won after a fine race by Correa, who thus holds the Doctors' Cup; but the half mile was rather disappointing as only two runners finished. The final heat in the 100 yards produced a splendid finish by Weed and Mason, the former just getting in first. The one mile evoked considerable interest and proved a good race for first and second, T. W. Kilby winning with a fine spurt. The Sack, Three-Legged and Obstacle races were, as usual, highly amusing, the latter especially causing much fun and laughter.

The following officers of the day carried out their various duties most efficiently:—

Dr. E. Wheeler, W. L. Meriman, Dr. A. L. Moon, R. N. Judges; D. H. Blake, W. B. White, Clerks of the Course; L. E. McChesney, Starter; E. Mendelson, A. W. Read, O. Strome, Time-keepers; G. G. Brady, L. D. Tebb, Measurers; J. F. Drummond, E. W. Kilby and F. Pollard, Handicappers.

The events were as follow:—

#### 100 YARDS.

First Prize, presented by Messrs. Arthur and Bond.  
Second Prize presented by Bankers.

##### Heat I.

F. G. Correa (4 yds.)	1
H. Hearne (8 yds.)	2
L. Stornebrink (3 yds.)	3

Time 11½ secs.

##### Heat II.

D. Weed (5 yds.)	1
R. G. Bell (5 yds.)	2
W. B. Mason (Scratch)	3

Time 11½ secs.

##### Final.

D. Weed	1
W. B. Mason	2
R. G. Bell	3

Time 10½ secs.

In the final heat the starters were Weed, Mason, Bell, H. Hearne and Correa. An exceedingly good race, all the men coming down in a line, and the finish was so close that it was impossible for the spectators to decide who had secured first place. There was apparently not more than a foot between the first and last man.

#### HIGH JUMP.

(First and Second Prizes presented by Brokers.)

Seven competed in this event, but Correa, Lambert and Thorn dropped out. The remaining four cleared the bar at the following heights:

R. G. Bell (receives 4 in.)	5 ft. 3 in.	1
V. A. Hearne (receives 5 in.)	5 ft. 2½ in.	2
Donald Drummond (receives 1 in.)	5 ft. 2 in.	3

W. S. Moss (received 3 in.) 5 ft. 2 in. 0

#### 440 YARDS.

First Prize, presented by the Ladies of Yokohama.

Second Prize, presented by Silk Merchants.)

This was really a very fine race, seven competing, Mason (scratch) started to over-haul those in front right from the start and went through them in splendid style, actually getting the lead about 100 yards from the winning tape and thereafter winning easily, T. W. Kilby being second with Stornebrink a good third:—

W. B. Mason (scratch)	1
T. W. Kilby (12 yards)	2
L. Stornebrink (10 yards)	3

Time 53½ secs.

#### PUTTING THE SHOT.

(First and Second Prizes presented by Silk Merchants.)

Very poor form was shown in this contest, the furthest distance being a "put" of Kingdon's of 27 ft. 1¾ in. The first three were as follows:—

A. Kingdon (receives 6 in.)	27 ft. 7½ in.
T. Russell (receives 1 ft.)	27 ft. 7 in.
D. Drummond (receives 2 ft. 6 in.)	27 ft. 2½ in.

120 YARDS HURDLES (3 FEET 6 INCHES HIGH).

First and Second Prizes presented by Bankers.

This event was run in heats, the final producing a very close finish between Moss and Graham, in the order named, with D. Drummond a good third. J. E. Drummond missed his stride at the start and thus lost his chance of winning. The heats and final resulted as follows:—

##### Heat I.

J. E. Drummond (Scratch)	1
Donald Drummond (5 yds.)	2
V. A. Hearne (10 yds.)	3

Time 18½ secs.

D. Drummond and Hearne each had one hurdle removed.

##### Heat II.

W. S. Moss (10 yds.)	1
W. Graham (10 yds.)	2
H. W. Kilby (10 yds.)	3

Time 18½ secs.

Moss had two hurdles removed and Graham and Kilby one each.

##### Final.

W. S. Moss	1
W. Graham	2
D. Drummond	3

Time 18½ secs.

#### 220 YARDS.

(First Prize Doctors' Cup. Second Prize Presented by Insurance Companies.)

This was one of the best contests of the meeting, the competitors keeping close together throughout. Correa, the holder of the cup, won with a good spurt by a matter of inches, and thus secured permanent possession of the trophy. Thorn was second, and the others all finished in a bunch.

F. J. Correa (5 yards)	1
C. H. Thorn (5 yards)	2
G. Russell (8 yards)	3

Time 25½ secs.

#### HALF MILE.

First and Second Prizes presented by Insurance Companies.

Five started in this race, but J. E. Drummond, D. Drummond and A. Bishop gave up. T. W. Kilby ran in fine style and putting on a good spurt won fairly easily from W. Graham.

T. W. Kilby (25 yards)	1
W. Graham (30 yards)	2

Time 2 min. 11½ secs.

#### LONG JUMP.

There were six competitors in this event, R. G. Bell winning first prize. Mason and Hearne tied for second prize, but it was, of course, awarded to the former as he jumped from scratch. The distances covered were:—

R. G. Bell (2 ft.)	20 ft. 5½ in.	1
W. B. Mason (Scratch)	20 ft. 4½ in.	2
V. A. Hearne (2 ft.)	20 ft. 4½ in.	0
D. Drummond (2 ft. 3 in.)	19 ft. 8 in.	0
L. Stornebrink (1 ft. 6 in.)	18 ft. 6 in.	0
F. Bunting (3 ft.)	17 ft. 6 in.	0

#### THROWING THE CRICKET BALL.

(First and Second Prizes presented by Shipping Firms.)

This contest resulted as follows:—

F. J. Correa (scratch)	96 yds. 5 in.	1
J. E. Drummond (10 yds)	94 yds. 1 ft. 7 in.	2

#### ONE MILE.

"Dare" Challenge Cup and Gold Medal Presented by the Club. Second Prize by Committee.

The mile proved a fine race, White making the running for the first three rounds. Passing the winning post after the second round the order was:—White, T. W. Kilby, Bell, Ferrier, McNamara, Bunting, J. E. Drummond, H. W. Kilby, W. Graham, C. H. Thompson. On the last round Ferrier obtained the lead, followed closely by T. W. Kilby, with H. W. Kilby and White some little distance behind. At the finish, however, the younger Kilby put on a fine spurt and won by about two yards from Ferrier, with H. W. Kilby third several yards behind.

T. W. Kilby (55 yds.)	1
W. H. Ferrier (60 yds)	2
H. W. Kilby (Scratch)	3

Time 4 min. 56½ secs.

#### SACK RACE.

(Prize presented by Mr. H. J. Sharp.)

A very close finish, though Kilby fell right on the line.

D. Weed	1
T. Kilby	2
A. Kingdon	3

#### THREE LEGGED RACE.

(Prize presented by Committee.)

This was won fairly easily by Weed and Stornebrink.

Weed and Stornebrink	1
T. Kilby and Bowden	2

#### OBSTACLE RACE.

(Prize presented by Shipping Firms.)

Mason came in well ahead of the other competitors, all of whom presented a snaked, mottled and "done-up" appearance after negotiating the various obstacles.

Mason	1
J. Abbey	2
Russell	3

The Ladies' Prize was presented to the winner of the 440 yards, W. B. Mason, at the conclusion of that race by Miss Merriman, the usual cheers being given and the lady being presented with a floral tribute.

The other prizes were presented to the successful competitors at the close of the sports by Mrs. D. H. Blake, who had a few graceful words for each recipient.

At the meeting of the baseball players of the Y. C. & A. C. held at the Pavilion on Monday afternoon Mr. L. E. McChesney was elected Captain; and Messrs. D. H. Blake and E. W. Kilby, Vice-Captains. It was announced that Mr. E. V. Thorn will present a silver cup for the best batting average during the season.

## Y.M.C.A. WORK IN MANCHURIA.

The Rev. J. H. De Forest, of Sendai reports:—It was my good fortune recently to visit the work of the Young Men's Christian Associations among the soldiers of the Japanese Army in Manchuria. At the request of the Y.M.C.A. Committee and with generous letters of introduction from Cabinet officers, I went for the purpose of speaking at three centres of Association work, Dalny, Newchwang and Hoojo, and also of studying the conditions under which this work is widening out.

At these three places the Army authorities have provided houses which are open every day, virtually from 9 a.m. to 11 p.m. The same kinds of work are done there as are done in the Y.M.C.A. halls throughout America and in Japan, with slight adaptations to the military situation. The aim is to do good to the whole man, physically, intellectually and spiritually. The soldier is encouraged to keep in touch with his family and friends by an abundance of good materials for correspondence, all furnished free. If, as sometimes happens, he cannot write, one of the workers will write his letters for him. Often the workers go to the hospitals where they spend much time writing letters for the sick and wounded, and sometimes they go scores of miles to carry sympathetic aid to the men.

In each place there is a reading room which is a real blessing to the men hungry for something to read from the home land. Lessons in English and music are given. Baths and barber rooms, wash tubs and "insect killing" steamers are kept going. And every day there are readings of the New Testament with expositions, sermonettes, or more formal lecturing and preaching, to which are added singing and prayer as the leader in charge sees fit. At these religious meetings, which are purely voluntary, I was told the rooms are generally well filled, and occasionally they are crowded to overflowing.

The Japanese workers whom I had the pleasure of hearing spoke as earnestly and as freely on the same great subjects of God and Man as do pastors in the home pulpits. As to my own addresses, I used substantially what I use in my regular missionary work, and found that it was as fitting in Manchuria as in Japan. Officers and soldiers filled the large Chinese theatre at Dalny on two afternoons. A Lieut. Colonel, so busy that on each of the four walls of his office he had written in large characters: "Don't talk long here," found time to address with me one evening two hundred soldiers. Another Christian officer begged me to come late in the evening to his quarters and give his men a Christian talk, since they were hungry for it.

No one could spend the day around one of these halls without seeing that everything pointed to the bracing up of the moral and spiritual life of the soldiers. The officers and men expressed no less gratitude for the moral and spiritual influences being exerted than for the social and practical privileges provided.

Everywhere I went—from Port Arthur to Mukden, from Newchwang to Antung,—I found Christians, or rather Christians found me. On the top of Port Arthur's Ni Ryu Zan an officer was overseeing the burning of the dead of both armies. I handed him my card and as he gave me his, he said that he and several others of his friends were Christians, as were all the members of all their various families. At one of the dinners with a company of officers the majority must have been Christians, for it was previously arranged that I should say grace. North of Mukden I happened to meet a captain who is a member of a Sendai church; in the train going up was a lieutenant who is a member of another Sendai church; and several of the interpreters at different headquarters were Christian teachers or preachers. It was curious to meet here and there officers who opened up gradually and at last said, "My wife is a Christian."

I met officers who with perfect frankness said they had no religion and felt no need of any, but there were others who as frankly confessed their religious needs. I found ten times more of the reverential religious spirit than I did of indifference, and there was not the slightest sign of

hostility anywhere. I believe it is this wide religious spirit that makes possible the moral and spiritual successes of the Y.M.C.A. work. This spirit is coupled with a beautiful tolerant mind that is open to anyone who is sincere.

The following letter is from Mr. C. V. Hibbard, one of the Young Men's Christian Association representatives at the front:

Hoojo, April 5, 1905.

The war has lasted long enough now so that the anniversaries are beginning to come round. While in Antung with Dr. De Forest the other day, I received an invitation to attend the commemorative service to be held at the battle field of Kusenjo, on the 1st of May. A couple of officers invited me to spend the night before the ceremony with them, and so in the afternoon of the 30th I set out from Hoojo with the certainty of an interesting time ahead.

A lot is being written about the traits of Japanese character, especially the traits of the Japanese soldier, so I am moved to make my contribution. At the station in Hoojo are a half dozen rabbits, several varieties of flowery shrubs, pines, etc. I doubt if there is one of the eight or ten stations between here and Antung where you would not find at least a dog and a branch of quince blossoms. About the headquarters, in the hospitals, everywhere are flowers which have been sought out in the hills and brought in often from a considerable distance and at no small labour. And as we stretched our blankets on the floor of my host's rooms, I narrowly averted turning over the everpresent vase of flowers. One may draw his own conclusions, but I am glad that the men of the people with whom I cast in my lot care for flowers and pets. As we rolled up in our blankets there were some anxious prognostications concerning the weather for the next day, and we opened our eyes on a day of no great promise. The breakfast of a mixed ration of rice and wheat being despatched, the horses were soon at the door. That sounds dignified and proper, but four or five Japanese steeds are likely to be about as proper as a Sunday school class of small boys without a teacher. A man at each horse's head sought to maintain a safe interval between his and the next animal, but it was with a certain sense of achievement that we got off down the road in single file. Across the new bridges and out through the new Japanese town the road led. Everywhere well drained, with bridges and public conveniences, the town is changed as by magic from the indescribable filth of the undrained, uncleared town as I first saw it eight months ago. When we struck into the main road we joined a number of officers, many of whom I knew. The virtues of the Japanese officer, and they are many, do not, however, as a rule, include expert horsemanship, and in fording a stream one horse lay down with more satisfaction to himself than his rider. Boots full of water, a wet uniform, and a dull morning are not sedative to a ruffled temper, but without a word the officer led his horse ashore, emptied his boots as we climbed the opposite bank and soon joined us, laughing cheerfully at his own misfortune. The sun made his existence felt by a close heat, and the Manchurian farmer tramping his furrows loomed gigantic in the haze. Across the Yalu, over on the Korean side, a group of tall cottonwoods, close bunched, showed faint and shadowy. In the nearer fields the grain was beginning to show in a green line across the brown earth, and the yellow brown of the hills shaded into green in the ravines. The village of Kusenjo is but a little place and quiet enough. A little to one side of the fighting there are only a part of the houses that bear the marks of shot, but as you pass the village the Russian trenches are a good deal in evidence. The "dumpling hill" around which the battle centred has been greatly changed by the hand of the conqueror. A well made roadway zig-zags up the steep ascent and the whole slope is set with pines. A little more than half-way up a lesser mound has been set aside for a monument to the officers of the first army. At the summit is another small park and at the highest point a single granite slab five feet wide, a foot in thickness and twelve feet high, towers from the massive boulder base. On the side of this facing the northwest, the Manchurian, is deep carved the record of the battle with its tale of dead and wounded.

From the foot of the hill rises the call of a bugle and the Japanese, in full marching order, come swinging steadily up the steep path. The men have all seen service and there is that in their step and carriage that shows their thoughts go back to another day when it was not firecrackers on the hill. Behind them come the Chinese, only a hundred or so, but with a grand flourish of trumpets. First into the little park march an oddly assorted group, the members of which, all in uniform, range in age from twelve to thirty. These are the members of the Chinese-Japanese school established last autumn. Are they perhaps more significant than the troops out on the hillside? Then there is a group of

splendidly uniformed, fine-looking men. They are officers of the Korean army. Chinese officials with their peacock feathers and brilliant costumes mix readily with the Koreans and a little less easily with the Japanese. At last the ceremony begins. A little company of priests, standing before the monument under a couple of newly set quince trees in full bloom, perform a simple, quiet and dignified service in memory of the dead. Later all go down to the smaller monument in the court below, and as we enter a pine twig is handed to each one. The service is repeated, or at least the second service is very similar to the first, and this is followed by several short tributes. Being the only American present, I had written out a little tribute and presented the same, both in Japanese and English, with a small American flag to the presiding officer. I had not expected to speak, but he very kindly invited me to read the English and I did so. After this the invited guests passed before the monument and with a bow placed their pine boughs there. The soldiers were marched up, company by company, and presented arms. After the ceremony came the usual feast and then the ride back to Antung. When at eleven o'clock that night I stepped into our room here in Fengwanchen, it was with a feeling that I had enjoyed a very interesting and rather tiring day.

## WINGS OF WHITE.

(A SONG OF THE INLAND SEA.)

White wings folded to rest  
On the tide of Oi Wan;  
Sunlight and moonlight and starlight,  
And scent of the blossoming hills;  
Dip and drip of the oar  
And laugh of the waves on the sand—  
Still when the twilight falls  
Shall I see the gold of the moon  
Deep thro the pines on the hill  
That sigh to the Maids of Ai.  
White wings spread to the breeze  
On the tide of Harima Sea;  
Sunlight and moonlight and starlight  
And salty breath of the deep;  
Song of the sailors at work,  
Song of the waves at play—  
Still when the night winds blow  
Shall I see the round red moon  
Rise from the misty sea  
That sings to the fisher lads.  
White wings lifted in flight  
Down the silver way of the west,  
A-swing to the winds of the day,  
A-dream in the hush of the night,  
By what far Isle do you droop,  
Adrift on the opal tide?  
Yonder the evening star  
O'er Kitagi's shadowy isle,  
But far is the glow thro the pines  
That sigh to the Maids of Ai.

S. L. L. YENDYS.

On a moonlight May night off Kitagi Id.

## THE LAW COURTS.

## PETITION FOR INSOLVENCY.

Mr. S. Yoshida, a merchant in Tokyo, has brought an action in the Tokyo District Court against Mr. K. Oishi, a representative for Tokyo, residing in the compound of Count Okuma's dwelling, petitioning for a decision of insolvency. According to the complaint, says the *Yiji*, Plaintiff lent Defendant yen 1,240, which the latter failed to pay back within due time. Subsequently, Plaintiff tried through a bailiff to seize Defendant's property and found that there was no article which could be seized. On the other hand, the emoluments which Defendant receives from the Lower House have been pledged as guarantees for debts of yen 500 from Mr. Ubahara, yen 5,000 from S. Tanikawa and yen 5,000 from K. Uyeno.

## DE WETTE v. KUHN.

The following is the gist of the judgment given in the case instituted by Miss Sophie Anne Barbe De Wette (or Mrs. Kuhn, the wife of Mr. S. H. Kuhn) against Mr. S. H. Kuhn, the verbal judgment having been delivered on May 12th dismissing plaintiff's case.

1.—The important point of Plaintiff's petition is that she asks the Court to give a decision to

the effect that the marriage between the parties is invalid, and to order defendant to pay forty yen monthly, for damage incurred as the result of the invalidity of the marriage, until the daughter of the parties shall attain twenty years of age.

2.—According to the principle of the relative law one of the married parties who considers the marriage to be invalid is not allowed to institute an action in the Court against the other requiring the other to admit the invalidity, but a petition must be lodged in the Court asking it to declare the illegality of the marriage. Miss De Wette lodged her action against Mr. S. H. Kuhn and did not ask for a declaration of the invalidity of the marriage by the Court. Consequently her case can not be admitted by the Court.

3.—Plaintiff's claim for an allowance for bringing up the parties' child is not regarded as direct damage incurred as result of the invalid marriage. The expenses for bringing up the infant have no immediate connection with the marriage. Her claim, therefore, can not be brought in the Court by means of her petition.

#### ACTION AS TO DISTRAINT.

A case in which Chao Ju-sih and one other Chinaman petition for the cancelling of the seizure of a house by Mr. Paul Helm came up again in the Yokohama District Court on May 20th, when Judge Nakanishi dismissed plaintiffs' action.

#### CLAIM FOR DAMAGE.

The following is the formal judgment delivered in a case instituted by the American Trading Co., No. 28, Yokohama, against Messrs. Robert M. Slomann and Co., Hamburg (whose Yokohama agents are Messrs. C. Illies and Co.) in which the verbal judgment was given on April 29th dismissing plaintiffs' claim.

GIST OF JUDGMENT.—Plaintiffs' claim is dismissed and they are ordered to bear the cost in accordance with Clause 1 of Art. 72 of the Code of Civil Procedure.

GROUND.—Mr. G. Akiyama, Plaintiffs' counsel, asks the Court in his definite statement to give judgment ordering defendants to pay yen 485.36 and interest at the rate of 6 per cent. per annum from March 5th, 1903, till the execution of the decision and to bear the costs. As to the claim, plaintiffs' contention is that defendants have their head office at Hamburg and branches at several ports in America and in the Orient, and are carrying on shipping business. In Japan, Messrs. C. Illies and Co. No. 54, Yamashita-cho, Yokohama, represent them as their agents. On Nov. 12th, 1902, plaintiffs shipped a hundred cases of several kinds of merchandise on the defendants' steamer *Verona* at New York to be transferred to Yokohama and defendants contracted to carry them safely to their destination. On Feb. 24th, 1903, the ship arrived at Yokohama. On the landing of the cargo, plaintiffs began, on the 28th of the same month, to take delivery of the goods in the compound of the Customs, when plaintiffs found that a case, containing four smaller boxes with eighteen dozen each of woollen terai hats was broken and that some of the hats were lost or spoiled. Consequently, without taking delivery of the damaged case, plaintiffs lodged a claim on March 4th in the same year at the office of the Yokohama agent—Messrs. C. Illies and Co.—but the latter did not enter upon definite negotiations (*yoryo too esaru ni tsuki*). On March 18th, plaintiff took delivery of the damaged case under protest. The damage is stated to be that 73 hats costing yen 48.68 per dozen—aggregating yen 295.65 in all;—and 20 hats costing yen 81 per dozen—amounting to yen 135—were short delivered; and 27 hats costing yen 48.60 per dozen—amounting to yen 34.71—were spoiled. The damage was caused during the voyage of the steamer while defendants were responsible for damage. As evidence, plaintiffs produced Exhibit A-1, a bill of lading—and contended that Art. 1 of the document provides for the fixing of the rate of freight and Art. 9 to settle disputes on damage.

Mr. W. Nagashima, defendants' counsel, asked the Court in his definite statement to reject plaintiffs' claim and to order the latter to bear

the costs. While admitting the damage insisted on by plaintiffs, he held in his essential contention that Art. 1 of the bill of lading agreed on between the parties provides for the taking of the value of the cargo, if it is not declared by the shippers, as \$100, and in the case of damage the claim should not exceed the amount. Art. 9 provides for a claim in the case of the value of the cargo having been notified by the shippers. Defendants availed themselves of Arts. 1 and 9 of the document.

Reason.—Art. 1 of the bill of lading takes the value of the cargo as a hundred dollars in case the real cost is not declared as the standard for charging freight and further as a basis to fix the extent of the responsibility of the defendants. Art. 9 settles any dispute on the damage in the case of the value of cargo being notified. There is no dispute between the parties that the value of the damaged goods was not declared in the bill of lading, so that there is, it is considered, no responsibility for any claims exceeding a hundred dollars. Nevertheless, plaintiffs claimed for damage of the actual value. The claim is not proper and on the other hand defendants' contention is quite right.

The foregoing judgment was signed by Judge K. Yasuda and Judge-associates K. Matsuyama and Y. Tamura.

#### OHARA v. WRIGHT.

A case lodged by T. Ohara against Mr. W. N. Wright, proprietor of Wright's Hotel, claiming yen 18 25, came up again on May 23rd in the Yokohama Local Court.

At the outset of the hearing, defendant's Counsel stated that he had tried to settle the dispute amicably out of Court to which end the Court had exhorted the parties at the previous hearing, and that plaintiff refused to consent. Plaintiff said that he was desirous to conclude his case in the Court and that he did not care whether his claim were dismissed or not. He asked the Court to summon the *betto* of defendant and three coolies who were employed in laying concrete in the stable of Mr. Wright, as witnesses. The Court granted the request and adjourned the hearing till May 30th.

#### SELECTIONS FROM "ELIJAH"

The repetition of the selections from "Elijah" (given first some weeks ago with great success) did not attract by any means as large an audience as the occasion deserved, for undoubtedly all the music went even better than before. The programme was exactly as at the previous rendering, with the exception that Mr. Vincent had substituted two offertory numbers for those he formerly played. They were: Mendelssohn's "Songs without Words," Book 2, No. 3; and "Nocturne" from "Midsummer's Night Dream," both of which were listened to with the deepest appreciation. As before the soloists were: Mrs. E. C. Irwine, Mrs. W. A. Harrison, Miss Mendelson and Miss Burdett Leach, Mr. A. E. Cooper and Mr. S. H. Somerton. Mr. Griffin was again Conductor and Mr. W. Karl Vincent, Organist.

Just before the offertory Rev. E. S. Booth said the Union Church was making an effort to build a church. There was perhaps an impression abroad that the community in years gone by built the edifice in which they were assembled. If there was such an impression he wished to correct it. A portion of the means of building this house came from Christians in the Sandwich Islands the object being to build a church for the Japanese; the American Minister then accredited to His Majesty's Court supplemented that gift, and it was further supplemented by gifts from America, so that this house was erected for the Japanese. Previously the Union Church congregation met in the Gaiety Theatre, but after this building was completed its doors were opened to them and they had since been housed at a moderate rental. Instead of rebuilding the Union Church the congregation proposed to build a new house of worship and they therefore appealed to their friends to assist them in building a house

for the worship of God. The scheme was already well advanced, a site had already been secured and judging from the enthusiasm in relation to this project it promised to prove a complete success.

The collection last evening totalled yen 106.

#### L'ALLIANCE FRANCAISE.

The last of the series of pleasant literary and musical reunions given by L'Alliance Francaise, took place on Thursday evening at the Van Schaick Hall on the Bluff. There was a full attendance of members and guests and a very enjoyable evening was passed by those present. After a few introductory remarks the popular President of the association, M. de Cuers de Cogolin, introduced the Rev. Père Noël Péri, who read, in eloquent style, a most interesting *conference* or paper, on "La Guerre Russo-Japonaise: Poètes et Soldats," of which we hope to give a resume later on. The second part of the programme was opened by Mons. L. Cherfils, who gave an excellent rendering of two songs: (a) *Les Vieilles de chez nous*, by Ch. Lavade, and (b) "J'avais rêvé," by de Lassen, Mr. Grimbale playing the accompaniments. Both numbers were warmly applauded. The second item consisted of a recital by Mons. R. Jamin of the poem "Le Sommeil de Canope," by Albert Samain, with a pianoforte accompaniment (A Sauvrais) played by Madame Chaix. This was a novelty to most of the audience and proved very successful. The last item on the programme comprised two choice vocal morceaux, (a) "Connais-tu le pays," by A. Thomas, and (b) "Une Nuit de Mai," by A. Goring Thomas, sung with artistic grace and expression by Mrs. E. C. Irwine, who was in excellent voice, and accompanied by Miss E. B. Leach. A round of applause brought the brief but very enjoyable entertainment to an end.

#### HORSE SALE.

At the horse sale conducted by Mr. John W. Hall on Wednesday the following prices were realised:—

	Yen.
Capricieuse, Black, Australian Mare .....	370
Hard Cash, Grey, China .....	160
Gogai, Cream, China .....	110
Folly, Bay, Australian Mare .....	375
Parisienne, Black, Australian Mare (Bought in) .....	380
Iwate Bay, Australian Mare .....	370
Kuama, Brown Australian Mare .....	380
Chitose, Bay, Australian Mare .....	500
Wakashima, Skewbald, China .....	500
Hitachi, Bay, Australian Mare .....	800
Hinode, Chestnut, Australian Mare .....	425
Chiyoda, Bay, Australian Mare .....	400
Kobe II, Brown, China .....	95
Sunset, Grey, China .....	105
Sunbeam, Chestnut, China .....	70
Kestrel, Grey, China .....	45
Ibuki, Black, Australian Mare .....	200
May-oui, Grey, China .....	170
May-king, Brown China .....	120
Omuro, Bay, Australian Mare .....	425
Ohyon, Brown, Australian Mare .....	500
Miyoshino, Brown, Australian Mare .....	450
Texas, Bay, Australian Mare .....	525
Dairen, Grey, China .....	70
Ten-in, Chestnut, Australian Mare (Bought in) .....	425
Ten-nin, Brown, Australian Mare .....	425
Daybreak, Brown, Australian Mare .....	625
Puritan, Bay, Australian Mare .....	425
Pagoda, Grey China .....	110
May-mie, Bay Australian Mare .....	400
May-nooth, Brown, Australian Mare .....	325

Coot, Brown, China .....	600

## NEWS OF THE WEEK.

A Russian at Otsu has escaped from prison and is still at large.

Two cases of small-pox are reported in the district of Haguri near Nagoya.

On the night of May 21st, 413 sick arrived at Ujina from the front in two hospital ships.

The death is announced of the mother of the late Count Katsu. She was 86 years old.

Thirty-three Russian prisoners are expected to arrive to-day, May 26th, at Ujina from the front.

Sergeant V. Tadano, and a hundred other non-commissioned officers have been promoted to ensign.

On the evening of May 23rd, hail fell in the districts of Iruma, Osato, and Chichibu, near Urawa.

T. Takahashi, a police-inspector of the Yokohama Central Office, has been appointed Superintendent of the Yokosuka Police Station.

A telegram reports that at 3 p.m. on May 25th, the steamer *Fuyo Maru* sighted two floating mines five miles north of the Miao Group.

Two Russians at Kanazawa have been sentenced to twenty days' imprisonment with hard labour for having assaulted other prisoners.

Gold bullion valued at yen 150,000 was brought on May 22nd from Shanghai to Kobe. Subsequently it was removed to the Osaka Mint.

Rear-Admiral Curzon-Howe, R.N., remains as Second-in-Command on this station, owing to the ill-health of his successor, Rear-Admiral Hamilton.

According to a *China Mail* telegram, an official at Saigon named Young Gouttes shot at and killed his mistress on the 12th May and then shot himself.

Mr. T. Komuchi, a prominent Progressist, and member of the Lower House, who was paying a visit to Korea, returned on May 22nd, to Moji, on account of severe illness.

The Russian steamer *Prometheus* has been renamed *Urajima Maru* and now belongs to the Nippon Yusen Kaisha. She will leave Yokohama on June 1st for Fusan via Kobe.

Viscount Yoshikawa, Minister for Home Affairs, returned on May 25th by the 9.30 a.m. train from the west where he was investigating commercial and industrial conditions.

The Empress of Japan has presented to 1,661 men, including 129 non-commissioned officers, who had received wounds rendering them unfit for further military service yen 3,451 and a flannel coat each.

The owners of the steamers *Esby Abbey*, *Venus*, and *Aphrodite*, which were recently confiscated, have lodged an appeal in the Supreme Prize Court, Tokyo, against the decision of the Yokosuka Court.

The final of the Mixed Doubles Handicap between Mr. E. W. Maitland and Miss A. Harrison, and Mr. Horne and Miss Harrison which took place on Friday afternoon resulted in a win for the former couple by 6.4—10.8.

In an East-end (London) church the following notice is posted up:—"As all these alms-boxes are regularly emptied it is not worth while to break them open." An interesting comment on the progress of education among the lower classes.

The British steamer *Carlisle*, which drifted for 85 days between Vladivostok and Manila with a cargo of ammunition on board, and finally brought up in the Philippines, has reached the Baltic fleet at last, and it is stated that the captain gets a bonus of £10,000.

Eight hundred among 6,750 Russian prisoners at Osaka, and three other places will be removed

to Toyohashi and the remainder to Narashino. Those for Narashino will be transferred within six days commencing May 24th by train via Hirayama, Yokohama.

A Parliamentary report just issued shows that the number of British emigrants who went to America in 1904 was nearly double the combined total of those emigrating to all the British colonies. Thus, out of a total of 453,877 leaving the United Kingdom, 291,945 went to America, being 40,000 more than in 1903. Canada attracted the next largest number, 91,684; 32,278 went to South Africa and 14,210 emigrated to Australia. The rest went to various parts of the world.

Dr. Luther Holden, of Pinetoft, Ipswich, late President of the Royal College of Surgeons, by his will has given to St. Bartholomew's Hospital £3,000 for a scholarship in surgery and £500 for the building fund; £1,000 to the Foundling Hospital; and on the death of his wife, £10,000 and the proceeds of the sale of his freehold residence and furniture are to be divided between St. Bartholomew's Hospital and the Foundling Hospital. The value of the estate is £110,289.

The Seventh Annual Boat Races of the Yokohama Commercial School were held on Sunday, May 21st, in Yokohama harbour, the pavilion being erected in front of the United Club. Mr. S. Misawa, Principal of the school, presided, and Mr. S. Oki and seven others attended as umpires. The distances of the races were 800 to 1,000 meters and each race was rowed in three boats, the crews being distinguished as white, green and red. The winners were rewarded with silver medals, books, etc. Bombs were sent up and the Town Band played selections. The programme was successfully carried out.

About 3.30 p.m. on Friday an up train on the Kansai Railway was approaching the bridge over the Neya river, Namazue village, Higashinari district, when three children were seen crossing the bridge toward the train. The conductor made every effort to stop the train, but to no effect, the distance being too short. One of the children was consequently run over and fatally injured, while the two others were thrown into the river and killed. The unfortunate mother of the children was looking for them close to the scene of the disaster at the time it occurred.—*Kobe Herald*.

On Saturday afternoon last a blind girl, pupil in the Yokohama Christian Blind School, was walking along Motomachi, intending to cross the bridge at the foot of Jizo-zaka. Missing the bridge, she went a little beyond, and, turning there, fell into the canal. Fortunately the water was not deep, and she was able to regain her feet. A policeman soon came up, and with the help of the bystanders, rescued the poor girl. Her stick was broken, but he found another one for her, and a foreigner among the people gave her fifty sen, while another stranger helped her home. The girl has not been long in the school, and has not been blind long enough to walk alone with safety. She is ambitious to do this, and it seems a pity that almost her first essay should have ended so disastrously. She was not badly hurt strange to say, though bruised and frightened. She insists that her teachers must find for her the kind foreigner, that she may make an "orei."

## CORRESPONDENCE

## THE YELLOW BOGY.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Ignorance and prejudice are twin brothers. If it is "Sir Oracles," of whatever station in life, knew a little about the relationship between Eastern and Western man, they would look towards the Orient with a less jaundiced eye; if they knew a little, a very little, about the history of the world's enlightenment, there would be less nonsense preached about the yellow peril.

I well remember Sir Henry Littlejohn, twenty years ago, when lecturing on a famous murder trial in the class of Medical Jurisprudence, pointing out a mistake in the medical evidence, where it had been sworn to that the yellow colour of the body after

death was a sign of arsenical poisoning. I remember as if it were yesterday, his earnest and dramatic demonstration that the white man did not exist, and that no one could look on a dead body without knowing that colour was only a question of quantity and not of quality.

It is well known by modern orthologists that there is no such thing as a European race, that the population of Europe is a hotch-potch of every conceivable breed of humanity.

Perhaps I may be allowed to quote from Ripley's great work on the Races of Europe.

"Concerning race, first of all, we may hold four propositions to be fairly susceptible of proof. They are as follows:—

I.—The European races, as a whole, show signs of a secondary or derived origin; certain characteristics, especially the texture of the hair, lead us to class them as intermediate between the extreme primary types of the Asiatic and negro races respectively.

II.—The earliest and lowest strata in Europe were extremely long headed; probability points to the living Mediterranean race as the most nearly representative of it to-day.

III.—It is highly probable that the Teutonic race of northern Europe is merely a variety of this primitive long-headed type of the Stone Age; both its distinct blondness and its remarkable stature having been acquired in the relative isolation of Scandinavia, through the modifying influences of environment and of artificial selection.

IV.—It is certain that, after the partial occupation of western Europe by a dolichocephalic Africanoid type in the Stone Age, an invasion by a broadheaded race of decidedly Asiatic affinities took place. This intrusive element is represented to-day by the alpine type of central Europe."

The Chinese and Japanese almost certainly originated from westward of the 90th degree of longitude and combine Semitic, Negroid and Mongolian characteristics as do the races of Europe; though the mixture is more recent, I should hesitate to say that it presents a greater peril to civilisation than does that of Europe. The prejudice on the part of some Europeans against the yellow skin and the "Mongolian fold" (that covers the inner corner of the eye) of many, though by no means all, Chinese and Japanese is most absurd. To these superior people I would say "look at your own infant, and you will find one and probably both of these characteristics." Up to the age of six months, and frequently beyond it, the "Mongolian fold" is well marked in nine out of ten European infants, and I have seen it better marked in a purely "European" child of seven years than one can see it in the majority of Chinese and Japanese.

Without being able at the present moment to quote chapter and verse, I can confidently give it as the opinion of those who have made the races of Europe a special study, that the migration of the Asiatic type which spread over early Europe was of a peaceful character; it turned the virgin soil into the service of man and introduced a higher culture into the western territory.

But Europe is indebted to the East for another great impulse towards a higher culture. The Sumerian immigration into the basin of the Euphrates and Tigris (truly Mesopotamia is a blessed word) was the means of introducing many of the higher arts into Europe (through the Phoenicians), and Egyptians, including knowledge of letters, of which we are so proud.

Few can be ignorant that the great systems of morality have originated in the East and not in the West. Christianity, Buddhism, Confucianism, all originated in the Orient, and mental philosophy, with the foundations of science, e.g. mathematics and astronomy, can boast a similar origin. China had a metallic currency when Europe was in the lower stages of barbarism and her government has been a model of perfection as compared with that of Europe till recent times.

Before we talk of the yellow peril, let us ask who are the aggressors? Whose outward spread has been accompanied by bloodshed and violence and whose by peaceful industry? I do not say that European nations have been wrong to seize upon the territory of less offensive nations. That question need not concern us here; I only ask, what precedent is there to show that Europe is about to become the victim of any colour of "peril"? Does the balance of evidence not emphatically point the other way?

Yours faithfully,

N. GORDON MUNRO, M.B. & C.M.

## CHRISTIANITY IN THE ENGLISH UNIVERSITIES.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—A short time ago there was a letter published in the *Japan Mail* referring to the influence of Christianity in the English Universities. Being anxious to know what was felt by those on the spot I wrote to an old friend sending the letter in question. I enclose, with his consent, a copy of his reply,

which, I thought, might be interesting to some of your readers.

I am, dear Sir, yours truly,

HENRY EVINGTON.

Bishop of Kyushu.

Bishop's Lodge, Nagasaki, May, 16th 1905.

MY DEAR BISHOP,—Your letter ought to have been answered a fortnight ago. In regard to religion in Oxford I have three periods to judge by.

1. 1870 to 1874—my academic period in which I was reading for honours in Mods. and Greats (Classics and Philosophy).
2. 1877 to 1885—when I was the Vicar of a parish in Oxford and came in contact with many seniors and juniors in the University.
3. 1900 to 1905—when I have been Principal of Wycliffe Hall (after an interval in India, 1887-1900).

Surveying religious thought in these periods I note:  
I.—That in Oxford, as elsewhere, the majority of men are more or less in all periods worldly and indifferent to religion. So Christ warned us it always would be.

II.—That in some externals, such as observance of Sunday, the indifference has grown. Whereas 30 years ago, the indifferent were restrained from certain worldly pursuits on Sundays, they now feel themselves more free to disregard restraints.

III.—That on the other hand, the number of men who are earnestly following Christ has enormously increased among both seniors and juniors.

IV.—That the prevalence of Materialist views, strong 30 and 20 years ago, has diminished greatly. e.g.—The leading philosophers are many of them distinct believers in Christianity. I was astonished in 1900 at the array of professors who came and sat on the platform at the Annual Meeting of the Bible Society. On one occasion I was struck by seeing in the Chair of a large Missionary Meeting a man whom I had known as a strong Agnostic about 1880. At the Liverpool Church Congress, 1904, a paper was read in evidence of Christianity, on Comparative Religion, by a man of my own college, though about 10 years my junior, who when he graduated was an aggressive Agnostic.

Many other cases I might name which prove that belief in genuine "supernatural" Christianity is growing stronger and stronger; though of course there is a strong sceptical influence also.

V.—That the *a priori* biassed objection to the miraculous is now admitted by the best philosophers to be invalid; and the basis of ethics apart from Theism recognized by more and more scientific men to be highly precarious.

VI.—That the study of the Bible and practical Christian work, both evangelistic and social, are much more widespread and vigorous than 30 years ago; e.g. in Balliol, the leading college intellectually.

During the term now closing we had some addresses of the most downright and rational Christian kind 5 or 6 days from a Layman.\* Hundreds of undergraduates and many graduates attended; on one occasion over 700.

In conclusion I can only say that belief in supernatural Christianity is stronger than ever among Oxford men of the most thoughtful type. That there are more open objections than fifty years ago when a decorous orthodoxy and less information prevailed is of course perfectly true; but Christ's claims are more than holding their own.

Yours very sincerely,

H. G. GREY.

\* The Layman referred to, I believe, to be Mr. Mott. H.E.

Wycliffe Hall, Oxford, March 17, 1905.

#### SUMMER SCHOOL AT KARUIZAWA.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—As is perhaps quite generally known, I have been engaged for a number of years in teaching the Japanese language to foreigners, and at present am conducting a school for the study of the Japanese language in Tokyo. My pupils are chiefly missionaries.

It has been remarked that after a missionary has attained ability to teach and preach in Japanese with considerable fluency, his progress in the language tends to cease. It is difficult to maintain stated hours for language study, more difficult to secure competent instructors, and most difficult to obtain intelligent, severe and helpful criticism. It has occurred to me that it might be of advantage all around, to open at Karuizawa, for advanced pupils, a summer school for the study of the Japanese language. My plan is somewhat as follows:—Place and Time.—Karuizawa. From July 28th to Aug. 10th. Twenty sessions. Method.—Language of the school to be Japanese. Sessions to be two hours.

First half hour, a lecture by myself on points of grammar, literature and methods of study, with especial attention to the common errors and special

needs of advanced students. The next 30 or 45 minutes a lecture or sermon by a pupil, to be followed by criticism by myself and other pupils. Attention will be given to questions proposed by pupils, and such matters as parliamentary forms, the language of prayer, proper forms of speech when speaking of the Royal Family, etc., etc. It is expected that the matter of methods of language study in general will be discussed by two or more of the pupils, probably at a special session.

Pupils.—It is expected to limit the pupils of the school to those who have completed one term of service in Japan, or who, having devoted some years to language study, can speak freely and preach without manuscript. In addition to these, Associate Pupils will be enrolled. Anyone paying his fee and wishing to attend the sessions of the school without taking part in discussions, is eligible as an associate pupil.

Fees.—The fee for the twenty sessions for Regular Pupils will be yen 10.

The fee for associate pupils will be yen 5, all payable in advance in each case, no rebate for absences.

All those who anticipate joining the school, even those not yet able to definitely do so, are requested to communicate with me, that further preparations may be made.

Very respectfully,

I. K. MATSUDA.

No. 27, Ichiban-cho, Kojimachi, Tokyo.

May 20th, 1905.

[This letter is in reality an advertisement and should be inserted as such. But as it has interest for missionaries we give it a place here.—ED. J. M.]

#### THE IMPERIAL GIFT TO THE Y.M.C.A.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—The article in the *Japan Weekly Mail* of May 20, concerning the Imperial gift of ten thousand yen to the Y.M.C.A. army work is such a tangle of misapprehension that it needs to be straightened out. The article says: "When we ask how much Christianity is there in the whole of the Manchurian Social Entertainment work, the truthful answer is, very little indeed. Pingpong is not Christianity, neither is music. The connection with the Christian creed cannot be seen by ordinary people. . . . but only to point out that there is nothing essentially and exclusively Christian about such work."

It is true of course that such work is not exclusively Christian. The moral Law of Love, of which this Y.M.C.A. army work is a great practical illustration, is as wide as the human race. Indeed it is the moral law of the whole universe. The conscience of every man in the world feels more or less imperatively its demand. The relation of the Christian religion to the moral law is that of means to an end. The Christian religion is the great effort God has made through Jesus Christ to make it possible for men to become free from their past guilt toward the Moral Law and to be able to keep it in the future. When a man comes into personal relationship with Jesus Christ he thereby comes into a relationship with God that gives him peace of conscience toward his past and power not his own to keep the Moral Law. In a proper conception of Christianity there can be no conflict in our thought between faith and works. For one is the means, and the other is the end. And if any man in this world thinks he can satisfy his conscience and keep the Moral Law without the help of Jesus Christ, it simply means that he does not know his own conscience yet and does not know the Moral Law.

All this is elementary, but it is needed to correct the misapprehensions of the article quoted. And it shows that while such work as the Y.M.C.A. is doing in Manchuria is not "exclusively" Christian, it is "essentially" Christian. And the connection between such work and the Christian creed is the same connection that exists between the movement of the railroad train and the steam in the engine. And pingpong is Christianity, and music too, and hair cutting too, when they are done in Manchuria in obedience to the great impulse put into the hearts of men through their relationship to Jesus Christ to keep the Law of Love. Surely there is a connection between the tree and its fruit and the whole Y.M.C.A. work in Manchuria, and a vast deal of other such work in the world, can be traced directly back to the relationship between men and Jesus Christ.

I don't think that any one imagines that the Imperial gift to the work means a personal leaning on the part of the Emperor toward the Christian religion. It shows, as the writer of the article in question justly says, "liberal mindedness and common sense" on the part of the Emperor, and it also shows that the Christian religion has won its way in Japan. And it has won its way as it should win it, not by sword as political power, but by "its fruits."

In another article in the same issue on "Do we Believe," the writer concludes thus: "This means that the majority of professing Christians are nothing more than very liberal-minded Unitarians and that

the supernatural basis of Christianity is no longer deemed essential—Christian morality can fall back on the firmer basis of utility and rationality." Such sayings seem perfectly ridiculous to those of us on the inside. For the vast majority of professing Christians, we who are glad to believe in the Lord God Almighty and in Jesus Christ who came down from heaven to save us from our sin, go on our way rejoicing in the peace of conscience that comes from our belief and in the power not our own to keep the Moral Law. We know the power of the natural selfishness of our own hearts too much to fall back from the "supernatural" help of Jesus Christ to "utility and rationality." And the surest thing we know is that our peace of conscience in the face of all our shameful breaking of the Moral Law of Love has come from the awful relationship of the death of the Son of God to our sin.

In the time in which I have read your truly invaluable paper, I have often wondered if the articles that often appear like the ones here quoted are written by different men or by the same man. They all alike show a strange in season and out of season bias against the Christian religion. I truly hope that only one man among the foreigners in Japan has such an unfortunate personal attitude toward Christianity.

A. D. B.

Tokyo, May 20th, 1905.

#### TAX PAPERS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—Tax papers are now sent out in covers and printed in English so that most of us know what we are asked to pay for, yet to-day the ground rent tax comes from the Kencho all in Japanese. This is the more strange as it is the oldest tax and was, in the receipts, formerly always printed in English, then in Japanese one side and English on the other. But why now in Japanese only? I am sure the English translation would save the foreigner much trouble, and the Kencho Land Office many enquiries. Why this retrograde step.

Yours, etc.

ENQUIRER.

#### TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

#### THE FOURTH RUSSIAN SQUADRON.

London, May 18.

The Fourth Baltic Squadron is ordered to be in readiness to sail on the 14th of June.

#### ROJESTVENSKY'S CONTEMPTUOUS BEHAVIOUR.

Admiral Jonquière has returned to Saigon on board the *Guichen*.

According to information received at Saigon, Admiral Rojestvensky displays unmitigated contempt for an international crisis in connection with the neutrality question. He declares that he will act as he thinks fit, independently of all other considerations.

#### PRINCE AND PRINCESS ARISUGAWA.

London, May 19.

President Loubet received Prince and Princess Arisugawa on May 17.

#### CHINESE PIRACY.

Later.

Earl Percy stated in the House of Commons that Sir Ernest Satow, British Minister at Peking, is communicating with the Chinese Government in reference to the recrudescence of piracy on the Canton River.

#### GERMAN CARGO LINE.

North German cargo steamers which are about to begin running between Bremen and Australia, will call at the principal ports in Java on both the outward and homeward voyages.

#### ADMIRAL BIRILEFF.

London, May 20.

Reuter's St. Petersburg correspondent wires that Admiral Birileff had audience of the Czar yesterday, prior to leaving for Vladivostok to take command of the naval forces in the Far East. The report that he is to assume the immediate command of the Baltic Squadrons is unfounded. Admiral

Rojestvensky will conduct all the pending operations.

#### IMPENDING SIEGE OF VLADIVOSTOCK.

All foreign commercial agents have been requested to leave Vladivostock. A similar measure was taken at Port Arthur prior to the investment.

#### BOMB EXPLOSION IN WARSAW.

Just as General Maximovitch, Governor-General of Warsaw, was about to leave the Cathedral after the Tsar's Birthday Service, a workman, who was attempting to evade two detectives, slipped on the kerb and fell, causing a bomb in one of his pockets to explode. The workman, the detectives, and a Jew who was standing near were blown to atoms; many persons were injured, and neighbouring buildings were wrecked.

#### FRANCO-SIAMESE SETTLEMENT.

M. Delcassé announces that Siam has accepted the frontier demanded by France, and the frontier has consequently been carried back from Cape Lemling to Paknam river.

#### THE DEATH LIST.

London, May 21.

Twenty-one persons were wounded, three seriously, by the bomb outrage at Warsaw. The workman responsible for the outrage was a member of the Physical Force section of the Socialists. The police are conducting a house to house search and are making many arrests.

#### GERMANY AND MOROCCO.

An unusually favourable reception was given at Fez to Count Tattenbach, German Envoy to Morocco. The belief that he was prepared to make certain definite proposals to the Sultan continues to make the Morocco question the subject of special study in Paris and London. Communications are constantly passing between the two Governments.

The rumours of the impending resignation of M. Delcassé, the French Foreign Minister, are revived.

#### THE HOUSE TAX.

In the arbitration with reference to the Japanese House Tax the award will be delivered at the Hague on May 22nd.

London, May 22, 5.35 p.m.

The House Tax Arbitration decision is against Japan.

#### THE BALTIC SQUADRON.

London, May 22.

A Paris telegram from Saigon says that Rojestvensky's auxiliary cruisers returned to the Annamese coast on Friday night and anchored at Port Dayot, outside territorial waters. They were apparently seeking colliers which they were instructed to convoy to the main fleet, which is reported to have gone to anchor at Hainan.

#### THE "CALCHAS" DECISION.

With reference to the *Calchas*, the St. Petersburg Supreme Prize Court has decided to confiscate the cotton and wooden beams, which formed part of her cargo, and to ascertain the destination of parts of machinery which were found on board by enquiry of the owners. The steamer and the rest of the cargo were released. The Court upheld the legality of the seizure of the steamer in order to prevent pecuniary claims from being presented. The interesting point in the judgement is that cotton is pronounced contraband.

#### ADMIRAL BIRILEFF.

London, May 23.

Admiral Birileff starts for Vladivostock on the 25th May.

#### CHINESE RIOTS AT JOHANNESBURG.

The *Daily Chronicle's* Johannesburg correspondent telegraphs that one thousand Chinese attacked the native compound on the 14th of May and killed two Kaffirs and one Indian.

#### RENEWED RUSSIAN ACTIVITY.

There is a notable increase of activity in the despatch of troops from Poland to the Far East. Detachments are starting daily composed of picked men from each regiment, whose places are filled by reservists.

#### NEWS FROM MANCHURIA.

Telegrams from St. Petersburg indicate that the Japanese are assuming a general offensive.

#### THE JAPANESE HOUSE TAX.

The Japanese house tax award, which was given against Japan, declared that the treaties and agreements submitted to the Tribunal exempt both lands in foreign concessions of which the Government has granted perpetual leases and existing as well as future buildings thereon from all imposts and liabilities not specified in the leases. Mr. Motono, Japanese Minister to Paris, one of the arbitrators, recorded his dissent.

#### SCENE IN THE HOUSE OF COMMONS.

London, May 24.

Sir Henry Campbell-Bannerman, leader of the Opposition, moved the adjournment of the House of Commons to draw attention to a statement made by Mr. A. J. Balfour, the Premier, that the question of Colonial preference might be submitted to the Colonial Conference in 1906. Sir Henry maintained that this statement was inconsistent with Mr. Balfour's Edinburgh proposals and subsequent pledges involving the general elections; first, on the question of the Colonial Conference, and secondly in the matter of the Conference's decision that such policy was a safeguard against sudden changes.

A scene unparalleled in the history of the House of Commons followed and lasted for an hour. The Deputy Speaker was finally obliged to adjourn the sitting without putting the question.

#### ADMIRAL BIRILEFF.

Admiral Birileff has been appointed to the command of the Pacific fleet with independent power.

#### THE CASE OF THE "CALCHAS."

Colonel Nolan has called attention in the House of Commons to the case of the steamer *Calchas*. He asks the British Government to protest against the treatment of cotton as contraband.

#### BOMB OUTRAGES IN BAKU.

London, May 25.

Prince Nakashinow, Governor of Baku, and a Lieutenant who was standing by him have been killed by a bomb at Baku. The Chief of the Police at Seidlee was severely injured. The thrower of the bomb escaped.

#### THE "CALCHAS."

Earl Percy, replying to Colonel Nolan's question in the House of Commons, said that when the text of the Russian decision regarding the *Calchas* had been received, he would consider the advisability of further action.

#### PRINCE ARISUGAWA IN PARIS.

President Loubet lunched with Prince Arisugawa. Premier Rouvier, M. Delcassé and Mr. Motono were present.

#### REAR-ADMIRAL POE.

Rear-Admiral Poe has been appointed to the command of the British squadron in the East Indies.

(Received at the Military Head Quarters 2 p.m. 19th instant.)

#### THE WEIYUANPIENMUN DISTRICT.

(Weiyuanpienmun is to the north of Kaiyuan on the road from the latter to Hungchou. Vide map of April 23rd.—Ed. J.M.)

On the 18th instant a force of the enemy consisting of at least one battalion of infantry and a sotnia of cavalry, advanced from the direction of Taolu, and at 1 p.m. arrived in the neighbourhood of Chōshōshi (about 11 miles north-east of Rutaukong). At 4 p.m. this force met our advanced guard and retired towards Taolu.

Again, about 2 companies of the enemy's infantry and 500 or 600 cavalry advanced from the direction of Tung-kekau (about 6 kilometres north of Nanchints, called also Tsenchints), and at 3.30 p.m. this infantry reached the highland south of Kojoushi (vide map of 23rd of April, where Kojoushi will be found on the railway 26 miles north of Kaiyuan). In the official report it is said to be some 2 kilometres north-west of Tsenchingtsz). In succession to this force another body of infantry numbering not less than two battalions arrived at Kojoushi at 4 p.m., and at 5.15 p.m. a part of them penetrated to Tsenchingtsz. Subsequently one battalion of infantry, 2 sotnias of cavalry and 7 guns attempted to advance still farther south, but at 6.30 p.m. they were repulsed by our troops.

#### THE CHANGTU DISTRICT.

On the 18th, at a little after 10 a.m., some 3 sotnias of the enemy's cavalry advanced through Shabotsz and a similar force entered Pakiatz (about 7½ miles north-east of Changtu) but at noon these troopers were completely driven back by our men.

The same day at 9 a.m. a body of the enemy consisting of 4 companies of infantry, about 8 sotnias of cavalry and 4 guns advanced from the direction of Rhshihlipau (north of Changtu on the Changtu-Fenghua road. Vide map of April 23rd.—Ed. J.M.), temporarily pushing back our cavalry to Sukiatz and Changshapau. But at 2 p.m., being attacked by our troops, this force retreated northward. In this fight we had 2 men and 2 horses wounded. The enemy's casualties are not clear but about 20 of his men were seen to fall.

On the 18th at 11 a.m. 500 of the enemy's cavalry advanced towards Kangping and attacked our field-hospital, but being heavily injured by our artillery fire they retreated.

There is no other change.

(Received at the Military Head Quarters p.m. 20th.)

#### WEIYUANPIENMUN REGION.

On the forenoon of the 19th two companies of the enemy's infantry and two sotnias of cavalry again advanced from Tungkau against Tsenchingtsz (Nanchingtsz) but at 1 p.m. they were driven back towards Yangtszling and Mieuhwachieh. Almost at the same time that this force was repulsed a body consisting of a regiment of infantry and 5 sotnias of cavalry, advancing from the north-east, made a strong attack upon our troops in Tsingyangpau, but they were repulsed at 6 p.m.

#### CHANGTU REGION.

After the enemy who pushed south on the 18th instant had been driven back to the line from Shwangmiaotsz to Kinlungsien and Sumienching, nothing occurred except skirmishes between vedettes.

#### RIGHT OF THE LIAO RIVER.

On the 19th instant the main body of the enemy's cavalry on the right bank of the Liao, having concentrated, between noon and 1 p.m. at Kungsulung (some 7½ miles west of Fukumun), made a detour to the

south-west and threatened our lines in rear, but finding our troops vigilant, they failed completely and retired far to the north-west.

(Received at the Military Head Quarters, p.m. 21st.)

#### CHANGTU QUARTER.

On the 20th a force of the enemy consisting of about a battalion and a half of infantry, a regiment of cavalry and 2 guns, advancing from Tankeng (about 10 miles east of Changtu), came round the highlands on the north-east of Santaokau (about 7½ miles east of Changtu), and opened gun-fire at 11.30 a.m. Thereafter 4 guns were seen on the hill north of Tsingyangpau (about 2 kilometres south-east of Tankeng), and at about 4 p.m. some 2 battalions of infantry advanced from a point eastward of that village (Tsingyangpau). They were driven back by our troops. Again at 10 a.m. the same day a force consisting of some 300 infantry, 4 sotnias of cavalry and 3 guns, entered Rhshihlipau from the direction of Kinglungchuan, and having set fire to the place, retreated.

#### RIGHT BANK OF THE LIAO RIVER.

At 10 a.m. on the 20th instant the enemy's cavalry advanced toward Tafangshin (about 13 miles south-west of Fakumun), and attacked on foot. After a fight of 2 hours they were repulsed, leaving over 300 killed and wounded on the field. They retired in disorder a long way to the south-west.

There were small skirmishes at other points but otherwise the position is unchanged.

(Received at the Imperial Military Head Quarters p.m. 22nd.)

#### NEWS FROM MANCHURIA.

The main body of the enemy's cavalry on the right bank of the Liao, which had attempted a wide turning movement in the Fakumun direction and had been frequently repulsed by our rear-guards, passed the night of the 20th—after its defeat at Tafangshin—in Hsiaotatz, which is on the Fakumun-Hsinmintun high-road, 28 miles from Fakumun; and on the 21st retired to the right bank of the Malien River, which flows southward on the west of the Fakumun-Hsinmintun high-way. Meanwhile his cavalry which had remained on the left bank of the Liao, several sotnias strong, was broken by our troops and retreated in disorder to the north.

There is no special change in other directions.

(Received at the Military Head Quarters; 23rd p.m.)

#### RUSSIAN REPULSES.

On the 21st instant at 2 p.m. a force of the enemy consisting of 1 battalion of infantry and about 6 sotnias of cavalry advanced to attack the highland on the north of Tsingyangpau (about 10 miles north of Weiyanpaumun), but by 5.40 p.m. they were repulsed by our troops.

On the 22nd instant at 7.30 a.m. about a battalion of infantry and two or three sotnias of cavalry advanced by the Kirin high-road and the Taolu high-road (Taolu is some 38 miles east of Weiyanpaumun) towards Tsenchingtz (called also Nanchingtz); and another force consisting of about a company of infantry and cavalry approached the highlands on the west of the same place, but both attempts were repulsed.

The enemy's cavalry which had pushed far south on the right bank of the Liao began to retreat early on the morning of the 22nd, and by 5 p.m. on that day no sign of the enemy was to be seen south of Tatum, which is about 17½ miles west of Fakumun.

Trifling skirmishes have taken place in other directions but there is no noteworthy change.

(Received at the Military Head Quarters, 24th p.m.)

#### AT THE FRONT.

At about 7 a.m. on the 22nd instant a force of the enemy's cavalry and infantry were discovered throwing up defensive works on the heights to the north of Hsiekau (about 5 miles north of Weiyanpaumun). Our troops at once drove them off.

At noon on the same day some four sotnias of cavalry approached Taotan (7½ miles to the north-west of Changtu) were repulsed.

The enemy's cavalry which for some days past has been manœuvring on the right bank of the Liao, has now retired to northern Mongolia.

There is no change elsewhere.

(RECEIVED AT THE FOREIGN OFFICE.)

#### THE BALTIC SQUADRON.

A German steamer which arrived at Singapore on the 17th instant reports that on the 15th at 4 p.m. she sighted a Russian fleet of 42 ships in the offing 40 miles from Cape Valera.

The British steamer *Honwan* (?) which arrived at Singapore on the 18th instant, reports that on the 16th at 2 a.m., she saw the lights of about 40 men-of-war in north-latitude 13° 39' and east-longitude 111° 38'. This fleet was proceeding north at a good speed.

#### GERMANY AT HAICHOW.

With regard to the affair of the Germans at Haichow the German newspaper published at Tsingtau says in its issue of the 18th instant:—"The story that Germany has landed troops at Yuchou island opposite Haichow is ridiculous. The Yellow River which debouches at Haichow has many shallows and is difficult of navigation. A survey had therefore to be made, and a gunboat was sent thither for the purpose. She obtained information not yet generally known and it will be published in good time. The surveying has been suspended temporarily until the stormy season is over."

#### KOREAN COMMUNICATIONS.

The transfer of the general post-office and telegraph-office in Seoul took place to-day. The office has been renamed the "Nihon Keijo Yubin-denshin Bunkyo-ku."

#### ROJESTVENSKY.

A Wolff's telegram says:—"According to the *Bourse Gazette* Admiral Rojestvensky is suffering from a severe nervous disorder and has asked to be relieved. It is reported in St. Petersburg and Cronstadt that he will be succeeded by Vice-Admiral Birileff."

#### RUSSIAN REFORMS.

A St. Petersburg News Agency telegraphs as follows under date of the 16th instant:—"An Imperial Ukase has been issued granting certain concessions to Poland, recently the scene of much disturbance. The Governor-General of Poland previously proceeded to St. Petersburg to ask for concessions, but his application was at first said to have been refused. If then the above ukase has really been issued it is doubtless the result of the Governor-General's action. The ukase is said to consist of 6 articles. The first four remove certain disabilities under which the Poles labour and grant to them privileges of leasing and owning land which they have not hitherto enjoyed. The fifth article re-establishes the Assembly of Nobles and imposes upon the Minister of Home Affairs the responsibility of carrying out the arrangements. The sixth article is the

most important. It sanctions the use of the Polish and Lithuanian languages for educational purposes in districts where the Poles or Lithuanians are in a majority. The Minister of Home Affairs is required to give effect to it immediately.

#### THE FOURTH SQUADRON.

In its issue of the 17th instant the *Novoye Vremya* says that the commander-in-chief of the Baltic Squadron has issued the following order to the officers commanding ships:—

"It is necessary that the officers commanding the vessels of the Fourth Baltic Squadron should complete their preparations for leaving port by the 14th of June. The Port Admiralty will use its best endeavours to equip the squadron, and, if necessary, the work will be carried on day and night by relays. If, in consequence of a strike among the workmen any demands can not be met in time, other companies or the factories of the Port Admiralty will be caused to undertake the work. Each commander of a ship will keep a diary wherein he will enter details as to the progress of the work."

A Russian newspaper says that the *Slava* was declared fit for sea on the 14th of May.

#### HAICHOW.

The *Nord Deutsch Allgemeine Zeitung* says this about the Haichow affair:—"The story that the German flag has been raised at Haichow is baseless. That fact has been already declared yet the East-Asian correspondents of an English and an Italian journal continue to credit some part of it at rate. But on the 18th instant the German Minister in China reported that the rumour of soldiers having landed at Haichow was probably suggested by surveying operations undertaken by a German gun-boat. This survey was undertaken in accordance with the usual custom of smoothing away difficulties to navigation such as are well known to exist near the mouth of the Yellow River. There was no raising of a flag, no firing of guns, and still less any collision with the people. It is also wholly untrue that the German Consul at Chefoo announced an idea of posting troops at Haichow in connection with protecting internal navigation. This report having been published by an Italian journal an inquiry was addressed to the Consul from Berlin and it elicited an explicit denial."

#### THE "CALCHAS."

A Telegraph agency wires from St. Petersburg under date of the 20th instant:—"The Russian High Prize Court has rendered the following decision in the case of the British S. S. *Calchas*:—(1) The gun-cotton is to be confiscated. (2) The destination of a small part of the machinery is to be ascertained from its owners. (3) The vessel and the remainder of her cargo are to be released. (4) The seizure of the vessel was proper."

#### SUBMARINES.

The submarines now in Vladivostok, according to *L'Avenir du Tonkin* of April 28th, number 6, and were all sent out by railway. They are of the *Horel*, *Protector*, *Fulton* and *Derhan* types. A large dock has been built for the accommodation of vessels and auxiliary forts have been constructed. Coal is stacked mountains high and innumerable torpedoes are sunk at the harbour's mouth. The garrison numbers 100,000 and is receiving large re-inforcements daily. There are 500 guns. The non-combatants have all been removed.

#### A RUSSIAN RESCRIPT.

The Tsar has addressed the following rescript to Grand Duke Nicolas Nicolaivitch:

"In view of the need of developing the empire's combatant strength, and in order to preserve uniformity of procedure between the high administrative offices of the Army and Navy as well between those offices and other offices, with regard to questions that relate to the security of the State, we consider it necessary to appoint a Permanent Council of National Defence. We therefore direct that a special Council be organized with members nominated by ourselves and we appoint you to be its head, directing you, in accordance with Our commands, to undertake the duty of compiling laws relating to the Council of National Defence, and directing that the Council under your supervision lose no time in carrying out its duties. We are persuaded that the Council of National Defence, having due regard to the great interests of the State, will discharge its functions with all circumspection and without fail."

#### A SHIP'S REPORT.

The steamer *Yuensang*, which arrived at Hongkong on the 22nd from Manila, reported that on the 21st in E. long.  $116^{\circ}8'$ , N. lat.  $20^{\circ}$  she sighted a steamer in ballast coming from the Bashi Straits in a south-westerly direction. She saw another steamer in E. long.  $116^{\circ}45'$ , N. lat.  $20^{\circ}40'$  coming from the same direction and steering the same course.

#### RUSSIAN WOMEN'S DEMANDS.

A telegram from Austria says that 500 Russian women of all classes held a two hour's meeting in Moscow. They discussed political freedom, equality of rights for men and women, cessation of the war, and the establishment of constitutional government.

#### THE BALTIC FLEETS.

Hongkong, May 23.

The steamer *Annamba*, which has arrived at Hongkong from Bankok, reports that when passing down the coast of Indo-China she saw no sign of any Russian ship.

The French Consul in Hongkong made the following declaration in the various local newspapers published on the 23rd instant:—"There have been frequent statements during the past few days to the effect that the Baltic Squadron has returned to the coast of Annam. Such assertions are baseless. According to an official report received to-day from Admiral Jonquieres, he has visited the various harbours on the coast of Indo-China, but did not see a Russian ship there."

#### A RUSSIAN DENIAL.

A St. Petersburg news agency reports as follows:—"With reference to the report that foreign capitalists had proposed to lend to the Russian Government a large sum of money on the security of the state railways, the Russian Finance Department denies that any such offer has been made, and declares that there is no necessity to raise such a loan. Farther, there is no truth whatever in the rumour that the Russian Government has the intention of selling the state railways to private companies."

(RECEIVED BY THE "ASAHI SHIMBUN.")

#### FUSHUN COAL.

Antung, May 21.

Mr. Buto, M.P., who has been to inspect the Fushun coal-mine, reports that the mineral is equal to the best Kyushu coal, and that the vein is 70 feet thick and 50 miles long. He considers it a quite exceptional mine.

(RECEIVED BY THE "NICHU NICHU SHIMBUN.")

#### THE DALAI LAMA.

Peking, May 21.

The Dalai Lama, who had been staying

in Kulon, left that place on the 18th instant and started on his return journey to Tibet via Changkiakau. This news has been sent by the Resident at Kulon to the Chinese officials.

#### GERMANY IN SHANTUNG.

Peking, May 21.

There has been a collision at Kaumihien in Shantung between Chinese officials and German soldiers. Several of the Chinese seem to have been killed or wounded.

(RECEIVED BY THE "HOCHI SHIMBUN.")

Peking, May 20.

In connexion with marking out the 10-mile limit on either side of the railway at Kaumihien, in Shantung, two Chinese commissioners and three other important officials met the German Commission in discussion. Owing to some lawless conduct on the part of the Germans a collision took place and the five Chinese were assaulted by the Germans, some of them being killed and wounded.

(RECEIVED BY THE "HOCHI," "ASAHI," &c.)

#### KOREAN MINISTERS.

Seoul, May 21.

Li Yongik has been appointed Minister of War; Li Chiyong, Minister of Home Affairs; and Li Keunho, Minister of Justice. The portfolio of Finance is still vacant.

#### AMERICAN TOPICS.

Mr. Carnegie's gift of \$10,000,000 to furnish annuities to retired College professors covers the whole of the United States, Canada and Newfoundland and applies to all without regard to race, sex, creed, or colour.

Henry Goll, assistant cashier of the First National Bank of Milwaukee, of which Frank G. Bigelow was president, has been arrested and charged with embezzling \$100,000 of the bank's funds in complicity with Bigelow.

The largest single life policy ever written on an individual in the state of Michigan, namely one for \$200,000, has just been issued by The Mutual Life Insurance Co. of New York, to Hamilton Carhartt, the well-known manufacturer and art connoisseur of Detroit.

Mr. Edward Emerson Barnard, Professor of Astronomy at the Chicago University, has, from observations made at Wilson's Peak, discovered, near the constellation Sagittarius, a previously unknown nebula capable of easily containing a thousand solar systems.

Though five women gave evidence in a divorce suit at Connecticut, U.S.A., that the defendant, the husband, was a drunkard, the judge of the Superior Court refused to accept it unless corroborated by male witnesses. "Women are not qualified to testify as to the various stages of intemperance," he said.

While being initiated into the Knights of Pythias at Little Rock, Ark., Ebenezer Runyan was shot and instantly killed. An officer of the lodge was officiating at the initiation and it is said used a revolver supposed to have contained blank cartridges, but which really contained loaded cartridges. The bullet entered Runyan's brain. The lodge broke up in consternation.

According to an executor's bond filed on April 22, the late William F. Milton of Pittsfield and New York, whose fortune goes to Harvard University, left an estate valued at \$1,300,000. Of this amount \$1,125,000 is in personal property and \$175,000 in real estate. In his will Milton made specific bequests of \$177,500. The estate, however, does not go to Harvard until after the death of Mrs. Milton.

Nan Patterson, the attractive "Floradora" chorus girl who is alleged to have shot Caesar

Young, a well-known bookmaker, on the day the latter was to have sailed from New York to Europe, has faced a jury for the third time and once again the jury have disagreed. There is a possibility now that the proceedings may be quashed. Surely the ordeal of a murder trial before three different juries is about the limit of human endurance.

The greatest gift of municipal art Chicago has ever received has come through a bequest of \$1,000,000 made by Benjamin Franklin Ferguson, a pioneer lumber merchant, whose will was filed for probate on April 14th. It provides for the creation of the B. F. Ferguson monument fund under the direction of the trustees of the art institute. The income from the bequest is to be devoted to the erection and maintenance of statuary and monuments in the parks, along the boulevards and in other public places of Chicago.

Secretary Shaw has decided to cause a retrial of the question whether Japanese saké is dutiable as a still wine. The circuit court of appeals recently sustained the view that saké is to be classified as an "unenumerated manufactured article." This was the case of the United States against W. Nishimiya. The duties will be refunded in this case, but the collector at New York is instructed to continue to assess Japanese saké as a still wine pending a court decision on a new case to be prepared by the attorney general.

A former Californian state senator named Harry Bunkers, has just been sentenced to five years' imprisonment for accepting bribes while in office. Meanwhile the San Francisco tax-collector, E. J. Smith, who levanted with some \$60,000 of the city's cash, has offered to return to San Francisco and "face the music." The agitation for a cleaner municipal administration is growing in San Francisco, where associations are springing up to sweep the fiddler Mayor and his labour associates out of office at the next elections.

There certainly appears to be some reason for the alarm expressed in some of the American newspapers at the extraordinary figures given of desertions from the American Navy. It is stated that last year 10.66 per cent. of the whole number of men serving deserted, and there would appear, therefore, to be good grounds for the view that the American does not take kindly to naval discipline. The fact is of more than merely domestic interest, because it is one which will have to be faced and overcome—if indeed, it can be overcome—before the plans of those who advocate a great increase in the American Navy can possibly succeed.

Madras (Dry Leaf), Medium to best ...

## EXPORTS.

## RAW SILK.

A quiet week with moderate daily doings at firm prices.

Crop news remains good and favourable, and the prospect is bright for a crop fully equal to that of last year.

From Shanghai also news comes that the favourable change in the weather has improved the prospects there and that the silk crop of North China will be probably larger than it was last year.

## SAVE YOUR HAIR

With Shampoos of Cuticura Soap  
and Light Dressings  
of Cuticura.

This treatment at once stops falling hair, removes crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates hair follicles, supplies the roots with energy and nourishment, and makes the hair grow upon a sweet, wholesome, healthy scalp when all else fails.

## MILLIONS USE CUTICURA SOAP

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chaffings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, and for all the purposes of the toilet, as well as by millions of women in the form of washes for ulcerative weaknesses, and many sanative, antiseptic purposes which readily suggest themselves to women and mothers.

## COMPLETE TREATMENT FOR EVERY HUMOUR,

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales, and soften the thickened cuticle; CUTICURA OINTMENT, to instantly allay itching, inflammation, and irritation, and soothe and heal; and CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. A SINGLE SET is often sufficient to cure the most torturing, disfiguring, itching, burning, and scaly skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Australian Depot: R. Towns & Co., Sydney. British Depot: 57-58, Charterhouse Sq., London. French Depot: 5 Rue de la Paix, Paris. FORTER DROG AND CHEM. CO., Sole Props., Boston, U. S. A.

**CUTICURA RESOLVENT PILLS** (Chocolate Coated) are a new, tasteless, odourless, economical substitute for the celebrated liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials, containing 60 doses. CUTICURA PILLS are alterative, antiseptic, tonic, digestive, and the purest, sweetest, most successful and economical of blood and skin purifiers, humour cures, and tonic-digestives.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 3RD, 1905.

## SUMMARY OF NEWS.

THE Crown Prince is slightly indisposed.

PRINCE and Princess Arisugawa arrived at Berlin on Monday, May 29th.

THE son of Prince Fushimi, who was born on May 22nd has been named Hironobu.

ON May 29th, a Russian prisoner at Kuma moto fell into the Shirakawa and was drowned.

ACCORDING to the *Hochi*, the Sapporo, Ebisu, and Asahi Beer Brewing Companies intend to amalgamate.

FIVE hundred workmen employed in the Government tobacco factory at Utsunomiya have gone on strike.

A PEKING telegram to the *Nichi Nichi* says that Germany has established a consulate at Chinan, Shantung province.

THE promoters of the Yokohama Railway Co.—the line between Kanagawa and Hachioji—met on May 27th and decided to complete the

purchase of land, before this autumn and to finish the construction within two years.

A QUANTITY of new raw silk was brought to Kanazawa on May 28th, and the quality is reported to be excellent.

A SMALL quantity of new rice was brought on May 29th from Shigehara, Kadzusa province, to Chiba. The quality is good.

A CHARTER for the construction of the Yokohama Railway—between Kanagawa and Oji—has been given by the Minister for Communications.

THE new American Minister to Peking, the Hon. W. Rockhill, was suffering from gout on arrival at Shanghai and had to decline all social invitations.

MR. T. ABE and four other directors of the Meiji Life Insurance Co., Tokyo, have been prosecuted on a charge of an infringement of the Commercial Code.

MAJOR-GENERAL ISHIMOTO, Vice-Minister for the Army, Major-General Morata, Lieut.-Colonel Horiuchi and other staff officers left Seoul on May 26th for Manchuria.

A HAIL-STORM was experienced on May 25th, in Aso and other districts near Utsunomiya. A woman was killed by a thunder-bolt. Damage was caused to the crops.

A CHEFOO telegram reports that 177 Russians were removed on May 23rd from Port Arthur and were delivered to the Russian Consul in the presence of the French Consul at Chefoo.

PRINCE Fushimi, Special Envoy to the Korean Court, left Chemulpo at 9 a.m., on May 30th, for home by a transport. By the same ship, 48 members of both Houses are returning.

COUNT ARCO Valley, German Minister, has presented a hundred yen to the War Department to be distributed among families of the workmen in the Tokyo arsenal who were killed in the recent explosion.

THE dividend of the Nippon Sugar Refining Company, Tokyo, for the first half year is believed to be 10 per cent (the rate being 20 per cent per annum). The ordinary general meeting will be held in the middle of June.

FOUR cars of a freight train were derailed at 3.20 p.m. on May 28th, at Kamakura, causing damage to the railway. Repairs were completed before the evening. The cause is reported to be the negligence of a pointman.

EARLY on the morning of May 30th, fire broke out at Yashiro, in the district of North Hata, near Karatsu, destroying some hundred buildings, including a coal warehouse and the office of the Karatsu Coal Mining Company.

DURING April, the income of the post, telegraph, and telephone offices throughout the Empire was yen 3,028,435.01, which shows an increase of yen 473,281.25 over that of the corresponding month of last year.

EARLY on the morning of May 27th, the steamer *Taiyu Maru* collided with the steamer *Tairei Maru* off Imaharu near Osaka, the result being that the latter sustained severe damage. The cargo and crew of the damaged ship were saved.

ABOUT 1 p.m., on May 27th, the Nippon Yusen Kaisha's chartered steamer *Oro* (3,353 tons gross) now at Kobe, took fire. Through the efforts of the Harbour police the fire was put out before

much damage was done. The cause is not yet known, but the flames are reported to have originated in a room near the engines. The ship usually runs between Kobe and Otaru.

SUNDAY, May 28th, being the anniversary of the birth-day of the Empress, peers and high officials were entertained at noon in the Homei Hall of the Palace. They were not received by Her Majesty in audience as she is still suffering from slight illness.

AN official telegram reports that at 10.40 a.m., on May 27th, fire broke out in Hanawa-machi, Akita, and the flames immediately spread, owing to a strong wind, to the streets adjoining. A hundred and forty buildings and seven telegraph poles were mined down.

TWO dead bodies—a man about 30 years old and a woman of some 23 years—were washed up opposite No. 7, Bund, Yokohama, early on the morning of May 27th. They were bound together with a cotton cord and are believed to have committed suicide by drowning themselves.

THE construction of the Formosan Jukwan Railway between Kelung and Takao, Tainan, 241 miles, has been completed, except a section of 9 miles between Tainan and Taikokei over which a tramway temporarily runs. The journey between the north and southern points of the island can now be made in 18 hours.

ON May 17th, a French steamer was captured by the Japanese in the neighbourhood of the Pescadores. On examination the crew insisted that the ship was a regular liner between Shanghai and Hongkong. However, it is believed that she is employed by the Russia to spy out the whereabouts of the Japanese squadron.

A TELEGRAM from Morioka reports that Mr. T. Tsurusaki, an engineer of the Nippon Railway Company, was found murdered early on the morning of May 27th in his house, having received severe injuries on the head. A man, formerly an employee of the Morioka Railway Station, was subsequently arrested as a suspect.

AT 3.10 p.m., on May 30th, three cars of a freight train from Kobe were derailed at Tenryogawa station on the Tokaido Railway, causing damage to the permanent way. Repairs were completed in two hours. Owing to the accident, the passenger train which left Kobe at 1.30 p.m., on the previous day for Shimbashi, was detained at Tenryogawa for forty minutes.

TOKU SAITO (19), the younger sister of F. Saito, handkerchief dealer, Ashibiki-cho, Yokohama, on the morning of May 27th, attempted to murder a tailor named T. Motoki, at Suruga-cho, inflicting a severe injury on his throat with a knife about 6 inches long. Subsequently she attempted to commit suicide, injuring her throat with the same weapon. The man was removed to the Yokohama Hospital and the woman to the Koshimidzu Hospital. The cause is jealousy.

A VERY sad affair is reported from Shizuoka. On May 26th, Colonel Milchensky, of the Russian Army, suddenly fainted while making preparations to celebrate the birth-day of his son, Lieutenant Nicholas Milchensky. The *Fiji* says that the General had just received a bundle of the *Novoye Vremya* and in its columns read a notice from his wife that the remains of the Lieutenant, who had been killed in Manchuria, had been brought home. Colonel Milchensky was subsequently removed to hospital.

## THE BATTLE OF TSUSHIMA.

Saturday, May 27, Night.

Saturday was a day of rumours in Tokyo. Early in the forenoon news was received in responsible quarters to the effect that a Russian Squadron, numbering 21 ships according to some accounts, 27 according to others, had reached the Saddles on the morning of the 26th. The Saddles are off the mouth of the Yangtze on the north of the Chusan group, and Rojestvensky's presence there seemed entirely consistent with the intelligence received on the 26th as to two of the Volunteer Fleet, the *Petersburg* and the *Smolensk*, having entered the Yangtze as far as Woosung and then steamed out again. They had evidently detached themselves from the Squadron and gone out again to re-join it, so that Rojestvensky's presence on the China coast became an almost assured fact. Not altogether assured, however. Some authorities still believed that the main fighting force of the Baltic Squadron, having passed the Bashi Strait, was off the east coast of Formosa, whither the two auxiliary cruisers had proceeded after their inexplicable expedition up the Yangtze. By and bye, however, intelligence was received confirming the original statement as to the presence of a large number of Russian ships in the neighbourhood of the Saddles, but unfortunately there was nothing to indicate clearly whether they were Rojestvensky's principal war-vessels or whether they were chiefly his auxiliary cruisers, transports and, perhaps, a few of his weakest cruisers. The Naval authorities probably knew, but they held their peace.

Presently another item of news arrived, namely, that at 8 a.m. on the 25th instant a four-masted war-ship had been sighted off Furiwake in Etorufu Island, and that, shortly afterwards, four other ships had been seen, all under a full head of steam. If these were Russian vessels it was evident that they must have passed the strait between Etorufu and Kunajiri and were then en route for Soya, in which event they would have been in Hakodate before the intelligence of their presence in the Furiwake offing reached Tokyo. Throughout Saturday no confirmation of this report was received, but an impression gained ground that Rojestvensky had divided his fleet into several sections, and that these would essay the various passages nearly simultaneously, namely, Tsushima, Tsugaru and Soya.

At about 11 o'clock in the forenoon a telegram from Saseho, sent by an apparently trustworthy authority, announced that the Russians were approaching the Tsushima Strait in two divisions, evidently with the intention of attempting to force the eastern and western passages simultaneously. It was added that all westward sailings of Japanese vessels had been interdicted and that the coast in general had been warned. At noon Fukuoka sent a message to the effect that news was to hand saying that the enemy's ships were approaching Tsushima; and shortly afterwards the Authorities received information that some Russian ships had actually been sighted near Tsushima. Implicit confidence was not placed in these rumours. It was noticed that the Naval Department did not issue any bulletin, and that the suspension of all westward sailings could not be certainly interpreted to mean the imminent approach of the Russians, since such a precaution would have been deemed essential in consideration of their presence off the Saddles.

At 4 p.m. the *Hochi Shimbun* issued an extra as follows:—"According to a telegram received in a certain quarter the enemy's Squadron has come into collision with our ships in the east passage of the Tsushima Straits and a battle is now being waged." Shortly afterwards another telegram in the same sense reached another quarter, and the keenest interest was awakened, though the Naval Authorities still observed strict silence. There could not be much doubt that some Russian vessels were approaching or had approached Tsushima, but whether they were the main fighting squadron or whether a battle had really commenced remained uncertain.

Shanghai also sent one strange telegram at 5.45 p.m. on the 26th. It ran thus:—"Intelligence from Woosung says that in the fight outside the Bell Buoy, several Japanese torpedo-boats withdrew in order to obtain reinforcements." No whisper of this fight was audible in any other quarter and people could only marvel at the intelligence.

The following telegram was received at the Foreign Office on the afternoon of the 27th:—"Admiral Birleff left St. Petersburg for the Far East on the 25th instant." The *Asahi Shimbun* also received a telegram on the same subject:—"Vice-Admiral Birleff, without any notice, has left St. Petersburg for the Far East. His departure did not produce the slightest effect in the Russian capital which shows that the war is more unpopular than ever."

Sunday, May 28th, 9 a.m.

There is no definite public confirmation this morning of the reported fight in the Tsushima Straits, but there are numerous statements in the sense that on Saturday forenoon the Russians were drawing near the passage and that they had been sighted by the Japanese fleet. One telegram said that the Russian Squadron was nearing the Eastern Passage at 11 a.m., and another represented it as 10 miles south of Kanzaki promontory at 10 a.m. Several of the leading newspapers had telegrams all indicating the broad fact though differing slightly as to details. Karatsu sent news that the sound of cannonading had been heard in the distance. The *Yorozu Choho*, notably, published a message from its Moji correspondent saying that heavy cannonading began to be heard at 2.45 p.m. and was still going on at the time of the message's despatch. At 5 p.m. another wire to the same journal said that the sound of firing was gradually drawing near Mutsurejima, namely, the place where the sinking of transports took place last year. The weather was described as foggy in the forenoon but fine in the afternoon with a strong wind and high sea.

There is further reason to think that some part of Rojestvensky's vessels have made the Soya Strait. A telegram from the headman of Rumoi in Etorufu to the Administrative Chief of Hokkaido says that on the 25th instant a war-ship, evidently not Japanese, was seen steaming in the offing, and that she was followed by 5 other ships, some of them being transports. The inference is that Rojestvensky sent his weaker vessels and his transports to Soya while he himself took his fighting Squadron to Tsushima.

But why did Rojestvensky separate six of his auxiliary cruisers and transports and send them to Shanghai? The explanation most generally accepted is that he wanted these vessels up to the last moment and that he apprehended too much danger for them if they were left to steam northward without a strong convoy. The universally accepted

theory is that Rojestvensky passed the Bashi Straits or the Bata Straits about the 19th instant, and thence steering up the east coast of Formosa, stood over towards the Saddles, ultimately heading for the Tsushima Straits. A Norwegian steamer, the *Oscar II*, which entered Kuchinotsu from Manila on the 23rd instant, reports that on the 19th, in east longitude 113° and north latitude 20°, she saw 21 Russian war-ships, 14 auxiliary cruisers and 6 destroyers. She was stopped and visited, and one of the Russian officers said that the Squadron was bound for Tsushima. It will have been observed that the reports relating to the presence of the Russians at the Saddles spoke of some 21 ships, other of 27, whereas the *Oscar II* saw 41. How these were subsequently divided it is impossible to say, but it is evident that, speaking broadly, Rojestvensky sent his weakest vessels north and himself steered with all his fighting force in the direction of Tsushima.

It may be mentioned here that definite official contradiction is furnished as to Shanghai's rumour of a fight outside the Bell Buoy or of the presence of Japanese destroyers in that vicinity.

As we write (9 a.m. 28th) news reaches us from a trustworthy quarter that while passing Formosa the Russians sunk an American steamer, the *Oldham*, laden with the troleum. The statement comes in that bald form, but there is no reason to doubt it. What became of the crew and why the vessel was sunk there is no information. It does not appear that any Japanese steamer fell in with Russians. Precautions had been taken so that misfortunes of that kind were averted.

The leading Tokyo newspapers, in their issues of the 28th instant, make little mention of the rumours that a battle has already taken place. But they applaud Rojestvensky for having abandoned his policy of delay and hesitation, and for at length advancing boldly to put his fortune to the test. They also speak with confidence of the result of the impending battle, which will be one of the greatest and most momentous fights in the history of the world. It is generally conjectured that the vessels sent northward to Soya were intended to create a diversion and to draw off Togo's ships from the Tsushima Strait. Looking at the dates, we find that the 5 or 6 vessels which have passed Kunajiri, were off Etorufu on the 25th, whereas Rojestvensky himself was nearing Tsushima on the 27th. He may have assumed that the news of the northern essay would reach Togo on the 25th and that the Japanese Admiral would at once despatch a force toward Soya, whereafter the main Russian Squadron would have steamed at full speed for Tsushima. Still, that is scarcely a working theory. For, in the first place, unless Togo had previously determined on making his principal dispositions at Tsugaru and Soya it would have been quite futile for him to steam thither after receiving news of the appearance of Russian vessels off Etorufu; and, in the second place, Rojestvensky, had he contemplated such a ruse, would not have sent a mob of vessels to the Saddles on the 26th, thus giving notice of his own whereabouts. We are at a loss to interpret his strategy, except on the hypothesis already stated in these columns, namely, that Tsushima was his objective throughout; that he made no ultimate attempt to deceive Togo, and that the vessels sent northward were the tail of his fleet, ships which could not possibly have been taken into action.

May 28, 10 a.m.

Rumours, now apparently quite trust-

worthy, arrive to the effect that the Russian Squadron was sighted approaching Tsushima on the 28th and that the sound of heavy cannonading was subsequently heard. This confirms the above statements, and doubtless before going to press we shall have some definite news of the fight.

May 28, 10.20 a.m.

Telegram, apparently trustworthy, received in Tokyo on the afternoon and night of the 27th show that a naval battle began at a little past 2 o'clock on the afternoon of that day in the Tsushima Straits, and that the general result was favourable to the Japanese. There are innumerable reports but the Naval Authorities maintain and enjoin silence.

Monday, May 29th, a.m.

An embargo of the strictest nature was placed on the press during Sunday, the 28th instant, and thus though many reports of a more or less trustworthy character reached Tokyo, none of them was published. The line taken by the Naval Department was that pending an explicit telegram from Admiral Togo it would be merely mischievous to allow any publication, and Togo apparently was too busy with the Russians to spare any time for sending telegrams. At this moment of writing there has not yet been any removal of the embargo or any official utterance. It is, however, universally believed that a signal victory has been won by the Japanese. The Russian Squadron seems to have been sighted by the Japanese scouting ships at a little after 10 a.m. on the 27th. It consisted of 26 or 27 ships (there is a difference of one unit in the accounts) and it moved in two lines, advancing steadily towards the Tsushima Straits, and evidently prepared to dispute the great and vital question of the final mastery of the Far-Eastern Sea. Never did a more momentous result depend on the issue of a single battle, and it is a curious and interesting fact that when the news of Rojestvensky's approach reached Tokyo, the feeling universally inspired was one of profound exultation. The Japanese public believed implicitly in the success of the country's sailors, and the country's sailors, we may be sure, had equal faith in themselves. At a few minutes after 2 p.m. the fighting began in the Genkai Nada, that is to say, immediately within the Eastern Channel of the Tsushima Strait, the channel between Iki and Tsushima where a breadth of 38 miles offers for the passage of ships. Apparently the Russians were suffered to pass this Channel before the attack commenced, but as to that and many other points we must remain in doubt. It is also rumoured, though we do not credit the rumour, that Rojestvensky was not accompanied by the Third Squadron; that he had chosen the best fighting ships of the Second Squadron only, and had sent the comparatively slow and inefficient vessels of the Third Squadron northward to Tsugaru or Soya. Whether he had calculated on diverting Admiral Togo's attention to other quarters by the aid of manœuvres which are not yet clear to the public, or whether he had taken his courage in both hands and advanced boldly into the lists, we can not now say. The former seems to be the view taken by the *Fiji Shimpō*, but it is certain that if Rojestvensky entertained any such design, he failed to impose upon Togo. The Japanese Admiral had laid his plans before the Baltic Squadron left the waters of Madagascar, and he never wavered from his pro-

gramme. The forenoon of the 27th was foggy, and had the fog held we might now have to record Rojestvensky's safe, or comparatively safe, escape to Vladivostock. But the mist lifted at noon, just as though the weather had conspired against the Russians. Rojestvensky had undoubtedly 8 battle-ships, 5 cruisers, 3 auxiliary cruisers and 8 destroyers. But there all trustworthy information stops. The Naval Authorities promise to publish news this afternoon in the form of a semi-official statement, and from this we infer that Admiral Togo's reports have not yet come fully to hand. It is believed, however, that the fight lasted all through Saturday afternoon; that it was continued by the torpedo-craft during the night; that it was renewed on Sunday, and that another torpedo attack took place on Sunday night. Evidently the scene of battle must have grown more and more distant throughout Sunday, as the Russians naturally struggled forward towards Vladivostock, and that fact accounts for the delay in receiving definite news. The military and naval authorities have generally made it a rule not to publish official statements during the course of a battle.

It thought in some quarters that Shanghai was the scene of a deliberate attempt on the part of the Russians to throw dust in the eyes of the Japanese. All kinds of rumours came from Shanghai during the 26th and the 27th. There were bewildering rumours, but the general impression conveyed was that a mob of Russian vessels had assembled somewhere in the vicinity of the Saddles, and was actually anchored there up to the night of the 26th. Had these vessels represented Rojestvensky's main strength, it is obvious that they could not have approached Tsushima during the 27th, as the voyage from the mouth of the Yangtze to the Korean Straits requires at least 24 hours. Hence the tales from Shanghai might have deluded the Japanese into thinking that Rojestvensky's approach was still comparatively remote. But we do not see what other deception can have been contemplated, and against this *ruse* has to be set the fact that the appearance of Russian vessels at the Saddles must be interpreted as indicating an intention to try the Tsushima passage, and was in truth so interpreted.

A telegram from Sapporo dated p.m. on the 28th reports that two Russian vessels were seen steaming south-west off Mashiki. It is conjectured that these were the Vladivostock cruisers moving down to the assistance of Rojestvensky. From Mashiki to Tsushima the distance is about 900 miles, so that the cruisers evidently entered the field a little too late, but it is not impossible that they rendered some assistance.

May 29th, p.m.

Since the above was in type the Naval authorities have published in brief outline an account of Japan's great victory, a victory which will astonish the world. The Japanese Navy had already proved itself to be a fighting force of the highest competence, but the outcome of its encounter with the united Second and Third Squadrons of the Baltic Fleet was nevertheless viewed with no little anxiety. The Russians had 8 battle-ships against 4 on the Japanese side, and out of the 8 no less than 4 were first-class new vessels which should have fully equalled Togo's four. The other four were second-class vessels, but of excellent fighting capacity, and each of them ought to have more than outbalanced any of the first-class cruisers on the Japan-

ese side. Then there were five first-class cruisers under Rojestvensky, three coast-defence ironclads and four second-class cruisers, with 8 destroyers, besides a large number of auxiliary cruisers. Such a force ought to have proved fully a match for the Japanese United squadrons. The latter, however, went into the fight with absolute confidence and the results warranted their faith in themselves. Out of the 4 first-class battle-ships on Rojestvensky's side, 2 were sunk, 1 captured and 1 escaped. Out of the 4 second-class battleships one was captured, and 3 escaped. That is the most favourable calculation for the Russians. Out of the 5 first-class cruisers 3 were sunk and two escaped. Out of the 3 armoured coast-defence ships, 1 was sunk and 2 were captured. Out of the 4 second-class cruisers, 2 were sunk, 1 seems to have subsequently surrendered and 1 escaped. Out of the 8 destroyers 3 were sunk and 1 was captured. The sum total is that out of a fleet of 28 fighting ships no less than 17 were either sunk or captured. We know nothing as yet about the details of the fighting, but there can be no second opinion about the overwhelming and brilliant character of the Japanese victory, or about the signal effect this battle must exercise upon the war.

(Received at the Foreign Office.)

In connexion with the naval battle the following numbers of Russian officers, petty officers and bluejackets have come ashore and been picked up at the undermentioned places:

Kawate in Iwami .....	31
Tsushima .....	75
Sasebo .....	1,200
Hamaba in Iwami .....	247
Nishima in Yamaguchi .....	55
Kamamura in Tsushima .....	99
Hitaka in Tsushima .....	162
Tsuchida in Iwami .....	22
Miyakono in Iwami .....	267
Keichi in Tsushima .....	75

Capt. Rojinoff, of the *Admiral Nakhimoff* is amongst the number.

(Received at the Naval Head Quarter Staff.)

The following reports have been received from Admiral Togo, Commander-in-chief of the Combined Squadrons, with reference to the naval battle which has been going on since the 27th in the Sea of Japan:—

No. I.—Received on the 27th in the forenoon.

The Combined Squadron, receiving intelligence that the enemy was in sight, have put to sea at once and are proceeding to destroy him. The weather is fair but the sea rough.

No. II.—Received on the night of the 27th.

To-day the Combined Squadrons attacked the enemy's fleet near Oki Island and broke it. At least 4 of his ships were sunk and the others received heavy injury. Our squadrons are little hurt. From night-fall the torpedo squadron commenced their attack.

No. III.—Received a.m. 29th.

Since the 27th instant the main body of the Combined Squadrons has been pursuing the remnants of the enemy's fleet. On the 28th, in the neighbourhood of the Liancourt Rocks we met a Squadron consisting of the *Nicholas I* (battle-ship), the *Orel* (battle-ship) the *Admiral Seniavine* (armoured coast-defence ship), the *Admiral Apraxin* (armoured coast-defence ship) and the *Isumrud* (cruiser). We attacked. The *Isumrud* separated from her consorts and escaped. The rest surrendered, after a time. Our squadrons did not suffer.

According to the statements of prisoners the enemy's vessels sunk on the 27th were the *Borodino* (battle-ship) the *Ale x-*

ander III. (battle-ship), the *Jemichug* (cruiser) and three others.

We have taken prisoners Rear-Admiral Nebogatoff and 2,000 others.

The Naval Head Quarter Staff adds the following:—Collating the reports received from commanding officers other than the Commander-in-Chief and from watch-towers since the 27th the enemy's losses have been as follow:—

	Tonnage.
<i>Admiral Nakhimoff</i> (armoured cruiser)...	8,524 sunk
<i>Dimitri Donskoi</i> (do) .....	6,200 sunk
<i>Vladimir Monomakh</i> (do) .....	5,593 sunk
	after capture
<i>Svetlana</i> (protected cruiser) .....	3,727 sunk
<i>Admiral Oushakoff</i> (armoured coast-defence ship) .....	4,126 sunk
<i>Kamchatka</i> (transport) .....	7,207 sunk
<i>Irish</i> (do) .....	7,507 sunk
Large transport unidentified .....	captured
Three destroyers .....	sunk
One destroyer .....	captured

The names given in this list must be supplemented by those in Admiral Togo's report namely:—

<i>Borodino</i> (battle-ship) .....	13,516 sunk.
<i>Nicholai I.</i> (battle-ship) .....	9,700 captured.
<i>Orel</i> (do) .....	13,516 captured.
<i>Admiral Seniavine</i> (armoured coast-defence ship) .....	4,126 captured.
<i>Admiral Apraxin</i> (armoured coast-defence ship) .....	4,126 captured.
<i>Alexander III.</i> (battle-ship) .....	13,516 sunk.

Putting the list in another form it stands thus:—

	Sunk.	Captured.	Total.
Battle-ships .....	2	2	4
Armoured coast defence ships .....	1	2	3
Cruisers .....	5	0	5
Transports .....	2	1	3
Destroyers .....	3	1	4
Grand Total .....	13	6	19

It is not clear whether the 3 vessels stated by the prisoners to have been sunk are included in the above. In addition to the 2,000 prisoners taken by the main squadron, 1,000 others were captured by the other squadrons.

(RECEIVED BY THE "YOKOZU CHOHO.")

A Russian vessel believed to be the *Izumrud*, with 300 officers and men on board, mostly wounded, made the coast of Iwami Prefecture on the 28th flying a white flag. The members of the Red Cross hospital in the vicinity are succouring the wounded.

(FROM THE "ASAHI SHIMBUN.")

#### HOW THE NEWS WAS RECEIVED IN ENGLAND.

London, May 29.

Although the Japanese victory was fully expected in well-informed circles, the news of the almost complete annihilation of the Baltic Fleet has produced the deepest impression upon the mind of the public. The feeling of confidence in Admiral Togo, which has never changed, has again been endorsed by the new victory. It is generally conceded that the victory is a most brilliant one and will probably bring about a decisive effect on the war.

All the evening papers are lavish in eulogizing the Japanese success, and, referring to the action of Rojestvensky, express a certain amount of sympathy towards him on account of the fact that he has displayed more ability as a naval commander than expected.

Wednesday, May 31st.

One of the most interesting questions of the hour is the fate of the ships not accounted for in the official despatches. These despatches, it will be remembered, indicated uncertainty as to whether three vessels which the Russian prisoners spoke of as having been sunk were included in the list contained in the

official reports. The vessels which may have escaped are the battle-ships *Knias Suvaroff*, *Osslabaya*, *Sissoi Veliky* and *Navarin*, and the cruisers *Aurora*, *Oleg*, *Izumrud* (?) and *Almas*. Now a telegram has reached the *Nippon* from Fusan saying that the *Oleg* sank off Cape Kesshiya, and that there is no hope of saving the *Navarin*, though her crew have been rescued. The *Nichi Nichi* and the *Asahi* say that the pursuit was still continuing on the afternoon of the 29th, and that the sound of cannonading was heard at Maizuru. There is also talk of the *Knias Suvaroff* having been sunk, but no confidence can be placed in any of these rumours pending further official intelligence. The *Kokumin* has a telegram stating distinctly that the ship which came to Tsuno-mura in Iwami and surrendered was the cruiser *Izumrud*, as already conjectured in these columns. Moji also telegraphs under date of the 29th to the effect that a Russian ship was then off Hagi in Yamaguchi prefecture. In short, there are many reasons to think that the tale of Russian losses, formidable as it is, may have to be supplemented.

The captain of the *Admiral Nakhimoff* says that his ship was apparently struck by a Japanese torpedo at half-past seven on the evening of the 27th. There was a heavy concussion, and the vessel immediately began to sink. Out of her crew of some 600 very few were saved, but some managed to lower boats and others swam away with buoys. The Captain himself got off in a steam-launch and was picked up next day by a Japanese fishing boat. He was assured that although he had been yesterday an enemy of Japan, the fight was now over and he might count on being treated exactly like a Japanese subject.

The accounts agree that Rojestvensky's Squadron was first sighted near Quelpart at 6 a.m., and that he began to make the passage of the East Channel of Tsushima at 10.40. It was then foggy and the greatest disappointment prevailed among the Japanese lest the fog should assist the Russians to escape. There is reason to suspect that Rojestvensky himself was induced by the fog to make his attempt, for otherwise his wisest plan might have been to essay the passage during the night. Moreover, the Japanese took care not to show their full strength. They allowed Rojestvensky to see a small squadron only, and this fact combined with the fog drew him on. But just as Togo's ships came down the West Channel to place themselves on the rear of the Russians, the fog cleared off, and the battle commenced within the triangular space having the islands of Iki, Tsushima and Oki at its three points. Rojestvensky seems to have made a great mistake from the outset. He marshalled his ships in two lines, the cruisers on the west, the battle-ships on the east. Thus, when Togo came round from the west to attack he found himself confronting the line of comparatively weak cruisers, whereas the powerful battle-ships were steaming between the cruisers and the mainland whence no danger was to be apprehended. The result was that the cruisers suffered terribly at the hands of the Japanese, and Rojestvensky's formation was completely broken. His squadron does not seem to have recovered its organization from that time, and on the other hand, the injury he was able to inflict on the Japanese was trifling. It may here be stated that the Japanese losses seem to have been confined to the following, though as yet we have only rumour to guide us:—

The second class cruiser *Kasagi* (4,784 tons), struck below the water-line, and obliged

to leave the line of battle, but subsequently repaired so as to resume her place.

The third-class cruiser *Izumi* (originally *Esmeralda* 2,950 tons) heavily injured but not sunk; compelled to leave the fighting line.

Two torpedo-boats sunk, but most of their crews saved.

It is an almost incredible record. These Japanese losses are of the most trifling nature, whereas Rojestvensky's big fleet may be said to have been almost annihilated. How was it done? That is the great question and as yet no definite answer is forthcoming. Only the *Asahi Shimbun* says that the submarines achieved a signal success. These engines of destruction had never previously been used in war and they are rumoured to have accomplished everything that might have been expected of them. But of course neither torpedo-craft nor submarines had anything to do with the surrender of the four iron-clads off the Lian-court Rocks.

The loss of life on the Russian side must have been terrible. There is one sad record. The bodies of 170 men have come ashore at Tsuchida-mura in Iwami.

#### THE JAPANESE PRESS ON THE VICTORY.

It may well be supposed that the newspapers of Tokyo are jubilant over the great victory just won. Every onlooker must have noticed what an apparently calm demeanour the nation preserved from the time when the Baltic Fleet passed the Straits of Malacca. No anxiety was allowed to appear. All classes went about their business quietly, and it could not possibly have been inferred that a great national crisis was impending. But now that the crisis is happily passed, now that the possibility of a tremendous disaster has been replaced by the certainty of a brilliant victory, the unequivocal tone of rejoicing on the part of all the newspapers shows how much solicitude was really concealed under a previously placid demeanour. The truth is that had Rojestvensky served the Japanese Squadrons as he has himself been served, a situation of stupendous gravity would now confront Japan. She has an army of some five hundred thousand men beyond the seas, and a signal victory won by the Russian Admiral would have practically severed the communications between this great army and its base, and would have rendered the return of the troops extremely hazardous if even possible. With such issues in the balance the Japanese must have felt that the fate of the empire was at stake, and Russia must have felt that she had still a card to play which might radically alter the complexion of the whole game. It is evident that Admiral Togo had not a moment's doubt about the result. All his despatches in the past have been marked by a tone of the utmost sobriety, but in reporting the fact that the Baltic Fleet had loomed in sight on the forenoon of the 27th, he used the words *rengo kantai wa tadachi ni shutsudo shi kore wo gekimetsu sen to su* (the combined squadrons are going out at once to attack and destroy the enemy). The expression *gekimetsu* (attack and destroy) is curiously unlike anything that a knowledge of Togo's habits of thought and language would have suggested as likely to be employed by him at such a moment. He must have had all his plans thoroughly matured and he must have been quite convinced of their infallibility. Russia's naval power is now completely broken. The question is what will she do. There remains no conceivable reason for continuing the war. This

year 1905 is the centenary of Trafalgar, and Togo may well be called the Nelson of the Orient. The Japanese empire is now secure. Defeat would have undone all previous successes. Victory has confirmed and enhanced them. The Russian armada is no more and the island empire can breathe freely. To Biriloff has fallen the lot of a second Skrydloff.

Such is the tone of the Tokyo press. It may well be jubilant, and never have we seen it more jubilant. Whether Mukden or Tsushima is the greater victory seems to be an open question in the mind of the nation.

(Received by the Naval Head-Quarter Staff.)

With reference to the news recently published that the Baltic Squadron had sunk an American steamer on the coast of Formosa, it turns out that an English steamer, the *Oldham*, was in question, and that she was captured, not sunk. The master, the engineer, the purser and the cook were taken off by the Russians.

To-day (30th) at 12.30 p.m. the *Orel* reached Maizuru and at 10.40 a.m., the *Nicolai I.*, the *General Admiral Apraxin* and the *Admiral Seniavin* reached Saseho, all safe.

(RECEIVED BY THE "JIJI SHIMPO.")

It is stated that a part of the enemy's defeated squadron, namely, the battle-ship *Ossliabya* and the cruisers *Aurora* and *Almas*, being badly injured by the Japanese fire in the battle on the 27th, left the fleet and fled to Shanghai.

Further, among the vessels whose fate remained uncertain until yesterday, the battle-ship *Suvaroff* and three others (presumably the *Sissoi Veliki*, the *Navarin* and the *Oleg*), have gone ashore in the Sea of Japan or were sunk during the battle on the 28th.

The battle-ship *Orel* and 3 others which surrendered to our fleet on the 28th instant, had the Japanese flag run up immediately and have already arrived in port.

(RECEIVED BY THE "KOKUMIN SHIMBUN.")

The ships that went ashore at Hamada in Iwami numbered 3. One of them was the *Isumrud*, already reported; one was a vessel like the *Suvaroff* and the third resembled the *Aurora*. News of the capture of three ships may soon be expected.

Thursday, June 1st.

The *Jiji Shimpō* has a telegram from Maizuru which says that when the battle-ship *Orel* entered that port the marks of the numerous shells that had struck her were very palpable and her condition was suggestive of the terrible mauling she had received. There were 600 prisoners on board including 30 officers, and they were afterwards assembled in the park preparatory to being assigned to their quarters ashore. The captain had received a wound in the head, and all looked pallid, exhausted and profoundly dispirited.

The *Nichi Nichi Shimbun* says that the Volunteer Fleet steamers *Castrona* (6800 tons) and *Aryol* (8175 tons) have been captured and brought to Saseho. These vessels were nominally serving as hospital ships to Rojestvensky's Fleet, but since they are fitted with wireless telegraphic apparatus and are known to have performed the function of scouting ships, it is probable that they will be confiscated. They are of course distinct from the large special-service steamer officially reported to have been captured. We read

in Tokyo journals that the latter capture was made by the *Sado Maru* in the immediate vicinity of the place where the *Hitachi Maru* was sunk last year by the Vladivostock cruisers, and the fact is welcomed as in some sense a retaliation for that shocking catastrophe. But indeed when we consider that this great battle commenced in the very place where the *Hitachi Maru* and the *Isumi Maru* were sunk, it will not be surprising to learn by and bye that the Japanese, who believe so firmly in the tutelary influence of the spirits of the dead, draw large inferences from the identity of locality.

Admiral Rojestvensky has been carried to Saseho. No news is to hand as to whether his wound is likely to prove dangerous. The public will not deny him sympathy. He dallied a great deal *en route* but then he had stupendous difficulties to overcome, and it must be frankly admitted that at the end he acted a manly if not a heroic part in boldly facing the enemy and putting his fortune to the test. He has lost everything, but his only chance of success lay in risking everything.

The comical figure in this drama is Birielf who has come out to Vladivostock to take command—of what? Nothing remains for him to command.

There is another comical figure. We say it with all respect, but truly the world must be allowed to laugh a little now when it recalls that grandiloquent message from "the Admiral of the Atlantic to the Admiral of the Pacific."

Admiral Togo has telegraphed laconically to Admiral Viscount Ito and Admiral Yamamoto;—"We have practically annihilated the Second and Third Baltic Squadron. You may feel at ease." The answer of the two Admirals was very much more elaborate as was meet. It spoke of the strenuous exertions made by Russia to send out these Squadrons, of the long period of suspense pending their arrival; of their great strength; of the nation's immeasurable joy over their destruction; of the grand achievements of Togo and his men, and of the people's profound sympathy with the killed and wounded.

The only ships that seem to have escaped are the *Aurora* (protected cruiser, 6,630 tons), the *Oleg* (protected cruiser 6,500 tons) and 5 destroyers. We have hitherto spoken of 4 destroyers on the hypothesis that the total number with Rojestvensky was only 8, but the latest returns of the Naval Department show that he had 9. There is reason to suppose that the *Aurora* and the *Oleg* steamed back in the direction of Shanghai, and some reports speak of their having actually entered the Yangtze, but on that point further intelligence must be awaited.

The *Hochi Shimbun* has taken the trouble to compile a list showing the total losses of the Russian Navy since the war broke out. In the list are included the interned ships as well as the auxiliary cruisers. The total is 75 vessels aggregating 300,000 tons. What a magnificent engine of destruction the Japanese navy has proved itself.

London seems to have received its first news of the victory from a telegram sent to Washington by the United States Consul in Nagasaki. This was received on the 28th. No definite intelligence was allowed to be sent from Tokyo until the 29th. England calls this battle Japan's Trafalgar. St. Petersburg knew nothing of it on the 28th.

The embargo has been removed as to the comings and goings of steamers in the seas of Japan and China.

(Received at the Imperial Head-quarters on the afternoon of May 30th.)

#### ADMIRAL TOGO'S FIFTH REPORT.

The main force of our combined fleet upon accepting surrender of the remaining main force of the Russian fleet near the Liancourt Rocks on the afternoon of May 28th, as already reported, stopped the pursuit and were engaged in the disposition of the surrendered ships when they found in a south western direction a coast-defense ship, the *Admiral Ushakoff*. Thereupon the *Iwate* and *Yakumo* were immediately dispatched to pursue and invited her to surrender, but this invitation being refused, they sank her at 6 p.m. and rescued her remaining crew of over 300 men. The cruiser *Dimitri Donski* was also found at 5 p.m. in a northwestern direction and was immediately overtaken and fired at vigorously by our Fourth Division and Second Destroyer Flotilla. She was attacked at night by the Second Destroyer Flotilla and was found next morning, aground, on the southeastern shore of Ulleung Island, Korea. Our destroyer *Sazanami* captured, towards evening of May 27th, at the south of Ulleung Island, a Russian destroyer *Biedony* in which was found Admiral Rojestvensky severely wounded, together with 80 Russians including staff-officers from the flagship *Kniaz Suvaroff* which was sunk on May 27th. They were all taken prisoners. Our cruiser *Chitose* while cruising northward on the morning of May 28th found and sunk another Russian destroyer. Our cruiser *Nitaka* and destroyer *Murakumo* also attacked at noon on May 28th a Russian destroyer which finally went aground. According to various reports hitherto received and the statements of prisoners, the result of the battle since May 27th to May 28th is as follows: *Kniaz Suvaroff*, *Alexander III*, *Borodino*, *Dimitri Donskoi*, *Admiral Nachimoff*, *Vladimir Monomach*, *Zemichug*, *Admiral Ushakoff*, one converted cruiser and two destroyers were sunk, while the *Nicholas I*, *Orel*, *Admiral Apraxine*, *Admiral Seniavin* and destroyer *Biedony* were captured. According to the prisoners, the *Ossliabya* was sunk at about 3 p.m. on May 27th, and the *Navarin* also sunk. The *Almas* was observed on May 27th to have been disabled and in a sinking condition but her final fate is yet unknown. Full particulars regarding the injury to our ships are not yet to hand but so far as I could ascertain, none of them was seriously injured, all being still engaged in the operations. The whole casualties can not yet be ascertained. Those of the First Division are a little over 400. His Imperial Highness Prince Yorihito is in excellent health. Admiral Misa was slightly wounded on May 27th.

[Sixth report received on the afternoon of May 30th:—]

The loss of the *Ossliabya* and *Navarin* is confirmed. The *Sissoi Veliki* is also definitely reported to have sunk on the morning of May 28th.

The enemy's losses may thus be stated as follows:—

Battleship <i>Kniaz Suvaroff</i> .....	13,516 tons sunk.
Battleship <i>Imperator Alexander III</i> .....	13,516 tons sunk.
Battleship <i>Borodino</i> .....	13,516 tons sunk.
Battleship <i>Ossliabya</i> .....	12,674 tons sunk.
Battleship <i>Sissoi Veliki</i> .....	10,400 tons sunk.
Battleship <i>Navarin</i> .....	10,206 tons sunk.
Cruiser <i>Admiral Nachimoff</i> .....	8,124 tons sunk.
Cruiser <i>Dimitri Donskoi</i> .....	6,200 tons sunk.
Cruiser <i>Vladimir Monomach</i> .....	5,593 tons sunk.
Cruiser <i>Svetlana</i> .....	3,727 tons sunk.
Cruiser <i>Zemichug</i> .....	3,163 tons sunk.
Coast Defence Ship <i>Admiral Ushakoff</i> .....	4,126 tons sunk.
Special Service Ship <i>Kamchatka</i> .....	7,507 tons sunk.
Special Service Ship <i>Irish</i> .....	7,507 tons sunk.
3 Torpedo-destroyers .....	sunk.
Battle-ship <i>Orel</i> .....	13,516 tons captured.
Battle-ship <i>Imperator Nicholas I</i> .....	9,594 tons captured.
Coast Defence Ship <i>Gen. Admiral Apraxine</i> .....	4,126 tons captured.
Coast Defence Ship <i>Admiral Seniavin</i> .....	4,960 tons captured.
Destroyer <i>Biedony</i> .....	350 tons captured.

Admiral Viscount Ito has been ordered by the Emperor to convey instructions to Admiral Togo, in the following sense:— (1) Admiral Nebogatoff is to be permitted to return to Russia for the purpose of conveying to the Tsar a report of the Battle in the Japan Sea and a list of the killed and wounded as well as the prisoners. (2) The officers of the 4 ships which surrendered, namely, the *Orel*, the *Nicholai I*, the *General Admiral Apraxin* and the *Admiral Seniavine*, are to have the same privileges as those extended to the officers of the Port Arthur garrison, namely, permission to return to Russia on parole not to fight again against Japan during this war.

## THE CASUALTIES.

It is a matter of sad interest to calculate the casualties to life and limb suffered by the Russians in the naval battle of Tsushima. The following figures are probably very close approximations:—

Ships.	Complement.
<i>Borodino</i> .....	750
<i>Kniaz Suvaroff</i> .....	750
<i>Ossiabya</i> .....	750
<i>Navarin</i> .....	530
<i>Alexander III.</i> .....	750
<i>Admiral Nakhonoff</i> .....	567
<i>Dimriti Donskoi</i> .....	570
<i>Vladimir Monomakh</i> .....	550
<i>Svetlana</i> .....	330
<i>Zemichug</i> .....	334
<i>Admiral Oushakoff</i> .....	318
3 Destroyers .....	600
<i>Irish</i> .....	200 (?)
<i>Kamchatka</i> .....	200 (?)
Total .....	7,199

Turning now to the captured vessels, we have the following figures:—

<i>Orel</i> .....	750
<i>Nicholas I</i> .....	604
<i>General Apraxine</i> .....	318
<i>Admiral Seniavine</i> .....	318
<i>Ismrud</i> .....	334
1 Destroyer .....	200
One large transport .....	200 (?)
Total .....	2,724

Altogether, therefore, it appears that the complements of the sunken and captured ships aggregated 9,923. How many of these have perished? Admiral Togo's report speaks of 2,000 prisoners; the reports collated by the Naval Head Quarter Staff add 1,000, and it was subsequently announced by the War Department that 2,220 had come ashore in boats or been picked up at ten places along the coast of the Sea of Japan. If these numbers may be added together as they stand, it would appear that 5,220 have been saved and that 4,723 remain to be accounted for. But shocking as that result is, it may fall short of the facts. For we cannot tell that the returns of the War Department and the Naval Department do not overlap. The former's figures include 1,200 who have reached Saseho, and it is at least probable that the thousand added by the Naval Department may form part of the Saseho twelve hundred. Such a battle could not but be attended by great loss of life and we fear that the ultimate figure will be found very large.

Admiral Togo was indeed justified when he announced that he was going out to "destroy" the Russians. Yet we doubt whether even in his most sanguine moment he looked for a result such as that actually achieved. Out of 28 fighting ships, Rojestvensky has had 22 sunk or captured, and of the 7 that seem to have escaped, 4 are destroyers. On the other hand, the Japanese losses were two small cruisers temporarily disabled and two torpedo-boats sunk. The figures are almost incredible.

Of course, this was the first occasion when the Japanese Admiral felt justified in taking the risks without which no signal results are achievable. In all previous instances he had been hampered by an urgent sense of the necessity of saving his ships, for he knew that whereas his country had no reserve of fighting vessels, the Russians had a very considerable reserve. At Tsushima, however, he went in and fought a magnificent fight with the unique object of destroying the Russians.

It is now definitely ascertained that the Japanese losses in the great Battle of the Japan Sea were confined to the sinking of 3 torpedo-boats. Not one craft, from a destroyer upwards, was sent to the bottom. We can not tell exactly how many torpedo-boats the Navy has now in commission. The number at the close of 1902 was 65 and there were then 20 on the stocks, so that the loss of three is a very trifling matter.

## THE EMPEROR'S MESSAGES.

The Emperor's Message to Admiral Togo was:—"The Combined Squadrons attacked the enemy in the Korean Strait and destroyed him after several days of strenuous fighting, thus achieving an unprecedented success. I rejoice that your loyalty and vigour have justified me in the sight of the spirits of my ancestors. The end is still distant. Let your efforts be continually unremitting to bring about the end of the war."

To the Navy His Majesty said:—"Our Navy's strategy and its fighting have alike been excellent. Watchful at home and abroad, you have annihilated the enemy's squadrons, thus gratifying my desires and earning my applause. Work harder than ever to achieve the great result."

## ADMIRAL TOGO'S REPLY.

Admiral Togo's reply to the Emperor's message is as follows:—"Your Majesty's servants are profoundly thankful for the gracious Message addressed to them in connexion with the victory in the Sea of Japan. It is not by any human efforts but by the graces of Your Majesty's virtues and by the guardianship of the Great Ancestral Spirits that a result so far beyond our expectations has been achieved. Your Majesty's servants will toil with ever-increased zeal to bring about the accomplishment of the Imperial purpose?"

## (REUTER'S SPECIAL SERVICE.)

London, May 31.

The newspapers are unanimous in considering that Admiral Togo's triumph challenges even the greatest victories of Nelson, including Trafalgar, and is the sixteenth decisive battle recorded in the world's annals.

Reuter's correspondent at St. Petersburg states that though during one morning the public were kept ignorant of the disaster to the Russian fleet, a semi-official agency issued a Shanghai telegram stating that seven Japanese warships, including two battleships, and four Russian vessels were sunk.

On the strength of this the newsboys at midnight were shouting a great Russian victory, emptying the theatres and music halls.

Later. The news of the Japanese victory has been received with general satisfaction in London, where it is regarded as improving the prospects of peace.

[Received at the Naval Head Quarters.]

Admiral Rojestvensky was placed in the hospital at Saseho on the 30th. He has four wounds, three of which are slight, but the fourth is a fracture of the skull, the extent

of which is not yet clearly ascertained. His pulse and temperature are normal and there are no signs of nervous prostration.

With regard to the temporary seizure of the hospital ships *Aryol* and *Kostruma* Admiral Togo reports that they are suspected of having violated the Hague Convention and for this reason, as well as on account of strategical considerations, they were taken into Saseho on the 28th.

(RECEIVED AT THE FOREIGN OFFICE.)

The steamer which has entered Shanghai is not the *Smolensk* but the *Korea*. Also the vessel that entered that port on the 29th was the mine-laying vessel *Svirin*.

The above two ships had come from the scene of the battle.

General Linevitch reports that the cruiser *Almaz* reached Vladivostok on the 29th. Her Commander states that before he separated from the squadron, the battleships *Boiodino*, *Suvaroff*, and *Oslabya* were sunk and the *Orel* and *Alexander III* were injured. Admiral Rojestvensky, having been wounded, had transferred himself to another ship.

The line of escape of the *Almaz* was nearly cut off but she succeeded in making her way to Vladivostok.

The fighting was renewed on the night of the 27th after she left but she knows nothing of the result.

The *Kniaz Suvaroff* was severely injured on the 27th. The *Almaz* had one officer and four men killed and ten wounded.

Friday, June 2.

The *Hochi Shinbun* has a telegram from Moji saying that from daylight on the 30th of May sounds of cannonading, varied by explosions, were heard in the direction of Mutsurejima, which is in the neighbourhood of the scene of the great battle. In the same paper there is a telegram from Dai-ri (Fukuoka) to the effect that among the Russians picked up at that place there are members of the crew of the *Aurora*, including officers who say that the *Aurora* was struck by torpedoes during the night of the 27th, and that she sunk, the greater part of her complement perishing. This seems to dispose finally of the case of the *Aurora*.

It may be well to re-capitulate the vessels whose fate is not quite certain as yet. They are:—

The *Oleg* (protected cruiser, 6,500 tons); about this ship nothing whatever has been heard.

The *Ismrud* (protected cruiser, 3,200 tons); confidently alleged by private telegrams to have gone aground at Hamada in Iwami, but not mentioned in the official reports.

The *Zemichug* (protected cruiser, 3,200 tons); originally stated in the official reports to have been sunk, but subsequently said to be doubtful.

Two destroyers, about which nothing has been heard. The firing now reported to have been heard in the direction of Mutsurejima on the 30th of May may have concerned one or more of these above ships or the destroyers.

The *Kokumin Shinbun* has a telegram from Moji saying that 33 members of the crew of the auxiliary cruiser *Ural* (8,238 tons), including the second in command and the chief engineer, have landed at Susamura in Yamaguchi prefecture. They say that the *Ural* was torpedoed and sunk. Nothing has been said of this ship in previous reports. She is one of the six auxiliary cruisers that accompanied Rojestvensky's Squadron.

Eight members of the crew of the *Kamchatka* (special service steamer, 7,237

tons), whose torpedoing has already been reported, landed at Kogahama and were sent to Qairi.

These Russians, who come ashore in small boats, are described as being in a most exhausted condition.

The *Kokumin's* Sascho correspondent wires that one Russian auxiliary cruiser was brought into that port on the 29th of May and that four others came in on the 30th. This would account for the whole six auxiliary cruisers, if we accept as established the sinking of the *Ural*.

According to a telegram from Hamada, a portion of the Russians who landed there raised the white flag, but another party having failed to observe this formality, a company of soldiers was sent against them, and they finally surrendered.

Various accounts are published as to the condition of the *Orcl* (battle-ship, 13,516 tons, which surrendered and is now in Maizuru). The *Fiji Shimpo's* account is the most accurate. We read there that the vessel has 40 shot-holes in her hull. Her forward chimney stack is almost rent to pieces. One of her 12-inch guns (on the port bow) is smashed. Her quick-firers on both sides are more or less destroyed. Her deck is torn open near the rear-mast. One of the steam-launches on her deck is absolutely riddled with bullets. She is exceedingly dirty. There is much rust near the water-line and below it quantities of sea-weed are clinging to the hull. The prisoners say that during the fight at the Liancourt Rocks on the 28th of May, a Japanese shell reached the engine-room and set the place on fire. Many of the prisoners have burns. Her captain fought splendidly. He was severely wounded and he died 30 minutes before the ship reached Maizuru. His body was consigned to the sea with due ceremony. The commander is slightly wounded. It is the present intention to send the *Orcl* round to Yokosuka in order that the Emperor may see her. And in truth she is an interesting object, as the first first-class line-of-battle ship ever captured in action. It was supposed that such an incident was impossible.

A petty officer of the *Kamchatka* says that the captain was killed; two of the officers were severely wounded and two jumped into the sea. Fifty-six of the crew escaped in a boat. Apparently all the rest were lost.

It is expected that the *Aryol* (8,175 tons, 19 $\frac{1}{4}$  knots built in 1891) and the *Castroma* (6,800 tons, 13 knots, built in 1889) will be declared prizes. They were nominally acting as hospital ships and would therefore be secure against capture had they confined themselves to that function. But they are fitted with wireless-telegraphic apparatus; they are proved to have acted as scouts, and they have on board a number of naval officers as well as some armament. It will be necessary, however, to bring them before a prize court in due form.

In this context we may mention that the steamer *Industrie* has been declared prize of war. This vessel was captured on the 28th of March at a place which is not mentioned. She is only 198 tons, and her small size combined with the fact that she was the 40th of the Japanese captures deprived her case of much interest. Yet she has emphatic interest, for it is now proved that she was acting as a spy. She is a German steamer and she carried a German who represented himself as a correspondent of the *Chefoo Daily News*, whereas his real business was to discover and report the whereabouts of the Japanese Squadrons.

With regard to the S. S. *Korea* which, according to latest reports, has arrived at Woosung and will be disarmed, it is to be noted that she is one of the special-service steamers of which there were supposed to be four attached to the Baltics; namely, *Korea*, *Kamchatka*, *Okean* and *Kitai*. The original official reports said that two of these vessels had been sunk and one captured. These, with the *Korea*, would account for the whole four. But in subsequent official reports the names of the vessels sunk were given as the *Kamchatka* and the *Ilits*, the last being apparently an addition which had come out with the Third Squadron. On that hypothesis there were 5 of these special-service steamers, and 4 only are accounted for, namely, 2 sunk, 1 captured, and 1 to be disarmed at Woosung. The *Korea*, which arrived at Woosung on the 30th May at 9 a.m., is described as having an enormous hole made by a 12-inch shell at her water-line, and as being torn by several 6-inch shells. She says that she remained until the fight on the 27th was at its height, but that, not having such an armament as would have justified her in attempting to break through the Japanese lines, and being also short of coal, there was nothing for it except to run for Shanghai, which place she barely reached. She had many casualties. The *Sviru* (mine-laying vessel), which arrived at Woosung shortly after the *Korea*, was also terribly mauled. It was observed that a number of life-buoys were strewn about her deck. A shell had penetrated to her engine-room, and she will have to be docked.

All the fugitives in Shanghai will be docile enough now. It looks as though Rojestvensky, counting confidently on victory, had sent the original 4 steamers to Woosung merely to keep them out of harm's way, and with the intention of summoning them to join him after he had disposed of Togo and the Japanese Squadron.

The *Fiji Shimpō* has a telegram from Shanghai to the effect that on the evening of the 29th of May cannonading was heard in the direction of the Saddles. It is quite certain, apparently, that no Japanese ships were in that quarter on the 29th, so probably this cannonading may be classed among Shanghai's myths. How unfortunate Shanghai is, to be sure, in the matter of canards. It is the grand seed-plot of falsehoods in the Far East. The last story that emanated from it—the story of a Japanese defeat involving the sinking of 7 ships, including 2 battle-ships—the story which threw St. Petersburg into a momentary frenzy of delight, may have been a Dessino, but it sounds more like a genuine "bunder." Here we may mention that a *Fiji Shimpō's* telegram from London depicts the Russian authorities as making every endeavour to conceal the disaster. But the truth is leaking out, and sensational results are anticipated.

Shanghai sends another interesting statement which may possibly be true. It is that on the 29th of May the Austrian Lloyd steamer *Nippon*, when approaching the Yangtze, was over-hauled by Russian vessels at the Saddles, and that another steamer had a similar experience between Swatow and Foochow. If these stories be true it would seem that some vessels of the Volunteer Fleet are still prowling in the China Seas. This idea is confirmed by a report carried to Moji on the 30th of May by the Norwegian steamer *Delia*. She says that at 4 p.m. on the 29th of May she sighted a Russian ship at a point some 40 miles

south-west of Shantung. Possibly it was the *Smolensk*.

The Russian Consul at Shanghai seems to be quibbling. By the Chinese Admiral he is said to have promised definitely that the refugee steamers would disarm, but to the Taotai he denies that disarming has been decided, and alleges that the steamers lowered their flags solely on account of the rain. We are disposed to hope that the Consul will continue obdurate. The refugee steamers would be much more useful in Japanese hands than lying in the Yangtsze disturbing the peace and good order of Shanghai.

Count Cassini is said—*Kokumun Shim-bun's* Washington service—to have openly declared that the time for peace has come, but he adds that he has received no instructions on the subject from St. Petersburg. President Roosevelt is represented as willing to mediate and even desirous of doing so, but he will not move without Japan's request. Washington thinks that Japan's demands will be found to have undergone considerable increase.

CASUALTIES.

Admiral Togo's report of casualties in the fleet under his command, a report compiled on information received up to the 1st inst., is as follows:—

Ship.	Killed.	Severely wounded.	Slightly wounded.	Hurt.	Totals.
Mikasa .....	8	21	34	—	63.
Shikishima .....	13	7	11	6	37
Asahi .....	8	4	12	7	31

Kasagi .....	1	3	5	—	9
Grand Totals .....	113	104	278	42	537

It will be observed that there do not appear to have been any casualties on board the cruiser *Isukushima* and the battle-ship *Chinyen*, or on board the destroyers *Murakumo*, and *Arare* or in the torpedo squadrons VII, XV, XX, IX and XIX, or on the *Kumano Maru* and the *Manshu Maru*.

(Received at the Naval Head Quarters, p.m. 30th  
May. From Admiral Togo.)

### DETAILS OF THE FIGHT.

Collating the various reports received from the vessels under my command since my last telegram, I find it certain that the battle-ship *Ossliabya*, being severely in-

jured at the commencement of the action, left the fighting line and was the first to sink at a little after 3 p.m. The battle-ship *Sissoi Veliky* and the cruisers *Admiral Nakhimoff* and *Vladimir Monomakh*, after having been badly hurt in the fight during daylight on the 27th, were still further injured in the night by attacks from our destroyers and torpedo-boats. They lost their fighting capacity, became unmanageable and drifted ashore on Tsushima Island, where, the next morning, they were found by our auxiliary cruisers, *Shinano Maru*, *Yawata Maru*, *Tainan Maru* and *Sado Maru*. These were on the point of making prize of the war-ships when the latter sank after a brief interval. The survivors of their crews, some 915 in number, were rescued by the auxiliary cruisers and by the people on shore. The battle-ship *Navarin*, being attacked by our torpedo-boats after nightfall on the 27th, was struck by four torpedoes and sank, as is clearly established by the statements of the survivors of her crew who are among the prisoners. The cruiser *Svetlana* was found at 4 a.m. on the 28th by the cruisers *Nitaka* and *Otowa* off Chiyukpyon Bay, and being attacked, was finally sunk, according to the report of the commander of the *Nitaka*. There is a doubt whether the cruisers *Aurora* and *Almaz* were not sunk during the attack of the torpedo-craft on the night of the 27th. Again, as to the *Zemichug*, mentioned in my last report among the sunken ships, there is some uncertainty, and I therefore withdraw her name, pending further investigation. Collating my present report and my previous ones, it may be said that the ships constituting the enemy's main strength, namely, 1 battle-ship, 3 armoured cruisers and 3 coast-defence iron-clads, have all been sunk or captured, and his secondary vessels, from second-class cruisers downward, have been for the most part destroyed, so that this fight may be considered to have terminated the existence of the enemy's fleet. With regard to the losses on our side, subsequent reports show that during the torpedo attack on the night of the 27th, torpedo-boats No. 34, No. 35 and No. 69 were sunk by the enemy's defensive fire, but the greater part of their crews were saved by their consorts. For the rest, there is no appreciable loss. Not one ship has lost its fighting power or its navigability. As to the killed and wounded, I had expected a large number at the outset, but I find that, adding the casualties already reported in my own squadron, the total is under 800. No time will be lost in collecting and telegraphing the details so as to relieve the anxiety of the families concerned.

In the battle both sides put forth their full strength, and not only was the field of the fight very extended, but also owing to foggy weather it was impossible to see more than 12 miles even when the view was not impeded by smoke from the funnels and from the guns. I could not therefore keep in sight the various units under my command, and moreover as the battle lasted two days and two nights and as the squadrons pursued the enemy who had broken in all directions, and as some of the vessels are still operating, several days must elapse before full accounts and detailed reports of the whole fight can be compiled.

(Received at the Naval Head Quarter Staff, on the night of May 31st, from Admiral Togo).

According to the report of the Captain of the *Kasuga*, which vessel returned to-day having rescued the survivors of the *Dimitri Donskoi's* crew, the latter vessel, on the

morning of the 29th, ceased pumping, and having opened her Kingston valves, went to the bottom. Her crew all landed on Ulleung Island. Among the survivors were some rescued from the battle-ship *Ossliabya* and the destroyer *Buini*. This destroyer (*Buini*) had taken off Admiral Rojestvensky and his staff on the afternoon of the 27th at the time of the sinking of the flag-ship (*Suvaroff*). She had on board also over 200 survivors from the battle-ship *Ossliabya*. But being struck just then by a shell, she became unseaworthy and she therefore transferred the Commander-in-chief and the rest to her consort the *Egedovi*, herself proceeding northward. On the morning of the 28th she fell in with the *Dimitri Donskoi*, and having transferred her crew to the latter, sunk herself. The survivors of the *Ossliabya* say that in the battle of the 27th of May the first shell which found the vessel struck the conning tower and Rear-Admiral Folkersham was killed on the spot. Thereafter the ship received a concentrated fire of shell after shell, and at a little after 3 p.m. she went to the bottom among her consorts. The survivors of the *Dimitri Donskoi* say that in the fight during daylight on the 27th, they saw two Russian destroyers sunk. If this be true, the number of the enemy's destroyers sent to the bottom was 6.

It is rumoured that an official announcement has been made in Russia to the effect that the destroyer *Buini*, carrying Rojestvensky, has reached Vladivostok.

(RECEIVED AT THE FOREIGN OFFICE.)

A telegram from St. Petersburg to the *Journal* says that the cruiser *Almaz*, the hospital ship *Orel* and one destroyer have reached Vladivostok.

The Japanese naval victory has produced a great impression in Berlin. It is generally believed that this result will contribute materially to the restoration of peace.

The German newspapers, irrespective of politics, are unanimous in wishing for the end of the war. Russia having been unable to obtain success by means of her army, placed in this Baltic Squadron great hopes which have now been completely disappointed. The remnants of the Squadron are not capable of any renewed effort. They are doomed to destruction, and Russia having lost her last chance, may now give up the war. She must abandon or postpone to a far-distant future all prospect of re-establishing her sea-power in the East.

#### WILL ADAMS: AN EPITAPH.

"I hop the wourshipfull coumpani shall find me to bee a servant of yr saruants to seru them in such a maner as they shalbe satisfied of my serues."

Letter from William Adams, dated "the 12 of Jeneuari 1613," to his "assured good frind Augustin Spalding."

Here lies Will Adams, Keatish man, whilom Bound Pilot-Major on an East-sea quest, Then Iyeyas his shipwright, now at rest, His shore-wave weathered and his last hill clomb,

At rest in sight and hearing of the foam, Obedient to a greater Pilot's heft, Who, having set his lone course from the West,

Now pilots him, from waves and wandering, home.

Here lies a Servant—such was Will in brief:

His country's servant, first to hail Japan

In English speech: Hemmi he held in fief,

A Shogun's vassal: last his letters scan:

Servant of God is writ on every leaf—

Trusti as ever faithfull Englishman.

S.W.

#### THE SEVEN PROFESSORS.

Immediately prior to the outbreak of war and occasionally since the fighting began public attention was directed to the Seven Professors of the Imperial University who now represent the "strong-foreign-policy" party in Japan. These gentlemen, who have fellow thinkers in the world of science and business alike, held a meeting on the 23rd instant to formulate the results of researches conducted by their committee. Dr. Terao, Dr. Tomizu and Dr. Kanai took leading parts, and the following five resolutions were unanimously adopted:—

I. Whereas certain persons are advising our country to bring the war to a speedy close, we emphatically dissent.

II. Only by prosecuting the war for a lengthy period can its objects be attained and practical solutions be found for many problems.

III. For the exercise of endurance and perseverance one of the most important things is that the nation should be resolved and the Government unyielding. If, when the nation has comprehended that the war must not be stopped, the Government, influenced by some minor consideration, show any disposition to entertain a desire for peace, we shall unite in taking whatever measures may be necessary to give effect to public opinion.

IV. The second essential of endurance and perseverance is financial strength. Several hundreds of millions of yen have been borrowed at home since the war commenced, yet abundant funds remain. Several hundreds of million of yen have been borrowed abroad yet there is every hope that loans can be floated in the future. Since Japan's history began to be written she has never put such forces into the field, yet we are firmly persuaded that the country's producing resources are keeping pace with this exercise of military power.

V. As for Japan's foreign relations, it is scarcely necessary to say that we attach the greatest weight to our friendship with all countries except that with which we are at war; but if there be any State which secretly and openly assists our foes, extends the limits of the war or disturbs the tranquility of the world, we shall repeatedly warn such State, and should it still refuse to reconsider its course, we shall be obliged unhesitatingly to treat it as an enemy, and to invite our trusted ally to cooperate with us."

#### YACHTING.

A fresh south-westerly wind blowing on Saturday afternoon gave promise of a good race for the Cruising Class, although it was rather too heavy for the smaller boats. Four cruisers started at 3 p.m. to race over the Tsurumi-Widow buoy course, but it was found that the Tsurumi mark boat had got blown away towards Kanagawa into shoal water, and so the race had to be abandoned.

*Winsome* and *Pete* got ready with reefs down for the 21-rater race, but *Pete* carried away her mainsail, fortunately an old one, and *Winsome* after crossing the line, returned to moorings.

It is a pity that there is not some fixed mark off Tsurumi, a buoy, or something better than the usual sampan. This mark boat is the source of a lot of trouble, is seldom easily located, varies its position from race to race, and sometimes is not to be found at all, as in the Fourth of July race last year. Considering the plenitude of wind on Saturday, it would have been better to change the course, even at the last moment before the time appointed for the start, and have the race round the Lightship and Widow Buoy, leaving out the Tsurumi mark altogether.

## RUSSIAN SHIPS AT SHANGHAI.

Friday, May 26th.

It has often been remarked of the Russians that they do what is least to be expected of them. The despatch of six ships of the Baltic Squadron to Shanghai is a case in point. Only ten out of the eighteen steamers forming the Volunteer Fleet—it originally consisted of 19 steamers, but one, the *Ekatereinoslav*, has fallen into Japanese hands—are said to be adapted to serve as cruisers, but all have armaments, and being now included in the Baltic Fleet, they will be subject to the same restrictions as ordinary war-ships in neutral ports. With what object then have Volunteer steamers proceeded to Shanghai? If they are seeking coal and provisions they will be immediately hampered by China's rules of neutrality and if to interrupt the course of maritime commerce be their purpose, nothing could be stranger than their undisguised approach to Woosung. Besides, it must be repeated that Rojestvensky's ships are not in a position to prey upon commerce. They might, indeed, sink any Japanese steamer found on the high seas, but even then the crews and passengers, many of the latter being neutral subjects, would be embarrassing to deal with. As to neutral vessels, the Russian Admiral will leave them severely alone so long as he has no port to carry them to. Thus it is hard to imagine that the three Volunteers are anchored at Woosung in the character of commerce-destroyers, and they can scarcely have come for stores. The only remaining hypothesis is that this squadron has been sent to make a diversion; to tempt the Japanese into the Yangtze waters. For such a purpose, however, the squadron is too weak. If Admiral Togo thinks it worth while to snap at this prey, apparently offered to him as a pawn or a minor piece is often sacrificed at chess, he will only send a couple of third-class cruisers to look after the Russians. We should think, however, that he will not concern himself about them at all. Altogether it is an inexplicable move on the part of the Russians.

If it be true that such a mob of Russian transports and auxiliary cruisers have entered the Yangtze, there is reason to fear that a troublesome problem of international law will present itself. China is not strong enough to enforce her neutral laws in this case, and it is plainly against the interests of all the Powers that the tranquillity of the Yangtze should be disturbed. Indeed, this coup on Rojestvensky's part looks very like an attempt to create a general commotion under the shadow of which Russia may find an exit from her dilemma. He probably counts on perplexing the Chinese officials who may feel some doubt as to the proper attitude to assume towards steamers which, though in the naval service of a combatant, are not themselves actually combatant, and it is not extravagant to conjecture that Chinese tardiness in deciding this question may drive the Japanese to adopt some precipitate course which would alienate the world's sympathy. But the statesmen in Tokyo have shown themselves so astute and patient, and so sensible of the inadvisability of sacrificing great results to petty interludes, that they may be confidently trusted to deal with this matter in their usual far-seeing fashion.

Saturday, May 27, a.m.

The names of three among the six Russian vessels which anchored at Woosung on the 25th have been already given; that is to say, the names of the Volunteer steamers.

The transports are the *Michael*, the *Kiulonia* (?) and the *Livonia*. The *Michael* and the *Kiulonia* are in ballast; the other four ships are laden with coal, which makes their going to Shanghai all the more extraordinary. Japanese papers say that the two volunteer steamers which left immediately were not the *Petersburg* and the *Smolensk* but the *Dnieper* and the *Rion*. The two latter names, however, are those subsequently given to the *Petersburg* and *Smolensk*. The crews of the six steamers are French, German and Russian. They all seem to be in good health, and the vessels have plenty of provisions. Two of them have wireless-telegraphic apparatus. The masters are taking their instructions from the Russian Consul.

Saturday, May 27.

There are two theories about the arrival of these six steamers at Shanghai. One is that the manoeuvre is intended to create a diversion and draw off some part of the Japanese fighting force; the other, that the six steamers being all slow vessels, it is thought better to send them safely into a neutral port where they can disarm and remain quietly until the war is over. The latter hypothesis is very difficult to entertain. We see no reason why Rojestvensky should deliberately deprive his country of the services of these 6 steamers. They might just as well have sailed back to Europe as entered the Yangtze. What seems more probable is that the Russian Admiral is seeking to throw dust in the eyes of the Japanese and to deceive them as to the point where he intends to essay a passage into the Sea of Japan. He may also be seeking to obtain or to convey information. Since he left Honkoku he has been without means of communicating with either St. Petersburg or Vladivostok, and that is surely a great inconvenience. Still for such a purpose he need not have sacrificed six steamers.

In Japan a belief prevails that Rojestvensky's main force has entered the Pacific, but of course there is absolute uncertainty as to whether he will divide his squadron into three, and simultaneously essay the three straits, Tsushima, Tsugaru and Soya. The *Kokumin* does not hesitate to draw a confident inference from the arrival of the six steamers at Woosung; namely, that the Russian Admiral, before entering the Pacific and marshalling his forces for the supreme enterprise, eliminated the slow and useless vessels. But what are we to say, in that case, about the fact that two of the finest ships in the Volunteer Fleet, the *St. Petersburg* and the *Smolensk*, accompanied the six steamers as far as Woosung? These two auxiliary cruisers could not have served as a protection, and, besides, no protection was needed. Whither then did they go after emerging from the Yangtze? If they proceeded to rejoin Rojestvensky we must conceive that he is somewhere in the Yellow Sea and that his locality can not be very far from Shanghai.

It is just possible that Rojestvensky may be again exercising his own strange notions about the law of neutrality. He may imagine that these six steamers, not being actually combatant ships, will be suffered to lie without restraint in Shanghai. But he will find himself mistaken should that be his view.

As to the three steamers of the Volunteer Fleet, the *Vladimir*, the *Yaroslav* and the *Voronej*, and the three transports which entered Woosung on the 25th, they remained at anchor after the expiry of the 24-hours' limit, and the Japanese Consul-General urged

the Chinese Authorities to insist on the disarming of the six vessels and their internment at Shanghai.

Sunday, May 28.

It is hard to make out how many Russian ships, or how many ships employed by the Russians, are at Woosung. A steamer which entered Shanghai on the 27th reported that she saw 13 vessels, 5 of which were flying the Russian flag, and the others, though under various colours, were undoubtedly in the service of the Baltic Squadron. Another steamer, the *Doris*, which arrived in Shanghai on the 26th at 2 p.m. reported having sighted 11 vessels in the North Channel of the Yangtze. The *Nichi Nichi* has a telegram saying that the 6 Shanghai refugees had come straight from Madagascar and that they put into Shanghai for instructions. The crews are said to have been recruited at Madagascar. Of course rates of insurance have gone up in Shanghai. Risks are quoted at 4 per cent.

(FROM THE "JIJI SHIMPO.")

Shanghai.

The officer commanding the Chinese Squadron has ordered the Russian colliers at Woosung to be prepared for lowering their colours and removing the vital parts of their machinery as the limit of time allowed for them to remain in port expired at 8 a.m. on the 27th.

Subsequently the Chinese commander withdrew the above order and substituted for it a formal declaration that the 24-hours' limit of anchorage had expired, and that by remaining at anchor the ships would be violating China's neutrality.

The President of the United States has sent a telegram to the Taotai of Shanghai applauding his energy in maintaining China's neutrality.

(RECEIVED BY THE "ASAHI SHIMBUN.")

Shanghai.

The Russian ships at Woosung have now exceeded their 24-hours' limit and can not be allowed to leave. The Japanese Consul makes this declaration and the Taotai is about to order the disarming of the vessels. But the Russian Consul contends that the ships should receive the treatment of merchant-vessels.

(FROM THE "HOCHI SHIMBUN.")

Shanghai.

The Viceroy at Nankin ordered the departure of the Russian ships within 24 hours but the Russians utterly refused.

The Russian Consul contends Japan has the same right to anchor a Japanese merchantman here, but the Chinese officials take a precisely opposite view.

Peking.

Mr. Uchida, the Japanese Representative, has informed the Chinese Government that the 24 hours have already expired; that the Russian ships must either leave the river or disarm; that if this can not be effected, China's inability to enforce her neutrality will be proved, and that Japan will have to act independently.

Wednesday, May 31.

The *Dnieper* and the *Rion* seem to be cruising between Nagasaki and Shanghai. Probably their function was to await and report the result of the battle. It is said that the *Dnieper* has a large complement of marines, a strong armament and a wireless-telegraphic apparatus.

In the *Jiji* we find a telegram saying that eleven Russian ships which were at the Saddles until the 27th, appear to have

steamed northward on that day. There are, it may be noted, many of Rojestvsky's following to be accounted for; namely 6 auxiliary cruisers (*Don, Ural, Terek, Kuban, Rion and Dneiper*), 3 special transports (these have probably been captured or sunk, namely, the *Okean*, the *Kazan* and the *Kitai*), and 9 of the Volunteer Fleet (*Castloma, Argol, Nijni Novgorod, Saratoff, Yaroslav, Tambor, Vladimir, Voronej and Kief*). These are doubtless the vessels now in the neighbourhood of Shanghai.

### MANCHURIA.

An officer who has just returned from the front is quoted by the *Asahi*. He speaks of the failure of the last Russian attempt to effect a turning movement. There is nothing of special interest in his statement. Its gist is that the Japanese fought remarkably well, and that the wounded Russians admit their thorough beating. Of course there were some casualties on the Japanese side, but no allusion is made to their number. The officer merely observes that most of the wounded were brought in safely.

Linevitch reports, according to a London telegram, that the Japanese are reconnoitering the Russian right and centre. We should have been prepared to hear, rather, that the Russians are reconnoitering the Japanese left and centre.

No explanations are offered as to the delay in the Japanese advance, but we recall that every big movement on their part in Manchuria has been preceded by a long period of preparation. The transport difficulties must be enormous, and probably on the extreme left, where Nogi's army is, water is a serious problem.

Prince Kilkoff, who has just returned to St. Petersburg, is represented as saying that Linevitch is much embarrassed by being unable to find out either the numbers or the positions of Oyama's troops. That statement is confirmed by the frequent reconnaissances which the Russians appear to be making in the directions of Fakumun, Changtu and Kaiyuan.

The Russians are said to have built several temporary hospitals at Kunchuling, which lies eastward of the railway below Changchun.

Tokyo journals write of the doings in Manchuria, but it is not very clear whether they take the view that the Russians are seeking to cover their own retreat or are contemplating a really strenuous resistance along the Kirin-Changtun line. The former theory is entertained by the *Asahi*. It says that the defences constructed by the Russians are nothing like so strong as those in the Shaho Valley and that they do not indicate any intention of making a permanent stand. The numerous skirmishes taking place in the west of the field are merely reconnaissances essayed by the Russians, who, according to Japanese accounts, show little skill in conducting such operations, and are generally enticed into positions where they suffer heavy loss without acquiring any correspondingly valuable information.

As to the news sent from St. Petersburg that Rennenkampff has suffered a severe repulse, there is nothing in Japanese official reports to account for this incident, unless we identify it with the cavalry turning movement at Tafangshin on the 19th and 20th instant. But Rennenkampff is not a cavalry leader. He commanded the left wing of the Russians in the battle of Mukden, and, unless he has been transferred, any operation on his part should be in the

On the whole we are inclined to think that the news agents in St. Petersburg have confounded Mischenko and Rennenkampff.

(Received at the Military Head Quarters: 25th p.m.)

### RUSSIANS DRIVEN BACK.

At 2.30 p.m. on the 25th a force of our cavalry drove in a north-easterly and northerly direction the enemy's cavalry in Sumienching (about 18 miles north of Changtu) and occupied the place.

There is no change elsewhere except that slight skirmishes have taken place between the scouts on each side.

[A telegram received at the Head Quarters on the 4th of April said that, on the 3rd, the enemy had been driven from Sumienching and the place had been occupied. Its re-occupation now would seem to indicate that it was temporarily abandoned after the 3rd of April.—Ed. J.W.M.]

The *Jiji Shimpō* publishes a telegram from Yingkow dated the 30th of May. It says that the Russians' most advanced position is at Supinchieh, where troops are constantly east of the field against Kawamura's army, arriving from Harbin. The railway is open as far as that place. The enemy's main strength is concentrated at Kwanchingsz (Changchun). He has also a large force stationed along the Itungchou-Kirin line, where there are defensive works of more or less strength. He is building fortifications on the heights 13 miles south of Harbin.

It is probable that military activity will now be at once resumed in Manchuria. We speak from conjecture only, but appearances seem to indicate that one cause of delay was uncertainly connected with the Baltic Squadron.

### THE MONGOLIA QUESTION.

There is a *post facto* flavour about the announcement now attributed to the Russian Government that Russian troops will be moved through Mongolia. As a matter of fact Russian troops have already been moved through Mongolia. Mischenko's cavalry raid, for which General Linevitch claims such fine results, was made by riding through Mongolia and was followed by a retreat into Mongolia. Russian announcements in matters of this kind are generally superfluous so far as their practical relations are concerned, though they usually have a significance of a political character. From the very beginning of this war the Russians have not shown the faintest disposition to respect the neutrality of Mongolia. They have marched troops into that region and they have drawn their supplies from it just as though it were definitely within the range of belligerent operations. That, too, was when the situation did not include such exigencies as it now includes. For, owing to the gradual back-forcing of the Russians, it has come to pass that the Japanese left is resting on the confines of Mongolia, and that the same district flanks the line of the Transasian railway through a long distance westward of Harbin. Thus, were Mongolia's neutrality strictly observed, the Japanese left would be secure against any turning movements by the Russians, and—which is much more important—the terrible menace of a Japanese advance against the west of Harbin would cease to be a Russian night-mare. That would be an ideal state of affairs for Russia, but unfortunately for herself she did not foresee the contingency. She did not anticipate the possibility of her great army being forced backward until only the question of Mongolian neutrality stood between it and a crush-

ing disaster. Had she been sufficiently prescient she would herself have shown towards that neutrality the respect she is now seeking to secure for it. For it appears very plain that the purpose of her new announcement is, not to obtain for herself liberty to move troops through Mongolia, but to induce the Powers to take some step which shall guarantee the district against any military incursions by either belligerent. Russia has already moved troops through Mongolia. The very same telegram which tells of her announcement to the Chinese Government, tells also of a big cavalry raid which was effected by Mischenko's Cossacks marching through Mongolia and which resulted in their retreat into Mongolia. Russia has learned one lesson thoroughly. She has learned that in nine cases out of every ten bluff is attended with some measure of success. Seldom, however, has she attempted such a bare-faced coup as the present one. Seldom has she essayed to alarm the world by threatening to do what she is actually doing without any threat. Truly there is something admirable about her assurance. Her language is that of victory not of defeat. She talks of moving armies through Mongolia, just as though she had armies ready to send, whereas, as every intelligent person must clearly understand, what she really dreads and what she really desires to avert, is the moving of Japanese armies through Mongolia against her own right. It is too late for such shallow tricks. Russia herself has treated the neutrality of Mongolia as absolutely non-existent, and at this eleventh hour she can not rehabilitate in the interests of her own military convenience a character which her own acts have deliberately destroyed. When Japan publicly formulated her programme at the beginning of the war, she announced that she would respect Chinese neutrality just so far as her enemy respected it. She would be now committing an act of suicidal mania if she agreed to overlook Russian's flagrant violations of the neutrality of Mongolia merely because Russian strategy no longer dictates trespasses; and the world has too much penetration to be deceived by this shallow bluff on the part of St. Petersburg.

### EXPLOSION IN TOKYO.

At 8.15 on the morning of the 29th an explosion took place in the drying-room of the blasting gelatine factory at the Koishikawa Arsenal. Flames broke out and three small factories were burned. At 8.40 the conflagration was extinguished. The explosion killed 16 people, severely wounded 40 (of whom four have since died); and slightly wounded 64. As to the origin of the accident, all the workmen in the drying-room having been killed, there is no means of investigation. The extremely explosive nature of blasting gelatine is well-known and several accidents had previously happened in its manufacture, but this last is the largest.

General Terauchi, Minister for War, feeling great sympathy with the sufferers and their families, has presented to them considerable sums of money. The loss is insignificant technically and will not cause the slightest inconvenience from a military point of view.

The *Jiji* has a Sasebo telegram to the effect that a foreign steamer laden with wood and stone from Otaru, Hokkaido, has been captured by a Japanese warship in Tsushima Strait. Two Russian naval officers were on board.

at Russia's behaviour in the matter of neutrality, but this last *coup* would be too silly.

The report of A. S. Watson & Co., Ltd., shows a divisible balance, less \$30,000 paid as interim dividend in November last, of \$83,597. It is proposed to pay a final dividend of 5 per cent. on the old capital, making 10 per cent. for the year, to pay a dividend for 3 months on the new capital at the rate of 10 per cent. per annum; to place \$30,000 to permanent reserve; to write off \$30,000 from plant, etc.; and to carry forward the balance, \$6,097.

The American steamer *Garonne* left Shanghai for Odessa on May 21 having on board about one thousand Russian refugees. The *N.-C. Daily News* remarks that there are few Russians left in the Settlement who still wish for transportation home, and whereas both hotels and boarding houses were previously willing to cater to Russians in preference to residents and visitors of other nationalities, there is now ample accommodation at houses of both descriptions at normal rates.

A curious, and, in these days, rather rare accident occurred at the Kiangnan Arsenal Dock on May 23rd. An old steam vessel of about 200 tons, belonging to the Provincial Authorities, had been docked for survey and had been condemned to the scrap heap. Some ballast in the bottom had been removed for the purpose and of this only a portion was replaced before filling the dock. When this was commenced and the vessel became waterborne she took a list, and in spite of all precautions eventually fell over on her side. The accident occurred during the night.

Many residents of Tokyo have pleasant recollections of the Misses Yu, the daughters of H. E. Yu, Chinese Minister to the Court of Tokyo. In recent Shanghai papers we read that these talented young ladies have been appearing at a Shanghai concert, and we quote one of the reports below:—

Part II. began with what was evidently anticipated as a great treat, the Greek dance, "Les Erinnyes," by Massenet, performed by the Misses Yu. That a dance in Greek robes should be given by two Manchurian young ladies on the stage of the Lyceum is in itself remarkable, but it is still more so when it is remembered the two young ladies in question are daughters of the ex-Minister to Paris. The dance itself was delightful, the poetry of motion itself, and it was most enthusiastically received.

No less than eight officials holding substantive and, in several instances, quite lucrative posts in Hunan province, either as sub-prefects, district magistrates or district directors of studies, have recently petitioned H.E. Tuan Fang, Governor of the province, to be allowed to resign their positions so that they may go abroad, either to Japan or Europe, to travel around and extend their present knowledge. The Governor, Tuan Fang, was naturally exceedingly pleased at this and not only gave his unqualified assent but also ordered that each of the applicants should be paid a certain amount for passage money, while at the same time, his Excellency instructed the Provincial Treasurer to appoint officials to become *locum tenentes* for the travellers, so that when they returned from abroad they would find their original posts kept for them. This exceptional treatment by the Governor is deeply appreciated by all classes of officials.

The writer of Notes on Native Affairs in the *N. C. Daily News* has the following remarks to make concerning recent doings of the Triad Society:—

As is generally known the Triad Secret Society of Kuangtung province was organised by old Taiping rebels in the middle of the sixties, after the collapse of the Taiping rebellion which followed the capture of Nanking and the death at the time of Hung Hsiu-ch'uen, the so-called "Heavenly King," or "Emperor," of the Heavenly, of Taiping dynasty. The Chinese name of the Triads in San-hô Hui (Canton Sanhop Hui), although it is sometimes also called Santien Hui (Cantonese Santien Hui) or "Three-dots" Society. This last has been sometimes called a branch of the Triads, but as far as can be learned this idea seems to be erroneous. As anyone in the South knows, the Triads still have the ambition of ousting the present Manchu dynasty,

and so they have had a hand in almost every insurrection that has started in the Two Kuang provinces. Advice in hand now state that the members of this Society, under their newer designation of Santien Hui, have become very active, proselytising of late in the northern districts of Kuangtung province, especially in the sub-prefecture of Chiayingchou, where they are said to number over 7,000 men. One result of this is that operations are being pushed further north, so that, according to a Foochow dispatch, a large body has penetrated the districts of Wuping in Fukien, and Huich'ang in Kiangsi province. This would seem to give the idea that the Triads are working to join hands with the Kolao Hui and its branches, the Great Sword (Tatao), and Dagger (Siaotao) Societies, in the Yangtze Valley. Evidently the authorities of Min-Che (Fukien and Chekiang provinces) and Kiangsi think this new movement of the Triads dangerous enough to deserve serious attention, and we understand that measures have been arrived at to take joint military action between the high authorities of the provinces above noted. There also seems to be an idea in mandarin circles that the secret societies are hoping that the Chinese Government will be involved in difficulties by the arrival of the Baltic Fleet in Chinese waters, which will turn away the attention of the authorities, for the nonce, from the operations of the secret societies from the Liangkiang and Hukuang provinces in the Centre down to the Min-Che, Two Kuang and Yün-Kuei (Yunnan and Kueichow) provinces in the South.

The Chinese cruiser *Feiyang*, which returned to Chefoo on the 21st May, reported the destruction of no less than eleven derelict mines.

Governor Chang Tsêng-yang of Shansi province has written to the Waiwupu and the Shangpu with reference to the recent convention between Shêng Kung-pao, representing the Directorate General of Railways, and the Peking Syndicate regarding the construction of a railway between Taochou in Honan and Tsehchou in Shansi, and the opening of mines between the two points in which the Governor requests the two Boards to be firm regarding the rights of Chinese owners of mines. The Governor declares that the concessionaires must not be allowed to encroach upon mines already worked by natives, whether in the Old Chinese style or by Western machinery; also that the railways to be constructed there shall be bound to carry and transport the output of native-owned mines located in the neighbourhood of these railways. By this means only can the natives of the two provinces of Honan and Shansi have their rights protected and the high authorities in Peking ought to take the lesson given re the Kiaochow-China Railway and Mining concessions, where the concessionaires have the power to take possession of all mines in the neighbourhood of that railway to the detriment of the natives of Shansi province.

A somewhat serious collision occurred in the Shanghai river on May 26. The China Mutual steamer *Pingsuey* arrived outside the Woosung Spit Buoy on May 25 and anchored there for the night, proceeding up the river early next morning. About the same time the Austrian Lloyd's steamer *Maria Valrie*, outward bound for Trieste, was going down river on the last of the ebb. About a quarter to five in the morning, opposite Pheasant Point—a portion of the river which is always difficult to navigate—the two vessels came into collision, the bows of the *Pingsuey* cutting into the *Maria Valrie* amidships, on the port side. The *Pingsuey* suffered little damage beyond denting and scraping, but the *Maria Valrie* was cut into below the water, in the second hold. She was without delay beached bow on at Pheasant Point. The gash in the vessel's side is about four feet in width and is now covered by a collision mat. The *Pingsuey* proceeded on her course up river.

The Chinese Chamber of Commerce in Shanghai has received a telegram from the Ministry of Commerce informing it that the decision to boycott American goods, etc., arrived at by the various bodies of merchants and gentry in Shanghai has been handed to the Ministry of Foreign Affairs (Waiwupu), and that the latter had replied that upon the approach of the expiration of the Chinese Exclusion Treaty, Minister Liang Chêng at Washington had been instructed to delete all clauses of the former Treaty which had borne

hard upon Chinese entering the U. S. A., and also to add such as it was thought would be more just in the treatment of Chinese. Having done so Minister Liang Chêng was instructed to approach the U. S. State Department on the subject. Minister Liang Chêng had since reported that the U. S. Government had refused, so far, to discuss the subject, while, on the other hand, it had been hinted to him that the U. S. Government had in mind the investigation in detail of all Chinese in the United States as to their names, occupations, native provinces, etc. The Waiwupu further stated that the day before a telegram had been sent to Minister Liang Chêng informing him what steps of retaliation had been decided upon by Chinese merchants in the South. That Minister had also been instructed to use every argument with the U. S. Government in order to obtain more just terms in the new Treaty which is to be signed.

A Canton letter to the *North China Daily News* states that on the 9th May while a body of troops encircled the execution ground of Shih-wanhsing in the Namhaihsien district of Canton city, where three bandits were about to be beheaded, a number of their comrades suddenly broke through the cordon and carried off one of the doomed men. It so happened that this was not done until two of the three had already fallen under the executioner's heavy two-handed sword. This gave the opportunity for all the troops present to rush after the audacious rescuers. The bandits were too weak in numbers to maintain a successful rear guard fight as it were, with the result that while four bandits were killed outright in the fight the soldiers managed to recapture the rescued man alive and also one of the rescuers. The sentence was then carried out "as previously arranged," with the addition that the man who was taken at the same time was also beheaded.

There have been 72 cases of plague in Hong-kong since it broke out again, and it is reported to be spreading at Foochow.

According to a letter from the North, translated by our senior Shanghai contemporary, the recent Imperial decree abolishing torture during investigation of cases has raised a storm of protest from members of the Board of Punishments and a number of Censors. It would seem that it has been the etiquette since the establishment of the Chêng Wu-ch'ü (Department of State Affairs) in 1902, that whenever any suggestion is presented to the Throne the matter is at once referred to the Chêng Wu-ch'ü for decision. In the case under review this was not done by the Empress Dowager who, immediately after reading Wu Ting-fang's memorial for more leniency in the execution of the laws, issued an edict granting his memorial. Conservatives in the Board of Punishments, however declare that under present conditions it is impossible to abolish torture during the examination of cases, and they have also taken advantage of the Empress Dowager's so-called slip to declare that Her Majesty should have in the first place ordered the Chêng Wu-ch'ü to consider and report on the matter before granting the Imperial approval. The chances are that being unable to withstand all this clamour, Her Majesty may order the Chêng Wu-ch'ü to report on the matter after all.

The report of the Shanghai Electric & Asbestos Co., Ltd., for the year ended 31st March last shows a divisible balance of \$30,275, after payment of an interim dividend of 4 per cent. The directors propose to pay a final dividend of 6 per cent., to write off from furniture, etc., \$3,296, to present \$2,500 as a bonus to the staff, and to carry forward the balance, \$6,979.

#### BANK DEPOSITS OF TWO COUNTRIES.

The *Bankers' Magazine* of London, in its April number, gave the statistics of banking operations in the United Kingdom during 1904. These statistics and the compilations contained in the report of the Comptroller of the Currency covering banking operations in the United States during the year

ending June 30, 1904, permit of a comparison of the aggregate deposits and note circulation of all the banks in the two countries. Deposits and note circulation:

	United States.	Great Britain.
1904 .....	\$10,449,782,094	\$4,503,955,000
1903 .....	10,087,055,953	4,427,340,000
1902 .....	9,561,467,881	4,520,650,000
1901 .....	8,892,879,518	4,444,515,000
1900 .....	7,548,626,824	4,448,340,000
1899 .....	7,058,369,762	4,346,695,000
1898 .....	5,953,477,521	4,191,720,000
1897 .....	5,282,139,527	4,082,150,000
1896 .....	5,171,124,970	3,988,795,000

The figures are those of deposits (current accounts and note circulation) in the United Kingdom and of the individual deposits of all banks and trust companies and private bankers in the United States and of the note circulation of the national banks as reported by the Comptroller. According to the *Wall Street Journal*, the comparison is not perfect, owing to the differences in the methods of making the two reports, but it is sufficiently near the mark to enable one to get a view of the greatness of banking in the two countries. The deposits (including circulation) of the two countries aggregate nearly \$16,000,000,000, against \$9,000,000,000 in 1896, a tremendous expansion in eight years. The growth in the United States has been 102 per cent. and in the United Kingdom nearly 13 per cent. In 1896 the deposits of the United States were nearly 30 per cent. larger than those of the United Kingdom; in 1904 they were 132 per cent. larger.

#### NOTES ON CURRENT EVENTS.

The Empress of Japan continues to bestow gifts of artificial limbs upon wounded soldiers. The number of men thus assisted by Her Majesty in the present war is 1261, and the detail is 571 (including 12 Russian prisoners) provided with legs or arms, and 690 (including 22 Russians) with eyes.

The British Government has presented a sum of 7,400 yen to the family of the late Lieut. Ishihata, who was killed in the trenches at Port Arthur while conducting a party of British and German officers. The Kaiser had already presented a sum of 15,000 marks to the Lieutenant's family.

There has been a sudden and great rise in the market prices of Japanese securities, as the following figures show:—

	Rise.
4 per cents.....	£ 86.8s.
War Bonds .....	£ 101.11s. 1d.
Five per cents .....	£ 99.10s. 8d.
First Six per cents .....	£ 103.
Second .....	£ 101.

Compared with the corresponding period of last year, Japanese securities showed an average rise of £10 on the London market.

Japanese shares also show considerable increases but the market had been remarkably steady throughout the whole crisis.

Prince and Princess Arisugawa arrived at Berlin on the 29th May by special train. They proceeded to the Bristol Hotel, where preparations for their reception had been made by the Imperial Household. Their reception was public. The Kaiser, the Crown Prince and other members of the Imperial Family met them at the station. A friendly conversation took place. A guard of honour was drawn up at the station, and the treatment of Their Imperial Highnesses was most courteous. The Kaiser immediately conferred on the Prince the Grand Cordon of the Black Eagle, Admiral von Bandeman, Rear-Admiral von Uze (?), Lieut. Taubert,

Secretary of Legation von Yergurt, and Herr von Inohl who formerly served in the Imperial Household of Japan, formed the reception committee. They went as far as Magdeburg to meet the Prince.

Field-Marshal Marquis Yamagata and General Terauchi, Minister of War, have addressed to Admiral Togo messages couched in the warmest terms of admiration and appreciation.

#### "OUR BOYS."

H. J. Byron's ever popular play was produced in Yokohama on Monday night with remarkable success by the A. D. C. It doubtless takes a past generation to remember when "Our Boys" ran its phenomenal course in London, but to most English-speaking people the title carries with it interesting and suggestive associations. Under the able superintendence of Mr. E. Beart the play was staged with all the advantages obtainable locally and certainly no complaint could be forthcoming on that score.

It would be idle to describe here the plot of "Our Boys." A country magnate (*Sir Geoffrey Champneys*) and a retired butlerman (*Mr. Perky Middlewick*) have each a son; there is an heiress (*Miss Violet Melrose*) and her sister *Mary*, matrimonial intrigues and schemes ensue—and that is the plot. We have omitted, in this sketch of the movement to mention *Sir Geoffrey's* sister *Clarissa*, because at first sight that character appears to be subsidiary. It is not so by any means. In the hands of Miss Lloyd Thomas it became quite a study, and that lady is to be congratulated upon her careful and appreciative fulfilment of the rôle. It is safe to say that Mrs. E. C. Davis has never appeared with greater effect than in the character of *Violet Melrose*. Charming dressed, she spoke and moved like the consummate actress that she is, and deservedly won the applause of her audience. Miss Rogers' impersonation of *Mary Melrose* was quite what one should have expected from this young lady. She not merely looked but acted the part, and undoubtedly hers was the impersonation that captivated the house. Mrs. Maitland's rôle, that of *Belinda* the lodging-house slave, must be, under any circumstances, a thankless one but by her full justice was done to it. For the rest we have the two boys, *Talbot Champneys* and *Charles Middlewick*, Mr. J. M. Mollison and Mr. W. S. Moss respectively, who impersonated the parts allotted to them with great success, and the fathers *Sir Geoffrey* and *Middlewick*. It is needless to say that Mr. Brady's rendering of the retired butlerman (whose presumably vulgar experiences had been softened by contact with his son and with other associations) was all that could be desired. Indeed the scene in the London lodging-house was a very fine bit of acting. As *Sir Geoffrey* Mr. Williamson Jones gave a very painstaking performance, presenting a character which was original and interesting.

It remains to add that there was a crowded and appreciative house; that the Bijou Orchestra gave a number of selections during the evening which were highly appreciated; and that the performance concluded with the customary "calls":—

#### CHARACTERS.

*Sir Geoffrey Champneys* (*A County Magnate*)..... Mr. J. Williamson Jones.  
*Talbot Champneys* (*His son*)..... Mr. J. M. Mollison.  
*Perky Middlewick* (*Devonshire House*)..... Mr. G. G. Brady.  
*Charles Middlewick* (*His son*)..... Mr. W. S. Moss.  
*Kempster* (*Sir Geoffrey's Man Servant*)..... Mr. A. E. Cooper.  
*Poddles* (*Middlewick's Butler*)..... Mr. A. J. H. Windet.  
*Violet Melrose* (*An Heiress*)..... Mrs. E. C. Davis.  
*Mary Melrose* (*her poor Cousin*)..... Miss Rogers.  
*Clarissa Champneys* (*Sir Geoffrey's Sister*)..... Miss Lloyd Thomas.

*Belinda* (*a Lodging House Slave*)..... Mrs. E. W. Maitland.

#### MUSIC.

Overture—"Laughing Water".....Hager.  
 Selection—"Ben Hur Waltzes".....Hoffmann.  
 Selection—"Rakoczy-Marsch".....Berlios.  
 Medley Two-Step—"I've got a Feeling for You".....Mores.

At the close of the performance, Mr. E. C. Davis, President of the A.D.C., came before the curtain and asked the audience to join him in three cheers for the Emperor of Japan. That day they had received news of a victory which would go down in history as one of the greatest ever fought on blue water, and the foreigners living in Japan appreciated at its full worth the work done by the sailors of the empire. The cheers were heartily given, and were followed by three even heartier *Bansai*.

#### "LA GUERRE RUSSO-JAPONAISE."

##### "POETES ET SOLDATS."

M. Père Noël Péri, in his lecture given on the above topic at the *réunion* of the Alliance Française held on Friday afternoon, commenced with some sketches of Japanese poetry in general with further reference to the *tanka* and *haiku*, the two forms with which the author is specially interested. After a short digression on the cherry blossom as the symbol of Japanese love, and to which, naturally, particularly numerous allusions are made in the poetry of soldiers, the lecturer opened the little volume in which Messrs. Kunikida and Edamoto have combined their poems. He first quoted some verses of His Majesty the Emperor, in particular the following:—

<i>Yomo no umi</i>	En cet âge du monde ou
<i>Mina kara kara</i>	Dans tout l'univers nous nous
<i>Co omou yo ni,</i>	Croyons tous frères, pourquoi
<i>Nado nani kaze no</i>	Donc la tempête s'élève-t-elle
<i>Tachi-sawaguran?</i>	Encore furieuse?

After having mentioned some poems by the princesses of the Imperial blood, and another by General Nogi, the lecturer laid before his hearers a rich and varied selection of poems of which the authors have already shed their blood or offered up their lives on the field of battle. All ranks are included amongst these—the general together with the simple soldier, and it is no little surprise to those unfamiliar with Japanese poetry, to learn how, in Japan, the knowledge of and manipulation of poetic forms is diffused among all classes of the population. Her sailors and simple soldiers speak the language of the gods alike with the professional *littérateur*, and this is not a mere eloquence more or less hollow; one cannot be mistaken in the accent of these poems, the sentiments in them are true, sincere and deep in the brevity of their form. Those sentiments of which the expression occurs most frequently are devotion to the Emperor and love of country, carried even to the desire of dying for their glory; the love of glory and the love and regret of their native land, as well as the family affections. The latter, in particular, have produced a number of charming verses from which we extract the following, addressed by an officer to his wife:—

<i>Nadeshiko no</i>	Les fleurs d'œillet s'épanouissent
<i>Hana wa sakedomo,</i>	sent; mais toi, qui pour e-
<i>Asa ni yu na</i>	nuit enveloppes mon enfant
<i>Waga ko wo mesuru</i>	de ton amour, toi, tu n'es
<i>Kimi wa aranaku!</i>	pas là!

The lecturer adopted in his exposition the chronological order; that is to say, he took the Japanese soldier from the time of mobilisation and followed him through all the stages, the last farewells, the disembarkation, the battles, after the victory, citing the appropriate and more striking poems applicable to the various circumstances. He concluded by an investigation into the sentiments of these soldiers with regard to their enemies, and the conclusion he arrived at, entirely to the honour of the Japanese character, was summed up in this last verse, which brought the lecture to an end:—

<i>Chi ni somishi</i>	Cadavres ennemis, tout cou-
<i>Ada no shikabane,</i>	verts de sang, quand je songe
<i>Oya ari to</i>	que vous avez des parents,
<i>Omoeba, aware!</i>	ah! cadavres ennemis, que
<i>Ada no shikabane!</i>	vous m'êtes cruels!

#### TENNIS.

The Final of the Gentlemen's Singles Handicap of the Ladies Lawn Tennis and Croquet Club took place at the Bluff Gardens on Saturday between Mr. J. Chapman and Mr. J. M. Mollison, when Mr. Chapman came out the winner with the score of 6-0, 3-6, 6-3.

## THE NAVAL VICTORY.

SO far as we know at present, the ships which escaped from the battle of Tsushima are the following:—

*Oleg*, protected cruiser, new, 6,500 tons, speed 23 knots.

*Aurora*, protected cruiser, completed 1900, 6,630 tons, speed 20 knots.

*Almas*, protected cruiser, completed 1903, 3,285 tons, speed 23 knots.

Destroyers 4.

On the other hand, the fighting ships he has lost are:—

*Kniaz Suvaroff*, first-class battle-ship, just completed, 13,516 tons, speed 18 knots.

*Ossliabya*, first-class battle-ship, completed in 1898, 12,574 tons, speed 19 knots.

*Sissoi Veliky*, second-class battle-ship, completed in 1894, 8,880 tons, speed 16 knots.

*Navarin*, second-class battle-ship, completed in 1891, 9,476 tons, speed 16 knots.

The *Borodino*, first-class battle-ship, completed 1901, 13,516 tons, speed 18 knots.

The *Orel*, first-class battle-ship, completed 1902, 13,516 tons, speed 18 knots.

The *Alexander III*, first-class battle-ship, completed 1901, 13,516 tons, speed 18 knots.

The *Nicholai I.*, second-class battle-ship, completed 1889, 9,900 tons, speed 16 knots.

The *Admiral Nakhimoff*, armoured cruiser, reconstructed 1900, 8,500 tons, speed 19 knots.

The *Dimriti Donskoi*, armoured cruiser, reconstructed 1896, 6,200 tons, speed 15 knots.

The *Vladimir Monomach*, armoured cruiser, reconstructed 1898, 5,593 tons, speed 15 knots.

The *Svetlana*, protected cruiser, constructed 1896, 3,727 tons, speed 20 knots.

The *Jemichug*, protected cruiser, constructed 1902, 3,200 tons, speed 22 knots.

The *Isumrud*, protected cruiser, constructed 1903, 3,200 tons, speed 22 knots.

The *Admiral Oushakoff*, coast-defence iron-clad, constructed 1893, 4,126 tons, speed 16 knots.

The *Admiral Seniavina*, coast-defence iron-clad, constructed 1894, 4,126 tons, speed 16 knots.

The *Admiral Apraksin*, coast-defence iron-clad, constructed 1896, 4,126 tons, speed 16 knots.

Destroyers 4.

These represent a total tonnage of 139,050 tons. If we take these ships (including their armaments) at an all round value of £80 per ton, which is a very moderate estimate, they represent an aggregate value of about one hundred millions of *yen*. We have also to add two special transports sunk and one captured, with a total displacement of 22,000 tons at least, and representing a value of at least 5 million *yen*. Thus we obtain the figure of over a hundred million *yen* as the total pecuniary loss suffered by Russia in the battle of Tsushima in the matter solely of ships captured and sunk. But to this already formidable figure an immense addition has to be made; an addition which, unfortunately, we have no means of estimating. The cost of bringing out the Second and Third Baltic Squadrons must have been enormous. They were attended by 9 ships of the Volunteer Fleet, by 4 special steamers and by 6 converted cruisers, and a vast number of steamers were either chartered or purchased for the purpose of coaling them.

Greater, however, than all the pecuniary loss is the disaster that has befallen Russia's cause. She has not only been stripped of all her naval force, but she has also forfeited her last chance of recovering the command of the Far-Eastern Sea. The loss of her First Pacific Squadron, though a terrible blow, was not crushing. The loss of the Second

and Third Squadrons is crushing as well as terrible. For it may justly be said that they are lost. The shreds of strength remaining to ROJESTVENSKY may possibly serve as furtive commerce-destroyers, but their habitual role must be to hide themselves in the harbour at Vladivostok so long as they are allowed to remain there. They can not venture out to meet Togo again: destruction would be their certain fate. It has indeed been a fiasco. Since October of last year these Russian squadrons have been steadily creeping eastward. They attracted the world's attention and furnished a topic of universal conversation during 7 long months. They nearly dragged France and England into war by their gross violations of the former's neutrality. They enveloped themselves in mystery and held the whole of the East in suspense. And then, after this protracted and sensational preface, a day and a half in the actual arena of war sufficed to annihilate them. They took an unconscionable time to come up to the "scratch" and their preparations disturbed the world's markets, but the instant that they arrived within reach of Japan's arms she struck them down with the greatest ease and in the most efficient manner. Russia has now shot her last naval bolt. Nothing remains to her except the Black Sea Fleet, and that she can not utilize.

How the feat was accomplished it would be idle to conjecture: detailed news must be awaited. Experts have not been accustomed to regard the sinking of first-class battle-ships as feasible incidents of ordinary naval warfare, and still less conceivable has been their capture. Previously to the Battle of Tsushima no battle-ship had been sunk in this war except by mines and only one cruiser had been sent to the bottom by gun shot. Possibly most of the work of sinking in the Battle of Tsushima was done by torpedo-craft. Possibly submarines were used. But in the struggle at the Liancourt Rocks, 240 miles away from the place where the battle began, neither destroyers nor submarines were employed. It seems to have been merely a case of 4 ships—5 before the *Isumrud* fled with her cargo of killed and wounded—surrounded by a squadron of faster vessels and greater combined strength. Every ship on the Russian side was iron-clad and two of them were battle-ships, yet they had to surrender without inflicting any appreciable injury on the enemy. These four Russian vessels carried six 12-inch guns, three 10-inch and eight 9-inch, not to speak of lighter pieces. They should have been able to inflict heavy injury on the Japanese. Yet Togo, in reporting their capture, was able to say "our squadron did not suffer" (*waga kantai songai nashi*). It is all very strange.

And not the least inexplicable feature is the absence of the Vladivostok cruisers. The *Rossia* and the *Gromovoi* are two splendid cruisers. They might have rendered most material aid to ROJESTVENSKY had they come down boldly and attacked from the north while the Baltic Squadrons attack-

ed from the south. They could have timed their arrival to an hour, and there can not have been any difficulty in keeping them posted as to ROJESTVENSKY's movements. Nevertheless they appear to have lain idle in port while their comrades were being crushed outside. The Russians have often done what they were not expected to do, but this last act of theirs is so singular that we are disposed to infer the inability of the cruisers to move out to battle. It looks as though they had not yet recovered the effects of the treatment they received 9 months ago at the hands of Admiral KAMIMURA.

## ON FUJIMI.

(A SONG OF ASAMA YAMA.)

Still stands the mountain Asama,  
Sturdy and steadfast and strong,  
(Albeit hot-hearted,  
With passionate outbursts at times)  
In summer and winter the same,  
Unheeding the weather.  
Bluff but faithful is he,  
Broad-shouldered, deep-hearted.

Such are the friends who are friends:  
Love us and hold to us still  
However the old world may mutter,  
However may pile up the winters.  
It recks not on earth or in Heaven.

Still float the mists by Asama,  
Fair seeming to-day as we saw them,  
Silver and silken and soft,  
In dead happy days of September;  
Fair seeming, but fickle and void,  
Cold-hearted, unstable,  
Gone at a look from the sun,  
Fled if a wind do but whisper.

Such are the friends of an hour:  
Smile, and are fair, and are gone,  
And the place thereof knows them no longer;  
Far fled at the word of a whisper,  
And vanished from earth and from heaven.

Each summer day hath its mists,  
And let no man mourn their departure.  
They pass, but still standeth Asama.  
My heart, be not heart of the mist!  
God give thou be heart of the mountain!

KARUIZAWA.

S. LI. YENDYS.

## MEMORIAL DAY.

The annual exercises of Memorial Day took place on May 30th in the compound of the United States Naval Hospital, Yokohama. There were about 150 present, including Yokohama and Tokyo residents and naval and military men, the American Minister to Tokyo, Mr. Lloyd C. Griscom, presiding. The Minister was accompanied by Mr. Miller, Consul-General; Mr. Scidmore, Mr. N. F. Smith, Mr. Lockland, Second Secretary of the American Legation, and Revs. E. S. Booth, A. A. Bennett, and J. H. Loomis. The grounds were decorated with the national colours and the flowers that were afterwards placed on American graves in the cemetery were displayed on tables. Proceedings were opened by the singing of the hundredth Psalm. An orchestra consisting of Mrs. McIvor, at the piano, Mr. Salinger, cello, and the Misses Fraser and Page and Mr. Charles Thorn, violins, furnished the music. Psalm 31 was read by the Rev. E. S. Booth. Job XIV: 1-15, was read by Rev. A. A. Bennett, followed by a reading from Matthew XXV: 30-40. A hymn followed and prayer was said by Rev. E. S. Booth. The Lord's Prayer was then recited, followed by the singing of "America." Benediction was offered by the Rev. J. H. Loomis and "Taps" was blown by Mr. George H. Tuckey, a retired cavalry bugler, now residing in Yokohama. Mr. Griscom then invited those present to take charge of the flowers and march in procession to the Cemetery, where the graves were decorated.

## NIPPON YUSEN KAISHA.

Below we print the thirtieth report of the Nippon Yusen Kaisha presented at the half yearly ordinary general meeting of shareholders held in Tokyo on Friday:—

GENTLEMEN:—The Directors submit to you the annexed Statement of the Liabilities and Assets of the Company, and the Profit and Loss Account for the Half-Year, ended March 31st, 1905.

The Gross Profits of the Company for the past Half-Year amount to yen 3,870,434.042, out of which there has been paid:—

Depreciation of the Company's fleet and property.....	Yen.
Insurance Fund.....	755,593.775
Ships' Structural Repair Fund.....	325,657.280
Special Repair and Renewal Fund for Steamers in Transport Service.....	453,521.180

2,384,772.235

leaving a balance of yen 2,459,925.676, including yen 974,263.869 brought forward from the last Account.

The Directors now propose that yen 74,283.000 be added to the Reserve Fund, raising it to yen 2,133,338.976; and that yen 71,358.110 be allowed as Directors' and Auditors' fees. From the remainder the Directors recommend a dividend at the rate of Ten per cent., together with Two per cent. as Special Dividend, thus making Twelve per cent., per annum, which will absorb yen 1,320,000.000. The balance, yen 994,284.476, will be carried forward to the next Account.

REMPEI KONDO,  
Chairman.

## BALANCE SHEET, 31ST MARCH 1905.

LIABILITIES.	
	Yen.
Share Capital.....	22,000,000.000
Debentures.....	800,000.000
Insurance Fund.....	2,771,996.844
Ships' Structural Repair Fund.....	3,289,138.957
Special Repair and Renewal Fund for Steamers in Transport Service.....	850,000.000
Reserve Fund.....	2,059,055.886
Dividend Equalization Fund.....	3,300,000.000
Fund for the Extension of Services and Improvement of the Fleet.....	3,500,000.000
Pension Fund for Employees.....	456,699.220
Sundry Creditors.....	4,591,281.131
Amount brought forward from last account.....	974,263.869
Net Profit for the Half-year.....	1,485,661.807
	46,078,097.714
ASSETS.	
	Yen.
Reduced Book Value of Fleet.....	23,823,365.721
Reduced Book Value of Launches, Barges, &c.....	165,887.321
Payment on account of new ships .....	930,369.273
Buildings and Land.....	3,857,716.454
Yangtze-Kiang Line account.....	1,531,528.150
Yokohama Stores Depart., &c.....	1,060,468.654
Public Loans and other Securities .....	6,848,051.640
Cash at Bankers and in hand.....	6,035,706.977
Sundry Debtors.....	1,825,003.524
	46,078,097.714

## PROFIT AND LOSS ACCOUNT:

	Yen.
To Depreciation of fleet and property.....	755,593.775
To Insurance Fund.....	325,657.280
To Ships' Structural Repair Fund .....	453,521.180
To Special Repair and Renewal Fund for Steamers in Transport Service.....	850,000.000
To Reserve Fund.....	74,283.090
To Directors' and Auditors' fees.....	71,358.110
To Dividend (10 per cent.).....	1,100,000.000
To Special Dividend (2 per cent.) .....	220,000.000
To Balance carried forward to next account.....	994,284.476
	4,844,697.911
By Balance brought forward 30th Sept., 1904.....	974,263.869
By Amount of Gross Profits for the Half-Year, ended 31st March, 1905.....	3,870,434.042
	4,844,697.911

We have examined the above Accounts, with the Books and Vouchers of the Company, and find them to be correct.

TAKESHI ARISHIMA } Auditors.  
TATSUMI IIDA }

Tokio, 26th May, 1905.

The business report of the Nippon Yusen Kaisha for the last half year (October 1, 1904, to March 31, 1905) is as follows:—

GENERAL.—The military operations being still in full swing during the term under review, the greater portion of the Company's fleet was employed in the military service, and though one or two steamers were relieved at intervals, they were again engaged soon after, so that a few small vessels plying in the Hokkaido and two or three other steamers were the only ships of the company engaged in ordinary business. In consequence, all the ocean steamship services, with the exception of the American line, were suspended. But the coasting services and those in the Far Eastern seas were maintained by means of chartered foreign steamers, which numbered 24, representing about 60,000 tons displacement.

COASTING SERVICES.—The victories in the war increased commercial prosperity in general and activity in transportation in particular. A large quantity of marine products were exported from Hokkaido and other merchandise from Tokyo and Osaka, so that the Company had always to employ several steamers in the transportation of these freights, in addition to those on the regular services. As most of the vessels belonging to other steamship companies in Japan were employed in the military transportation, there was not the keen competition that existed in ordinary times, and the Company's vessels carried a large amount of cargo on each trip.

FAR EASTERN SERVICES.—The firm retention of the control of the sea and the splendid victories in Manchuria gave rise to prosperous trade between Japan and Chinese and Korean ports, especially between Yokohama and Shanghai. But the exportation of beans and bean cake, the principal exports from Niuchwang, was slight, owing to the Russian requisition of these articles. The agricultural products of Korea were directly exported to Manchuria, in consequence of which their import to Japan decreased. The Company's services to Vladivostok, Gensan, Port Arthur and Tairen remained suspended.

EUROPEAN SERVICES.—This service by the Company's steamers was suspended. But the four-weekly service carried out since May last year, by means of the contract with Messrs. Bucknall Brothers and the British Pacific Steam Navigation Company, which companies placed six of their steamers on the service, worked smoothly. The Company, desiring to maintain by this service the business connection which this line had established abroad, dealt with the business relating to passengers and cargo alone. During the term, the Company chartered seven steamers for the single voyage from Europe to Japan, in order to convenience our customers by carrying their freights to the Far East.

AMERICAN SERVICE.—Instead of the regular fortnightly service maintained in normal times by six steamers plying between Hongkong and Seattle, a monthly service was carried out, mainly between Japan and America, by the *Kanagawa Maru* and *Iyo Maru*, in addition to the *Shimano Maru*, which made one voyage during the term, and the service between Hongkong and Japan was suspended. The Company experienced some difficulty in obtaining freights for the out-going voyage, on account of the fluctuation in insurance rates, but on the return voyage these steamers always carried a full cargo. At times a certain amount of freight consigned to the Company was sent to America by the Boston Steamship Company's vessels by virtue of a special contract.

AUSTRALIAN SERVICE.—The *Yawata Maru* made one voyage on this service at the beginning of the term, and was then chartered for military purposes, where-upon the service was suspended.

BOMBAY SERVICES.—This service remained completely suspended during the term. But the company effected an arrangement with other steamship companies, by which Bombay cotton was brought to Japan at the rates originally fixed, and thus the requirements of the Japanese cotton mills were fully met.

CONCLUSION.—Though the important services to Europe, Australia, and Bombay were suspended during the term, the passenger and freight traffic on the coasting and Far Eastern services prospered on account of the victories in the war. This circumstance—occupied with the fact that the Company improved the fleet of chartered steamers from time to time, thus making the working more efficient and more economical, and that the receipts from the military transport service were considerable—brought about comparatively good results in the company's business, occurring, as it did, in time of war. The gross receipts during the term were yen 10,727,458.68, and gross expenditure yen 6,857,024.638, leaving a balance of yen 3,870,434.042. After deducting from this sum yen 850,000 for repairs of vessels on the military service and of re-

covering their losses; yen 1,518,346.035 as reserves according to the company regulations, and yen 16,426.200 towards the sinking fund for premises, there remained a net profit of yen 1,485,661.807, to which has to be added the sum of yen 974,263.879, balance brought forward from the last account making a total yen 2,459,925.676, which is to be distributed as already published.

Speaking at the semi-annual general meeting of shareholders of the Nippon Yusen Kaisha, Mr. Kondo Rempei, President of the Company, said that during the term just ended the Company had been able to carry on its business peacefully and with considerable success, in spite of the war. This success was mainly attributable to the chartering of foreign steamers. The sum paid by the Government for the use of the Company's steamers as transports during the period under review amounted to 5,400,000 yen against 5,370,000 yen in the preceding term, showing an increase of only 30,000 yen. The shipping subsidy during the same period was 527,000 yen against 627,000 in the preceding term, showing a decrease of 100,000 yen. At the same time, the expenses of the fleet showed a decrease of 750,000 yen, owing to the fact that the Company's steamers were so busily occupied with military transportation that they could not be fully repaired. The chartered foreign steamers in the preceding term numbered 20, representing 58,000 tons. In the period under review, the number increased to 24 and their aggregate displacement to 60,000 tons, but the hire decreased from 1,670,000 yen to 1,090,000 yen, a saving of 570,000 yen thus being effected. At the beginning of the war, the charter rate for foreign steamers was extremely high, but it had lately depreciated, owing to the secure retention of the control of the sea by the Japanese Navy. The Company therefore replaced the steamers chartered at high rates by cheaper ones. These circumstances were the cause of their profitable business. In the current fiscal term, however, the presence of the Baltic Fleet in Far Eastern waters would affect the shipping trade to some extent, but the Company must be determined to endure to the last. In conclusion, Mr. Kondo expressed his appreciation of the devoted and faithful services of the seamen belonging to the N.Y.K., who were facing the perils of the war in a manner worthy of an heroic nation. This spirit of duty and self-sacrifice was not, however, limited to the Japanese alone. The foreign members of the crews on board the Company's steamers were also equally worthy of praise on account of their efforts on behalf of the country as well as of the Company.

## PLAGUE.

There has been another case of pest—the fifth—in the Fukagawa suburb. It was a child of five. All the victims have been children with one exception.

A case of plague is reported at the village of Tamakoshi, Ayauta district in Kagawa prefecture. A Takamatsu telegram says that in the same district, four cases have appeared this spring and proved fatal and that there are some suspected patients.

A case of bubonic plague appeared on May 29th in Kuroe-cho, Fukagawa, Tokyo. The patient is a hat dealer named R. Kuroda (36). He was removed to Honjo Hospital the same night.

On May 28th, two cases of plague were reported at Fukagawa, Tokyo. The patients are children—one, 9 years old and another, 4 years—of a small merchant named S. Kagotani. The younger died the same day.

A Chiba telegram says that a case of bubonic plague was reported on May 29th in the district of Unakami and the patient died in the evening. The victim was a coolie named S. Senbonmatsu (28) who was employed by a firm in Mannen-cho, Fukagawa, Tokyo, up to May 23rd when he left for his native place.

On the afternoon of May 31st, another case of plague appeared at Oshima-cho, Fukagawa, Tokyo. The patient is a youth of 12 years old, the eldest son of a coolie named K. Tanaka.

## DIFFERENT ACCOUNTS.

On the 28th instant Reuter sent a telegram which we publish this morning. It contains a report from General Linevitch describing the recent cavalry raid by Mischenko's Cossacks and claiming a very signal success. The public had already heard about this raid. News of it reached Tokyo officially on the 22nd of May and was published in all the newspapers on the following day. The Japanese Commander-in-chief in Manchuria did not confine himself to one report. He sent consecutive accounts day after day, so that we have from him a connected story covering the whole operation from the appearance of the Russian cavalry on the south-west of Fakumun until their retreat into northern Mongolia. So greatly and flagrantly do the Japanese and Russian versions differ that it is worth while to place them side by side.

## JAPANESE VERSION.

At 10 a.m. on the 20th instant the enemy's cavalry advanced toward Tafangshin (about 13 miles south-west of Fakumun), and attacked on foot. After a fight of 2 hours they were repulsed, leaving over 300 killed and wounded on the field. They retired in disorder a long way to the southwest.

The main body of the enemy's cavalry on the right bank of the Liao, which had attempted a wide turning movement in the Fakumun direction and had been frequently repulsed by our rear-guards, passed the night of the 20th—after its defeat at Tafangshin—in Hsiaoatze, which is on the Fakumun-Hsinmintun high-road, 28 miles from Fakumun; and on the 21st retired to the right bank of the Malien River, which flows southward on the west of the Fakumun-Hsinmintun high-way. Meanwhile his cavalry which had remained on the left bank of the Liao, several sotnias strong, was broken by our troops and retreated in disorder to the north.

The enemy's cavalry which had pushed far south on the right bank of the Liao began to retreat early on the morning of the 22nd, and by 5 p.m. on that day no sign of the enemy was to be seen south of Tatun, which is about 17½ miles west of Fakumun.

The enemy's cavalry which for some days past has been maneuvering on the right bank of the Liao, has now retired to northern Mongolia.

Now which of these reports is to be believed? Not in one single instance have the official reports of Japanese generals been contradicted by subsequent facts or convicted of exaggeration. But there have been several examples of discrepancies between them and Russian reports. A case in point may be quoted on account of its analogy with the above. When Mischenko made his raid down the right bank of the Liao towards Niuchwang in the beginning of January, he described the result of his operations in terms almost as glowing as those now attributed to him by Linevitch, yet events proved that he had not accomplished anything of any moment and

certainly nothing even approximately proportionate to the magnitude of his programme. Is it now conceivable that if he had succeeded in destroying lines of telegraphs through a great distance, in dispersing an immense convoy of commissariat, in carrying an entrenched position defended by a strong Japanese force, in annihilating 2 Japanese companies, in capturing one, and in carrying off 234 men with 2 machine-guns—is it likely that if all these things happened, the Japanese official report would have described the affair briefly as an unsuccessful raid by the Russians resulting in their repulse and their abandonment of over 300 killed and wounded? Mischenko claims too much. It is not within the role of cavalry, especially of Cossacks, to capture entrenched heights held by strong infantry forces possessing machine-guns. Such things have not happened in this war at any rate nor in any war with which we are historically acquainted.

## PORT ARTHUR.

The last of the Russian invalids, with the exception of Lt. General Balashoff of the Red Cross Hospital and probably a few of his staff, were transported by the *Shingu Maru* from Talien to Chefoo on the 23rd instant. There were 43 combatants and 134 non-combatants. The main part of them are said to consist of melancholia patients, so that their handling was a matter of no little difficulty. Port Arthur's hospitals are now emptied and it is to be prayed that they may long remain void.

Ships continue to report the presence of floating mines in the China Sea. These engines of destruction have drifted even as far as the Riukiu islands. One of them was seen by a party of deep-sea fishermen. They imagined it to be a buoy which had broken adrift and they accordingly towed it ashore, where an inquisitive man hammered it with a stone. An explosion followed, tearing four of the unfortunate fishers' folk to pieces and wounding a fifth. The mine is said to have been floating with the lower half submerged. The part under water was covered with shell-fish and weeds. It is curious that no intelligence is ever published showing whether these mines have been identified as Russian or as Japanese.

Good intelligence continues to arrive from Port Arthur as to the raising of the ships sunk there. On the 24th inst. news was received in Japan that the *Angara* and the *Kazan* had been floated, and that all the movables had been carried ashore from the *Peresviet*. We have no particulars about the *Kazan*, but the *Angara* is an auxiliary cruiser of 12,500 tons displacement. The *Peresviet* is a battleship of 12,674 tons and 19 knots speed. She was launched in 1898. It is now stated that of all the sunken ships the *Retvizan* will be the most difficult to save. It is also stated that the number of craft actually found on the bottom exceeds by 40 the number originally supposed to have been sunk.

All reason for secrecy having now disappeared, the Naval Authorities have published the names of the following ships lost during the blockade of Port Arthur: battleship *Yushima*, lost by striking a mine on May 15th, 1904; destroyer *Akatsuki*, lost by striking a mine on May 17th, 1904; gunboat *Oshima*, while engaged covering the flank of a landing party, was lost in a collision on May 18th, 1904; destroyer *Hayatori* was lost by striking a mine on Sept. 3rd, 1904; gunboat *Atago* was lost by running on a

rock in the straits of Peehili Nov. 6th, 1904; cruiser *Takasago* was lost by striking a mine off Port Arthur on Dec. 12th, 1904.

## THE HOUSE TAX.

Japanese journals have now much to say about the house-tax decision. There is evidently a strong sense of injustice, which is greatly to be regretted. But at this moment all comment on the legal aspects of the case seems to us to be either premature or belated. It will probably be interesting to read the arguments as presented to the tribunal of arbitration, for we shall then have an opportunity of estimating the value of the evidence on which the judgment was based. Meanwhile the problem of immediate importance is the logical scope of the judgment; a problem which must await elucidation until the French text reaches us. From the Japanese side it is naturally very disappointing to find that the extraterritorial system has not been abolished but is to be fiscally preserved, since the foreign residents are to live under conditions unrecognised by the laws of the land. Further what will have to be decided at once is the onus of maintaining the foreign settlements. The house-tax is a municipal impost and it constitutes the basis of other levies applicable to similar ends. Are the Japanese of Kanagawa, Hyogo and so forth to be saddled with special fiscal burdens on account of the foreign settlements, or should the central Treasury put up the money? There will be some discussion about that, but however it may be settled we can not hope that the Japanese nation will be easily reconciled to the obvious injustice of having to make special payments in order to support communities of foreigners who come to this country simply for money-making purposes. If, as the majority of the arbitrators have virtually declared, it was the purpose of the drafters of the revised treaties to differentiate in favour of the foreign communities and to provide that they should have the privilege of living in Japan under fiscal conditions more favourable than those enjoyed by the Japanese themselves, no more unfortunate or unwise purpose was ever conceived by a body of responsible diplomats.

## PREDICTIONS AND FACTS.

We have just had the pleasure of seeing some numbers of the *Chfoo Daily News* which make quaint reading at this moment. In one there appears a paragraph headed "Prey for the Baltics," the "prey" being described as 40 locomotives shipped by the S. S. *Minnesota* for Yokohama. In another, the editor quotes a portion of a lecture recently delivered by Professor Takahashi of the Tokyo University on the subject of France's methods of maintaining neutrality, and concludes thus:—

The lecture ends with the following sane words:—"The most appropriate course in the present case would be for the Japanese to ignore the neutrality of Kamranh and take what action might be necessary against the Russian fleet."

Very few people will disagree with the Professor in his last statement. The best way to circumvent the Baltic fleet is to destroy it. But the World has waited in vain for action of this sort. Togo has "funked," he hasn't carried out his promise made to us when the last Japanese loan was being floated, and it looks as if the brave Professor's advice would not be followed. Ten inch shells are much more formidable weapons than the jawbone of an ass. The appeal to good friends is likely to fizzle out. Admiral Togo is forgetting the slogan of the strenuous life—that "nothing succeeds like success."

Such remarks are an interesting rider, are they not, to the news we have been receiving from Tsushima since Monday last?

## KOREA.

It is reported that the Russians have now a force of some 10,000 of all arms at Kyongsong and that their outposts are pushed down as far as Kilju, in the neighbourhood of which place frequent skirmishes take place. When last we heard from this quarter, the Russian force at Kyongsong did not exceed four thousand. It is hard to know what to believe, but since the story of ten thousand comes from a Korean source, it may probably be regarded as an exaggeration.

Apparently the relations between the Japanese and the inhabitants of north-eastern Korea are much better than they used to be. For many years there has been a large movement of Koreans across the Tumen into Russian territory. This is a thing familiar to all readers of modern history. There was regular emigration from Korea and there was a temporary outflow of labourers. Something like twenty thousand men were involved annually in the exodus, and ultimately as many as 150,000 Koreans are said to have settled in Russian territory. The pro-Russian tendencies of these settlers has always been recognised and the state of affairs in that part of Korea was supposed to be particularly favourable to Russian aggression. However, the Russians did not push southward. Meanwhile Sonjin was opened to trade in 1899 and Japanese proceeded thither in considerable numbers, establishing a new point of contact with the Koreans. Presently an opportunity of winning the good-will of the Sonjin folks presented itself. They wanted to have their district separated administratively from Kilju, and the Japanese Representative in Seoul interceded in their behalf. When the Russo-Japanese war broke out, the Japanese settlers withdrew from Sonjin, and the Russian troops coming down, gave the Koreans some striking object lessons in the art of plunder and rapine. Many rumours on this subject reached Tokyo, and if one half of them might be credited, the unfortunate Koreans must have had a hard time. By and bye the Russians, in turn, had to retreat, and the Koreans then became acquainted with the campaigning methods of the Japanese who do not molest peaceful folks or steal the people's goods. The result is that the Koreans have resumed their regular vocations, their women and children have returned from refuges among the hills, and terror of the Russians has been replaced by confidence in the Japanese. An illustration of the Korean mood was furnished recently when the Japanese authorities issued a requisition for 850 horses and oxen. The influential Koreans immediately set to work, and in the course of one night produced the animals. This is contrasted with the action of the people on the occasion of the retreat of the Russians from the same place. They declined to furnish transport animals, and the Russians were consequently obliged to burn their stores. Altogether it would seem that the coming of the Japanese troops has wrought a radical change in the views of the Koreans and that the Japanese will benefit considerably.

The official opening of the Seoul-Fusan Railway on the 25th instant is reported to have been a very successful ceremony. Some twelve hundred guests were present. Prince Fushimi, after receiving from Chief Engineer Furuichi the plans and reports relating to the line, delivered a speech from which all political allusions were carefully excluded. His Imperial Highness said, in effect, that the opening of the line would greatly

promote facilities of communication between Japan and Korea; that in these times of war it would prove of much value, and that its future prosperity was an object of the best wishes. Prince Wi-yang also spoke. He alluded to the value of the railway as a promoter of material prosperity and expressed the conviction that its construction would increase the cordial relations between Japan and Korea. Dr. Furuichi returned thanks, and there were speeches by the American Representative and the Japanese Representative, but they are not reported telegraphically.

Prince Fushimi, on the 26th inst., attended a garden party given in the grounds of the Old Palace by the Minister of Trade, Agriculture and Industry. There were some 400 persons present. That evening the Prince gave a banquet to the Ministers of State and Prince Wi-yang. On the 27th His Imperial Highness was to leave Soul, but it is probable that in view of the naval fight which commenced on that afternoon the Prince's departure was delayed.

## COUNT CASSINI AND THE WASHINGTON GOVERNMENT.

If Count Cassini initiated the policy of protesting against Mr. Secretary Taft's visit to Japan, he has added another blunder to the long list already standing to his discredit. It is not to be imagined that he actually made the protest without the approval of his own Government, but in all probability the idea came from him. Such an idea is as impertinent as it is irrational. The theory it involves is that nations are to change their friendly relations with a Power simply because it happens to be at war with another Power. If Mr. Taft finds it in the convenient and useful routine of his programme to visit Japan, and if he would visit her in time of peace, why on earth should he abandon his visit because she happens to be at war with Russia? Once let such a principle be admitted in the intercourse of States and it became impossible to draw the line. The plainly rational theory is that A, a neutral State, should make no manner of change in its intercourse with B and C because they happened to be at war with one another. Count Cassini's conception of neutrality must be very crooked, and indeed we are compelled to say that all Russian conceptions of neutrality are very crooked and that their deviousness has caused a great deal of ridicule. This protest, however, is not only unreasonable but also most unwise in the interests of Russia herself. Do Russian statesmen imagine for one little instant that a nation like the United States will suffer itself to be dictated to by St. Petersburg concerning the comings and goings of American officials outside Russian dominions? Unless we greatly mistake the temper of the American people they will most bitterly resent this piece of useless and gratuitous insolence.

## THE PURIFICATION OF WATER.

According to the *Scientific American* Boards of Health and officials in charge of public water supplies in the United States have been furnished by the Bureau of Plant Industry with the results of recent investigations into the means of purifying waters subject to algal contamination. The methods are not to take the place of but to supplement the standard methods of filtration, and are especially interesting from their inexpensive character. Extremely dilute solu-

tions of sulphate of copper or of metallic copper are found to destroy with rapidity objectionable algae in lakes, reservoirs, and similar places. A solution of one in a hundred thousand is said to destroy in three hours the most virulent of typhoid and cholera bacteria; and it is important to note that solutions of this strength do not render the water unfit for the use of animals or man. The investigators found that the disagreeable smell and taste of the water in question is caused by the presence of algae, which are very widely distributed throughout the States, and have in a large number of districts rendered the reservoirs unfit for human use. The method proposed may be applied to ordinary reservoirs of drinking-water, to fish-ponds, oyster-beds, watercress-beds, &c. They also suggest that it will be found to act with equal value in the case of places infested with mosquito larvae. Large bodies of water may be sterilised in from three to four hours, and it is an easy matter to eliminate the sulphate of copper introduced. It is found that the beneficial bacteria are unaffected by the solution—i.e., that its selective toxicity is exercised only on the pathogenic forms. No rules are laid down as to the amount of copper sulphate to be added, each case having to be treated on its own merits, or, rather, on its demerits. The cost of the material required for exterminating the mischievous algae is fortunately very low, so that, if effective, the new remedy is sure of universal adoption. For algae, 52 to 60 cents for a million gallons will suffice in the way of expenditure. For the destruction of pathogenic bacteria the cost, apart from that of labour, is only from 5 to 6dols. per million gallons. Experiments have been going on for the last four years, the expense being borne by Congress.

## CHINA.

The French Representative in Peking has applied, it is said, to the Wai-wu-pu, asking that a joint commission be appointed to delimit the frontiers of Lungchow and Annam.

Boxers are said to have made their appearance in the vicinity of Kwanchow Bay, and the French are sending gendarmes to assist the Chinese in preserving order.

The French Representative has also applied, it is said, for the opening of two new ports between Nan-ning and Wuchow.

During the Russian occupation of Mukden refugees from the neighbouring country to the number of 48,000 flocked into the city, hoping to find shelter against the excesses committed by Russian soldiers. This large inflow of destitute folk was frequently spoken of at the time. When the city fell into Japanese hands negotiations were immediately opened with Governor-General Tseng for the succour of the unfortunates, but no satisfactory arrangements could be made, and only now has Peking been induced to take effective steps. A considerable sum of money has been allotted to enable the refugees to return to their homes and resume the cultivation of their farms.

A telegram from Peking to the *Nichi Nichi Shimbun* says that Russia is pressing China to declare the whole of Manchuria north of Petuna (or Petun) neutral territory. Petuna is on the banks of the Sungari. Were this step taken, it would mean that the Russians in the regions beyond the Sungari would be secure against attack; in other words, that Harbin would be safe as would the whole of the Baikal-Vladivostock Railway. The thing is too absurd to be credible. The world has had much occasion to laugh

## MINING MORTGAGE LAW.

(Law No. 55 of the 38th year of Meiji.)

PROMULGATED BY IMPERIAL ORDER ON THE 11TH MARCH, 1905.

TRANSLATED BY J. E. DE BECKER.

Art. 1.—A concessionaire may create a mining estate (礦業財團) in order to make it the subject of a right of mortgage.

Art. 2.—A mining estate may consist of either the whole or a portion of the following things which belong to one and the same concession in connection with mining:—

- (1) Mining rights;
- (2) Land and constructions;
- (3) Rights of leases of things, subject to the consent of the lessor;
- (5) Machinery tools and implements, rolling stock, ships, cattle, horses, and other accessories.

Art. 3.—With regard to a mining estate, the provisions of the Factory Mortgage Law relating to factory estates apply *mutatis mutandis*.

Art. 3.—When the cancellation of a right of mining has been recorded (登録), the Chief of the Mine Inspection Office shall forthwith give notice thereof to the mortgagee.

In the case of the preceding paragraph the mortgagee may forthwith enforce his right.

When it is intended to foreclose a right of mortgage in accordance with the provisions of the preceding paragraph, steps shall be taken by the mortgagee within six months from the day on which the notice mentioned in paragraph 1 has been received.

The right of mining is deemed as still existing so far as the purpose of the foreclosure of the mortgage is concerned within the term prescribed in the preceding paragraph or until the foreclosure of the mortgage is completed.

The successful bidder, or a juridical person established by the successful bidders, are regarded to have purchased the mining right at the time when the cancellation of the mining right has been registered.

The provisions of the preceding two paragraphs do not apply to cases where applications for mining have been granted in error or where the mining operations have been considered injurious to public interest.

Art. 5.—The provisions of the preceding Article apply *mutatis mutandis* when a concessionaire has relinquished his business.

Art. 6.—In the case of persons intending to form a juridical person in accordance with the law of the Japanese Empire and making the mining business which is put up to auction its object, participating in the auction, the fact shall be notified to the Court of execution simultaneously with their bidding.

Persons participating in the auction according to the provisions of the preceding paragraph are jointly and severally liable in connection with their bidding.

Art. 7.—In the case of the successful bidders of a mining estate being persons participating in the auction according to paragraph 1 of the preceding Article, a juridical person shall be formed within three months from the day on which the rule confirming the "knocking down" has become final and conclusive, and a notice thereof shall be given to the Court of execution.

Art. 3.—The successful bidders mentioned in the preceding Article shall pay the purchase-money in the auction to the Court of execution within one week from the date of the establishment of the juridical person. Provided that in the case of a creditor being the successful bidder, it will suffice to pay the balance after deducting from the purchase-money such amount of money as is to be received by him on account of his claim.

Art. 9.—When the purchase-money in auction has been paid in accordance with the provisions of the preceding Article the right of ownership of the mining estate which was put up at auction is transferred to the juridical person established by the successful bidders.

Art. 10.—Where no report has been sent in of the formation of a juridical person within the term specified in Art. 7, or where the purchase-money

has been paid within the term specified in Art. 8, the Court of execution shall *ex officio* direct a further sale by auction of the mining estate to be carried out.

With regard to the second auction mentioned in the preceding paragraph, the provisions of Art. 688 of the Code of Civil Procedure apply *mutatis mutandis*.

Art. 11.—The penal provisions of the Factory Mortgage Law relating to a factory estate apply *mutatis mutandis* to a mining estate.

## SUPPLEMENTARY PROVISIONS.

The time at which this law is to be put into operation will be determined by an Imperial Ordinance.

## ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the house of R. J. Kirby, Esq., 8 Tsukiji, Tokyo, on Wednesday, 17th May, 1905, at 4 p.m. The President of the Society was in the Chair. There was no business to be transacted, and the Minutes of the last meeting, having been already published in the papers, were taken as read. A very able and interesting paper on the subject of "British Sailors and Mito Samurai in 1824" was read by Mr. E. W. Clement, of which the following is a summary:—

## MITO SAMURAI AND BRITISH SAILORS.

When Iyemitsu, the third Tokugawa Shogun, in 1638, issued his famous edict<sup>\*</sup> forbidding, not only foreigners to land on the coast of Japan, but also Japanese to leave the country, it was supposed that the policy of seclusion, with its two phases of exclusion and inclusion, was as unalterably established in this Empire as the laws of the Medes and Persians in ancient days. It was assumed that the limited amount of trade permitted at Nagasaki with the Dutch and the Chinese would suffice for all extra-territorial needs of Japan, and that one little hole, like Nagasaki, would give sufficient vent to the outward aspirations of Japan and inward desires of foreigners. Certainly, to all intents and purposes, Japan was hermetically sealed to and from the rest of the world. But no number of rigorous edicts could prevent the winds and currents from carrying foreign vessels to the Japanese coasts or keep in the ambitious and adventurous desires of Japanese to know something about the outside world. No matter how stringent might be the theory of the policy of seclusion, it was absolutely impossible for it to be maintained after whaling and merchant vessels began to frequent the waters of the Pacific Ocean. It then became only a question of time how long such a policy could stand.

It would be a most interesting subject for one with plenty of time and perseverance to hunt up from all sources available the records of visits to Japanese coasts by foreigners before Perry's day. A beginning has been made in this line of investigation. In Lanman's "Leading Men of Japan" (page 283), we read as follows: "According to the native annals the coast of Japan was visited by foreign vessels in 1637, 1673, 1768, 1791, 1793, 1796, 1803, 1808, 1813 and 1829." Dr. W. E. Griffiths in his "Japan in History, Folklore and Art" (chap. XXV), writes as follows: "When the Yankee whaler of New Bedford, in Massachusetts, began, about the year 1750, to find their game leaving them, they sailed into new waters in quest of blubber and bone. They moved their ships down into South American waters. Then they rounded Cape Horn and pushed up into the northern Pacific Ocean. Our treaties with Russia made all sub-Arctic waters free. Some of the 'black ships' began to loom up in fleets along the coast of Japan." \* \* \* \* \*

"When it was found that the North Pacific was so fruitful, the whaling industry increased mightily.

"Commodore Perry found that seventeen millions of dollars were invested in it. In one year, eighty-five of the 'black ships,' as the Japanese called our painted, smoky and sooty whalers, were counted passing one port. Steam made the ocean a ferry, and increased the commerce to China, making also coal supplies and open ports necessary. American ships of peace and men-of-war came frequently to Japan to take away ship-wrecked sailors, or to return Japanese waifs picked up at sea."

Dr. Griffiths also devotes a chapter (XXVII) of his "Matthew Calbraith Perry" to this subject; and in his "America in the East" makes frequent mention of the matter. Nitobe's "Intercourse between the United States and Japan" treats the subject at considerable length. Hildreth's "Japan as it Was, and Is," also contains valuable material along this

\* See Hildreth's "Japan as it Was and Is," p. 192.

line, and enters somewhat into details. Rein's "Japan" likewise treats this topic of the attempts made before Perry's day to open intercourse with Japan. Commodore Perry's official report of the "Expedition to Japan" contains a tabular view of attempts made to open communication and commerce with Japan. A paper read by Wilson Crewdson before the Japan Society, London, on "The Dawn of Western Influence in Japan"† includes a long tabular record of Japan's relations with foreign countries from 1542 to 1858; and this is much more complete than Perry's. That paper contains also mention of a very flagrant case in 1842, when the captain of the "Lady Rowena," as he reported to the *Sydney Gazette*, in attempting to obtain supplies, "destroyed a Japanese village near 43° N. Lat."

But the special purpose of this paper is to give an account of an unofficial descent on the eastern coast of Japan by some British sailors in 1824. This event was of no particular importance, except as one link in the chain of historical record of ante-Perry visits to Japan by foreigners. The Japanese accounts, however, are rather interesting, as they portray the confusion into which some of their nationals were thrown by this unexpected occurrence. In a paper read before this Society on October 16, 1889, and printed in Vol. XVIII, Part 1, of these Transactions, I briefly referred to the event as follows: "In 1823 some fishermen discovered a foreign ship off the coast of Hitachi, and had an opportunity to go aboard. In the ship they found many swords, guns, etc.; and they saw the crew getting oil from whales. When they returned to the shore they notified the officers of these facts. So great alarm was felt throughout this province, and also in all the provinces on the eastern shore of this island, that soldiers were sent to the coast to guard against the expected invasion. During the same year twenty or more foreign ships were seen off Hitachi; and the next year twelve foreigners who had landed at the village of Otsu were seized. The excitement reached its highest point; but, upon the explanation of interpreters, that these men landed only to obtain water and fuel, the foreigners were released. Many young samurai were dissatisfied with what they called 'a weak policy.'"

In Lanman's "Leading Men of Japan" (pp. 33, 34), in a sketch of the famous Mito samurai, Fujita Hio, is found the following account:—"In the seventh year of Bunsei [1824] an American [?] ship, which was sailing about, stranded on the coast of Hitachi. The crew landed at Otsu-mura, attacked and robbed the people, and threw the people into confusion. As soon as this news was reported, Hio's father was very much excited, and said to his son: 'As you know, during the past few years, foreign barbarians have visited our coast very often, and sometimes they have made use of cannon, and so caused great disturbance among the people. But, alas! all our countrymen are contented with a momentary peace, and they take no heed of the danger of the future. I am deeply sorry for them, that they have no courage or spirit of patriotism. Now, I advise you, my son, to go to Otsu-mura immediately, and to watch what the foreigners are doing; and when an opportunity occurs, slay them all, afterwards report personally to the Government what you have done, and bravely accept the judgement of the authorities. This will not be a service of the highest importance for the country, but we should be quite satisfied to manifest our *yamato-damashii* (conservative feeling) even in so small a way.' Hio, having listened to his father's advice, quite sympathized in the scheme, and a stern resolve to carry it out was exhibited in his face. While he was making preparation for departure upon this errand, a report was brought from Otsu-mura, to the effect that the Americans [?] had retired and that no foreigner remained on shore. He was disappointed and felt great regret at this circumstance, as it interfered with the execution of his father's order. At that time he was only nineteen years old."

There are some discrepancies in these two records; but it is at least certain that in 1824 some sailors from British vessels, apparently whalers, landed on the coast of the Mito *Aan* (rief) and were detained for several days in the village of Otsu. By the courtesy of Marquis Tokugawa, now head of the Mito family, I was able to obtain one document bearing on this topic. I also made a trip to Mito and Otsu, at both of which places I was so fortunate as to find other material. It is, however, unfortunate that almost all the relics at Otsu were destroyed some years ago in a large conflagration.

(Here the writer of the paper read extracts from the document mentioned above, as well as from a diary found in the archives of the Otaka family in Mito. He also exhibited a few drawings, the only

† Vol. VI, Part 2, of the "Transactions and Proceedings" of that society.

† It was in this year that "Captain Reuben Coffin, of Nantucket, landed on the Bonin Islands."

relics of the incident. The whole affair illustrated the tremendous excitement into which the Japanese were thrown by such an event, as well as both the possibilities and the limitations of the sign language for intercommunication.

At the conclusion of the paper, which was listened to with much interest, the Rev. A. F. King gave some interesting information as to the Bonin Islands and their early connection with whaling enterprises off the coasts of Japan.

Though only somewhat remotely connected with the subject of to-day's paper by Mr. Clement, I will ask leave to read a note on the Bonin Islands as a port of call for whaling vessels in earlier days.

Among those who in the year 1830 sailed from Honolulu to form a settlement in these islands was a Mr. Nathaniel Savory, of Essex County, Massachusetts. This Mr. Savory kept a diary of events he thought worth noting, and a record of all ships that called at Port Lloyd, or Port William, as the harbour of Futani was variously known to the early settlers in the Bonins.

The diary was in 1872 unfortunately destroyed by a tidal wave; certain papers, however, were recovered, and among them one list of ships which, with the other papers, is now in the possession of his son, who still lives on the main island.

This list, of which I have a copy, included the names of all vessels that called at Port Lloyd between Jan. 1st, 1833 and July 1st, 1835. The total number of the vessels is twenty-four. Of these four are from American ports, the remaining twenty from London. All but two of the whole number are described as whalers.

As the earlier date of this list is only nine years subsequent to the date of the Mito story read to us to-day, we have, if we need it, some further proof in the record of Mr. Savory that British and American whalers frequented these seas at least in the early thirties of the last century; and we are further reminded that many of them made the Bonin Island harbour a port of call.

It is also interesting that while in this Bonin Island list of whalers the large proportion of entries under the heading "Where for, etc." is simply "Whaling," in three cases the entry is "Japan," and in the case of the *Amelia Wilson*, a whaler that was wrecked off the Bonins on the 24th May, 1833, the entry is "Crew gone to Japan." This last entry is somewhat puzzling, but Mr. Savory may have meant that they went on board another whaler which, before returning to England, was bound first on a whaling expedition along the coasts of Japan. The hunting ground of the whalers that touched at the Bonins is traditionally said to have extended from Black Rock (probably Torishima) to Kinkazan.

Dr. GREENE, commenting on the knowledge of European politics displayed by the Mito authorities, said that Japan in the early days of the nineteenth century was by no means as hermetically sealed as is generally supposed. Besides the Factory at Deshima and the information which came in through the Dutch much seems to have come in through the Loochoo Islands. The people of Satsuma and Kyushu seem to have taken a great interest in foreign ways, and old pictures may still be seen of what was called *Oranda Shogatsu*, a New Year's ceremony kept as much as was possible after the fashions of the west.

After a few more remarks the meeting was closed, with thanks, felt if not expressed, to Mr. and Mrs. Kirby for their hospitality in receiving and entertaining the Society.

### THE LAW COURTS.

#### CLAIM FOR RETURN OF DEPOSIT.

In the Yokohama District Court, a case in which Y. Sakamoto, a merchant of Tokyo, claims a thousand yen from Mr. V. Menil, No. 166, Yokohama, came up again on May 26th before Judge Watanabe.

Plaintiff's Counsel asked the Court to summon Paymaster M. Goto, of the Military Clothing Office, as a witness.

The Court addressed a few questions on the petition of plaintiff and Counsel gave explanations, after which the Court decided to examine Paymaster Goto on June 2nd.

#### A CLAIM FOR DAMAGES.

The hearing of a case lodged by Mr. G. F. Thomas, liquidator of the bankrupt estate of Messrs. H. C. Morfand Co., against B. Kobayashi, a Japanese trader, claiming yen 1,241.26, was resumed on May 30th in the Yokohama District Court before Judge Yasuda.

R. Yamada, grocer of Moto-machi, was examined as an expert as to commercial usage between foreign and Japanese merchants.

He stated that generally business between Japanese merchants and foreign importers took the form of a formal contract but sometimes it was done through verbal promise only. Formal contracts are not regarded as the exclusive condition of business. If the parties are satisfied to rely on the other's honour then the formal contract is not made. Many foreign firms in Yokohama keep a printed contract form in English with a Japanese translation.

Plaintiff's Counsel produced two or three letters but defendant's Counsel declined to admit them. Defendant's Counsel asked the Court to summon a member of the Tokyo Chamber of Commerce and a foreign trader of Yokohama as experts regarding commercial usages. The Court granted the request, and adjourned the case.

### CRICKET.

The cricket season opened in Yokohama on Saturday afternoon with a match between E. W. Maitland's XI and the Rest, captained by F. H. Bugbird. The day was beautifully bright, but a strong wind considerably marred the game. The Rest started very fairly, but after the fall of Emerson's wicket there was a regular procession to and from the Pavilion, the whole side being dismissed for 53. The brothers Kilby opened for E. W. Maitland's XI and were not separated until their opponents' total had been passed. All the batsmen played a free game, there being little or no sting in the bowling, and were finally disposed of for a total of 219 for seven wickets.

There were five men absent from the team representing the Rest and three from the eleven, viz., from the latter B. C. Foster, A. Kingdon and S. W. Argent; and from the former J. A. Robertson, S. H. Dawes, N. G. Maitland, W. S. Moss, and C. B. Mitford.

Emerson and Lambert opened the batting for the Rest to the bowling of Edwards and Moon, and when the score stood at 17 Lambert was clean bowled by Moon for seven. T. Kilby joined Emerson but had only a short life, being caught and bowled by Edwards without scoring—21-2-0. Emerson, who was batting in very good style, was joined by Correa, and the latter got Moon away through the slips for three. Soon after the same batsman lifted a ball from Edwards which was held by H. Kilby—35-3-4. Cox went in and opened with a single off Moon and drove the same bowler for two. Then Emerson was finely caught at point by H. Kilby off Edwards, after scoring 29; 43-4-29. Hawkins joined Cox and Cooper going on to bowl in place of Moon Duff stumped Cox from the first delivery—43-5-3. Bell partnered Hawkins, and was bowled by Edwards without scoring, and Ford, who followed with the bat, was clean bowled by Cooper after making a single. Eddison was next in bat was quickly bowled by Cooper—45-8-0. Hearne joined Hawkins and was bowled by Cooper without scoring, Cooper having thus dismissed three men in one over for no runs. E. Kilby went on to bowl in place of Edwards and bowled Hawkins with his first delivery—45-10-0. McClure and Bishop were now at the wickets, but the latter was bowled by Kilby without scoring, Worden going in. McClure snicked a single to leg and got another away for one, but soon after was clean bowled by Cooper—50-12-3. Thomson went in but was bowled first ball by Cooper, and Worden was then joined by Bugbird, who drove Cooper for two and again for a single, but Cooper's next delivery found Worden's stumps, the innings closing for 53 runs.

For the Eleven the brothers Kilby went first to bat, E. W. facing the bowling of McClure from the Pavilion end. After a couple of byes E. W. Kilby cut McClure to the boundary. Emerson bowled from the Settlement end, but when the score had been carried to 25 Lambert relieved him. Runs now came rapidly, the fielding being loose, and 40 went up on the telegraph. Three boundaries by E. W. Kilby brought 50 up. Emerson then took the bowling in place of McClure, and Cox relieved Lambert.

Runs continued to come freely, boundary following boundary, and when the score reached 84 H. W. Kilby was clean bowled by Emerson, being credited with 31 runs—84-1-31. Emerson was twice no-balled when bowling the other end, but he now appeared to be bowling no balls without the umpire noticing it. Moon partnered E. Kilby and Bishop bowled in place of Cox. Moon started scoring at once, and both batsmen playing freely the telegraph soon signalled the century. Bugbird then bowled in place of Bishop, and Moon was run out by a good throw from Correa—111-2-14. Edwards went in and immediately opened his account with a two off Bugbird. Both batsmen now hit at everything and the runs piled up to 125, when E. W. Kilby was held by Hawkins off Emerson's bowling after a finely-played innings of 60; 125-3-60. Duff joined Edwards and put Emerson twice away to the boundary and 140 was quickly reached. At 145 Duff was bowled by Emerson after scoring 15 runs—145-4-15. Cooper went in and made two off his first ball. Ford took the ball from Bugbird, his first delivery being cut to the boundary by Edwards. Runs came freely and 170 was soon shown on the telegraph; then 180 and Edwards lifted a delivery from Ford over the opposite fence, following with a two and a boundary off the same bowler. Edwards was then bowled by Emerson after a well played innings for 40; 192-5-40. Thwaites joined Cooper and made two off Emerson. Hawkins took the bowling from Ford and was hit for a two and again to the boundary by Cooper. The score mounted to 219 when Cooper was bowled by Hawkins for 26; 219-6-26. Maitland went in and made a single and then Thwaites being bowled by Hawkins, the innings closed for 220.

Scores:—

The "Pound" Party given at the Seamen's Institute on Wednesday evening was a great success. Each guest came provided with a pound of something, and when later in the evening these packets of mystery were put up for auction by Mr. Clarence Griffin the sum of yen 115.03 was realised. The money will be devoted to paying for the redecoration of the Institute.

## SPRING REGATTA.

Fine weather attended the Spring Regatta of the Yokohama Amateur Rowing Club and the Committee are to be congratulated on the punctuality with which they carried the programme through. The day was bright and genial and though a southerly breeze kicked up the dust somewhat on land the stretch of water over which the races were rowed was quite sheltered. Boats in the outer berth it may be were adversely affected but that cannot have been to any appreciable extent. This year more than the usual number of presented prizes was received and it is perhaps a pity that closer contests were not witnessed. To tell the truth most of the races were of the nature of processions. However the fine, sunny weather and the music of a good band put everybody in a good humour and the afternoon must have passed very pleasantly for all. Committee: H. C. Litchfield, President; F. J. Hall, Captain; W. Goddard, A. L. Mottu; O. Strome; F. Pollard; O. T. Gillon, Hon. Secretary; F. H. Abbey, Hon. Treasurer.

The officers of the day were:—Judge: Mr. H. C. Litchfield; Starter: Mr. F. J. Hall; Timekeeper: Mr. A. L. Mottu; Pontoon Officials: Messrs. O. T. Gillon, F. Pollard, and O. Strome.

The Ladies' Prize was presented to the winners by Miss Gigray. At the close of the races the other prizes were distributed by Mrs. F. J. Lias. The tea-tables were presided over by Mrs. Thwaites assisted by Mrs. W. K. Tresize and a bevy of charming young ladies.

JUNIOR DOUBLE SCULLS.— $\frac{1}{4}$  Mile.

"Pearl."		lbs.
Bow.	G. K. Totton	153
Str.	H. G. White	177
"Tern."		lbs.
Bow.	L. Stornebrink	138
Str.	A. W. S. Austen	155

"Pearl" in the outer berth got away first but steered rather badly in the early part of the race. White laid a better course as he neared home and at the Break-water was a good ten lengths ahead. Austen gave up about this point. Time, 6 min. 18 secs.

## SENIOR FOURS.—1 MILE.

"Swan."		lbs.
Bow.	A. E. Caro	118
2	H. Goddard	144
3	O. Strome	202
Str.	C. L. Timm	155
Cox.	G. Kenderdine	135
"Pelican."		lbs.
Bow.	J. E. Moss	140
2	P. E. Nicolle	158
3	H. G. White	177
Str.	J. S. Cartwright	160
Cox.	W. Goddard	140
"Flamingo."		lbs.
Bow.	J. Abbey	120
2	D. Weed	145
3	R. C. Bowden	140
Str.	J. Helm	150
Cox.	D. L. Abbey	115

Cartwright had rough water in the outside station, Timm, under the lee of the land being specially favoured. The latter at once took the lead, Helm in the middle falling into second place. They rowed thus till about half-way home, when Cartwright brought his boat ahead of Helm and tackled the leader. Timm had too good a lead, however, and finished several lengths in front. Time, 8 min. 34 secs.

JUNIOR PAIRS.— $\frac{1}{4}$  Mile.

"Mallard."		lbs.
Bow.	W. Graham	120
Str.	A. W. S. Austen	155
Cox.	J. Abbey	120
"Widgeon."		lbs.
Bow.	G. Russell	120
Str.	G. Charlesworth	131
Cox.	C. L. Manley	138

Austen got off the quicker and was soon leading by a length. Charlesworth in the inside berth though rowing neatly going without life. The leader held the race throughout and eventually won by several lengths. Time, 7 min. 16 secs.

## "BORN IN JAPAN 7/2 THE WORLD."—1 MILE.

## "BORN IN JAPAN." "Flamingo."

"THE WORLD." "Pelican."		lbs.
Bow.	L. Stornebrink	138
2	J. Helm	150
3	F. E. Nicolle	158
Str.	D. Weed	145
Cox.	L. Mottu	140

"The World" was in the outer station. The start was practically level and the boats rowed bow for bow during the first half of the race. "Born in Japan" then began to draw out in front and at the P.M. pier a couple of lengths separated the boats. Thence home Weed had the race in his hands and he finished an easy four lengths ahead. Time, 8 min. 50 secs.

## SENIOR DOUBLE SCULLS.—1 MILE.

"No. 2 Boat."		lbs.
Bow.	P. E. Nicolle	158
Str.	C. L. Timm	155
"No. 1 Boat."		lbs.
Bow.	A. E. Caro	158
Str.	J. Abbey	120

There was some misunderstanding as to the distance but eventually they were dispatched, Timm soon taking the lead. The steering in both cases was far from good, but Timm held his advantage, finishing several lengths to the good. Time, 8 min. 7 secs.

JUNIOR FOURS.— $\frac{1}{4}$  MILE.

"Seamew."		lbs.
Bow.	R. Holmes	135
2	W. D. Camerom	128
3	E. A. Wiedeman	165
Str.	F. S. Booth	140
Cox.	L. Mottu	140
"Swan."		lbs.
Bow.	J. F. Helm	116
2	A. W. S. Austen	155
3	N. Bruna	177
Str.	G. Charlesworth	131
Cox.	A. E. Caro	118
"Flamingo."		lbs.
Bow.	W. Graham	120
2	A. Casti	125
3	L. Stornebrink	138
Str.	R. Wallace	134
Cox.	G. Kenderdine	135
"Darter."		lbs.
Bow.	G. Russell	120
2	L. Mayer	130
3	D. Wilson	155
Str.	D. L. Abbey	115
Cox.	J. Abbey	120

Booth had the outer berth, Helm the inner and the race lay practically between them. They got away together and raced level over a great part of the course, but Booth was not to be denied and gradually drawing ahead won as he pleased, a distance separating first and second. Time, 6 min. 48 secs.

## SENIOR PAIRS.—1 MILE.

"Mallard."		lbs.
Bow.	R. C. Bowden	140
Str.	C. L. Timm	155
Cox.	D. Abbey	115
"Widgeon."		lbs.
Bow.	D. Weed	145
Str.	J. Helm	150
Cox.	J. Abbey	120

Perhaps the best race of the regatta. Timm had fallen astern in the early part of the race but later he bucked up and overhauling his opponent in capital style won by over three lengths. Time, 6 min. 7 secs.

## SCRATCH FOURS.

"Pelican."		lbs.
Charlesworth		
Wiedeman		
Luther		
Mayer		

The usual scratch scuffle in from the P. M. Wharf took place, resulting in a win for "Pelican" by what may perhaps not inappropriately be described as a short neck.

## NEWS OF THE WEEK.

H.M.S. *Africa* was successfully launched on May 20th.

Twelve Russian prisoners at Himeji escaped on May 31st and are still at large.

Two British steamers laden with coal which had been temporarily stopped at Moji were released on May 29th.

The Crown Princess visited on May 31st the Tokyo Institution of Sericulture, leaving the Palace at 12.30 p.m.

The estimate of the crop of wheat and barley this year in Ise province is 325,872 *koku*, which shows an increase of 7 per cent over current years.

At noon, on May 31st, fire broke out at Ikarigasaki, in the district of South Tsugaru, Aomori prefecture, with the result that 250 buildings were burned down.

According to a telegram received by the Yokohama Specie Bank, the first 6 per cent Japanese bonds in New York have advanced by £2.10.0 making the price £103.

The Osaka Shosen Kaisha's chartered ship *Trucer*, which left Shimonoseki on May 29th for Keelung, is reported by telegram to have safely arrived on the 30th at her destination.

Commander K. Matsui, chief staff officer of the First Squadron under Admiral Misi, is reported to have been killed during the battle of May 27th. He was 37 years old.

Several Osaka telegrams say that the marine insurance premium on cotton from Bombay, which advanced to yen 4.50 on the appearance of the Russian squadrons in the Far East, has been restored to almost the normal rate.

The *Yorodzu* has a telegram from Kyoto that the property of the well-known Buddhist temple Hongwan in that city was to be sold by auction on June 1st. The property has been seized by the Kitahama Bank for heavy debts.

On Thursday forenoon Mr. H. B. Miller, the newly appointed American Consul-General, took over charge of the office from his predecessor, Mr. E. C. Bellows. Mr. Miller, as may be recollected, was previously Consul at Newchwang.

On May 30th, the Emperor decorated Generals Kuroki, Oku and Hasegawa, and Lieut.-General Nishijima with the Grand Cordon of the Rising Sun; Vice-Admirals Shibayama, Kamimura and Kataoka with the First Class of the Sacred Treasure; and 3,500 other officers of the Army and Navy with decorations of various classes.

We learn (says the *Hongkong Telegraph* of the 16th inst.) that news has been received in town to the effect that the cofferdam has been successfully sunk and placed in the required position beneath the bows of the stranded *Sully*, and that the high tides of the 21st inst. are now anxiously awaited, for the supreme effort of raising the cruiser. Meantime all preparations are being carried out to be in readiness to take charge of her as soon as she is got off as it is confidently expected she will be, and for towing her up here to dock.

The foundation stone of the Y.M.C.A. building at Nagasaki was laid on Friday afternoon. Dr. N. Sasamori presided and others taking part in the ceremonies were the Rev. E. N. Waite, Rev. N. Stout, Rev. C. Nakayama and Mr. I. Sugamura. The plans provide for a three-storied brick building, divided into lecture hall (to seat 600 persons), games' room, gymnasium, library, reading and dining room, and rooms for night classes. It is expected that the premises will be completed in time for the opening to take place this year.

The Tokyo Electric Railway Company held a general meeting on May 30th when the accounts for the first half year were submitted to the shareholders. The net income was yen 88,368.52, to

which yen 4,410.85, balance brought forward from the previous account was added, making a total of yen 92,779.37. Of this sum yen 4,638.97 was set apart as reserve; the same amount as special reserve; yen 68,600 was to be paid as dividend at the rate of *sen* 87½ per old share and *sen* 52½ per new share; and the remainder was carried forward to the next account.

Considerable interest has been aroused in cricketing circles by a resolution adopted by the M. C. C. committee to recommend the introduction of an optional clause to the present law regulating the choice of innings. The spin of the coin has always been regarded as the one unimpeachable method of settling which side shall secure whatever advantages the prevailing conditions can offer in any sport; and although the interest of a fixture may frequently be completely marred by the overwhelming benefits accruing from this appeal to luck, the perfect equality of chance it offers to either side has given it supremacy over all others systems. It is questionable whether the proposal to allow the option in a second fixture to the side which lost the toss in the first will put things on a much fairer basis.

The following is a translation of a letter received by the Bible Society of England from a Russian officer on behalf of his fellow prisoners at Fushikiyama:—"Kind Sir,—I beg to notify you that we prisoners of war thank you from the depths of our hearts, and we all of us will remember you as long as we live, for the 1,099 books, which have created such surprise and happiness, among the prisoners. Every minute is spent in reading them. Kindly accept our sincere thanks; we shall always remember you for your kindness.—Yakoff Kouznetsoff, Sergeant-Major." The Bible Society's agent in Japan is actively engaged in distributing Scriptures among the prisoners of war arriving from Mukden. These include many Jews, Poles, Finns, and Germans. The agent writes:—"I sent 40 German Bibles to a German lady missionary of the C.M.S., who has a Bible class of 300 German-speaking prisoners. She says, that as the 40 books will not go round, they cast lots for the use of the books." During the first two months of the year the Bible Society distributed 18,000 Gospels and 500 Testaments to the wounded in the hospitals.

Mr. Angus Hamilton, who has made a special study of Russian expansion during the past few years, sends an article to the *Times of India* in which he declares, after a careful tour through the Russian provinces of Central Asia, that everything is prepared for an advance against Afghanistan and India. The reverses in Manchuria are pushing on rather than alleviating the danger. Although the men are urgently needed elsewhere a force of 200,000 men has been massed almost on the Afghan frontier. The trains that come across the steppes from Orenburg to Tashkend bring soldiers; none ever go back. A new branch line is being made from Samarkand due south via Shehr-i-Selz to Termez, on the Oxus River opposite Balkh. The surveys were finished two years ago; the earthworks are to a great extent made; the line will be ready in a year. Several fine new military roads are being constructed from various points to the Afghan frontier. In Mr. Hamilton's opinion the only way of meeting the menace and saving Afghanistan is for British troops, with the Amir's consent, to occupy benevolently the north and north-west frontiers of Afghanistan.

The following is an extract from an article in the *Kyokuar Jiji* (a Buddhist journal), published on the 3rd of May. "Numerically speaking, Buddhism far outranks Christianity; but by reason of actual work accomplished, the balance of power is in favour of the Christians. General hatred against Christianity is passing away, and the belief that it is better adapted to the new condition of things is daily gaining ground. Buddhist customs and rites are becoming more and more alien to the interests of society and priests are often the subject of public ridicule. The war-correspondents declare the unfitness and inability of the Buddhist priests and the more thoughtful of these priests who are at the front

lament bitterly their co-workers' ignorance, senselessness and idleness, which have caused the soldiers to ridicule them and also to become tired of them. On the other hand, the quarters of the Christians are regarded as a paradise for the soldier and they are welcome everywhere. The enormous amount of yen 200,000 has been expended by the Honganji (the largest Buddhist sect in Japan) for the work among the soldiers, but it is far inferior to the work of the Christian association, whose expenditure amounts only to a few thousand yen. The work of the Christians has attained such success that it has reached the Emperor's ear; while that of the Buddhists is always attended by debts and disturbances."

#### LITERARY GOSSIP.

Children furnish some of the best stories to be found in the last two volumes of Sir Mountstuart Grant Duff's voluminous Diary. "A little boy was beating his sister, and on being asked why he did so, replied: 'We have been playing Adam and Eve, and she won't tempt me, but will eat the apple herself.'—A High Church mother urged upon her two little boys the duty of abstinence in Lent. She asked the elder what he thought he could give up. 'Sugar,' he replied. She asked the second, who, *meglio consigliato*, replied: 'Lessons!'"

It appears that the late Mr. Locker-Lampson's magnificent Rowfant library is for sale in New York. It was purchased last autumn by the leading New York book dealers, the transaction being kept a secret. We are now told that an attempt will be made to sell the library as a whole, but failing this being accomplished in a few weeks, it will be broken up. As the correspondent of *The Times* remarks, in view of the library's fate, there seems bitter irony in Mr. Andrew Lang's lines:—  
"Behold a special act of grace;  
On Rowfant shelves behold,  
The well-loved honours keep their place."

A contemporary of Disraeli in his memoirs records this impression of the famous statesman's personal appearance in his early days as a dandy:—Usually he wore a slate-coloured velvet coat, lined with satin; purple trousers, with a gold braid down the outside seam; a scarlet waistcoat, long lace ruffles falling down to the tips of his fingers; white gloves, with brilliant rings outside them, and long black ringlets rippling down over his shoulders. When he rose in the House he wore a bottle-green frock coat, with a white waistcoat, collarless, and a copious supply of gold chains.

Marie Feodorowna, the subject of "A Mother of Tsars," by Mrs. Colquhoun Grant (author of "The French Noblesse of the XVIII. Century," which has just been published by Mr. Murray, reigned during the lives of three successive Sovereigns, her ill-fated husband Paul and her sons Alexander I. and Nicholas I. Mrs. Grant's main purpose is to give some account of Russian life at the close of the eighteenth and beginning of the nineteenth centuries. The early portions of the work have been translated from the *Life of the Baronne d'Oberkirch*, the *Empress's* friend, who left a graphic account of her girlhood and early married life.

This year's recipients of the two Royal medals of the Royal Geographical Society are well known for their services to the science it is the society's mission to foster. Sir Martin Conway, in the Alps, the Andes, and the Himalayas, has for many years past carried on the work of exploration, the results of which are contained in numerous valuable publications. Captain C. H. C. Ryder, R.E., has gained well-merited recognition of his labour as principal survey officer with the recent political Mission to Tibet, and also of his earlier efforts in the province of Yunnan. In both enterprises Captain Ryder secured results of the greatest interest and importance.

The Selden Society, the object of which is "to encourage the study and advance the knowledge of the history of English law, especially by the

publication of original documents," has just held its annual meeting at Lincoln's Inn. With the publication of the third volume of the "Year Books of Edward II.," edited by Professor Maitland, and of the first volume of the "Borough Customs," edited by Miss Mary Bateson, there were now 18 volumes of such historical works. The society is supported in the colonies, on the Continent, and particularly in the United States, which, in Mr. Choate, the very distinguished Ambassador, claimed the first hon. member.

"Lhasa and Its Mysteries," by Colonel L. Austine Waddell, C.B., which Mr. Murray publishes, is an important new work on Tibet and its capital and the Grand Lama hierarchy. The author's first visit to the country was, it seems, nearly a quarter of a century ago. Since then he has enjoyed exceptional opportunities of studying the people. During his attempt to reach Lhasa in disguise in the year 1892 he obtained such accurate pictures of the land that, as he puts it, when he ultimately entered the capital of Tibet it was "but the realisation of a vivid and long cherished dream." His book is exceedingly well illustrated after photographs—some of which are in colour—taken by himself.

Of the literary commemoration of Nelson which may be anticipated in the present year, as the centenary of Trafalgar, one feature will probably be a reinvestigation of the life-drama of "Emma, Lady Hamilton," by Mr. Walter Sichel. Her early history will be retold from new and authentic material, the service which she claimed to have rendered to the British Fleet in June, 1798, will be presented in a light more favourable to her pretensions than before, and the precise character of her influence upon Nelson (whose Neapolitan doings are focussed afresh) reconsidered in the light of newly-discovered letters and M.S.S. "The 'Life,'" which will be published by Messrs. Constable early in October, will be illustrated from a hitherto unknown oil sketch by Romney and by other portraits.

Under the title "Tracks of a Rolling Stone" (Smith, Elder, and Co.) the Hon. Henry J. Coke tells the story of a life so various that one is almost ready to apply it to Dryden's famous couplet on Buckingham. The author's wanderings in many lands appear to have been singularly fruitful in adventure. His anecdotes of many people—people well known in politics, society, sport, literature, and art—suffice to diversify his lively record of mid-Victorian times. It would be difficult to say what Mr. Coke has not seen or done in the course of his career. His travels in the Western States of America when the West was really wild make capital reading. He has much to say of music and the drama. He tells us of his first Parliamentary contest as Radical candidate for Cricklade in 1852. He had a hand in running a weekly paper known as the *Realm*, which Thackeray pronounced "the Rellum," and insisted should be printed on vellum. He breakfasted with Rogers. In short, he seems to have known everyone.

"A literary sign of the times," says the *Daily Graphic*, "is the extent to which English critics have lately taken to reviewing French books. Nothing but good can come from the interaction between the two literatures thus set up; and good has, in fact, often resulted from such interaction in the past. The Encyclopædists were the children of the Baconians, and Rousseau was in the direct line of descent from Richardson. Those are the chief, though not the sole, French gains; and it is our own fault if we do not, in some other direction, derive a corresponding profit. What we mostly have to learn from the French at this hour is, perhaps, sincerity and technique. They, like ourselves, are passing through a period illuminated by few great literary names; but at least they keep their feeling for art and their sense of proportion. Even their book-making is more usually based than ours upon original research, and in presenting the results of their research, they take more pains than we do to avoid slipshod workmanship. If the comparisons which the reviews in so many

literary papers now give us the chance of instituting raises our standards in these regards, the introduction of the feature will have served a useful purpose."

Messrs. Sotheby in March concluded a five days' sale of books and manuscripts, the 1,346 lots realizing £8,482. There was an unusual number of Kelmscott Press books, printed on vellum. These brought about double the published prices, but much less than the prices obtained at the dispersal of the late Mr. F. S. Ellis's collection in November, 1901. Shakespeare's "Poems," 1640, brought £205. The MSS. included Thackeray's notes for his lectures on "The Four Georges"—£199—and 18 pages of his "Pendennis"—£290; besides Keats's "Isabella, or the Pot of Basil," with another MS. in his brother's writing—£215. At the sale of the John Scott library the same week the edition of de Glanville's "De Proprietatibus Rerum," printed by Wynkyn de Worde, realized £251. One of the most interesting features in the sale consisted of the original manuscripts of the novels and plays of Charles Reade, "the property of a descendant." The more important of these were:—"Gold, A Drama," original manuscript, with printed copy, signed by the author, and the opening chapters of the novel upon which it was founded, "It's Never too Late to Mend"—£10 5s. "Love me Little, Love me Long, a Story," the original manuscript—£33. "White Lies Condemned," rewritten and called "The Double Marriage," the original manuscript—£7 5s. "The Cloister and the Hearth," two portions of the original manuscript—£24; "The Woman Hater," the original manuscript—£17; "Hard Cash," the original manuscript, with agreement signed by Charles Dickens and W. H. Wells relative to the work appearing in *All the Year Round*, 1864—£95; "Put Yourself in His Place," major portion of the original manuscript—£24 10s.; "Love and Money, or A Perilous Secret," part of the original manuscript, a portion was dictated, 1883-84—£11; this was the author's last work; and Charles Reade's letter-book, containing numerous autograph letters, including six from Charles Dickens, and others from nearly all the literary and other celebrities of the period—£38. The sale also included, the following:—Edmond Malone's copy of the "Supplement" to Johnson and Steevens's edition of Shakespeare's plays, in two volumes, 1780, with 64 of the pages containing amplifications or corrections in Malone's autograph, the original miniature portrait of Lord Southampton painted for Malone by Sylvester Harding, &c.—£91. Isaac Watts, "Hymns and Spiritual Songs," 1707, first edition—£43; G. Chaucer's "Works," Kelmscott Press edition, 1896—£45; and Alexander Dumas the Elder, the original autograph manuscript of his monograph on Shakespeare's *Othello* and the great actors, English and foreign, who have sustained the title role, on 19 pages folio, signed at the end—£49.

#### AMERICAN TOPICS.

The tornado which struck the town of Snyder, Oklahoma, on May 10, completely demolished the town, killing 200 people and injuring 300.

News received from Alaska and the Northwest Territory is that the output in gold from the northern country this year will total \$22,000,000, if not more. From the Klondike alone an output of from ten to twelve millions, is expected, the balance coming from the camps on the American side.

Rear-Admiral Yates Stirling was placed on the retired list of the United States Navy on May 6th, having reached the age of 62. His retirement promotes Captain W. H. Brownson to the grade of Rear-Admiral, Commander W. H. Turner to that of Captain and Lieutenant-Commander Gove to that of Commander.

The first half year's existence of the New York subway was completed on April 28th. Its business has already increased beyond the estimated maximum daily capacity of 350,000

passengers. On several occasions it has safely handled 425,000 passengers and the limit of its possibilities has not yet been reached. Means are being studied for still further enlarging its capacity to accommodate the growing demands of urban traffic.

Consul-General J. W. Ragsdale, who has been representing the United States Government for the past eight years at Tientsin, has been appointed Consul at Dawson City, Yukon Territory, by President Roosevelt. This position was held by Consul-General Ragsdale on March 25th, but was never reported in Washington dispatches.

Surveyors are at work in the Catskills laying out what will be, when completed, the largest brickmaking plant in the world. The United States Brick Company, which owns plants in Reading, Baltimore and Buffalo, has purchased large shale brick works in Catskill. The company has also obtained options on clay and sand lands extending in a continuous strip from Catskill to Alsen, a distance of five miles. The title to this land will pass as soon as the legal formalities are complied with. The new plant, when erected, will employ over 1000 men and turn out 1,000,000 bricks a day.

Statistics recently received by the State Department of Labour show that only three foreign countries have as many organized working people as New York State, and in proportion to population New York leads these. Members of labour unions in Great Britain and Ireland number 1,902,308, in Germany 1,276,831, in France 715,576 and New York 400,000. The ratio is 1 to each 18 inhabitants in New York, 1 to 22 in Great Britain, 1 to 44 in Germany and 1 to 53 in France. "It is a significant fact," said the department, "that the hours of labour are short or long in almost the precise ratio of the degree of organization."

Under the statute of distribution the posthumous child of Paul Leicester Ford, the novelist—who, was slain by his brother, who, in turn, killed himself—will receive more than \$150,000 of the novelist's personal estate. The Surrogate signed a decree settling the accounts of Ford's widow, Grace Kidder Ford, who is the executrix. If the child had not been born Mrs. Ford would have received the entire estate, but now she will receive only one-third of it, the remaining two-thirds to go the child, who has been named Lesta Ford. The novelist left a personal estate amounting to \$189,033.99. This has increased until at present, after deducting legacies and expenses of administering the estate, there is left a net personal estate amounting to \$227,501.01.

Formal notice from the British Embassy has reached the Department of Commerce and Labour that both the Governments of Great Britain and the Dominion of Canada have issued orders to accept American certificates of inspection of the hulls, boilers, machinery and life-saving apparatus of steamships. In accordance with an agreement already reached the American Government will issue a similar order to all officers at American ports with respect to the certificates of inspection carried by the British and Canadian steam vessels. This reciprocal arrangement will facilitate materially the clearance of vessels at all ports of the three countries and will relieve from much embarrassment and expense the owners of American, British and Canadian steamships, as the only survey required will be one to determine simply whether the vessel is equipped in accordance with the statement in her certificates.

Mrs. Mary Schall has made a startling discovery in the great fossil beds at Fossil, in the form of an iron pin ten inches long and about an inch in thickness, firmly imbedded in the fossil rock. The find proves that the secret of the manufacture of iron was known at a much earlier age than is generally supposed, the pin antedating any other iron implement heretofore discovered. The iron pin is a remarkable piece of work, inasmuch as its manufacture produced a metal which has a ring like a silver bell, making it apparent that in some respects the people of prehistoric times were ahead of the present age in

iron manufacture. The pin was found in a rock formed many ages before the Aztec or the Toltec, and indicates that America has been inhabited for thousands of years, a high standard of civilization existing there years before Adam and Eve are supposed to have occupied the Garden of Eden.

Mr. John D. Rockefeller has decided to follow up his recent donation of \$100,000 to the Congregational missionary fund with additional contributions in aid of church and philanthropic work. "I shall continue to give, in my own way, to any cause that appeals to me as being worthy or in need," he said. "Do you think the sentiments expressed by Dr. Gladden are held by any large number of clergymen?" I should be loath to feel that such was the case. I have a great many friends in the Christian ministry and my experience with clergymen generally leads me to entertain only the warmest respect for them as just and charitable men. This controversy over my gift of \$100,000 for Congregational missionary purposes has set me to thinking as to the best methods of aiding church and philanthropic work. I am considering methods that will enable me in future to regulate my giving of money on a systematic basis and with more effective scope than heretofore."

On April 10 Commander C. B. T. Moore, U. S. N., with his officials went to the islands of Manua on the U. S. S. *Adams*. They returned on April 14 to Pago Pago. The chiefs and leading people on the three islands of Manua assembled in large numbers on the island of Tau, where the commander delivered to them diplomas and watches from President Roosevelt in recognition of their voluntary act in ceding the islands to the United States in July of last year. Commander Moore made an address to the Samoans concerning the advantages and privileges they would now obtain by this closer connection with the United States. High Chief Tuimanua replied, expressing the gratitude of himself and his people to the United States Government for the help and protection afforded to them in the past. The medals and presents were handed to the recipients by Mrs. Moore, wife of the commander. Tuimanua and his chiefs said they were proud to wear the medals presented. The people are wholly loyal to the United States.

To determine whether the steamer, shipper or insurance company shall stand the loss exceeding \$15,000 for flour stolen by Russian soldiers at Port Arthur last February is the purpose of libel proceedings commenced in the Federal Court by the Centennial Milling Company against the steamship *Pleiades*. The *Pleiades* loaded flour at Tacoma for delivery at Port Arthur, reaching that port on February 8th, the day that the Russian-Japanese war broke out. While she was in port trying to secure consent to be released, the Russians took a considerable part of her flour cargo and actually confiscated it. Being unable to land her cargo at Port Arthur, the *Pleiades* landed it at Chefoo, where it was sold for what it would bring. Though the complaint states that the amount is due as re-inbursements for the loss sustained by failure to deliver the flour at Port Arthur according to agreement, it is claimed by Manager Waterhouse of the steamship company that the real issue is to determine who must stand the loss of the flour taken by the Russians.

Crookes Thomas, an Oxford graduate, but for the major portion of his life a hermit, died in Denver recently leaving an estate worth \$60,000 and English heirs have commenced a fight against the claims of Denver people. Mrs. Sallie Collins, who says she cared for Thomas during his life, claims \$6,350, part of which was allowed in the County Court. Crookes Thomas came from a prominent English family. He was a graduate of Oxford and during his younger life was a Beau Brummel. He was disappointed in love, however, and came to America resolved to forswear all association with his countrymen and family. He took up his residence in Denver, living in a shed in Mrs. Collins' back yard. He refused to have anything to do with any one but Mrs. Col-

lins and her husband it is claimed. In later years he refused to eat unless his meals were brought to him. Mrs. Collins alleges she cared for him in every way because of the pity and affection she felt for him in his trouble. The \$350 awarded her was for washing done during the residence of the hermit and the \$6,000 is asked for personal care and attendance.

Chicago was given a new charter by the Illinois Legislature which has just adjourned. The act does not become law until the City Council has submitted it to the people of the city and received a favourable vote thereon. The Mayor is to be elected for four years. He is empowered to release persons from the City Prison for violations of city ordinances, and he may appoint a board of pardons of three members to review applications for pardon. No city officer is allowed to accept perquisites and all fees must be paid into the city treasury. Interest on the public funds goes to the account of the city instead of to the Treasurer, the Council awarding the funds to the depositaries paying the highest rate for them. The office of City Attorney is abolished and all legal business is to be vested in a new bureau, at the head of which is the corporation counsel. The city may purchase, maintain and regulate municipal parks, playgrounds, public beaches and bathing places. Among the things sought for and denied are: the right to acquire and maintain telephone lines, the right to tax vehicles and different trades; the right to issue more bonds. Another bill passed permits the city to regulate the price of gas.

The fight of Mr. E. H. Harriman to keep James H. Hyde in control of the Equitable Life Assurance Society has cost Harriman at least \$5,000,000, and perhaps double that amount, according to a reliable Wall street authority. It is said that he has had to take up loans on Union and Southern Pacific and other Harriman securities with the Mercantile and Equitable Trust companies, the National Bank of Commerce and other financial institutions in which the 600,000 policy holders are depositors. Some of the Wall street bankers said that the officers of these subsidiary institutions of the Equitable decided to "clean house." Other said that the insurance department examiners, in tracing the Equitable money, uncovered the big loans and gave the subsidiary institutions the hint that they had put out too much money on one class of collateral and to one borrower. Not being able to replace all the loans, with other institutions, Harriman, it is said, had to sell big chunks of Union Pacific, Southern Pacific and other Harriman stocks; and this, it is asserted, was the real cause of the recent stock market slump and the gradual fall in value of Union Pacific from 138 to 116½. It is said that Harriman has cleaned up the last of his Equitable loans and that he is now on good, hard ground. It develops that a unanimous call for a caucus of Equitable directors was sent out by Jacob H. Schiff, head of Kuhn, Loeb & Co., and a partner in Harriman's railroad ventures. Schiff is one of the thirty-eight so-called "dummy" directors in Equitable and has been sharply criticized because his banking house sold \$22,000,000 worth of bonds to the Equitable in 1904, on which it is said to have cleared \$500,000.

#### CORRESPONDENCE.

##### THE HOUSE TAX.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—If I was with a feeling of sincere regret that I read the remarks contained in Saturday's issue of the *Japan Daily Mail*, as the tone of the paragraph impressed me as not only ungracious but calculated to unnecessarily arouse ill-feeling against resident foreigners among the English-speaking Japanese readers of your journal.

In the absence of the papers presented to the Arbitration Court, and the complete text of the judgment, I refrain from attempting to comment in detail upon the legal aspects of the case; but it may perhaps be allowable to state that when the discussion was at its most acute stage I studied the matter most carefully, in all its bearings, from an academic point of view and that the result of

the investigation then made fully satisfied me that the foreign side of the argument was supported by irrefragable evidence. It is therefore my firm conviction that had the Hague Tribunal arrived at any decision other than that eminently just one which has been rendered, it could only have done so by wilfully or carelessly ignoring patent facts.

Apart from the general tenor of your observations, is it not contrary to the facts to insinuate that "foreign residents are to live under conditions *unrecognised* by the laws of the land" when such conditions are varied and recognised by the operation of treaties which are in themselves the supreme law of the State?

With regard to "the onus of maintaining the foreign Settlements," I must protest against your remarks, as they would seem to imply that there is an obvious injustice in the "Japanese nation" having to make payments for the upkeep of municipal works, etc., in the former foreign settlements. But is it quite true that the Japanese are asked to do anything of the kind?

When the matter is calmly investigated and historically considered in an unbiased frame of mind, it will be found that the lots in the former Settlements were purchased outright by foreigners at prices as high, or higher, than those paid by Japanese for neighbouring lands, and the purchase money duly paid; and in this respect the initial transactions did not materially differ from sales and purchases of lands between Japanese subjects except in this one important detail—that the lands were sold upon the distinct condition that buildings should be erected thereon within a certain specified period. Now, under the extra-territorial regime existing at that time, the Japanese Government could not directly tax the property, so a system was inaugurated under which the purchasers of the land were obliged to pay a yearly sum of so much a *tsubo* in commutation of all taxes, charges and impositions. This yearly payment was nominally termed "rent," but when it is remembered that the rights in the land were purchased outright for actual cash to commence with, it is obvious that the term "rent" was in practice, a mere synonym for "taxes." The "rent" in question is still being paid, and as it is really a commutation for all taxes leviable upon, or in respect to, property held under perpetual leases, should be entirely devoted to municipal purposes by the authorities. Under these circumstances do you honestly consider it is quite fair to infer that a portion of the incidence of taxation justly leviable on the foreign holders of lands and houses is being borne by the Japanese tax-payers? Perhaps you do not mean this, but that is the logical inference to be drawn from your words!

Personally I am absolutely impartial in the matter, neither owning, nor being interested in, any property in the former foreign settlements. Moreover, I have to pay the regular taxes levied in respect to other usual holdings of real estate; but being convinced of the justice of the position taken up by owners of property held under perpetual leases, I cannot understand why the Japanese public generally should feel any "strong sense of injustice" because certain unusual tenures were granted to foreigners under treaty, more especially when the grantees are actually paying a considerable amount of taxation under the name of "rent." Your own knowledge of English history will show you that Japan is not the only country where abnormal tenures of real estate have been created by the government!

My purpose in writing this is not to stir up wordy strife, but having acquired knowledge of the true inwardness of the matter, and realising that the Hague Tribunal has only supported the legitimate claims of the foreign property holders as presented through their respective governments, it is painful to see a journal of your standing, edited as it is by a gentleman whose ability and scholarly attainments are universally recognised, casting what are tantamount to veiled and wholly unwarranted aspersions upon the good faith of the members of the foreign communities in this Empire, who have neither asked, nor obtained, more than they are fairly entitled to.

I think it right to add distinctly that my advocacy of the justice of the foreign claims in respect to the house-tax question does not necessarily extend to the extravagant length of advocating exemption from any and every tax which can be shown, by means of a strained analogy, to be based upon or connected with the house-tax. There is reason in all things, and common-sense should play a part in determining the proper degree of exemption to be claimed from other taxes apparently connected with the house-tax.

Thanking you for your courtesy in inserting this letter, which is not discursively intended,

I am, Sir, Yours truly,

J. E. DE BECKER.

Kamakura, May 27th, 1905.

P.S.—While the matter is quite foreign to the subject of the discussion, I venture to point out that the

Japanese Government and people ought to be amply satisfied with the comparatively enormous indirect taxes which are paid by foreigners resident here. Almost everything used by western foreigners has to be imported in some shape or other, and the consequence of this is that American and European residents are really paying far more than their fair share of the taxes owing to the high import duties. Of course Japanese importing stuff from abroad pay similar duties, but, as a rule, what are luxuries to them are *everyday necessities* to foreigners, who are thus squeezed like the proverbial orange!

(We do not intend to renew this discussion. There may be something to be said when the documents are published, but there is nothing to be said now and all the arguments advanced by our correspondent are old friends which have been reported over and over again. We protest, however, that it is quite extravagant to construe our remarks as "veiled and unwarranted aspersions upon the good faith of the members of the foreign communities." Such charges are merely emotional rhetoric. We spoke solely of the political inexpediency of the system which has now received the imprimatur of the arbitration tribunal. We did not speak at all of the morality of the foreign communities. The foreign communities are not responsible for the drafting of the revised treaties any more than they were responsible for the negotiation of the original conventions. These perpetual attempts on the part of the champions of the anti-tax section to import sentiment and emotion into a purely legal discussion can not be too greatly deprecated.—ED. J.M.)

#### SHANGHAI COAL MERCHANTS AND THE BALTIC FLEET.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—A very interesting question has recently been referred to arbitration, in the course of which it has been disclosed that the Baltic Fleet was well provided for at Shanghai, by the Russian Naval Contractors, Messrs M. Ginsburg & Co., who, through their Agents, Messrs Alex. Bielefeld & Co., obtained immense quantities of Cardiff coal and stores in readiness for the requirements of the Fleet, but which, unfortunately for the Russians, are now practically in the possession of the Imperial Maritime Customs, who, by orders of the Taotai, have prohibited the re-exportation of such materials, unless satisfactory guarantees are furnished that they are not destined for the use of the Russian Armada.

This prohibition is, in all probability, the outcome of Messrs. Ginsburg and Co.'s policy in preferring arbitration to determine the rate of commission to which their agents are entitled, rather than allow the latter the usual remuneration for the very valuable services they have rendered.

It has leaked out in the course of the evidence given by Messrs. Bielefeld & Co., that they lent their name to Messrs. Ginsburg & Co., for the purpose of establishing a depot at Shanghai for the Baltic Fleet; and goods to the value of several million dollars have been stored awaiting the arrival of the famous brawlers.

Ginsburg & Co. appear to have taken the very unwise step of "swopping horses whilst crossing the stream," by severing their connection with Bielefeld & Co., just at a time when the utmost caution should have been exercised in order to avoid publicity as to the nature of their business. Now, however, the "murder is out." Counsel for both sides have waxed eloquent in denouncing the iniquities of the other side; and the wearied arbitrators who have patiently listened from day to day, to the grievances of the one and the arguments of the other,—to the quibbling of witnesses, and haggling of lawyers,—and to the opinions as to what the position would have been had the great Armada been annihilated by the trawlers at "Dogger Bank," have now retired in order to decide whether or not Messrs. Bielefeld & Co. shall have their pound of flesh.

Meanwhile the Baltic Fleet is clamouring for coal, and cannot get it!

Yours, etc.,

SHANGHAIENSIS.

#### Y.M.C.A. WORK.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—In the letter concerning the Imperial gift to the Y.M.C.A. which appeared in your issue of May 25th, I find the following words:—"And if any man in this world thinks he can satisfy his conscience and keep the moral Law without the help of Jesus Christ, it simply means that he does not know his own conscience, yet and does not know the Moral Law." "all this is elementary" etc.

Now if we substitute Amida Buddha for Jesus Christ in this sentence, we have the contention of the latter day Buddhists. If we substitute Krishna, we have a modern interpretation of the ancient Indian

Upnishads. One might substitute Mahomet or Zoroaster or a number of others. If, however, this letter had been written by a devout Buddhist, and if the name of Buddha had appeared in this unqualified assertion, would the statement have been allowed to pass unchallenged? I trow not,—for we Anglo-Saxons are essentially aggressive in our beliefs. Orthodoxy is my "doxy" and heterodoxy is emphatically the other fellow's "doxy." The problem therefore is very simple:—we are right and he is wrong,—so let us fight the good fight and maintain the strife.

If there be any good in Buddhism or in any other religion or philosophy it is simply Christianity. If it happened to antedate Christianity it was simply "plagiarism by anticipation." Whatever is true is Christianity; whatever is false is not Christianity. Could anything be more simple? It may be held by some that Truth is one and eternal that it may be found in many forms that we call religions, but that it is superior to all forms. Such a view, however, is highly distasteful to the dogmatist. Whether the latter be Christian, Buddhist or Mahomedan he is characterized by the same dislike of broad and liberal statements. One and all will declare with more or less vociferation that "Allah illa Allah" and that A. B. or C. is his one and only prophet. And further, they will not say merely "I think, or I believe that A is the only prophet,—that he come down from heaven to save me from my sins, and that I and you must either accept him or he damned." No one could object to the dogmatist's stating that he believes this.

But no, they don't merely believe it but they know it,—they are absolutely certain that A. B. or C., as the case may be, is the one and only prophet.

Not only is A. the only true prophet but B. and C. are distinctly false. Or in other words B. is the anti-A. and therefore B. and his teachings must be combated by the faithful. The people of Europe must guard their holiest possessions.

There appears, however, to be little need for the Christians of Europe to guard their "holy possessions." Certainly the peoples of Asia, although their own forms of faith may have fallen into decay, do not appear to be inordinately anxious to acquire these holy possessions. The fact is that the people of Asia,—and preeminently the Japanese—are very discerning people. They see very clearly the difference between professions and practice. They will readily admit that the ethics of Christianity are very exalted. When they are shown that "Do unto others as you would have others do unto you" is superior to the old Confucian teaching which states the same thing in a negative form, they will readily admit it. "Do not unto others as you would not have others do unto you," may not be the highest possible teaching; but it is quite difficult to live up to it. It may even be questioned whether the people of Europe in spite of their holy possessions have ever been able to live up to this comparatively low Chinese teaching. We will not ask if the Christians of Europe always do unto others as they would have others do unto them; but do they even refrain from doing what they would not like others to do in them? Until they are fully able to do so, there need be no complaint that the Confucian teaching is too low.

The whole question therefore resolves itself into this—the ethics of the western religion are high and the people fail to live up to them. The ethics of the eastern religions are also high, though perhaps not so high. And the people fail to live up to them. In the present-day religion of the west there are many conflicting sects, something over two hundred and forty, I believe. Some of them are distinctly hostile, while others tolerate one another, although with the superior and slightly pitying air of one who knows that he is right. According to some it is necessary to sprinkle a child with water in order to ensure its salvation. According to others it is necessary that adults should be ducked bodily in water.

The extraordinary feature of these sects which must present itself to any intelligent Japanese, or to any one not accustomed to such things from childhood is that educated and apparently sane people should attach such enormous importance to trifles of this kind.

The fact, however, that so many Christian people do attach importance to details of ceremony, turning to the East or not turning to the East, making a smell with incense, or strenuously objecting to it, is profoundly significant. It affords the most conclusive proof that where such controversy and triviality obtain, the true spirit of the religion has unquestionably fled.

This unpleasant state of affairs is principally the result of intolerant insistence on certain dogmas. If Christian workers are to do any good in Japan they would do well to avoid all dogmas, and endeavour to get rid of their intolerance. Whatever they have to offer to the Japanese people that is helpful and

serviceable, whether it be "ping-pong" and "hair cutting" for the benefit of the soldiers in Manchuria; or any other such eminently practical work—no doubt it will be duly appreciated. In fact one "ping-pong" outfit, or one good substantial hair-clipper, would probably be more appreciated than all the dogmas that have ever addled the brains and disturbed the peace of mankind.

Yours very truly,

A MAN IN THE STREET.

May 26th, 1905.

#### YOUNG MEN'S CHRISTIAN ASSOCIATION ARMY DEPARTMENT.

YINGKOW.—The following presents the first impressions of the Rev. J. G. Dunlop concerning the work at Yingkow. Mr. Dunlop has gone to this point as a special representative of the Association. "The work and the opportunities are beyond even what I expected. Altogether this is the liveliest Y.M.C.A. I have ever known. The equipment is crude and the Manchurian dirt unspeakable, but for life and usefulness, this beats any Association I ever saw at home." We put in busy days, for the most part serving the men in little ways, insignificant each of them, but in the aggregate adding much to the happiness and comfort of men suffering many privations. Here is a man who wants writing paper and envelopes and another and another. Here is one who wants to borrow another book and there are many like him too. Here is a man who used to be here but has gone up Mukden-way and is here again for a day and runs in to see us. Here comes an officer, a new arrival who knows about and admires the Y.M.C.A. work and comes to leave his card and wish us well. He is followed by a young soldier who has just read Matthew's Gospel and wants to know who the Pharisees were, whether Herod was the name of a place and what "rendering unto Caesar the things that are Caesar's" means. Before I am through with him the men of the English class arrive. Teaching English is one of the home comforts that I expected to have to do without in the field of war, but here I have it,—an hour and a half a day; and just as at home in Japan I could very soon fill the day with nothing else if I agreed to all the requests that come in. Next come a couple of chaps who have broken a mirror and want some glue or muckage to mend it; and next comes one with his tunic off and his hair half cut, and he says the clippers won't cut his hair and 'have we any oil to put on them?' So it goes from early morning till late at night. It is delightful to have such constant contact with needy men and to feel that you are really helping, physically and spiritually, hundreds of men daily.

Mr. Gleason writes as follows about the first lantern exhibition given after Mr. Dunlop's arrival: "Mr. Dunlop has 500 or more lantern slides. His first exhibition on Saturday night of Japanese views, especially gardens and flowers, made the men crazy with delight. In barren, wintry Nychaung even a turnip blossom is admired, and when tsubaki, cherries and wisteria were shown, you have no idea of the extent of appreciation."

While the Association building at Yingkow has been used by soldiers with increasing interest, Secretary Fujii has been spending most of his time visiting Tashichiao, Liaoning and intermediate hospital points. Besides the soldiers in the hospitals, thousands of more lightly wounded from the battle of Mukden were passing through, en route for Japan. At Tashichiao Mr. Fujii went through the long trains, giving thousands of pieces of stationery, postals, tracts, reading matter and other small gifts to the men. The train stopped at Tashichiao two hours for refreshments, giving Mr. Fujii time to put something in the hands of every man, as well as passing words of comfort and encouragement with groups in every compartment. It is to be regretted that while so many thousands were returning after the battle of Mukden there was not a large force of secretaries for this work.

KWANSHO.—Work has just been opened at a new point, Kwansho, forty miles north of Hoojo and is operated for the present as a branch of the Hoojo work. Two secretaries, Messrs. Hirayama and Kawakami have proceeded from Hoojo with supplies for the immediate needs of this new Association.

SUMMER SUPPLIES.—Secretary Hibbard writes as follows about a unique idea which is taking well at Hoojo. "We have received the large supply of fishing tackle and have wired for more to come by mail. Small fish are abundant in the neighbouring river and what with the ennui and the monotony of the diet, there is a double inducement to go a fishing. Privates, commissary soldiers, bearded reserves, gendarmes, petty officers and commissioned offi-

cers' orderlies form a never ending chorus of *Tsuri barga attara hitotsu chodai itashi tai*. Again and again we have been complimented on the idea. It takes the men out of doors and away from the sake shops. It gives them a pleasant holiday and provides a luxury. Everything but the essential food stuffs is hard to get at any price and the lack of fresh fish especially bears hard on Japanese. One Isaac Walton had gone to the length of getting a Chinese blacksmith to make hooks. Anyone who knows how impossible it is for a Chinese mechanic to work anything more delicate than a mule shoe will realize something of the joy of this artist when he found that the Association supplied the real article. A practical evidence of gratitude was the string of twenty fish that formed a welcome change to our own diet."

The hot weather presents problems and opportunities different from the winter. The men desire articles that will take them out of doors, providing games and recreation. Proper supplies have already been forwarded, including implements for baseball, tennis, archery and fencing.

SPECIAL TOURS.—Bishop Harris, accompanied by Rev. T. Kihara, is making a month's tour of Manchuria, as a special representative of the Army Association Committee. Bishop Harris has been kindly granted by leading officials in Japan letters to the officials in command throughout Manchuria. The particular object of his tour is to deliver a series of addresses in behalf of soldiers at the various Association points. Bishop Harris' itinerary includes Tairen, Port Arthur, Yingkow, Liaoyang, Mukden and Hoojo.

The Hon. S. Ebara, M.P., and K. Yamamoto, Esq., both members of the Army Committee, are making a tour of inspection among the Associations in order that the Tokyo headquarters may perfect and improve its administration of the growing Army Department. The Army Committee has now eighteen secretaries in Manchuria and the work is conducted at six stations, as follows: Hoojo, Kwansho, Tairen, Port Arthur, Yingkow and Liaoyang.

#### THE OPPOSED FLEETS IN THE CHINA SEAS.

The definite information which has been received as to the composition of the force with Admiral Rojdestvensky at the Anamba Islands shows that in the two divisions now reported he has steamed into the China Seas with all his available strength. His battleship squadron consists of seven vessels, of which four, of the *Kniaz Sviatofl* class, are similar and powerful in every respect. As was said in *The Times* of October 1, 1904, they may be compared not unfavourably with our own *Formidable* class, for, although the latter have an advantage in displacement of about 1,500 tons, the armament is similar in the two classes. With regard to protection, the Russian vessels have a complete belt, and the principal armour is of the same thickness in both types, but the Russians are lacking somewhat in the protection afforded to their secondary batteries and to the channels for the provision of ammunition. In regard to the disposition of the guns, the chief difference is that the 6in. guns are carried in pairs in secondary turrets on the bow, beam, and quarter of the Russian vessels, whereas the secondary armament of the *Formidable* class is carried in casemates. The Russians in this respect follow the French system. The estimated speed of this class was 18 knots, but it is probably much less than this at the present time, when the sea-going speed of the whole fleet does not appear to have been over seven knots. The other battleships include the *Ossliabia*, a sister to the ill-fated *Pobieda* and *Peresviet*, and two older vessels, the *Sissoi Veliky* and the *Navarin*. One of these last-named vessels was reported to have been with the cruiser division under Admiral Enquist. Only two of the cruisers are classed as armoured, but in comparison with any of the armoured cruisers of Japan their protection does not merit this distinction. The "protected" cruisers may still have some value for scouting if it has been possible to keep their hulls clear of weeds, and nominally they include some fast vessels. The *Olag* is nominally very speedy and is well armed. She should be equal to meeting any similar vessel in the Japanese Navy. Her weak point is the lack of protection for her guns' crews, although slight armoured defence may have been improvised to some extent. The *Temiching* and the *Isurud* are also nominally of more than average speed as cruisers. If these three vessels are clean and their machinery efficient, they should render scouting on the part of the slower Japanese vessels of a similar class difficult, if not dangerous. There is still some uncertainty as to the composition of the torpedo flotilla which accompanies the Russian admiral. A recent report gave him nine destroyers, six of the *Blastiaschy* class and three of the *Gremsky* type, which, described as torpedo-boats, formed part of the squadron under Admiral Botrovsky. The following is a list of the principal ships:—

THE RUSSIAN FLEET.  
BATTLESHIPS.

Name.	Displacement.	I.H.P.	Nominal Speed.	Gun Protection.	Weight of Broadside Fire.
Tons.	Knots.	In.	Lbs.		
<i>Kniaz Svarogoff.</i>					
<i>Alexander III.</i>					
<i>Borodino</i> .....	13,516	16,800	18.0	11.6	4,426
<i>Orel</i> .....					
<i>Osslabia</i> .....	12,674	14,500	19.0	10.5	2,672
<i>Sissoi Veliky</i> .....	8,880	9,500	16.0	12.5	3,186
<i>Narvarin</i> .....	9,476	9,000	16.0	12.5	3,404
ARMoured CRUISERS.					
<i>Dimitri Donskoi.</i>	5,893	7,000	15.0	12.2	444
<i>Admiral Nakhimoff.</i>	8,500	9,000	19.0	6.0	944
PROTECTED CRUISERS.					
<i>Oleg</i> .....	6,675	19,500	24.0	4.0	872
<i>Aurora</i> .....	6,630	11,600	20.0	—	632
<i>Svetlana</i> .....	3,828	8,500	20.0	—	478
<i>Almaz</i> .....	3,285	7,500	19.0	—	184
<i>Jemchug</i> .....	3,200	17,000	23.0	—	184

The third Baltic squadron, which has been reported to have left Libau, is under the command of Admiral Niebogatoft, and consists of the battleship *Nicholas I.*, the coast defence armour-clad *Admiral Oshakov*, *Admiral Seniavin*, and *Admiral Apraxine*, the cruiser *Vladimir Monomakh*, a hospital ship, several transports and armed auxiliaries.

It is believed that the principal vessels that Admiral Togo has at his disposal will be found in the following table:—

THE JAPANESE FLEET.  
BATTLESHIPS.

Name.	Displacement.	I.H.P.	Nominal Speed.	Gun Protection.	Weight of Broadside Fire.
Tons.	Knots.	In.	Lbs.		
<i>Asahi</i> .....	15,000	15,000	18.0	14.6	4,232
<i>Shikishima</i> .....	15,200	16,000	18.0	14.6	4,232
<i>Mikasa</i> .....	12,300	13,000	18.0	14.6	4,005
<i>Fuji</i> .....					
ARMoured CRUISERS.					
<i>Tokawa</i> .....	9,750	18,000	21.5	6.6	1,779

In addition to the above vessels, from which one or more cruising squadrons have probably been detached, the Japanese admiral has a large number of improvised war-vessels and vessels less efficiently protected. His torpedo flotilla is also numerous, having been added to lately. It is quite likely that some of the armed merchant ships are scouting in the neighbourhood of the Russian Fleet, and it is certain that two of the fastest of the Japanese cruisers, the *Chitose* and the *Kasagi*, have been within touch of *Rojdestvensky* since the beginning of the week. These two vessels are well armed, and although singly either might find her match in the *Oleg*, together they should prove very disagreeable companions to the hostile squadron, especially at night. Although the Japanese have a torpedo station and naval base at the Pescadore Islands, it by no means follows that this will come into use, since it will be out of the way if the Russians choose the route eastward of Formosa, as they are most likely to do. On the southeast coast of the island there are no good harbours, and in any case the hostile fleet would be certain to give these shores a wide berth. In making his way to Vladivostok it seems to be obvious that Admiral *Rojdestvensky* cannot attempt to use the Tsushima Straits, but that he will keep to the eastward until well clear of the Japanese islands and then attempt to enter the Japan Sea either by the Tsugaru Straits or by the La Perouse Strait to the north of Yezo. It is hereabouts that the really crucial situation may occur and the decisive battle be fought.

The strength of the Russian Fleet lies in the battleship squadron, with its slight margin of superiority. Capably used, this force should make its really formidable character felt. It is well armed, and with guns which out-number the similar guns likely to be opposed to it. On the other hand, the battleship squadron of Japan is assisted by a splendid division of eight armoured cruisers equal to working in combination with their heavier sisters, as regards both tactical mobility and fighting qualities, although the guns they carry are not so heavy as the heaviest in the Russian battleships. While giving every credit to the Japanese for the experience which they have gained in action, it would be a mistake not to give credit also to the Russian admiral for having made use of the six months during which his ships have been in commission, to give his men that training and practice which is the next best thing.—*The Times*.

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## BIRILEFF'S COMMAND.

London, May 25.

Admiral Birileff's command includes the Vladivostok and the Baltic Squadrons.

## ASSASSIN HANGED.

Koliaeff, the assassin of the Grand Duke Sergius, has been hanged.

## AFGHANISTAN.

*The Times* states that in the new treaty with Afghanistan the Amir is for the first time styled as the independent King of the State of Afghanistan and its dependencies, and described as "His Majesty." The Amir renews the pledges given between his father and Great Britain and also renews the former engagements.

## VLADIVOSTOK.

A letter to the *Daily Telegraph* from Tokyo states that the railway to Vladivostok has been severed and that the fortress is isolated.

## AMERICA IN THE FAR EAST.

London, May 26.

The Hon. W. Taft, Secretary for War in President Roosevelt's Cabinet, presiding at the Ohio Republican State convention at Columbus, said the United States claimed a hearing on the new questions that had arisen in the Far East by virtue of their growing trade and their ownership of the Philippines, which the United States held certainly for a generation, possibly for several.

## A RUSSIAN DISASTER.

Later.

Russian despatches show that General *Rennenkampf* has been severely checked after attacking an unnamed Japanese position with a considerable force. He had several hundred casualties. The censor has not allowed any details to be published.

[NOTE.—This of course refers to the turning movement on the S. W. of Fukumun.—Ed. J.M.]

## BRITISH POLITICS.

Mr. Balfour has fixed the 30th inst. for the discussion of Sir Henry Campbell-Bannerman's vote of censure.

## ADMIRAL BIRILEFF.

London, May 27.

Admiral Birileff started for Vladivostok on the 25th May.

## PRINCE ARISUGAWA IN PARIS.

Prince Arisugawa lunched with the Franco-Japonaise Society in Paris. Toasting President Loubet he said that he was convinced that the relations between France and Japan would be drawn closer in the future.

## KING OSCAR.

King Oscar has resumed the government of Norway and Sweden.

## THE FRENCH NAVY IN THE FAR EAST.

The French Minister of Marine announces that two more submarines, four shallow draught torpedoers, and six torpedo gunboats will sail for Indo-China in August.

## A RUSSIAN REPORT.

London, May 28.

General Linevitch reports a successful cavalry raid by General *Mischenko* against the Japanese communications. The telegraphs were cut throughout a great distance. A provision convoy extending seven versts was dispersed. A strong Japanese force entrenched on the heights south of Fukumun was attacked. Two Japanese companies were annihilated and one captured. Altogether 234 prisoners were taken with five machine guns.

## THE NEUTRALITY OF MONGOLIA.

*The Times'* St. Petersburg correspondent says that Russia has notified China of her intention to march troops through Mongolia to checkmate the Japanese flanking movement.

This decision has evoked something akin to consternation among the diplomatic corps, where it is regarded as the first step toward the annexation of Chinese territory and the opening of the question of the partition of China.

## "COALS TO NEWCASTLE."

London, May 29.

Reuter's Washington correspondent says that the American Consul at Nagasaki telegraphs that the Japanese have sunk five Russian warships in the straits of Korea.

## ANOTHER RUSSIAN PROTEST.

London, May 30.

*The Morning Post's* Washington correspondent telegraphs that Count Cassini, the Russian Ambassador to the United States, has protested against the visit of Mr. Taft, U. S. Secretary for War, to Japan as an expression of encouragement to Japan. President Roosevelt declines to change Mr. Taft's arrangements.

## LONDON WITHOUT NEWS.

Later.

The embargo on the publication of naval news in Japan continues.

## THE SWEDISH-NORWEGIAN CRISIS.

King Oscar has refused his assent to the law passed by the Norwegian parliament establishing a separate consular service for Norway. The Norwegian Ministry has resigned and the gravest constitutional crisis has been created. King Oscar has refused to accept the Ministers' resignation.

## THE ARISUGAWAS.

Prince and Princess Arisugawa were received at Berlin by the Kaiser, the Crown Prince, Princes Adalbert and August, the officers of the head-quarters staff, other high military and naval officers, the Japanese legation staff and members of the Japanese colony. These were all at the station awaiting the arrival of the train. The Kaiser cordially greeted the Japanese present and conversed with the Legation staff. His Majesty welcomed the Imperial visitors in the heartiest manner. An immense crowd was present and the Prince and Princess were warmly cheered.

The Imperial visitors were accommodated at an hotel but dined at the Palace with a distinguished company.

## THE KAISER'S CUP.

The American yacht *Atlantic* has won the Kaiser's Cup in the Atlantic race.

## THE NAVAL BATTLE.

London, June 1.

The *Bourse Gazette* of St. Petersburg says that the battle off Tushima has decided the issues of the war and opened new ways for the making of current history.

A later telegram says that the markets are buoyant; Japanese stocks are still rising, having gone up five points since the battle.

Hopes of peace are strengthened by the earnest advocacy of the French press.

## THE ARISUGAWAS.

The Kaiser has conferred the order of the Black Eagle on Prince Arisugawa and the Red Cross Medal of the first class on Princess Arisugawa.

(RECEIVED AT THE FOREIGN OFFICE.)

## PRINCE ARISUGAWA IN PARIS.

Prince and Princess Arisugawa received the kindest possible treatment in France. It had been previously made known in official quarters that during their stay in Paris the Prince and Princess would remain incognito. Hence no French officials were attached to Their Imperial Highnesses. But on the 17th instant a most cordial interchange of visits took place between them and the French President, and on the 24th the President invited the Prince and Princess to a luncheon at which they were the principal guests. Among those invited were the whole suite of their Imperial Highnesses, the staff of the Japanese Legation, the French Premier, the Minister of Foreign Affairs, the Minister of Marine, and a number of Frenchmen connected with Japan. The President seized this occasion to present Orders to the members of the Prince's suite.

## RUSSIAN INCOME TAX.

The committee appointed to investigate the question of the income tax in Russia has unanimously decided that the imposition of such a tax is a wise measure, and that it should be carried out by way of supplement to the direct taxes now in force.

## SWEDEN AND NORWAY.

The King of Sweden and Norway, having recovered from his illness, has resumed his administrative duties. The Crown Prince, during his regency, frequently urged the National Assembly to consider the problem of the national system in conjunction with that of the Foreign Office, but the Assembly separated the two. It was thoroughly expected that this decision would receive the King's approval but His Majesty has withheld his consent and when the Cabinet resigned in consequence he declined to receive their resignation.

The Shanghai Taotai has made the following communication to Consul-General Odagiri:—"Orders have been issued to the captains of the six Russian transports anchored at Woosung, which have already hauled down their national colours, in the sense that they must repair each to an indicated berth, that their crews must give guarantees not to consult their own convenience as to leaving the place, and that their machinery and armaments must be removed and handed over to the Arsenal.

(RECEIVED BY THE "JUJI SHIMPO.")

## CONTRABAND.

London, May 25.

Great Britain and America are preparing to protest against the ruling of the Russian Government that cotton is contraband of war. The situation will be grave. The basis of Russia's contention as to cotton being contraband is that it is provided for the purpose of manufacturing explosives.

## FUTURE OF POWER PRODUCTION.

The future of power production for manufacturing and other purposes is the subject of an article in the *International Quarterly* by Professor N. S. Shaler of Harvard. Combustible carbon in the forms of peat, coal, oil and gas is not only exhaustible, but forms a store that cannot be expected to endure the drain made on it for more than 300 or 400 years, according to Professor Shaler.

The store is effectively limited to the northern parts of North America and of the Eurasian continent. Of this accumulation the share of Europe will be substantially exhausted by the end of the present century; indeed, if the present increase in the demands upon it continues, the exhaustion may come within sixty or seventy years. This does not mean that all or nearly all of the coal that lies beneath the surface will have been used, but that very much of the store is so deeply buried that it is not in existing economic conditions available. That which remains will serve only when the needs are desperate and are far beyond what can be met by the other sources of power and heat. So far as the world is to depend on coal as a source of power, there are but two districts that have a chance to attain a large and enduring success; these are the fields of Western China and that of North America east of the Mississippi and south of the St. Lawrence, and these areas, vast as is the store of fuel they contain, are not likely to meet the demands made upon them in the next 300 years.

The petroleum, when first brought into use, were supposed to afford a basis for industries as extensive and as lasting as the coal deposits. Time has shown that while these accumulations are in some places, as at Baku, in vast quantities, none of the so-called basins which are now drawn upon are likely to withstand the drain for a half-century to come. Inasmuch as the rock oils are formed from decomposing animal matter, there is reason to believe that they have been very generally produced in all marine deposits abounding in fossils; that is, in nearly all beds formed on the floors of the ancient seas at some distance from the shores. It is tolerably certain that if we had access to all this oil, it would in amount many times exceed in energy-giving value all the other existing stores of fuel.

It is to be noted that while the native petroleum of the world can be no more than a temporary source of energy in the forms of heat and light, oil of like quality can be produced in vastly larger amounts from certain carbonaceous shales which plentifully occur in various parts of the world.

The present writer has computed that the oil which may possibly be had from the Ohio shales above mentioned will in volume much exceed the amount of water contained in Lake Superior.

Viewed as a whole, the forecast for the future of power with the world peopled to its maximum of food-giving resources, is favorable. While coal and natural oil and gases are essentially temporary resources not to be considered available for more than three or four centuries to come, they constitute but a small part of the offering of nature on this sphere. The falling waters, the winds and the tides are great and permanent sources of supply from which the crafty mind of man will be certain to win his needs for all his time. These sources of supply he will supplement with the oils obtained from the above-mentioned carbonaceous shales, and at the same time he will seek for dyestuffs, medicaments and the host of petroleum products which are now regarded as mere by-products.

## POPE PIUS ON PRESENT DAY EVILS.

Washington, May 8.

Pope Pius' last encyclical letter to all prelates and others in the Roman Catholic communion is considered the broadest and most far-reaching document he has written since his elevation. The encyclical has just come to the apostolic delegation in Latin form and will be translated soon and sent throughout the country.

According to the prelates the encyclical is especially important, since it speaks authoritatively upon subjects which are now harassing the American secular as well as religious world. He speaks in positive terms on the vital importance of moral teachings for young and old, and of the influence of religious instruction on the nation, as well as the individual. He makes a general review of the deplorable condition of the world at the present time and suggests that the remedy lies in knowing more clearly and following more closely the teaching of Christianity.

Part of the encyclical, according to the church authorities, is timely in this country, when trusts, "tainted money" and kindred subjects are engrossing so much attention. The Pope says: "There are to-day vast numbers, continually being recruited by fresh accessions, who are utterly ignorant of truths of religion or who at most possess only such

knowledge of God and of Christian facts as to lead the lives of idolaters. In consequence of this ignorance they regard it as no crime to cherish hatred against their neighbors, to enter into most unjust contracts, most unjust speculation, endeavor to possess themselves of property of others by enormous usury and to commit other iniquities, not less reprehensible.

"Furthermore, they seem unaware that the law of Christ not only forbids immoral actions, but condemns immoral thoughts and immoral desires. Even when they are restrained from abandoning themselves to sensual pleasures, they, without any scruples, feed themselves on evil thoughts, multiplying sins beyond the hairs of the head. We deem it necessary to repeat that such persons are found not only among the poorer classes, but in the highest walks of life, and even among those puffed up with knowledge, who relying upon vain erudition, think they are at liberty to turn religion into ridicule."

The preaching of "topical" sermons among the Catholic clergy receives a severe arraignment, and the writing of controversial books and of learned treatises is not encouraged.

"Too often," says the pope, "it happens that ornate sermons which win the applause of crowded congregations serve only to tickle the ear and fail utterly to touch the heart."

## MARRIAGE.

RUSSELL-LEVENSTON.—At Glasgow, on June 1st, HENRY, eldest son of Maurice Russell, of Yokohama, Japan, to NORA, youngest daughter of Henry Levenston, Esq., of Langside, Glasgow.—(By Cable.)

## SUMMARY OF NEWS.

THE death is announced in Tokyo of Viscount Ogasawara Sanetsune. His father was the feudal lord of Anshi, Harima province.

FOUR Russians who recently escaped from prison at Nagoya have been arrested in the district of Kamo, Gifu prefecture.

GENERAL BALASHOFF, President of the Russian Red Cross Society, arrived on June 4th at Chefoo from Port Arthur on his way home.

ON the morning of June 5th, fire broke out at Teramachi, Aomori, destroying 43 buildings including a temple and the City Office.

ADMIRAL IJIMA, Vice-Chief of the Naval Staff Office, has visited the captured ship *Orel* at Maidzuru. On June 7th he left for Tokyo.

THE trial of the Russian hospital ship *Aryol*, which was temporarily seized at the battle of the Japan Sea, began on June 5th in the Saseho Prize Court.

MESSRS. JARDINE, MATHESON and Co. have received a telegram from the Indo-China Steam Navigation Co., Ltd., informing them that the Annual General Meeting of Shareholders will be

held in London on the 9th June, when the directors will recommend that a dividend of 6 per cent. (six per cent.) be declared for 1904.

THE injury to Admiral Miso's left eye seems to be more severe than at first reported. Tokyo papers say that the sight will not be entirely lost.

THE steamer *Katsuyama Maru* which went ashore on June and in the neighbourhood of Port Hamilton, Korea, has been floated. She is not damaged.

OF the prisoners captured in the recent naval battle a thousand were removed on June 7th to Kumamoto and ninety, including forty-five officers, to Matsuyama.

FORTY RUSSIANS—priests and sanitary officials—were released on June 1st at Saseho and subsequently arrived at Nagasaki where they will embark for home.

VISCOUNT HONAMI and Count Asukai have been deprived of their ranks and removed from the peerage. They had been prosecuted on a charge of fraud and subsequently convicted.

AN official telegram says that the weather being favourable, sericulture in France this year is expected to be successful, and that the situation in Italy is believed to be generally good.

DURING ten days ending May 31st, the foreign trade of Yokohama was calculated as follows: Exports, yen 2,359,962; Imports, yen 9,072,633; export of Japanese gold coin, yen 440,000.

AT 1 p.m. on June 1st, a carriage on the Kyoto Electric Railway was derailed and overturned with the result that 4 persons were severely injured and 17 slightly. Many of them were soldiers.

ABOUT a thousand Russians at Fukuoka caused trouble with their guards on the night of May 30th. The disturbance was immediately put down. Some of the parties sustained injuries.

THE death was announced on June 7th in Tokyo of Major-General Takagi, President of the Military College. The funeral will take place at 1 p.m., on June 10th at Aoyama Cemetery.

THE price of the Japanese 6 per cent. bonds continues to rise in New York. According to a telegram which the Yokohama Specie Bank received on June 7th, the quotation was then £103½.

AT an extraordinary meeting of the Kobe Foreign Board of Trade on the 5th inst., Mr. Alfred Woolley, the former Vice-President, was elected President in the place of Mr. E. J. Bardens, resigned.

A HIMEJI telegram says that of twelve Russians who escaped on May 30th five were arrested on June 4th in the village of Sone, Innan district, and seven on the morning of the 7th on a mountain near the village of Yano.

THE remains of the commander of the Russian cruiser *Dmitri Donskoi*, sunk in the Japan Sea, were brought on June 4th from Saseho to Nagasaki. The funeral took place at Inasa and many Japanese naval officers were present.

A MAN armed with a sword, early on the morning of June 4th, broke into the dwelling of a pawn-broker named C. Mimura, Asama cho, Kanagawa, menacing the family. The intruder robbed them of money and several articles of property.

A TELEGRAM has been received in Tokyo to the effect that the price of iron and steel which, owing to the approach of the Baltic Squadron had con-

siderably risen, has fallen by twopence for iron and steel, and three pence for pig iron. The principal reason is that as the result of the annihilation of the Russian fleet, the rate of freight and marine insurance is restored to its ordinary level.

MR. M. MOTIYAMA, a civil engineer of the Army Department, and Mr. F. Mori a lawyer of Tokyo, have been arrested and removed to the Tokyo District Court. They are said to be charged with making a false accusation against a woman.

THE Nippon Yusen Kaisha's steamer *Kumano Maru*, at 6 p.m., on June 3rd, collided with a small sailing vessel off Kannon-zaki on her way from Yokkaichi to Yokohama, the result being that the latter was smashed and sunk. The crew were saved by the *Kumano Maru*.

THE Emperor received Dr. Bae'z in audience at 10.30 a.m. on June 9th. Dr. Bae'z left on the following day for home. The *Yiji* says that the Emperor in recognition of the meritorious services he has rendered to Japanese medical science will present him with a pair of silver flower-vases.

M. TACHIBANA and T. MIYAWA, of the steamer *Sado Maru*, which was damaged by the Vladivostok squadron last year, arrived on June 1st at Nagasaki from Europe. They had been taken to St. Petersburg via Vladivostok as captives. After examination at the Russian capital, they were released.

THE opening of tenders for the purchase of the German steamer *Romulus* took place on June 3rd and she was sold to K. Ooka of Aomori for yen 28,065. She was captured on Feb. 25th on her way to Vladivostok with 3,500 tons of Cardiff coal and subsequently she went ashore off Aomori prefecture.

THE Supreme Prize Court has dismissed an appeal lodged by the owner of the Russian steamer *Alexander* against the decision given by the Saseho Court confiscating the hull and cargo of this ship. The vessel was captured on Feb. 10th in the neighbourhood of Idzughara, Tsushima. She is a small vessel of 261 tons gross.

MR. K. HAMAGUCHI and a few other prominent merchants of Tokyo are promoting the establishment of a *sake* brewing factory in Korea with a capital of two million yen. It is said that the Korean Court has consented to subscribe a considerable number of shares. Two of the promoters will shortly leave for that country for the purpose of starting preparatory work.

THE *Nichi Nichi* reports that Madame Ignatieff, the wife of a Russian general, has addressed an inquiry by telegram to Marquis Ito as to the fate of her son and nephew, lieutenant and captain respectively in the Russian Navy. After having applied to the Navy Department for the information, Marquis Ito wired on June 7th to the Russian lady that the officers were on board one of the warships sunk and that they are not among the Russians captured by the Japanese.

THE death is announced of Major-General Tsuda, (retired) a member of the Upper House. He was 72 years old. For meritorious service in the army in the Restoration he was promoted Major General in 1874 and subsequently appointed Vice-Minister for War. After having occupied the post for several months he was appointed on a commission for drafting various laws with regard to the Army and Navy. In 1888 he was placed on the retired list and in 1890 appointed a member of the House of Peers.

## THE BATTLE OF TSUSHIMA.

## THE WORK OF THE TORPEDO CRAFT.

Friday, June 2.

There is much talk about the achievements of the torpedo-craft in the Battle of the Japan Sea. They went in and torpedoed the Russian ships during the day as well as during the night. After all the Japanese had a reputation to achieve in this matter, perhaps a reputation to recover. For it could not be said that great success had attended their previous work with torpedoes. On the celebrated night of the 8th of February, when they found the Russian ships not only unprepared but also at anchor, an ideal target, they discharged a great many torpedoes but only two, or at most three, took effect. Again, in the battle of August 10th, when the Russians were retreating to Port Arthur, the torpedo-craft had another signal opportunity, yet they did not score a single hit. Finally, when the *Sevastopol* lay under the shadow of Mantaushan, she was attacked night after night by Japanese torpedoers, but, though not uninjured, she did not receive any fatal wound. It is said that Admiral Togo's comments on all these abortive essays made the torpedo-officers wince, and resulted in a course of practice the results of which were vividly seen in the last battle. The boats worked by day as well as by night, thus breaking the record and the theory of this branch of naval practice, the theory that no torpedo-craft can approach the quick-firers of a war-ship during day-light. By and bye accurate details of the work achieved by these little craft will be forthcoming doubtless. At present the talk is somewhat vague. An incident mentioned is that one of the three torpedo-boats which were lost was disabled at a distance of 400 yards from the Russian ships against which she had advanced. She lay in a sinking condition and the fate of her crew seemed certain, when one of her consorts rushed in, and actually took off her surviving officers and men without sustaining any damage whatever at the hands of the Russians. If this incident illustrates the splendid courage of the Japanese it illustrates also the bad shooting of the Russians.

## ILL-FATED BATTLESHIPS.

Another theory upset by the experiences of this fight is that battle-ships can not be sunk by gun-fire alone. Undoubtedly the *Ossliabya* and the *Svaroff* were so sunk. They seem to have owed their fate in great part to the heavy sea that was running at the time. The Japanese have long made a habit of going out to gun-practice in high seas. The difficulty of scoring hits from a platform that is rolling and pitching is enormous, but, on the other hand, if the target-ship also be rolling and pitching, she exposes parts which are not protected and which, under ordinary circumstances, would be completely below the water line. The gunner, therefore, if his task be hard, has proportionately great chances of signal success. He might pound away for hours at a battle-ship on a tolerably even keel, but if she is dancing and exposing her vitals every moment, he may lodge a shot in fatal parts. That is what happened in the case of the *Ossliabya* and the *Kniaz Svaroff*. They received shot after shot below the armour on the port side. But, then, it may be thought, their water-tight compartments should have saved them in any event. These ships, however, are said to have fore-and-aft bulkheads, which means that if their water-tight compartments on one side of

the vessel be pierced, she loses her stability and rolls over. To put the matter simply, the *Ossliabya* and the *Svaroff* had their port valves filled completely with water, and they quietly turned turtle and went down.

## A CROWN OF LAURELS.

The *Sazanami* (destroyer), which distinguished herself so greatly in the operations at Port Arthur last year, has won a new crown of laurels. It was she that found the Russian destroyer *Byedovi* at Ulleung on the 28th instant in the evening. The *Byedovi* had on board Admiral Rojestvensky and his staff. She made a desperate resistance, but the *Sazanami* was too much for her and she finally became a Japanese prize. Commander Aiba Tsunezo, who commands the *Sazanami*, is to receive the Third Class of the Golden Kite.

## RUSSIA'S LOSSES.

The *Jiji Shimpō's* Shanghai correspondent has had a conversation with a Russian officer. The latter says that Russia must have lost some 12,000 men and a thousand officers with the Baltic Fleet. Most of the noble families in St. Petersburg and Moscow will be thrown into mourning. Japan now ranks as one of the greatest naval Powers of the world. She has made the Sea of Japan in fact what its name signifies.

## WHAT PEKING THOUGHT.

From the same paper we learn that the news of the battle has produced an immense impression in Peking. The waverers have now turned completely to Japan and even the Russophil politicians show signs of Russophobia. A similar effect has been produced in Seoul, according to the *Kokumin*. There was still a strong pro-Russian party there, and they eagerly awaited the issue of the Baltic Squadron's operations, which, they believed and hoped, would completely alter the complexion of the situation. But they now see that all hope for Russia is at an end.

## OFFICIAL REPORTS.

(Received at the Naval Head Quarters, 6 p.m. 1st June. From Admiral Togo.)

The *Iwate* and *Yakumo*, which on the 30th instant undertook the pursuit northward, and thereafter forthwith proceeded to search in a southerly direction, have now returned. They report having searched boat coasts of the Shanghai route from the vicinity of Tori-shima without seeing any sign of the enemy.

Admiral Shimamura, Commander of the Second Squadron, reports that during the fight on the 27th instant at 3.07 p.m. when he was on board the *Iwate*, the latter vessel opened a heavy fire on the enemy's cruiser *Zemchug* which was at a distance of some 3,000 metres, and it is certain that after about a minute she sank. As she was on fire at the time her smoke rolled over the sea and hid her, so that her sinking was not observed by the other ships. Hence the temporary doubt as to her fate.

## THE CAPTURE OF ROJESTVENSKY.

Saturday, June 3.

By degrees we learn many interesting incidents about the Battle of the Japan Sea. The *Sazanami's* exploit in capturing the *Byedovi* with Admiral Rojestvensky on board is one of these incidents. It appears that during the night of the 27th the three destroyers *Sazanami*, *Usugumo* and *Kasumi* set out in search of such units of the enemy as had scattered. They suddenly found themselves almost within colliding distance of several cruisers, and there was nothing for it but to pass between these ships, which

they did at full speed. The Russians fired furiously, but the very short range seems to have saved the destroyers, as the missiles of the quick-firers passed over their heads. What then became of the *Usugumo* and the *Kasumi* there is no indication, but the *Sazanami*, prosecuting her search, sighted the smoke of two vessels on the morning of the 28th at 10 o'clock. Steaming rapidly she approached them, and found that they were two Russian destroyers. The heavy odds against her do not appear to have deterred the *Sazanami*. She drew near rapidly opening a brisk fire. One of the destroyers immediately made off, and the other did not reply to the *Sazanami's* fire. The latter accordingly approached still closer, and then observed that the Russian was flying a white flag from his main-mast and a red-cross flag from his stern. Questioned by signal the enemy declared himself the destroyer *Byedovi* and explained that he had been injured in the machinery, was unable to move and had neither coal nor water. The *Sazanami* then despatched an armed party to board the destroyer. They found an officer evidently of the highest rank lying wounded in the cabin—this was Rojestvensky—and with him were his two chief staff officers and eight junior numbers of his staff. The *Sazanami* people agreed not to remove the Admiral. They took the *Byedovi* in tow. It was now the night of the 28th and during the darkness the tow-cable parted twice owing to the heavy seas, although the speed was low. The *Sazanami's* people had made up their minds to kill all the Russians if the destroyer fell in with a Russian ship, but happily that contingency was avoided. The first vessel encountered was the Japanese cruiser *Akashi*, which took the *Byedovi* in tow.

An officer of the *Nakhimoff* says that after leaving Saigon Rojestvensky suffered from nervous prostration, but he declines to make any further statement about the commander-in-chief. He explains, however, that the Russians had been misinformed. They believed originally that Admiral Togo had his base in the Formosan Channel and they were much surprised when their scouting vessels assured them that no sign of a Japanese vessel was to be discerned there. The expediency of passing out into the Pacific and steering for Vladivostok by the northern passages was then earnestly debated, but on the strength of other information, apparently trustworthy, it was resolved to head for Tsushima.

## THE 12-INCH SHELLS.

We shall never know how many 12-inch shells struck their mark in this great battle, but it does seem that the very ineffective record of these huge projectiles has at length been broken. It was a 12-inch shell that hit the conning tower of the *Ossliabya* early in the fight, killing Rear-Admiral Folkersham, and an account is now published showing that the auxiliary cruiser *Ural* met her death from a similar missile. The *Ural* has not been hitherto mentioned among the casualties. She was a steamer of 8,778 tons with a speed of 20 knots. Her commander, Captain Washilenko, is now in the sanitary station at Dairi. He says that the Russian squadron owed its terrible fate largely to the extraordinary efficiency and bravery of the Japanese torpedo-craft, which dashed about everywhere discharging their missiles. The *Ural* was struck astern by a twelve-inch shell and she immediately began to fill. Several other projectiles reached her and she finally went to the bottom. Out of her

crew of 500 the great majority perished. Some, however, were saved by a consort, and the captain with 30 men, embarking on a small boat, made their way to Susa Bay, where they were ultimately taken over by the Japanese authorities.

#### VESSELS THAT ESCAPED.

It was reported on Saturday that the *Izumrud* had reached Vladivostock. But we now know that she ran on a rock near her goal. Still this is a striking verification of the forecasts. The *Izumrud* has a speed of 22½ knots, the *Almas* a speed of 25 knots, and the *Orel* a speed of 20 knots and these were precisely the ships which were expected to get through the Japanese lines. It will be remembered that the *Izumrud* was reported by Admiral Togo as having escaped from the fight at the Liancourt Rocks on the 28th. Subsequently confident statements, non-official however, reached Tokyo, saying that she had gone ashore at Hamada in Iwami. They were erroneous statements.

The *Zemchug* was of the same class as the *Almas* and the *Izumrud*, all new boats of the *Novik* type. Admiral Togo doubtless regrets the escape of the *Almas* and the *Oleg*. They may prove nasty thorns in the flesh of Japanese commerce.

#### A TALE OF HEROIC ENDURANCE.

This battle may be said to have lasted 80 hours, during which time the Japanese seamen had practically no rest, and scarcely one square meal. The reliefs were called every second hour, instead of every six as is the usual custom. Great duration is a marked feature of modern battles on shore, but the probability of such a feature being introduced into sea-fighting had not been anticipated.

The commander of the *Orel* (battle-ship), now in hospital at Maizuru, speaks in very pitiful strains of the manner in which the Russian Squadrons were out-maneuvred and out-shot. The port side of the *Orel* was literally riddled. Her Captain, Yunuk (?), a man of the highest scientific reputation, was severely wounded at the outset, and died before the ship reached port. Out of her crew of 968, no less than 308 were killed, 630 being made prisoners.

#### FILTHY RUSSIAN SHIPS.

The Russian ships are said to have been in a filthy description. Their long voyage may be responsible for a good deal, but the rust on their guns and other evidences of neglect tell a significant tale. From the water-line downwards they were covered with sea-weed. Their gunnery was essentially defective. They fired innumerable shells; fired, in fact, as fast as they could discharge their guns. But the hits they scored were an infinitesimally small fraction of the number of missiles, and, moreover, were nearly all in the rigging and chimney-stacks of the Japanese vessels. Besides, their projectiles seldom burst, a fact which accounts largely for the paltry losses inflicted on the Japanese. The latter's gunnery, on the contrary, seems to have been conspicuously accurate. Their big shells struck again and again and never failed to explode.

It will always stand to Rojestvensky's great credit that he succeeded in bringing out such a mob of ships without a single casualty to a distance of many thousands of miles. Naval men say that only naval men can appreciate that exploit. Nor is it greatly to his discredit that his gunnery proved so immeasurably inferior to that of the Japanese. The Russians had probably never practised in high seas as the Japanese do repeatedly.

#### THE LOSS OF LIFE.

Sunday, June 4.

Another illustration of the terrible loss of life in the Battle of the Japan Sea is furnished by a man of the destroyer *Gromki's* crew. He says that the Russians were overcome by panic in view of the awful destruction that overtook them, and that they separated and fled, *saute qui peut*. The *Gromki* was overtaken by a cruiser and two destroyers. Her captain was shattered to pieces by a quick-firer shot, and out of 69 men, 21 were killed, 23 wounded and only 25 survived. Seeing that they must sink or surrender these brave fellows opened the Kingston valves, and sent their little craft to the bottom, those that remained without wounds leaping into the sea, whence they were drawn by the Japanese.

The nine Russian destroyers with Rojestvensky were the *Buini*, the *Bravi*, the *Blest-yashtchi*, the *Buistri*, the *Bodri*, the *Byedovi*, the *Beaupretchmi*, the *Grosni* and the *Gromki*. There is little doubt that six of these were sunk and one captured and that two escaped to Vladivostock.

#### THE JOINING OF THE SQUADRONS.

An officer of the *Nicholas I*, who is now in Nagasaki, has given some interesting information. He says that the Third Squadron left Jibouti on the 4th of April. Its difficulties were very great, many of the men being inexperienced and hardly able to discharge their duties. At Singapore the Squadron learned Rojestvensky's whereabouts, and on the 5th of May it joined him. Where the junction was effected this officer is careful not to indicate precisely. He merely says "off Annam." The new comers were greeted with a vehement demonstration, all the yards of the Second Squadron's ships being manned and the sky ringing with cheers. There the squadrons remained for several days, cleaning and repairing. Presently Rojestvensky summoned a council of all the commanding officers to discuss and determine the future course of the fleet. The first officer that spoke raised his voice in favour of entering the Pacific, steaming northward along the east coast of Japan and passing the Soya Strait for Vladivostock. The second endorsed this view. Had their advice been followed, a different result might now have to be recorded. But the third officer declared vehemently that they were following in Nelson's footsteps and must emulate his fame as well as his methods. They had travelled round one half of the globe to recover for Russia the command of the Far Eastern Seas. Should they think of creeping into port without encountering the enemy? He gave his vote emphatically for seizing a suitable place in Formosa, and making it a Russian naval base. This advice caught the fancy of the young naval officers. They cheered, clapped hands and stamped their feet. Rojestvensky then, after brief consultation with the members of his staff, announced that the fleet would enter the Pacific and then steaming northward would advance to the Straits of Tsushima. The officers accepted this decision without cavil. They embraced one another drank champagne, huzzahed for success and separated.

On the 18th of May they set sail and passed the Butan Straits on the 19th. (The dates are evidently wrong; probably a mistake of the reporter). As they drew near Tsushima they encountered the advanced squadron of Togo's ships and the rest is known.

#### THE SURRENDER OF THE BATTLESHIPS.

The surrender of the two battle-ships *Nicholas I* and *Orel* and the two coast-defence iron-clads *Admiral Apraxin* and *Admiral Seniavine* off the Liancourt Rocks on the 28th of May is a subject of much comment. These four vessels mounted six 12-inch guns, three 10-inch, eight 9-inch and thirty-eight 6-inch. With such a battery of artillery surrender after a few hours' combat seems inexplicable. But the explanation appears to be that the Russians had no ammunition left. They had come out of the action on the 27th with only a few rounds. It is indeed evident that the Russians laid their guns in the latter half of the big fight with misty eyes and panicky hands. They fired, as men will do in moments of great moral disturbance, almost without aim, and mainly with the idea of "letting her off." Never was such petty damage wrought with such a splendid park of artillery.

It is stated that there were a number of Russian ladies on the two captured Russian hospital ships. Among them is the niece of Admiral Rojestvensky. She has applied for permission to nurse her wounded uncle.

#### RUSSIANS DECLINE PAROLE.

None of the Russian officers seems willing to accept the Emperor's gracious permission to return home on parole. They were all assembled on the 3rd instant and asked to express their wishes. The second in command, Captain Fuevey(?) of the *Orel*, remained silent, and for a moment no one spoke. But presently a junior officer raised his voice. He said that they had all done their duty and fought stoutly for their country. They had nothing whatever to be ashamed of. But if they returned now to St. Petersburg before the facts of the battle were clearly known, they would inevitably be tried by court martial. It would be preferable to remain in Japan until peace was restored, when they could return home under better auspices. All the rest endorsed this view. The Japanese then recommended a day's reflection, and the meeting broke up.

#### "TOGO TODAY."

There is talk of celebrating the Trafalgar of the East by erecting a huge light-house on Oki Island. The idea is to make its light effective through a radius of 80 or 90 miles, and to provide it with apparatus for conveying warnings as well as for discharging the ordinary functions of a light-house. Had such an instrument being in existence last June, the *Hitachi Maru* and the *Sado Maru* would have been saved. The cost would be half a million yen, and it is believed that Admiral Togo and his men would prefer such a memento to any other. The light-house would be called the *Togo Today*.

#### RUSSIAN LOSSES.

Admiral Togo's tenth report gives a definite indication of the Russian losses in the Battle of the Japan Sea. The only four fighting vessels unaccounted for are two second-class cruisers, the *Oleg* and the *Aurora*, and two third-class cruisers, the *Izumrud* and the *Almas*, and we now know the fate of the *Izumrud*. There are reasons to think that the *Aurora* has gone down, but she may be struggling towards Vladivostock. Omitting these four ships the figures stand thus:—

Battle-ships .....	8 (6 sunk and 2 captured).
Coast-defence Iron-clads .....	3 (1 sunk and 2 captured).
Armoured Cruisers .....	3 (all sunk).
Protected Cruisers .....	3 (2 sunk and 1 lost).
Torpedo Destroyers .....	7 (6 sunk and 1 captured).
Auxiliary Cruisers & special service ships .....	3 (all sunk).

Total ..... 27 (21 sunk 5 captured and 1 lost).

The special-service steamers of the enemy sunk in the battle on the 27th ultimo were the auxiliary cruiser *Ural*, the transport *Kamchatka* and one more (supposed to be the *Russ*.—Ed. J.M.) This last was one of two vessels which accompanied the enemy's fleet in the capacity of colliers. The prisoners say that one of them was sunk.

Among the war-ships and other vessels present on the Russian side in the fight, those whose fate is unknown up to to-day are the second-class cruisers *Oleg* and *Aurora*, the third-class cruisers *Izumrud* and *Almas*, 3 special-service steamers (probably those now in Shanghai.—Ed. J.M.), 2 torpedo-destroyers and one tug (probably the *Svovia*.—Ed. J.M.). The rest were all sunk or captured.

Among the above remaining ships the *Oleg* and the *Aurora* were under fire from our Second and Third Fighting Sections during the battle on the 27th, and were seen to burst into flames several times. Therefore, even if they have escaped, many days must pass, I believe, before their fighting power is restored.

[The section (*sentai*) is the fighting unit of the squadron (*kantai*).—Ed. J.M.]

#### REPORTING TO THE CZAR.

(RECEIVED AT THE FOREIGN OFFICE.)

Reuter telegraphs:—Captain Baron Ferzen, commanding the "Izumrud" has sent the following message to the Tsar under date of June 1st:—"On the 27th of May the Baltic Fleet advanced to Tsushima Straits and there encountered the enemy. Firing commenced at 1.20 p.m. and the enemy concentrated on the flag-ship "Suvaroff" and the "Ossliabya." Before evening the "Ossliabya," the "Alexander III" and the "Borodino" were sunk. The "Kamchatka" and the "Ural" were severely injured and it is not known what became of them. The command of the Squadron now devolved on Admiral Nebogatoff. At night-fall the "Nicholai I.," the "Orel," the "Apraxine," the "Seniavine," the "Oushakoff," the "Sissoi Veliky," the "Navarin," the "Nakhimoff" and the "Izumrud," in that order, steamed north-east. It was the duty of my ship, the "Izumrud," to maintain communications between the vessels. Two vessels (evidently the "Nakhimoff" and the "Navarin" Ed. J.M.) were cut off from the Squadron and were seen no more. The Squadron advanced at a speed of 14 knots. It was repeatedly attacked by the enemy's torpedo-boats, the ships at the extremities suffering most severely. On the following morning at dawn our Squadron was found to consist of the "Nicholai," the "Orel," the "Apraxin" and the "Seniavine," besides the "Izumrud." (Evidently the "Sissoi Veliky" and the "Oushakoff" had been torpedoed. We know that they were subsequently sunk. Ed. J.M.) As the sun rose on the 18th we saw on the horizon the smoke of the enemy's ships. My ship reported this to Admiral Nebogatoff, and he issued orders to increase the speed. The "Apraxin" and the "Seniavine," being comparatively slow boats, now dropped astern. At 10 a.m. a squadron of the enemy appeared on our port-bow, and steamed round to our star-board. At the same time a cruiser squadron of the enemy, coming up from the rear, placed itself on our port side. Our ship having now been separated from the squadron and not being able to recover touch with it, I decided to steer for Vladivostok. Pursued by the enemy we steamed at full speed. Being short of coal and desiring to avoid an encounter with the enemy, I changed my course for Vladimir Bay,

which place I reached on the night of the 29th. It was pitch-dark and nothing could be distinguished. At 1.30 a.m. on the 30th my ship ran on a rock at the entrance to the Bay. We had now only 10 tons of coal left and I saw that there was no hope of floating the ship off. Therefore I landed all my men, and in order to prevent the cruiser falling into the enemy's hands, I blew her up. During the battle 10 of my crew were wounded. The rest are all safe.

#### THE STORY OF A SURVIVOR.

Monday, June 5.

There is now at Moji among the Russian prisoners a man named Kairansky, who was serving on board the auxiliary cruiser *Ural* when she went to the bottom. Though only a common marine this Kairansky is a man of high education. His older brother is chief editor of the *Russ* and his father was a Nihilist leader. He himself received part of his education at the Officers' College, but his disaffected connexions led finally to his falling to the rank of a blue-jacket. Interviewed by a representative of the *Hochi Shimbun*, he showed some voluminous manuscript which he is preparing to send to the *Russ*, discussing frankly the defects and deficiencies of the Russian Navy. He says that the Third Squadron joined the Second when the latter was lying in Kamranh Bay. This accords with the statement made by an officer of the *Nicholai I.* and quoted in our last, to the effect that the junction took place on May 5th when Rojstvensky's ships are known to have been lying in Kamranh. Kairanski says that the admiral's orders, subsequently issued, were for the fleet, now a great assemblage of ships, to pass the Bashii Straits, steam up the east coast of Formosa, and then steering north-west, proceed direct to Tsushima. The ships reached the sea near the mouth of the Yangtze on the 24th. On that day Rojstvensky ordered 2 of the auxiliary cruisers and 15 transports to leave the Squadron and go to the Saddle and Woosung. The other vessels were to steer for Tsushima with the intention of breaking through to Vladivostok. After passing the Bashii Strait the fleet observed the smoke of Japanese war-ships upon the horizon and Rojstvensky knew that he would meet with desperate resistance at Tsushima, but he argued that if he stood out into the Pacific and happened to encounter the Japanese there, there would be no neighbouring neutral territory where his wounded ships could take refuge. On the 25th, they sighted a Japanese vessel resembling the *Tokawa*, but that day and the 26th passed without other incident. On the 27th at dawn as they were drawing up to Quelpart, they began to sight Japanese war-ships. The Russians were then in three columns, one consisting of third-class cruisers headed by the *Zemchug*; one of second class cruisers, and one of battle-ships, the *Izumrud* acting as a scouting ship on the flank. It is now evident that the Japanese were drawing the Russians on. As Rojstvensky's ships were about to emerge from the East Channel, they saw three Japanese cruisers on their port bow. The battle then commenced. The Russians soon began to suffer heavy loss. They made desperate efforts to break through but the Japanese were always too quick for them and thus they were gradually forced eastward. The big shells of the Japanese came aboard the Russian ships with extraordinary accuracy, working terrible havoc. The *Ural*, being a slow ship, was left behind in the neighbourhood of Oki Island, and the enemy's shells poured upon her, one 12-inch

killing a number of men and doing such injury that nothing was left except to escape from the ship. A fierce struggle occurred at first for the boats, but orders were issued that no sailor must leave the ship until the officers had embarked, and thus Kairansky remained among the last. Some of the fugitives were saved by a Russian tug-boat and a transport, but 33, among whom was Kairansky, rowed all night in the direction of Korea, as they supposed. On the morning of the 28th, however, they made the land at Susa-mura in Yamaguchi.

#### A NIGHT OF TERROR.

It has been remarked that the one discreditable incident of the battle was the Russian surrender at the Liancourt Rocks. The idea of surrendering battle-ships is considered by some critics to be intolerable and almost incredible. To these people it may be some consolation to know that an attempt was actually made to blow up the battle-ship *Orel* while she was en route for Sascho in Japanese hands. Captain Togo of the *Asahi* had been placed in charge of the prize crew. Curiously enough, he found an old friend in the captain (Yunik or Yunuk) of the surrendered vessel. The two men had been comrades in St. Petersburg and the meeting between them in the cabin of Captain Yunik, who lay dying from his wounds, is said to have been very affecting. That night ten of the *Orel's* crew attempted to blow up the port magazine at the stern of the vessel. Their design was discovered just at the critical moment, and 8 of them were fusilladed on the spot. All honour to the memory of these gallant fellows. It is one of the cruellest incidents of war that such noble men should have to be sent to their death. It may well be supposed that after this event the comparatively small prize crew deemed themselves to be in a very parlous plight. They crowded on all steam, but they had failed to arrange any system for signalling their consorts, and throughout the night they were alone with the big ship and her desperate crew. In the morning the escort vessels, the *Mikasa*, the *Asahi* and three destroyers, finding that they had become separated from the *Orel*, ranged the sea in search of her and finally picked her up at 9 a.m. Her course was then changed to Maizuru. One can understand how, under such circumstances, Admiral Togo saw reason to report subsequently that the crews had been removed from the captured vessels and that these had finally passed into Japanese possession. Another terrible incident of the voyage was that some 13 or 14 of the Russian wounded suffered such agonies that they shrieked to be killed and put out of their pain. Their comrades thereupon lifted them and threw them overboard, the Japanese being too late to prevent this shocking occurrence. Captain Yunik, as he lay dying, repeatedly apologised for the disorderly conduct of his men, but in truth it is hard to think that there was much to apologise for. This gallant officer expired on the morning of the 30th as the ship was drawing near to Maizuru. He was buried at sea with all the ceremony possible under the circumstances.

#### THE "NISSHIN" AND "KASUGA."

A report published by a local English journal—we do not know which, and the *Fiji Shimp*, from which we quote, does not particularize—that the *Nisshin* and the *Kasuga* were severely injured in the recent fight, is emphatically denied. The ships may have suffered somewhat, but they are at sea and able to perform their duties without any inconvenience.

The *Kasuga's* officer says that the Rus-

sians opened fire, a few minutes after 2 o'clock in the afternoon, at a range of 8,000 metres, and that no reply was made until the distance had decreased to 5,800 metres. The Russians were moving at a speed of 12 knots; the Japanese at a speed of 14 or 15. The *Nisshin* was leading and she with the *Kasuga* worked together, steering for the enemy's port bow. Thus the Japanese, in single column line ahead, steered diagonally toward the Russian line, the directions of the two fleets forming an angle of about 45°. The enemy's fire was at first tolerably well directed, but it soon became wild. We learn from this account that the Japanese main fighting strength was manœuvring in two divisions, one consisting of six first-class armoured cruisers, the *Isumo*, the *Yakumo*, the *Iwate*, the *Asama*, the *Tokawa* and the *Azuma*; the other of the four battleships and two remaining armoured cruisers, namely, the *Mikasa* (flag ship), the *Shikishima*, the *Fuji* and the *Asahi*, with the *Kasuga* and the *Nisshin*, both squadrons in the order here stated. The slow speed of the Russians placed them at a great disadvantage, for the Japanese were thus enabled to choose their own mode of attack, and to keep always ahead of the enemy. Thirty-three minutes of cannonading sufficed to break the Russians' formation, and the Japanese then dividing into sections, according to previous arrangement, each section attacked independently. The *Kasuga* steamed to within 1,900 metres of a Russian battleship and opened a rapid fire. The enemy replied with random shells. It was now a general fight, and as the sea was running very high the spectacle was appalling. Very soon one of the Russian ships was sunk (the expression used, *kôchin*, seems to indicate a torpedo) and others were seen to be on fire. Such a sea was running that the waves broke in through the port-holes and drenched the gunners. The fog was rolling in great wisps and observations were almost impossible, but these conditions seemed to inspire the men with renewed vigour. At this stage another Japanese squadron came up on the enemy's rear, and his plight rapidly grew desperate. At 7 p.m. the warships received the signal "cease firing" and the field was left free for the torpedo craft.

#### THE "OREL."

It is stated that the *Orel* had a crew of 870, of whom 2 officers and 16 men were killed, the rest being saved. She was hit by forty 8-inch shells above the water-line and by sixty smaller projectiles. Her decks and masts were reduced to a state of complete wreckage.

The number of prisoners appears to be 4,200, but we may hope others will be added, for this would indicate a terrible loss of life.

#### DEATH OF A BRAVE CAPTAIN.

The Captain of the *Dimitri Donskoi* died on the night of the 2nd. His body was sent to Nagasaki where it has been interred with all honours. There have already been three burials of Russian dead and the nature of the ceremonies organized by the Japanese is said to have evoked great gratitude among the comrades of the dead. The *Dimitri Donskoi* fought a splendid fight, and died a glorious death. Her gunners may not have been highly skilled but her officers and crew were certainly gallant fellows.

#### THE REMAINING SHIPS.

The confirmation furnished by Reuter's telegrams which we publish this morning must be held to remove all doubt as to the *Aurora*, the *Oleg* and the *Zemchug* having reached

Manila. Admiral Togo, it will be remembered was in some doubt as to the sinking of the *Zemchug* but evidence subsequently obtained from his captains showed that she disappeared in the smoke of her own conflagration, and it appeared certain that she had gone down. She managed to escape, however.

The arrival of the three cruisers at Manila completes the tale of Russia's disaster. The *Aurora* was supposed to have escaped and might turn up at Vladivostok any moment, and the *Oleg* was said to be there already. These two cruisers of 6,630 tons and 6,500 tons, respectively, would have been a valuable residuum. But with the *Zemchug* they have been obliged to put into Manila in a damaged condition, and there, we presume, they will be disarmed. Thus their services are lost to Russia during the present war, and there remain to her out of the whole Baltic Fleet only one cruiser, the *Almaz* (3,000 tons) and two destroyers. Even one out of the three cruisers, if safe in Vladivostok, would have been more serviceable to Russia than the whole three interned at Manila. However, by means of the refuge afforded in neutral ports, she is amassing the nucleus of a new fleet. Five cruisers and one battle-ship are now on deposit to her account.

#### ADMIRAL NEBOGATOFF.

Admiral Nebogatoff does not wish to return to Russia at present. His choice is not surprising.

Tuesday, June 6.

In the *Hochi Shimbun* there is an interesting document said to have been written by a member of Admiral Nebogatoff's staff. From it we gather that the Third Squadron manœuvred in company during the battle, as indeed might have been conjectured from the fact that three of its most important units were found in a group on the following day. It appears that this small squadron had made so many turns and twists during the action as to have quite lost its bearings by the morning of the 28th. Admiral Nebogatoff had then appreciated the hopelessness of continuing to struggle for victory and had made up his mind to run for Vladivostok, but the first necessity was to ascertain his position. With that object he resolved to steer in the direction of Korea until some island or point could be identified. Pursuing that purpose and with the fast cruiser *Izumrud* acting as scout, he was presently signalled by the latter that she had sighted land, and it was recognized to be the island of Ulleung. The Admiral was much pleased and the spirits of the men rose once more. They shaped a course for Vladivostok and steamed off at the best speed they could command. But suddenly they saw in the distance the smoke of a strong squadron, and when it came closer the flag of the Japanese commander-in-chief could be distinguished as well as the flag of Rear-Admiral Dewa. Nebogatoff knew then that he was in the presence of a greatly superior force and that the game was up. He determined to surrender, but the *Izumrud*, whose 24 knots' speed gave her a great advantage, showed her heels to the Japanese most effectually. So soon as the signal of surrender was given—which was done by hauling up the Japanese ensign above the Russian—, Admiral Togo signalled his acceptance of it, and invited Nebogatoff to visit the *Mikasa*. Arriving there, the Russian Admiral was conducted in to Togo's cabin and treated with the utmost courtesy. He expressed profound admiration for the manner in which the Japanese ships had been handled and for

the excellence of their gunnery, and he asked Togo how it had been divined that Rojestvensky would choose the Tsushima passage. Togo replied that there had been various rumours circulated about Tsugaru and Soya, but in addition to the fact that these rumours were calculated to provoke suspicion, he argued that at this time of year, when dense fogs are common phenomena, the task of carrying a large squadron through passages like Tsugaru or Soya was one from which any commanding officer might shrink. The Russian Admiral then alluded to the deadly nature of the Japanese fire. He cited the case of the *Nicholai First*, whose armour had proved quite inadequate to resist the Japanese 12-inch shells. They had pierced her protection with ease, and had burst with such violence as to cause great damage. He had never witnessed such an effect produced by gun-fire. Admiral Togo, however, showed no inclination to discuss that matter.

#### VARIOUS NOTES.

It would appear from this account that no great resistance, if any, was made by Nebogatoff's squadron. The Japanese opened fire so soon as ever they came within range, but the Russians evidently adopted their resolve to surrender at an early period. This is the really interesting point, and it still awaits elucidation. The Russians have always shown themselves men of the greatest gallantry. They have given a hundred proofs of that quality during the present war. There must have been good reason for this surrender. Roughly judging folks will be disposed to say that the *Admiral Oushakoff* and the *Dimitri Donskoi* acted a much finer part when they preferred sinking to surrendering, but these are questions not to be decided by critics sitting in arm-chairs.

It appears that when Rojestvensky's Squadron passed out of sight after leaving Honkohe Bay, there was no little uneasiness among Japanese naval men. Many thought that the Russian Admiral had steamed out into the Pacific or that he would be next heard of at Tsugaru or Soya. But Togo never wavered. He held firm to his belief that the Russians would choose the Tsushima avenue, and he made all his dispositions accordingly.

It is reported by telegraph that Rear-Admiral Uriyu's Squadron has arrived at Gutzlaff Island, doubtless for the purpose of watching the Russian ships in the Yangtze and its neighbourhood.

There is a statement that the crew of the *Oldhamia*, 29 in all, have been landed from a Russian cruiser at Swatow.

The *Fiji Shimpo* has a telegram from Shanghai to the effect that much dilatoriness is shown in making the necessary arrangements for internment the Russian ships in the Yangtze.

The destroyer *Bodvi*, which reached Woosung on the 4th, had no coal on board and was obliged to be towed up the river by a steamer of Messrs Butterfield and Swire. She carried a crew of 73, together with 77 fugitives from other vessels. Among them were 15 wounded men.

It will be remembered that Admiral Togo's reports spoke certainly of only 3 destroyers sunk and one captured. Subsequently the statements of Russian prisoners led him to infer that six had been sunk, but he explicitly based that estimate on the evidence of the prisoners. So far as we now know, the tale is one in excess of the truth. Two destroyers, the *Grosni* and the *Bravi*, have escaped to Vladivostok, and

one, the *Bodvi*, has entered the Yangtze. Hence the sum is apparently 5 destroyers sunk and 1 captured out of a total of 9.

The case of the *Zemchug* is perplexing. Admiral Shimamura, the last man to make a mistake, reported that she sunk within sight of the *Iwate*, his flag-ship, whereas she now turns up at Manila. Evidently some other ship must have been mistaken for her.

Reuter, according to the *Asahi*, wires that the three cruisers which have reached Manila are not injured below the water-line. Their top-hamper has suffered much, and several of their gun-platforms are smashed. The Captain of the *Aurora* was killed in the action, but Admiral Eukvist is not wounded. The people on board these cruisers say that the Japanese used a number of submarines, but there is nothing to suggest that such was the case.

The *Mikasa*, Togo's flag-ship, was heavily fired on by the Russians. She received many shells and had 63 casualties. One splinter struck the conning tower, wounded Commander Matsumura and knocked down Admiral Togo. Several officers ran up to succor him, but before they reached him he rose unaided and continued to discharge his duties as though nothing had occurred.

The battle-ship *Orel* is now lying in Mairuru harbour, and it is understood that she can be inspected by any one who obtains a permit from the Naval Department in Tokyo.

A torpedo has been seen floating near Goto in Hizen. It is supposed to have been discharged by the *Dimitri Donskoi*.

#### THE SHIPS AT MANILA.

Wednesday, June 7.

A telegram to the *Asahi Shimbun* from Manila reports that the *Oleg* will take two months to repair; the *Aurora* one month and the *Zemchug* 7 days. It is curious that the *Zemchug* should have been the least injured whereas she was the only vessel of the three which the Japanese believed they had sunk. Evidently there must have been a mistake of identity.

The officers of the three cruisers report that they left the scene of the fighting on the 27th and that they consequently know nothing of what happened during the night of that day or during the 28th.

#### COMMERCE DESTROYERS.

The *Dnieper* has been sighted off Chetung point near Swatow, and the Japanese line of steamers between Swatow and Amoy has consequently been suspended. The *Rion* and the *Dnieper* seem to be engaged in the business of commerce destroying. They are two fine vessels. The *Rion* (ex-*Smolensk*) is of 10,500 tons with a speed of 20 knots, and the *Dnieper* (ex-*Petersburg*) is of the same size with a speed of 19 knots. Of course they can not long continue their depredations. Want of coal will compel them to put in somewhere. They can not take prizes. They can only do as the *Rion* did in the case of the British ship *Cilurnum*, namely, jettison her cargo and perhaps sink the ship. Either operation is likely to cause trouble if performed according to the methods of the *Rion*, for she obliged the British vessel to throw over-board a quantity of cotton and cotton is not recognised as contraband by the British Government. The crew of the *Cilurnum* say that the *Rion* had 11 complement of 500—how they ascertained such a point is a question—and that she mounts 25 guns. Her armament is nominally fifteen 4.7 inch guns and 12-pounders, so we suspect the number twenty-five to be an exaggeration.

Another of the Russian auxiliary cruisers

was sighted on the 4th in the act of overhauling steamers near Hongkong. She subsequently steamed south at full speed. These ships will soon be the sensation of the hour if they continue their present doings. It is possible that they may have some arrangements for coaling at sea, and if so they might range the ocean for weeks in the role of commerce-destroyers, preying upon neutral trade.

Admiral Uryu's Squadron looked in at Woosung on the 5th and has doubtless put to sea again within the 24 hours' limit. The Admiral's flag-ship is the *Naniwa*, a vessel of only 17 knots, to which ships like the *Rion* and the *Dnieper* could easily show their heels.

#### ADMIRAL ROJESTVENSKY PROGRESSING.

Admiral Rojestvensky is making good progress but his two wounds present features which show that it will be two months before recovery is complete. The medical authorities did not immediately accede to his niece's request for permission to nurse him, inasmuch as they doubted whether the presence of a relative at his bed-side might not impede rather than promote his cure, and on consulting the Admiral their caution was justified for he said that he preferred to remain solely in the hands of the professional nurses. It need scarcely be said that the utmost care is being taken of him.

#### THE REMAINING SHIPS.

The captured war-ships have been re-named as follows:—

<i>Orel</i> .....	<i>Iwami</i> .
<i>Nicholai I.</i> .....	<i>Iki</i> .
<i>Apraxin</i> .....	<i>Ohi-no-shima</i> .
<i>Seniavine</i> .....	<i>Akshima</i> .

We judge from this that the Japanese have determined not to perpetuate their triumphs by preserving the original names of captured vessels. Any one looking at the British navy list must at once recognise the provenance of ships like the *Barfleur*, the *Sans Pareil*, the *Immortale*, the *Imperieuse* and so forth. In the war with China this country seemed disposed to adopt the British system, for the captured Chinese ships continued to be designated by the old ideographs though, of course, the pronunciation differed slightly. Thus the *Chin-yuan* became the *Chinyen*, the *Tsiyuan* became the *Saiyen* and so forth. In the case of the *Angara* and the *Kasan*, recently recovered from the sea at Port Arthur, the new titles adopted were *Ane-gawa* and *Kasado*, sufficiently like to recall the origin of the ships. But that not very gracious disposition appears to have been completely put aside with regard to the four vessels taken at the Liancourt Rocks. They are re-named after places in the vicinity of their capture, but the original appellations are wholly abandoned. That is assuredly the wisest policy. It is neither tactful nor judicious to perpetuate the memory of war by means of naval nomenclature.

#### THE SHIPS AT SHANGHAI.

Thursday, June 8.

The destroyer *Bodvi* has anchored near the *Askold* in the river at Shanghai and was being disarmed there, or is about to be disarmed.

The *Hochi* has a telegram from Shanghai saying that Admiral Uryu, whose Squadron's arrival in the Yangtze was yesterday reported, is in the *Tokiwa*, not the *Naniwa* as previously announced. The *Tokiwa* is a first-class armoured cruiser. Uryu's ships are said to have come direct from the fight, and to be in spick-and-span condition, except that the *Tokiwa* has a big hole about 4

feet above the water-line on her starboard bow.

The Japanese destroyer *Shinonome* has entered the river at Shanghai, doubtless for the purpose of observing the operations connected with the disarming of the *Bodvi*. She was not touched during the action. The *Sasanami* also arrived at Shanghai on the afternoon of the 6th. The Japanese officers are said to have visited the Club that evening and to have explained the conditions of the battle.

A steamer which reached Hongkong from Manila on the 5th reports that she sighted, at a place south-west of the former port, a Squadron consisting of one Russian auxiliary cruiser, one destroyer, one transport and one other vessel. From Swatow also comes a rumour that several Russian ships have been sighted and some of them are described as armoured cruisers. The fact is, so far as can be discerned, that many units of the mob of vessels—volunteer fleet, special-service steamers and transports—sent by Rojestvensky to Shanghai on the 25th of April are now wandering about the China Sea. Thus the steamer *Promise*, which left Hongkong on the 3rd, was stopped by a Russian between that port and Formosa. The *Dnieper*, too, is heard of again near Swatow. It is interesting to speculate on the fate of these various vessels. They are now roving the seas in what the Japanese would call a very "high-collar" manner, but the length of their tether may be measured by the number of bags of coal they carry.

There is some perplexity as to the exact number of Russian vessels in Shanghai. A steamer of the Nippon Yusen Kaisha which lay in the river from the 26th of May until the 4th of June, being ordered to remain until the sea was free from Russians, reached Nagasaki on the evening of the 7th. She reports that there are altogether eleven Russian ships now in the river. This account is explicable if we assume that it includes the *Askold*, the *Gromovoi*, and the *Manjur*, but apparently the reference is to recently arrived ships only. On the 27th of May the Japanese official reports spoke of the *Yaroslav*, the *Vladimir* and the *Voronej*, 3 volunteer-fleet vessels, as having reached Woosung, and said that with them were the *Coronia*, the *Michael* and the *Livonia*. Subsequently these six were supplemented by the *Korea* and the *Swir* and ultimately by the destroyer *Bodvi*. Therefore if we add the three war-ships already interned we have a total of 12 not 11.

The *Bodvi* is said to have been literally crowded with Russian marines. They were almost elbowing one another off the deck. Evidently the destroyer had picked up a number of men from the sunken ships, and thus there is reason to hope that another deduction may be made from the terrible list of casualties. Three of the transports are reported to be laden with provisions, which fact bears out our original theory that Rojestvensky, counting on victory, or at any rate on such a measure of success as would for a time open the Sea of Japan to vessels bound for Vladivostok, sent these steamers temporarily to Shanghai with orders that they should proceed north after the action.

#### THE SINKING OF THE "SISSOI VELIKY."

The captain of the *Sissoi Veliky* says that the programme of passing the Tsushima Straits was adopted by Rojestvensky on the strength of his own judgment and without consulting his officers. He believed that he could easily break through any resistance

offered by the Japanese. Before entering the East Channel they sighted the *Izumi*, and afterwards the *Hashidate* and *Itsukushima*, all on their starboard bow. These vessels quickly disappeared in the mist, and were regarded as scouts. At a much later period there hove in sight, at a short interval, two squadrons under Togo himself, consisting of 4 battle-ships with the *Kasuga* and the *Nisshin*, and the Second Squadron under Admiral Kamimura, consisting of 6 armoured cruisers. The *Sissoi Veliky* had her rudder shot away and became unmanageable. During the night she was struck by a torpedo, and in the morning of the 28th at 9 o'clock she sunk at a point some 30 miles east of Tsushima. But although the torpedo may have hastened her fate it was not the true cause of it. Gun-fire had already doomed her, and she was down by the head and practically in a sinking condition before the Whitehead struck her. She had a complement of 32 officers and 630 men, and of that total 2 officers and 27 men had been killed before she sank. The rest jumped into the sea, and were rescued almost immediately by the *Shinano Maru*, the *Taijin Maru* and the *Yamato Maru*, three Japanese auxiliary cruisers.

The Japanese, we may remark *en passant*, seem to have done splendidly in saving lives. Some 4,000 officers and men must have been picked up by them—apart, of course, from the crews of the ships which surrendered.

The Captain of the *Sissoi Veliky* speaks in very high terms of the treatment extended to the Russians by the Japanese. In his opinion as a private individual, his admiration for the gunnery of the Japanese is unbounded, but he does not think highly of their skill in using torpedoes. A great number of these missiles were launched at the *Sissoi Veliky*, but only one struck her.

#### TORPEDO WORK.

The torpedo is evidently an immensely difficult projectile to shoot straight. And when one reflects calmly and remembers that 16 squadrons of torpedo-boats were at work during the night of the 27th, one's disposition is to wonder how even one of the Russians escaped. The first impression was that the torpedoers had wiped out their previous bad record, but on the whole it may be doubted whether their inaccuracy was not compensated by numbers. There is evidently much room for improvement in the mechanism of the torpedo. It seems to be as hard for a gunner to make one of them travel straight through the water as it is for a mathematician to calculate the path of the projectile through the resisting medium.

#### THE "NAKHIMOFF."

The Captain of the *Nakhimoff* says that not the least ground existed for the rumour of the *Kniaz Suvaroff* having run on a rock, nor yet for the rumour that Rojestvensky was sick. Admiral Fokersham, however, suffered from a severe illness. He fell into the sea during the action and was drowned. (It will be remembered that Fokersham has hitherto been said to have met his death from a shell which, early in the action, struck the conning-tower of the *Borodino*.) The Russians, according to this officer, believed that the main force of the Japanese was in the Formosa Channel, and not until the morning of the 27th did they recognise their mistake when they sighted the *Izumi*, the *Chitose*, the *Itsukushima* and the *Kasagi* in the Korean Strait. The Russians, who had hitherto been in double column, now

formed single column line ahead, and temporarily drove back the Japanese ships. But soon afterwards the other Japanese Squadrons appeared, and a terrible artillery duel commenced. The *Nakhimoff*, already heavily hurt by gun-fire, was surrounded during the night by 9 torpedo-boats, and a torpedo, shattering her bows, gave her the *coup de grace*. Her complement of 28 officers and 600 men were mostly picked up by a Japanese cruiser. This officer makes a strange statement by way of conclusion. He alleges that the Russians, when they arrived in the neighbourhood of Kamranh Bay, found two French cruisers which invited them to enter. He also speaks of the Squadron having been deficient in officers, and says that among their complements were many cadets just out of the Naval College.

#### TECHNICAL ASPECTS.

The *iji Slumpo* has an interesting article on the technical aspects of the great battle. It notes the gradual progress in armour plates, from Harvey steel to Harvey-nickel and then finally to Krupp. The finest of the Russian battle-ships had either Harvey-nickel or Krupp plates and were supposed to be unsinkable by any guns afloat, yet they have been sent to the bottom. The question now is, were the scientific men wrong in their calculations as to the resisting force of this armour and the piercing power of that ordnance, or was the armour on the Russian vessels of an inferior and defective quality. The question is of the utmost importance to naval architects, and happily the *Orel* having fallen into Japanese hands, it will be possible to determine by actual tests whether her plates are of the nature claimed for them by her builders. We do not, for our own part, altogether follow this reasoning, for the *Orel* has survived, and to make conclusive experiments it would be necessary to raise one of the sunken ships. It is true that the *Borodino*, the *Alexander III*, the *Kniaz Suvaroff* and the *Orel* were all similarly protected, a nine-inch belt of Krupp steel amidships with an anti-torpedo protection of four inches of Harvey-nickel steel. But who will venture to affirm that the three vessels which went to the bottom were as honestly constructed as the fourth vessel which survived?

#### WASTE OF AMMUNITION.

Captain Togo of the *Asama*, who is wounded and now in hospital, gives an account of the fight, which, though interesting, adds little to our previous knowledge. We learn from it that the Russians had fired away a quantity of ammunition at excessive ranges before the Japanese opened fire, which they avoided doing until they had closed up to some 6000 metres. It would seem from this that Rojestvensky placed special reliance on his heavy guns, 12-inch, 10-inch and 9-inch, in which class of ordnance he greatly excelled the Japanese. All through the shooting of the Russians was markedly defective, but the intrepidity with which they served their guns in the face of all difficulties and danger can not be overpraised. The Japanese had greatly the advantage in point of speed. They closed up and sheered off at will, and thus during the 27th the battle may be said to have consisted of a series of assaults, each lasting for about 30 minutes, with corresponding intervals. By night-fall the Russians had been thrown into complete disorder and were nothing better than a mob of ships. Then came the turn of the torpedo-boats, and in the meanwhile Admiral Togo, anticipating that some groups of the

enemy would endeavour to break through for Vladivostock, drew off his ships northward and formed a cordon which had for result the capture of the Nebogatoff squadron on the 28th. From this account we learn that Nebogatoff's vessels offered some resistance before surrendering, and that they hauled down their flags when they saw how utterly hopeless was their plight.

#### THE RUSSIAN PRISONERS.

There are 254 officers among the six thousand odd Russian prisoners taken in the battle of the Japan Sea. All their names are given in the columns of the *Official Gazette* of the 8th instant. Their ranks and the number in each rank are as follows:—

Vice-Admiral .....	1 (Rojestvensky).
Rear-Admiral .....	1 (Nebogatoff).
Captains .....	12
Commanders .....	22
First Lieutenants .....	67
Second Lieutenants .....	27
Third Lieutenants .....	100
Midshipman .....	1
Engineers .....	16
Paymaster .....	1
Officials .....	6

#### RUSSIAN TREATMENT OF THE RED CROSS.

Two Japanese physicians have just returned to their country after several months' imprisonment in Russia. One of them is Dr. Miyazawa who was taken from the *Sado Maru* on the 15th of June last year. Landed at first in Vladivostock he was thence conducted to Tonisk where he passed one month, and subsequently was taken to a place in the interior of Russia. He says that the sums allowed by the Russian authorities for the maintenance of captive officers—from 60 to 75 roubles monthly—are apparently enough, but that the money barely suffices to pay for the commonest fare, and does not even defray washing expenses. If this is the case with officers, the plight of the private is immeasurably worse, for he has only 16 kopecks *per diem* and nothing will induce the authorities to give him any more. The officers were obliged to subscribe 5 roubles each of their own already inadequate stipend. But this is nothing compared with the outrage of holding a Red Cross physician prisoner for nearly 12 months. Such procedure is flagrantly opposed to the Hague rules. Dr. Miyazawa's comrade was a physician attached to General Kuroki's army. How we fell into Russian hands we do not know, but he was kept in close custody from November until April. The two men attribute their release to American intervention. They are naturally much incensed at such a violation of the recognised principles of war.

#### THE "YASHIMA."

The story of the battleship *Yashima* is now published. She struck a Russian mine within a minute of the similar catastrophe to the *Hatsuse*. Immediately her commander ordered full speed ahead, and steered for the Japanese base, the whole crew working with deadly energy to conquer the inrush of water. But she was not to be saved. After steaming 60 miles the engines were flooded and the ship sunk in 25 fathoms. Her people were all rescued by the *Kasagi* and the *Tatsuta*. The *Shikishima* (battle-ship) was coming to her assistance immediately after she struck the mine, but her commander signalled to the big vessel to stand off and avoid the fatal field. Probably this saved the *Shikishima*.

## \* RUSSIA'S NAVAL LOSSES IN THE WAR.

It is very interesting to calculate what Russia's losses have been at sea during the present war. The following tables will make the matter clear:—

TABLE I.—BATTLE-SHIPS SUNK.

Name.	Tonnage.	Place where sunk.
Peresviet.....	12,674.....	Port Arthur.
Pobieda.....	12,674.....	do
Petropavlovsk.....	10,960.....	do
Poltava.....	10,960.....	do
Sevastopol.....	10,960.....	do
Retvizan.....	12,902.....	do
Kniaz Suvaroff.....	13,516.....	Sea of Japan.
Alexander III.....	13,516.....	do
Borodino.....	13,516.....	do
Ossliabha.....	12,674.....	do
Sissoi Veliky.....	10,400.....	do
Navarin.....	10,206.....	do

Totals 12 ships .....144,958 tons.

TABLE II.—CRUISERS SUNK.

Name	Tonnage.	Place where sunk.
Rurik.....	10,936.....	Off Ulsan.
Bayan.....	7,726.....	Port Arthur.
Pallada.....	6,731.....	do
Varyag.....	6,500.....	Chemulpo.
Novik.....	3,080.....	Saghalien.
Boyarin.....	3,200.....	Tairen Bay.
Admiral Nakhimoff.....	8,524.....	Japan Sea.
Dimitri Donskoi.....	6,200.....	do
Vladimir Monomak.....	5,593.....	do
Svietlana.....	3,727.....	do
Izumrud.....	3,200.....	Vladimir Bay.

Totals, 12 ships.....65,420 tons.

TABLE III.—COAST-DEFENCE IRON-CLAD SUNK.

Name.	Tonnage.	Place where sunk.
Admiral Oushakoff.....	4,126.....	Sea of Japan.

TABLE IV.—AUXILIARY CRUISERS SUNK.

Name.	Tonnage.	Place where sunk.
Amur.....	2,653.....	Port Arthur.
Angara.....	12,050.....	do
Enisei (torpedo depot ship).....	2,653.....	Tairen Bay.
Ural.....	8,278.....	Sea of Japan.

Totals 4 ships .....25,634 tons.

TABLE V.—GUN-BOATS SUNK.

Name.	Tonnage.	Place where sunk.
Korietz.....	1,213.....	Chemulpo.
Sivoutch.....	950.....	R. Liao.
Posadnik.....	400.....	Port Arthur.
Gaidamak.....	400.....	do
Gremyastichy.....	1492.....	do
Otvazny.....	1492.....	do
Rasboynik.....	1,334.....	do
Djidjit.....	1,334.....	do
Zabiaca.....	1,236.....	do
Giljak.....	963.....	do
Bobr.....	950.....	do

Totals 11 ships .....11,764 tons.

TABLE VI.—DESTROYERS SUNK.

Name.	Tonnage.	Place where sunk.
Boevoi.....	350.....	Port Arthur.
Bujitelni.....	350.....	do
Razyashtchi.....	240.....	do
Storozhevoi.....	350.....	do
Silni.....	350.....	do
Burni.....	350.....	do
Vnimatelni.....	312.....	do
Vuinoslvi.....	312.....	do
Vnushitelni.....	312.....	do
Raztoropni.....	240.....	do
Stereguschichi.....	350.....	do
Stroini.....	350.....	do
Strashni.....	350.....	do
Lieut Barokoff.....	276.....	do
5 boats.....	1,500 (?)	Sea of Japan.

Totals, 19 boats .....5,902 tons.

There is here a total of 59 vessels sunk with an aggregate displacement of 257,804 tons.

Turning now to the captured ships we have the following:—

TABLE VII.—BATTLE-SHIPS CAPTURED.

Name.	Tonnage.	Place of capture.
Orel.....	13,516.....	Sea of Japan.
Nicholai I.....	9,594.....	do

Totals 2 ships .....23,110 tons.

TABLE VIII.—COAST-DEFENCE IRONCLADS CAPTURED.

Name.	Tonnage.	Place of Capture.
Admiral Apraxin.....	4,126.....	Sea of Japan.
Admiral Seniavine.....	4,126.....	do

Totals 2 ships ..... 8,252 tons.

TABLE IX.—DESTROYERS CAPTURED.

Name.	Tonnage.	Place of capture.
Ryeshitelni.....	240.....	Chefoo
Byedovi.....	350.....	Sea of Japan
Totals 2 ships.....	590 tons.	

These tables give a total of 6 ships captured with a displacement of 31,952. Hence the aggregate number of sunk and captured is 65 and their displacement 289,756 tons. The value of this big fleet is about 235 million yen.

In order, however, to arrive at a definite notion of the full extent of Russia's naval misfortunes we must add the number of ships interned:—

TABLE X.—SHIPS INTERNED.

Nature.	Name.	Tonnage.	Place of Internment.
Battle-ship.....	Tsarevitch.....	12,912.....	Kiaochow.
Cruiser.....	Diana.....	6,731.....	Saigon.
do.....	Askold.....	5,905.....	Shanghai.
Aux. Cruiser.....	Lena.....	10,575.....	San Francisco
Gun-boat.....	Manjur.....	1,224.....	Shanghai.
Aux. Cruiser.....	Vladimir.....	10,750.....	do
do.....	Yaroslav.....	8,550.....	do
do.....	Woroneji.....	10,750.....	do
10 Torpedo-destroyers.....		3,000.....	Various places in China.
Total 18 ships.....		70,397	

The grand result is, then, that Russia has lost, for the purposes of this war, 83 vessels with a displacement of 360,153 tons. The total will have to be increased should the cruisers *Aurora*, *Oleg* and *Zemchug* and the destroyer *Bodvi* be interned.

On the other hand, the Japanese losses have been as follows:—

BATTLE-SHIPS SUNK.

Name.	Tonnage.	Place where sunk.
Hatsuse.....	15,240.....	Outside Port Arthur.
Yashima.....	12,517.....	do

Totals 2 ships...27,757

CRUISERS SUNK.

Name.	Tonnage.	Place where sunk.
Takasago.....	4,227.....	Outside Port Arthur.
Yoshino.....	4,225.....	do
Miyako.....	1,800.....	do
Heiyen.....	2,185.....	do
Saiyen.....	2,481.....	do
Kaimon.....	1,367.....	do
Oshima.....	640.....	do
Atago.....	622.....	do

Totals 8 ships...17,547

DESTROYERS SUNK.

Name.	Tonnage.	Place where sunk.
Akatsuki.....	364.....	do
Hayatori.....	381.....	do

Totals 2 ships... 745.....

Grand totals 12 ships.46,049

To these must be added four torpedo-boats, No. 48, No. 34, No. 35 and No. 69, the last three of which were sunk in the Battle of the Sea of Japan. It is to be observed that, with the exception of torpedo-craft, not one Japanese ship has been sunk in action. All were destroyed by mines, by collisions or by running on rocks.

Perhaps we should add that Russia has had 9 officers of admiral's rank killed or taken prisoners, namely:—

Vice-Admiral Makaroff.....	killed.
Rear-Admiral Wittgeft.....	do
Rear-Admiral Folkersham.....	do
Vice-Admiral Rojestvensky.....	prisoner.
Rear-Admiral Nebogatoff.....	do
Rear-Admiral Willen.....	do
Rear-Admiral Rantinsky.....	do
Rear-Admiral Grigorovich.....	do
Rear-Admiral Ukhtomsky.....	do

It is very plain that years must elapse before Russia can hope to float anything like a competent navy in Far-Eastern waters. She can not do it at all while this war lasts, for the best personnel she had available has all been killed or captured. She herself alone knows what her exact losses have been in officers, petty officers and men, but it has certainly been a crippling figure.

## RECAPTURE.

Some days ago news was officially published in Tokyo that an American steamer had been sunk by the Baltic Squadron near Formosa. Subsequently this intelligence was contradicted, and the report took the form, now undoubtedly correct, that there had not been any sinking, but that a British ship, the *Oldhamia*, had been captured with her cargo of 150,000 cases of kerosene, consigned to the Standard Oil Company's agents in Yokohama. Nobody knew or could divine the pretext under which the Russians had made this seizure, but as the Russians do many inexplicable things, not much excitement was caused by the event. The story has had a curious sequel. A Japanese cruiser has re-captured the *Oldhamia* from the Russians. When re-captured she was flying the Russian flag and she is therefore a legitimate prize of war from the Japanese point of view. But whence are her unhappy original owners and the owners of the kerosene to obtain compensation? They must evidently look to the Russian Government whose officials made the first seizure. It is a strange complication.

A cognate story relates to the incidents which happened in the northern part of the Sea of Japan on the 5th of May. Russian destroyers, issuing from Vladivostock, sunk the little schooner *Daisan Yawata Maru* and took off one or two of her crew. Two days later Linevitch reported that in addition to sinking the *Yawata Maru* the destroyers had captured a sailing vessel near Shiribeshi, removed her crew of nine men, and putting a Russian crew on board, had sent her to Vladivostock. Encountering heavy winds *en route*, she had to seek refuge on the Korean coast, and there she was re-captured by the Japanese with her Russian crew, an officer and 13 marines.

## GENERAL BALASHOFF.

General Balashoff and the remainder of his staff have left Port Arthur. The General, before setting out, conveyed to Dr. Harris an emphatically eloquent expression of thanks and admiration for the treatment extended by the Japanese to his wounded and sick countrymen. He declared that the most exacting dictates of the highest civilization had been satisfied by their conduct, and that alike in his official and in his private capacity he desired to express his profound gratitude and appreciation. On returning to Russia his voice should be raised and his pen exercised to make widely known this admirable record.

This warm and most unequivocal tribute reads strangely in the context of the complaints lately formulated by the Russian authorities on the very subject which here elicits General Balashoff's eloquent praise. After all, the difficulties encountered by the Japanese in tending some seventeen thousand Russian wounded, whose language was strange, who were thrown suddenly on unprepared hands, who lacked many hospital necessities, and for whose care no sufficient staff of nurses and surgeons were immediately available, must have been enormous. The Japanese themselves, having toiled with all the industry possible to human beings and with all the extraordinary patience and kindness of their nature, now say, with their habitual modesty, that there must have been many shortcomings. General Balashoff does not think so, and General Balashoff knows.

## ADMIRALS TOGO AND ROJESTVENSKY.

A telegram to the *Hochi* from Saseho dated the 3rd says that on that day Admiral Togo—the name is not given, but what reason there should be for concealment we do not see—visited Admiral Rojestvensky in the hospital. The Russian Admiral, in spite of his severe wound, rose in his bed to receive his late adversary. Admiral Togo said:—"It is the fortune of war, yet I most sincerely regret that you were wounded, especially as this hospital is in many respects defective. Pray make allowance for its deficiencies. I earnestly hope that you will soon be quite well again. The Russian Admiral seemed much moved by these kind words. He replied:—"The excellence and strength of the Japanese fleet astonished me and evoked my great admiration. As for my wound, I count it an honour, and it is a still greater honour to me to receive this kind visit from the officer commanding such a renowned fleet as yours." After this exchange of politenesses, the two officers conversed on various subjects.

(Received at the Naval Head Quarters; from Saseho, dated 4th June.)

Since Admiral Rojestvensky entered the Naval Hospital his pulse and temperature have been normal. No sign of brain trouble is apparent. He has a contused wound about as large as the palm of the hand on the inside of his thigh and an abrasion on the right ankle, but there is no appearance of suppuration and his condition is good.

Admiral Yamamoto has addressed the following letter to Admiral Rojestvensky in the Saseho hospital:—"I beg to express my profound admiration and respect for the more than thorough manner in which you discharged all your duties as a commanding officer, during the recent great battle and for the valour and zeal you displayed on behalf of your country. I most heartily sympathise with you in the matter of your wound, and sincerely hope that by the means obtainable at our hospital and by the ministrations of our surgeons you will speedily be restored to complete health."

## LOSS OF LIFE IN THE BATTLE OF THE SEA OF JAPAN.

It is impossible, of course, to calculate with absolute certainty the Russian casualties in the Battle of the Sea of Japan, but we believe that, happily, they are not so numerous as might have been supposed. In the 17 vessels known to have been sunk the complements were as follow:—

<i>Borodina</i> .....	850
<i>Alexander III.</i> .....	850
<i>Kniaz Suvoroff</i> .....	850
<i>Ossiabva</i> .....	775
<i>Sisoi Veliky</i> .....	582
<i>Nararin</i> .....	530
<i>Oushakoff</i> .....	318
<i>Nakhunoff</i> .....	567
<i>Dimitri Donskoi</i> .....	576
<i>Svetlana</i> .....	400
<i>Vladimir Monomakh</i> .....	550
<i>Ural</i> .....	350
Five des royers .....	600

7,798

Then we have the crews of the captured ships:—

<i>Orel</i> .....	850
<i>Nicholas I.</i> .....	604
<i>Sentacine</i> .....	318
<i>Abraxin</i> .....	318
1 Destroyer .....	120

2,210

This makes a total of 10,008 men, and as

6,212 are known to be prisoners in Japanese hands, the deaths would seem to have been about 3,796. Besides, some are said to have escaped in the cruisers which went to Manila and in the destroyer which has put into Shanghai. The crews of these Manila and Shanghai cruisers total about 2,582, and it consequently appears that the warships (excluding the *Ural*, of course) carried some 12,240 officers and men in all. Probably we shall be safe in concluding that not more than 3,500 lost their lives. It is a terrible record for a naval battle, but it is not so bad as was at first feared.

It must be noted that in the above list the two special-service steamers, *Ilits* and *Kamchatka*, sunk in the Sea of Japan, are not included. We do not know what complements they carried.

## THE BLACK-SEA FLEET.

We are often asked what vessels constitute the Black-Sea Fleet of Russia. They are these:—

Name.	Character.	Tonnage.	Speed.	When built.
<i>Rostislav</i> .....	Battle-ship	8,880	16	1894
<i>Tavritchesky</i> .....	do	10,950	16	1900
<i>Sviatitelia</i> .....	do	12,480	17	1893
<i>Pobiedonosets</i> .....	do	10,280	16	1892
<i>Apostolof</i> .....	do	8,500	16	1890
<i>Ekaterina</i> .....	do	10,182	17	1886
<i>Tchesme</i> .....	do	10,182	17	1886
<i>Sinop</i> .....	do	10,181	17	1887
<i>Novograd</i> .....	Coast-defence	2,491	6½	1873
<i>Admiral Popoff</i> .....	do	3,550	8½	1875
<i>Kugul</i> .....	Protected cruiser	6,500	23	1904
<i>Otkakoff</i> .....	do	6,500	23	1904
<i>Mekurya</i> .....	do	2,996	13	1878

To the above may be added 6 small (1,224 tons) cruisers of 13 knots speed all built in the eighties and quite useless for foreign service.

It will thus be seen that the Fleet consists of 7 second-class battle-ships, all of comparatively low speed, two fine new protected cruisers and a few old worn-out vessels which could not be sent eastward. The 7 battle-ships are remarkable for the nature of their armament. They carry no less than fifty 12-inch guns, four 10-inch and seventy-eight 6-inch. In that respect they constitute a formidable flotilla even as compared with Rojestvensky's Squadron, which mounted only twenty-six 12-inch pieces. But Russia can not take this fleet out of the Black Sea without England's consent, and there is little likelihood of her obtaining that. If she could, and if she added the battle-ships *Slava* and *Paul III.*, new first-class vessels, as well as some cruisers still available, she might make a strong squadron. She must be sorely tempted now to defy England and rush the Black-Sea Fleet through the Dardanelles.

## "THE TIMES" ON THE FIRST PHASE OF FRENCH NEUTRALITY.

Immediately after the Kamranh incident had been closed *The Times* commented on it as follows:—

While there was a possibility of serious risk that the question between France and Japan might become acute, there were obvious reasons why comment upon it should be restrained within narrow limits. Now that this danger is over, and, we trust, over for good, it may be useful to point out why Japanese opinion, which has been so singularly self-contained throughout the war, has lately showed strong signs of getting excited. The Japanese regarded the sojourn of the Baltic Fleet in the waters of Indo-China as the culminating incident in a long series of acts all of which they considered to be of very doubtful legality. They held that without French help the Russian armada could never have made its way to Far Eastern seas at all, and it must be owned that they had much to say in support of this contention. It has been in French ports, and in French ports only, that the Russian ships have received a hospitality which was

indispensable to their progress. At Cherbourg and at Brest, at Dakar, at Algiers, at Jibuti, and at Madagascar they have found shelter and opportunities for receiving supplies and information which they never ventured to seek in the waters of any Power. While this hospitality was accorded to them at a great distance from the scene of operations, something might, perhaps, be said in its excuse. But, when the Russian Admiral proceeded to claim it within a few days' sail of Japanese territory and to abuse it, as the Japanese were satisfied, for preparing hostilities against them, the cup of their indignation not unnaturally was full. The prompt action of France and the orders of the Tsar have removed a danger which threatened the peace of the world. If effective steps have been taken, as we assume they have been taken, to prevent any similar efforts by Russian ships to make an unfair use of neutral waters, the incident may now be regarded as happily and finally closed.

There has not yet been time to receive the copies of the great journal containing its comments on this neutrality question after it had entered its second and most acute phase; namely, when the Russian Squadron, having left Kamranh during two days, returned thither again, and finally steamed away merely to seek the hospitality of another French port, Honkoku. That second series of outrages was much more flagrant than the first. Happily the Baltic Fleet is no more and the good relations between France and Japan need not be disturbed. But the future can not be foreseen. Japan would be unwise if she failed to effect some friendly arrangement which will secure her against being again the victim of such exceedingly benevolent neutrality.

## CHINA.

There are rumours that the Dalai Lama still lingers at Kulong, pleading indisposition as a reason for not returning to Lassa. There are also rumours that Russia is endeavouring to purchase his political influence by offers of ten thousand roubles daily, which proposal is said to possess a very enticing aspect for the great prelate, and it is thought possible that he may soon be found preaching a Russo-phil propaganda in Tibet and Mongolia. We take these rumours to be reflections of a conviction that Russia will not rest content with her discomfiture in the Far East, but that she will endeavour to restore her tarnished prestige by a campaign of some kind in the Middle East. She certainly bears her defeats with admirable fortitude. We hear of her now planning to despatch another force of 200,000 men to Manchuria, and issuing orders to the Baltic dockyards to despatch a new Squadron to Japan. It is true that the Baltic dockyards cannot work miracles. They have one battle-ship on the stocks, the *Paul*, and this with the *Slava* and a few rather rickety cruisers might be got ready for despatch to the Far East at some time in the fall of the year. But they would be quite powerless to accomplish anything. Still Russia keeps up the game, and whatever may be said of her judgment, we can not but admire her courage. It all proves, however, that the least likely thing in the future is her tame acquiescence in defeat. She will strike in again. The tenacity of her expansive ambition is permanent.

Captain Puttfarke, commanding the S.M.S. *Seeadler*, has reported to the harbour master at Shanghai that whilst on the voyage from Tsingtau to Shanghai he sighted a floating mine in Lat 35.0 N., Long, 121.32 E. The mine was destroyed with two shots from a quickfiring gun. As the object in question was found within one day's steam of Shanghai one may understand how far afield the danger has spread.

## CONTINUING THE WAR.

The Council at Tsarskoe Selo, by a large majority, has resolved, the telegram tells us, to continue the war. Thus incidentally we learn that the question of ceasing the war has been debated in State circles. The *Novoye Vremya* also declares that her signal defeat at sea does not affect Russia's position on shore, and that with half a million of men in Manchuria she can not listen to proposals for peace. Further, the St. Petersburg journal adds that there is less ground than ever for attributing to many Russians an inclination to accept peace on Japan's terms. But the *Novoye Vremya* does not know what Japan's terms are. Japan has never formulated her terms. She has never been asked to formulate them and she certainly will not do so until she is asked. Therefore this allegation of the *Novoye Vremya*'s is either a trick to discourage the advocates of peace by attributing imaginary harshness to Japan's attitude or is another specimen of Russian bluff. Be that as it may, there can be no question about the insincerity of the *Novoye Vremya* when it alleges that the crushing defeat suffered by the Russian navy in the Sea of Japan does not affect the situation on shore. It does affect the situation on shore; affects it most vitally, for prior to that defeat the situation on shore was not without hope. It had one hope, and that hope was in the fleet. Were the positions reversed, had the victory of the 27th of May been a Russian triumph instead of a Japanese, Russia's situation in Manchuria would now be metamorphosed and Japan's absorbing thought would be how to get her armies back in safety from beyond the seas. But with the Russian fleet absolutely "wiped out," as it has been, Japan is free to pour as many troops as she pleases into Manchuria and can confidently count on keeping them supplied. On the other hand, unless the Russian armies can undertake an offensive campaign on a colossal scale, they can never hope to recover their lost ground. In point of fact the war is now absolutely won. Russia, if not completely driven out of Manchuria, has lost everything that invested the Three Provinces with attractions in her eyes, since she has lost the seaboard. There is nothing for her in northern Manchuria. She never would have planted a foot there except by way of preliminary to going south to the coast of the Pacific. But going south now means one of two things: either an obviously futile attempt to re-take Port Arthur or an invasion of Korea. Does it fall within the range of the wildest flight of imagination to suppose her capable of either the one feat or the other in the face of half a million of Japanese having free access to the seaboard? The game is irrevocably lost for Russia. It ended with the Battle of the Japan Sea. A victory there might have been followed by successes on shore. A crushing defeat there can never be followed by successes. This must be so plain to St. Petersburg that we greatly doubt the sincerity of the Tsarskoe-Selo Council.

## GERMAN CROWN PRINCE'S WEDDING.

Tuesday was observed by the German members of this community and of Tokyo as a general holiday in honour of the marriage of His Imperial and Royal Highness Crown Prince William to H.H. the Grand Duchess Cecilia of Mecklenburg-Schwerin. The weather was far from propitious in

Yokohama, rain falling heavily during the forenoon but in spite of this flags were plentifully displayed and a large number of residents attended the reception held by the Consul-General (Mr. Von Syburgh).

In the evening a dinner was held at the Oriental Palace Hotel. After the company had enjoyed the excellent repast provided by Messrs. Muraour and Dewette the toasts appropriate to such an occasion were drunk, the healths of the august young couple being enthusiastically honoured.

On the 5th instant His Excellency Count Arco Valley gave a banquet and ball at the German Legation to celebrate the nuptials of the Prince Imperial of Germany. These events were marked with all the brilliancy habitual where Count Arco Valley is host. His Excellency despatched telegrams of congratulation to the Prince Imperial and to the Representative of Japan at the ceremony, Prince Arisugawa.

## THE SHIPS IN SHANGHAI.

The Russian Consul in Shanghai has suddenly given his consent to the disarming of the vessels now at Woosung. They can not come up the river to Shanghai, on account of the state of the tide. It is stated that the Consul has asked the Taotai to take measures against the cutting out of any of the vessels by the Japanese. Hitherto he had insisted that the steamers must be accorded the treatment of ordinary merchant ships, and must be allowed to go and come at will. But evidently the only limit of a Russian official's claims is his ability to enforce them; for seeing now that a Japanese squadron may be expected at any moment to come to the mouth of the Yangtze and disturb the peace of these trespassers, the Consul appreciates that he had better climb down his arbitrary tree. Truly dignity and the reputation of their country do not seem to count for much in the procedure of Russian officials. If these steamers had a right to frequent Shanghai before the battle was fought in the Sea of Japan, they have just as valid a right now, and the Consul's plain course would have been to insist on their right, leaving the Japanese to violate it if they would. But he has withdrawn his claim immediately on the aspect of danger, thus publicly admitting that the claim was founded simply on Russian convenience not on international law, and that Russia is prepared to interpret the latter solely in accordance with the dictates of the former. When the internment of the steamers did not suit Russia's belligerent plans, he vehemently proclaimed that to intern them would be a flagrant breach of his country's treaty rights. When their internment became the only means of saving them from Japan, he demanded it as a right.

## PORT ARTHUR.

It is stated that the work of raising the sunken ships at Port Arthur is proceeding rapidly and satisfactorily. The authorities hope to float all the ships by the end of October and to complete the repairs by next spring. Of course the outlays will be heavy. It was originally estimated that an average of 1½ million yen per vessel would have to be spent, but the idea now is that some twice that sum may be required, and that in certain cases the cost will run up to 5 millions. Under any circumstances, however, the Navy will receive valuable additions at far less than the cost of providing new vessels.

The *Bayan* and the *Amur* are now receiving most attention as their positions render it desirable to get them quickly out of the way. The *Amur* is a torpedo-transport of 2,500 tons; the *Bayan* an armoured cruiser of 7,800 tons. No particulars are given as to the state of these ships or of the 4 battleships lying in the harbour, but evidently the prospect of utilizing them continues to be regarded hopefully.

The *Angara* and the *Kazan*, raised at Port Arthur, have been placed in the hands of the Kure Admiralty. They are renamed, the *Angara* becoming the *Angawa Maru*, and the *Kazan* the *Kasato Maru*. These are sufficient approximations to the original names. The *Angara* is a steamer of 12,050 tons, but as to the *Kazan* we have no information. Both vessels are said to be now fit for service.

## JAPANESE PRISONERS.

The Japanese Representative in Berlin telegraphs intelligence received from the Prisoners Information Bureau in Russia, to the effect that in the Battle of Mukden one Colonel belonging to the Seventh Division, a Captain and Lieutenant belonging to the Tenth, and three lieutenants belonging to the Ninth were taken prisoners and are now in the hands of the Russians. It is believed that the Colonel is Murakami Masanichi, who commanded a regiment in General Oseko's Division. The Battle of Mukden ended on the 10th of March and we are now at the beginning of June. Either the Russian organization must be greatly demoralized or their Prisoners Information Bureau must be working very badly. The latter fault has been frequently laid to its charge, and on this occasion after nearly 3 months' delay it has not yet succeeded in ascertaining and reporting the names of the captured officers, six in all. We venture to affirm that of the tens of thousands of prisoners, taken by the Japanese in the same battle, every name has long ago been transmitted to Russia. War is a cruel thing, but it becomes doubly and needlessly cruel when families are thus left in suspense as to the fate of their members.

## WONDERFUL Gobelins.

There are now on view at Messrs. Ueyada in Tokyo the finest specimens of gobelins and embroidery ever seen, we should think, since such fabrics began to be made. The gobelins number four, being intended to drape the four walls of a room, and the embroidery is a single piece, 56 square yards in area, which is to cover the ceiling. The subjects depicted on the gobelins are flowers and birds, and nothing could exceed the skill shown by the weaver or the magnificent yet perfectly harmonious variety of colours. On the ceiling piece a vast number of birds are embroidered in the finest style of the Japanese embroiderer, which is equivalent to saying the finest style in the world. The artist has not fallen into the very probable mistake of showing the backs of the birds. They are seen exactly as they would be seen flying over head, and though much of the brilliancy of their plumage is thus foregone, the beauty and softness of the silk embroidery are enhanced. This grand specimen of weaving and needle-work is to be sent to the Belgian Exhibition, where it can not fail to create a sensation. It is now, we believe, at the Palace, whither it has been sent for the Emperor's inspection, but it will probably be to-morrow restored to Messrs. Ueyada's show-rooms in Yariya-cho.

## FOREIGN PRESS OPINIONS.

(Telegrams received at the Foreign Office in Tokyo.)

The following was received from Paris on the 1st June:—Strict censorship appears to leave the public in Russia in ignorance of the result of the late naval engagement. On the 30th May, however, concealment became impossible, and the papers were permitted on the following day to publish certain portions of the Japanese official reports.

The Russian press unanimously point out in violent language the blunders which have been committed in the conduct of the war and call for the immediate convocation of a national assembly.

The *Novoye Vremya* declares that in view of the extreme gravity of the situation, the assembly should be convened at once without waiting for the conclusion of the inquiry now being made by the commission sitting under the Minister of the Interior.

The *Novosti*, after pointing out the fatal effect which the naval defeat would produce upon the army under General Linevitch, adverts to the serious danger in which Vladivostok is now placed by that defeat and concludes that it is only by the wise employment of the forces on land and sea now remaining to her that Russia can hope to bring the war to a definite issue and render it possible to conclude honourable peace.

The *Gazette de Bourse* observes that while fresh Russian disasters in Manchuria are anticipated in political circles in Great Britain, public opinion in France urges Russia in a friendly spirit to conclude peace in order to avert further catastrophes and adds that external peace is to be looked for only after the restoration of peace at home.

## BRITISH OPINION.

A profound impression has been made throughout Europe by the decisiveness of our naval victory, and it still continues, judging from the tone of the comments, to fill the press with wonder.

The *Times* dwells upon the utter hopelessness of further struggle and the increasing disadvantages to Russia if she were to continue, but it observes with regret that these considerations do not seem to have any weight at Tsarskoe Selo. It remarks in reference to the fears of the yellow peril expressed by the continental press that it is firmly convinced that there is not the least intention in France, Germany or any other country to take any action whatever for again depriving Japan of the legitimate fruits of her victory. England would be bound as all the world knows to resist to the utmost any such attempt. The yellow peril bogey, it concludes, would indeed be converted into a living reality if any power were now to repeat the blunder which led ten years ago to the retrocession of Liaotung Peninsula. England for one would most emphatically oppose such a scheme which is as foolish as it is iniquitous.

The *Standard* in a leading article pays a tribute to the heroism of Admiral Rojestvensky and his squadron and hopes that the prospects of peace have been at least brought near by the late battle. It has no doubt that Russia is seriously considering the question of seeking some basis of accommodation, and though Japan may with justice insist upon Russia's making the overtures, still she will not in the hour of her triumph fail to show that moderation and discretion which have marked every step she has taken in the present war. It is most important, says the paper in conclusion, that we should arrive at a definite solution for making the Anglo-Japanese alliance permanent and not

merely rest content with a recognition of its value. Disastrous consequence would certainly follow from any attempt to shake England's readiness to renew the alliance and accept all the responsibilities implied by it. No patriotic statesman would for mere party purposes endanger by indiscreet acts this great pledge of security.

Other important papers, liberal and conservative, advise Russia to be reasonable and sue for peace.

## FRENCH COMMENTS.

The *Republique Francaise* of May 31st, says that the Japanese victory will have merely an indirect effect on the duration of the war, which is to strengthen the peace party at the Russian court. If, however, the war should continue, the only result of the victory will be the removal of those apprehensions which delayed the Japanese attack on Vladivostok. But the Japanese triumph on sea is extremely interesting from another point. A great naval power born in the Pacific will disturb the world combinations. England and America will become anxious. France has long since been concerned at the consequences of Japanese successes. Even leaving out of consideration her sympathy for Russia, her own interests in the maintenance of her position in Asia would oblige her to take sides with those who are already concerned at the prodigious increase of Japan's forces.

The *Echo de Paris* reports a rumour that after the destruction of Rojestvensky's squadron, offers of friendly mediation may very shortly be made by England and France to their respective allies, and adds that pourparlers for the purpose were spoken of in official circles yesterday as being imminent.

M. Clemenceau in the *Aurora* severely criticises those pro-Russians who talked of all Russian defeats as if they were victories and says that the true friends of Russia are those who advised peace after the fall of Port Arthur. Then he comments upon the Russian situation after every defeat, and wonders when this bloody game will come to an end.

Rochefort in the *Intransigeant* says that there is for Russia but peace or ruin, and ruin spells death. A sovereign has no right to prolong the extermination of his subjects; they will remark that the fact that the Czar is still living when Rojestvensky and Nebogatoff are dead only serves to increase the responsibility upon him in persisting in the impossible task of recovering from defeat. He does not understand how dangerous the situation has become. The great Powers should advise him to respect the sanctity of human life and prevent his making further sacrifice.

The *Petite Republique* deprecates the folly of Russia in putting her fortune to the test with such demoralised forces as the Baltic squadron and declares that those who persist in such criminal folly deserve to be locked up.

The *Croix* resumes more emphatically than before its argument that the longer the war continues the more onerous will the terms of peace be, and to favour war is to court defeat. The revolutionary parties are organizing for a secret struggle and the Russian Government can hardly cope for long with enemies at home and abroad. However wounding to her *amour-propre* the course may be, Russia, vanquished in war, must, to avoid further useless slaughter, sue for peace.

## AMERICAN THOUGHT.

The *Washington Times* of May 29th says:

—The defeat of Russia is the triumph of enlightenment; the destruction of the last physical stronghold of superstitious bigotry and religious intolerance; the necessary demolition of the greatest obstacle to human liberty and progress. Napoleon predicted that in this century the Slav and Anglo-Germanic races would meet in death struggle. The prediction may yet hold true, but in part it has already been fulfilled, for Japan to-day is the legitimate heir and exponent of Anglo-Germanic ideals. The world rejoices at Russia's defeat, because it condemns the aims and policy of Russian administration, and because it brings peace, inevitable peace that much closer to realization. But, while we celebrate the inevitable, our hearts go out in sympathy to the brave men of both sides and to their families. The world deplors the waste of human life in this struggle. It places responsibility for this loss not upon the Russian people but upon their avaricious, arrogant and imbecile rulers. For the Russian people, it has sympathy and hope and for the brave little Japanese, it cheers commendation for their bravery and enthusiastic admiration for their methods. David has met Goliath and the victory is with David.

New York *Sun*, May 31st:—Togo's victory is complete. Later telegrams announce the total destruction of the Russian battleships with the capture of all admirals in command. Never in the history of the world has so effective a piece of work been done upon the sea. Russia's sea power is wiped out and Japan can deal with the waters of the Western Pacific as her own. Russia's bluff has been called with disaster to herself. When detailed accounts of the fighting come to us, naval experts will be able to draw lessons from the fight, for this is the first great naval battle in which two evenly matched forces have met since modern armour and modern guns have come into use. At Manila and Santiago the preponderance was all on one side while at Port Arthur conditions of the blockade affected the problem; here in the sea of Japan two nearly equal fleets have met with the outcome that one was totally destroyed and the other practically unhurt. Japan can now breathe freely and carry out her military operations unhindered. The Russian Armada is swept out of existence and even the Czar's madness will hesitate to send more Russian vessels to certain destruction. For the moment, Russia is eliminated as a factor in any European entanglements that may call for sea power, and in so far the peace of the world is ensured. Japan's military plans in Manchuria can be carried on with no fear of cutting off her base of supplies. It will be an interesting question that will meet naval experts when details of Togo's victories are learned. Is it on torpedo-boat and fast cruiser that a navy must depend or on big battleships, or is it superior pluck and knowledge of the man behind the gun that after all decides the fight? However that may be, nobody will grudge glory to the brave and patient commander who has secured the great victory of Japan.

New York *Sun* of May 30th:—The destruction by the Japanese of the Russian Fleet and practically of Russian naval power may be said without exaggeration to be one of the most momentous events not merely in naval history but also in the history of the world. Here is a nation which was opened to the civilized world only fifty years ago, that has been organized after the plan of western civilization for less than 25 years, that only within ten years has had a navy of

any considerable rank and that has by one blow put itself in the very fore-front of the naval powers of the world. After having previously demonstrated its superiority on land to nominally the greatest military power of the world, the naval engagement in Korea Strait therefore marks a radical change in the distribution of the military strength and the military possibilities of the world. The complete victory of Japan in the war with Russia which it foreshadows will put Japan far up towards the head of military powers and before this century ends it will hold the first place beyond peradventure if its development shall continue in anything like the ratio of progress which it has made since its victory over China ten years ago. The engagement in Korea Strait has afforded the first full test of new engines of naval war which has been made since their introduction, certainly since the type of modern battleship has been brought to its present development. Our American destruction of the Spanish fleets at Manila and Santiago could not be called such a test though our experience there foreshadowed the results in Japanese waters, that is both the Spanish and Russian ships were destroyed without significant damage to the opposing fleets. The theory that when modern ships of war actually met squarely in battle each side would be likely to destroy the other has been disposed of effectually. The victory won by the Japanese is not only one of the most complete in the history of naval warfare but it also was won without loss to the victor. It is demonstrated that Japan is the military superior of Russia on both sea and land. Japan has won the war. Is there another European Power which would have done better than Russia, unless Great Britain with its vast naval preponderance? When Japan has gone ahead in its development under the impetus of present victory, may not the time come and in no distant period when even Great Britain will be distanced? How about ourselves? The naval battle of Saturday and Sunday may change the whole course of civilization during the twentieth century.

#### OPINION IN GERMANY.

The *Kölnische Zeitung*, after discussing the recent battle from a naval point of view, says:—"It is not at all surprising that Japan's victory should have won for her a larger share than ever of applause and respect from a warlike nation like the Germans. Nor can it be doubted that this is not the case with Germany alone but that other countries feel similarly. That Prince Arisugawa should have entered Berlin on the very day of the receipt of the news of Japan's signal victory, is very remarkable. When the German Emperor went to the station to meet the Prince and received him with all military honours, the people of Berlin had an opportunity of seeing the Representative of a country which has gained one of those rare victories that are written in large letters on the pages of history. His Imperial Highness will appreciate from the extraordinary character of this cordial and sincere welcome that Germany feels not the smallest reserve in recognising the military successes achieved by his country. (The paper then repeats the argument that Russia by this defeat must be said to have exhausted her last resource, and concludes with these words:—) "That Russia has now arrived at the end of her devices is beyond discussion or query. It is not Germany's business to advise her as to what steps she should adopt after having invited the destruction of her fleet. We merely quote and endorse the dictum of *Le Temps*:—"The future of Russia is not in

the East alone: it is in Europe and Central Asia also. We pray earnestly that she will avoid being exhausted in this fight with Japan and that she will make peace."

#### RUSSIAN OPINION.

The *Novoye Vremya* writes as follows:—"We recognise that our fleet sustained a great defeat in the Tsushima strait and that for many years Russia must remain without naval strength, but the result does not make our cause any worse on land. Russia with an army of over half a million men in Manchuria cannot lend an ear to the talk of peace. Her defeat at sea does not affect the situation on shore. Russia's confidence in her army remains as unshaken as ever. Her losses at the battle of Tsushima were indeed terrible but the idea that this will induce many Russians to accept peace on Japan's terms is more baseless than ever."

The *Russian Bourse Gazette*, after writing of the agitation in the bureaucratic government and of the discontent and distress existing in the Russian nation, says:—"The Russian bureaucracy has not one single friend outside its own ranks in Russia, and cannot hope for any assistance. The sooner the Russian bureaucracy is abolished the quicker will the people's content be restored. The Russian nation has not been defeated nor suffered any disaster."

With regard to the situation all the Russian newspapers agree that the question of peace or war should be submitted to the Zemski Sobor. The *Novoye Vremya* says:—"Russia fought at first with one hand. By degrees she put out both hands. She has now lost one hand but she has not lost her fighting power. Nevertheless the time has come for convening a national assembly. There ought not to be a moment's delay. Unless the talent and the sympathy of the whole country be invoked the popular sentiment can not possibly be quieted."

The *Russ* writes:—"We can not keep silence in view of the defeat of our country. No effort must be spared to build up a new Russia and to establish the future on a firm footing."

Another journal says:—"The bureaucracy has again brought disgrace upon our nation. The time has come for the Russian people to exert themselves. It is of the most urgent necessity to convene a popular assembly."

But *Mischirsky*, under date of the 1st instant, argues thus:—"Russia's great hopes centered on the Baltic Fleet, and of course the destruction of that fleet has produced a painful impression upon the people's mind, and, what is very much to be regretted, must have given a great blow to the army in Manchuria. People are now everywhere asking what course should be adopted in the situation. The so-called patriotic editors' who until yesterday ridiculed my arguments for peace, are now with one accord demonstrating the necessity of peace. Do they understand, however, that the time for establishing peace has half expired? The *Novoye Vremya* is calling out excitedly for a national assembly. But has the editor reflected that however rapidly an assembly be convened Japan's movements will be still more rapid? My belief is that to summon a national assembly at this crisis would be to invite confusion, and therefore not at all a wise course. If the object of convening it be not to secure peace, then there is no occasion for haste. The only good plan to secure peace is for the local representatives, the Government officials, and the heads of the church to hold a combined council."

#### BELGIAN OPINION.

The shattering of the Baltic Squadron has produced a most profound sensation in Belgium. The newspapers with one accord declare that further resistance on Russia's part would be foolish and unreasoning. The decision adopted at the Imperial Council to continue the war will, they say, merely alienate the sympathy of the nations and add vigour to the revolutionary movement.

#### KOREA.

The Fusan-Masampo railway has been finished and was opened for traffic on the 6th instant. This makes Masampo one of the best harbours in the Far East.

In the *Nichi Nichi Shimbun* we read that the railway from Seoul to Wiju has been virtually completed, with the exception of the temporary bridge at Chongju. It is possible to ride the whole way in construction waggons if one is prepared to do a little walking at Chongju.

On the 2nd instant two steamers ran aground on the Korean coast during a fog. They were the *Kwanon Maru* (452 tons) and the *Katsuyama Maru* (1,770 tons). It is expected that the latter will be floated off.

#### MANY EARTHQUAKES.

On the 2nd instant at 2 p.m. Hiroshima was visited by a violent shock of earthquake. Telegraphs and telephones were interrupted, houses and warehouses lost their plaster or were cracked, and considerable injury was done. The seismic disturbance is said to have lasted 2 minutes. In the town of Hiroshima six people were killed and 79 wounded, and 33 houses were damaged. At Ujina the high-road developed 4 fissures and the railway was injured in two places. The record of casualties is not yet ascertained. At Kure also houses have been partially wrecked and some people killed. The water-works in the naval compound were broken and much damage is reported. Owing to interruption of the telegraph details are not immediately procurable, but it does not appear that the shock was much felt westward of Bakan or in Shikoku. The western half of Chugoku, from Hiroshima to Bakan, seems to have been the centre of disturbance.

Yokohama was treated to a sufficiency of earthquakes on Tuesday. The first occurred at a very early hour in the morning, somewhere about 1 o'clock and fairly disconcerting jars followed at intervals till the tenth shock came about 5. But the tremors continued at short intervals till the forenoon.

Tokyo was entirely out of the range of the earthquake, no shocks being perceptible.

The Governor of Shizuoka telegraphs that since the 5th June there have been 20 shocks of earthquake at Atami, and they are still continuing, but are very slight.

Another telegram from the headman of Oshima (Vries Island) dated on the morning of the 6th, says that since yesterday continuous shocks of earthquake continue to be felt. At 35 minutes past midnight a severe shock, followed by 100 minor shocks, was felt, and they still continue. Some stone walls were injured, but there were no casualties to either man or beast.

A good strong jar was felt in Yokohama about 2.40 p.m., on Wednesday, being followed within the space of a few minutes by several others, somewhat violent.

The Kanagawa-ken Meteorological Station reports that 14 earthquake shocks were felt in Yokohama on the 6th inst., 11 shocks on the 7th, and two shocks were registered up to 1.23 a.m. on the 8th.

## REJOICINGS.

The capital was *en fete* on the 1st instant. A congratulatory entertainment was organized by the Municipality, and there were speeches by the Mayor, Mr. Ozaki Yukio, as well as by the Ministers of War and of the Navy. The usual torch-light processions and fire-works made night brilliant and the air resounded from time to time with shouts of "banzai." There has been no heartier demonstration since the war began, though perhaps from the point of view of some western peoples a lack of spirit would be inferred. The Japanese does not abandon himself. He preserves always a certain measure of calm and decorum, which are not among the moral paraphernalia of holiday-makers in Europe or America.

There was also a great meeting of business men in the Nippon Club in the evening. Speeches were delivered by Baron Nagaoka, Admiral Viscount Ito, Baron Shibusawa and others.

The two Houses of the Diet have sent addresses of thanks and congratulation to the combined squadrons and their famous commander.

There was no mistaking the heartiness which the Yokohama citizens threw into their grand celebration on Friday. The principal feature was a garden party given at the Cricket Ground by the Japanese Chamber of Commerce during the afternoon, which drew large crowds. The weather was gloriously fine, but the heat was agreeably tempered by a breeze that blew continuously throughout the afternoon. Bunting and lanterns were provided in abundance and the scene was very animated when the formal proceedings began at 2.45, by Mayor Ichihara reading a lengthy congratulatory letter. He said that the Russian squadrons at Port Arthur and Vladivostok had been annihilated and there was apparently no prospect for Russia to restore her power in eastern seas. Nevertheless, Russia attempted to interrupt Japanese communications with Manchuria by sending out the Baltic fleet. This enterprise was generally considered as a speculation. Russia, in spite of the favourable treatment which her fleet received from a certain neutral country on the way out to the Orient, tried to reach Vladivostok. But the squadrons were entirely destroyed while attempting to pass the Tsushima strait. The meritorious services of Admiral Togo had been performed with even greater success than the Japanese expected, or even the world. As a result, not only was the Japanese commissariat service to Manchuria now safe, but also trade in the Orient was made more easy.

This speech was received with profound applause. The Mayor also read a copy of a telegram, to be sent to Admiral Togo on behalf of the Yokohama citizens, in which he said that the combined squadrons rendered extraordinary service in destroying the Baltic squadron, so that Russia had lost her naval power for ever in the Far East. The Yokohama citizens could not find a proper word to return their thanks for the service rendered to their country by the brave commander and his men.

At the conclusion of the reading the band played the national anthem, the *Kimigayo*, three times, after which Governor Sufu led off with three *banzai*. Major Ichihara then introduced Mr. Boyle, one of the commission who brought out the cruisers *Nisshin* and *Kasuga* last year. Mr. Boyle was loudly cheered and briefly returned his thanks.

The ceremonies then concluded. During the afternoon, numerous bombs were sent up and a band played selections of music. At 4.30 p.m., the meeting dispersed.

The whole town was profusely decorated, the schemes devised for the celebration of the victories at Liaoyang and Mukden and the fall of Port

Arthur being elaborated in many ways, particularly in transparencies, electric light devices, and mottoes. It would be impossible to describe the many beautiful colour effects which the street vistas opened up, for every house vied with the other to render the celebration complete. The former foreign settlement and the Bluff were in no way behind the Japanese portions of the town in the way of decorations, flags, and lanterns, and at night when the latter were lighted many a scene of fairy-like splendour was to be observed. The enthusiasm displayed was in a higher key than on the last occasion of a Banzai, but that is not to be wondered at when the extraordinary character of the Tsushima engagement is taken into account. For all that the behaviour of the crowd was most commendable. Surely the police of no other country in the world have an easier task than have the police of Japan on the occasion of a monster Banzai.

The lantern procession assembled at the cricket ground by various public bodies. It assembled at 6 p.m., as previously arranged, and subsequently Mr. M. Asada, a member of the Upper House, and several prominent traders delivered speeches from the verandah of the Pavilion in the Cricket Ground. The speeches were of a highly patriotic order, each speaker congratulating the navy on the victory. At 7.30 p.m., the procession started and followed a route similar to that taken on former occasions.

It may be added that June 10 was the festival day of the goddess *Benten* and also the anniversary of the opening of Yokohama to foreign trade so that the city had plenty of excuses for rejoicing apart even from the battle of Tsushima. The foreign stores all closed in honour of the event.

The *Banzai* celebration of the great naval victory in the Japan Sea continued, though in a more or less general fashion, over Saturday and Sunday. On the last mentioned day there was a demonstration in Yamato-cho, the former rifle-range at Kitagata, which passed off very successfully. There was plenty of music and a good display of fireworks. Among the features of the *Banzai* which should not escape record was the excellent display made along the Bund, the aspect of which viewed from the harbour must have been striking and effective. The various hotels, Grand, Oriental Palace and Club were of course handsomely decorated; the Yokohama United Club was also conspicuous, as indeed were the premises of Messrs. Jardine Matheson & Co., of the Pacific Mail, and the residences of Mr. M. Beart, Mr. J. W. Copmann. But undoubtedly the palm for originality and effect must be awarded to the Canadian Pacific. Admiral Togo's famous message to the Admiralty was the main feature of the decoration resorted to here—for on a large transparency were displayed the Japanese characters, with underneath the English: "The force of the enemy's second and third squadrons has been almost completely annihilated. Therefore please be at ease." There was also a fine display of lanterns bearing the ideographs of Togo's last sentence. This decoration evoked enthusiastic plaudits from all Japanese, processionists and others, who passed that way.

## THE "VARYAG."

The cruiser *Varyag* (6,500 tons) has at length been successfully floated. When she rose once more to the surface she had a list to port, but she is now on an even keel and will soon be towed to Sascho. The *Varyag*, before her disaster, was one of the finest of Russia's protected cruisers in the East. Built by Messrs. Cramp & Co. of Philadelphia in 1899, she did 24.6 knots for 8 hours on her trial, and 23.25 for 12 hours. She carried twelve 6-inch guns and her sister-ship was the *Askold* now interned at Shanghai. The *Varyag*, if she can be restored to her old condition, as is tolerably certain we presume, will be a valuable addition to the Japanese Navy.

## NOTES ON CURRENT EVENTS.

Telegrams from London say that a Council of State has been held at Tsarkoe Selo, and that it has been decided to issue an explicit bulletin of the great naval defeat, but, at the same time, to console the people by announcing the convocation of a national assembly. It does not appear, however, that the spirit of the war party is broken. The Tsar is said to be as strongly as ever in favour of fighting on. Outside Russia, on the other hand, public opinion is unanimous in advising peace. Once again the French press is conspicuous as a tenderer of wise counsels in this matter. But will the Emperor and his advisers listen? Can they induce themselves to listen? If there be such a thing in a providence which concerns itself with the affairs of the two-legged insects creeping on the face of this paltry planet, that power would seem to be impering Nicholas as Pharaoh of old was inspired; hardening his heart to his own destruction.

Count Cassini, it appears, was wrongly reported. He never said anything so wise as the words attributed to him by a recent telegram. On the contrary he is now reported to be declaring that the effect of the recent battle will be to prolong the war for an indefinite period. Russian bluff is a very fine thing in its way and Count Cassini is a very fine exponent of it.

The following has been officially published:—"Some time ago the Imperial Government temporarily interdicted the exportation of coal to Saigon and its neighbourhood, and respecting such exportation to other places the intending exporters were required to deposit a security equivalent to double the price of coal to be exported or to find a surety for the payment of the same in case of their default. But this restriction has now been wholly withdrawn by the Government, the result of the recent naval battle having made it no longer useful."

German newspapers write in the very warmest terms about Prince and Princess Arisugawa. They say that the presence of these illustrious personages will add eclat to the nuptials of the Crown Prince; they recall the exceedingly kind treatment extended to Prince Karl Anton on the occasion of his visit to Japan; they note the expressions of the Japan press at the time of the Prince's setting out from Tokyo, when the leading journals expressed a hope that the best possible relations would be thus established between Germany and Japan who frankly acknowledges how much she owes to the former, and they earnestly reciprocate the hope. More significant than even these articles is the demeanour of the citizens of Berlin, who cheer the Prince and Princess and the members of their staff whenever they appear in public.

Captain Bougouin has been released on bail, in consideration of his delicate state of health, and because there is no longer any danger of the proofs against him being destroyed, though the preliminary investigation is not yet concluded. We sincerely hope that this may prelude his final acquittal, though, of course, it would be idle to draw any such inference as yet.

There is talk of summoning an extraordinary session of the Diet in August to sanction the floating of a further domestic loan of 200 million *yen*. This money is said to be needed for several reasons which were not apparent when the Government com-

piled its last estimates. The reasons are, first, that large outlays must be made for raising and repairing 4 battle-ships and 3 cruisers at Port Arthur; secondly, that the repair of the Port Arthur forts and the clearing of the harbour will involve considerable expenses; and thirdly, that the number of Russian prisoners having increased beyond all expectation, the cost of supporting them has become very heavy.

The *Jiji Shimpō's* Indian Earthquake relief fund reached the handsome total of 16,434 rupees and was duly forwarded to the Viceroy through the Specie Bank. Lord Curzon's reply was received by telegraph:—"I have received with the sincerest gratitude the money which your journal took the lead in collecting and which the charitable Japanese public subscribed on behalf of earthquake relief in India. The two nations have interchanged their warm sentiments in connexion with the late calamity. The Japanese have succoured India in her adversity; Englishmen and Indians have admired the chivalry and magnanimity of the Japanese. It may be fairly hoped that these incidents will bring the two great countries still closer together."

According to a telegram received in Tokyo Grand Duke Vladimir was to have proceeded to Berlin to represent the Tsar at the wedding of the Prince Imperial, but he has suddenly abandoned the journey on account of illness, and Grand Duke Michael Alexander has arrived at Berlin in his stead. Rumour says that the party opposed to the Government had decided to assassinate Vladimir and that to send him to Berlin would have been the same as to sentence him to death. A warning in that sense is said to have reached the Russian Ambassador in Germany, and the result has been as above described.

The *Hochi Shimbun* says that the Government has decided to summon an extraordinary session of the Diet for July or August, with the object of seeking authority to add another sum of from 200 to 300 million yen to the war-chest.

There has been a performance of Japanese theatricals and *tableaux vivants* in New York for the benefits of the Japanese wounded. Mrs. Hugh Fraser and Baron Kaneko took a leading part in getting it up. Large prices were paid for boxes in some instances, and the performance, though lasting only 11 hours, produced 4,400 dollars (gold), which was subsequently made up to \$5,000 by Mr. R. S. Minton, a very intimate friend of Baron Kaneko.

Captain Stewart and 3 others of the crew of the steamer *Oldhamia* were found on board the Russian hospital-ship *Orel*. They say that the *Oldhamia* was seized by the Russians on the 19th of May, and these four members of her crew were taken on board the *Orel*, the ship and her remaining complement being released. This happened at dawn, and the place was the Batan Islands. The steamer had a cargo of kerosene oil.

It is announced in the *Official Gazette* that Dr. Richard Wunsch succeeds Dr. Baelz as Physician to the British Legation.

On the morning of June 6th, the Osaka Shosen Kaisha's steamer *Senshu Maru* (1,613 tons) went ashore in the neighbourhood of an island off Mokpho, Korea, on her way to Japan. All the passengers, crew and cargo are safe. The ship is still aground.

#### RECEPTION AT THE GENERAL HOSPITAL.

Splendid weather, almost uncomfortably warm in the early hours of the afternoon, favoured the Committee of the Yokohama General Hospital on Wednesday, the day to which the rainy weather had compelled them to postpone their invitation to the public to view the improvements recently effected; and the garden party over which the Ladies Advisory Committee presided profited equally by reason of the sunshine. So also did the Hospital and its handsome grounds, for they certainly could not be viewed under more favourable conditions. If after going over the building on Wednesday there remained one of the not small crowd of carpers that existed a short time ago, well—he may be despaired of. The writer recalls with some pleasure a visit of inspection that he paid to the Quarantine Station at Nagaura, then just completed and ready for use. So delightfully laid out were the grounds, so cool in summer and warm in winter, so comfortably furnished and efficiently fitted up did the rooms for the detention of suspects appear to be, that several of the party at once applied for leave to rent them in the "off" season, at which offer of course the officials smilingly shook their heads. Well, that is the sort of impulse that is awakened when, on a fine day at any rate, one looks about the reformed Yokohama General Hospital, so wide are the verandahs, so invitingly homelike and cosy the rooms, so refreshing to the eye the surrounding policies.

Among those who responded to the invitation there were doubtless some who remembered the unimproved Hospital and could institute comparisons. The first of the changes to arrest the attention of such persons would be that of the main entrance. Formerly the entrance was in the lane that led down to No. 88 and the Convent. It could hardly have been more successfully hidden away from persons passing along the main road. A very handsome gateway now gives access to the compound, and the bungalows that formerly occupied the entire front of the lot have been moved to each side of the entrance. That on the right is occupied by the Japanese assistant-doctor, Dr. Ishiuri, and that on the right it is desired by the Committee to continue as at present to let to persons or families who may not be ill enough to require accommodation in one of the Hospital Rooms but whose cases yet call for special treatment. It is at present occupied and there are several applications already in view for it. Beyond and in line with it towards the Hospital is the old hydropathic establishment that stood in the centre of the grounds. A mere shell, it was altered and fitted up like the others. It now accommodates the Steward, Mr. Ellis, and his wife. Further beyond this is the observation ward, a double-roomed building of most commodious proportions and excellently equipped. Opposite this and forming a wing of the Hospital on the site where formerly stood the insane ward are the rooms of the Matron, Miss Gray, and also quarters for nurses.

The Hospital proper, which has undergone considerable alterations, is reached from the front by a very handsome approach. Among the improvements are the entire remodeling and rebuilding of the lavatory, and the much needed reformation of the kitchen. This important adjunct of such an institution was formerly a small, dirty insanitary hole; it is now a well ventilated, spacious place, kept in spick and span order, and has a large scullery and still-room erected of brick.

On the ground floor there are the old operating room and its accessories, now used only for minor operations, and, adjoining it, as an east wing, are various quarters, including a nurses' dining room and other accommodation. The ground floor of the main building is devoted to first and second rooms, sitting rooms, etc., and, forming the west wing as well as giving egress upon the lawn, is a covered way leading also to the new operating, anaesthetic, sterilising, and washing rooms. For one day visitors were permitted to enter these—all but the first named, across the open doorways of which non-admittance cords were stretched—and thus to note the dazzling whiteness and

purity of walls, ceilings and floors, and, especially in the sterilising chamber, the different varieties of apparatus provided. A pair of twin cylinders will deliver sterilized water put into them cold only ten minutes before. There are two stair-cases leading to the upper floor, one from the front and another from the vicinity of the operating room. Ascending by the latter we find ourselves on the south front where important improvements are being effected and probably in ten days will be completed. Formerly a long ward ran along the whole of this front. This has been re-arranged and there are now five first rooms each with a verandah, nearly all with a view of Fuji and all with, to a convalescent, the inestimable boon of the green lawn below. These rooms, it is not difficult to see, will be in demand for they are cool in summer and warm in winter. Opposite them on the north side of the wide corridor are second class rooms hardly if at all less comfortably fitted up. On this floor the whole width is taken up on the west side by a very large ward, lofty, well-lighted and ventilated. Indeed a feature of the Hospital is the heating and ventilation, in respect of the former of which an improvement is contemplated by the introduction of new radiators. It remains to be added that there are four bath rooms, spacious and well-appointed.

The reception organized by the Ladies' Advisory Committee was held under the most happy conditions. Gaily coloured cloth surrounded the little kiosques and tents that had been erected, and for those who preferred to sit out on the lawn there were little tables. Lemonade, strawberries and cream, tea, cake, and all the other delicacies that could suggest themselves to an experienced committee were much in evidence, being dispensed with grace and hospitality. The arrangements in connection with the reception were under the charge of the following ladies: Mrs. J. C. Hall, President; Mrs. Lowder, Mrs. Manley, Mrs. Dearing, Mrs. E. J. Moss, Mrs. Irving Bell, and Mrs. C. K. Martin, to the last mentioned of whom also the thanks of visitors are due for her kindness in receiving and showing them over the Hospital.

#### THE BIRTHDAY GARDEN PARTY.

The garden party held on Monday afternoon at the residence of Mrs. D. H. Blake in aid of the building fund of the Union Church was an unqualified success. Little silk bags had been sent out accompanied by cards bearing the following verse:—

This birthday party is given to you,  
'Tis nothing novel, 'tis nothing new.  
We send you a little sack,  
Please either bring it or send it back,  
With as many cents as you are years old,  
We promise the number will never be told,  
Or if you doubt our promise and think we'll tell,  
More or less will do just as well,  
The friends with greetings most hearty,  
Are quite sure you'll attend "your own birthday party."

The many who responded in person were received by Mrs. Blake, who was assisted by Mrs. Bagnall, Mrs. Swain, Mrs. Thorn and Mrs. Colton. Refreshments were served by a number of very prettily dressed young ladies. The Grand Hotel band was in attendance and musical selections were given in the residence by Miss Mendelson (vocalist), Mrs. C. H. Thorn (violin) Mr. S. H. Somerton (vocalist) and Mr. Salinger ('cello). It remains to be said that the grounds as well as the house were very tastefully decorated and the guests were entertained in various ways.

Mrs. Blake, on behalf of the Committee of the Ladies Auxiliary, begs to thank all those who contributed so generously towards the success of the Garden Party and especially the Grand Hotel who gave the use of their Band. The proceeds amounted to 547.45.

The owners of the Norwegian steamer *Harry Balkow* (1,006 tons gross) which was captured on April 7th in the neighbourhood of Etorofu, Hokkaido, lodged a petition on June 3rd in the Yokosuka Prize Court asking for her release.

## THE BATTLE OF THE JAPAN SEA.

WHEN ROJESTVENSKY reached Saigon he seems to have carried with him the conviction that Togo's chief base of operations would be the Formosan Channel. *En route* from Madagascar he had believed in a much circulated story that some enterprise would be essayed against him if he attempted the Sunda Strait, and he avoided that danger, in truth an imaginary danger, by taking the direct route through the Malacca Strait. But from Saigon northward he imagined that his chief peril lay in the channel between Formosa and the Chinese coast. It was here that France's curiously benevolent neutrality stood him in conspicuous stead, for he was enabled to lie securely in Indo-Chinese ports while his scout ships investigated the conditions existing in the Formosan Channel. Thus he obtained the assurance that in this district the Japanese had not established any strong base and that their stand was to be made in home waters, namely, at Tsushima or at Tsugaru and its adjacent avenues. ROJESTVENSKY then passed into the Pacific. That was good strategy. It subjected his enemies to the perplexity of the double objective. On the east of Formosa the Russian Admiral would be equally favourably situated for taking either the southern or the northern route to Vladivostok, and the Japanese would have little to guide them in divining his selection. He seems to have steamed through the Ballintang strait during the night of May 17th, eluding observation altogether though various precautions had been adopted to observe him. Indeed, in the matter of bringing out to the far-distant East without accident of any kind his great and heterogeneous mob of ships and in the matter of handling them as he approached his bourn, ROJESTVENSKY showed himself to be a commander of consummate skill. During his stay in Indo-Chinese waters, where the telegraphs were always at his service though closed to every one suspected of working in the interests of his enemy, he received information, supposed to be entirely credible, that Togo had divided the Japanese fleet for the simultaneous custody of Soya, Tsugaru and Tsushima, and that the force detailed for duty at the last-named channel was comparatively petty. This accorded with probabilities. For, since among the three avenues Tsushima offered greatest facilities for the passage of a large fleet and was, moreover, the natural door of entry to the Sea of Japan, its selection being thus physically indicated would doubtless appear strategically unlikely in Togo's eyes. Chance threw in ROJESTVENSKY'S way an opportunity of mystifying his adversary. He had done much to mystify the Japanese already, had visited and revisited French ports so that his movements in Indo-Chinese waters became invested with a large element of caprice; had circulated rumours that Chusan was his new rendezvous; had contrived an unobserved

junction with NEBOGATOFF'S squadron, and had concealed his own route most skilfully. But although so much had been already done, he neglected nothing that could contribute to the mystery. As his ships lay coaling off the Batan Islands on the 18th of May a Norwegian steamer passed within reach of his scouting cruisers. She was summoned, examined, found to be consigned to a prominent Japanese firm and released, the Russian officers telling her master that their destination was Tsushima. ROJESTVENSKY knew that this intelligence would be conveyed forthwith to the Japanese Admiral, and he argued that Togo would surely construe it in the opposite sense. But he argued also that Togo would not act immediately on this construction; he would seek collateral evidence, and would find it by computing the time needed for a squadron to travel at a given rate from the Batan Islands to Tsushima Straits. The calculation could not be absolutely accurate, but it could be a close approximation, and if at the approximate time the Russians were not found approaching Tsushima, then the obvious inference would be that the story told to the Norwegian was a ruse, and that the northern passages were ROJESTVENSKY'S real destination. Admiral Togo seems to have acted in part as his enemy anticipated. He did make calculations of time and distance, and he arrived at the conclusion that ROJESTVENSKY should be reported in the neighbourhood of Quelpart by the evening of the 23rd or the morning of the 24th at latest. But the night of the 23rd passed, as did not also the whole of the 24th, without any sign of the enemy's approach, and when the morning of the 25th dawned still uneventful, the Japanese Admiral's anxiety must have been keen. But Togo appears to have made his estimate from the very outset. His own great experience in handling and moving squadrons enabled him to construct an equation including every really important factor of probability, and the result had been a firm conviction that the Tsushima avenue was dictated to ROJESTVENSKY by absolutely imperative considerations. At Tsushima, therefore, Togo waited unwaveringly and there he made all his preparations. Meanwhile ROJESTVENSKY had purposely slowed down on his voyage from the Batan Island up the China Sea. He judged, however, that two days' delay would suffice for his purpose, and on the 25th of May he made *acte de presence* by allowing six of his supply-steamers to enter the Yantsze. The incident perplexed the public profoundly. A dozen conjectural explanations were offered. For Togo, however, one explanation sufficed; namely, that ROJESTVENSKY was in the China Sea and that Tsushima was his objective.

At a little past 5 on the morning of the 27th Togo's scouts reported by wireless telegraph that the Russians were drawing up from the direction of Quelpart, being then some 70 miles distant. The morning was foggy, and the quality of the approaching vessels could not be clearly ascertained;

they might be ROJESTVENSKY'S main fighting force or they might be only a few weak craft, offered as sacrifices to engage the attention of the Japanese in the south while the battle-ships and their strong consorts forced the northern avenues. Togo's plan was this. Divining the enemy's belief that Tsushima was not powerfully guarded, he sent out to meet the Russians a squadron composed so as to promote that belief; a squadron consisting of altogether third-class fighting material, but including the *Chinyen*, *Itsukushima*, *Hashidate* and *Matsushima*, which mounted altogether seven 12-inch guns and could therefore engage the Russians at long range and prevent them from closing in. The function of this squadron was to draw ROJESTVENSKY through the Eastern Channel of the Straits into the area of the Sea of Japan lying between the three islands of Tsushima, Iki and Oki. As the Russians entered that area, Togo with his battle-ships would bear down on them from the north-west, coming round the north of the island of Tsushima, and KAMIMURA with his squadron of armoured cruisers would fall upon their left-rear, coming round the south of Tsushima.

At noon Admiral Togo knew that the full fighting force of ROJESTVENSKY'S Squadrons, the Second and the Third combined, was entering the East Channel of Tsushima, and that the danger of a mere diversion need no longer be apprehended. He telegraphed the welcome news to Tokyo, and ran up the signal:—"The fate of the Empire depends upon this effort. Men, do your best."

Neither of the fleets now approaching each other to fight one of the most momentous naval battles in the world's history, possessed such a preponderance of strength as to render the issue certain. In first-class fighting material the advantage was slightly with the Russians. They had 8 battleships, 3 coast-defence iron-clads and 3 armoured cruisers; 14 vessels in all, mounting twenty-six 12-inch guns, seven 10-inch and twelve 9-inch. The Japanese ships in the corresponding class were four battle-ships and eight armoured cruisers; 12 vessels mounting sixteen 12-inch guns, one 10-inch and twenty-eight 8-inch. Thus the number of armour-piercing cannon on both sides was equal, namely 45, but the superiority was distinctly with the Russians. In second-class fighting material, however, the Japanese were much the stronger. It is true that two of the Russian second-class cruisers, the *Aurora* and the *Oleg*, outclassed anything in the same category on the Japanese side; but whereas the Russians had only six cruisers of the second and third classes the Japanese had twenty-one, and though several of these were small vessels which dare not venture into action with battle-ships or armoured cruisers, they carried guns that made them formidable antagonists for vessels of their own type. Thus the armament of the twenty ships comprised three 12.6-inch guns, eight 10-inch, four 8-inch and thirty-five 6-inch, whereas the six Russian cruisers

mounted only twenty-six 6-inch. On the Japanese side must also be mentioned the third-class battle-ship *Chinyen*, which, though too slow to manoeuvre with either the First or the Second Squadrons of Togo's Fleet, carried four 12-inch guns and would therefore be a formidable antagonist under some circumstances. It is not publicly known whether Admiral Togo had all the above second-class and third-class cruisers in action. But he might have had. And what he certainly did have was sixteen squadrons (4 units each) of torpedo-boats, craft which were entirely absent in ROJESTVENSKY'S Fleet. Indeed it is plain that Togo's plans were laid largely with a view to the employment of these torpedoers. He can not have hoped to accomplish, at least on any considerable scale, the feat hitherto deemed so difficult as to be merely fortuitous, namely, the sinking of battle-ships or armoured cruisers by means of gun-fire alone. His programme was to hold the Russians under a heavy cannonade throughout the day, and then to loose against them a cloud of torpedo boats during the night. Torpedoes, it is true, had a poor record thus far. On the memorable night of February 8th, 1904, when they surprised a whole Russian fleet lying at anchor outside Port Arthur, they only succeeded in getting in two projectiles; on the 10th of August, in the one great naval battle of the years they made not so much as one hit, and for three consecutive nights they sought abortively to shatter the *Sevastopol* lying under the shadow of Mantashan. It did not appear that a history of so many virtual failures was destined to have a very brilliant sequel. Togo, however, by vehement exhortations and by special courses of instruction, had so thoroughly re-educated his torpedo-squadrons that he expected them to completely rehabilitate their reputation in the Battle of the Sea of Japan.

Up to 10.30 a.m., by which time his fleet was nearing Kanazaki, the southern point of Tsushima, ROJESTVENSKY, by allowing his auxiliary cruisers and special-service vessels to steam at the head of his array, showed his confidence in the insignificance of the resistance he expected to encounter. Such glimpses as he obtained of the decoy squadron through the fog confirmed his impression that he had tricked the Japanese and that the bulk of their fighting force was away in northern waters. Before entering the East Channel, however, he recalled the auxiliary cruisers and special-service steamers, so that his column now had at its head the battle-ships *Alexander III.*, *Navarin* and *Knias Suvaroff*. A strong and steadily freshening breeze was now blowing from the southwest, lifting the fog from the face of the water but raising a heavy sea. Thus far the climatic conditions had been eminently favourable to the Japanese. The mist, had it continued, must have greatly helped ROJESTVENSKY, but up to this moment it had helped to hide from him Togo's main squad-

rons and also to partially veil the decoy squadron which might otherwise have been roughly handled, and now it was lifting just when the Japanese needed a clear horizon for their attack. Besides, a rough sea greatly multiplied their chances of making deadly gun-practice. For it had always been their custom to exercise their gunners in stormy weather, on the principle that unless a man can shoot accurately from an unsteady platform, he is of little use as a marine artillerist and must moreover forego the advantages offered by a target which, when pitching and rolling in high waves, exposes vital parts never uncovered by a vessel riding on an even keel. The Russians, on the contrary, were known to have carried on their gun-practice chiefly in still waters, and it was certain that they would score few hits in such conditions as began to develop at noon on the 27th of May in the Straits of Tsushima. Moreover, the Japanese Squadrons steaming into action from the north-west and the south-west, had the wind astern, so that their smoke poured down on the Russians, and further they had the afternoon sun behind them.

Before the head of his column emerged from the East Channel, Rojstvensky, looking through the rapidly clearing mist, discovered that his psychological conjectures had been entirely false: the Japanese fleet, in full strength, was assembled for his reception. On his port bow, at a distance of some 15 miles, he saw Togo's battle-ships closing in on him, and astern KAMIMURA'S cruisers were rapidly forging up. The Russian Admiral now changed his formation to double column line ahead, but for some unexplained reason he committed the error of ranging his second-class fighting material in the western column so that the weight of the Japanese fire fell on it. This mistake had considerable influence on the fatal result, for the Russian western column being speedily broken up, its disorder affected the morale of the whole fleet.

At a few minutes past one o'clock the first gun was fired from Togo's battle-ships, and the Russians replying vigorously, the action soon became general. The Baltic Squadrons had now been drawn into the Genkai Sea, the very place where the transports *Hitachi Maru* and *Sado Maru* had received the attack of the Vladivostock cruisers a year previously. The story of the events during the day may be summed up in the brief statement, splendid gunnery on the Japanese side and the worst possible shooting on the Russian. As the vessels of ROJESTVENSKY'S Squadrons rolled and pitched in the heavy sea, shell after shell tore its way into their hulls below the water-line, and it soon became evident that one theory at least was to be controverted that day, the theory that a battle-ship can not be sunk by gun-fire. The *Ossliabya*, the *Alexander III* and the *Borodino* were seen to be listing more and more to port, and one by one these fine vessels turned over and went to the bottom. The *Ossliabya's* 7½

inch belt may not have sufficed to resist the 12-inch projectiles of the Japanese, but in the case of the *Alexander III* and the *Borodino* another cause was probably responsible. Their watertight compartments with fore-and-aft bulkheads seem to have proved their ruin. Pierced in succession on one side only, these compartments as they filled destroyed the equilibrium of the ships. At least two other vessels were sunk, but these were of a much weaker type. Those that remained afloat were nearly all severely injured. Meanwhile the Russians had been firing vigorously but wildly. They discharged at least two shells for every one fired by the Japanese, but their number of hits was quite insignificant compared with their own wounds, and the results were equally petty, not one Japanese vessel being sunk and only two third-class cruisers temporarily disabled.

Fortune now again favoured the Japanese. A principal feature of Togo's strategy was to hold the Russians until night-fall in the south-eastern corner of the Sea of Japan, and then, having shattered them with gun-fire, to launch against them his crowd of torpedo-boats, which should finish the work done by the battle-ships and cruisers during day-light. The destroyers had not waited for darkness. They had manoeuvred boldly during the afternoon and had lodged several of their missiles. But the great task of destruction was to be wrought at night, and while this was in progress the fighting ships were to draw off towards the north. As the afternoon wore on, however, it became very doubtful whether the sea would not be too rough for torpedo-boats to manoeuvre. Should that prove to be the case, the destruction of the Baltic Squadrons must remain only very partially accomplished. At the scene of action and in Tokyo men waited breathlessly, and when, at 5 p.m., the wires flashed to the Admiralty in Tokyo "wind and sea rapidly falling," it was thankfully understood that, having contributed materially to the Japanese success during the day, the elements were to be equally favourable during the night.

There had been a very widely entertained idea that in this supreme fight for the mastery of the Far-Eastern Seas the Japanese would use submarines. They did not. The submarine's *début* in action remains to be made. There was no novelty. A cloud of torpedo-boats settled down on ROJESTVENSKY'S ships and stabbed them to death. The record was completely broken, for whereas the torpedo had hitherto shown itself comparatively innocuous, it now gave the *coup de grâce* to ship after ship. Apparently three battle-ships and five cruisers were sent to the bottom by this missile. There were deeds of grand courage, as when a torpedo-boat dashed in and rescued the crew of a sinking consort which lay helpless within 400 yards of the enemy, and as when boat after boat rushed up to within stone's throw of its victim be-

fore discharging its Whitehead. But the Japanese had already taught the world to expect such spectacles when they fight. Three of the little craft were sent to the bottom, though happily most of their crews were saved. After that the battle resolved itself into a debacle on the part of the Russians. Out of ROJESTVENSKY's fine fleet only a group of 5 vessels preserved some semblance of formation, the battle-ships *Orel* and *Nicholai I*, the coast-defence iron-clads *Admiral Apraxin* and *Admiral Senyavin* and the cruiser *Izumrud*. These attempted to escape northward, but were overhauled by Togo on the 28th, and finding themselves enveloped on three sides, surrendered, the fast cruiser *Izumrud*, alone making good her flight to perish later in Vladimirov Bay. A few of the others had struggled away from the scene of the great battle, but they were followed and sunk, so that finally out of 29 fighting ships only 4 succeeded in reaching Vladivostok, namely, two cruisers and two destroyers. The Russians showed their usual valour. They fought devotedly but inefficiently. Two ships, the *Admiral Oushakov* and the *Dimiri Donskoi* refused to surrender when summoned by a greatly superior force, and battled till they were sunk. No destruction so wholesale is on record. It was essentially a victory of the efficient over the inefficient.

#### CHINA AND THE UNITED STATES.

IT appears that a very strong feeling on the subject of America's restrictive legislation is growing up in China. Some time ago there was talk of retaliatory action being taken by the native population of Shanghai, and indeed the agitators seem to have been restrained merely by the obvious reflection that their demonstration would have been premature. We now learn from telegrams in the columns of Tokyo journals that the sentiment of unbrage has spread to many of the provinces; that vehement memorials have been addressed to the Peking Government, and that it has been decided to abstain from purchasing American books or American articles at many of the schools throughout the empire. In thus acting the Chinese will doubtless be condemned by foreign public opinion as they are habitually condemned, with little thought for the rights and wrongs of the matter in question. But no man of ordinarily fair mind can fail to sympathise with them. The ostracism to which certain sections of the American nation seek to condemn them is one of the bitterest insults that could be put upon any people, above all on a people who, taken *en masse*, are not inferior in civilization to any nation in the world and are manifestly superior to many. The Chinaman's sole offence is that he is content to live more frugally and to work for a smaller wage than his American rival. Those who contend that he lives on a lower plane than the communities of Western towns and that his presence consequently exercises a demoralizing influence, seem to

forget that every competent municipality should be able to secure sanitary conditions within its jurisdiction, and seem to forget, above all, that the abyss of vice to which Occidentals descend in their cities is much deeper than anything to which the Chinese fall. There are some matters—matters of vital importance to the happiness and well-being of every community—in which the morality of the Chinese is palpably superior to that of Europeans or Americans, and the Chinese, after watching the ways of the West for two centuries, recognise these distinctions. Therefore their wrath must be roused to fever heat when they find themselves internationally discriminated against on grounds profoundly insulting. If they rebel against such treatment, if they retaliate, what more can be said than that they are human? There is, however, another specially interesting feature of this agitation; namely, the indication it affords that national feeling is beginning to be widely diffused throughout China. Is it conceivable that, twenty or thirty years ago, the native population of Shanghai or the students at numerous provincial schools would have been roused to a display of genuine patriotism by this question of American legislation? History shows that on two occasions Shanghai has been the scene of vehement demonstration, but they were provoked by acts on the part of the French which appealed locally and directly to the agitators, and thus these incidents may be classed with the mob protests so common in China. This matter of discriminative legislation, however, is comparatively indirect and academical. It would not have stirred any strong emotion among the masses of the huge Middle Kingdom a few decades ago, and the vitalizing effect it seems to be now producing suggests that China may perhaps be recovering from the one malady which has hitherto sapped her national vigour. Of course it is easy to see where the remedy has been compounded. It has been compounded in the newspaper office and the telegraph office, the nerve centres of modern China. But because the process of vitalization is evident, its possible results are none the less disquieting. Suppose that China should really be galvanized into a patriotic entity, and should awake to vivid consciousness of the consideration that a sovereign state is entitled to claim? It is not pleasant to contemplate the day of retaliation that might then dawn.

#### THE DELAYED REPORTS.

IT could have been confidently predicted that the delay made by the Japanese Government in publishing the reports of the loss of the battle-ship *Yashima* and the cruiser *Takasago*—none of the other vessels included in the lately published list were of consequence—would evoke hostile criticism, and it might have been predicted with equal confidence that alone among English jour-

nals the *Kobe Chronicle* would construe the concealment in a sense as unfavourable as possible to Japan. Both predictions would have been borne out by facts. Criticism has been provoked, and the *Kobe* journal, which excels in the Tartuffish art of damning with the voice of simulated friendship, declares that Japanese official reports will not again be credited so long as this war lasts; suggests that Japan may now be in a critical position in Manchuria though no evidence of it is allowed to appear; hints that it is no longer safe to invest in Japanese securities; implies that investors were deliberately deceived by Japan, and compares the Japanese Government to a tradesman who, when negotiating a loan on his business, conceals the fact that he has recently suffered a heavy loss. It would not be possible, we think, to pen an article where a malicious desire to injure this country is displayed more conspicuously, or an article where the writer's want of discernment is more palpable. Only a mind much warped by prejudice could find an analogy between, on the one hand, an act of reticence dictated by high interests of State and by the sacred duty of saving human life, and, on the other, a vulgar act of mercantile fraud undertaken for the sake of personal pecuniary profit. It would be indeed lamentable if any Japanese reader were betrayed into the error of imagining that such slanders as we have here quoted represent the views of fair-minded Englishmen. One of the most rudimentary, most essential and most widely recognised principles of war-fare is that a belligerent is not bound to publish any losses the revelation of which would injure his cause. Many strategists and diplomatists go a great deal further: they deliberately misrepresent their country's condition. That was done frequently by the Boers and their friends during the South-African war, and he were a bold man who would deny that it has been done not once only but many times by the Russians in this war. We put aside all measures of positive deception, however. Our business is only with the negative act of observing silence. The Japanese throughout the present war have been remarkably veracious and moderate in their official despatches. They have never directly or by implication magnified their own achievements or the enemy's losses, never minimized their own failures or the enemy's gains. It has evidently been their earnest endeavour to deserve the world's confidence, and they have deserved it. Doubtless, therefore, their inclination was entirely opposed to temporarily concealing the loss of the *Yashima* and the *Takachiho*. But they were in a position of extreme difficulty. The supreme crisis of this war was when the Pacific Squadron of 6 battle-ships and one armoured cruiser was lying scathless in Port Arthur expecting the arrival of another Squadron of 7 or 8 battle-ships and 3 armoured cruisers, while Togo

kept ward outside the port with 4 battle-ships and 8 armoured cruisers. Had that second squadron employed the expedition plainly dictated by the situation, the Japanese Admiral might have found himself at any moment caught between two fleets each nearly as strong as his own, and both far stronger when combined. Nothing saved the situation except the delay in the coming of the Baltic Squadron. It was a matter of life or death for Japan to do nothing which might hasten the advent of that Squadron. Now suppose that in June last St. Petersburg had been informed of the sinking of the *Yashima*; of the reduction of Japan's little squadron of battle-ships by one-fifth; could anything have more effectually encouraged the speedy despatch of the Baltics? Would the Russian Government have paused to collect such a force as it deemed necessary after Port Arthur had fallen and after the Pacific Squadron had been destroyed? No one can answer these questions with absolute assurance, but every one can see what kind of answer suggested itself at the time when the problem of reticence or frankness had to be considered by the Japanese authorities. To sympathise with them in their dilemma and to appreciate it must be the inclination of every fair-minded observer. To charge them with chicanery and to compare them to a fraudulent tradesman who borrows money under false pretences is the impulse of an imagination perverted by malice. Every Government possesses and exercises the right to judge what degree of publicity is dictated by the interests of the State's safety, the *suprema lex*. It may be that the highest code of international ethics does not sanction positive deception even where the fate of a country is at stake. That is a difficult and perplexing problem. But to pretend that a Government must take the world absolutely and immediately into its confidence, must expose all its difficulties to an enemy who is waiting to turn them to deadly advantage, is quite silly, and to lay a charge of fraud at the door of a Government which does not follow that reckless and insane line of procedure is simply malicious slander.

#### ADMIRAL NEBOGATOFF'S SURRENDER.

IT may be predicted that no incident in this war will provoke greater controversy than the surrender of the four Russian ships which hauled down their flags to Admiral Togo at the Liancourt Rocks. A Japanese newspaper (the *Hochi*) has published some interesting statements on the subject, attributing them to a member of Admiral NEBOGATOFF's staff, and from them we learn the simple fact that the Russian commander, appreciating that no hope of successful resistance remained, decided to surrender. That much might have been surmised, but there has been an explanation, suggested by rumour, that the four ships found themselves with empty magazines, which discovery

greatly assisted NEBOGATOFF's resolve. What the public will be disposed to contend, however, is that the surrender was unjustifiable under any circumstances. Side by side with the conviction that a modern line-of-battle ship can not be sunk by gun-fire, there has grown up a theory that such a vessel is not governed by any of the rules applying to naval craft of other ages, and that her surrender to an enemy is excluded from the list of admissible contingencies. There is, of course, sound practical reason for the creed that artillery alone can not send a battleship to the bottom. Her armour protects her against the projectiles of nearly any gun hitherto mounted for the purpose of sea fighting, and her water-tight compartments guarantee her against fatal consequences even though her armour be pierced. This faith has now been rudely shaken. Whether because of the extraordinary shattering force of the SHIMOSE explosive, or because some of the battle-ships which now lie under the Sea of Japan were fitted with compartments having fore-and-aft bulkheads and thus lost their stability when these compartments were breached from one side only, it is no longer possible to regard the armoured ship as unsinkable by gun-fire. But the other theory, the theory that surrender ought to be out of the question in the case of a battleship—on what is it founded? It has nothing to do with the invulnerability of the ship. It appears to be based solely on the fact that her enormous value as a fighting unit should compel her commander to blow her up, sink her or destroy her by any available means rather than suffer her to fall into the enemy's hands, thus becoming a potential weapon in subsequent fights against his own country's squadrons. There is certainly a great deal of force in such a contention. The responsibilities that devolve on the officer commanding a line-of-battle ship are tremendous. Even to the richest country her loss is almost catastrophic from a pecuniary point of view, and when we remember that her complement consists of from 700 to 900 men we see that as a repository of human lives she may be included in the same category with a great Atlantic liner. Assuaging every effort should be made, every expedient employed, to keep such a machine from passing into an enemy's possession. But is there no limit to such efforts and expedients? Take the case of a commanding officer situated as Admiral NEBOGATOFF was situated on the 28th of May off the Liancourt Rocks. He had to decide suddenly and rapidly what fate to decree for four ships. Every one of them had been greatly damaged by the fire of the Japanese during the previous day. Their decks had been searched by fragments of big shells; many of their guns had been put out of action; few of their boats were available; numbers of their crews had been wounded, and they carried a total of some twenty-one hundred officers and men. NEBOGATOFF was required to choose between three courses. He had

either to blow up the ships, or to open their Kingston valves and send them to the bottom, or to surrender. Remember that he was actually under fire from squadrons overwhelmingly superior in fighting capacity to his own. Had he resolved either to blow up the vessels or to sink them, he must first have made provision for getting off his men. No European theorist will contend, we presume, that he would have been justified in setting a match to his magazines or opening the Kingston valves with all his crews on board. Sir RICHARD GREVILLE and his master-gunner live in history, but we do not ask modern Admirals of fleets to follow their example. To provide for the safety of NEBOGATOFF's crews meant, also, to provide for the safety of his wounded. It is inconceivable that he should have left his wounded to perish with the ships, taking off his unwounded only. There can not have been less than from 200 to 300 wounded in the four vessels. To get them into boats would have been an affair of hours, and the Russian Admiral had only minutes, a very few minutes, at his disposal. Do those that condemn him think of these things? One feels, naturally, a glow of admiration when one hears of the *Admiral Oushakoff*, whose commander, under somewhat similar circumstances, deliberately chose to be sunk rather than to surrender; and one recognises that the commander of the *Dimitri Donskoi* did exactly the right thing when, having landed his crew, he sent his ship to the bottom. But if we assert that the *Admiral Oushakoff* should be taken as an example, then we subscribe to Japanese military ethics, and if we select for precedent the case of the *Dimitri Donskoi*, then the question of getting off the crews confronts us. For our own part we believe that the Japanese canon is the only true one—death before surrender. But we plead guilty to being sufficiently illogical to shrink from the application of the canon on a scale so wholesale as that of the four ships at the Liancourt Rocks. It would be very interesting to hear the views of Japanese officers and philosophers on this point, but as it is not their own affair they will probably refrain from discussing it.

#### YACHTING.

Up to noon on Saturday there was only a moderate southerly wind blowing, but the barometer showed that more was to come, and by 1 p.m. it was tuning up good and fresh, and for the third Saturday running there was too much wind for any but the bigger yachts. The Cruising Class was scheduled to start at 1.30 p.m., to race over the Kawasaki and Honmoku Lightship Course. When the preparatory gun was fired, *Nina* was the only yacht under way, and those on board did not notice that *Asagao* only left her moorings after gun-fire, and that therefore they were alone in the race. *Asagao* ran out beyond the shipping outside the Breakwater, and then returned, leaving *Nina* to complete the course alone. With one reef down, the latter made fast time to the outer mark, which was turned at about 2.20. There was a big sea running along the Northern shore, and the beat back was strenuous work. At about 4 p.m. they had the Lightship abeam, but held on into smoother water, eased sheets on going about for the Lightship, and finished the course at about 5 p.m. None of the other classes raced.

## MONTHLY SUMMARY OF THE JAPANESE RELIGIOUS PRESS.

Comments on the Imperial gift to the Young Men's Christian Association appear in the *Kirisutokyo Sekai* of May 11th and in the *Gokyo* of May 13th. The *Kirisutokyo Sekai* says that the notice taken of the work of the Young Men's Society by the Emperor and Empress is an indication of the liberal attitude of the nation towards Christianity as well as of the readiness of their Majesties to help forward benevolent work among their subjects by whomsoever carried on. The more recent donation to the Okayama Orphan Asylum was doubtless made in the same spirit.\* In the history of Christianity in Japan this incident is of great interest and importance, as it shows how completely old prejudices against the new creed have been removed by the manner in which Christians have acquitted themselves in the various spheres they have filled. The Church must not depend upon worldly patronage of any kind for its success, but there is no denying that such notice as it has now received will help forward its work in various ways, removing many of the doubts with which its doings have been regarded by narrow-minded people.

The *Gokyo* says that the reception by the Church of such a gift is a striking confutation of such arguments as were set forth by Dr. Inoue Tetsujirō some years ago in his noted book *Kyōku to Shūkyō no Shōtoku*, (the Conflict between Education and Religion) in which he maintained that there was something radically opposed to the nature of Japanese nationalism in Christianity. These views are now held by very few people, but such as do hold them will probably be convinced by the action of the Emperor and Empress that they are quite untrustworthy. Freedom of belief has long been allowed in this country, but nevertheless Christianity has been regarded as a foreign creed not altogether suited to the Japanese people. The Emperor's patronage shows that the work being done is deemed worthy of support even by those who are not Christians. The *Gokyo* proceeds judiciously to point out that this new form of patronage may be attended with certain dangers to the Church. The history of Christianity shows that she has been most prosperous when opposed and persecuted, and that the patronage of the great has often proved anything but a blessing. The *Gokyo* then refers to a statement made by Mr. John A. Mott in London to the effect that Bismarck was once asked whether he recommended Japan to make use of Christianity or not (*Nihon wa Kirisutokyo wo sayō subeki ya inayū?*). His reply was that they had better not do so. Whether Bismarck did actually make this remark or not is uncertain, says the *Gokyo*, but if he did, it is very probable that he foresaw that Government patronage in Japan would do more harm than good to Christianity. We have been fortunate in the past in being without this. At last it has come. Will the Christian ship make as much progress in a calm sea as she has done against the contrary winds of past years? We are thankful, but feel the need of great caution, concludes the *Gokyo*.

\* \* \*

In the *Kirisutokyo Sekai* of May 11th we find an article entitled "The Church of Christ in Japan," written by Mr. Yamaguchi Kinsaku, which, it seems to us, conveys a good idea of the kind of questions which are exercising the minds of Japanese Protestant Christians to-day. We epitomize the article as follows:—Among Japanese Protestant Christians of various sects the feeling that the Church of Christ in Japan needs a certain amount of reorganization and that some important changes are called for in order to increase the influence of the Church in the country prevails very generally. These changes may be summed up under four headings thus:—(1) Sectarianism must be entirely got rid of and members of the Church must work together as one body. (2) Self-support and thorough independence must become accomplished facts. (3) The spiritual development of the minds of Christians and

marked progress in thought must be realized. (4) Measures must be devised for making the church's influence thoroughly felt in society generally.

(1) In the early days of Christianity in Japan Dr. Brown was the first to point out that it was most undesirable that all the divisions of Protestant Christendom in the West should be perpetuated in Japan, and so he began by naming the church he founded Ichi Kyōkai (Union Church) a beautiful name, which we regretted to see altered later on to Nihon Kirisutokyokai, (Japanese Christian Church); which seemed to hint at a desire to separate the Japanese Christian Church from Christian Churches in other countries. The name the Japanese Congregationalist took, Kumiai Kyōkai, was not a translation of the term Congregationalists, but an original term, given with the object of distinguishing the Japanese Christians belonging to this sect from all other Western Congregationalists. Thus we see that all churches in Japan hope to separate from foreign sects (*Kaku no gotoku Nihon ni oite wa izure no Kyōkai mo, O-bei no Shūha yori hanaren koto wo nosomu mono nari*). But while this is so, it is much to be regretted there is so little union among us. There are no doubt theological difficulties and ecclesiastical difficulties in the way of amalgamation, but to us these do not seem to be the principal obstacles to union. Personal animosities and pettiness prevail to too great an extent. As a nation we have not yet got rid of insular narrow-mindedness and the feudal spirit. Every section of the community is more or less split up into small factions. This tendency is seen in the churches. (2) Independence and self-support. The late Mr. T. Sawayama showed an enormous amount of devotion to this cause, and as a consequence of the measures he adopted, compared with other churches, self-support has made much progress in the Kumiai Kyōkai. But still the results seen are very poor. It would seem as though some of the churches as now organized and conducted would never become independent. But there is no reason why a number of small churches of a new type should not be formed, with self-support as a main object from the very first. It would be infinitely better to have a number of healthy, stable, active, small bodies than large and showy organizations which are dependent on outside help. It cannot be said that such self-supporting churches as do exist are all of the right sort (*Konnichi no dokuritsū kyōkai chū ni wa zūbun ayashiki dokuritsū kyōkai mo aru to no koto nari*). (3) How much real faith and deep religious thought is there in the church? It seems to us that men and women with deep religious feelings are very rare nowadays both in the East and the West. Much is said about the amount of Christianity there is in America, but, speaking briefly, it appears to us to be very shallow. What is known as modern thought in the West no doubt has sufficient power to transform our Oriental thought in various ways if only we can get to understand it thoroughly. In its bearing on religion does it not consist of the harmony of pantheism and personal theism in some such way as is explained by Mr. Ebina Danjō? Both Mr. Ebina and the Rev. T. Miyagawa have of late been insisting on fellowship with God, on the need of Christian experience and so on. Our Japanese Churches have given the American missionaries some anxiety on account of the amount of heterodoxy there is among us. But there is something that should cause more concern than heterodoxy. When we come to examine the state of our Churches as a whole we find that "thought is shallow, experience inadequate, faith unpronounced, we find that our pastors preach flavourless and cold-hearted sermons." (4) How far do we influence Society as a whole? The answer must be not so far as is desirable. It can't be said that on the whole our charities and the work of our Young Men's Society are thoroughly successful. These enterprises need to be reorganized.

\* \* \*

In the *Gokyo* (Methodist), Dr. Takagi is still commenting on the "Attitude of Educated

\* *Beikoku no Kirisutokyo no gotoku mo, hanahada daitan naru gen naredomo, moshi ichigen nite ieba, shisō ni oite, jikken ni oite hanahada sempaku naraau ya to omowaruru nari.*

laymen to the Church." But his articles are too long and too numerous to be dealt with here. Art. X appeared on May 20th. It deals with the subject of preaching. Dr. Takagi maintains that the pastors are mostly poor preachers. He says they have not time to prepare their sermons nor do most of them possess preaching ability. They spend much time in visiting and are sadly overworked. Preaching, Dr. Takagi thinks, as a means of drawing people is underestimated in Japan. In the West a large number of people attend churches almost solely on account of the fine sermons that are preached. But these preachers are not overwhelmed by a multitude of trivial secular matters connected with their churches week in and week out. They have leisure for reading and for the preparation of their sermons. Our pastors, continues Dr. Takagi, seem to think that a mere account of their own religious experiences, repeated many times, will suffice to hold a congregation together. But the inefficiency of our preachers is not altogether their own fault, says Dr. Takagi. The churches should be reorganized so as to allow of ministers having more time for pulpit preparation and in some cases the pastors now in charge should be replaced by better educated men.

\* \* \*

Writing on the immorality of certain Russian prisoners, the *Seikyo Shimpō* (Greek Church) says that the Japanese Government will do well to entrust the spiritual care of the prisoners to the Japanese branch of the Greek Church. It is pretty certain that, if Japanese Christians who are members of the same church to which the erring Russians belong can do nothing to reclaim them mere rules and regulations drawn up by the authorities will prove ineffectual. The representatives of the Greek Church here possess spiritual authority to which many Russians will readily submit themselves, even while holding in contempt the regulations drawn up by military officers for their control. It is said, continues the *Seikyo Shimpō*, that the liberty of residence and movement from place to place within prescribed limits granted to Russian officers conduces greatly to misconduct. But the best way to keep these officers straight, says the *Seikyo Shimpō*, is to place them under the surveillance of the Japanese members of the Greek Church.

It is now 25 years since the consecration of Bishop Nicolai as head of the Japanese branch of the Greek Church and the May number of the *Seikyo Shimpō* comments in the following terms on this fact. The consecration of Bishop Nicolai may be said to be the beginning of our church. We had Christians here before that, but we were not formally connected with the Greek Church in the way we are now. We now have our own ordained ministers and are connected with what is known as the Apostolic succession. In the case of an episcopal church if there be no Bishop there is no real church. The consecration day was on April 12th, twenty-five years ago, and we at first thought of holding congratulatory services, throughout the country. But these have been postponed till after the war. When they are held it is to be hoped they will be utilised as a means of stirring up the whole Church to greater efforts than any that have hitherto been put forth.

The *Seikyo Shimpō* publishes a short notice of Mr. Douglas Sladen's book "The Japs at Home." It says that Mr. Sladen does not seem to know modern Japan very well, that many of his ideas are founded on very limited observations made 20 years ago. His remarks on Japanese women are the mere repetition of the remarks of ill-informed foreigners at the open ports in the seventies. Where the *Seikyo Shimpō* agrees with Mr. Sladen is in what he says about the resemblance of the Japanese to the Italians in taste and character. This the *Seikyo Shimpō* thinks is a fact which is destined to receive more attention in the future than it has in the past. Some see resemblance in the languages of the two countries. Mr. K. Shirai has been contending that the Japanese tongue certainly belongs to the Aryan branch of languages. Mr. Sladen says that Christianity encourages the arrangement of women's hair in Western fashion, but this the *Seikyo Shimpō* thinks not to be true. The matter is left open as a rule.

\* Yet another Imperial donation is announced, a thousand yen to Mr. Hara Taneaki's prison-door relief work.—(WRITER OF SUMMARY).

Mr. Sladen says that the European method of doing the hair is very unbecoming to Japanese. With this the *Seikyō Shimpō* does not agree.

Commenting on the war, the *Seikyō Shimpō* says that most people fail to recognize what is the true significance of the struggle that is going on. Japan is not fighting for territory, nor for prestige, nor simply for the benefit of her own trade and that of other countries. She is fighting in order to place her relationship to Russia on a proper basis. Hitherto there has been no sincerity in the friendship that Russia has professed for Japan. In their hearts the Russians have despised the Japanese. It has been necessary to kill off a great many of them in order to establish friendly relations with the Russian nation as a whole. *Sensō wa kyōgi no kokusai datta (打破) shite, kokumin no kōsai wo shite shinko (真個) no yūgi teki narashimite, shikai dōbō no kwannen to hakuwaiteki no kanjō wo hatsujō (發揚) seshi-muru mono nari.* There is perhaps no better test of the nature of a country's civilization and ideals than war with another country. War teaches many things that no nation learns in time of peace. In case of an unscrupulous country, where the Government observes none of the moral maxims that guide individuals, war alone can demonstrate the fact that the policy of greed and aggression will sooner or later bring its own punishment. Russia needed to learn these lessons and we must always keep them in mind ourselves in all our dealings with other countries.

The *Seikyō Shimpō* translates and publishes from month to month a number of extracts from various foreign religious journals. The May number quotes from an Indian Mohammedan periodical called the *Arya Patrika*. This magazine is the organ of a kind of Protestant sect among the Mohammedans. It advocates; (1) Monogamy; (2) The rejection of the Purdah; (3) The granting of permission to traders to take interest on money lent. (4) And the abolition of slavery. The movement is said to be growing in popularity.

The *Dai Nihon* in an article entitled *Kirisuto-kyōkai no Haigwai Shisō* (Anti-foreign ideas in the Christian World) says that many of the noisy advocates of the Japonicization of Christianity are doing more harm than good. They say that foreign and Japanese evangelists should not work together, that connection with foreigners on the part of Japanese pastors and evangelists implies sycophantism and the lack of independence of spirit. They maintain that Christianity in Japan must be modified to suit the Japanese State, to suit Japanese family life, and so on. This is equivalent to saying, observes the *Dai Nihon*, that Christianity is to be deprived of the universality which is one of its greatest merits and be narrowed down to the dimensions of our special nationality. The universal brotherhood of mankind, the oneness of all believers in the creed, the thorough abolition of race distinctions inside the pale of the Church, these grand ideals, apparently never cross the mental vision of the agitators. In the conception of Tertullian all Christians are subjects in one great Republic. Origen boasted of belonging to a State which had been established by God and which had lasted for ages. Christ said that all who do the will of God were his brethren and sisters. Our Christianity is not of a kind to come cringing to the State and to profess to do its bidding, but a creed that has the authority to say to the State "Repent of your sins and come to Christ for salvation," concludes the *Dai Nihon*.

L'Abbe E. Ligneul has just issued a small book on Ethics entitled *Rinri no Genri*. It is one of the theological series named *Shingaku Kōyō*. In the opening pages of the treatise M. Ligneul contends that since ethics is chiefly concerned with the duties of men and women to each other, and since the nature of these duties depends very much on the place that man occupies in the universe, ethics has to be founded on theology. In the universe it is found that all things have a destiny. Each creature or thing fulfils its own destiny, that is, fills the post it was designed to fill. M. Ligneul says that before Christ taught

men what duties they were to perform he taught them what their real nature and destiny were. They were told that they had immortal souls, that their relations to the Creator were of the closest and most momentous kind. On p. 13 M. Ligneul defines man as a "reasoning animal" (*risetteki dōbutsu*). M. Ligneul is evidently of opinion that man's reasoning powers are quite different in their essential nature to those of ordinary animals. With him it is not a difference in degree but in kind that separates human beings from ordinary animals. M. Ligneul traces the connection of ethics with law and explains in clear language the function which in Christian ethics the conscience fills. The work covers about 100 pages.

"The Special Merits of our Church in Ancient and Modern Times" is the title of an article appearing in the May number of the *Koye*, in which the following sentiments are expressed. The modern Christian in looking back to the early days of the Church cannot but feel that those who lived at the time of the Apostles and who were privileged to witness the miracles they performed were greatly favoured. These miracles were "Heaven's seal" marking the teaching of the disciples of Christ as genuine. Three hundred years later, so satisfied was the world at large that the church had credentials of indisputable genuineness that men of rank, wealth, and learning flocked to her portals and asked for admission. The position of the Church in the world at that time excited the wonder and admiration of everybody, and it was clear that without Divine aid she never could have prospered as she did; for she had the most formidable of obstacles to overcome. Despite persecution, in those days men gladly accepted the teaching of the Apostles and their successors. But is our modern Church left without any miraculous proof of its Divine origin? By no means. In all countries there are miracles performed to-day in connection with our Church. Thus in France there is a place (Lourdes) where every year hundreds of miracles are performed. Christianity is now accepted by numerous sectarians, but in one Church alone remain the indubitable proofs of Divine approval. Our Christians all over the world have the most implicit faith in the Christian creed and obey humbly the commands of those in authority. Think of the power wielded by the Pope. He has only to command that a certain prayer be offered up and millions of knees will bend before the Blessed Virgin in prayer. Earthly potentates can only wield authority when they have physical force at their back. But our Pope can rely on the devotion of Roman Catholics all over the world for obedience to his commands. There is no such union to be seen in any other section of Christendom as we have in our Church. This very oneness is a proof of the unimpeachable authority with which God has endowed the rulers of our Church. Let those who are in search of the true religion take note of the above points.

In the questions and answers published monthly by the *Koye* bearing on Christian casuistry No. 21 deals with the subject of usury. A Sotomatsu student asks whether a Christian may have anything to do with the money-lending business. Is the principle wrong, and does a Christian commit a sin if he participates in the business in any way? As regards borrowing money on high interest, says the answer, no Christian will do this if he is able to obtain it at a reasonable rate of interest. If he has to borrow money at high interest, it is his misfortune, but not to be reckoned as a sin. But in reference to the query, may Christians engage in the money-lending business without compromising themselves, and if so how high a rate of interest may be reasonably asked? The *Koye* says they may engage in the business if they wish, but as to the rate of interest to be charged no very definite answer can be given. In order to settle what is and what is not reasonable interest a variety of questions have to be taken into consideration. But perhaps the best guide is the law of the country. On Sept. 11th, 1877, a Law for Limiting the rate of interest was promulgated. Art. 66 of this Law fixed the following rates:—For sums under 100 yen, 20 per cent.; for sums over 100 yen and under 1,000 yen, 15 per cent.; for sums over 1,000

yen, 12 per cent. According to Dr. Ume this law is still in force. Any charges above this the borrower is not legally obliged to pay. In case a Christian engages in the business of money-lending, he should keep to the above rates most scrupulously, and under no circumstances descend to any of the subterfuges and evasions of the law so common among ordinary usurers.

Last autumn a new Christian organ was started in Nagoya called the *Universalist*. Its objects are stated to be the reconciliation of science and religion and the publication of articles written by liberal-minded and progressive Christians. Thus it may be said to be a broad church organ. In appearance it resembles the *Kirisutokyō Sekai*, but is a smaller paper. It is published once a month and has now reached its seventh number. In No. 4 we find an article on Calvinism in which it is maintained that this form of belief has long since been doomed to extinction. It was a product of an unenlightened and ill-informed age and has never had any rational basis, says the *Universalist*. The Westminster Catechism appears to the writer of the article to be quite immoral in its teaching. No known logic can defend the predestination of some to eternal life and of others to eternal punishment and the extension of this treatment even to infants. But among the Presbyterians to-day how many are there that really believe in the doctrine of election? How many are there that proclaim the repulsive doctrine of predestination from the pulpit? asks the *Universalist*. In the Japanese branch of this Church there are very few real Calvinists to be found, says this organ. The *Universalist* follows the practice of a great many papers in printing a short English column. But the English, as in other sheets of the kind, is usually very poor. The Japanese writing in style differs little from that of the *Fukūin Shimpō* and the *Kirisutokyō Sekai*.

Writing on "The Conscience of the Church and the Conscience of Society" the *Nichiyō Sōshi* (Protestant Episcopal) says:—An examination of the consciences of a number of individuals tends to show that there is an enormous difference between them. The average is struck in what is called the conscience of society, which constitutes the moral standard of the great majority of human beings. The Church should control and enlighten what may be called the collective conscience of communities. Now, the conscience of the Church being a reflection of the conscience of Christ it should be of an essentially higher character than the conscience of society as a whole. The superiority it possesses should be manifest to everybody. On every moral question, on every important event it must have something to say that is at once out of the common and superior. The conscience of the Church must ever strive to raise the conscience of society to a higher level. It must pay attention to the customs of communities and must strive to set them right where they are wrong. It cannot be said that the conscience of society in Europe and America has been thoroughly Christianized. There exists a conscience there that is not distinctively Christian (*Kedashi Kirisutokyō ga Ō-Bei wo hete kitareru keikwa sono mono wa, Kirisutokyōkai no ryōshin noshintai igwai ni Ō-Bet shakai no ryōshin wo tasasaye kitareru*). And when this conscience is compared with the Oriental conscience it by no means appears to advantage. When the Church's conscience is represented as approving of all that the public conscience of Europe and America approves, it is grossly wronged. It does nothing of the kind.

To the *Rikugō Zasshi* (No. 292) Mr. N. Nagano contributes a very useful article entitled *Kirisutokyō-to no Ichijigyo* (A Christian Enterprise). The writer informs us that a short time ago he was approached by an American Missionary and the following question was put to him: "Supposing that a sum of 30,000 yen were available to be expended in improving the minds and morals of young men in Tōkyō, what methods would you recommend with a view to realizing this object in a thorough and a permanent man-

ner"? The answer given was that there could be no better way of effecting this than by the creation of a home pervaded with a high-toned Japanese spirit and educating influence of a powerful kind. Mr. Magano then proceeds in substance to write thus. Our reforming agencies fail for want of such an institution as this. We have our churches, our lecture halls, our mission schools by the dozen where morality is taught continually, but these do not suffice to get hold of the majority of young men who attend them. As for the schools they develop the intellect, but fail to form character. There are boarding-houses connected with many schools, and these are controlled by superintendents who enforce a number of regulations without adding anything to the moral equipment against evil possessed by the boys who temporarily occupy these houses. As for the Christian boarding-houses, they are run on too narrow lines and hence are repulsive to the majority of students,\* who would welcome a nice home conducted on broader principles. The ordinary Tokyo student passes years in lodging-houses. His life is a lonely one. He is away from all home influences. His joys and sorrows he must bear alone, and he gets to think that his actions concern nobody but himself. Is it any wonder that he so often figures in the columns of the police reports? Picture the life of the ordinary student who only has his 3 or 4 mats of space to occupy when school is over. As a rule he has not a soul to speak to. He may sing a few songs to try and drown his melancholy, but this does not last long. He tries chattering with the maid-servant. But she is uneducated and only makes the silliest answers to his inquiries. He tries a little reading, but he has been studying all day and is in no mood for further head work. Finding indoor life unbearable, he makes his way to the *yose* or to Ueno or Asakusa in search of some kind of diversion, with results that are too well known to need description here.....There are a few students on whom the solitude in which their life is passed has a different effect. It renders them averse to society, shy, unsocial. Society has let them alone and they have grown to think that it had better be held at arm's length. They live the lives of hermits and cannot be induced to join in social functions of any kind. This is an abnormal state of mind more undesirable even than the craving for fellow-feeling displayed by the students who drift into bad companionship and all its consequences. It is quite clear that homes are needed for our students. These homes should be superintended by married couples, men and women of strong character, deep sympathy and common-sense; who should be ready on all occasions to enter into the small affairs of the students and give them good advice.....Are there any students in the world so sad-looking as ours? No such gravity as is seen in this country is natural to youth. Among normal Europeans and Americans what brightness and vivacity of manner there is compared to what is seen among us! To hear foreigners shout to each other even is enlivening. The brightness of tone they put into their words forms a striking contrast to our habitual solemnity of speech and manner. Much of the happiness of manner to be seen among foreign youths is to be traced to the fact that they have lived in happy homes, where they have whistled and sung and romped to their heart's content. We want homes with amusements provided, with tennis courts and gymnasiums, and the like; where manly sports, and fresh air, good companionship unmarred by unnecessarily strict rules and regulations may be enjoyed to the full. . . . And as regards the difficult subject of social intercourse between the sexes, since the plan of always keeping them apart has practically failed, the plan of allowing young men and women to meet for specific objects, to take part in social functions together, to join in concerts and the like, should be tried on a large scale. We know of an instance where this was tried on a small scale, and it succeeded excellently and led to no abuses. Young men and

women can meet in our churches and converse without becoming the subjects of adverse criticism. But in the *yose*, to which the student so often goes, no conversation with girls can take place without attracting the suspicious attention of onlookers. In a home rightly conducted it ought to be possible to teach students how to treat the opposite sex in a cordial but perfectly respectful and proper manner. Among the enterprises open to Christian effort none is more called for and none promises better results than the creation of students' homes on sensible, sympathetic and broad lines.

### THE BOYS' BRIGADE.

The 1st Yokohama Company of the Boys' Brigade, which was started by Mr. L. D. Tebb last January, held its first annual inspection at the Public Hall on Tuesday afternoon before a large audience. The work of the Boys' Brigade in England has been so very successful and beneficial that it is scarcely to be wondered at that when so energetic a champion of its physical and moral advantages as Mr. Tebb, a former officer in England, proposed starting a company in Yokohama parents and boys caught on at once, and despite disappointing luke-warmness in some unexpected quarters the scheme was successfully launched and a company of 30 lads formed with Mr. Tebb as Captain and Mr. H. W. Kilby and Mr. Nicolle as Lieutenants, with the Rev. J. L. Dearing, D. D., Chaplain. Mr. Tebb further enlisted the services of the following gentlemen as a Committee: The Rt. Rev. Bishop Aldry, D.D., Messrs. D. H. Blake, E. C. Bellows, G. G. Brady, A. Bellamy Brown, C. E. Bruce-Mitford, C. V. Sale, and Jas. Walter. Drills have been held at Van Schaick Hall every Tuesday evening and despite the epidemics of measles which have twice swept through the community this year, have been so well attended that the Company in competition with the Shanghai Company of the Boys' Brigade has won the attendance badge hands down. The Sunday morning Bible-class has also received enthusiastic support from the lads, and during the season the following addresses have been given:—

Date.	Speaker.	Subject of Address.
Jan. 8...	The Chaplain.....	"True Manliness."
" 15...	The Captain.....	"Choosing Sides."
" 22...	Mr. James Walter .....	"The Volunteer Force and what Emperor Napoleon III. said about it."
" 29...	Rev. E. S. Booth .....	"The Boy of Business."
Feb. 5...	Mr. D. H. Blake .....	"What not to do."
" 12...	Lieut. H. W. Kilby.....	"Obedience."
" 19...	Mr. J. Macbeth .....	"Steadfastness."
" 26...	Rev. W. Weston .....	"Daniel, Boy and Man—A True Hero."
Mar. 5...	Mr. Chas. E. Bruce- Mitford .....	"The Sacredness of Duty."
" 12...	Mr. Clarence Griffin.....	"Sowing Wild Oats."
" 19...	Mr. A. Bellamy .....	"Some Old School Mottoes."
" 26...	Lieut. P. E. Nicolle.....	"Great Little Things."
Apr. 2...	Mr. Isaac Bunting.....	"The Twelve Memorial Stones."
" 9...	Mr. Frank Booth .....	"Do it Now."
" 16...	Mr. G. G. Brady .....	"Friends and Friend-ship."
" 23...	The Chaplain .....	"Dare to do Right."
" 30...	Mr. C. V. Sale .....	"Character."
May 7...	Mr. N. W. McIvor.....	"Discipline."
" 14...	Mr. H. V. Summers.....	"Conscience."
" 21...	Mr. Wm. Ford .....	"Thoroughness."
" 28...	The Captain .....	"Things that Hinder."

The proceedings on Tuesday at the first annual inspection were marked by conscientious earnestness that spoke well for the admirable discipline inculcated by Capt. Tebb and his officers. Mr. Jas. Walter presided, being supported by members of the Committee, and the inspecting officer was Lieut.-Col. C. V. Hume, R.A., D.S.O., Military Attache, H.B.M. Legation. The following was the programme:—

Overture—"When the Boys go Marching By" ..Hager.  
The Bijou Orchestra.

Inspection of the Company:—The General Salute,  
Inspection of the Ranks, The March Past.  
Hymn....."O Worship the King".....Houghton  
Prayer by the Chaplain, Rev. J. L. Dearing, D.D.

### Chairman's Opening Remarks.

Squad Drill.—Mr. H. W. Kilby, 1st Lieut., in Command.

Selection....."Laughing Water".....Hoffman  
The Bijou Orchestra.

Song...."The Three Sailor Boys".....Theo. Marshalls.  
Mr. N. G. Maitland.

Company Drill.—The Captain, Mr. L. D. Tebb, in Command.

### Inspecting Officer's Remarks.

American National Anthem; British National Anthem.

The Chairman, in his opening remarks, said:—

On this particular occasion, the first annual inspection of the 1st Yokohama Co., of the Boys' Brigade, we would have had a much larger attendance (for there is no lack of interest in the Boys' Brigade) but most unfortunately climatic and seismic conditions have somewhat handicapped us; particularly the latter, for nearly all residents of the Bluff were up the greater of the night, being rocked not in "the cradle of the deep," but in the billow-like undulations of the hills on which we have our temporary abiding places.—(Laughter). Col. Hume, who has so kindly come down from the capital for the sole purpose of an inspection of the 1st Yokohama company of the Boys' Brigade, will, I am sure, excuse us for any shortcomings in respect of a diminished audience. The Chairman then went on to describe the forming of the 1st Yokohama Company at the close of last year by Mr. L. D. Tebb, whose quiet, unostentatious efforts bore fruit that evening. What he did to start with was to ask practically for nothing. "I want," said he, "the support, the moral support, of some of the older men of this community to do something more than is and has been done for the welfare of the boys of Yokohama." He got what he asked for and being an old boy of the Boys' Brigade knew how to organize the company, and he did it. The object he had in view was in itself certain to command success, and it has proved an unqualified success. The object was and is "The advancement of Christ's Kingdom among boys, and the promotion of habits of obedience, reverence, discipline, self respect, and all that tends towards a true Christian Manliness." The enthusiastic reception accorded to the 1st Yokohama Company has been very gratifying to its officers, and it now carries on its roll 30 members. The features of the Boys' Brigade organisation are:—Company Bible classes; Military drill and discipline; physical training; summer camps athletics; ambulance instruction; instrumental bands. The 1st Yokohama company has not attempted too much in its first session, confining its activities to the first four features. Next session an ambulance class will be started for instruction in first aid to the injured. The Sunday morning meetings and weekly drill parades have been well-attended, the average possible attendance at each of these meetings being 95 per cent. per week.—(Applause.) The average possible attendance at the Sunday morning meetings during the whose session is 97.38; and at drill, 96.38 per cent.—(Applause). To emphasize the keenness of our boys I might mention that they entered into a competition with the 1st Shanghai Co., competing for a challenge badge based on attendance results, and our boys won, to use the expression of the Shanghai Captain, with hands down, their average being better every month.—(Applause). We have another record to top even this, for no less than 23 boys gained a prize for obtaining the highest possible marks for attendance at the meetings during the session. This is all the more remarkable for lateness on more than one occasion entails forfeiture of the prize. After a passing reference to the wide-spread organization of the Boys' Brigade in England and to its kindred organizations which enlist altogether 140,000 boys, the Chairman continued:—The Boys' Brigade should enlist the heartiest support of all for all must surely approve of its objects. The whole European male population of this city is under, or about, 2,000. We naturally each prefer our own Church but an institution of this kind in Yokohama has only to be Christian and of necessity is non-sectarian. You boys of the 1st Yokohama company have started well and under excellent auspices, for all of you have been born here or come to live here in the era of *Meiji*. When you go to your own home lands in the years to come never forget that and when you are asked what it means you can say, "The era of enlightenment in Japan, or Dai Nippon."—(Applause). You have lived in this country and at a time when the greatest battles on land and sea that history knows have been fought and won by this brave nation. You have seen right triumph over wrong, have seen the story of David and Goliath enacted over again. Now this David is not a Yellow Peril but in my humble belief it is a nation that will do more to civilize the races of the Far East and in less time, than all the united efforts of Europeans would be able to accomplish. Boys of the 1st Yokohama.

\* *Shikashi kore wa amari Yaso teki de ari, amari ni makko kusei (抹香臭) no de aru kara, tashi no gakusei wa suboshi mo, yori kukanai no de aru.*

Company of the Boys' Brigade, I wish you every success.—(Loud applause).

Col. Hume in his remarks following the inspection complimented the officers on the work done by the Company. He congratulated the company on its Captain, and speaking as a British officer he felt that Mr. Tebb would be a distinct gain to the Army. If he was in the Army there could be no doubt that he would be a drill-instructor.—(Laughter and applause). The gallant Colonel then proceeded to give some words of advice to the officers and the boys on various points which had presented themselves during the drills. He was proud of being present at such a capital exhibition and hoped it would not be the last occasion on which he would be with them. He then passed on to eulogise the objects of the Brigade and dwelt particularly on the benefits to be derived from it, in discipline, a higher sense of order, and moreover a development of patriotic feeling for the lands of their birth.

The prizes were then awarded. Lance Corporals Neville, Grey, Bagnall, and Bell were promoted Corporal and duly received their stripes from Col. Hume; Corporal Grey received the medal for best squad work; and the other prizes were:—Captain's Prize, Lance Corp. Wayde Bagnall. Drill Prizes: Pts. F. Booth, K. Tresize, and N. Brockhurst, Corp. H. Bell. Attendance Prizes: Lce-Corps. Bell, Bagnall, Gray, Neville, Pts. F. Booth, W. Nicolle, E. Eagling, C. Hornstein, J. Tresize, D. Neville, J. Hayes, A. Gorman, A. Tipple, P. Gorman, J. Kenderdine, F. Dinsdale, P. Hornstein, R. Graham, N. Brockhurst, K. Tresize, N. Fearon, V. Worden, and H. Booth.

Cheers for Col. Hume and the Chairman having been given the singing of the American and British National anthems brought the proceedings to a close.

### CRICKET.

Y. C. AND A. C. V. TOKYO.

Very pleasant weather favoured the match between a Tokyo eleven and the Y. C. and A. C., played in Yokohama on Monday. The sky was overcast for the most part of the time, but the light was good and the wickets in excellent condition. Tokyo going in first made a few over the hundred, and the home team knocked up in the time remaining 225. Tokyo were weak in bowlers, while the absence of facilities for practice was also greatly against them. Nevertheless they put up a sporting game and are to be congratulated on their work in the field. Many ladies graced the field during the afternoon.

Play began at 10 minutes to 2 o'clock, Capt. Hart-Synnott (Pavilion) and T. H. Rice (Settlement) facing the bowling of Drs. Moon and Emerson, with Maitland behind the wicket. Rice opened with a single off Moon, and lost his partner the next ball, Mollison holding him at point—1-1-0. Pigott filled the vacancy and played out the over. The second ball of Moon's next over saw Rice dismissed, caught by momban—2-2-2. Lieut.-Col. Hume went out to bat at 2 o'clock, and Duff now arriving on the field took up his old position behind the wicket. Hume began his score with a neat drive down the ground for a single, off Emerson, but soon lost his partner, Dr. Moon finding Pigott's middle stump in the second delivery of the over—5-3-0. Tokyo's opening was, so far, very disastrous. The new comer was H. T. Thomas and he played out the over. In the next over Hume made a single off Emerson, and he followed this with a cut for two, off Moon, and with the fourth of the over he made a 3. Thomas began with a single off Moon and 10 went up on the telegraph. The first boundary in the match was made by Hume off Emerson, and two balls later Thomas cut the leather for 3 and 20 went up. The second ball of the following over saw Thomas dismissed, clean bowled by Moon—20-4-4. The sixth man in was the Rev. J. Chappel, and he began with a single off Moon, and followed it with a drive down the ground for 3, Brady stopping the ball capably. A leg bye was the only incident of the next over, and with the second ball from Dr. Moon's succeeding over Hume was run out, Mollison fielding very smartly—25-5-13. Griscorn went out at half-past two to partner Chappel. He snicked Moon for one with the first ball sent down, and lost his partner, clean bowled by Moon, next ball—26-5-4. Barclay

filled the vacancy, and Griscorn making a single brought him to the Pavilion end. Then Griscorn got his opportunity and drove Moon to the fence for 4, bringing 30 on to the telegraph board amid cheers. He repeated the stroke with the next ball, and followed with a 2, having evidently found the weak spot in Moon's bowling. Barclay was the next to punish the bowling, getting Emerson away to long leg for 4. But this quick rush of runs was soon stopped; Griscorn, skying one from Emerson, being smartly held by Mollison—41-7-12. A life was vouchsafed to Barclay upon Leader joining him, Cooper falling in attempting an easy catch; and, strange to say, with the next ball he again fumbled. Mollison now relieved Emerson and his first delivery resulted in two byes going down on the sheet, the ball reaching the boundary. Leader started his score with a single, off Moon, but nothing else was scored that over. At three minutes to three the half century was reached, Barclay having at the moment a narrow shave of being run out; the ball struck Duff and caused him to retire hurt to the slips in favour of Moss. Upon resuming Leader cut Moon for 3. Gradually by 3's the score mounted and 60 was hoisted. At 61 Cooper replaced Moon with the leather, and his first ball was put away for 4 by Barclay, and the same bat snicked a single off the fifth ball of the over. Edwards went on to bowl at 67, relieving Mollison. Leader got him away for two and Barclay for a single, and 70 went up. A drive to the Pavilion by Leader was followed by another boundary to the settlement end by the same bat, off Edwards; a couple by Barclay brought 80 on the telegraph. Then Edwards disturbed Leader's off stump and he retired, being deservedly cheered on his return to the Pavilion with the top score so far for his side—81-8-28. White, the new comer, did not break his duck, Edwards sending him back to the Pavilion with his second ball—81-9-0. The last man to go in was Wray. A single by Barclay and some byes helped to swell the score; then Wray broke his duck. Barclay made 3, bringing the score to 90. Barclay continued to score and Wray ably seconded him, and then through sheer ill-luck Barclay, walking out of his crease, was smartly thrown out by Edwards—106-10-29—the side retiring at 25 minutes to 4.

Edwards.....	20	12	—	2

The game was resumed at 10 minutes to 4, Dr. Moon and Dr. Emerson facing the bowling of Griscorn and Pigott. After a couple of byes Moon began the scoring for Yokohama with a single, and lost his partner in the first over, Emerson being run out—3-1-0. Two more runs were added ere the over closed, Maitland, the new comer, scoring one and Moon one. By singles and an occasional 3 the score mounted and at 4 o'clock 10 was hoisted; another five minutes saw another ten added. The monotony of singles was broken at last by Moon tipping Pigott to the boundary at the Settlement end. Then the interest petered out again and the score mounted very slowly to 30. Half past 4 saw 50 reached, with the batsmen well set and what little sting the bowling possessed at the start gradually wearing to vanishing point. With the telegraph marking 60, Leader went on to bowl, relieving Griscorn of the leather, and was punished by Maitland for 3 first ball. Moon got him way for a single, after which Maitland made

a four and a single, and then Moon lifted the leather right into the scorer's box among the press representatives. This over proved the most expensive in the match, costing 13 runs. Col. Hume was the next to go on to bowl and the batsmen treated him with a certain amount of reserve. Leader's next over produced 5 runs. At a quarter to five 80 was hoisted, to which Maitland had contributed 43, and Moon 32. Another change in bowlers was soon after effected, Wray taking over from Leader, but still no separation could be effected until soon after the century had been knocked up, when, Moon lifting a ball from Hume was held by Barclay at mid-on—103-2-47. Griscorn went on to bowl again and Abbott partnered Maitland. Abbott in opening was missed at long on, but the succeeding ball from Hume was skied by Maitland and held by Chappel at mid-off—105-3-47. The vacancy was filled by Mollison. Mollison opened with a boundary, but in the same over Abbott was bowled by Hume after 6 runs. Four wickets for 123. E. B. S. Edwards took his place and made a three out of the finish of the over and two fours and a 3 in the following over, of which Mollison also made a four—a rather expensive over for Tokyo. Mollison in Griscorn's next over added a couple of fours and a single, and 150 went up. Pigott now relieved Hume with the ball at the Pavilion end but after two singles Mollison drove him for four. In the next over Mollison was taken by Leader off Griscorn, after putting together a useful 31. Five wickets for 178. Duff followed Mollison and opened with a two and a single off Pigott, but in the next over, after scoring another 2, was caught by Pigott, off Griscorn, for 7 in all. Bugbird took his place but was taken off his first ball by Hart Synnott; 187 for 7 wickets. W. S. Moss was next man in, and drove and cut Griscorn for 4 and 3, Edwards adding a 2 and a 4 off the same over. Chappel now went on at the Pavilion end but runs continued to be freely made and the 200 went up. Edwards was soon after caught by Pigott, off Griscorn, after adding a useful 45 to the score. Brady was next man in and when a few more had been scored, bringing the total to 225, stumps were drawn at 5.45, Moss being not out for 18, and Brady not out for 6.

### PLAGUE.

Further cases of bubonic plague are reported at Oshima-cho, Fukagawa, Tokyo. One is a youth (11) named K. Tanaka and the other is his mother, Tsuna (31), by name. They have both died.

A case of plague has appeared in the village of Kasai, near Honjo, Tokyo, and ended fatally on Sunday. The victim was a woman named Shichi Umezawa (32), who recently arrived from Hamaguri-cho, Fukagawa, Tokyo, where several cases of the disease had been reported.

Two fresh cases of bubonic plague have appeared at Fukagawa, Tokyo. One of the patients is an old woman, the mother of a coolie named N. Namiki. She died in the evening of June 7th. Another is K. Arakawa, (56) a servant of the Fukagawa Police Office.

## THE BATTLE OF THE JAPAN SEA.

MAY 27TH AND 28TH, 1905.

- 1.—That there's a God who rules above  
And shapes man's destinies,  
Is doctrine hard perhaps to prove;  
But had you been with us that day,  
When, from the deep indented bay,  
Where hidden from the world we lay,  
Brave Togo led his fleet  
Our Russian foe to meet,  
You would no longer have a doubt;  
For, had you seen that rout,  
You'd know that God does rule the skies,  
And shape man's destinies.
- 2.—For weeks and months we heard from far,  
From Neva's banks and Baltic tide,  
The rumours of that war.  
The mighty hummers' clang  
In dock and shipyard rang,  
Despite the nation's discontent  
All efforts on the Fleet were bent  
Which was to give sound chastisement  
To Nippon's upstart pride.
- 3.—We watched it sail from Finland's Bay  
And Libau's *rendez-vous*;  
Through Sound and Belt it took its way  
Into the North Sea, cold and dank  
With mists, where, on the Dogger Bank,  
The fishing-fleets of England stay.  
And when the news came of the fray  
With peaceful trawlers as they lay  
That night amidst their outspread gear,  
We knew that we had nought to fear  
From Rojestvensky's crews.
- 4.—Again we watched them sailing south  
By England's coast for many a mile,  
Across Biscaya's stormy mouth  
To Vigo's harbour, then, once more,  
Some by the rough Atlantic shore  
Round the great Cape that lied of Hope,  
Whilst other's past Gibraltar's slope  
And Suez' straits their way did grope  
To Madagascar's isle.
- 5.—We smiled—the Frenchmen did their best  
To treat them kindly, and they lay,  
Like some revered, long-lingering guest,  
Around that sunny shore.  
The summer into Autumn wore,  
And we were busy as men could be,  
Fighting their brethren, and eke the sea,  
Off bleak Port Arthur and so you see,  
We smiled to think the Russ could play.
- 6.—Then, when Port Arthur fell, we slipped,  
One after one, towards the land,  
To rest our men, for they were "hipped"  
With ten months tossing on the brine  
Midst gun, torpedo, and Russian mine,  
And our ships (what were left) sore needed  
repair,  
So we slipped into dock, some here, some  
there,  
And our men got shore leave, and a breath  
of air,  
And then we returned to command.
- 7.—But when 'twas now too late to save  
The fortress from its fall,  
Over the Indian Ocean's wave  
The Baltic Squadron, crossed,  
Past Singapore to Annam's coast,  
Where every nerve they strain  
To coal their ships, yet loiter again,  
As though unwilling to cross the main,  
Even at Duty's call.
- 8.—Then knew we that they had no heart to fight,  
And still less hope to win;  
And we knew that God had given us might  
'To fight and conquer': We held our hand,  
And let the French load them with contraband,  
For coals and provisions don't make a fleet,  
Nor ships, be they never so trim and neat,  
But handy men with nimble fleet,  
And loyal hearts within.
- 9.—One thing we feared as we lay at ease  
In our hiding under the shore,—  
And that was the fog of the China seas,—  
But that morn the fog all cleared away,  
Displaying the Russians under weigh,  
Steaming full speed in battle array  
For Vladivostok, and the signal flew  
From ship to ship, from crew to crew,—  
"They're twice our numbers, now go forth  
And smite them ere they reach the North!"  
So we went forth, and what befel  
The Russians I need scarcely tell,  
For some were taken, and some went down  
And some fought well—"twas 'Mercy's Crown'—  
Next day they were no more.
- 10.—And so we know, beyond a doubt,  
We who beheld that rout,  
That there's a God that rules the skies  
And shapes man's destinies.

A. L.

## BASEBALL.

The clerk of the weather has "a down" on Yokohama sportsmen to judge by the scurvy manner in which he has treated them on three consecutive Saturday afternoons. High winds raising clouds of most irritating dust were the order of the day at the Athletic Sports' meeting, the regatta, the first cricket match, and the opening match of the baseball season, all events which have eminent attractions for the fair sex, and it speaks well for their sporting instinct and love of manly exercises that despite the wind and dust they turned out on each occasion in considerable numbers. For an opening game the baseball match on Saturday was decidedly above the average, some very decent batting being done, while the fumbles and errors in the field were commendably few. The teams, too, were fairly evenly balanced, and although Thorn's nine bunched four runs in the fifth innings and established their lead, McChesney's team gradually crept up and when the game finished were only one run behind. The teams were:

THORN'S NINE.	MCCHESENEY'S NINE.
Webster .....	P. .... Brown
Thorn .....	C. .... E. W. Kilby
Correa .....	S.S. .... C. H. Thompson
Merriman .....	2nd B. .... Atkinson
Miller .....	1st B. McChesney (Capt.)
Kunimi .....	3rd B. .... Watrous
Wiedemann .....	L.F. .... Stornebrink
McEwen .....	R.F. .... Tobin
Messer .....	C.F. .... Cowan

The score by innings:

	Total
Thorn's Nine .....	1 1 1 2 4 0 0 1 0 10
McChesney's Nine .....	2 1 1 0 1 0 0 2 2 9

Mr. Mendelson was scorer; Mr. Jenks umpire; and Mrs. E. V. Thorn presided at the tea-tables at the close of the game.

## NEWS OF THE WEEK.

Four Russians at Nagoya have escaped from prison, and are still at large.

Surgeons M. Koike and S. Sato of the army have been promoted Surgeon-General.

By the *Empress* steamer are travelling home Mr. and Mrs. C. Illies, Mr. Rudolf Illies and Dr. Behn.

Seventeen Russian prisoners and 380 Japanese invalids left Dairen on June 1st by transport for Ujina.

The result of the final of the Ladies' Singles Tennis Handicap at the Bluff Gardens on Wednesday was a win for Miss A. Harrison, who beat Miss Merriman by 6-2 6-0.

A challenge has been received by the Y. C. & A. C. from the Yokohama Commercial School to play lawn tennis, doubles and singles, the match to take place about the 20th inst.

Mr. E. C. Bellows, who is leaving Japan by the *Manchuria*, was entertained at a farewell dinner by Governor Sufu on Wednesday evening. Most cordial speeches were exchanged.

A Sapporo telegram under date June 2nd reports that a French steamer (? the *Binchuan*) has gone ashore in the neighbourhood of Yajiri, Teshio province. All the crew were saved.

Twenty-nine Japanese refugees, including five women, are reported to have arrived on May 29th at Bremen from Siberia. They will leave the German port on June 7th by the *Prins Heinrich* for home.

Owing to the *Bansai* on Friday evening the second performance of "Our Boys" was rather poorly attended, but the piece went very well notwithstanding the small house. Every body played capably; the Buttermans was never better; the ladies were charming as ever and the Bijou Orchestra quite deserved the applause it received.

According to Tokyo papers, Mr. I. Bickart, the representative of Messrs. Oppenheimer Frères, Yokohama, has lodged a prosecution through Mr.

S. Ota, a lawyer, in the Tokyo District Court against Y. Tamai, residing in the village of Okubo near Tokyo. It is said that the Japanese had obtained fifty thousand yen from the French firm by fraud.

The *Nichi Nichi* has a telegram from Sapporo to the effect that a Japanese fishing boat has been captured by the Russians while drifting, owing to a storm near Saghalien, and five of the ten fishermen were killed, two injured and the remainder are detained in the island. The survivors, however, are being well-treated by the inhabitants.

One of the most pleasing of the several new features undertaken by the friends of the Seamen's Mission is a cleverly mounted scroll of the Lord's Prayer and the Decalogue. It is the result of many hours of hard and conscientious work on the part of Miss M. Schwabe, with whose artistic industry the Yokohama public are already familiar. The scroll is a gift to the Mission church, and is hung in the Chancel.

The announcement was made at Vancouver on May 11th that Commander O. P. Marshall, N.R., of the R. M. S. *Empress of India* of the Canadian Pacific Railway Company's Oriental fleet, had resigned his command after 14 years' service and would shortly leave for England; having been appointed one of the Elder Brethren of Trinity House, London. Captain Marshall was the Commodore of the Company's Pacific fleet, having arrived in command of the *Empress of India* in 1891, just 14 years ago. He has been succeeded by Capt. Beetham of the C. P. R. steamer *Tartar*.

The laying down of the rails for the extension of the tramway from the Railway Station to the Settlement, is now almost complete, the whole of the ground being covered with the exception of five small sections, which the Tramway Company hope to concrete and put into shape by about the end of this month. The overhead wires are being fitted with the utmost dispatch, and those which will encircle the Public Gardens will be ready for the through current some time next week. The line is almost a double one for about four miles in length, and will connect at Kanagawa with a central depot at the Railway Station. The cars are being especially constructed. The officials of the company are hopeful of having the cars running by the beginning of August.

The evidence before the Commission of Inquiry into the surrender of Port Arthur has been steadily unfavourable to General Stössel, says a contemporary. Other officers from the fortress declared that General Stössel very rarely visited the fighting line. He devoted his principal energies to raising food for the garrison—or, at least, for such part of it as could afford to pay him his price. One officer testified that he paid £3 10s. to the General for a turkey, and that Mme. Stössel owned 40 cows, which were well fed, while the soldiers were on short rations. She sold the milk at 2s. a bottle. Finally it came out that the only officers who supported General Stössel at the council of war when it was decided to surrender were Colonel Reiss and the Commander of the *Retovian*.

The forty-ninth annual report (for 1904) of the Missions to Seamen is to hand, containing full information as to the working of this excellent institution. There is as usual a reference to the Yokohama Mission from which we learn that "many of the Japanese merchant steamships, which usually trade with Yokohama, have, since the war began, been taken into the service of the State, and have made the men-of-war ports their head-quarters. Hence our staff at Yokohama have not had the usual opportunities of serving Japanese seamen which they and we could wish. This is the more to be regretted as, so far as human minds can foresee, the future of the evangelization of the world must be largely influenced by the seamen of the land of the Rising Sun, if they themselves be brought under the dominion of the Gospel."

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## THE NAVAL VICTORY.

London, June 2.

The newspapers are unanimously dilating on the stupendous victory, the full extent of which is now being appreciated. They pay unstinted homage to Admiral Togo and his gallant fleet and are awaiting eagerly details showing how the results were accomplished.

## THE ARISUGAWAS.

The victory seems to have enhanced the popularity of Prince Arisugawa who, yesterday was received by great crowds in Berlin.

## AN ATTEMPTED OUTRAGE.

A later telegram states that as King Alfonso and President Loubet were returning from the Opera last night a man dressed as a workman threw a bomb. The cuirassier officers riding on either side of the carriage were unhorsed and one horse was killed. Six persons were injured, including three police, one woman and a child.

The King and President Loubet were unhurt.

## THE "GROMOBOL."

The Admiralty denies daily the Tokyo report that the *Gromobol* has been sunk.

## THE BOMB OUTRAGE IN PARIS.

London, June 3.

Twenty persons were injured by the bomb explosion in Paris. King Alfonso treated the affair cheerfully and is the object of much sympathy. There is great indignation in Paris and Madrid, where it is believed the outrage was planned in Barcelona.

## LORD LANSDOWNE ON THE ANGLO-JAPANESE ALLIANCE.

London, June 3.

Speaking at a Conservative dinner, Lord Lansdowne, British Secretary for Foreign Affairs, referring to the hope expressed by Sir Edward Grey that the Anglo-Japanese agreement would be maintained, said at no time had there been on either side any question whatever as to withdrawal from the alliance. In our opinion when the time comes, as it soon must, to consider the renewal of the agreement, the only practical question that would arise was whether we shall renew the alliance in the present form or whether we should not seek some means of strengthening and consolidating it. The alliance would be a potent instrument for peace and if it were possible to so modify it that it would not only prevent the spread of conflagration, when begun, but also prevent a conflagration altogether, all true lovers of peace would welcome such a modification. There had never been a moment when the good relations with France had been more firmly based than at the present time. If the history of the anxious months lately passed were ever written it would show that the understanding between Great Britain and France had greatly mitigated the friction and trouble inevitable when a great war was in progress. The alliance with Japan and the agreement with France were alike formed for no selfish aggressive purpose. Our sole object had been to secure peace and restrict the evils of war.

## RUSSIAN WARSHIPS TAKE REFUGE AT MANILA.

London, June 3.

Rear-Admiral Enquist, with the cruisers *Aurora*, *Jemichug*, and *Oleg*, all damaged, has arrived at Manila. There were many wounded on board.

## THE GERMAN CROWN PRINCE'S WEDDING.

London, June 4.

The Grand Duchess Cecilia, the bride of the German Prince, made her State entry into Berlin yesterday. The pageant was gorgeous and medieval in its splendour.

## RUSSIAN WARSHIPS AT MANILA.

London, June 5.

The Russian warships at Manila have not been damaged below the water-line, but their funnels are riddled and many of their guns are dismounted. The Russian officers declare that the Japanese used a number of submarines during the battle.

The captain of the cruiser *Aurora* was killed. Admiral Enquist was not wounded during the fighting.

## RUSSIANS AT MANILA TO BE INTERNED.

London, June 6.

The internment of the Russian ships at Manila has been ordered by the American Government.

## SERIOUS COLLISIONS IN CHANNEL FLEET.

On Saturday night the Channel Fleet struck a dense fog off Dover with the result that the battleship *Cesar* (14,900 tons) collided with the ship *Afghanistan*. The latter sank and eighteen of her crew were drowned.

The battleship *Triumph* (formerly Chilean *Libertad*, 11,800 tons) collided with the battleship *Swiftsure* (formerly Chilean *Constitucion*, 11,800 tons). The latter was badly, and the *Cesar* and *Triumph* slightly damaged.

## RESIGNATION OF GULOWIN.

London, June 7.

Reuter's agent at St. Petersburg telegraphs that Gulowin's resignation was obviously due to the dictatorship conferred on General Trepoff. The latter has prohibited the Congress of members of the Zemstovs, which were to have met in Moscow on the 6th.

## THE GERMAN CHANCELLOR.

London, June 8.

The Kaiser has created Count von Bulow, the German Chancellor, a Prince.

## FRICTION IN THE FRENCH CABINET.

M. Delcassé, the French Minister of Foreign Affairs, has resigned. M. Rouvier, the Premier, replaces him temporarily. The differences between M. Delcassé and M. Rouvier have continued since the first resignation of the former on the 21st April last. M. Rouvier and other Ministers consider that M. Delcassé ought to have propitiated Germany before sending M. Taillandier, the French Envoy, to Fez.

## THE GERMAN ROYAL MARRIAGE.

The German Crown Prince has been married at Berlin, with great pomp.

## M. DELCASSE.

Later.

Reuter's correspondent at Paris states that M. Rouvier, the Premier, will conduct foreign affairs till pending questions are settled. The change will not affect the *entente* with Great Britain. M. Rouvier will also uphold the Franco-Russian Alliance, but will probably insist on Russia guaranteeing its utility, and showing herself amenable to her ally's advice.

(Received at the Military Head-Quarters 1 p.m. 3rd June.)

## NEWS FROM MANCHURIA.

At about 6.40 a.m. on the 2nd instant

some 30 of the enemy's cavalry entered West-Shahotsz (about 9 miles east of Changtu), and at 12.30 p.m., the same day a similar number of his cavalry entered Nanchiutsh (about 6½ miles north-east of Wei-yuanpauman), but both forces were repulsed.

On the same day at 3.30 p.m. our scouts attacked the enemy's cavalry at a place about 5 miles north of Changtu station, and killed one trooper and 2 horses, capturing 1 horse.

(Received at the Military Head Quarters; p.m., 4th instant.)

Early on the morning of the 3rd about 300 of the enemy's infantry and cavalry advanced against Rhsihlipau (some 7½ miles north of Changtu) but at 10 a.m. they were repulsed by our troops. On the same day at 9.30 a.m. some twenty sotnias of the enemy's cavalry pushed south from Taping-chieh (about 20 miles north of Kangping) along the Kangping-Chengkiaun highroad (Chengkiaun is some 50 miles north-west of Fenghuwa), and part of them advanced against Shilitzku (about 10 miles north-east of Kangping), but our artillery stationed there inflicted heavy loss on them and drove them to the west and north-west in confusion. In this fight we had only four men slightly wounded. The enemy's casualties were over 100. There is no special change in any other part of the field.

(Received at the Military Head Quarters; p.m. 6th.)

Between 4.50 and 5 a.m. on the 5th the enemy's infantry made an attack against Makiatun (some 2½ miles north of Wei-yuanpauman) but they were repulsed.

On the same day a force of ours which had advanced towards Shahotsz (about 10 miles east of Changtu) drove back the enemy from that vicinity and took possession of the railway station and the highlands. Also a force of our cavalry drove back in a northerly direction the enemy's cavalry near Cikiatsz (some 18 miles north of Kangping) and Makiatun (about 7½ miles east of Chikiatsz) and occupied the region.

There is no change in other quarters.

(Received at the Military Head Quarters, 7th inst.)

At 11.30 a.m. on the 6th about 150 or 160 of the enemy's troops advanced towards Sumiatsz (some 2 kilometers east of Yingepienmun), but being repulsed by our force stationed on the north of the place, fled in disorder at 3.30 p.m. towards Nienyuling (some 7½ miles north-east of Yingepienmun). We captured one man and 2 horses in this fight. Otherwise there is no change except skirmishes of scouts.

(RECEIVED AT THE FOREIGN OFFICE.)

St. Petersburg.

General Linevitch reports under date of the 29th of May:—"The Captain of the cruiser *Almaz* which has entered Vladivostok says that the Baltic Fleet fought the Japanese Fleet in the Tsushima Straits on the 27th instant. The *Borodino*, the *Ossliabya* and a cruiser were sunk. The *Alexander III* was seriously injured. Admiral Rojestvensky being wounded at the beginning of the battle, transferred himself to another ship. The *Almaz* left the Fleet. The battle continued during the night but she is ignorant of its results.

A Russian newspaper has a telegram from Vladivostok saying that the destroyer *Giosni* entered that port safely on the 30th of May.

The Russian cruisers *Oleg* (6,675 tons), *Aurora* (6,630 tons), and *Jemichug* (3,080 tons), arrived at Manila on June 3rd at 10 p.m.

(Received at the Naval Head Quarters.)  
PRISONERS.

Investigations carried down to noon on the 6th instant, show the total number of prisoners taken in the battle of the Japan Sea to be 6,143; of whom 3 have died; 5,420 have been distributed to the various stations; 583 are still at Saseho and Tsushima, and 137 will be released. In addition to the above 69 have been already released, consisting of priests and sanitary officials.

(Havas Agency.)

#### RESIGNATION OF M. DELCASSÉ.

Paris, June 6.

M. Delcassé presented his resignation at a Cabinet meeting attended by the President. The reason is that he cannot agree with his colleagues as to the means of carrying on the foreign policy hitherto pursued by the Cabinet.

The Premier (M. Rouvier) expressed regret at M. Delcassé's resignation and will himself assume the portfolio of foreign affairs.

(RECEIVED AT THE FOREIGN OFFICE.)

#### WARSHIPS AT LUZON.

The police authorities in the Philippines have received the following telegram:—On the afternoon of June 2nd, six warships approached to within several miles of Lingan Bay in the North of Luzon; and at 5.30 p.m., on the same day, three of them entered Sari (Dezol) Bay. The nationality of the ships is not yet known.

#### STRAGGLERS.

A telegram from Manila says that the "Aurora," the "Oleg," and the "Zemchug" arrived there on the 3rd at 10 p.m.

[NOTE.—This is scarcely credible, for the *Oleg* is reported by the Russians to have reached Vladivostok, while the *Zemchug* is reported by Admiral Togo to be sunk.—Ed. J.M.]

A telegram received from London on June 1st says that Kazubak (?) reports the arrival of the destroyer "Grozui" at Vladivostok. [NOTE.—This is one of the two destroyers already announced as arriving there.—Ed. J.M.]

#### A TALE OF THE FIGHT.

Prince Alexis has received the following report from the officer commanding the destroyer *Bravi* (this is the second of the destroyers reported as having reached Vladivostok). On the 29th May at 9 o'clock in the evening our vessel left the fleet. With the exception of the "Ossliabya" and a ship like the "Suvoroff," we saw all the battleships then in line advancing at high speed. Since 4 p.m. our boat had been under heavy fire; a 6-inch shell had passed through, bursting in the engine-room. It smashed a steam-pipe and destroyed our foremast. Desiring to avoid observation we lowered our main-mast and painted our chimney-stack white. On the night of 29th May our third steam-pipe exploded and we could not steam more than 5 knots. We were also short of coal and had to burn all our wooden fittings. On the 30th we reached Vladivostok.

#### THE "BODVI."

Telegrams from Shanghai, received on the 4th inst., say that the Russian destroyer *Bodvi* has arrived off Woosung and anchored in the middle of the river near the forts.

#### THE RUSSIAN SHIPS AT SHANGHAI.

The Shanghai Taotai has officially informed the Japanese Consul that on the night of the 2nd instant the Russian Consul recognised the steamers at Woosung to be of the nature of transports and agreed that they should be interned. Therefore the Chinese maritime officials, after consultation

with the Harbour-master, have decided that two of the vessels shall be brought to the inner bar at Woosung and that the others shall remove to the Shanghai harbour. Thereafter their machinery will be dismantled and they will not be allowed to leave Shanghai again throughout the war. The Russian Consul will give a signed guarantee in that sense.

#### CURRENCY AT YINGKOW.

Hitherto it has been the rule in Yingkow to make payment with taels only, but the principal merchants of the place recently decided to abandon that custom and to use Japanese war-notes. The result has been to increase Japan's credit and to greatly facilitate commercial transactions. The present rate of exchange is 71 taels 5 mace for a 100 yen war-note. Mexican dollars being scarce, 100 will buy 108 yen.

#### RUSSIAN AFFAIRS.

According to a report from the Austrian Intelligence Bureau a number of Russian officials and members of local assemblies were to hold a meeting in Moscow on the 3rd of June, and intended to fix the 6th instant for the purpose of considering what course should be adopted with regard to the situation in the Far East. In connexion with this the municipality of Moscow telegraphed to the various localities throughout the whole empire urging attendance at the meeting and pointing out that members of local assemblies and of municipalities should be present.

#### THE "BODVI."

Consul-General Odagiri reports from Shanghai under date of the 5th instant that the captain of the Russian destroyer *Bodvi* has already agreed to be disarmed and interned. The Chinese naval commanding officer at Woosung telegraphs that he has made the officers and men of the destroyer give a written promise not to engage again in the war.

#### RUSSIAN COMMERCE HARRIER:

##### BRITISH STEAMER HELD-UP.

The British steamer *Citurnum* which left Shanghai at noon on the 2nd inst., was stopped at a point 140° E. by the Russian auxiliary cruiser *Rion* and was detained for 12 hours from 3 p.m. on the 3rd. Of her cargo she was compelled to jettison 48 bales of ginned cotton; 411 bags of beans; 6 bales of pressed cotton; and 12 boxes of antimony. She was then released and arrived safely at Moji on the 6th.

A telegram in the above sense has been received by the Mitsui Bussan Kaisha.

#### COUNT BULOW PROMOTED.

Count Bulow has been promoted to be Prince.

#### THE RUSSIAN ZEMSTOVs.

The Telegraph Agency in St. Petersburg wires that the Home Minister's bill with reference to the Zemstovs Sobor has been presented for discussion by the Cabinet and will, it is announced, be immediately considered.

#### MILITARY MEASURES.

Orders have been issued for an inspection of horses in the military district of Moscow, with a view to military necessities.

#### ANOTHER PROHIBITION.

The authorities have prohibited the proposed meeting of members of the local assemblies and municipal officials which was to have taken place on the 6th inst. in Moscow to discuss the situation.

#### RUSSIA AND GERMANY.

The *Kölnische Zeitung's* St. Petersburg

correspondent sends extracts from two newspapers which are incensed at the welcome given Prince Arisugawa in Berlin. Prince Oukhtomsky, in his journal, observes that just as Prince Leopold of Prussia is being welcomed in the Amur region, whether he has proceeded to witness the war, the Japanese prince is receiving an extraordinary welcome in Berlin. The whole of the city which had recently been warned by the Kaiser to beware of the Yellow Peril is now rejoicing at its success. The Prince of Montenegro received a cold welcome and was almost watched during his stay in the city. It is evident that Germany rejoices at the sufferings of the Slav nation, however great. We Russians must now open our eyes and recognise who it is that profits by disasters in our west.

The *Svet*, which argues that the war must be continued, says that the naval affair does not effect the Russian system; and that Germany is courting the fellowship and friendship of Russia's enemy because she believes the latter to be stronger. But this will make no manner of difference to the economic development of Russia in Siberia and Europe.

#### RUSSIAN AFFAIRS.

The *Novoye Vremya* says:—"If the Japanese Fleet comes to the Baltic and takes Kronstadt and the capital, St. Petersburg, then for the first time we shall recognise that Russia is beaten. But now our Russia has more than one means of recovering from her discomfiture and maintaining her place as a great country. In this connexion a popular assembly would be of no small benefit.

The *Viedomosti* says:—"We have not the least idea of peace at present. Let the law of siege be everywhere declared, let war taxes be imposed, let internal disturbances be suppressed and let a military government be established.

The Russian Telegraph Agency reports that the Home Minister's scheme for convoking a national assembly was to be submitted on the 5th to a Council of Ministers who would discuss it without delay.

The same agency reports also that demonstrations in force are taking place for ceasing the war and reforming the constitution. On the 3rd instant there was a meeting of 15,000 people, on the 5th one of 5,030, when speeches were made. The police interfered when a disturbance occurred, and a fight took place resulting in many severe wounds.

A Moscow telegram dated the 6th has been received by the Austrian Intelligence Bureau. It says that the representatives of local assemblies and municipal officials in spite of the Government's veto, held their meeting during a whole day and unanimously voted that the time had come for consulting the people's views and for putting an end to the war.

Russian newspapers argue that as this meeting was to be attended by representatives of all the localities and municipalities without distinction of party or principle, yesterday's debate must be considered to have a very great influence on the situation.

#### NORWAY AND SWEDEN.

The Norwegian Storting has decided to terminate the arrangement of a common King with Sweden. It has resolved to apply for a Prince of the reigning family of Bernadotte to be King of Norway and meantime has appointed a temporary government. King Oscar has refused to sanction the resolution.

## CORRESPONDENCE.

## DECISIVE BATTLES IN THE WORLD'S HISTORY.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—In a recent issue of your paper is a London cable to the effect that Admiral Togo's naval victory in the Sea of Japan is "the sixteenth decisive battle" in the world's history. The reference is undoubtedly to the fact that Crescy has written up so carefully and critically what he calls "The Fifteen Decisive Battles of the World" from Marathon to Waterloo. But the framer of that cable in spite of his keen historical instinct, seems to have forgotten more history than he remembered. No one will attempt to deny that the recent naval victory is one of the decisive battles of the world's history: but I beg leave to remind your constituency that between 1815 and 1905 there were several battles which fairly deserve to be included in that category: so that the Battle of the Japan Sea should be called the twentieth or twenty-first decisive battle in the world's history. Let me briefly call attention to some very important battles of the last half century.

In 1863 was fought at Gettysburg the battle which is considered the decisive one of the American Civil War. It decided, not only that slavery should no longer be legally recognized in the United States of America, but also that the United States should be one and inseparable; and it rendered possible the present grandeur of that nation.

In 1866 the battle of Sadowa forever excluded conservative Austria from Germany, and transferred the hegemony of the German states to progressive Prussia.

In 1870 the battle of Sedan, in which the German gymnasium proved itself far superior to the French fashionable frivolity, positively established the German unity which had been made possible by the Battle of Sadowa, and led to the organization of the German Empire, which is one of the greatest powers in the world. Moreover, this same defeat of the French compelled the withdrawal of French troops from Rome, so that Italy could be reunited under Victor Emmanuel and the secular power of the Pope was ended.

In 1894 the Battle of the Yalu and the military and naval successes which followed introduced to the world a new power in the person of Japan, who was then admitted to the so called comity of nations and thus became a real world-power.

In 1898 in Manila Bay Admiral Dewey annihilated the Spanish fleet, so that in a very brief period Spain was reduced to the position of a small continental power, and the United States of America became more than a continental power, and was compelled to enter upon a new policy of expansion.

And now, in 1905, the recent naval victory practically decides the ultimate result of the Russo-Japanese War, which will pick the bubble of Russian might and dominance and will transfer the control of the Far East to Japan and the nations with which Japan is in hearty sympathy.

It certainly seems to me that every one of the battles mentioned above is worthy of a place among the decisive battles in the history of the world. But, even if one of the victories of Japan is considered enough and Yalu is omitted, we still have left the following

## Twenty Decisive Battles.

Sincerely yours,  
Tokyo, June 3rd, 1905.

## THE Y.M.C.A. ARMY WORK.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Your correspondent "A.D.B." wishes to know whether the communications which appear in the *Japan Mail*, he is pleased to call anti-Christian, are all written by one man. If he will examine the files of the *Mail* during the past 10 years he will

find numbers of articles and letters written by free-thinkers and agnostics. But we would suggest for A.D.B.'s consideration another question. How many of the intellectual foreigners residing in this country attend Christian churches or believe in the doctrines which A.D.B. expounds with so much ignorant self-assurance. The feelings of most men as to A.D.B.'s views were well expressed by "The Man in the Street," whose letter we commend to "A.D.B." No doubt the views of thinking men who are far better informed on the questions at issue "seem perfectly ridiculous" to such writers as "A.D.B."; but fortunately for the progress of thought, such views occasionally find their way into the newspapers. That the majority of thinkers who hold liberal views on religion do not take the trouble to state them in the papers is doubtless to be attributed to the fact that they deem the obtuseness of such writers as A.D.B. to be incurable. A.D.B.'s Gospel seems to be summed up in the dictum "newspapers exist to support orthodoxy."

I am yours &amp;c.,

# ITCHING HUMOURS

## SPEEDY CURE TREATMENT FOR EVERY HUMOUR.

Bathe the affected parts with hot water and CUTICURA SOAP, to cleanse the skin and scalp of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply CUTICURA OINTMENT freely to allay itching, irritation, and inflammation, and soothe and heal, and lastly take CUTICURA RESOLVENT PILLS, to cool and cleanse the blood. This pure, sweet, and wholesome treatment affords instant relief, permits rest and sleep, and points to a speedy, permanent, and economical cure of the most torturing, disfiguring, itching, burning, and scaly skin, scalp, and blood humours, eczemas, rashes, and irritations, from infancy to age, with loss of hair, when all else fails.

# MILLIONS USE CUTICURA SOAP

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itches, and chafings, and for all the purposes of the toilet, bath, and nursery. Millions of Women use CUTICURA SOAP in the form of baths for annoying irritations, inflammations, and excoriations, for too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sensitive, antiseptic purposes which readily suggest themselves to women, especially mothers.

## CUTICURA RESOLVENT PILLS, CHOCOLATE COATED.

Are a new, tasteless, odourless, economical substitute for the celebrated liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humours cures. Put up in screw-cap pocket vials containing 80 doses. CUTICURA PILLS are alterative, antiseptic, tonic, and digestive, and beyond question the purest, sweetest, most successful and economical blood and skin purifiers, humour cures, and tonic-digestives, yet compounded.

CUTICURA REMEDIES are sold throughout the world. Australian Depot: R. TOWNS & Co., Sydney. British Depot: 27-28, CHARLTON ROAD, LONDON. French Depot: 2, Rue de la Paix, Paris. For Sale: DAWSON AND CO., Glasgow, Sole Proprietors, Boston, U.S.A.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 17TH, 1905.

## MARRIAGES.

On the 7th instant at Trinity Episcopal Church, Keith, by the Right Rev. the Bishop of Moray and Ross, assisted by the Very Rev. John Archibald, Dean of the Diocese, FRANK OSBORNE STUART, third son of the late Robert L. Stuart, W. S., Edinburgh, to MINNIE, eldest daughter of the late R. S. Kynoch-Shand, of Hillside, Kincardineshire, and The Linn, Keith.

At the Roman Catholic Church, Yokohama, on Wednesday, June 14th, 1905, by Rev. Pere Alfred Pettier, EDWARD STEPHEN SULLIVAN, of San Francisco, Cal., to CAROLINE, daughter of Mrs. Catherine Sweigert, of San Francisco, Cal.

## SUMMARY OF NEWS.

DYSENTERY is prevalent among the Russians at Hamadera and Sakai.

REAR-ADMIRAL M. HASHIMOTO has been appointed Chief Judge of the Tokyo Court Martial.

MAJOR-GENERALS KODAMA, and Fujii have been appointed Commanders of two new brigades.

It is reported by a correspondent at Port Arthur that the work of floating the *Peresvet* has commenced. The raising will be more easily

effected than at first expected, her damages not being severe.

PRINCE FUSHIMI the younger, who had been visiting the armies in Manchuria, has returned to Japan.

It is reported by a telegram that on the night of June 7th, snow fell on Iwate mountain, near Morioka.

SOME rats infected with plague have been found among a number collected by the Kanda Urban Division Office, Tokyo.

AN official report says that Sub-sergeant K. Nishiwaki committed suicide after being taken prisoner by the Russians.

THE steamer *Senshu Maru*, which recently went ashore off Mokpho, Korea, was floated on June 10th and left for Chemulpo.

THE Emperor of Korea has decorated Mr. Furuichi, President of the Seoul-Fusan Railway, with the First Class of Merit.

A TELEGRAM from Moji says that the Russians on board the *Orel* threw 1,500,000 roubles into the sea before their surrender.

SOME Tokyo papers report that war expenses since the outbreak of the war up to the present time aggregate 953 million yen.

ACCORDING to the *Courrier d'Haiphong*, the pontoon sent down from Hongkong to assist the *Sully* has not answered expectations.

AT 3.30 p.m., on June 7th, hail fell in Hojibana and three other villages of Saitama prefecture. Cultivated fields were damaged.

A TELEGRAM under date of June 10th, says that Prince and Princess Arisugawa have arrived at Hamburg on their way from Berlin to London.

THE Rt. Hon. William Court Gully, P.C., K.C., &c., Speaker of the House of Commons, resigned the Speakership on the plea of ill-health.

AT 11 a.m., on the June 8th, fire broke out at Sakashita-cho, near Wakamatsu, Fukushima prefecture, destroying about three hundred buildings.

THE Osaka Shosen Kaisha steamer *Taicho Maru*, which is under construction at Osaka, will be launched on June 18th. She is 1,250 tons gross.

CAPTAIN ALEXANDER KILSON (?) of the captured Russian battleship *Orel*, who was lying in Maidzuru naval hospital, died on the morning of June 8th.

THE Russian converted Volunteer cruiser *Dnieper* has sunk the British steamer *St. Kiilda* near Hongkong. She was laden with rice and carried the English mails.

ON June 10th, 686 invalids left Dairen by the *Tairen Maru* and two other transports for Ujina. On the following day 228 wounded arrived from Hiroshima at Tokyo.

DR. ALLEN, ex-American Minister at Seoul, left Chemulpo on June 9th by the *Ohio* for home. Mr. Morgan, new American minister, arrived at Yokohama on June 12th.

A BRITISH steamer has arrived at Nagasaki from Shanghai with silver bullion valued at yen 652,250 and a quantity of Japanese gold coin. The silver is destined for the Osaka mint.

MR. MORGAN, new American Minister to Seoul, arrived at Yokohama on June 13th by the *Siberia*. He proceeded to Tokyo by the 3.45 p.m. train

and put up at the U. S. Legation. Mr. C. A. Griscom, father of the U. S. Minister, arrived by the same steamer.

AT 6 a.m., on June 10th, Countess Loughuan passed away at Nikko. This lady, on the 7th, was thrown out of a jinrikisha into the Nikko river and sustained severe injuries.

RUSSIAN invalids still in Port Arthur naval station number about thirty only. The publication of a weekly journal, the *Kyosun Shaka*, has been started, as an organ of the naval office.

THE Tokyo Electric Light Co. intends to raise a loan of three million yen in New York and for that purpose a representative of the firm is negotiating with a syndicate of American capitalists.

THE crop of cocoons in Fukuoka prefecture, this year is estimated at 8,160 *koku*, which shows an increase of 1,198 *koku* over that of the previous year. One *koku* is equivalent to about 5 bushels.

ACCORDING to estimates made by the Department of Agriculture and Commerce, the wheat and barley crop this year will reach 12,289,676 *koku*, which shows an increase of 3.2 per cent. over that of the previous year.

EARLY on the morning of June 12th, fire broke out in Wakamatsu, Fukushima prefecture, destroying 120 buildings. On the previous night, a fire occurred in the village of Takisawa, Akita prefecture, burning down 57 houses.

MR. S. NAGAHASHI, residing in the village of Asahata, Shizuoka prefecture, has invented a machine-gun. On June 12th, he gave an exhibition in the prefectural office. It will shortly be removed to the military office for trial.

THE Governor of Okayama prefecture reported on June 11th that the sailing vessel *Jingi Maru* (146 tons) went ashore off the district of Oku and subsequently sank. The crew were saved. The ship is owned by the Mitsui Bussan Kaisha.

ADMIRAL YAMAMOTO, Minister for the Navy, orders that the *Tsukuba*, belonging to the Kure Naval station, be removed from the Navy. This vessel was built of wood in 1883 and up to some years ago was used as a training ship for cadets.

REAR-ADMIRAL NEBOGATOFF and a hundred and fifty other officers will shortly be removed to Kyoto. The president of the Sasebo Naval Hospital wired on June 9th to the Naval Department that the condition of Vice-Admiral Rojestvensky is improving.

THE *Kokumin* has a telegram from Nagasaki that an American has been arrested there on a charge of fraud. He is not yet identified. He is reported to have used false names such as Wilson and Grant. He had some forged bank drafts in his possession and called himself a railway engineer.

THE Japanese Consul at Lyons wired to the Foreign Office on June 10th that sericulture in Asia and Europe is expected to be prosperous this year. Weaving factories are merely waiting for the new crop, which they generally expect to obtain at lower prices. The present condition of raw silk business is dull.

TOKYO journals report that the Osaka Shosen Kaisha's chartered German steamer *Tetartus* (2,409 tons), which left Muroran, Hokkaido, on May 23rd, for Taku, China, with wooden sleepers, is still missing. It is said that the vessel is considered to have passed the Sea of Japan on May 27th when the naval battle was raging.

## NAVAL NOTES.

## ADMIRAL NEBOGATOFF ATTEMPTS SUICIDE.

Friday, June 9.

It appears that when on board the *Kasagi*, probably on his way to Saseho after the surrender at the Liancourt Rocks, Admiral Nebogatoff attempted to commit suicide with a pistol. The officers of the *Kasagi* were just in time to prevent the fatal act. It is said that the Admiral seemed quite cool and collected at the time. He had surrendered, doubtless, in order to save the lives of those under his command, but he must have had a strong desire to prove that the preservation of his own life had not entered into the account.

## RUSSIAN GUNNERY AND EXPECTATIONS.

The public has already heard that the gunnery of the Russians was very wild at the battle of the Sea of Japan. It is now added that they used rifles freely and that the marks of several rifle-bullets are to be seen on the Japanese destroyers and even on the war-ships. This is going back to medieval methods of warfare but truly there is no reason why rifles should not be used if the range be sufficiently close.

Russian staff officers are represented as saying that their reasons for essaying the Tsushima Straits were, first, that they believed the Japanese naval forces to be distributed between Tsugaru, Soya and Tsushima, and consequently if they approached the last-named place in full strength they would have a marked superiority; secondly, they had sighted Japanese war-ships at places which suggested that Togo's war-ships were scattered; and thirdly they believed that the Japanese Admiral had only 3 serviceable battle-ships, the *Yashima* having been sunk, and the *Mikasa* so greatly injured in the fight of last August as to be still unfit for action. In fact they counted on steaming into the fight with 8 battle-ships, 3 armoured cruisers and 3 coast-defence iron-clads, against 3 Japanese battle-ships and 8 armoured cruisers—14 Russian ships against 11 Japanese, the former also having great superiority in armour and armament. Even supposing that they encountered the main force of the Japanese at Tsushima, they reckoned on certain and signal victory.

## WITNESSES.

The master of the *Oldhamia*, who witnessed the fight from the hospital-ship *Orel*, says that the Russian defeat was largely owing to defective intelligence. They had received a report which they firmly believed that only 8 Japanese vessels were guarding the Tsushima passage, and when they discovered their mistake it was too late to avert the consequences. But, after all, it is now evident that wherever and under whatever circumstances Rojestvensky's ships encountered the Japanese, the former must have been defeated. The Russians had the better fighting material, but they were evidently quite deficient in practice, and the best gun in the world is valueless to a man that does not know how to use it.

At the beginning of the engagement when various reports filled the air, one rumour was circulated on apparently good authority, namely that a Russian hospital ship had been sunk. But it now turns out that the two hospital-ships *Orel* and *Kastronia* were not even touched or fired on. They witnessed the battle from a place of safety and were subsequently "run in" by a Japanese cruiser.

## THE RUSSIAN PRISONERS.

Saturday, June 10.

Allusion has already been made to the comments of Kairansky, a marine on board the *Kniaz Suvoroff* and sometime editor of the *Russ*. He is now quoted at greater length by Japanese journals, but we can not find in his remarks anything which throws light on the strategy and tactics of the great fight. He confines himself to abusing his officers, who, if a tithe of his account be true must have been a remarkably incompetent set of men. According to Kairansky they lost their heads totally after the battle began to go against them, and their condition of nervous trepidation contributed materially to the magnitude of the defeat. He mentions that when the time came for embarking in the boats of the sinking *Suvoroff*, he was about to take his place in boat No. 13 to which he properly belonged. But a midshipman dragged him back and asked roughly what view he took of an officer when he attempted thus to forestall one. Kairansky says, further, that the officers were not only incompetent but corrupt, and that the men fared little better than beasts. His statements, however, do not carry much conviction; they are too wholesale. Probably there is some truth in them, but how much no one can venture to discern. It may be taken for granted, of course, that the Japanese owed much of their success to the qualities which a veteran carries with him into action. They had been fighting for more than a year, and to their originally calm and intrepid mind this long experience had added the utmost self-possession and confidence. That was an element of strength fully foreseen by every one who undertook to cast up the chances of the fight, and very likely it counted for more in the result than the most sanguine had been disposed to estimate.

With reference to this question of personnel, the following interesting communication was made to *The Times* by its Paris correspondent on the 28th of April:—

The St. Petersburg correspondent of the *Matin* sends the following interesting information:—

"I have what I am going to tell you from an engineer who has just returned from Madagascar. Like a great many others, he went there to wait for the Russian squadron, which arrived in rather a bad condition. The boilers and all the machinery for speed and battle were repaired. Living on board, my informant was able to ascertain that new recruits were coming in large numbers. They consisted of skilful mercenaries who were well paid—old sailors, former subordinate and retired officers, Greeks, Germans, Italians, English, and Scotch. There were also engineers who were to remain with the squadron. These foreigners—sailors, mechanics, and gunners—set to work at once instructing the Russians. Before the fleet left officers, subordinate officers, and sailors from the Argentine and Chilean fleets joined it. With regard to these latter it is true that the Russian maritime authorities had entered into *pourparlers* for the purchase of a few ships. This was also the case as regards Italy, where it was sought to acquire two large vessels which went to the Japanese, as the latter transact business with more promptitude. It was the same as regards South America. *Pourparlers* dragged on indefinitely, and, as no arrangement was come to, Rojestvensky himself treated directly with a part of the crews.

"Now these crews are excellent, being composed almost exclusively of Italian and English ex-officers and subordinate officers. All these mercenaries, who have been paid a fortune, have started in pursuit of glory with Rojestvensky. Pirates and corsairs, experienced sailors, ready for every emergency, they constitute an important factor in battle."

## THE SINKING OF THE "ADMIRAL OUSHAKOFF."

The Captain of the *Iwate* gives an interesting account of the sinking of the *Admiral Oushakoff*. He says that at 10 a.m. the squadron under Nebogatoff's immediate orders surrendered, only the *Izumrud* steaming away. The *Iwate* would have gone in

pursuit of her, but Admiral Togo signalled to her to desist. Captain Kawashima conjectures that the Admiral was willing to let one vessel escape in order that she might carry the news of the defeat, but a more intelligible reason seems to be that, knowing the relative speeds of the two vessels—Iwate 20.7 knots, *Izumrud* 22½ knots—Admiral Togo thought it futile for the former to follow the latter. From 10 a.m. to 3 p.m. the Japanese ships were occupied with arrangements relating to the surrender of the Russian squadron under Nebogatoff, and they then steamed off southward. Incidentally we gather from this account that Togo had then with him his two main squadrons, namely, the 4 battle-ships with the *Nisshin* and the *Kasuga*, forming the squadron under his own immediate command, and the six armoured cruisers under Admiral Kamimura, forming the second squadron. Several of these vessels must have been detailed to guard the *Orel*, the *Nicholai*, the *Apraxin* and the *Semirum* en route for Saseho, but that detail is not mentioned by Captain Kawashima. After steaming south for a time, the remnants of the two squadrons observed the smoke of a steamer which they presently made out to be the *Admiral Oushakoff*. She had probably seen their smoke and steered for it, imagining it to indicate the whereabouts of Nebogatoff's squadron, for, immediately on identifying the Japanese vessels, she sheered off and steamed away at full speed. Admiral Togo signalled to the *Iwate* and the *Izumro* to follow. The *Oushakoff* was already hull down, but they overhauled her with unexpected rapidity. When within ten thousand metres they summoned her to surrender, signalling that Nebogatoff's squadron had already hauled down their flags and that his ships were in Japanese possession. The *Oushakoff's* people began to run up an answering signal, but hauled it down before the Japanese could make it out. These therefore opened fire and in thirty minutes the Russian vessel sunk. The two Japanese cruisers hastened to the spot, and the *Iwate* picked up 192 men, of whom 11 died almost immediately, while the *Izumro* picked up 140. The *Oushakoff's* total complement had been 422, so that about 80 must have perished. The *Oushakoff* went down at a few minutes past six o'clock on the evening of the 28th. Captain Kawashima describes the state of the rescued men. They were immediately undressed, re-clad in dry clothes and given a small quantity of brandy. Many of them behaved like madmen, having evidently been quite unnerved. Some ran hither and thither; others began to ascend the companion ladders; others caught hold of the nearest objects and clung to them; but not a few, immediately on realizing their situation, set themselves to succour their comrades. The poor fellows were evidently, in many cases, re-acting in imagination the incidents of the terrible experience they had just undergone.

The interest of this incident for naval men is that the contending ships were nearly matched as to protection, but the superiority of armament was with the Russian. The *Oushakoff's* main protection was a belt of Harvey steel 176 feet long and from 7.8 to 10 inches in thickness, whereas in the Japanese ships the main protection was a belt of Krupp steel 260 feet long, (the difference in length is owing to the greater displacement of the Japanese cruisers) and 7 inches at its thickest part, tapering to 3½ inches at the ends. Krupp steel is superior in some respects to Harvey steel, but this should have been fully compensated by the greater

thickness of the *Oushakoff's* armour. Turning to armament we find that the Russian had four 9-inch guns and four 6-inch, whereas each of the Japanese cruisers had four 8-inch and fourteen 6-inch. The 6-inch guns, however, may be omitted from this comparison as they must have been quite powerless against such protection at a range of 8,000 metres, which seems to have been the smallest distance at which the ships engaged. The sum of the matter is that the Russian was bombarded by eight 8-inch guns and that he had four 9-inch guns to reply; and the *finale* was that he went to the bottom in 30 minutes, having hit his adversaries only once—a shell which struck the *Iwate* near the stern and set her on fire for a few minutes. These things are very remarkable. It was not supposed that an armoured ship like the *Oushakoff* could be sunk at such a range in so brief an interval by 8-inch guns. That the *Oushakoff* succeeded in scoring only one hit during half an hour's practice when shooting for her own life, and that, during the same time, she was hit by the Japanese so often as to be sent to the bottom, is merely a question of superior gunnery on the Japanese side—remarkably superior, it must be admitted. But the technical question is not so easily disposed of. At all events the utmost admiration is due to those gallant Russians who chose to sink rather than to surrender.

#### JAPANESE AND RUSSIAN INJURIES.

As to the Japanese vessels' injuries, some details are now beginning to appear. The *Shikishima* was hit several times but she suffered so little that her hurts were speedily repaired. She was not obliged to leave the fighting line. The *Mikasa*, Togo's flag-ship, lost her fore-mast and had a smoke-stack shattered. She was also struck on the conning tower—this was the shell which nearly killed Admiral Togo. But in her case, too, the injuries were not such as to impair her fighting power. The *Asama* is said to have suffered most. She was struck, apparently by a 12-inch shell, on the port bow high up, and she received several smaller wounds.

Captain Popoff, of the *Vladimir Monomakh*, says that his vessel did not suffer any fatal injury from gun-fire during the fight on the 27th but that a torpedo struck her forward during the night, and all efforts to save her proved unavailing. She did not sink for 15 hours after being torpedoed, and 9 hours after she received the fatal missile the impossibility of saving her was recognised, so that her crew had plenty of time to provide for their own safety. They were all—470—picked up by the *Sado Maru*, which, as our readers already know, took the *Monomakh* in tow, but after 3 hours had to cast her off in a sinking condition.

The chief surgeon of the *Nakhimoff* says that at first they had not more than one-half of one per cent. of sick, but that ultimately the number grew to 2 or 3 per cent. He speaks of a number of men taken on board *en route*, and it is conjectured that he alludes to the crew of the *Diana* which is interned at Saigon. Rumour persistently alleged that several of these men had joined the Russian Squadron.

#### GENERAL DESSINO.

General Dessino is said to have been severely censured for his failure to collect accurate information, or for the transmission of misleading intelligence. Certainly the Russians were ill-informed, if it be true that they believed Togo to have divided his force into three and posted one section each at the three avenues, Tsushima, Tsugaru and Soya. If Shanghai was the

principal source of intelligence, which we must presume to have been the case, then Dessino can not be said to have been very successful. Probably the Russians had no spy acting for them in Japan, and at any rate the Japanese managed to guard their secret splendidly. What an incalculable effect their studied reticence had upon the result! Suppose that now, instead of recording the annihilation of Rojestvensky's fleet and the absolute integrity of Togo's, we had to record that Rojestvensky was in Vladivostok with one half of his squadrons and that one half of Togo's ships were at the bottom of the sea, how completely metamorphosed the position would be: the Japanese having no hope of re-inforcement, the Russians being assured of it.

#### MR. BUTO'S OBSERVATIONS.

Mr. Buto, who has just returned from a trip in Manchuria, says that the ill-success which had hitherto attended the use of torpedoes in the Japanese navy was due to discharging them at too long ranges, whereas in the recent action the officers commanding the torpedo-boats had orders to close up to short distances. Mr. Buto speaks of the former ranges having been from 5,000 to 7,000 metres, whereas those in the battle of the 27th of May were from 500 to 600 metres. We suspect these figures to be erroneous, though the general fact is probably correct. It has never been supposed that torpedoes could be used at such ranges as Mr. Buto mentions. The range of a Whitehead of the latest pattern does not greatly exceed 350 yards, when fired from a ship in motion, and though occasional hits have been made at 800 yards, they have been very fortuitous. Six-inch guns even would be of little service at the ranges said to have been attempted by Japanese torpedo-boats.

Mr. Buto further says that over 20 ladies (?) were found in one of the hospital ships. They called themselves "nurses" but the suspicion is that their nursing was limited to saving the commanding officers from *ennui*. The hospital ships were furnished with everything that could minister to pleasure and entertainment.

The same informant gives a vivid and disgusting account of the behaviour of the crew of the *Nicholai I* at the time of surrender. The men seemed to regard the event simply as releasing them from the long restraint and hardship to which they had been subjected. They snatched at everything edible or potable and behaved not only with abandon but also with shocking indecency, so that the ship was quickly reduced to an unendurable condition. Their own quarters showed a state of filth incomprehensible to a Japanese, and it must indeed seem to the people of this country a veritable farce to be told that these are the soldiers of Christianity sent out to save Europe from the peril of pagan Japan.

The men all carried English money. Apparently they had no faith in Russian coins, observes Mr. Buto, but the obvious explanation is that English coins circulate everywhere whereas Russian do not.

Quantities of documents and books were taken—a huge boat-load from the *Nicholai I*. They are now being examined. It is said that they will probably disclose many interesting facts relating to neutrality. Already a letter has been found from the notorious Korean statesman Li Keung-thaik. Writing as the representative of his country, he welcomes the coming of the Baltic Fleet. 'Tis a bad thing for Mr. Li that he is at length pulled off the fence.

#### THANKS.

Sunday, June 11.

Kairansky is full of praise of the Japanese. He speaks with profound admiration of the kindness he received at their hands. They did not treat him and his comrades in any sense as enemies. The moment the fight was over they seemed to regard the Russians as friends. There was not done or said a single thing that could have hurt the feelings of the vanquished. Kairansky justly asks how many nations claiming to be in the first rank of civilization could be expected to behave in such a manner. He is evidently a shrewd observer, for he noticed when on board a Japanese destroyer, what good and friendly relations existed between the officers and the men. He saw them chatting together in an intimate manner, and he saw the officers giving cigarettes to the men out of their own cases. A strange contrast, he observes, to the relations existing between officers and men in the Russian navy, where a curse or a blow is the commonest token of the officer's regard for the sailor under his command. Kairansky was astonished also at the thoroughness and excellence of the arrangements made by the Japanese for the accommodation of prisoners. The barracks for the men and the separate rooms for the officers, clean, commodious and comfortable, were all ready. He relates how a change of clothes was given to him; how he was disinfected; how he was supplied with soup, bread and fruit; and how, although guards were posted, his movements were in no way obstructed. He declares that the leading columns of the *Russ* shall be devoted to combating the monstrous charges against Japanese civilization which so many Russian journals are fond of ventilating.

#### FURTHER DETAILS.

A Japanese naval officer, speaking in the *Hochi Shimbun*, says that the first artillery duel on the 27th of May lasted for an hour, and that it decided the fate of the battle. For the *Borodino* was put out of action; the *Sivarov* received heavy injury and the enemy's lines were completely broken. The Japanese ships did not escape unscathed, but they suffered only trifling hurts, though they had closed up to a range of 4,000 metres, and at one time to 2,500 metres. Such ranges had not previously been essayed in any instance by the battle-ships. The fact was that Admiral Togo on this occasion took risks of an unprecedented nature, recognising that the time had come to destroy the enemy or to be destroyed. After this first fight the battle resolved itself into a series of disjointed combats. The Japanese battle-ships turned their attention from the enemy's disabled vessels to those that still possessed fighting power, leaving the former to be finished by the lighter craft. Then the third-class cruisers and the gun-boats closed in and poured shells into the doomed vessels. One gun-boat in which an Imperial Prince was serving, might be seen engaging the big battle-ship *Sivarov* at a distance of only 2,000 metres. The *Sivarov* made a grand resistance. She worked her last two guns until the very moment of sinking. She went down at 6.30, having been struck just previously by two torpedoes fired from a destroyer.

This officer relates that Admiral Nebogato, when he saw the hopelessness of further resistance, summoned all the commanding officers of the four ships to the *Nicholai* and informed them that nothing remained except

to surrender so as to save the lives of the men. Captain Yanada, who was sent by Admiral Togo with 200 marines to accept the surrender, found all the officers on board the Russian Admiral's flag-ship. He required that the officers should repair to the quarter deck and that the men should parade forward. This was done quietly by the Russians. Then the Russian flag was hauled down and the Japanese flag run up. The Japanese marines, who were drawn up on the deck of the *Nicholai*, sang the national anthem as the Rising Sun rose to the mast-head. Many of the Russian blue-jackets were in tears.

Admiral Nebogatoff has addressed a short telegram to the Tsar. He says that the fight having become hopeless he recognised the duty of not sacrificing the lives of two thousand men, and therefore he surrendered. The Admiral now awaits the Tsar's instructions as to returning to Russia.

A telegram from Nagasaki quotes an Englishman just returned from Vladivostok. He says that by the 4th instant the full effect of the disaster which had befallen the Russian Navy was understood, and a high mass was celebrated for the souls of the brave dead. It was disturbed by the sad incident of a lady fainting from grief.

A British ship which has just reached Hongkong reports that on the afternoon of the 7th, at a point some 300 miles north-west of Manila, she was signalled by a Russian converted cruiser, which enquired whether three Russian war-ships were anchored in Manila. The cruiser then steamed away.

Wednesday, June 14.

The Admiral's Secretary on board the *Nicholai I.* is represented as saying that on the morning of the 28th when all attempts to break through the Japanese cordon had failed, Admiral Nebogatoff summoned a council of officers and sought their advice. Their opinions differed, some being for surrender and some for fighting on. The men were then paraded and asked their views, when they unanimously declared for surrender. That decided Nebogatoff.

The Russian prisoners say that out of the whole crew of the *Borodino*, which was sunk by gun-fire on the 27th May, only one man escaped. He was picked up by a destroyer and transferred to the *Orel* ultimately. The *Borodino* must have had a complement of nearly 800 men.

#### PEACE PRELIMINARIES.

The following official correspondence has been published:—

The U. S. Minister in Tokyo has made the following communication to the Minister for Foreign Affairs, dated the 9th instant:—

"In compliance with telegraphic instructions from the Secretary of State, I have the honour to communicate to Your Excellency the following:

"The President feels that the time has come when in the interest of all mankind he must endeavour to see if it is not possible to bring to an end the terrible and lamentable conflict now being waged.

"With both Russia and Japan the United States has inherited ties of friendship and goodwill. It hopes for the prosperity and welfare of each, and it feels that the progress of the world is set back by the war between these two great nations.

"The President accordingly urges the Russian and Japanese Governments, not only for their own sakes but in the interest of the whole civilized world, to open direct negotiations for peace with one another.

"The President suggests that these peace negotiations be concluded directly and exclusively between the belligerents; in other words, that

there may be a meeting of Russian and Japanese plenipotentiaries or delegates without any intermediary, in order to see if it is not possible for these representatives of the two Powers to agree to terms of peace.

"The President earnestly asks that the Japanese Government do now agree to such meeting and is asking the Russian Government likewise to agree.

"While the President does not feel that any intermediary should be called in in respect to the peace negotiations themselves, he is entirely willing to do what he properly can if the two Powers concerned feel that his services will be of aid in arranging the preliminaries as to the time and place of meeting. But if even these preliminaries can be arranged directly between the two Powers, or in any other way, the President will be glad, as his sole purpose is to bring about a meeting which the whole civilized world will pray may result in peace.

I avail &c., &c., &c."

The Minister for Foreign Affairs answered as follows under date of the 10th inst:—

"I have the honour to acknowledge the receipt of Your Excellency's Note of the 9th instant communicating to me a telegraphic instruction to you from the Honourable the Secretary of State, and I beg to request that you will have the goodness to transmit by wire the following as the reply of the Imperial Government.

"The Imperial Government have given to the suggestion of the President of the United States embodied in the Note the very serious consideration to which, because of its source and its import, it is justly entitled.

"Desiring in the interest of the world as well as in the interest of Japan the re-establishment of peace with Russia on terms and conditions that will fully guarantee its stability, the Imperial Government will, in response to the suggestion of the President, appoint plenipotentiaries of Japan to meet plenipotentiaries of Russia at such time and place as may be found to be mutually agreeable and convenient, for the purpose of negotiating and concluding terms of peace directly and exclusively between the two belligerent Powers."

I avail &c., &c., &c."

In Shanghai Papers to hand on Monday morning we find the following telegrams bearing upon the question of peace preliminaries:—

London via Bombay, June 3.

Count Cassini, Russian Ambassador, called on President Roosevelt yesterday.

President Roosevelt expressed his earnest hope, as a friend of Russia, that she would seek peace in response to the wish of the entire civilized world. A prolongation of the war would mean increased Japanese demands; and he pointed out that Russia could hardly hope to win.

Moved solely by motives of humanity, he (President Roosevelt) offered his services as mediator or intermediary in any way acceptable to Russia.

Count Cassini replied that he had no instructions. He personally believed that Russia would continue the war, because the moment was disadvantageous to discuss peace. Russia has lost none of her own territory, and there is nothing in the present situation necessitating suing for peace; but he promised to communicate President Roosevelt's views and offer to the Czar.

London, June 3.

The correspondent of the *Standard* at Washington wires that the American Ambassador at St. Petersburg has been instructed to communicate to the Czar President Roosevelt's conception of Japan's position; namely, that an indirect proposition would be acceptable, and the slightest opening in the direction of peace overtures would be utilised.

London via Bombay, June 5.

News comes from Washington that the Italian Ambassador there, after a prolonged conference with Count Cassini on Saturday, conferred with President Roosevelt.

Mr. Takahira, the Japanese Minister, was then summoned from New York, and had a prolonged interview with President Roosevelt.

Mr. Takahira stated afterwards that there could be no progress until St. Petersburg was heard from. According to the *Standard*, the American Ambassador at St. Petersburg reports that this is unlikely for a fortnight, until the excitement has subsided, but he opines, with all reserve, that the prospects are hopeful.

London via Bombay, June 6.

Count Lamsdorff is to communicate to-morrow to

the Czar Count Cassini's account of his interview with President Roosevelt.

Berlin, June 5.

The steps taken by President Roosevelt in the peace question have not yet received the consent of Russia. The mayor of Moscow summoned by wire all Russian mayors in order to discuss Russia's further policy in face of the events in the Far East.

#### A JAPANESE NAVAL OFFICER'S CRITICISM.

The following appreciation of the Battle in the Japan Sea is by a well-known Japanese naval officer and has been published:—"It need scarcely be said that any one reading Admiral Togo's official reports of the Japan-Sea victory fully comprehends the extraordinary achievements of Togo himself and the intrepidity of Kamimura who commanded the armoured-cruiser squadron. But what seems not to attract people's attention much is the admirable manner in which Kataoka's Squadron fought. This Squadron, being inferior in strength to a main fighting squadron, was not of a character to engage in full front the enemy's imposing fleet. Indifferent, however, to that fact, no sooner did it sight his ships than, though far away from any protecting forts, it bore down on his van, and by skilful tactics pushed him into the desired place, so that the main fighting squadron was thus enabled to bring its entire force against him. Kataoka's efforts must have been something extraordinary on that occasion. Then, in the fight on the 28th, he with his inferior squadron kept touch of the *Orel*, the *Nicholai I.* and their consorts, drawing them again into the hands of the main squadron with the result that the enemy finally surrendered. Moreover, the auxiliary cruisers and other vessels which served under Vice-Admiral Kataoka all fought most gallantly. Especially remarkable was the little cruiser *Izumi*. Inferior as were her capacities for defence, on one occasion she alone faced the great fleet of the enemy just as Honda Tadakatsu, a solitary horse-man, attempted to stem the whole force of Hideyoshi's big army. It was an exploit worthy of the best traditions of the Japanese *bushi* and it well deserves to adorn the pages of history. The prisoners say that they were astounded at the courage of the *Izumi*. Add to this that she worked to turn back from the zone of danger a military transport and other steamers which just then came from Moji to the neighbourhood of the fight, ignorant that it was going on. The *Izumi* signalled to them, but the fog hid the signals and they steamed on. Then she approached and tried to warn them by shouting, but they thought she was cheering and shouted *bansai* in return. With the greatest difficulty she succeeded in conveying her meaning and in getting them out of danger. Thus she showed not bravery but also great vigilance. Then again the torpedo-boats that gave the *coup-de-grâce* to the enemy's flag-ship *Swaroff*, already heavily injured by our gun-fire, and the destroyer squadrons that harassed the enemy during the night were also attached to Admiral Kataoka's command. There is more than enough to suggest the resolution and courage with which the ships under his flag fought. All these things show how thoroughly every part of the fleet, from the main squadron downwards, discharged each its special duty, bearing witness to the virtues of His Majesty the Emperor and to the character of the Japanese people. Was not the signal that Admiral Togo displayed high on his mast-head, "Let every man do his utmost, was it not fully reflected in the event?"

## JAPANESE OPINION ON THE PEACE PROSPECTS.

Saturday, June 10.

The *Fiji Shimpō* has two articles on the new development. The first is mainly a eulogy of the part taken by the United States, which from its character is well suited to be a peace-maker and well deserves the confidence of both the belligerents. But, at the same time, the *Fiji* warns its countrymen against any hasty belief that peace is already concluded. The conference may end in failure. That depends entirely on Russia's good faith. The second article is devoted to a consideration of details; mainly the question as to the place and time of the conference. Evidently the plenipotentiaries can not come together for a considerable period: either the Japanese plenipotentiaries must travel west or the Russians must journey east. In the interval it will be natural to have an armistice, and in order that an armistice shall not inure to Japan's disadvantage she must have some security: some place must be delivered up to her temporarily.

The *Yomiuri Shimbun* writes in a tone not calculated to promote the prospects of peace, but not unnatural, it must be confessed. Russia's diplomacy has not won the confidence of the nations. They know well that her habit is to recover in the council-chamber the losses suffered in war. They know, too, that agreements detrimental to herself do not count for much in her eyes. Therefore it is a very serious and difficult matter for Japan to consent to an armistice which may be utilized to her disadvantage. The *Yomiuri's* disposition would be to continue the contest until the peace covenant is actually signed. That would have been done in China's case had not a point of honour been raised by an assassin's attempt upon the life of Li Hung-chang. As to the terms of peace, our contemporary—which we quote here since it holds the place of a Progressist organ, more or less—is persuaded that they must be such as to put an end permanently to Russian aggressions in the Far East. That is implied in the Japanese Government's answer to President Roosevelt; namely, that peace should be restored "on terms and conditions that will fully guarantee its stability." The *Yomiuri* observes that Japan's armies have not yet set foot on Russian soil, and that if peace be made on any less terms than the above it will be a case of scotching the snake. One condition should be the surrender of the whole Siberian coast to Japan. Our contemporary concludes by warning the Government that if the terms agreed to be of such a nature as to dissatisfy the nation, the nation will make its voice heard. Altogether the article smacks of Mr. Oishi Masami.

The *Chuo Shimbun* observes that Russia has, in effect, sued for peace. There can be no doubt that she approached the President of the United States in the first instance. That being so, her recent announcements of a determination to continue the war and to send fresh troops to Manchuria must be taken as mere bluff. Concerning the question of a truce, the *Chuo* has evidently as much distrust of Russia as its contemporaries have. It thinks that these peace proposals may be of the nature of the Chang-Deiring mission, a mere *ballon d'essai*. Therefore Japan must be very cautious about granting a truce, and must at any rate limit its operation as much as possible. The *Chuo* advocates Tairen (Talien) as the best and most fitting place for the plenipotentiaries

to meet, as those from Russia could travel all the way thither by train from St. Petersburg. The *Yomiuri* advocates Shimonoeki, which appears to us to be an essentially bad suggestion.

Count Okuma, speaking through the columns of the *Chuo Shimbun*, notes that proposals to confer do not necessarily mean peace. Russia could neither fight nor lay down her arms. She was threatened with domestic disturbance in either case, and thus found herself in a dilemma. It became necessary to search for a physician. France was out of the question. So was England: one being Russia's ally, the other Japan's. Germany was objectionable. So she turned to the United States and asked President Roosevelt to diagnose Japan's mood. The President did so, and the result of his diagnosis was to ascertain that Japan had no disposition to impose humiliating terms on Russia. But, after all, Japan and Russia are not fighting a duel in the presence of seconds. They stand alone in the lists, and they alone must conduct their quarrels and arrange their composition. Nothing is settled because a mere proposal for discussion has been made. We shall now see a Russian Li Hung-chang appointed and a Japanese Ito with a Japanese Mutsu. But there must be no truce, or, at least, no truce from the outset. The war must be continued as vigorously as ever. Should the course of the negotiations dictate a truce as essential, it must be a short truce.

Dr. Takahashi, writing in the *Fiji*, says that the occasion is advantageous for Russia and disadvantageous for Japan, inasmuch as a peace conference is proposed before the war has been carried beyond neutral regions, and before a Japanese soldier has set foot on Russian soil. The psychological moment for peace from Japan's point of view would have been when Harbin, Saghalien and Vladivostock were in her possession. But since things are as they are, care must at all events be taken not to grant a general armistice. If an armistice of some kind be inevitable, let it be limited to one part of the field: to Manchuria for example. Most assuredly it must not extend to maritime operations or to any part of Russian territory in the north-east. Russia will probably preface her proposals by asking for an armistice on the basis of the *status quo*. But the *status quo* at present is the development of Japan's victories and the growing consequences of Russia's defeats. These things can not be checked without manifest detriment to Japan.

Dr. Nakamura, speaking through the same medium, points out that though ostensibly Russia has not sued for peace, as the beaten power should, she has virtually done so in fact, since there can be no doubt that she approached the United States in the first instance. It is plain from the celerity adopted by Japan in replying to the President's proposal that there had been previous interchanges of ideas, and it is therefore not extravagant to assume that a preliminary understanding has been reached. Nevertheless some time must elapse before the opening of the negotiations. There is the preliminary question of choice of place. Russia being the beaten Power, it is only right that her plenipotentiaries should come to meet the Japanese, and evidently it is desirable that the conference should be held in some place beyond the reach of extraneous interference. From the latter point of view Tokyo would be most unsuited, and so would any capital where foreign representatives are assembled.

This requires consideration and perhaps the best plan would be to take advantage of the good offices of the President of the United States. As to an armistice, Dr. Nakamura is opposed to it. He thinks that it could not be arranged on terms such as would be fair to Japan.

Another international jurist, whose name is not given, has been interviewed by a representative of the *Fiji Shimpō*. He says that in March Russia made some overtures for peace, but her proposed basis was simply that she should agree to abandon the places from which she had already been driven by the Japanese armies. Since then she has suffered additional and even more sweeping defeats, and it may fairly be assumed that she has made up her mind to proportionately more reasonable concessions. None the less she is Russia, and no movement on her part inspires confidence. She has not been mortally wounded, and it is hard to tell what twist she may take to emerge from her difficulties. From Japan's point of view the time for peace can not be said to have come. It may be, however, that Russia is prepared to acknowledge her defeat, and at any rate since she has asked for a conference, and has asked through the President of the United States, the Japanese can not well refuse. But Japan must not abate a jot of her just demands. Above all the greatest care must be exercised in the matter of an armistice. This juriconsult is altogether opposed to any cessation of the war until an agreement is actually in sight. Concerning the place of conference he considers that as China is deeply interested, some town in China, as Peking or Tientsin, should be chosen.

The *Hochi* (Progressist organ) writes like the *Yomiuri* in a very strong strain. It details the recently furnished proofs that Russia's pretensions and Russia's real intentions are wholly at variance. One moment she is found declaring that not until Cronstadt is in ruins and St. Petersburg reduced will she listen to peace. The next she is actually seeking to find an avenue to peace. Who can venture to affirm that this is not merely a device to mend her fortunes by some trickery? And does not her history show that no promises given by her may be trusted unless they are accompanied by substantial pledges? With such a *vis à-vis* Japan must exercise every possible precaution. Above all there must be no armistice. Rumour alleges that Japanese officialdom is disposed to be yielding. Public opinion must take care that nothing of the kind is permitted.

The *Kokumin* calls it the "dawn of peace"; not the full light but only the dawn. Our contemporary is full of praise for the United States. That great country is acting purely and truly in the interests of humanity. No one can possibly suspect it of ulterior motives. Happily for the world there is such a Power. It is in a measure Japan's duty to entertain a suggestion coming from that quarter. Japan has gained victory after victory, but she knows how to listen to reason even in the hour of her greatest successes. To-day is the day for her to show her magnanimity to the world. In her hour of triumphs far greater than she could have expected, she is called upon to gain a victory much more difficult than victory in the field, victory over herself. The nation will rise to the occasion, and will know how to use not to abuse its successes. As yet, however, we see only the dawn of peace. Its full light may still be far distant. Let it be now remembered that Japan owes her previous triumphs to the unity of her

people. If she lose that unity; if voices be raised here and there preferring selfish demands or ventilating discordant views, it is quite certain that an opportunity will be furnished to the enemy and that the fruits of hardly earned successes will be sacrificed.

Tuesday, June 13.

It is stated (*Kokumin Shinbun's* Washington telegrams), that President Roosevelt has proposed Manchuria as the place of meeting for the peace conference. As to this the Japanese newspapers are tolerably unanimous in advocating some place in Manchuria, as Mukden, Liaoyang or Dalny. Their idea is that these places are specially accessible on account of the trans-Asian Railway but they recognise that Russia may possibly object. We greatly doubt whether the President has made any such suggestion, but should think that the Russian plenipotentiaries would be particularly desirous of meeting at a place where the telegraphs are under neutral control. On the other hand, as Japan is in the position of victor she may reasonably expect some concession on this point, and Manchuria, after all, is nominally neutral territory. It may be predicted, we think, that a minor question of this kind will not receive factitious importance at Japan's hands.

It is stated that the Russian acceptance of President Roosevelt's suggestion reached Washington on the night of the 10th and that it was accompanied by the names of the plenipotentiaries. But in Tokyo there are reports that nothing about Russia's consent is officially known. Japan's acceptance had already been received, but rumour says nothing as to the Japanese representatives. In Tokyo some talk of Count Inouye, but the general idea appears to be that Marquis Ito and Baron Komura will be chosen. Should Russia appoint a Grand Duke, Japan, of course, will send a plenipotentiary of corresponding rank.

The *Fiji Shimpō* justly observes that one proof of Russia's sincerity will be the quality of the plenipotentiaries appointed by her. If she attempts to send men of secondary rank, as China did when she despatched Mr. Chang to Kobe, that will be an evidence of insincerity. Altogether the *Fiji's* mood is distrustful, inasmuch as the war party is still powerful in Russia, and its influence may at any moment sway the Cabinet to a change of policy. The *Nichiichi Shinbun* appears to be equally distrustful. It questions whether Russia, having compelled the Japanese to fight sorely against their will, is now prepared to accede to such terms as shall guarantee permanent peace. But the *Nichiichi* urges strongly that there shall be no hesitation nor any diffidence on Japan's part in framing her conditions. It was all very well that she should show conspicuous moderation after her war with China, but the present occasion is very different. She has been compelled to pour out blood and treasure without stint, and it is her duty to guard her sons against a repetition of such calamities.

The *Asahi Shinbun* writes in a very interesting strain. It regards Russia as a country imbued with the instinct of aggression and morally deranged by long continued successes. Russia has been the darling of fortune during the past two centuries. Her expansion has been so marvellous and so unopposed that her people have learned to regard expansion as their natural destiny and come to consider the world as Russia's ultimate inheritance. It is not to be supposed for one instant that this long educated faith and this confidence begotten of continuous

experience have been eradicated by the present war. In Russia's eyes the present war will soon assume the dimensions of a mere passing incident: a temporary setback. Fifteen or twenty years hence she will be found gathering herself for a fresh spring forward, unless a permanent check be put on her now. That is as certain as anything human can be certain. Russia would never have entered the present struggle had she not been so dazzled by her own perpetual good fortune as to imagine herself invincible. She would have appreciated that it was a struggle comparable in some respects to the antics of a juggler who balances himself on a pole or ascends in a toy balloon. Fighting by land and by sea at such a distance from her basis, she could not have seriously hoped to win against a resolute adversary. She will not again make such a fatal blunder. When next she steps into the lists it will be in very different panoply. Japan, on the other hand, must recognise that the victory just gained by her is one in a millennium. She can not again hope for anything so complete, so crushing, against such an adversary. Therefore she is bound to utilize the opportunity to the full, not for aggressive purposes but in the interests of permanent peace. Two facts are absolutely certain. One is that Russia's instinct of aggressive expansion has not been expelled nor her confidence in her own destiny shaken by this war: therefore if she be left to collect her energies for a fresh spring, nothing but a new exhibition of force will check her. The other is that Japan can not reasonably hope to find herself ever again in such a dictatorial position as she is to-day. The conclusion is obvious: utilize the occasion so as to guarantee posterity against any renewal of a struggle which would be far more terrible and more disastrous than the present has been.

The *Yomiuri Shinbun* urges that unless Harbin and Vladivostok be in Japanese hands, there can be no lasting security. It would have the army press forward against these places, and it would then have their cession to Japan ensured by treaty.

The *Nippon* limits itself to discussing the spirit which the Japanese plenipotentiaries will bring to the conference. Will they approach it as representatives of a victorious nation entitled to dictate terms; or will they approach it in a give-and-take mood such as informs negotiations between parties on an equal footing. It is easy to see that the *Nippon* apprehends the latter, though it does not distinctly say so.

On the whole we may sum up the views of the vernacular press thus:—(1) Virtual unanimity as to the retrocession of Saghalien; (2) a large majority in favour of an indemnity of twenty hundred million yen. Mr. Nakano Hyei, a prominent businessman and now President of the Tokyo Chamber of Commerce, suggests that such a sum may be too large, but he is appears to have no supporters in that view. Mr. Ikeda Taizo, President of the Tocho Bank, speaks of seventeen hundred millions plus ten hundred millions, the latter sum being for the relief of the families of the killed or maimed and for the support and for the ransom of prisoners. The *Chuo Shinbun* makes the following calculation:—

	Yen.
First Outlays .....	156,228,929
Second Outlays in first year .....	420,000,000
Outlays in second year .....	780,000,000
Addition now required .....	300,000,000
Total .....	1,656,228,929

To this has to be added the interest on the

foreign loans and the expenses connected with raising them. But the *Chuo* fails to note that we are now in only the third month of the second fiscal year of the war, and that if peace be speedily concluded Japan's expenses will be proportionately reduced.

The *Kokumin Shinbun* urges the importance of avoiding the publication of various private opinions and discussions on the subject of the peace terms. It is very natural that at such a national crisis many views should be expressed, but nothing is more essential than to avoid creating an impression of divided councils. Let the people wait calmly. The Government will not betray them, or make peace on terms such as would be unsatisfactory.

We have not, for our own part, observed as yet any symptoms of undue excitement on the part of the leading Japanese organs of public opinion. There is keen interest, but the indications are that the nation will immediately resume the calm demeanour which has so admirably distinguished it throughout the war.

Wednesday, June 13.

Up to the evening of the 13th there had not been received officially in Tokyo any intimation of Russia having accepted President Roosevelt's invitation. This fact is plainly stated by some of our Japanese contemporaries. The President's temporary absence from Washington was at first thought to be the cause of the delay, but telegrams from London suggest that at the eleventh hour, a dispute has broken out between the war party and the peace party, and that Russia is again vacillating. There can not, of course, be any doubt that before issuing his suggestion officially the President of the United States had satisfied himself as to the willingness of Japan and Russia to accept it. Japan did so immediately, her reply being made on the 10th, but Russia according to rumour still hesitates. Should the War party prevail in St. Petersburg and should the Government, in obedience to its pressure, draw back from the conference at this late period, the American nation will be justly and deeply offended, for a grave slight will have been put upon the President. It is difficult, however, to conceive Russia acting so unwisely. She has virtually pledged herself to go into the conference and she will not be guilty of the deliberate bad faith of standing aloof now.

London telegraphs to the *Hochi Shinbun* that Linevitch complains of being short of ammunition and that Russia's consent to enter the conference chamber is merely a device to gain time. That intelligence bears the obvious stamp of unreflecting invention. The opening of negotiations would not mean an armistice, and without an armistice Russia would not gain any time.

The *Russ* says that Russia's purpose in entering the conference is merely to have an opportunity of openly rejecting Japan's demands. Put in that form the theory sounds to us very absurd, for Russia needs no such opportunity and certainly need not purchase it by the cost of an act of bad faith. But the *Russ* may be misrepresented. What it may have suggested is that the Russian Government wants to obtain an official declaration of Japan's terms in order to hold them up to the nation as an excuse for continuing the war.

It is also possible that the yielding mood suggested by entering a conference may be merely a sop to the peace party in Russia who are now allied inconveniently with the reformers. The bureaucracy may be simulating willingness to make peace in order to

weaken the hands of one set of its opponents at any rate. Certainly the Grand Dukes would be in a better position were they able to say, "you see, we were ready enough to make peace could it have been concluded without humiliation, but you now see also that the choice lies simply between national disgrace and continuing the war." Their warlike policy would then obtain the *cachet* of patriotism.

On the other hand, the *Kokumin Shinbun* has a telegram from Washington dated the 12th saying that Russia has chosen her ambassador in Paris to be her plenipotentiary (or delegate) at the conference.

The Seven Professors are making known their ideas as to peace terms. With all respect for their scientific attainments we can not but think that they are merely doing mischief, for their proposals are greatly in excess of any reasonable standard and could not possibly be accepted by Russia. Hence the ventilation of such views serves solely to disturb the public mind and to sow the seeds of discontent with any feasible settlement. If Russia be asked to do something which would be far more painful to her than the continuance of the war, can there be any question as to her choice? The Seven Professors are evidently swayed by a conviction that Russia must now be deprived of all opportunity to resume hereafter her ambitious design in the Far East, and in obedience to that conviction they have thought out every conceivable means of compassing their end. It is academical but it is not practical. Fortunately the great bulk of the nation seem to be swayed by calmer counsels. Take, for example, the *Tai-Ko Doshikai*, which, considering its origin and its membership, might be expected to occupy the extreme camp. Its views, as just formulated, are (1) the cession of Saghalien and the Maritime Province (*i.e.* the littoral territory between the Ussuri, and the sea, or, in other words, the part of the coast facing Saghalien); (2) the surrender to Japan of the railway concession and land-renting concession in Manchuria; (3) the withdrawal of all Russia's forces from Manchuria; (4) the handing over of the interned ships; and (5) the payment of an indemnity of three hundred millions sterling. These may be called the views of the most thoroughly jingo section of the nation, an exceedingly small section. Even the *Yorosen Choho*, which, as foreign observers know, is more patriotic than circumspect, laughs at the Seven Professors, and classes them with callow students.

A telegram from Shanghai to the *Fiji Shimpō* says that France has used her best endeavours to assist President Roosevelt in the matter of bringing about a peace conference.

As we go to press the following news reaches us from a trustworthy quarter:—"The President, after submitting to both Powers his suggestion, left Washington and returned on Monday the 12th. On the morning of that day (12th) the Russian Ambassador in Washington informed the President that Russia agreed to his suggestion, and stated, at the same time, that she would appoint her Ambassador in Paris to be Plenipotentiary and that she desired to have the conference at Paris. This announcement was formally made. It seems to have reached Japan at 4.40 a.m. on the 14th, which apparent delay is largely accounted for by the difference in the longitudes of Tokyo and Washington."

Thursday, June 15.

Such Japanese newspapers as discuss the

matter are not at all satisfied with the Russian proposal to appoint M. Nelidoff as plenipotentiary for the purposes of the peace conference, and above all with the proposal that Paris shall be the place of conference. M. Nelidoff may be a man of great talent and considerable reputation, but no one can pretend, say these journals, that as a publicist he occupies a place entitling him to discharge the duties of such an office. One journal alleges that Japan might just as well have nominated Viscount Hayashi, and so indeed she might, for Viscount Hayashi had held higher positions than M. Nelidoff ever did. At the least Russia should name Count Lamsdorff or M. de Witte, and this attempt to entrust a matter of the most vital international importance to a diplomatist of altogether second rank shows, and must be taken as intended to show, that Russia attaches very little importance to the whole affair and that she has agreed to a conference merely as a matter of form.

M. Nelidoff, it may be mentioned, is 70 years of age. He was *Charge d'Affaires* in Constantinople in 1877 at the time of the outbreak of the Russo-Turkish War and he acted as Secretary at the San Stefano conference. From 1880 to 1890 he served as Russia's Representative in the Balkan Peninsula. Then he was appointed ambassador in Constantinople, where he served 6 years, thereafter being promoted to Rome where he remained until 1904, then proceeding to Paris. He is not a man of any political influence.

Japan reasonably expected that Russia would appoint one of her most prominent statesmen, and was prepared, for her own part, to send Marquis Ito and Baron Komura.

As to Paris for place of conference, the notion is justly ridiculed. Such a choice would be equivalent to an admission that Russia was not the beaten party at all, and that Japan had to go to seek her. The proper thing, considering the circumstances of the belligerents, would be that the Russian plenipotentiaries should come to the Far East, but the idea of Japan going to Paris is far more extravagant than that it would be for Japan to choose London. The *Fiji Shimpō* infers from these antics on Russia's part that she is not in earnest at all, and that the prospects of the conference eventuating in a satisfactory arrangement are very remote.

Berlin claims to have coöperated with Washington in bringing about a proposal for a peace conference. Indeed a telegram to our German local contemporary reads as though the credit were to be equally divided between Germany and the United States. Already something similar had been telegraphed about France. We trust that these rumours may be well founded, for if such a phalanx of Powers be on the side of peace, Russia will be constrained to treat the matter with sincerity.

In Peking a council of leading statesmen is said to have been held for the purpose of discussing the course to be pursued in connexion with the peace negotiations. The decision, according to rumour, was that the Powers should be invited to treat the matter conjointly.

The *Fiji Shimpō* has a very strong article on the subject of making the peace really permanent, if there is to be peace. Nations do not easily forget defeats. That is not the way of human nature. More than thirty years have passed since the Franco-Prussian War, yet France has not yet laid aside her hope of revenge, nor can it yet be said that

the relations of the two countries are entirely normal. Not less, even more, true will this be of Russia. Hard indeed will it be for her to reconcile herself permanently to defeat by a Power hitherto regarded as so insignificant. The dream of revenge will haunt her, and if she retains a great naval base on the Sea of Japan, she will be perpetually looking over a narrow stretch of water at her sometime puny foe. Even now when the Baltic Squadrons have been annihilated and when the command of the sea is entirely in Japan's hands, the presence of two or three Russian cruisers in Vladivostok constitutes a menace to this country's maritime commerce. It is plain that if the peace is to be what Japan's answer to President Roosevelt indicated, a peace based on conditions such as shall make it permanent, the command of the sea must be secured to Japan, and that can be accomplished only by placing Vladivostok in Japanese hands. Anything less would be a wholly immature peace; a mere truce not likely to last more than 20 or 30 years at the utmost.

The *Yomiuri Shinbun* argues in the same strain. It discusses in detail the views of those that advocate an incomplete settlement. To men who contend that the object of the war was simply to recover Manchuria for China, the *Yomiuri* points out that the conditions proximately responsible for bringing about a war are radically modified after a war. Such a terrible conflict as this has been creates a new set of circumstances which have to be dealt with on a new footing. Japan has to guarantee herself against dangers which have their origin in the war and would not have existed without it. Then there are those who urge that Japan must pay all deference to public opinion. Is public opinion a thing of so much value? When Russia drove Japan out of Liaotung pretexts that the presence of any foreign Power there would be an intolerable menace to the peace of the Far East, and when she forthwith proceeded not only to secure Liaotung for herself but also to over-run the whole of Manchuria, she committed one of the most flagrant and audacious wrongs ever perpetrated by a nation claiming to be civilized. Was public opinion shocked? Did it exercise any kind of influence to check this outrage? And when Russia deliberately broke her promise about evacuating Manchuria, thus adding perjury to shameless aggression, did public opinion interfere? Did public opinion show itself sufficiently potent even to range on Japan's side Germany and France who had been co-signatories of the original announcement that the occupation of a part of Manchuria by a foreign State imperilled the peace of the East, and who now looked on idle while Russia occupied the whole of Manchuria? Japan must go her way, and must not allow herself to be swayed by sentimental or academical notions to which the very countries undertaking to judge her do not themselves pay the smallest practical attention.

The *Asahi* insists that nothing could be more desirable at this juncture than the freest possible expression of the people's views. (This is evidently intended for the *Kokumin* which urges reticence and entire confidence in the Government—Ed. J.M.) In point of fact the people may be said to be unanimous. There are some discordant ideas, it is true, but they emanate from very small sections. What is universally agreed is that all Russia's special privileges in Manchuria must be transferred to Japan; that Saghalien must be ceded to her, that her expenditures must

be recouped, and that there must be no armistice.

The *Nichi Nichi Shinbun* confines itself to insisting that not a day should be lost in occupying Saghalien.

The *Kokumin Shinbun*, referring to Reuter's inexplicable telegram, is just as much perplexed as any one else to decipher the meaning of the alleged difference of "conception" on Russia's part and on Japan's. Russia's words are not to be believed nor her acts to be trusted. That is the record she has established and Japan is fully cognisant of it. When the Tokyo Government accepted the invitation made by President Roosevelt, it did so, not because it reposed confidence in Russia's sincerity, but because it believed in President Roosevelt and desired to treat every suggestion coming from him with the utmost deference. Japan's course is quite plain. If a peace conference is held, she will ask for a settlement the justice of which will be universally recognised. She does not seek simply an end of the war. She is prepared at all points to continue the war. Concerning those that describe the present occasion as one not likely to recur for a thousand years, the *Kokumin* opines that they have very inadequate faith in their country's destiny. Japan has not reached her zenith. And in conclusion our contemporary reverts to its previous contention, namely, that when only a glimmer of the light of peace is visible, the time is premature for loudly discussing terms of settlement.

General Viscount Takashima, formerly Minister of War, speaks very moderately in the columns of the *Chuo Shinbun*. He laughs a little at the scientific septemvirate. Seven is a favourite number for bands of heroic personages. We have the Seven Wise Men in the Wood and the Seven Gods of Felicity, and now we have the Seven Professors. Their policy, if pursued, would mean the swallowing of the whole world. A delightful operation, doubtless, were it within the range of any digestion. But Japan has nothing to do with such romances. She has to ask for terms such that the world will recognise their justice. Already her people may be said to have pronounced themselves unanimously on the broad outlines—the cession of Saghalien, the disarming of Vladivostock, and its reduction to the status of a free port, and an indemnity sufficient to recoup Japan's outlays. It is well to regard the experiences of other countries. The cession of Alsace and Lorraine figured at the head of Germany's demands after the Franco-Prussian war. Will any publicist pretend that the value of these little provinces was at all equivalent to the moral effect produced permanently by their cession on the relations of France and Germany. The taking of an enemy's territory is a picturesque and gratifying operation, but of all international acts it is most unwise from the point of view of true statesmanship.

Professor Ume, one of the most renowned of Japanese jurists, speaks in the *Nippon*. He too strongly deprecates all inordinate ambition. His idea of the just terms of peace are (1) the recognition of Korea as altogether within Japan's sphere of political influence; (2) the cession of Saghalien; (3) the surrender of Russia's special privileges in Manchuria to Japan; and (4) an indemnity. Concerning the amount of the indemnity Dr. Ume notes that Japan has thus far spent ten hundred million yen and that a careful account should be made of her subsequent outlays. Beyond the total thus reached Russia should not be asked for anything. Concerning the question of Vladivostock, he says that it must depend upon whether there is an armistice or not. If there be no armistice, Japan's actual situation in the field in the sequel of continued operations, may affect her demands.

Dr. Hatoyama thinks that the time is premature for making peace. Russia is only scratched. She is not really hurt. It is mere extravagance to compare her with what France was in 1871. She is not beaten to her knees or anything like it. She holds Vladivostock still and she still reposes hopes in the armies of Linevitch. Why should she pay an indemnity? The true course is to go on with the war. There need not be any hurry. Occupy Saghalien; cut the railway and isolate Vladivostock, leaving it to perish of inanition. Then there will be some grounds for discussing the terms of a permanent peace.

Dr. Hatoyama also denies the suitability of Marquis Ito for Japan's chief plenipotentiary. Rightly or wrongly the Marquis has the reputation of a Russo-phil. Any settlement made by him would certainly invite criticism. General Baron Kodama would be a much better choice. There can be no doubt as to his exceptional ability and he has the advantage of large military experience. It will be observed that all parties seem agreed as to the advisability of nominating Baron Komura to be one of the plenipotentiaries.

Concerning the terms of peace, Dr. Hatoyama says that Japan does not want territory but she wants to be guaranteed against having to fight again. Therefore she must have Saghalien and the immediately adjacent continental area; therefore also Vladivostock must be made a free unarmed port, and therefore also Russia must engage not to establish any new naval base in the Far East.

#### DR. E. BAELZ.

Dr. E. Baelz left Japan on Saturday after a residence of twenty-nine years, during which time he has attained a degree of distinction almost unprecedented in the case of a foreigner serving Japan. From the post of Instructor in Clinical Medicine at the University of Leipzig he was summoned in 1876 to serve as Professor of Medicine at the Tokyo Medical College, shortly afterwards incorporated with the Imperial University. He held that important position for the long space of 26 years, his reputation as a lecturer and demonstrator no less than as a physician growing all the while. He was also a member of the Central Board of Health for many years, as well as of the Health Department in the Mombusho, and many learned societies carry his name on their roll of membership. Dr. Baelz has always been a keen and profound student of Japan and its people. He has written many luminous brochures about them, so that his fame in the field of anthropological research is scarcely inferior to his celebrity as a medical practitioner. In the latter capacity it has been his fortune not only to restore the blessing of health to innumerable patients, but also to win crowds of friends who remember him with constant gratitude and admiration. His fame is known all over the East, so that men came from far and near to seek his advice, and the appreciation in which he is held in Japan is proved by the fact that during the past ten years he has been Physician to His Imperial Highness the Crown Prince. The Emperor bestowed on him the First Class Order of the Sacred Treasure in 1900, and has just conferred on him the First Class of

the Rising Sun. It will be welcome news to the public to hear that Dr. Baelz is not leaving the East permanently. He visits Europe partly for the sake of prosecuting researches in which he has long been engaged, and he contemplates returning to Japan some two years hence in the sequel of extensive travels throughout India and central Asia.

On the 9th instant Dr. and Mrs. Baelz were received in farewell audience by the Emperor and Empress, after which they lunched with the Prince and Princess Imperial at the Shiba Palace. Beautiful souvenirs were presented to Dr. Baelz by the Emperor and the Prince.

The 5.30 train carried the Doctor and Mrs. Baelz from Tokyo. A large crowd, representative of every nationality, assembled at the station to say farewell, and it may be truly said that no heartier demonstration has ever been witnessed at Shimbashi.

A very large company assembled at the Pier on Saturday to say *bon voyage* to Dr. and Mrs. Baelz, who departed by the *Zieten* on a long trip. Among those present were Sir Claude MacDonald, the British Minister, Count Arco-Valley, the German Minister, Mr. von Syburg, German Consul-General, and other members of the diplomatic and consular bodies, many Japanese officials and civilians and a large body of the general public.

#### CAPTURED SHIPS.

The *Iwami* (formerly the *Orel*) has been assigned to the Kure station, the *Iki* (*Nicholai*) to Sascho, the *Okinoshima* (*Apraxin*) to Yokosuka and the *Mishima* (*Seniavine*) to Maizuru. Further, the *Ryeshitai* has been renamed the *Akatsuki* and the *Byedoci* the *Satsuki*. Both the *Akatsuki* and the *Satsuki* were sunk at Port Arthur, so that the two Russian destroyers take their places.

It is stated that the *Nicholai* will probably be sent round to Yokosuka, where she may be inspected by persons carrying orders from the Naval Department.

The following changes of names are also announced:—

Old Name	New Name.
<i>Ekaterrinoslav</i> .....	<i>Kanzaki Maru</i>
<i>Russia</i> .....	<i>Seishu Maru</i>
<i>Argun</i> .....	<i>Rasha Maru</i>
<i>Manchuria</i> .....	<i>Kwanlo Maru</i>
<i>Manchuria</i> .....	<i>Manshu Maru</i>
<i>Fukping</i> .....	<i>Chosan Maru</i>
<i>George</i> .....	<i>Rotetsu Maru</i>
<i>Severus</i> .....	<i>Shibetoro Maru</i>
<i>Angara</i> .....	<i>Anegawa Maru</i>
<i>Kazan</i> .....	<i>Kasado Maru</i>

This Prize Court at Sascho has definitely decided that the hospital-ship shall be confiscated. Notice has been given that an appeal will now lie from this judgment. On the 12th instant the captain of the ship and her crew, numbering in all 120, the chief surgeon with 93 assistants and 30 patients were all released.

The British steamer *Powderham* (3,019 tons) and her cargo have also been adjudged lawful prize of war.

In the *Official Gazette* of the 14th instant it is announced, with regard to the Russian steamer *Alexander*, which was seized on the 26th of May, 1904, and which with her cargo was declared lawful prize, that the appeal of Count Geizinger and Company was rejected on the 8th instant.

The same number of the *Official Gazette* announces the release of certain private property among the cargo of the German steamer *Palos*.

## MANCHURIA.

Friday, June 9.

The *Asahi's* correspondent at the front says that for a considerable time after the battle of Mukden Linevitch was obliged to use his cavalry for the purpose of filling up gaps in his lines, but re-inforcements of infantry and artillery having now reached him, he has been enabled to free his cavalry for flanking operations. Mischenko with some twenty thousand sabres is consequently back at his old position on the Japanese left, whence the Russians apprehend their greatest danger. There is reason to think that Mischenko's last raid did more damage than was suggested by the first-received reports, but at any rate it must be confessed that this great force of Russian horsemen, a force from which very signal achievements were anticipated in view of its marked superiority to the Japanese cavalry, has accomplished practically nothing.

The same correspondent—an officer—adds that when Linevitch took command-in-chief some novel departure in strategy was anticipated. But there has been nothing of the kind. The new General follows in the groove of his predecessor: fritters away his strength in futile petty attacks which accomplish nothing and cost him considerably in the aggregate. His men do not offer any real resistance to the counter-attacks of the enemy, they retreat faster than they had advanced, and since these small assaults are undertaken mostly with newly arrived soldiers, the present *morale* of the army may be inferred. There are some fortifications at Yehhaching, Supingchih, Pamienching and so forth, but they are not on anything like the scale of the Shaho works, and it does not seem that the Russian entertain any intention of making a vigorous stand there. They are busily constructing a military road from Changchung to Petuna. The impression is, however, that this road is intended for purposes of retreat rather than of attack.

The *Jiji Shimpō* says that Linevitch had originally about 240,000 troops along the Kirin-Changchung lines, but that the number has now been increased to 360,000. He has also two army-corps, or some 60,000 at Vladivostock and in its neighbourhood.

In the *Shogyo Shimpō* we read that Linevitch at present has his head-quarters at Fenghuwa, whence he often rides south on tours of inspection.

Saturday, June 10.

The *Asahi Shimbun* has a telegram from Tientsin saying that the Russian forces assembled in Kirin have begun to move, and that interesting news may be expected from this quarter ere long.

London telegraphs that in St. Petersburg Linevitch is believed to be virtually surrounded by the Japanese armies.

Monday, June 11.

A telegram to the *Hochi Shimbun* from London says that according to rumours prevalent in St. Petersburg a Japanese force has occupied Omso (or Omaso), 75 miles east of Kirin. If this be true it places the Japanese on the high road from Kirin to Ninguta, and within 70 miles of the railway to Vladivostock. The cutting of the latter and the consequent severing of communications between Harbin and Vladivostock would be the next step in the programme, a comparatively easy step. But we have no independent information that such a move has been made. The difficulties attending it are obvious. An army directing its march upon Omso would have to set out, so far as

we can see, from Onsyōng, on the north-western frontier of Korea, and there is a sufficient Russian force along the Tumen in that region to render such an operation hazardous in the matter of communications. Unfortunately, however, no maps in the possession of the public are sufficiently accurate to warrant definite statements on a matter of this kind. All that we can say is that the strategy indicated by the occupation of Omso—assuming the thing to have really taken place—would be at once brilliant and sound. The isolation and investment of Vladivostock are results which Linevitch must struggle with all his capacity to avert, but a little reflection shows that in attempting to succour Vladivostock from Harbin with a great Japanese army threatening his flank from the direction of the Kirin-Changchung line would be a virtually impossible feat for the Russian General. Linevitch now labours under the great disadvantage that his main line of communications is parallel to the Japanese front, and that if he attempts to concentrate his strength at the Vladivostock end, he uncovers himself at Harbin. The Japanese strategy, as it now unfolds itself, becomes thus a thoroughly clever combination of action and menace.

Tuesday, June 12.

One or two Tokyo newspapers speak of the Japanese armies in Manchuria as having commenced their forward movement. That is very evident from the official reports though the dimensions of the movement are not clear. The extreme left sent forward its cavalry screen from Fakumun on the 5th, and the centre (of the Western Army) did the same from Changtu on the 9th. This army is plainly moving towards the Russian lines south of Fenghua. It should be understood that the great range of the Kulu mountains divides the arena of campaign into two distinct sections, and we have no precise information as to the distribution of the Japanese forces on either side of this chain. Therefore it is that we speak of the West Army and the East Army. Changchung may be said to be the objective of the West Army's advance, and the Russian lines in this section of the field seem to be pushed forward to the south of Fenghua and to extend from Yehhaching on the east to Pamienching on the West. Were these lines forced, Fenghua would presumably fall into Japanese hands, but nothing is publicly known as to its defences, nor do we know whether the Russians have inner lines between Changchung and Fenghua. As for the Army operating on the east of the Kulu range, its objective is Kirin, and its outposts are pushed as far as Yingepienmun. Apparently the Russians, in this part of the field, intend to make a stand southward of Hailungching, which holds towards Kirin much the same relation that Fenghua holds towards Changchung. It is in this eastern section that St. Petersburg reports the Japanese van to have reached Omso. If it has, then the Russian positions on Hailungching and Kirin are turned. At all events the military situation in Manchuria begins to be very interesting.

## THE "INDUSTRIE."

Our readers remember that some days ago a report was received of the seizure by the Japanese of a little steamer called the *Industrie*, concerning which it was stated that though nominally chartered for journal-

istic purposes, she was really acting as a spy. A different account of her is now given. It appears that her master and crew of 21 people, having been released at Saseho, reached Nagasaki on the 9th. From them it has been learned that the vessel was secretly on her way from Shanghai to Vladivostock when she was seized off Fusan *en route*. She is not an ordinary trading steamer. She was to have been used in operations connected with the raising of warships and steamers in Vladivostock harbour, and for that purpose she had on board a number of skilled divers. Since last year no less than ten torpedo-craft and steamers have gone to the bottom, it is said, in Vladivostock, and the salvage of these was the object in view. Among those on board the steamer there is a German, whose name we can not successfully decipher from its transliterated form. He is said to have been released on taking an oath not to reveal military secrets.

Is this story credible? When and under what circumstances have ten vessels, torpedo-craft and others, gone to the bottom in Vladivostock harbour? Nothing had previously been heard of such incidents, except in the case of the *Bogatyr*.

## NEW RUSSIAN WAR-SHIPS.

From intelligence contained in the *Official Gazette* of St. Petersburg it appears that Russia is now building ships to replace those lost in the Far East. The following details are given:—

Three ships (armoured cruisers, 7,800 tons) of the *Bayan* type, to be called the *Admiral Makaroff*, the *Pallada* and the *Bayan*.

Four gun-boats of the *Giljak* type (1,300 tons), to be called the *Giljak*, *Bobr*, *Sivoutch* and *Koriets*.

Ten river-gun-boats of 183 tons to be called the *Orachanin*, *Mongole*, *Briyade*, *Za-Baikals*, *Korel*, *Kilgus*, *Karummis*, *Amours* and *Ussuries*.

Two torpedo gun-vessels of 570 tons to be called the *Posadnik* and *Gaidannak*.

One torpedo transport of the *Yenisei* type (2,500 tons) to be called the *Yenisei*.

Two torpedo-destroyers of 297 tons to be called the *Lieutenant Marefu* and the *Anastassoff*.

Twenty-nine torpedo-destroyers of 350 tons. Their names are not given but presumably they will be the names of those lost at Port Arthur and in the Japan Sea.

Some guard-boats of 35 tons, to be called Guard Boat No. 1, Guard Boat No. 11, and so on.

## THE EARTHQUAKES.

Shocks of earthquake still continue to disturb the Izu Peninsula. From Ito, Mishima, Mizuzaki, Ohito and Oshima comes news that petty tremblings are frequent. In Oshima there was quite a heavy shock on the 7th, followed by 51 *tremblements*. There is naturally some anxiety lest these frequent shocks should prelude a serious seismic disturbance.

A Shidzuoka telegram says that on the afternoon of June 7th, one severe and seven slight shocks of earthquake were felt in the districts of Mishima, Numadzu, Ito, etc. No details as to damage are given.

The Governor of Oshima reports that at 2.40 p.m. on the same day, a severe shock was experienced and since then fifty-four slight shocks were felt. The damage is not serious.

## THE EQUITABLE.

The unseemly squabble which has been going on in New York for some three months or so regarding the management of the Equitable Life Assurance Society of the United States, has at last been settled, as we learn from a letter addressed to us by Mr. J. T. Hamilton, General Manager for the East of this big concern. The newspapers of America, true to their unhealthiest instincts, magnified, twisted, and distorted the affair according to the side they took upon themselves to defend, and filled pages, not being content to limit themselves to a few columns, with charges, countercharges and recriminations day after day until the public grew thoroughly disgusted and begged to be excused the daily surfeit. The young Mr. Hyde, son of the founder of the Society, was made the target for the worst missiles, but the President, Mr. Alexander, did not escape lightly by any means. Ostensibly the attack was led against Mr. Hyde, the wielder of the controlling power among the stock-holders. As Mr. Hamilton tells us, when the Society was founded a guarantee of \$100,000 was required by law and this was raised in one thousand shares of \$100 each, the dividend thereon being limited to 7 per cent. per annum. The late Mr. Hyde and his friends put up this money, and they practically controlled the working of the Society and had the undisputed disposal of its vast funds entirely in their own hands. As a result of the recent fight, the control of the stock has now been transferred to a committee of policy-holders to be vested in three trustees, appointed for life, with power to vote for twenty-eight directors according to the instructions of and representing policy-holders, and twenty-four directors to represent the stockholders, thus accomplishing the mutualization plan approved by the State Superintendent of Insurance and by the Board of Directors. For the Society's charter from the outset provided that the business should be conducted on the "mutual plan," and that was always the intention of its founder and its present president, Mr. Alexander, however different it has really been in practice. Mr. Hamilton tells us that the gentlemen invited to serve as trustees for the policy-holders are well-known and command respect. They are, the Hon. Grover Cleveland, formerly President of the United States, the Hon. Justice O'Brien, of the Supreme Court of the State of New York, and Mr. George Westinghouse, President of many great and well-known companies. To still further consolidate the interests of policy-holders the office of Chairman of the Board of Directors has been created and the Hon. Paul Morton, now Secretary of the Navy of the United States, has been elected to this office, which he has accepted. Mr. Morton retires from President Roosevelt's Cabinet in the Fall, we understand.

We said above that the recent fight was made ostensibly against the young Mr. Hyde and his father's estate. If any fact comes clearly out of the squabbling it is that the real object of the attackers, after the issue was joined, was to oust the present head of the Society and put Mr. Gage Tarbell, one of the Vice-Presidents, in his place. Mr. Tarbell seems to be a man possessed of restless ambitions and overbearing personality and it is little to be wondered at that before the fight was over the American papers began to tear and rend him in their own familiar fashion. Whether they were right or wrong

in their accusations against Mr. Tarbell it is impossible for us at this distance to say, but we can't help feeling that policy-holders in the Equitable must be glad that the affair is settled and that the Committee of Investigation headed by Mr. H. C. Frick has reported:—"It seems proper for the Committee to state that the interests of every policy-holder are absolutely safe. The assets of the Society are in possession of the Committee; they are absolutely sound and the integrity of everyone of the Society's contracts is absolutely unimpaired."

## THE RUSSIAN TRANSPORTS AND AUXILIARY CRUISERS AT SHANGHAI.

There appears to be considerable hesitation on the part of the Chinese Authorities in dealing with the Russian transports and auxiliary cruisers at Woosung. Why there should be any hesitation it is difficult to understand, for did any doubt originally exist as to the belligerent character of a transport which accompanies a fleet and supplies it with coal and provisions, such doubt should have been dispelled by the orders of the French Government to the Indo-Chinese authorities that war-ships and transports alike should be denied the hospitality of neutral territorial waters. The Chinese, however, have never shown any disposition to be prompt, still less precipitate, in their interpretation of international law. Seeing what a wearily long time they took to decipher the rights and wrongs in the case of the *Manjur*, and even in the case of the *Askold*, their present delay is not very remarkable. Meanwhile it is rumoured that some of the transports have adopted the device of hiding away in their bunkers certain material of war which they were carrying, and which, if discovered, would at once identify their character. But that may be a mere canard.

Here a report may be mentioned that a steamer claims to have sighted 14 Russian warships in the China Sea. If they were not the ghosts of the Balticers, they must have been Japanese.

It is stated that the Russian refugee ships at Shanghai are doing just what they please and that the Chinese officials can not exercise the least authority over them. That is very probable. It has always been understood that China's desire to maintain her neutrality was very much stronger than her ability to assert it.

Another Russian transport is said to have reached Woosung on the 12th and to have been ordered by the Taotai to choose between going to sea in 24 hours and being interned.

## GERMANY, JAPAN AND RUSSIA.

The *Kokumin Shimbun* sagely remarks that discomfiture it always discontented. Russia grumbles because Germany has extended a warm welcome to Prince Arisugawa. Why should not the German welcome be warm? Prince Karl Anton was surely received with sufficient warmth in Japan, and if Germany returns the compliment she merely discharges the duties of hospitality. The fact is, however, that Russia is wearing down the goodwill of her friends. Germany was among the number at the outset. Germany was very strongly suspected of discharging her neutral obligations in a manner markedly benevolent to Russia. But she is probably getting tired of the Russians, their defeats, their incompetence and their complaints. It is extremely pro-

bable that French sympathy also is largely alienated and that it will be quite alienated if things go in their present groove.

It is not to be denied, however, that the Kaiser showed very remarkable *empressement* in his reception of Prince Arisugawa. We have not heard that the Emperor of Japan went to meet Prince Karl when the latter reached Tokyo. Certainly the cases were different, and the Emperor of Germany was entirely justified in emphasizing the difference. But we can scarcely expect the Russians, in their present mood, to reason very closely. They might well have supposed that the Yellow-Peril link would have held Germany and Russia very close together. The link has snapped, however. It snapped at Tsushima.

## AOYAMA.

Two hills there are, both green in summer time,  
One where the sleeping,  
After life's weeping,  
Peacefully rest.  
While the white clouds, like listening angels,  
Float over the homes of the Dead.  
And quiet it is in this garden in summer time.  
For Earth's noise comes not  
To this hallowed spot.  
Only the trees  
Breathe softly their songs and their sighings  
To the Blessed who lie asleep.  
And many there are, with the fever of Life  
upon them,  
Longing for rest.  
For rest seems best  
To those who faint  
In the lone, long hours of summer time.  
But rest comes not, and many there are who weep.  
And on the other hill in summer time,  
Men groan with pain.  
And never again  
Will former strength  
Come back to those who have fought with  
the King of Death.  
For cruel is he, to those who defy his strength.  
And sleepless and long are their nights in summer time.  
But though pain is sad,  
The world is glad,  
And there is joy.  
In flower and tree in summer time.  
And those who have felt Death's touch  
Stretch forth for the hands of Life.

M.K.

## KOREAN RAILWAYS.

Japanese energy is rapidly furnishing Korea with railways. The Sôul-Fusan line is opened throughout its whole length of 270 miles. On the 6th the Fusan-Masanpo road was opened, the celebrated Chinghai Bay being thus brought into railway communication with the outer world. The Sôul-Wiju line is practically finished; only one bridge throughout its entire stretch of 296 miles remains unbuilt. Work has been commenced on the Sôul-Wonsan road (140 miles), though as yet the embankments at either end—20 miles from Seoul and 10 from Wonsan—have alone been finished. Finally there is serious talk of a line from Wiju to Yinkow and another from Pyongyang to Wonsan. The total figures are that 592 miles of road have been practically finished and 140 miles are actually in hand.

## CHINA.

The Chinese Minister, in St. Petersburg is said to have telegraphed to his Government that Russia having been completely crushed at sea, is now determined to throw her whole strength into the land operations, and that she is about to march a big army through Mongolia, wholly regardless of the Middle Kingdom's neutrality. The Peking Authorities are represented as adopting measures to preserve the empire's neutrality, and the Japanese newspapers announcing the intelligence use for caption the Confucian saying "desperation inspires disorder."

It is stated that the Russian Government had almost succeeded in effecting arrangements for receiving from China payment of the St. Petersburg share of the indemnity in silver at a rate of exchange which would greatly benefit Russia and correspondingly prejudice the other Treaty Powers. These have therefore remonstrated.

The new Representative of the United States in Peking, Mr. Rockhill, is said to have remonstrated with the Chinese Government on the subject of the decision recently adopted by Chinese provincial colleges and merchants not to make any purchases of American products. The Waiwupu is reported to have pointed out, in reply, that the procedure of the United States in restricting Chinese immigration had greatly and naturally enraged the people of China and that instead of complaining of action which was but a protest against wrong, the wiser plan would be to correct the wrong.

In the face of the extraordinarily disingenuous attempts made by certain foreign local journals in Japan to demonstrate the legality of Rojestvensky's proceeding in Indo-China from the point of view of French neutrality, it is refreshing to read the following digest of American public opinion, a digest which, as a specimen of *multum in parvo*, commends itself forcibly:—

France is really in a predicament. The continued violation of neutrality by the Russian fleet, which obeyed the order to leave Kamranh Bay only to reënter French waters at a point a little farther north on the Indo-Chinese coast, has been awkwardly difficult to prevent. Yet this violation of international comity, this abuse of French hospitality, has definitely aided Rojestvensky in his preparations to meet Togo. Japan can not be blamed for protesting—could not, for that matter, be blamed if she attacked the Russians in French waters. But here is where the cynical cunning of the Russians is most apparent; they know that Togo can ill afford to risk battle so far from a base as Indo-China. At such times as this we long for an international police court. The decision of a court could hardly be other than that Rojestvensky has already lost his campaign—on a foul.

We may quote here the words of a correspondent whose opinion is based on the best possible information:—"Your letter of March 21st in which you alluded to the feeling in Japan about the doings of the Baltic Fleet in Madagascar, reached me just as the trouble was beginning over again about their doings on the coast of Indo-China. It was, and I am afraid still is, a very unpleasant and ticklish matter. The French of course believed at the beginning of the war that their allies would have something like a walk-over and so they were naturally not going to disoblige them by modifying to their detriment even in theory the regulations they had hitherto always had with regard to the duties of neutrals in such cases. They did not, I am sure, believe that the question would ever be one of practical importance. They are now loist with their own petard, and much as they dislike it they feel they can not in decency alter their attitude at this stage to the detriment of their ally. They are therefore in a very

awkward predicament, and I have no doubt Rojestvensky, inspired by his own knowledge of the policy which the naval Grand Dukes have at heart, is acting to a great extent with the definite purpose of trying to embroil France with Japan, so as to create international complications. The Grand Duke Alexander, who is in many respects the strongest man in St. Petersburg, has all through sought to play this sort of game, sometimes with and sometimes without the knowledge of the Tsar. It is neither English interest, nor French interest, nor Japanese interest to play into his hand, and I only hope the Japanese will keep cool over it, though the provocation is, I admit, severe."

A telegram from Peking to the *Hochi Shinbun* alleges that on the 9th and 10th the Russian *Chargé d'Affaires* had long interviews at the Waiwupu. He presented finally a formal document announcing that unless China could definitely fix the boundaries of neutrality in Mongolia as demanded by Russia, the latter would, from the 15th instant, consider herself free to march an army through that region and would defy China to interfere.

If this be true it constitutes a curious comment on the peace negotiations which Russia has commenced. The 9th was the day when President Roosevelt's suggestion reached Tokyo. The 10th was the day when Tokyo replied. And these were the very days when the Russian *Chargé d'Affaires* was threatening in Peking a new development of his country's Far Eastern aggressiveness.

It is rumoured that China has determined to organise twelve garrisons throughout the Empire, and that a part of Viceroy Yuan's forces are to be sent to Tsingchou and Tieh-chou. That would be a demonstration against Germany.

Russia is said to be continuing her menaces with regard to Mongolia. She insists that the limits of neutrality must be extended and that the Japanese troops must be required to withdraw from Hsinmintun, and she fixes the 1st of the sixth month (Chinese calendar) as the latest date for compliance with these terms, the alternative being that she herself will regard all the district southward to Shanhaikwan as within the belligerent area. The Chinese Government is reported to have replied that negotiations are now proceeding on the subject of Hsinmintun, and that if Russia carry out any such threat, China will cease to pay the indemnity for the Boxer troubles. We have already pointed out more than once that this demand for extending the limits of neutrality in Mongolia is simply a device to obtain protection for Russia's flank westward of Harbin. She herself used Hsinmintun and the West-Liao region freely so long as it suited her military convenience to do so, and now in deference to the same convenience she wants to have these very regions declared neutral. Such arbitrariness is too transparent.

It is stated that the Empress Dowager, on learning of President Roosevelt's intervention in the cause of peace, addressed to him an official telegram thanking him in the name of the Chinese nation for his efforts to restore tranquillity.

A private letter from Peking translated by the writer of "Notes on Native Affairs" in the *North China Daily News* states that the reception by their Majesties of H. E. Sheng Kung-pao in audience on the 22nd of May, was all that could

be desired. The Empress Dowager, questioning his Excellency about the railways under him, remarked:—"We are satisfied with your ability in doing the best that can be done in the matter, the only thing being that you must exercise more discretion in placing your confidence in those under you, who may not be as disinterested and patriotic as yourself." Finally her Majesty, towards the end of the audience, enjoined upon his Excellency the necessity of consulting and working in conjunction with the Ministry of Commerce and Viceroy Yuan Shih-k'ai. The *North China Daily News* also understands through another source that Sheng Kung-pao on being admitted to audience asked their Majesties to accept his resignation of the Director-Generalship of Railways and recommended Lord Li Ching-fong, adopted son of the late Marquis Li Hung-chang, as a proper person to take his place. It may be asserted that Sheng Kung-pao's position at the present moment has not been so strong for several years. There are many rumours flying about as to the amount used to smooth his path in the North, but a moderate estimate places it at Tls. 200,000, although provision is said to have been made for an expenditure of at least a million.

Mr. J. W. Ragsdale has been instructed to remain permanently as U. S. Consul-General in Tientsin, and his pay has been increased by \$1,000 gold per annum.

After lingering the better part of seven months in Urga, Mongolia, most reluctant to return to Lhasa, from which place he fled in August of last year upon the approach of the British Expedition, the Dalai Lama has been compelled to leave Urga on his journey home. On the 7th ultimo, says a Shanghai contemporary, an Imperial decree arrived at Urga sharply reprimanding the Dalai Lama for his malingering, so to speak, and he was made to understand that if he did not immediately cease his intrigues with the Russians and start instantly for Tibet he would be cashiered for good, sent back under arrest, and left to the tender mercies of his many rivals and enemies in Lhasa. This is reported to have had the desired effect; the Dalai Lama left Urga the very next day and the Imperial Resident in the city must have been exceedingly glad to have got rid of his unwelcome guest, whose continued presence in Urga and incessant efforts of the Russians to get him to throw himself upon their protection would be the cause of grave dissensions between China and Russia, whilst if the Dalai Lama had actually gone over to the Russians it would also cause trouble in the future between the British Government and the Russian, since the latter after the restoration of peace would doubtless use the Dalai Lama's presence with them as a pretext to interfere in Tibetan politics.

M. Pokotiloff, the new Russian Minister to the court of Peking, began his regime with a distribution of gifts to the value of Tls. 25,000 among influential officials of the Court and Metropolitan administrations.

A Peking dispatch states that in order to prevent further occasions for misunderstanding, their Majesties, under advice of the Waiwupu, have instructed Viceroy Chou Fu of Nanking to take immediate steps with reference to the throwing open to international trade of the city and port of Haichou, near the old mouth of the Yellow river. As recently as the preceding Ming dynasty Haichou was a seaport of some considerable strategical and commercial importance and its merchants possessed not only a coast-borne trade, but their junks also made regular trips to Korea as well as to the Manchuria coast. The present shallow state of the waters of the Haichou coast, however, makes it only fit for the lightest-draught steamers and it will need considerable and constant dredging work to make it resume its former importance.

Mr. Chang Chenhsun, Director-General of Railways for the Two Kuang and Min-Che provinces, cannot put his scheme of constructing a railway between Canton and Whampoa and one between the latter place and Amoy in Fukien province, into speedy execution owing to the hostility of

Viceroy Tsen and Governor Chang, of Kuangtung. It would seem that Director-General Chang in projecting the two lines omitted to first consult with these two highest authorities of Kuangtung province and so when the former recently asked them to issue proclamations ordering the masses not to interfere with the building of the new lines and other matters relating to the projected railways the two high functionaries declared that they were officially ignorant of the schemes and then telegraphed to the Shanguu complaining of the conduct of the Director-General. They declared that, as the immediate Governors of the provinces, anything relating to it must be first referred to them and that not until it had been found that there was nothing detrimental to the masses or the national interests in the projects in hand, should the Director-General of Railways be permitted to put his schemes into action.

The Rev. J. Hudson Taylor, M.R.C.S., F.R.G.S., founder of the China Inland Mission, succumbed to heart failure at Changsha, Hunan, on the 3rd June. Born in 1832, he arrived in Shanghai on 1st March, 1854, in connection with the Chinese Evangelisation Society, and worked for some time with the Rev. W. C. Burns, the well-known missionary. He returned to England after a few years and severed his connection with the Evangelisation Society. He started the China Inland Mission in 1865. At that time there were only 92 missionaries in China, and these were located in about a dozen cities upon the coast line of the maritime provinces, with the single exception of Hankow. Eleven of the vast interior provinces of China were then without a single Protestant missionary, and the total number of native converts to Christianity was only 2,000. Though his methods met with considerable criticism, especially with regard to the manner of sending women missionaries entirely unprotected into the heart of China, the Mission which Mr. Hudson Taylor projected, has been a power for good in many ways. The China Inland Mission—the little one of forty years ago—has become nearly a thousand, for the total number of missionaries in connection with it is now 828, or five more than before the Boxer crisis, when 58 of its missionaries were killed. In connection with its work there are 200 central stations and more than 450 outstations. There has been a total of nearly 20,000 baptisms since the foundation of the Mission. Mr. Taylor was twice married, first in Ningpo to Miss Dyer, a daughter of the Rev. Samuel Dyer, the well-known missionary of the London Mission, in the Straits, and afterwards on the 28th of November, 1871, in the Regent's Park Chapel, London, to Miss Faulding, who was one of the missionaries who came to China in the *Lammermoir* in 1866. His first wife died at Chinkiang of cholera, on the 23rd of July 1870, whilst his second wife only predeceased him by a few months, she having died last year at Vevey in Switzerland. Several of Mr. Hudson Taylor's children are now working as missionaries in China.

Residents at the Peak of Hongkong appear to be suffering this year from a plague of mosquitoes and a few other unusual things in the natural history line. Centipedes of phenomenal size have been killed recently in several houses at the Peak. The early rains and fogs are believed to be responsible for the swarming of mosquitoes, and the presence of the centipedes in unusual numbers may be attributed to the same cause. These mosquito pests do not appear to be anything like this record, however. "Talk about mosquitoes," said an American, "why, when we were in latitude 30 deg. and longitude 75 deg., a host of mosquitoes settled on our rigging, and when they left us, there wasn't a stitch of canvas left on the boat." "Wal," said his friend, "that's strange, because when I was sailing in latitude 29 deg. and longitude 74 deg. a swarm of mosquitoes settled on our rigging and every one of them had a pair of canvas breeches on. Same mosquitoes, no doubt!"

Mr. A. Wright, the popular *Taiwan* of Messrs Butterfield and Swire, left Shanghai for home on the 7th inst. by the C. N. *Fochow* for Hongkong where he took steamer for Australia and after a

short stay there will proceed to the Cape and thence home. Mr. Wright came out East in 1869 and was first stationed in Japan and later on came to Shanghai. He goes home on the advice of his medical adviser.

"Piracy continues to flourish." This startling phrase, is embedded in a report by British Consul-General Scott on the trade of Canton, and he proceeds to give proof of his assertion. During the past year half a dozen organised attacks have been made in the delta, even on British steam launches, and pirates and robbers carried on their depredations in the harbour precincts. The authorities did nothing to prevent them, even the pirating of a Hongkong junk and the landing of the stolen cargo under their noses did not galvanise them into repressive action. Yet in spite of all the trade of the locality during the year exhibited remarkable expansion. China is a country of contradictions.

The *Sin Wan-pao* hears that there is much corruption in the management of the Shanhaikwan railway line. The station-masters have misappropriated large sums of money. When Director-General Hu Yu-feng went to inspect the accounts, he found one of the station-masters had misappropriated Tls. 170,000, which amount he failed to account for. There has been a regular system of "squeeze" in the administration.

The following is an extract from a despatch received at the British Foreign Office from H.M. Minister at Peking (Sir E. M. Satow, G.C.M.G.) on the prospects of the rapid development of Newchwang after the conclusion of the Russo-Japanese war—"There are now 1,400 Japanese registered at the Newchwang Consulate, which is about 300 more than there are at Tientsin. There are signs of increasing local prosperity; new shops and houses of an improved style are being built; roads have been made, and a tramway is to be constructed from the port to Niu Chia T'un (3½ miles), the terminus of the branch railway from Ta Shih Ch'iao. There is little doubt that after the war the development will be great and rapid, and Newchwang is likely to become one of the largest and busiest ports in China, and that in spite of the possible competition of other ports, such as Dally and Chingwantao. There is at present a considerable export of native produce from the latter place, the Chinese railway having contracts for the transport of bean cake alone from Hsinmintun to the amount of 40,000 tons. It is, however, probable that this is merely product which could not be brought down in the autumn, owing to the Russian obstructions on the river and the use of so many river boats by the Japanese."

H.M. Consul-General at Canton (Mr. James Scott) states in his report for 1904, that tea has ceased to hold a place in Canton trade—some 25,000 piculs of all sorts cover the export. Much that has gone to Australia and the United Kingdom has been of low quality, and, in some instances admission, was refused by the Custom-house authorities in London. The tea season of 1904 has closed with heavy losses both to native and foreign merchants, and all accounts agree in pronouncing the Canton tea trade "dead."

A dragon boat festival disaster is reported from Nanking under date June 7. While a large crowd of men, women, and children were standing on the Wënté Bridge, over the canal in front of the Confucian Temple of Nanking City, looking at the manoeuvring of the dragon boats, the bridge suddenly gave way under the weight of the multitude and precipitated hundreds of the spectators into the canal. Fortunately the canal was not very wide, while there were a number of boats near by, so that only about forty persons are said to have been drowned.

We are pleased to record, says the *N. C. D. News*, in view of the present agitation against certain alleged clauses of the proposed new Chinese Exclusion Treaty, that the three American professors of the Imperial Nanyang College, at Sicauei, namely, Professors C. M. Lacy Sites, Ph. D.; C. S. Leavenworth, M.A.; and D. Latti-

more, B.A., have been decorated by His Imperial Majesty Kuang Hsu with the First Class Double Dragon of the Third Grade Division, in recognition of their successful efforts at the College during the past few years, and in response to a eulogistic memorial from H.E. Sheng Kung-pao, Director General of Railways, etc., who it will be remembered received the Imperial permission to establish the College in 1897. His Excellency Sheng's memorial to the Throne was based on the very favourable report of Taotai Chang Mei-yi, the Director of the Nanyang Colleges, to the five, sterling, educational work of the American professors and he had the pleasure of handing the decorations to them a day or two ago.

### RUSSIANS SINK ANOTHER BRITISH STEAMER.

Mr. F. J. Abbott, Agent for the P. & O. Company in Yokohama, on Thursday received a telegram from Kobe informing him that the "Russian Government had sunk the steamer *St. Kilda* at sea and that the native crew and the English mails were landed at Batavia."

The *St. Kilda* was a steel vessel of 3,518 tons gross, built at Dumbarton in 1899, and was owned by the British and Foreign Steamship Company of Liverpool, her Captain being Mr. W. Jones. She recently made a voyage from London to the Far East, arriving at Sasebo on June 3rd, where she discharged. She must then have proceeded south to Saigon for rice and put into Hongkong (her agents were Messrs. Bradley & Co.) for orders on her way north again. Here the English mails just arrived from home were transferred to her, and she left Hongkong for Kobe on June 3rd. Evidently the converted Russian Volunteer cruiser *Smolensk* must have encountered her and the delay in hearing news of the ill-fated vessel arises through the Russians carrying the crew off to Batavia. English commerce has suffered greatly at the hands of the *Smolensk* since she first held up the P. & O. steamer *Malacca* in the Red Sea last year.

### NAVAL CASUALTIES.

The *Asahi Shimbun* publishes the following statement of total casualties in the Japanese Navy up to the 12th instant:—

	Killed.	Wounded.	Totals.
Officers (substantive and relative rank).....	221.....	170.....	391
Petty officers and blue-jackets .....	1,782.....	1,497.....	3,279
Totals.....	2,003.....	1,667.....	3,670

Our contemporary divides the wounded as follows:—

	Completely Released	In hospital.	In hospital.
Officers (substantive and relative).....	117.....	1.....	22
Petty officers and blue-jackets .....	876.....	65.....	198
Totals.....	993.....	66.....	220

This detail of wounded totals only 1,279, whereas the aggregate of the previous table is 1,667.

From the same source we learn that the casualties in the battle of the Sea of Japan totalled only 690.

The detail is as follows:—

	Killed.	Wounded.	Totals.
Officers .....	6	41	47
Officers of relative rank..	2	12	14
Petty officers .....	27	122	39
Blue-jackets .....	72	398	470
Men attached .....	4	11	15
Totals.....	111	579	690

Another table is given showing the detail of the wounded.

	In hospital.	Died after admission.	Treated on board ship.
Officers .....	16	1	24
Officers of relative rank .....	6	—	6
Petty Officers.....	39	1	83
Blue-jackets .....	123	3	275
Attached men .....	2	—	4
Totals.....	186	5	392

There is here also a discrepancy of 1.

We may supplement the above by saying that the number of Russians wounded naval officers and men now in Japan undergoing treatment is 268, and that 10 others died after admission to hospital. Among those that died were 3 officers, and among those undergoing treatment are 31 officers.

#### IDEALS FOR THE AMERICAN PRESS.

On the eve of his departure to take up the post of American Ambassador to the Court of St. James, the Lotos Club of New York entertained the Hon. Whitelaw Reid at a brilliant farewell dinner. Naturally amid such an environment the speeches were of a very high order, but Mr. Reid's reply to the toast of his health was conspicuously the best. After a brief allusion to the memories which now cluster round the Lotos Club dinners he made reference to his new appointment. The most gratifying thing about it, he said, was the way in which it had been received. "We have been living in a strenuous time. No man in this great metropolis and in my place could well escape an active part in the incessant controversies and turmoil of the last third of a century; and my critics, I believe, have generally agreed that I was apt to assume at any rate my full share of them. After such a life, to have this appointment made by the President of my country, without the filing of a single recommendation, and approved by the Senate without a dissenting voice, and received by the press and the public with such apparently general cordiality, fills me with a sobering sense of responsibility beyond anything I have ever felt before, and with earnest aspirations that all this general confidence may prove in the end not to have been wholly misplaced."

Mr. Reid grew more serious as he proceeded:—

"Let me take the opportunity before this club, so largely made up of members of the press and others of literary and artistic pursuits, to say further that the thing that has touched me most of all is the unbroken goodwill expressed with such heartiness and without distinction of party by my colleagues in the press.

"May I presume a little on this? I would like to take the liberty of pointing out that other work may now bring different duties. No one, I trust, will ever find me unmindful of the rights and the just claims of the profession I honour most in the world, and I am the proudest to have served. No man can have spent his life in newspaper work without being led by all his habits and instincts to sympathize with newspaper workers and a readiness to facilitate their efforts. And yet may I hint to the general manager of our wonderful Associated Press service, whose wary eye I see upon me, and to others in less responsible places, who may have chanced to think of the matter hitherto with less scrupulous care than the general manager himself and his representatives in the great capitals always show, that there may come, in fact, there must come, a time when it will be my duty to report first and exclusively to the Government, instead of reporting to the newspapers.

"It is perfectly true that an open course is best; that a free people wish to know from day to day what is being done in their name and by their authority; that our Government is not adapted to secrecy and does not like to make a mystery of its movements and its policy.

"But the Japanese have been showing, on a great scale, that there is a duty in war which under any sagacious government must come before the

duty of furnishing bulletins for the daily press. Diplomacy, if it is to be sagacious or successful, even the diplomacy of a republic, must be somewhat in the same class. Neither can always be advantageously conducted *coram publico*.

"There is another phase of our newspaper activities that merits more serious consideration from us all than we generally give it. The free press largely rules a free people. It may make peace or war; it has done both. But it is quite capable of fomenting very grave difficulties which it never desired or intended, or even thought of. In our great distances and the isolation between two oceans and a general feeling of remoteness and elbow-room and independence it has sometimes been apt, in moments of excitement, to measure its words as little in dealing with a high-spirited and sensitive nation as with a candidate for town constable or the Board of Aldermen. Is it not time for the press, when it exercises the power, to recognize also the obligations of consideration, moderation and a scrupulous regard both for the rights and susceptibilities of others?"

These are wise words, well considered, but we fear in the present development of the press of the United States—with some conspicuously fine exceptions—that they have been spoken in vain.

#### HOME STORIES OF THE WAR.

Into her booklet of 46 pages entitled "Home Stories of the War," Mrs. Diana Apcar has contrived to compress seven stories connected with the present conflict—simple, unpretentious little sketches showing how red-handed war touches the family life of the Japanese people. Mrs. Apcar, as many of our readers are aware, writes with ease and facility, and such a moving subject, as might be expected, strongly appeals to her imagination and enlists her sympathies. "The Only Son," "The Mother of the Kondo," "Commander Masao Sakurai and his Father," "The Kurumaya," "The Blacksmith," "The Village," "In the Shrine," are the titles of the stories. The little work has a pretty cover, but the proof-reading is unworthy of both that and the contents.

The price of the book is *yen 1*, and the entire proceeds of the sale are to be distributed among destitute families of the soldiers and sailors of Japan. Messrs. Kelly and Walsh are the agents in Yokohama and Kobe.

#### NOTES ON CURRENT EVENTS.

Some time ago Herr Seitz, Chancellor of the Consulate-General of Germany at Shanghai, was thrown from his jinrikisha and received some injury. It happened that a Japanese resident was passing at the moment. He rendered assistance which Mr. Seitz was unable to acknowledge at the time nor did the Chancellor learn the name of the Japanese. Desirous of showing his gratitude in some appropriate manner, Mr. Seitz handed a sum of \$50 to the Japanese Consul-General requesting him to forward it to the Red Cross Hospital in Tokyo. This has been done. The facts are published by the Foreign Office.

Miss Marianne Walsh, sister of the well-known and much beloved and respected old-time residents of Japan, the late Messrs. T. Walsh and J. G. Walsh, has just intimated her desire to contribute a sum of 4,377 *yen* to the fund for the widows and orphans of Japanese soldiers. Miss Walsh, in her letter to Baron H. Iwasaki conveying the magnificent gift, says:—"I feel sure that it would have been the pleasure of my brothers and sister to help your country in its noble struggle against its foes, and I make this offering a memorial to them." It is indeed true that none would have sympathised

more heartily with Japan or rejoiced more sincerely over her successes than Messrs. Thomas and John Walsh.

On the 11th instant the obsequies of Commander Matsui and there other naval officers killed in the Battle of the Sea of Japan were celebrated with much ceremony in Tokyo. Aoyama was the place of burial, and the funeral was attended not only by a great number of distinguished officers of both services, but also by representatives of several Imperial Princes and leading statesmen.

The seven Professors are again busying themselves very actively. They insist that the terms of peace must be fully proportionate to the magnitude of the victories won by Japan. They also insist that nothing short of the most tangible facts can be accepted at Russia's hands, and in the context, discussing the value of a Russian engagement to convert Vladivostock into a free commercial port, they point to the issue of a similar promise made by Russia in the case of Batoum, and they also point to her manner of fulfilling the engagement she made to England with regard to the opening of Port Arthur. These Seven Professors doubtless serve a useful purpose, but we do not think that their extreme views fairly represent Japanese public opinion or that too much importance should be attached to them.

The leading members of the Progressive Party held a council on Monday to discuss the terms of peace. They decided that the following demands should be made:—

- 1.—The cession of Saghalien.
- 2.—The conversion of Vladivostock into a permanent free port.
- 3.—The granting of fishing rights to Japan along the coast of the Russian maritime provinces.
- 4.—The cession of the East Chinese Railway to Japan.
- 5.—The cession of all Russia's special privileges in Manchuria to Japan.
- 6.—Payment of an indemnity of two thousand million *yen*.

An important Cabinet Council was held on Monday morning at 10.30. It was attended by Marquis Ito, Marquis Yamagata, Count Matsukata, Count Inouye, Count Katsura, Admiral Yamamoto, Baron Komura, General Terauchi, and the other Ministers of State. The members of the Council proceeded to the Palace, where they found Princes Fushimi, Kanin and Yamashina. The Emperor himself subsequently attended the Council, which broke up at 2.30.

The battle in the Japan Sea has produced a new danger for navigation. It appears that the sunken Russian ships were carrying torpedo mines, doubtless for use at Vladivostock, which they were not destined to reach. Many of these mines have floated up from the sunken ships, some—namely from the ships that went down off the Iwami coast—drifting in the direction of Noto and Sado; and others—from the ships sunk further south—moving towards Tsushima and Korea. One vessel which went to the bottom near Tsunomura in Iwami is said to have carried 100 of these destructive instruments. It is a most unhappy result that the Sea of Japan should be thus rendered perilous for navigation.

The German steamer *Romulus*, which ran ashore near Hachinohe and which, when originally put up for sale by the Naval Department, was withdrawn owing to in-

sufficient bidding, has now been sold to Mr. Ooka Kazo of Machinohe for a sum of 28,065 yen. The *Romulus* is a steamer of 2,640 tons and she was carrying 3,500 tons of Cardiff coal to Vladivostok at the time of her accident.

It is expected that the Government will speedily release a number of steamers now requisitioned as auxiliary cruisers. The steamers specially mentioned are the *Sado Maru*, *Shinano Maru*, and the *Bingo Maru*, which have already received notice of release, and many others will soon follow.

Vice-Admiral Misu, who is wounded in the eye, reached Shimbashi on the 13th at 5.24 p.m.

The Russian prisoners, whose behaviour hitherto has been excellent on the whole, seem to be inclined to change their record, in Himeji at any rate. Some attempts to break out are reported from that place and some rioting which compelled the sentries to use their bayonets, though happily no injuries of a serious nature were inflicted. Japanese journals incline to the belief that the Russians, despairing of the restoration of peace and weary of the monotony of confinement, are beginning to develop a truculent disposition, but the detailed accounts suggest that some, at any rate, of the rioting was the outcome of mere horse-play.

We observe that two local English papers, one of Kobe and one of Yokohama, have discovered a mare's nest in the fact that during the early part of last week certain telegrams on the subject of peace preliminaries reached Shanghai but were not sent across the wires to Japan. Our contemporaries both jump to the conclusion that this intelligence was purposely obstructed by the Japanese Government, but the truth is that the obstruction came from the earthquake on June 2nd which interrupted all communication by wire between Tokyo and the South.

#### THE FAMILIES OF JAPANESE SOLDIERS.

If the Japanese soldier is a hero, so is his wife. The world has been hearing his praises sung so loudly of late, that they hardly stopped to inquire about his wife. In fact they may have doubted whether he was married; and the truth is that the first batches of him were not, but owing to the long continuance of the war, the later batches have consisted of his elder brother and his father even, who of course were married. And it is of these poor wives and children left at home that a word needs to be said, lest they be forgotten. Again I affirm, they are every bit as great heroes as the husbands in the field. While their hardships are of a different sort, still at times they are about as great, and without, entirely lacking in the thrill and frenzy of battle which helps the man to do his part so bravely. It is in the quiet shadow of the humble home and in the humdrum toil, the never-ending round of daily duties—this is the sphere which calls for the splendid exhibition of heroism as unconscious as it is steadfast.

That the families of the soldiers might have some hardship, had occurred to me, but not very seriously. I knew that the Government made rather generous grants to the widows, and I took it to be a reasonable supposition that similar precaution would be taken to provide for the families of the absent living soldiers: also I heard of various patriotic organizations which planned to care for these families. Further, those families which I know went on about their daily affairs as usual, and with such calm smiling faces, that there was no hint on the surface of any great burden within. They didn't dress in rags, and their faces seemed as though well-fed;

so the lack of daily necessities was not at all suggested. But when the fund collected in America by Revs. E. Warren Clark, Wm. E. Griffith and others, arrived in Tokyo, and thence came in part to us, this required some definite knowledge on the part of the committee. We applied to the local officials to give us some 40 names of the families most in need. After an Oriental wait of two weeks or more, the list came. It was divided among us and we set to work to investigate. The result has been that the committee, to a man, have been simply shocked at the misery. It you had heard the speeches of Messrs. Ogata and Mori at the last union prayer meeting, you would have seen how these brethren, experienced though they are, feel about the suffering they have discovered among those whom they had hoped were in fairly bearable circumstances. They used the strongest terms to condemn the waste of funds to celebrate the recent victory, while the families of those who won the victory are allowed to gnaw out their hearts in pain and anxiety. Yet I think it is more a sin of ignorance than otherwise: and to remedy this, our committee have taken steps to have full descriptions of the state of suffering, together with strong appeals published in the local press.

If now you go to one of these soldier-homes, the wife likely will meet you with a smiling face, and clothed in fairly presentable garb—seeing it is summer now and she needs only one garment. But entering, you find the children mostly in nature's garb and the rest of the family almost in rags. The bedding you will note is about gone, and the cooking place looks as if it hadn't known fire for a week. Questioning, you find from two to five children, all under ten; and more often than not, one or two aged parents 70 or 80 odd years old—all these dependent upon the exertions of the wife. If she or any others fall sick—well, that is simply outside the programme and just mustn't happen.

To help these needy ones, the patriotic societies have been giving rice and also money—from one to four yen to a family. This, with what the wife was able to earn at the loom or other toil, enabled them to live; but now it seems that having established *cresches* for caring for the children, the administrators of funds are to stop giving direct help, even of rice. Instead, notice is sent round that work will be given to all who apply. This sounds all right enough, till you come to think of who can apply. Then it becomes apparent that none of those in our forty families can do so. Children under ten of course cannot; neither can those aged ones. Can the mothers? With all those helpless ones left at home, how can the mother go? Besides, she is already earning more at her loom than this committee offer. Naturally she doesn't go. But the former help has been cut off: what in the world is to become of us? is the question now confronting her. And just at this time our committee-man arrives, for this change in the finance methods only took place from June 1st. Not a day too soon does our man arrive, either, for several times the grateful woman has told him that she was seriously thinking of taking her life in order to escape from the terrible burden oppressing her. Profoundly thankful, she accepts the gift, and cheerfully begins to work and hope for better times.

These forty families—and a few more incidentally falling to us as we worked—are now on our hands. All will go merrily while the money lasts. But with an average of 3.00 yen per month to each, you can estimate how soon the end of the tether will be reached. What will happen then? Cold weather will be approaching; and even though this cruel war should end, it would still be a long time before the soldiers returned and normal conditions were established. Still these heroic, silent sufferers must not be abandoned: they will still look to us for aid, but unless our original grant of 500.00 yen increases like the widow's cruse of oil, it will be absolutely beyond our power to help them. Shall we stand and see them starve and freeze before our very eyes? That is the question which this committee would like to lay before you for answer. And likely the other

committees in twenty different cities are thinking along exactly these same lines. If any who read these words are moved to help make reply to the problem, no doubt the same committee in America, and the central one in Tokyo (with Rev. Chas. Bishop for treasurer) are as willing as ever to receive and forward funds.

On behalf of the Nagoya Committee.

R. E. MCALPINE: Local Treas.

The peace news which comes as I write, can hardly moderate the above conditions for many months yet.

R.E.M.

#### MR. E. C. BELLOWES.

Mr. E. C. Bellowes, retiring Consul-General at Yokohama, was met by a very large number of Americans at the Consular residence on Friday, who presented to him a large silver bowl of most ornate design (dragon and wave) bearing the inscription: "Presented to Mr. E. C. Bellowes as a token of regard and respect by his American friends at Yokohama, June, 1905."

Mr. N. F. Smith, who made the presentation, said:—Occasions like the present always give rise to mingled feelings of sadness and pleasure, sadness when we realize that they but portend departure from our midst of friends that we have learned to look upon with kindly regard and esteem—and when the time arrives to wish them Godspeed to their native shore, we are better able to give expression to our feelings by a warm pressure of the hand than to trust our lips to utter them. It is a privilege and a pleasure, however, for us to meet here this afternoon and pay to Mr. Bellowes this small tribute of respect and esteem which he so justly merits—for we are witnesses to the faithful and untiring service he has rendered during the past five years as the American Consul-General at this port. During his term of office he always evinced a deep interest and devoted much valuable time and intelligent work in promoting as far as possible all legitimate American commercial enterprises, therefore the marked advancement made in these interests during his administration is largely due to the encouragement and unswerving aid that he has given. Not only in commercial enterprises but also in all other affairs that in any way affected the welfare and interests of his constituents, has Mr. Bellowes taken an active and efficient part when called upon—so we can truly say that both as an official and a friend we have always found him courteous, considerate and attentive to all who have had occasion to seek his advice or assistance. Mr. Bellowes, it is now my pleasant office to present to you on behalf of your American friends at Yokohama, this testimonial, which represents only in a small measure our respect for you as our former Consul, and our esteem for you as a man, a fellow national and a friend. We can but deplore the departure of Mrs. Bellowes and yourself from our midst, and it is hardly necessary for me to assure you that you carry with you our most fervent wishes that the future has many happy and prosperous years in store for you both.

Mr. Bellowes in reply spoke feelingly of his stay in Yokohama, and of the many warm friends he had made here. He expressed his appreciation of the kindness and friendship that had prompted the handsome gift now presented to him, and he assured them that even without that testimonial he would never have forgotten Yokohama and the friendships he had known here.

#### INTERPORT YACHTING.

The first interport sailing race this year took place at Kobe on Saturday in a strong wind with a heavy sea.

Kobe (Messrs. J. H. Fawcner and W. W. Campbell) in *May* won the first sailing race by five minutes against Yokohama (Messrs. F. J. Hall and H. Gunn) in *The Babe*.

In the second race *The Babe* (Yokohama) capsized. The crew clung to the boat and were rescued by a launch.

## AMERICAN BOARD MISSION MEETING.

The annual meeting of the American Board Mission was held in Arima, May 25-31. The members were all accommodated at the Sugimoto Hotel. This relieved the ladies of the care of running a club as used to be our custom. The appointments of the hotel were sufficiently good to lead to the choice of the same place of meeting for next year. The coolness of these May days too as against the sweltering heat of July was grateful to all. The disadvantages of a May meeting to those engaged in educational work were more than balanced by the convenience to others and the comfort of all. Next year's session will be in May.

The devotional meetings were of a high order. The general subject was, "The Signs of the Times, The Coming of the Kingdom." It was considered in different aspects on successive days. The annual sermon by Rev. Mr. Olds of Miyazaki was broad in outlook and optimistic in tone. As usual the exercises of the C. E. Society of the mission church by the children gave us a pleasant Sabbath afternoon.

Two addresses were made somewhat aside from our regular work. Dr. De Forest, just home from his trip through Manchuria as representative of the Y.M.C.A., related some of his many interesting experiences and told us of the Y.M.C.A. work at the front, of the country, and of the war. Mr. Rowland, lately back from a furlough to the States, gave us "some impressions" of Christian thought and life in America gained from his observations there.

Incidentally meetings were held twice for soldiers, some six hundred convalescents being temporarily cared for in Arima.

Reports from the twelve stations were in the main reports of measurable progress and of hopefulness. In two or three instances regrettable conditions had in all truthfulness to be mentioned. But none of these was irremediable. On the other hand the war has brought special opportunities for living the gospel, for being the good Samaritan. And the different members of our company have not been slow to seize these opportunities. Many signs are patent of an unusual openness of mind and heart on the part of the people at large toward the Christian life and teaching. Signs are visible also of an acceptance on the part of many outside the church of principles of conduct essentially Christian.

It is becoming increasingly evident that in the twelve stations of the mission more work has been undertaken than can be adequately cared for. Sad reminder of this is the fact that after prolonged consultation and canvassing of the field and the force, a large and representative committee brought in a report on location providing for no resident worker in Tottori. The meeting adopted this report because there seemed no other thing to do. Tottori field will be cared for as best it can by Okayama.

The growing self-consciousness of Japan as a nation is finding its counterpart in a similar growing self-consciousness of the body of *kumiai* churches, their sense of responsibility for the evangelization of this Empire first, and then of the East. In evidence of this was the earnest and kindly message of a deputation to our conference from the *kumiai* body seeking to increase the power and influence of that body by making it stand out before the whole world as an independent and national organization. This desire of the churches was cordially met by the mission. The matter was discussed by the mission with the deputation. It will be still further considered by a joint committee of the mission and the churches preparatory to some action at the National Council (*Sokoku*) in October.

In educational lines two questions claimed attention. The trustees of the girls' school in Matsuyama request the mission to receive the school plant as it stands gratis and to assume full responsibility for the future of the school. The mission wished to accede to the request if it could do so without weakening school work already in hand. It accordingly asks the home Board for extra funds and a teacher. Final decision will depend upon whether or not the Board will supply this need as an extra. The

other problem, that of the location and future of Kobe College, is forcibly thrust upon us by the growth of the college and the inadequacy of the present grounds. No adjacent land is available. Can we expand? Or shall the work be made intrusive rather than extrusive? The matter was discussed for the sake of a fuller understanding of all the pros and cons. Final decision was postponed in the hope that a deputation already asked for from the supporting Board in Chicago will be on the ground in the near future for consultation and advice.

Though no single action of pre-eminent importance was taken nor any change of policy inaugurated yet the reporting, planning, the fellowship and spiritual uplift of the conference were altogether helpful to all. It was voted one of the best meetings of recent years.

GEORGE M. ROWLAND.

Arima, June 1st, 1905.

## CRICKET.

## BORN IN JAPAN VERSUS THE REST.

For the first time in the history of this almost classic cricket event the Born in Japan eleven of the Y. C. and A. C., have but barely "saved their bacon" in their contest with The Rest. Only the intervention of a providential rain-storm averted defeat on Saturday afternoon. The Rest going in first had knocked up 141, and when the brothers Kilby went out to open the score for their side things looked rosy. But Edward was run out for 13, having called on his brother for a rather desperate chance, and Harry was caught by Lambert at 24; the rest of the team went down for small scores, and had not Strome adopted the most patience-wearing tactics the century would never have been reached and the draw brought off. Incidentally we might remark that the weather was overcast from the commencement of play but there was an entire absence of wind. The fielding on both sides was smart, giving much promise of interesting cricket as the season advances, while the bowling of some of the players showed distinct improvement. But, more in sorrow than in anger, we must protest that time has very elastic meaning for Yokohama cricketers. The match was fixed to begin at 1.30 p.m., but it was exactly 10 minutes past two when E. W. Kilby trundled the first ball to E. W. Maitland, the Captain of The Rest, and thus began proceedings. The third delivery of the first over found Maitland's wickets, an unpropitious start—0-1-0. A leg-bye from Kilby and a miss by Moss behind the wicket were the only other incidents of the opening over. Kingdon now began the trundling from the Settlement end and a maiden went down on the scoring sheet. Three runs were made in the next over off Kilby, by Emerson, and Foster opened his score with a single off Kingdon. The following over saw 10 hoisted with Foster and Emerson settling down steadily to run-getting, and, though runs came at erratic intervals, 30 was reached twenty-five minutes after the start of play. When the half century was signalled H. W. Kilby relieved Kingdon at the Settlement end, but the partnership remained unbroken until 74 had been made when Foster, putting up a ball from H. W. Kilby, was held by Graham—74-2-24. Abbott joined Emerson and the latter at once drove the leather to the Pavilion for 4; the next ball saw him dismissed, clean bowled by H. W. Kilby—78-3-49. Abbott and E. B. S. Edwards were now partnered. Abbott opened his score with a 3 off E. W. Kilby, and 80 went up. Seven more runs were added and then Abbott retired, bowled by H. W. Kilby—87-4-4. Piggott joined Edwards and lost his partner immediately, Edwards being dismissed by H. W. Kilby—90-5-5. Piggott was the next to retire—90-6-1, to be followed by McClure—90-7-0, both being beaten by E. W. Kilby's bowling. On Hudson and Lambert being partnered the rot was temporarily stayed and at 98, E. W. Kilby went off, Strome going on to bowl. His second delivery found Hudson's middle stump—98-8-7. At 20 minutes to 4 o'clock the century was reached, Lambert getting Strome away to the fence for 3. Cooper broke his duck with a single and then Lambert made 4 off H. W. Kilby

with a drive down the ground. At this point E. W. Kilby relieved Moss at wicket-keeping, and Drummond gave Cooper a life. A change was made in the bowlers, Kingdon taking over from H. W. Kilby: Lambert cut him for a single and Cooper making one, 110 went up. Runs came steadily, but at 121 Kingdon, with the first of the over, disturbed Lambert's sails—121-9-14. The last man in was Bugbird and he began with a cut for 2 following it next ball with a single. Hunt now took over the bowling from Strome, and Bugbird drove him for a couple, third delivery. The last ball of the over Bugbird lifted, but the chance was missed and the batter continued to make things lively, 130 being soon afterwards hoisted. At 139, H. W. Kilby went on to bowl again, this time at the Pavilion end, but the separation was effected by Kingdon, who clean bowled Bugbird and closed the innings—141-10-10—at 12 minutes past 4.

## BOWLING ANALYSIS.

	B.	R.	M.	W.	Wides.
E. W. Kilby	72	42	2	3	2
A. Kingdon	70	42	2	2	—
H. W. Kilby	54	28	1	4	2
O. Strome	30	9	1	1	—
Hunt	12	11	—	—	—

Born in Japan began their innings at 4.26 o'clock, E. W. Kilby and H. W. Kilby going out to face the bowling of McClure and Emerson. The first over produced six runs, off McClure, and then H. W. Kilby drove Maitland to the Pavilion and 10 went up. After this the batters treated the bowling with greater deference, the fielding smartened up and runs came at infrequent intervals, 20 being telegraphed at a quarter to five. The next fifteen minutes brought 17 runs on to the score sheet, and then Cooper took over the ball from McClure. H. W. Kilby cut him for 4, Edwards changed with Emerson and with the first of the over he saw E. W. Kilby run out, Bugbird sending in the ball very smartly—41-1-13. Moss filled the vacancy and soon lost his partner, Lambert holding H. W. Kilby in the slips, off Cooper—42-2-14. Graham went in and playing carefully assisted Moss in raising the score to 57, succumbing at last to a straight ball from Edwards—57-3-0. McClure going on to bowl again, relieving Piggott, Moss continued scoring and 60 was hoisted. White opened with a cut, off McClure, for 2, and then in the next over Maitland held Moss, off Edwards—62-4-12. Kingdon made but a short stay, being held at the wicket by Piggott, off McClure—63-5-0. The next to go was White, clean-bowled by Edwards—63-6-5. The newcomer, Hunt, began with putting Edwards away for a single. The light was failing rapidly, the clouds which had been floating about all the afternoon increasing in density and a slight rain began to fall. The partners kept up their wickets and 70 was telegraphed, but at 71 Hunt was caught by Emerson at cover point off Edwards—75-7-5. Drummond joined Strome, but before he could begin a heavy shower drove the players to the shelter of the Pavilion at 12 minutes to six o'clock. It was a most unfortunate interlude so far as The Rest were concerned, but naturally The Born in Japan felt otherwise. At 10 minutes past six the rain has tapered down to a drizzle and play was resumed. Strome maintained his careful line of conduct, giving no chances, being intent merely on keeping up his wicket and endeavouring to bring about a draw if possible. His tactics were eminently successful, for though J. E. Drummond slogged 12 in rapid style, Tom Kilby played a safer game and enabled the hands of the clock to creep perceptibly nearer the time for drawing stumps. On Kilby being caught and bowled by

Edwards, Victor Hearne went in, last man, and had contributed 8 when "time" was called, Strome carrying out his bat for 9—the match thus ending in a draw.

INTERPORT ROWING.

Telegrams from our Kobe correspondent, despatched on Friday evening but not received by us till Saturday morning, say that the first Interport events were rowed on Friday in fine weather, with a calm sea in the early afternoon but a slight swell later.

Kobe won the Single Sculls very easily, E. Moller beating C. L. Timm by fifteen lengths. Time, 9.24.

The first item (mid the *Kobe Herald* of Friday) started about twenty minutes late, when only a few spectators had assembled in the Boat-House. The representatives of Yokohama and Kobe tried conclusions first in the Single Sculls over a course of a mile, starting from the eastward. The start was rather unfortunate as the gun missed fire twice before finally sending the men off. Timm (Yokohama) seemed to catch the water first and led off with a faster stroke than his rival, but Moller (Kobe) appeared more collected and got in a better swing. By the time half the distance was covered the Kobe man had a slight advantage and both men were pulling about the same stroke. From this point, Moller had it all his own way, and a quarter of a mile from home was leading by nearly ten lengths, subsequently increasing this to fifteen lengths before the winning post was passed. And this without any particular exertion. The two men pulled about twenty-eight to the minute over the greater part of the course, and the time taken by the winning boat was 9 min. 24 sec.

By the time the last race came off on Friday there was a slight swell which made the Interport Double Sculls more difficult to row than the first Interport event. Yokohama was represented by two well-known oarsmen; for Timm has been regarded in the northern port as the best man there for some little time, and Weed has distinguished himself for Kobe. Small wonder then that the Yokohama boat was strongly fancied. F. James and Silhus, both capital oars, turned out for Kobe. The two boats got off well together, Yokohama getting in a quicker stroke during the first hundred yards and in consequence taking the lead. There seemed more life in the Yokohama boat than in the Kobe one which was gradually lagging behind in spite of the excellent time and finish with which the crew were rowing. By the time the first half mile had been covered Yokohama led by about four lengths and they added one more before going another quarter mile. Both crews had been rowing from 26 to 28 strokes a minute and the pace was beginning to tell on the Kobe men, when a mishap occurred in the springing of the bow rowlock. After that the race was practically over for although Kobe started rowing again it was more with the intention of getting home than of participating in the race. The time taken was 13 min. 59 sec. and considering the state of the water, it was a very creditable performance.

(In 1903 when the last Interport rowing took place the Interport Double Sculls were done over the mile in 11 minutes. In this case as the opposing crew gave up, the time is meaningless).

On Saturday the Interport Pairs (one mile) brought out the yesterday winners of the K. R. & A. C. Senior Pairs, Möller, Graham and Bischof (cox)—to try conclusions with Helm, Hayward and Mottu (cox) representing Yokohama. A good start was made by both and the crews seemed fairly well matched but the Kobe men pulled stronger, and by half way they led by nearly two lengths increasing at the finish to four or five. Time 7 min. 27 sec.

The last Interport event, the Fours, was rowed over a course of a mile and a quarter. The two boats went off beautifully together and settled down at once to a good swinging stroke. Yokohama seemed to be taking it easier than Kobe and gradually forged ahead until, by the time half the course had been rowed, they held a lead of about a length. This was increased to nearly two lengths when a quarter of a mile from home. Soon after this, the Kobe men made a grand spurt and gained considerably right up to the finish, but it was too late and Yokohama passed the post just over a length ahead. Time, 7 min. 50 sec.

UNOFFICIAL REGATTA.

The unofficial regatta fixed for Saturday proved quite a successful affair so far as sport was concerned though no doubt the rival attraction of cricket accounted for the small attendance of members.

Goddard and Totton had a rather easy job in disposing of Hearne and Charlesworth, finishing about eight lengths to the good. In the Fours H. S. Goddard's crew went off at a terrific rate and led by about a length and a half to the half mile, where Charlesworth's crew with a good long stroke overhauled them, and assuming the lead won by an open length. The second heat of the Pairs was won by Caro, who led all the way. The final heat of the Pairs was as pretty a race as ever rowed over the Club course. The two boats were level all the way till about the P. M. Wharf, when Goddard, in the outside berth, had if anything the better of it. Here, however, he began to put it on a bit, yet his opponent just held him—nothing more. Half way in from the Breakwater he set about it in earnest and succeeded in cutting down the lead by a foot or two, but Goddard still maintained the advantage. Two or three lengths out Caro, then about an eighth of a length behind, made his final effort and a game spurt just landed him a matter of inches the wrong way. Had not his bow missed the crucial stroke he would undoubtedly have won, as his boat had full way on.

Time, 7.21.

YACHTING.

There were races for all classes in the Yokohama Yacht Club on Saturday. The 39 Raters, represented solely by *Mary*, started with the Cruising Class at 1.30 p.m. to race over the Nagahama course. The wind was very light, N. E., and the six yachts starting crossed the line close after gun fire. *Mary* and *Nina* crossed by the bathing barge, on the starboard tack, *Wanderer* and *Surprise* on port tack. *Wanderer* went about to starboard tack immediately, but *Surprise* held on, and fouled *Nina*, being struck with the latter's bowsprit full on her broadside. The crew on *Surprise*, taking hold of *Nina*'s bowsprit, pushed themselves clear, and proceeded with the race as if nothing had happened. *Kathleen*, coming up from behind *Nina*, escaped this embroglio, and got away with the lead of the rest of her class. *Asagao* started nearer the other end of the line, and also had a clear course. *Mary* was first out of the Harbour Entrance, and proceeded to show the way round the course. *Kathleen* had the lead from *Asagao* at the Lightship, and *Nina* passed *Wanderer* on the reach out to that mark, *Surprise* bringing up the rear. Spinnakers were set to port for the run to the Widow buoy, during which *Nina* passed *Kathleen*, and *Wanderer* overtook *Asagao*. At the Nagahama buoy the order was *Mary*, *Nina*, *Kathleen*, *Wanderer*, *Asagao* and *Surprise*. In the beat back against the tide to the Widow buoy, *Surprise* passed *Wanderer* and *Asagao*, but the yawl was ahead of her again at the Lightship. *Asagao* got quite becalmed, and eventually gave up without rounding the Lightship. The order at the finish was:—

	Cruising	Finish.	Handi-	Correct-
	Class.	cap.	ed.	
<i>Mary</i>	4.51.15	takes prize for 39 raters.		
<i>Nina</i>	5.25.35	scratch.	5.25.35	Mumm Chalmers Cup.
<i>Wanderer</i>	5.53.10	18	5.35.10	
<i>Surprise</i>	5.54.44	15	5.39.44	Disqualified.
<i>Asagao</i>	gave up	20		
<i>Kathleen</i>	5.50.53	25	5.25.52	Second prize.

The 21-Raters started at 2.15, by which time the wind had improved a trifle, although still very light. The seven starters all crossed the line smartly on gunfire, and although they had to do a good deal of hunting for wind, they had a very interesting race round the Widow buoy course. The *Pele* won from *Winsome*, with *Aimée* third, the times being as follows:—

	<i>Pele</i>	4.50.35	scratch.	4.50.35	First prize.
	<i>Winsome</i>	4.51.52	do	4.51.52	Second prize.
	<i>Aimée</i>	4.52.42	do	4.52.42	
	<i>Valkyrie</i>	4.58.24	do	4.58.24	
	<i>Edna</i>	5.02.57	do	5.02.57	
	<i>Choco</i>	5.05.35	1 min. 36 secs.	5.03.59	
	<i>Witch</i>	5.13.08	4 min. 58 secs.	3.08.10	

Only three boats of the Lark Class started, and raced over the Mandarin Bluff course. Times at finish:—

	No. 11	3.51.42	Prize.
	No. 5	3.56.58	
	No. 4	3.57.38	

## CORRESPONDENCE.

## DOGMA.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—In the *Japan Mail* of June 3rd, "A Man in the Street" does me the honor of quoting a sentence from a recent letter of mine in the *Mail*, and attaches to it his views in regard to "dogma." As it is a serious and interesting question to us, all I beg leave to state my criticism of your correspondent's views.

A minor point may be cleared away first. Your correspondent says "According to others in order to insure their salvation it is necessary that adults should be ducked bodily in water." I presume he refers to the vast number of Christian people who are called Baptists. I am not a Baptist myself, but I am able to state that "A Man in the Street" should have known himself, that the Baptist Churches do not teach and never have taught that baptism by immersion is essential to salvation. But they teach, in common with all the other parts of the Christian Church, that there are but two things essential to salvation on the human side and those two things are repentance of sin and that personal relationship to Jesus Christ which in the New Testament is called faith. And I may add that these two terms, repentance and faith, express an attitude of the human heart toward God and the Moral Law which is easily defensible as the necessary condition of salvation from a psychological and ethical standpoint as from the Bible. They are not arbitrary conditions imposed by God. They are woven into the very make-up of righteous character.

The different parts of the Christian Church teach with varying degrees of emphasis that rites and ceremonies are necessary for the maintenance of the Church and for the stability of the Christian life. And there is no doubt but that they at times have put altogether too much emphasis on rites and ceremonies, to the great harm of the Christian religion. But for a man to assert that Christians teach either at home or come to non-Christian lands to teach that rites and ceremonies are essential to salvation is simply to throw dust in the air. All the Christian missionaries in Japan alike teach that repentance and faith are the necessary conditions whereby men of all nations can get into right relationship with God and attain unto righteous character.

But the main burden of your correspondent's letter is this—"People with dogmas are intolerant; the people in Christian lands are inconsistent; they do not morally measure up to their professions. Therefore dogma should be laid aside. In particular, Christian workers in Japan should avoid all dogmas. Pingpong and hair clippers would be more appreciated than all the dogmas that have ever addled the brains and disturbed the peace of mankind."

It would be psychologically interesting to understand why "A Man in the Street" shows such prejudice against dogma. Even the word he uses betrays a certain prejudice. By "dogma" he means religious beliefs of men. But I am willing to use his own word. Of course we should all alike heartily condemn intolerance in dogma, whether it be religious or political or scientific dogma. And we should also condemn useless hairsplitting and insistence on minor points, whether it be in religion or in any other department of life. Though sometimes a contention seems hairsplitting only to those who know nothing about the subject. But all this does not justify a man in condemning dogma by wholesale.

Your correspondent asserts his admiration of "practical" Christian work. But all practical Christian work is due to dogma—due to the influence that the Christian dogmas have upon men. The inconsistencies in Christian lands are not because of dogma but in spite of the Christian dogmas. All the great Christian philanthropies and benevolences that brighten the poor and the sick and the children of the world are due, all of them, to the power of dogma upon men. The Salvation Army surely does a great deal to lift up the moral standard of people in America and England, but the Salvation Army, without its dogmatic belief that the Son of God died for the sins of men, would lose its whole power in a night. The distinguished Edward Everett Hale, who with his scarcity of dogma would delight the heart of "A Man in the Street," tells a story that well illustrates my point. He had tried in vain to save a drunkard in Boston in whom he was interested. But the Salvation Army came along and in one night put the man on his feet and thenceforth he led a straight life. The difference was this—Edward Everett Hale with all his splendid philanthropy could put before the man only a high moral ideal. But the Salvation Army put into his heart the power of a great dogma and when they had got into the heart of the man, drunkard though he was, the belief that the Son of God had died for him, the battle was won.

But the case that started this discussion is nearer at hand. Y.M.C.A. workers, both American and Japanese, are with the army in Manchuria, and with pingpong and hair-cutting and the like, as well as with religious instruction, are trying to help the soldiers. They are all there doing that fine service because of dogma—because of their belief in God and Jesus Christ. And not until a man in the street himself—or men who like him have no dogmas themselves—go to Manchuria and play pingpong and cut the soldiers' hair and write their letters—has he or they the beginning of a shadow of a right to criticize the dogmas that influence other men to go. In the interior cities in China I have seen American and English women who have gone there far from their homes to live in the midst of the most disagreeable surroundings and the hardest and loneliest kind of work. With their schools and hospitals and orphanages and industrial homes they are brightening the lives of the women and little children in China. They are all there, every last one of them, because of dogma, because of the influence of the Christian dogmas upon them. And not until American and English women who have no dogma go and do like splendid service for other people has "A Man in the Street" any right to write a letter deriding dogma and not saying one good word for it.

The tremendous influence of men's beliefs on their lives and on the world for both good and evil is a plainly open fact. The remedy for the evil influence of wrong dogmas is not to throw away all dogmas, for that is an impossible thing, but to substitute the right for the wrong. And this is true alike in religion and in politics and in medicine and in all departments of life. The contention of Christian Missionaries is that they have in the religion of Jesus Christ, the greatest and truest and best religious beliefs in all the world, beliefs that if all men will honestly accept them and follow them will lift the whole world up into a right relationship with God and with each other. Therefore in all countries they are trying by preaching and by practice to substitute them for the beliefs that are less great and true and good. If any of them do their work with intolerance and bitterness of spirit, they sin against their own dogmas and therefore they and not the dogmas should be criticised.

But they will hardly take the advice of your correspondent and "avoid all dogmas" and bring nothing to Japan but "eminently practical" work. They think that to bring to the Japanese people the great Christian dogmas is the most eminently practical work they can possibly do. And they think that their work will be appreciated by the people of Japan if they bring to them the great Christian doctrines. So they will go on preaching the doctrine of God the Father, Almighty Maker of Heaven and Earth; and the doctrine of the common childhood and brotherhood of men; and the doctrine of the absolute moral law; and the doctrine of our common sin; and the doctrine of repentance and faith; and the doctrine of everlasting life; and that most splendid and most powerful for righteousness of all doctrines—the doctrine that the Son of God died for the sins of the whole world—the doctrine that from the beginning has broken like a great sledge hammer the hardness and selfishness of men's hearts.

But the missionaries have to confess to so much of a close connection between "practice and profession in the discernment of the people of Asia," that if the representatives of the Christian nations residing in the East would all alike live clean and righteous lives before the people of Asia and maintain a racially tolerant attitude toward them—their task in preaching the Christian dogmas would be far easier.

I can give to "A Man in the Street" a far more appropriate name than he has chosen for himself. If in reality he himself has thrown away all dogma—then is he "A Man on the Fence." A fence is a narrow place for a man to sit and I cannot imagine a narrower life for a man's heart and soul than a life in which there is no belief. But I imagine your correspondent is not so badly off for belief as he himself seems to indicate.

Yours respectfully,

A. D. B.

Aoyama, June 5th, 1905.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—The correspondent A.D.B. in the letter which appeared in your issue of the 10th inst. makes a statement in connection with my letter on the subject of "Dogmas" which I must ask to be permitted to correct. Your correspondent says:—"By dogmas he means the religious beliefs of men." Now, I think I may be permitted to be the best judge as to what I mean, so I wish to say that by "dogmas" I do not mean the religious beliefs of men.

It speaks volumes as to the degeneration of religions that in the minds of some people the very word religion has come to mean nothing but dogmas.

One would say that the essential characteristic

of religion should be not dogmas but truth. One might even say that there is no religion—that there can be no religion higher than truth. By truth, I mean that which rests upon its own evidence; by dogma I mean that which rests merely upon assertion. For example, a few centuries ago the Christian Church stated authoritatively that the sun moved round the earth. "It must be so, for it is not written that Joshua made the sun stand still." That is dogma. The truth as to this astronomical matter, and the honest truth-seekers of that day were met, as we know, with the bitterest persecution. It is always so, and it is well to observe that it is invariably the dogmatist who persecutes.

To give a recent example of this, and to show how dogmatism and intolerance always go hand in hand I cannot do better than to quote the following extract from an American journal lately received:—

"The pastor of a Manhattan church has had to face the charge of heresy from the Iowa Classis of the Reformed Church in America, on the ground that he quoted with reprobation this extract from a Scotch theologian:—

"The godly husband shall say amen to the damnation of his wife; the godly parents shall sing hallelujah at the passing of sentence of death against their only child; the godly child shall approve the damnation of his wicked parents—the father who begat him and the mother who bore him." In reply he says:—If the Iowa Classis endorses that type of theology as the Theology of the Reformed Church in America to-day, I am ready to step out of my pulpit to-morrow. I would rather break stones by the roadside than preach such a caricature of the love of God."—Here we have an honest man.

It is needless to point out that the fulminations of the Scotch theologian are the natural outcome of a belief in the dogma of hell and eternal damnation, is this one of the dogmas which are to elevate the Eastern world? One of the greatest virtues of Eastern people is their respect and love for their parents. Are they to be taught to say amen and "to sing hallelujah" at the damnation of their parents and children and wives?

It is quite true, as A.D.B. says, that "dogmas have a great influence on men." Whether it be the Mahomedan fanatic who goes forth joyfully to slay the unbeliever with a sword, or the Christian priest of the middle ages who carried on his propaganda with the aid of the thumbscrew and the rack,—both of these prove that belief in dogmas is a powerful motive force. The question is, however, whether the world is any the better for this kind of motive force. It is quite possible that the "Boxer" outbreak in China, and similar disturbances may be directly traceable to this very force.

In conclusion A. D. B. again refers to that "most splendid" of all dogmas, the doctrine that Jesus Christ was the only son of God and that he died for the sins of the whole world. Now we Westerners are accustomed to this teaching. We have heard it from childhood and this has a profound psychological effect. If, however, we were to hear this now for the first time, and after having received a general education, how would we regard it? How does an educated Japanese or a Chinese regard it? We can form a conception of how they regard it only by putting ourselves mentally in their place. Suppose then, that Chinese missionaries went to Europe or America with what they were pleased to call a "plan of salvation." And suppose that they solemnly asserted that about 2,000 years ago a certain young newly-married woman in China gave birth to a son; that this child was born in an entirely unnatural and inconceivable manner and that his father was a ghost. And further, that he was crucified as a kind of sacrificial offering to appease the wrath of Joss and that he thereby "saved" mankind.

What should we think of all this? And what should we think of the wrathful Joss who required to be continually propitiated with burnt offerings and living sacrifices. And finally what should we think of the still more astounding statement that the child born in this unheard of manner was none other than the creator of the entire universe? I am afraid that even the most credulous of us would find these things somewhat difficult to believe. In fact we should probably think just about what the educated Japanese think of the Christian "scheme." We should respect the noble character of the Teacher,—we should give more or less heed to his moral utterances and high humanitarian teaching,—we should perhaps accept such of his teaching as appealed to us. All else,—all the dogmatic assertions concerning his birth and exclusive divinity we should in all probability utterly reject. It is an old and oft-repeated story. It has happened more than once in the history of mankind,—the loss or the perversion of the original high teachings and the subsequent deification of the teacher.

And this and the doctrine of vicarious atonement, we are told by A.D.B., is the "splendid doctrine that from the beginning has broken like a great sledge

hammer the hardness and selfishness of men's hearts."

The comparison of dogmatic teaching to a sledge hammer is all too appropriate. One could wish however that there were less of the sledge hammer in Christian propaganda. "Great sledge hammers" wielded by intolerant and dogmatic people are apt to break many things which cannot be so easily replaced.

Yours respectfully,

A MAN IN THE STREET.

June 11th, 1905.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Assuming for argument's sake the correctness of the following statement:—

"In the interior cities of China I have seen English and American women, who have gone there, far from their homes, to live in the midst of the most disagreeable surroundings and the hardest and loneliest kind of work. With their schools and hospitals and orphanages and industrial homes they are lightening the lives of the women and little children of China. They are all there, every last one of them, because of dogma, because of the influence of Christian dogmas upon them....."

In the seventh paragraph of A.D.B.'s letter of the 5th June, it would follow that the "influence of Christian dogma" is responsible for the willingness of these keen workers in China to forsake the women and little children of their own countries, sunk in want and degradation; that the "influence of Christian dogma" blinds these enthusiasts to the immorality of taking abroad large sums of money that could better be spent at home in alleviating distress and in improving the material and moral condition of their own countrywomen; that the "influence of Christian dogma" deafens the ears of these self-constituted guardians of the well-being of the Chinese to the piteous clamours of starving children in Europe and America.

The menace to the success of missionary effort in Asia comes rather from within the fold than from the ordinary layman, the "representative of Christian nations residing in the East," whose conduct is quite up to the standard obtaining in Christian lands. To the travelled and observant Asiatic the parable of the Mote and the Beam must often occur when he sees the work of the missionaries among comparatively happy and well-to-do people in the East and remembers the sights of New York and London, recognising as he must that the money spent and energy expended abroad would go far to relieve the hideous sufferings of the submerged thousands in Christian lands. He will further undoubtedly recall to recollection the racially intolerant and patronisingly unflattering reports circulated by the missionary societies among Christian peoples with the object of raising funds for the conversion of the "heathen."

It is difficult to conceive a condition of mind so deplorable as that of a man constrained to steel his heart against the pitiful appeal of degraded men, disconsolate women and hungry children in his own country, contenting himself meanwhile with the *success d'estime* of impressing the East with his charity and kindheartedness as a dispenser of medicinal and other comforts and as a ready teacher. I cannot imagine a narrower life for a man's heart and soul than a life in which there is no sense of paramount duty to one's unfortunate fellow-countrymen, but although your correspondent asserts that missionaries "think that to bring to the Japanese people the great Christian dogmas is the most eminently practical work they can possibly do" I imagine he must often have a secret longing to give up this child's play in Asia and get to work with his coat off in the slums of New York or London.

I am, Sir, Yours obediently,

LAYMAN.

Kobe, 12th June, 1905.

#### THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—During the past three months numerous paragraphs dealing with certain proposed changes in the Equitable Life Assurance Society of the United States have been published in the American papers and reproduced in other parts of the world. It will be interesting to the public generally and to policyholders in particular to have the latest authentic information in regard to the situation.

The Society's Charter provides that the business shall be conducted "on the mutual plan," and for some time past the question has been under consideration of how to give to this condition actual and permanent value. From the inception of the Company the business has been conducted on the mutual plan, the late President Hyde on many occasions publicly declaring that the surplus belonged

to the policyholders, that being the guiding principle of the management for forty-five years; and Mr. J. W. Alexander, the President, has repeatedly of late declared that the surplus is intended for the security and benefit of policyholders, and that not one dollar should be diverted from its original purpose. To remove any possible doubt on this important subject, special committees of the Board of Directors have reported, and their resolutions have been carried without a dissentient voice, conferring upon policyholders the right to elect a majority of the Board of Directors. This step in the right direction has been improved and enlarged.

I am in receipt of a telegram from the Head Office in New York announcing the result of the special meeting held on the 10th instant. The telegram reads as follows:—

"The control of the stock has been transferred to a committee of policyholders to be vested in three trustees, appointed for life, with power to vote for twenty-eight directors according to the instructions of and representing policyholders, and twenty-four directors to represent the stockholders, thus accomplishing the mutualization plan approved by the State Superintendent of Insurance and by the Board of Directors. This settles on a secure basis the mutual plan and confers upon policyholders all that is implied in the term 'mutuality.' The gentlemen invited to serve as trustees for the policyholders are well-known and command respect. They are, the Hon. Grover Cleveland, formerly President of the United States, the Hon. Justice O'Brien, of the Supreme Court of the State of New York, and Mr. George Westinghouse, President of many great and well-known companies. To still further consolidate the interests of policyholders the office of Chairman of the Board of Directors has been created and the Hon. Paul Morton, now Secretary of the Navy of the United States, has been elected to this office, which he has accepted. This adjustment gives general public satisfaction."

A few words in reference to the stockholders may be useful.

When the Society was formed a guarantee of \$100,000 was required by law and this was raised in one thousand shares of \$100 each, the dividend thereon being limited to 7 per cent. per annum. Heretofore, the holders of all this stock have been men deeply interested in the welfare of the Society, and they have formed practically the governing body; but as the Society's funds now exceed \$410,000,000, with a surplus of \$80,000,000, it has become necessary to secure the rights of policyholders by the appointment of Trustees, which has been done.

I will take this opportunity of referring to various unfounded reports reflecting upon the stability of the Society. To meet these charges a committee of investigation was formed, the Chairman of which is Mr. H. C. Frick, a name prominent in financial circles. From a short letter by him I quote the following:

"It seems proper for the Committee to state that the interests of every policyholder are absolutely safe. The assets of the Society are in possession of the Committee; they are absolutely sound and the integrity of everyone of the Society's contracts is absolutely unimpaired."

Apart from this Committee of Investigation, the Society thought proper to call upon the Superintendent of Insurance of the State of New York to enter upon a complete official investigation. The enquiry must, necessarily, take time, but in the interval Mr. Hendricks, the Superintendent, has issued a circular in which he says:—

"I am at this date sufficiently well-informed as to its condition to unhesitatingly state that the Company is financially sound and that all its contracts to policyholders are fully and safely guaranteed."

I have asked the *Fiji Shimpō* to publish a letter somewhat similar to this in order that the information it contains may be widely read by Japanese interested in the future of the Company; and as there are numerous foreign policyholders residing in Japan, the favour of publication in your columns is solicited.

Yours faithfully,

J. T. HAMILTON.

General Manager for the East.

Yokohama, 12th June 1905.

#### A QUESTION OF TASTE.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—In your issue of June 9th your correspondent, who signs himself "The Writer of the Article," makes a somewhat free use of my initials. In the course of a short letter he says: "The doctrines which A.D.B. expounds with so much ignorant self-assurance"; and, "thinking men who are far better informed on the questions at issue than such writers as A.D.B."; and, "the fact that they deem the obtuseness of such writers as A.D.B. to be incurable."

Have I the honour of being personally known by your correspondent? Or does he have the self-

assurance from my one letter in your paper to size up my intellectual ability and attainments so summarily and so discriminately?

Of course it would be perfectly easy for me to talk back to your correspondent with the same high grade tone of language. But if I should do such a thing, he would have a real occasion to talk about a narrow minded, intolerant orthodox believer, and I should deserve the characterization.

But I must correct one misrepresentation of your correspondent. He quotes me as though I had termed views like his "perfectly ridiculous." I would not so characterize any man's views in public print. I said instead that it seemed perfectly ridiculous to us to have those views attributed to us as ours too.

I am still left to wonder whether the articles I referred to in my former letter are written by the same man or by different men. It is hardly necessary for me to say that I do not refer to all articles contrary to the usual Christian belief. I refer to those characterized by the tone and spirit of this latest one.

According to the standards of the country from which I came a gentleman would not put in public print personal statements that he would not be willing to put over his own name. Would your correspondent make such statements about me over his own name? Even if he would not, I can not judge him. For he may come from a country with different standards of gentlemanly conduct.

Yours sincerely,

ARTHUR D. BERRY.

Aoyama, Tokyo, June 10th, 1905.

#### THE SOCIAL EVIL AND THE WAR.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—Requests for statistics concerning certain features of the social evil question were sent out in February and replies have been received from all the Police Departments except Ishikawa and N. gasaki.

The number of licensed prostitutes at the end of last year was 42,178, as against 36,676 at the close of the 35th of Meiji, an increase of 5,502. Osaka heads the list with 6,158, an increase of 2,387 over the 35th of Meiji. Hiroshima reports 2,436, nearly twice the number of two years ago. The increase in these two places accounts for the general increase, as there is very little change in the other *kyū* and Prefectures. The presence of great numbers of soldiers in Hiroshima during most of the past year accounts for the increase there, and the same may be true of Osaka to a certain extent, although the fact that Osaka is the distributing point for Formosa and the places in Manchuria where brothels have been opened probably offers an explanation for the heavy increase there. Osaka has nearly as many licensed women now as in Meiji 32nd, the year before *jiyūkaigyō* came into effect. Kyoto, Hyogo, Niigata and Aichi, show a slight increase. In Aichi Prefecture there are 270 more courtesans than two years ago, but there are 300 less *geisha*. It is not difficult to surmise where the 300 *geisha* are. Aichi and Niigata Prefectures furnish about half of the licensed prostitutes for the Empire, and the increase in those places means that a supply of women is being secured for some purpose. It also means that the suffering among the poor, caused by the war, is making it easier for keepers to secure girls.

Tokyo reports 850 less courtesans than in Meiji 35th, though there has been a heavy increase in the number of guests. Fukuoka reports 664 prostitutes as against 1,079 two years ago, and Shimane has only 47 as against 220 when "Free Cession" began.

Very few places show any increase in *geisha*. The number for the entire country at the close of last, 37th, year was 26,276. Compared with two years ago, this shows a reduction of 1,905. Licensed prostitutes are recruited now largely from *geisha* and women employed in eating houses. The sale of innocent young girls direct to the brothels has almost ceased. Police control of *geisha* has been very strict during the war and in some places they and women employed in eating houses, places of amusement, cheap hotels, etc., have been required to submit to physical examination, the same as licensed women.

Reports covering vile diseases are too meagre and imperfect to be of much use, although the idea, still prevalent in official circles, that licensed prostitution causes a reduction of vile diseases is certainly not supported by the official statistics.

Taken as a whole, it is very gratifying that there has been no heavy increase in licensed women during the war. The gradual increase of visitors to licensed resorts during the past few months, however, is to be very much regretted, as it may indicate the beginning of the general moral break-down that often follows a great war. There were 52,400 prostitutes and 30,000 *geisha* in 32nd Meiji, when the "Free Cession" movement began.

U. G. MURPHY,

Nagoya, June 8, 1905.

## PEACE PROSPECTS.

Monday, June 12.

AT last the terrible war between Japan and Russia seems to be on the eve of conclusion. The belligerent Powers have agreed to appoint plenipotentiaries for the purpose of negotiating terms of peace. There is not to be any intervention of third parties apart from the action taken by the President of the United States in suggesting the appointment of plenipotentiaries; the two Governments will confer direct and to the exclusion of all outsiders. It can not, of course, be taken as absolutely certain that an agreement will be reached, but the probabilities are very strong in an affirmative sense. Russia must know very well what demands Japan will advance as an irreducible minimum, and Japan must know equally well the maximum concessions Russia is prepared to make. Concerning the question of a truce pending the conclusion of the conference, that must depend largely if not entirely upon the disposition shown by Russia. If she frankly meets Japan half-way, and gives unequivocal evidence that she intends to be reasonable, a truce may be immediately agreed to. But if there is a prospect of the negotiations being protracted and if their issue be problematical, the campaign must go on. One invariable condition of a truce is that neither side takes advantage of the cessation of hostilities to improve its military position. One almost invariable result of a truce is that one side or the other does, by deliberate contrivance or by the mere maturing of circumstances, find its military position considerably improved. It will be for the Japanese Generals to decide whether a truce is possible without risk of injuring their country's interests.

There can be no question that the great naval victory in the Sea of Japan was the proximate cause of this result. A naval victory made the war possible for Japan and a naval victory has made peace possible. In saying this we do not for an instant suggest that either of the two services has contributed more than the other to the Empire's triumph. On the contrary their loyal co-operation has been a signal feature of the whole contest and their achievements have been equally brilliant. Japan emerges from the struggle having given her proofs, alike on land and on sea. She has shown herself to be a great naval Power and also a great military Power. Of how many States in the world can that be said? Nevertheless it is evident that so long as a chance remained of Russia recovering command of the sea, she could scarcely have persuaded herself to listen to terms of peace. If even a measure of success had attended ROJSTVENSKY's doings the gloom that enveloped his country's cause would have been largely lightened. Japan's navy is virtually a finite quantity for the purposes of this war; Russia's was virtually infinite prior to her recent defeat. Suppose—and

the supposition is in accord with all previous naval estimates as to the invulnerability of heavily protected vessels—suppose that ROJSTVENSKY had won through to Vladivostok with 10 out of his 14 armoured ships, and that in exchange for this loss of 4 vessels he had sunk two of his enemy's first-class cruisers—we omit minor craft altogether—, then there would now be in the northern port 12 units (including the *Rossia* and the *Gromoi*) of the best fighting material, whereas under the Japanese flag there would be only 10 of corresponding quality. Further, Russia could speedily send out 2 first-class battle-ships and at least 1 armoured cruiser by way of re-inforcement, whereas Japan could not materially increase her strength for a twelve-month. In sum, therefore Russia would have a squadron of 15 armoured ships against Japan's 10. With that possibility in view could it be reasonably expected that the war party would yield? But all such hopes were finally destroyed by the annihilation of ROJSTVENSKY's squadrons, and thus the honour of opening the path to peace belongs finally to the navy.

It has been an immense struggle and for Japan its results are immense. She has leaped at one bound to a leading place among the world's great nations. She has shown herself the possessor of qualities which ensure success and command respect. As for Russia, there seemed at one moment a probability that the dementia which precedes ruin had attacked her. But she has saved herself by an exercise of wisdom hard indeed to display; so hard that many counted it an impossibility. This too is not Russia's only title to be re-instated partially in the world's good opinion. Her troops, though everywhere defeated, have shown tenacity of courage such as has seldom, very seldom, been witnessed. After 13 months of disaster not relieved by a single success, they have not been demoralized, but are fighting on as obstinately as ever. Whatever may be said of the Russian officer, of the Russian official, nothing but praise can be spoken of the Russian soldier's bravery and devotion.

The intervention of the PRESIDENT of the United States might, perhaps, have been anticipated. No European Potentate could have undertaken the task. But America is regarded with equally friendly eyes by each belligerent, and the absolutely disinterested nature of her action is above question. The incident will increase the goodwill that Japan has long borne to her great neighbour.

## ARMISTICE.

Tuesday, June 13.

THREE may be said to be a consensus of journalistic opinion on the subject of an armistice. All are agreed that an armistice must not be granted. The leading idea seems to be that Russia has not acknowledged herself beaten. She has not come direct to Japan suing for peace, but has approached the victor through a third party.

Therefore, there is as yet no evidence that she has sincerely resolved to accept such terms as shall secure the permanency of peace, and to no other or lesser terms will Japan agree. Besides, this is not Russia's first overture. She made one after the battle of Mukden, but she made it in such a manner that Japanese statesmen clearly perceived the futility of entering any conference with a *vis-a-vis* in such a mood. It is true that she had not then shot her last bolt; the Baltic Fleet was still *in esse* and its success might have altered the whole complexion of the campaign. It is also true that during the past two months Russia's internal affairs have assumed an aspect which, in the eyes of her oligarchy, may seem more formidable than any disaster suffered at the hands of a foreign foe. But against these considerations has to be set the hard fact that to accept, at the dictation of a Power hitherto regarded as puny and insignificant, terms which will virtually amount to the abandonment of all her programme of Far-Eastern expansion must be profoundly difficult for a great and proud empire like Russia, and to assume that she is prepared to make such a sacrifice of her dignity until she has furnished some incontrovertible proof of readiness to make it, would be to commit a blunder of which Japanese statesmen are not likely to be guilty. The one weak point in Japan's situation is that she is not yet in possession of any Russian territory, and it requires no great perspicacity to see that the proposals for a peace conference have been made precisely so as to anticipate a change of the situation in that respect. Unless all appearances are strangely deceptive, a Japanese expedition would have seized the island of Saghalien some weeks ago had not the potentialities of the Baltic Fleet invested such an enterprise with dangers not to be lightly faced. The Baltic Fleet has now disappeared off the face of the deep. The road to Saghalien is open and unobstructed. Troops are believed to have been told off, and preparations are said to have been made for the expedition. For its own sake Saghalien may not have much value, but as the key of Russia's position in the Far East it is incalculably valuable, for it commands the Amur, which is the great Siberian waterway on whose broad bosom the argosy of Russian ambition may be said to have been carried towards the Pacific during the past half century. With Saghalien in her hands Japan would be in a much better position to treat than she is now, and every week's delay may greatly augment the military difficulty of occupying it. Turning again to Manchuria, it is observable that, so far as the outer world knows, the Japanese armies have been idle for 3 months, and those three months too are months of spring and early summer, precisely the time that a General would be constrained to utilize. But the Japanese armies never previously lay idle at any period in the war. When they faced the enemy along the lines of the

Shaho in seeming inactivity, they were in reality preparing all the time for that colossal *coup* which culminated in the magnificent victory at Mukden. Is it conceivable or credible that they have not been busily engaged since March 10th in preparations for some similar *coup*, and are the fruits of those preparations to be sacrificed on the altar of a chance that Russia may prove reasonable and yielding? It is Russia's business and her duty to yield nothing which she can possibly retain. That is axiomatic, and it is equally Japan's business and her duty to deprive Russia of every pretext for obduracy. It must be confessed, though every publicist will be unwilling to make the statement at this moment, that Russia does not inspire full confidence. It has not been her habit to act as though she attached value to the world's trust. One of the most essential features of an armistice is that each party must pledge itself to maintain the *status quo* with the strictest integrity: not to build any fortifications, move any troops or make any military dispositions whatsoever such as would alter the situation existing at the moment when the armistice was negotiated. Is it necessary to point out that where such an immense belligerent area is involved and where the possibilities of concealing her doings are so greatly in Russia's favour, her temptations to abuse an armistice would be almost irresistible? Granted even that the Government in St. Petersburg were sincere, can any one answer for the man at the front who has always bulked so largely in the drama of Russian aggressions? We can not but agree with our Tokyo contemporaries that any cessation of hostilities prior to the furnishing of most unequivocal evidence that Russia is in earnest when she enters a peace conference would be extremely unwise. Every one must ardently desire the speediest possible cessation of bloodshed, but present bloodshed is not the only consideration; future bloodshed has also to be taken into account, and to avert future bloodshed Japan must forego no advantage obtainable from a situation which she has reached by such splendid efforts and by such a magnificent display of devotion and valour on the part of her people.

#### TERMS OF PEACE.

Wednesday, June 14.

**N**ATURALITY there is much talk in Tokyo about the terms of peace. Count OKUMA has spoken, but he did not allow himself to be very expansive and it was easy to see that he desired to avoid embarrassing officialdom by any premature expression of opinion. He did, however, urge the importance of not asking for too much. Mr. OISHI MASAMI, one of the Progressist leaders and a somewhat chauvinistic statesman, has also spoken, and we gather from his remarks that he would ask for the cession of Saghalien, the reduction of Vladivostock from a

place of arms to a purely commercial port, and the payment of an indemnity of two thousand million *yen*. Mr. SONODA, evidently influenced by his position as a banker, seems to attach most importance to a big indemnity. It is all very fine, says this practical economist, to claim sympathy with Russia's humiliation in having to bow her head to a small Power. But the hard fact is that she has found Japan not a small Power at all but much too big for Russia herself, and she must submit to the penalty invariably imposed on the vanquished. Japan's actual outlays in conducting the war, her losses in ships, the cost of maintaining the Russian prisoners, the funds required for relieving the families of the killed and wounded, the losses caused to trade and industry—all these items should be defrayed by Russia, though they may aggregate fifteen hundred million *yen*, or twenty hundred millions or even more. The surrender of territory is very satisfactory, no doubt, from the point of view of honour and glory, but as a business man Mr. SONODA casts his vote for hard cash. Professor TOMIZU, most stalwart of the Scientific Septemvirate, would have Russia deprived of all her Asiatic territory east of Lake Baikal. Thus varied are the views expressed. Evidently underlying them all is an apprehension that some weak-kneed counsels may prevail among the country's diplomatists; and one has no difficulty in deciphering the direction of these fears.

Apart from compensation which she has an indisputable right to demand—compensation for losses suffered and expenses incurred—the main purpose of Japan's plenipotentiaries must be to secure the stability of peace. If the composition effected be merely a truce, a period of armaments' expansion, during which one side prepares for revenge, the other for renewed defence, then it would be far better to continue the present war to the bitter end. How is such an unhappy state of affairs to be averted? There have been suggestions, repeated with some insistence, that one of the essential conditions of peace should be a promise on Russia's part not to maintain in the Far East a naval force exceeding certain limits. Doubtless that would be an effective guarantee but if a less humiliating method of compassing the same end can be found, it should be adopted. After all the best precaution against the presence of a large Russian Squadron in these waters is the absence of naval bases. Until she came into possession of Port Arthur and Dalny Russia did not think of assembling a strong maritime force in the Far East for the simple reason that she had no place to keep it. Dalny and Port Arthur, we take it for granted, will be now permanently removed from her hands and she will be reduced to the position she occupied in the days when, prior to obtaining an exit in the China seas, she held Vladivostock only. That reversion to her old-time status, that retrogression to an era antedating the huge expansive leap

she took when she acquired Liaotung and carried thither an arm of her trans-Asian railway, will already constitute an immense limitation of her aggressions. Could she ever become a really formidable trespasser in the Far East were such a limitation preserved? It is very doubtful. But if further assurance be needed, it must be sought in Vladivostock. Were Vladivostock disarmed and were Russia pledged never to fortify it again and always to keep it a free port—not merely an open port but a free port—she would cease to have any means of assembling and keeping a navy in this quarter of the globe. On the other hand, it would probably shock her pride much less to accept such an arrangement than to be bound by a direct promise as to the dimensions of her Pacific Squadron. The retrocession of Saghalien is another condition which evidently commends itself to the Japanese. Ten years ago they themselves were compelled by Russia to retrocede Liaotung to China under pretences far too shallow to cover even the outlines of the Northern Power's aggressive purposes. It would be pleasant now to compel Russia to retrocede Saghalien, which may be said to have once belonged to Japan. More than mere sentiment also is concerned. Saghalien has immense strategical value, for it commands the embouchure of the Amur, and the Amur is the avenue along which Russian ambition first travelled effectively on its eastward journey. Deprived of Liaotung, deprived of Saghalien, deprived of Vladivostock as a naval base, Russia would be completely effaced in the Far East. It is the spectacle of that effacement the world is presently to witness. The magnitude and significance of the incident appear to be imperfectly appreciated. For many years a sort of tacit consensus existed that Russia was subjected to almost unendurable restraints. She was denied access to ice-free seas alike in the West and in the East. Then, in the middle of the 19th century, obeying an evidently natural law of her destiny, she began to tear away the bars on the eastern side of her cage, and first down the Amur, thereafter *via* Saghalien to Vladivostock, and finally from Harbin to Liaotung, she at length made for herself an avenue which is now about to be closed to her once more. The fruits of half a century's expansion are to be snatched from her.

#### THE PEACE QUESTION.

Thursday, June 15.

**I**T is exceedingly difficult to understand what is meant by Reuter's telegram of the 13th instant on the subject of a peace conference. The telegram says that Baron KOMURA's note, handed to Mr. GRISCOM, "shows that Japan's conception of the object of the proposed conference does not in any way coincide with the conception of the Russian Foreign Office." What is meant by "Baron KOMURA's conception?" There is no question of a "conception." Baron

KOMURA's note was nothing more than a simple assent. He merely said in polite language, "I accept your suggestion." Happily in this case the Japanese Government adopted the precaution of publishing the full text of the PRESIDENT's despatch and the full text of Baron KOMURA's reply. Mr. ROOSEVELT's words were:—

"The President urges the Russian and Japanese Governments, not only for their own sake but in the interest of the civilized world, to open direct negotiations for peace with one another. The President suggests that these peace negotiations be conducted directly and exclusively between the belligerents; in other words, that there may be a meeting of Russian and Japanese plenipotentiaries or delegates without any intermediary, in order to see if it is not possible for these representatives of the two Powers to agree to terms of peace. The President earnestly asks that the Japanese Government do now agree to such meeting and is asking the Russian Government likewise to agree."

Nothing could be less equivocal. President ROOSEVELT, in the plainest and most straightforward terms, asked Japan to agree to two things; namely, to agree that a meeting should be held for the purpose of endeavouring to arrange terms of peace; and to agree to appoint plenipotentiaries to attend the meeting. Baron KOMURA's reply was equally unequivocal and straight-forward.

"Desiring, in the interest of the World as well as in the interest of Japan the re-establishment of peace with Russia on terms and conditions that will fully guarantee its stability, the Imperial Government will, in response to the suggestion of the President, appoint plenipotentiaries of Japan to meet plenipotentiaries of Russia at such time and place as may be found to be mutually agreeable and convenient, for the purpose of negotiating and concluding terms of peace directly and exclusively between the two belligerent Powers."

The same note was sent by President ROOSEVELT to the Russian Minister of Foreign Affairs. There can not have been a difference of so much as one word. But we are now informed by Reuter that Russia's conception of the object of President ROOSEVELT's proposal does not in any way coincide with Japan's conception. The perplexing question is, what constitutes the difference of "conception." Baron KOMURA's answer is in the main a transcript of President ROOSEVELT's *ipsissima verba*. The PRESIDENT asked that in the interest of the belligerents, a conference be opened and plenipotentiaries be appointed to discuss and, if possible, arrange terms of peace. Baron KOMURA replied that Japan agreed to the opening of a conference and to the appointment of plenipotentiaries. Thus far St. Petersburg's interpretation of the object of the proposed conference must have been identical with Tokyo's interpretation. There is not the smallest room to doubt the coincidence of the two "conceptions." If, however, we examine Baron KOMURA's reply very closely, examine it—that is to say—with the explicit object of discovering some point or points in which it goes beyond the exact scope of President ROOSEVELT's suggestion, we find two such

points. One is that Baron KOMURA speaks of "terms and conditions which will fully guarantee the stability of peace," whereas President ROOSEVELT makes no allusion to the nature of the terms and conditions. The other is that Baron KOMURA speaks of "negotiating and concluding terms of peace," whereas President ROOSEVELT spoke only of a meeting "in order to see if it is not possible for the representatives of the two Powers to agree to terms of peace." Are these the points at which the radical divergence of conception takes place? They must be. No others are discernible. But observe what such an inference means. It means that, in the first place, Russia does not contemplate terms and conditions which will fully guarantee the stability of peace. And it means, in the second, that she does not go into the conference with the intention of concluding peace but merely with the intention of learning what Japan wants. We are aware that such an interpretation cannot be reconciled with President ROOSEVELT's use of the word "plenipotentiary." Plenipotentiaries are not appointed merely for tentative purpose. However, no other margin exists for difference of conception, and if that interpretation be correct, then to open the conference at all would be futile. But there remains an alternative; the alternative that Reuter is misinformed. He speaks with singular assurance. He says nothing about rumour or about suggestion, but he tells us flatly that so and so is the case. Still we are sceptical. We can not think that Russia would play such a trick. If she is hanging back, it is probably because she wants to create an impression that she herself had nothing to do with the peace initiative and that she enters the conference on solicitation. President ROOSEVELT, however, is ill-chosen as the *corpus vile* for such experiments and Russia knows it well. On the whole, therefore, we doubt Reuter's accuracy and hold strongly to the view that his agents have been greatly misinformed.

#### AN ARMISTICE.

Friday, June 16.

A STRANGE idea appears to exist in some quarters that Japan would be guilty of an act shocking in the eyes of the civilized world did she not agree to an armistice from the moment that peace negotiations commence. It should not be necessary to point out that no such obligation rests on a belligerent. The mere discussion of terms of peace, or a definite agreement to discuss them, has no binding effect whatever so far as concerns the cessation of hostilities. Only from the day of its signature does a treaty of peace carry with it an obligation to desist from hostilities. International law is quite plain on that point. Ratification of the treaty need not be awaited. Signature is the crucial point. It is considered that the chances of ratification being refused are too small to be set against the

certain calamity of further bloodshed if hostilities be continued. But pending signature, that is to say, throughout the course of the preliminary negotiations, the question whether the operations of war shall cease or continue depends solely upon the volition of the belligerents. Already rumour has suggested some grounds for questioning Russia's sincerity in approaching the conference chamber, but even though such cause for uneasiness did not exist, Japan for many reasons would be unwise did she consent to an armistice pending the actual signature of a peace treaty. It has to be remembered that, according to international law, an armistice does not prevent either belligerent from performing any act which the other, apart from the armistice, would not have been in a position to hinder. To reduce this to a concrete example: if an armistice were agreed to to-morrow, it would not preclude LINEVITCH from constructing new fortifications at Vladivostok, Harbin, Kirin, or along the line of the Sungari, all these places being now beyond the immediate reach of the Japanese armies; neither would it preclude him from pouring re-inforcements and munitions of war into Vladivostok; neither would it prevent him from replenishing his magazines or obtaining fresh troops from Europe, or distributing them in fresh positions; neither would it prevent Russia from equipping war-ships and sending them eastward from the Baltic. Every week's delay would then be a week's gain to Russia and a week's loss to Japan. Many sacrifices should be made to stop the effusion of blood, but to stop it temporarily by agreeing to an armistice which might in the end lead to greater bloodshed than ever, would be extremely unwise policy. Our conviction is that were hostilities suspended from the day of opening the conference chamber, and were it agreed that they should not be resumed unless the conference came to naught, Japan would find herself involved in just such a morass of delays and evasions as that which lasted throughout the whole of the year 1903. Russia has a record.

#### WEDDING.

The wedding took place at the Catholic Church, Yokohama, on Wednesday, of Miss Caroline Sweigert of California, and Mr. E. S. Sullivan, of the Standard Oil Company, Yokohama. The Church was very prettily decorated for the occasion and a large number of people were present. The bride, who is the daughter of the late Mr. Adam Sweigert, a millionaire land owner of Santa Clara, Cal., was attired in a grey taffeta silk travelling gown, with a large black picture hat with white plumes, and was attended by Mrs. Hobbs and Mrs. Dutard of San Francisco. The best man was Mr. W. L. Keane, and the officiating priest Pere Alfred Pettier. Mr. Sullivan before coming to Yokohama spent many years in Oakland, San Jose, and Los Angeles, and he and his bride intend to spend some time in travelling. After the ceremony on Wednesday a reception was held at the Oriental Palace Hotel.

A Maidzuru telegram says that on June 8th, some naval attachés of the German and three other foreign legations at Tokyo paid a visit to the captured ship *Iwami* (formerly *Ori*), and on the following morning left for Tokyo.

# DETAILED OFFICIAL REPORT OF THE BATTLE IN THE JAPAN SEA.

(Compiled by Admiral Togo and published by the Imperial Naval Head Quarter Staff on the afternoon of June 14th.)

By the help of heaven our United Squadron fought with the enemy's Second and Third Squadrons on the 27th and 28th of May and succeeded in almost annihilating him.

When the enemy's fleet first appeared in the South Seas, our squadrons, in obedience to Imperial command, adopted the strategy of awaiting him and striking at him in our home-waters. We therefore concentrated our strength at the Korean Straits and there abode his coming north. After touching for a time at the coast of Annam, he gradually moved northward, and some days before the time when he should arrive in our waters several of our guard-ships were distributed on watch in a south-easterly direction, according to plan, while the fighting squadrons made ready for battle, each anchoring at its base so as to be ready to set out immediately.

Thus it fell out that on the 27th at 5 a.m. the southern guard-ship *Shinano Maru* reported by wireless telegraphy "Enemy's fleet sighted in No. 203 section. He seems to be steering for the East Channel."

The whole crews of our fleet leaped to their posts; the ships weighed at once, and each squadron proceeding in order to its appointed place, made its dispositions to receive the enemy. At 7 a.m. the guard-ship on the left wing of the inner line, the *Jaumi*, reported:—"The enemy's ships are in sight. He has already reached a point 25 nautical miles to the north-west of Uku-jima; he is advancing north-east." The Togo (Captain Togo Masamichi) Section the Dewa Section and the Cruiser Squadron (which was under the direct command of Vice-Admiral Kataoka) came into touch with the enemy from 10 to 11 a.m. between Iki and Tsushima, and thereafter as far as the neighbourhood of Okino-shima these ships, though fired on from time to time by the enemy, successfully kept in constant touch with him, and conveyed by telegraph accurate and frequent reports of his state. Thus, though a heavy fog covered the sea making it impossible to observe anything at a distance of over 5 miles, all the conditions of the enemy were as clear to us who were thirty or forty miles distant as though they had been under our very eyes. Long before we came in sight of him we knew that his fighting force comprised the Second and Third Baltic Squadrons, that he had seven special-service ships with him, that he was marshalled in two columns line ahead, that his strongest vessels were at the head of the right column, that his special service craft followed in rear, that his speed was about 12 knots and that he was still advancing to the north-east.

Therefore I was enabled to adopt the strategy of directing my main strength at about 2 p.m. towards Okino-shima with the object of attacking the head of his left column. The Main Squadron (1), the Armoured Cruiser Squadron (2), the Uriu Section and the various Destroyer Sections at noon reached a point about 10 nautical miles north of Okino-shima, whence, with the object of attacking the enemy's left column, they steered west, and at about 1.30 p.m. the Dewa Section, the Cruiser Squadron and the Togo (Captain) Section, still keeping touch with the enemy, arrived one after the other and joined forces. At 1.45 p.m. we sighted the enemy for the first time at a distance of several miles south on our port bow. As had been expected, his right column was headed by 4 battle-ships of the *Borodino* type; his left by the *Ossliabya*, the *Sissoi Veliky*, the *Navarin* and the *Nakhimoff*, after which came the *Nicholai I* and the three coast defence vessels, forming another squadron. The *Zemchug* and the *Lamrud* were between the two columns, and seemed to be acting as forward scouts. In the rear, obscured by the fog, we indistinctly made out the *Oleg* and the *Aurora* with other second and third-class

cruisers forming a squadron, while the *Dmitri Donskoi*, the *Vladimir Monomakh* and the special-service steamers were advancing in column line ahead extending to a distance of several miles.

I now ordered the whole fleet to go into action and at 1.55 p.m., I ran up this signal for all the ships in sight:—"The fate of the Empire depends upon this event. I let every man do his utmost."

Shortly afterwards the main squadron headed south-west and made as though it would cross the enemy's course at right angles, but at five minutes past 2 o'clock the squadron suddenly turned east and bore down on the head of the enemy's column in a diagonal direction. The Armoured Cruiser Squadron followed in the rear of the Main Squadron, the whole forming single column line ahead. The Dewa Section, the Uriu Section, the Cruiser Squadron and the Togo (Captain) Section, in accordance with the previously arranged plan of action, steered south to attack the rear of the enemy's column. Such, at the beginning of the battle, were the dispositions on both sides.

## FIGHT OF THE MAIN SQUADRON.

The head of the enemy's column, when our Main Squadron bore down on it, changed its course a little to starboard, and at eight minutes past 2 o'clock he opened fire. We did not reply for some time, but when we came within 6000 metres range, we concentrated a heavy fire on two of his battle-ships. This seemed to force him more than ever to the south-east, and his two columns simultaneously changed their course by degrees to the east, thus falling into irregular columns line ahead, and moving parallel to us. The *Ossliabya*, which headed the left column, was soon heavily injured, burst into a strong conflagration and left the fighting line. The whole of the Armoured Cruiser Squadron was now steaming behind the Main Squadron in line, and the fire of both squadrons becoming more and more effective as the range decreased, the flagship *Knyas Suvaroff* and the *Imperator Alexander III*, which was second in the line, burst heavily into flames and left the fighting line, so that the enemy's order became more and more deranged. Several of the ships following also took fire, and the smoke, carried by the westerly wind, quickly swept over the face of the sea, combining with the fog to envelop the enemy's fleet, so that our principal fighting squadrons ceased firing for a time.

On our side also the ships had suffered more or less. The *Asama* had been struck by three shells in the stern near the water-line, her steering gear had been injured and she was leaking badly so that she had to leave the fighting line, but she performed temporary repairs and was very soon able to resume her place.

Such was the state of the main fighting forces on each side at 2.45 p.m. Already the result of the battle had been decided in this interval.

Thereafter our Main Squadron, forcing the enemy in a southerly direction, fired on him in a leisurely manner whenever his ships could be discerned through the smoke and fog, and at 3 p.m. we were in front of his line and shaped a nearly south-easterly course. But the enemy now suddenly headed north, and seemed about to pass northward by the rear of our line. Therefore our Main Squadron at once went about to port, and with the *Nisshin* leading, steered to the north-west. The Armoured Cruiser Squadron, also, following in the Main Squadron's wake, changed front and thereafter again forced the enemy southward, firing on him heavily. At 3.07 p.m. the *Zemchug* came up to the rear of the Armoured Cruiser Squadron, but was severely injured by our fire. The *Ossliabya* also, which had already been put out of action, sunk at ten minutes past 3 o'clock, and the *Knyas Suvaroff*, which had been isolated, was injured more and more. She lost one of her masts and 2 smoke-stacks and the whole ship being enveloped in flame and smoke, became unmanageable and her crew fell into confusion. The enemy's other vessels, suffering heavily, changed their course again to the east. The Main Squadron now altered its direction 16 points to starboard, and the Armoured Cruiser Squadron following, they pursued the retreating enemy, pouring a constantly heavier fire on him and discharging torpedoes also whenever oc-

casions offered. Until 4.45 p.m. there was no special change in the condition of the principal fight. The enemy was constantly pressed south and the firing continued.

What deserves to be specially recounted here is the conduct of the destroyer *Chihaya* and of the Hirose Destroyer Section at 3.40 p.m., as well as that of the Suzuki Destroyer Section at 4.45 p.m. These bravely fired torpedoes at the flagship *Suvaroff*. The result was not clear in the case of the first-named boats, but a torpedo discharged by the last-named Section hit the *Suvaroff* astern on the port side, and after a time she was seen to list some 10°. In these two attacks the *Shiranui* of the Hirose Section and the *Asashio* of the Suzuki Section, being each hit once by shells from ships in the neighbourhood, fell into some danger, but both happily escaped.

At 4.40 p.m. the enemy apparently abandoned the attempt to seek an avenue of escape northward for he headed south and seemed inclined to fly in that direction. Accordingly our chief fighting force with the Armoured Cruiser Squadron in advance went in pursuit, but lost him after a time in the smoke and fog. Steaming south for about 8 miles, we fired leisurely on a second-class cruiser of the enemy's and some special-service steamers which we passed on our starboard, and at 5.30 p.m. our Main Squadron turned northward again in search of the enemy's principal force while the Armoured Cruiser Squadron proceeding to the south-west and attacked the enemy's cruisers. Thereafter until nightfall these two squadrons followed different routes and did not again sight each other.

At 5.40 p.m. the Main Squadron fired once upon the enemy's special service steamer *Ural*, which was near by on the port side, and at once sunk her. Then as the Squadron was steaming north in search of the enemy, it sighted on the port bow the remaining ships of his principal force, 6 in number, flying in a cluster to the north-east. Approaching at once it steamed parallel to these and then renewed the fight, gradually emerging ahead of them and bearing down on their front. The enemy had steered north-east at first, but his course was gradually deflected to the west and he finally pushed north-west. This fight on parallel lines continued from 6 p.m. to night-fall. The enemy suffered so heavily that his fire was much reduced, whereas our deliberate practice told more and more. A battle-ship of the *Alexander III* type quickly left the fighting line and fell to the rear, and a vessel like the *Borodino* which led the column, took fire at 6.40 p.m. and at 7.23 suddenly became enveloped in smoke and sank in an instant, the flames having probably reached her magazine. Further, the ships of the Armoured Cruiser Squadron which were then in the south pursuing the enemy's cruiser squadron northward, saw at 7.07 p.m. a ship like the *Borodino* with a heavy list and in an unmanageable condition, come to the side of the *Nakhimoff* where she turned over and went to the bottom. It was subsequently ascertained from the prisoners that this was the *Alexander III*, and that the vessel which the Main Squadron saw sink was the *Borodino*.

It was now getting dusk and our destroyer sections and torpedo sections gradually closed in on the enemy from the east, north and south, their preparations for attack having been already made. Therefore the Main Squadron ceased by degrees to press the enemy and at 7.28 p.m., when the sun was setting drew off to the east. I then ordered the *Tsushima* to carry orders to the fleet that it should proceed northward and rendezvous on the following morning at the Ulneung Islands.

This ended the battle during daylight on the 27th.

(TO BE CONTINUED.)

An invitation has been received by the Y.C. & A.C. from the Shanghai Cricket Club asking that a team should visit Shanghai for an interport match. The latter part of September is mentioned as the best time for the visit. Tientsin and Kobe have also been asked to send teams. Failing an eleven from both Yokohama and Kobe it is suggested that the two ports join forces and send a combined team.

(1) Under Togo himself. (2) Under Vice-Admiral Kamimura.

## BRASSEY'S NAVAL ANNUAL.

(SPECIALLY WRITTEN FOR THE "JAPAN MAIL.")

The nineteenth edition of *Brassey's Naval Annual* reached Japan before the echoes of the great battle in the Sea of Japan had subsided. Yet the editor of this work says in his preface: "Owing to the Russo-Japanese War the history of the past year will probably prove more interesting to naval men than that of any year since the *Naval Annual* was first published." For, he says, in the wars between China and Japan and between the United States and Spain the combatants were most unequally matched. Neither the battle off the Yalu nor the destruction of Cervera's squadron off Santiago can be compared with the engagement between the Port Arthur squadron and the Japanese fleet on August 10, when fleets of modern battleships of not unequal strength were for the first time engaged. How much more absorbingly interesting, then, will be the volume for 1905, which may be expected to contain a description of the tremendous battle waged in the closing days of May and of the events that immediately preceded it.

The Russo-Japanese naval campaign of 1904 is dealt with by Admiral Sir Cyprian Bridge, who enjoys the advantage of having become well acquainted with the *locals* of the operations during his command on the China Station. On the same lines as the article in last year's *Annual* on the Japanese Navy there is another in this edition on the German Navy, prepared by Mr. J. L. Bashford. A "Plea for the Study of Tactics" by Vice-Admiral Sir Reginald Custance, formerly Director of Naval Intelligence, is another special article which is certain to possess much interest at this time. The Doggerbank incident is an old story now,—seems, indeed to have aged since its heroes met real torpedo-boats in circumstances different as to results from, though geographically not unlike, those of the North Sea affair. Mr. J. R. Thursfield writes about it lucidly and on the whole, as it appears to us impartially. The Campaign of Trafalgar is another article of great interest by Mr. John Leyland. Lord Brassey, K.C.B., writes with his usual authority on the manning of the Navy and Mercantile Marine. A sketch of the work performed by the Navy in connection with the Somaliland Expedition; the usual articles on the British and Foreign Navies and Comparative Strength, and on Armour and Ordnance, with tables, plans, illustrations, maps and the usual appendix complete the tale of the book's contents.

Nine ships are illustrated: 2 English, (battleship *King Edward III* and cruiser *Challenger*), 1 each Italian, French, Turkish and Russian (*Kutais Potemkine Tavrishesky*, built at Nicolaieff and included in the Black Sea Fleet) and no fewer than three German (one battleship and two armoured cruisers). Six maps and plans accompany and elucidate Admiral Bridge's article on the naval campaign of last year.

## THE BRITISH NAVY.

In the chapter on the British Navy reference is made to Lord Selborne's transference from the post of First Lord of the Admiralty to succeed Lord Milner in South Africa. Of him it is said that during his term of office many changes have taken place,—some, made during the last few months, open to serious objection but he "undoubtedly leaves the Navy in many respects more efficient for the purposes of war than it was when he entered upon his duties."

Quite an interesting table is given showing the results of the trials of four of the new battleships, in which it is interesting to note that while the *Dominion* (engined by Vickers) steamed 12.8 knots on a coal consumption of 1.93 lbs per horsepower, 18.3 knots on 1.68 lbs, and 19.5 knots on 1.77 lbs; the *Hindustan* (Clydebank) 11.8 knots on 1.94 lbs, 17.7 on 1.76 lbs, and 19.01 knots on 1.8 lbs, and the *Commonwealth* 11 knots on 1.74 lbs, 17.9 knots on 1.68 lbs and 19.01 knots on 1.83 lbs, the *King Edward VII* Harland and Wolff only did 11.6 knots on 2.63 lbs, 17.35 knots on 1.96 lbs, and 19.04 knots on 2.17 lbs. *Apologies* of the later and more powerful (*Lord Nelson*) class, the American *Connecticut* and the Japanese *Katori* and *Kashima* (5,900 to

16,500 tons) the writer of this article declares that in view of the losses sustained by the present war from submarine mines the policy of putting so many eggs in one basket demands serious reconsideration. A *Lord Nelson* or a *Connecticut* costs in round figures £1,500,000; a *Swiftsure* (former Chilean *Constitution*) costs but £1,000,000, so that three of the latter can be built for the same expenditure as two of the former.

Of four third-class cruisers that have run their trials the *Amethyst* (built at Elswick), fitted with turbines, appears to have made a remarkable record. She steamed 18.2 knots on 1.71 lbs. of coal per hp., 20.63 knots on 1.5 lbs., and 23.42 on 1.2 lbs., while the *Sapphire* (Palmer) fitted with reciprocating engines (her nearest competitor) only made 18.47 knots on 2.34 lbs., 20.68 knots on 2.22 lbs., and 22.45 knots on 2.52 lbs.

Considerable space is devoted to sub-marines but most of the matter has already been published.

Lengthy reference is made to the recent changes in the British Navy in administration as well as in respect of the removal of obsolete ships.

As to the Estimates for 1905-6 (£33,389,500 as compared with £36,889,500 in 1904-5, or a decrease of £3,500,000) the writer takes credit for having correctly prophesied that when economy was enforced it would be on the Shipbuilding Vote, which has been reduced by £3,000,000. Only one battleship is to be laid down during the year in the face of Germany's 8 and America's 12. Note is taken of the destruction of the Port Arthur fleet and of other considerations, but at all costs, he says, we must keep our battleship construction going, for nothing will compensate for inferiority in the line of battle.

## JAPANESE AND RUSSIAN NAVIES.

The destruction of the Russian Armada by Admiral Togo renders obsolete most of the information given under the respective heads with reference to the belligerent navies, and the remaining facts are practically common property. The statement that "the attempt to raise the *Varyag*, which was sunk at Chemulpho at the outbreak of the war, has failed," will have to be corrected for next year's *Annual*.

## THE DOGGER-BANK AND ITS LESSONS.

Mr. Thursfield's paper on the affair of the Dogger Bank and the lessons to be drawn therefrom discusses this sorry business in a deeply interesting fashion, and suggests several highly practical and useful lines of thought. After describing the occurrence, drawing his facts entirely from the report of the International Commission of Inquiry and summarizing the finding of the Commissioners, which has already been given to the public, he takes up the problem: what was it that first provoked the Russian fire? It could not have been the fishing fleet because when Admiral Rojestvensky set his course to pass close to the Dogger Bank he must have known that he would at that point come across a large assemblage of trawlers. If he did not know it then either his nautical incapacity or his flagrant neglect of information common to all competent mariners, stands confessed. The green rocket which the "admiral" of the fishing fleet displayed as an order to travel on the starboard side to windward might puzzle him, but it could not make him see torpedo craft or other hostile vessels where there were none to be seen. Mr. Thursfield comments upon the fact that the presence of torpedo craft other than Russian was absolutely excluded by the evidence before the Committee. He suggests, however, that the whole incident would become more or less intelligible if the hypothesis were entertained that Russian torpedo boats were present.

Passing from the judicial, diplomatic and naval aspects of the question (upon which we have not touched) he describes the first stage in the formation of what he calls the "psychological atmosphere" which, he says, alone accounts for the tragedy,—which predisposed the Russian Admiral and his officers to make a mistake so deplorable in its nature and so terrible in its consequences. "That they did make a mistake is beyond all question. It was a mistake if they fired on the *Aurora* and

the *Dmitri Donskoi*. It was a mistake if they fired on their own torpedo craft. It was a mistake if they fired on nothing at all. It was the worst mistake of all if they fired on the fishing boats believing them to be torpedo craft." How is this mistake to be explained? Well, in the first place there were "nombreuses informations des Agents du Gouvernement Impérial." So Admiral Rojestvensky's information as to the presence of Japanese torpedoers in European waters did not come from the Russian Admiralty (for if it had then it is hardly conceivable that such information would not have been laid before the Commission) but from local agents whose warnings he believed and made his dispositions accordingly. The attitude of expectancy that had been created even before he left the Skaw was accentuated by the experiences of the *Kamichatka* (which, 50 miles astern, mistook a Swedish steamer and other craft for hostiles and fired on them, signalling aerially at the same time that she was attacked on all sides by "torpilleurs"); was brought to extreme tension by the green rocket of the trawlers' "admiral," and passed into action premature, disastrous and unjustifiable when the suspicious vessel seen over the starboard cathead liberated all the pent-up expectancy and fired the long-laid train. "The Russian officers saw what they expected to see and took action accordingly." What they saw may have been a torpedo craft—if so it was a Russian. It may have been the *Aurora* as the Commissioners seem to suggest. It may have been a fishing boat, or it may have been nothing at all. But whether it was anything or nothing, it was taken for a torpedo craft because that was what it was expected to be.

Now, to make a mistake is human. British officers have often made the same mistake. Where fault is to be found is in the persistence in it and the making of no efforts to repair it. Mr. Thursfield goes on to quote a number of instances showing that if, with the Commissioners, we set aside the hypothesis that hostile torpedo craft were present on the Dogger Bank, there was "no possible explanation of what occurred on that occasion that could not be paralleled by what has happened over and over again in the Naval Manœuvres and other sea exercises of the British fleet. Battleships and at least one cruiser have been mistaken for destroyers; a flotilla of torpedo boats was in one instance mistaken for the main body of a fleet, and comment has been made by Rear-Admiral Durnford on the extraordinary way people think they see torpedo boats when none are there. A fleet of fishing boats off the west coast of Ireland was on one notable occasion taken by a cruiser for torpedo boats, and it is no uncommon occurrence in manœuvres both British and foreign, for torpedo craft to be fired on by their own friends.

But it has to be borne in mind that while in manœuvres every ship within the field of operations, especially at certain positions, knows that it must be on the look out for torpedo attack. "Here the psychological atmosphere which generates a state of acute mental expectancy must needs exist, and may easily lead to mistakes which, if not excusable, are at least intelligible. But if in manœuvres an admiral were to go outside the manœuvre area to a position where the probable presence of fishing vessels in large numbers was a matter of maritime notoriety, he would hardly be entitled to plead the psychological atmosphere and its concomitant state of expectancy as a valid and sufficient excuse for any mistake that he made in consequence. Now the analogy of the Dogger Bank incident is in large measure of this latter character. The actual theatre of war was thousands of miles away. The presence of hostile torpedo craft was so improbable in the circumstances, that the suspicion of it should never have been allowed to take so firm a hold as it did on the minds of Admiral Rojestvensky and his officers. On the other hand the presence of innocent fishing boats was almost a certainty. It is the duty of a naval officer who knows his business to weigh these alternative probabilities and to draw a sound conclusion from them. It would seem that Admiral Fölkersham did this while Admiral Rojestvensky did exactly the reverse. It might be invidious to compare the 'valeur militaire' of the two officers,

but such a comparison could hardly be favourable to the Commander-in-Chief."

Now as to the lessons. Here Mr. Thursfield's propositions or rather those which he bases upon already accepted and established doctrine—are endorsed in a peculiarly convincing manner by the as yet partially-known story of the Battle of the Japan Sea. The torpedo craft, he says, constitutes a weapon of such tremendous and peculiar menace that it creates a psychological atmosphere of its own. It is not, perhaps, likely that the world will witness a repetition of the extraordinary phenomenon which involved the creation of this atmosphere at the distance of nearly half the circumference of the globe, but at shorter distances—say the width of the Mediterranean—such things as occurred on the Dogger Bank are prone to happen again unless recent lessons are taken seriously and learnt betimes. Two things are certain: (1) that innocent vessels will often be mistaken for torpedo craft and (2) that torpedo craft will always be fired on at sight. Capt. Bacon, one of the highest authorities in the Navy on torpedo warfare, says "—a ship should always fire on any boat—whether suspected of being a friend or an enemy—that approaches her at night, since it is far better to sink a friendly boat than risk losing a ship by mistaking the identity of an enemy's boat. The boat is of no value compared with the ship and therefore the onus of sinking a friendly ship should lie on the boat." And the official account of manoeuvres in the Mediterranean in 1904 confirms this proposition by laying it down, in connection with an attack by a friendly destroyer upon the battleship *Implacable*, that "the destroyer, which was in sight long before she attacked, would have been fired on without waiting to ascertain whether she was friend or foe." In war, then, all torpedo craft will be fired on at sight unless they have previously disclosed their identity. But how does a neutral torpedo craft stand? Well, she has no business to be there at all; if she sights a belligerent fleet the best thing she can do is to show it a clean pair of heels at once. "Nothing on earth can save her if she once allows herself to be caught within the range of belligerent fire. In the abstract, of course, she has just as much right to use the sea as any other vessel that floats. In like manner a husbandman has every right to till his fields, if he chooses, under the fire of two contending armies. But if he is killed it is his own fault. So far, then, there is no great difficulty. The neutral torpedo craft must take her chance. She has no business to be there intentionally, and if she is there by accident, she must do her best not to be there as soon as possible."

But we come to the Dogger Bank case: that of the neutral trading vessel whether fishing boat or large craft. Clearly she stands upon a different footing. In the clash of war, as Mr. Thursfield points out, she is innocent, defenceless and helpless, and yet experience shows that she runs a very appreciable risk of being mistaken for a torpedo craft and as such of being fired on at sight. Yet if Dogger Bank incidents were to become common the situation would be rendered intolerable to a neutral Power possessing a large mercantile marine and a navy adequate to its protection. "It must be made clear to the belligerent that he cannot make with impunity such disastrous mistakes as Admiral Rojestvensky made at the Dogger Bank; that it is safer for him to run the risk of a not very probable torpedo attack than, by making a mistake, to incur the much more probable and much more serious risk of having the fleets of a powerful neutral added to the fleets of an adversary with whom he is already at war. In other words the commander of a belligerent fleet or ship must show the real quality of his 'valeur militaire.' He must not allow his military judgment to be sophisticated by a psychological atmosphere mainly of his own creation. The right of firing on a torpedo craft at sight carries with it the correlative duty of not mistaking an innocent vessel for a torpedo craft. . . . The sea is the common highway of peaceful commerce and industry. The belligerent commander must never forget this, nor allow himself to open fire on whatever looks like a torpedo craft on a dark night without waiting to

ascertain whether what he is attacking is a furtive and insidious assailant or only a flock of defenceless and unoffending sheep. If he acts in this heedless fashion he discredits his own 'valeur militaire' and runs the risk of turning neutrals, wholly against their will, into his country's enemies. These are lessons which it behoves all maritime Powers to learn. It was because Admiral Rojestvensky had not learnt them that innocent lives were sacrificed on the Dogger Bank, and the world was brought within a hair's breadth of almost universal war." H.

#### BABU POETRY.

We have to acknowledge receipt of "A Poem on the Russo-Japanese War" by Mr. J. N. Mookerjee of Calcutta, written evidently in sections as the war proceeds, for this copy is marked Part IV., and carries us almost up to the battle of Mukden. The "Poem" is prefaced by a "Welcome to Lady Curzon" of which, perhaps, it will be enough to quote the following:

We hail thee daughter of the mighty noble race,  
We welcome thee for we adore thee for thy grace,  
Thine recent terrible illness, though brief the time,  
Was an age of grief to us for thy deeds sublime.

Mr. Mookerjee thus apostrophises Japan in his Epic.

Japan! I know not how to build the lofty rhyme,  
For I am not the son of cold and misty clime.  
Japan! thou art in thy pride of beauty and youth,  
My heart is for thee, as warm as the sunny south.

The poet, however, is by no means bigoted in his admiration. He has a word to say for India. Thus:

Oh Japan, Japan! let us learn for thee to feel,  
But alas! who by words a nation's sore could heal,  
Where is that yearning, that love Japan for thy sake?  
Great God! what object thou had India to make?  
But with all thy faults I love thee with my heart!  
I hail thee my Mother-land, dear mother don't start,  
Why, why, He made thee the epitome of the world?  
England is there mother no more blows shall be hurled.

Then come mother, disperse the darkness from my mind.

I invoke thy help for my mother thou art kind,  
I will sing mother, for the brave Japs, if I can,  
Let my weak sinking heart all difficulties span.

I am proud of my birth, being a son of thine,  
Nature's most charming daughter is mother of mine.

Oh thou useless flood of grief turn, turn from my sight,  
See my mother's beauty has been sent from the Height.

But thou England! don't be the blindest of the blind,

My beautiful mother was once a sovereign, mind!  
Breathe new vigour in thy old sister's shaken frame.

Let us serve both as brothers, without fear or shame,  
Though miserable are my songs, though wretched still.

Art thou not there mother to protect me from ill?  
The dice is cast, false Hope firms men in every clime.

Alas! misery and shame come untired by time.

We would gladly follow Mr. Mookerjee further—there are, according to some reviews which he quotes, some 1,600 lines of him—but we regret that space will not permit. His verses seem to have gathered in every incident from the passage of the Suez Canal by the Baltic fleet to the Japanese list of prisoners at Port Arthur. Sometimes they coruscate with such gems as "Lest old Togo appears from before or behind," sometimes they peter down to "Oh, joy, joy for the great victory let us joy."

#### RECEPTION BY MADAME SUFU.

The reception held on Friday afternoon by Madame Sufu, who entertained the foreign ladies who have for the past ten weeks been engaged in rolling bandages for the Red Cross Society at the British Naval Hospital, proved a very enjoyable function. The reception was held at the Governor's official residence at Iseya. All the ladies of the party, 42 in number, were invited

but only 27 were able to attend. Among those present were Mesdames Scidmore, W. K. Wilson, James Walter, C. K. M. Martin, Lichfield, C. V. Sale, Townsend, Irving Bell, Barmont, Emerson, Pratt, Frique, Hawkins, Reidhaar, Ritter, Moon, Lowder, Macbeth, Tegner, Eldridge and Manley, Misses Scidmore, McLean, M. E. Tracy, Julia E. Hardy Davis, Manley, R. Martin and Walter. There were also present several Japanese ladies, the wives of leading officials of this Prefecture.

Tents were erected and the house and grounds profusely decorated with flags of all nations, the Japanese colours, red and white, being artistically utilized. Soon after the arrival of the guests a programme of Japanese music was provided by four prominent musicians in this city, three of whom were blind. Their names were Messrs. Bunshi and Bunga (*koto*), Mrs. Chiyoharu (*kobyo*) Japanese violin, and Miss Bungae (*samisen*). The selections, given were *Adumajishi*, *Yichigoyishi*, *Rokudan* and *Shochukubai*.

H. E. the Governor, in his capacity of Governor and President of the Kanagawa-ken Branch of the Red Cross Society, and in the name of Madame Sufu, President of the Yokohama Branch of the Volunteer Nursing Association, thanked the ladies for their great and active sympathy shown to the Japanese wounded. He also returned thanks to Dr. Moon for the use of a ward at the British Naval Hospital for the purpose of bandage rolling, and to Mrs. Macpherson who had been mainly instrumental in organising the work. Refreshments and various entertainments concluded the proceedings, which ended at about 6.30 p.m.

At the close of the reception Madame Sufu similarly entertained the student nurses of the Red Cross Society, twenty-five in number.

#### PLAGUE.

An official telegram says that since May 30th up to June 8th, thirteen cases of plague have appeared in the village of Kwoetsu, Ayanta district, Kagawa prefecture. Eight patients died. On the morning of June 8th, two suspicious cases were reported in the same village. Dr. Shiga, of the Home Department, is investigating the origin of the disease.

K. Arakawa, a servant of the Fukagawa Police Office, Tokyo, who was attacked by the disease, is reported to have died early on the morning of June 8th. The police station was segregated behind a fence of tin plates. It may be added that in the Fukagawa district, eleven cases were reported up till June 8th. The Fukagawa Urban Division Assembly has held an extraordinary meeting to defray the expenses needed for sanitary works.

A fresh case of plague has appeared at Kurocho, Fukagawa, Tokyo. The patient died on the morning of June 10th. The victim was a carpenter named S. Hayakawa, 26 years old.

On June 10, three rats infected with plague bacilli were found in the same urban division.

Four fresh cases were reported on June 8th and 9th in the district of Ayanta, Kagawa prefecture. Thirteen cases had already been reported there.

A telegram from Takamatsu says that a fresh case of bubonic plague was reported on June 10th in the village of Kanayama, Ayanta, Kagawa prefecture.

An official telegram says that from May 30th up to June 12th, 25 cases of plague appeared in the district of Ayanta, Kagawa prefecture. Nine of the patients died.

It is reported by an official telegram that from the beginning of January up to June 13th, 1,704 cases of plague appeared in Formosa, and of the patients, 1,480 died. The disease is being vigorously combatted throughout the island. The authorities are carrying on strict disinfecting measures with regard to vessels arriving and departing.

On June 12th, five cases were reported in the village of Tamakoshi, Ayanta, Kagawa prefecture. Three of the patients died. It is added (by telegram to the *Nichi Nichi*) that about eight hundred persons who constitute the population of the village have been segregated.

## THE LAW COURTS.

## FRAUD.

In the Tokushima District Court, on June 8th, S. Watanabe and one other employee of the Kure Naval Station were sentenced to 8 years' minor confinement, and C. Shinsho and 16 other merchants who received the patronage of the naval office, received sentence of 2 years' and 7 years. The *Nichi Nichi* says that these men obtained money from the naval office by forging official documents.

## FAVRE-BRANDT v. TOKYO CITY OFFICE.

Messrs. C. and J. Favre-Brandt, agents in Japan for the Liege Water-pipe Company, Belgium, have lodged a case in the Tokyo District Court against Mr. Ozaki, Mayor of Tokyo City, claiming yen 86,211.70. According to the petition, plaintiffs made a contract with the Tokyo City Office to supply a certain quantity of iron-piping to be used for water-works, and deposited fifty thousand yen as guarantee. The pipes were delivered within the period notified in the contract, and those which were required to replace some rejected on inspection were supplied in July, 1904. The Tokyo City Office, however, decided to confiscate a portion of the deposit on the ground that the delivery of the goods was deferred, and further refused to pay yen 36,211.70, the cost of piping delivered in July 1904.

The first hearing will take place on June 26th.

## THE CASE OF MR. GEORGE ALLEN.

The trial of Mr. George Allen (39), No. 77, Yamashita-cho, Yokohama, will take place at 9 a.m., on June 20th in the Tokyo District Court. According to leading Tokyo papers, the charges against him are forgery of a private document and calumny.

## CLAIM FOR LIFE INSURANCE.

The hearing of a case in which S. Miyamoto claims yen 23,000 from the Mutual Life Insurance Co. was resumed on June 14th in the Yokohama District Court before Judge Nakanishi.

This case was adjourned on June 2nd at the request of defendants' Counsel, who asked the Court to take up the record of the Takamatsu District Court with reference to a criminal case lodged by defendant against plaintiff.

Defendants' Counsel now produced some letters from the record of the criminal case. After making brief explanation as to the evidence, he insisted that the insurance company has no responsibility with regard to the claim.

Plaintiff's Counsel refused to admit the evidence and said that the letters produced by defendants made no alteration in the policy concluded between the parties. The policy provided that the money insured should be paid to the insured himself or to Mr. S. Miyamoto. The insured is dead. The payment thus is due to S. Miyamoto, but defendants refuse to fulfil their obligation.

Defendants' Counsel asked the Court to summon J. Nambu and Dr. K. Oka of Osaka as witnesses and also to examine Mr. A. L. Manley, Manager of the Osaka branch of the New York Life Insurance Co., as an expert knowing the usage of life insurance business, especially with regard to the system of 20 or 30 years' endowments.

The Court decided to examine the two Japanese only on June 23rd.

## CUSTOMS PROTEST.

## GALVANIZED STEEL WIRE.

On June 8th, Mr. Midzukami, Director of the Yokohama Customs, delivered a decision on a protest lodged by the American Trading Co., No. 28, Yamashita-cho. The firm imported galvanized steel wire (No. 30 gauge), on which the appraisers imposed duty at the rate of 10 per cent. *ad valorem* in accordance with No. 496 of the general statutory tariff, which provides for "all articles, raw or unmanufactured not herein enumerated." The importers contended that the goods should be dealt with under No. 13-B of the Conventional Tariff between Japan and Germany, and the duty should be 5 per cent. *ad valorem*. The protest was sustained on the ground that the goods in dispute were a kind of telegraph wire.

## NEWS OF THE WEEK.

The Japanese language is to be taught in one of the Lahore colleges.

Captains T. Inouye and V. Nakao have been promoted Rear-Admiral.

The Russian hospital ship *Kastrona* which was recently released at Saseho arrived at Shanghai on June 14th.

Owing to the recent storm, damage was caused at several points on the Bantan Railway and traffic was suspended.

Two guns among the spoils captured at Mukden were brought to Tokyo on June 15th. These were removed to the Staff Office.

The Emperor of Korea has decorated General Baron Okazawa, Aide-de-Camp to the Emperor, with the Grand Cordon of the Plum-Blossom.

General Balashoff, President of the Russian Red Cross Society, who had been at Port Arthur, arrived at Peking on June 13th from Tientsin.

The Hongkong shareholders in the Indo-China Steamship Company are sending a telegram to the directors protesting against the smallness of the dividend.

On June 14th a thunderstorm was experienced in Osaka. Many buildings were damaged; 22 boats capsized; one *sendo* was drowned and 13 are missing.

A telegram from Wakanai, Kitami, Hokkaido, reports that seventeen Russians have arrived there in a boat. There is believed that they drifted during the recent storm.

The well-known fire-bandits have again appeared in the neighbourhood of Tippon on the Seoul-Fusan Railway and killed five Koreans who belong to the Il-Chong-hoe, progressive party.

T. Yoshida, a Tokyo merchant, has begun a prosecution in the Tokyo District against the Directors of the Japan Railway Company. The ground is an infringement of the Patent Law.

Suda Fuku (24), wife of a tea dealer, Isezaki-cho, Yokohama, on June 14th, attempted to commit suicide by cutting her throat with a sword. The cause seems to be discordance in the family.

The fortunate shareholders in the Great Northern Telegraph Co., receive a dividend, for the past year of 12½ per cent, together with an exceptional bonus of 11½ per cent, making 24 per cent in all.

Mr. Chamberlain, says a *Hongkong Daily Press* telegram, announces that he has come to an agreement with the Premier Mr. Balfour which enables the Government party to face the country with a clear fiscal policy.

The *Nichi Nichi* has a telegram from Shanghai that on June 10th, a Japanese squadron consisting of some cruisers and destroyers was sighted between Amoy and Hongkong. The fleet was steering southward.

The Commercial Treaty between Japan and the Panama Republic has been concluded by Mr. Takahira, Japanese Minister at Washington, and the Minister of State for Foreign Office of the Republic. The *Asahi* says that the convention is similar to that between Japan and the Argentine Republic.

A sad fatality occurred at Kobe on Saturday evening. A dinghy in which were Messrs. E. Spence, H. Rankin, R. Marshall and J. G. Murray capsized on its way to the shore from their yacht off the American Hatoba. Mr. Murray, who had not been long out of hospital, having suffered from diptheria, disappeared at once and his body was not recovered till some hours later. The other gentlemen, who could not swim, were rescued by Mr. Marshall, who is a good swimmer. The deceased who was a brother of Mr. G. C. Murray, of the Hong-

kong and Shanghai Bank, was about 30 years of age, and had been about four years in the office of Messrs. Birch, Kirby & Co.

According to telegram which the Yokohama Specie Bank received on June 14th from its London branch, the price of Japanese bonds is continuously rising. The quotations are 4 per cent. £98.36; war, £101.11.6; 5 per cent, £102.6.9; 6 per cent, £103.10; second 6 per cent, £102.5; and new bonds of 4.5 per cent, at the rate of 3½ per cent premium. The report adds that the price of Russian bonds has advanced in London and Paris.

The Yokosuka Prize Court will give a decision on June 16th regarding the Norwegian steamer *Henry Balkow* (1,006 tons) which has been under trial some weeks past. The ship was captured on April 7th in the neighbourhood of Etorofu, Hokkaido. It is added by the *Nichi Nichi* that since the beginning of January this year up to the present time, fifteen captured ships including the *Henry Balkow* have been examined by the same court. The *Easy* was released.

This part of the country was visited during Tuesday night and Wednesday by a strong southerly gale. The temperature rose and as the wind was hot and moist the weather was extremely unpleasant. Some fences were blown down on the Bluff but so far as we can gather that constitutes all the damage.

On the night of June 12th, heavy rain was experienced in Kanagawa and the rivers were flooded, buildings and cultivated fields being damaged.

From the first crop up to the end of May, the tea transactions in Yokohama, this year, and during the corresponding period in the past four years were as follows:—

	Bought from interior.	Sold.	Average price per 100 <i>kin.</i>
	<i>kin.</i>	<i>kin.</i>	<i>Yen.</i>
1901 .....	9,020,500	8,260,500	30.99
1902 .....	5,477,600	5,088,400	36.96
1903 .....	8,877,200	8,130,800	47.37
1904 .....	8,328,600	7,561,900	43.98
1905 .....	5,485,000	5,020,600	41.43

## AMERICAN TOPICS.

The body of Hiram Cronk, the last veteran of the war of 1812 to pass away, was buried on May 18, in Cypress hill, New York, with impressive military honours. Before the funeral the body of the veteran soldier lay in state in the city hall, where it was viewed by many thousands.

The body of John Paul Jones will have its final resting place in the naval cemetery at Annapolis. At the cabinet meeting Secretary of the Navy Morton recommended the burial at Annapolis, because the cemetery there was a naval one, and held the bodies of revolutionary naval heroes. His objection to Arlington was that it was a civil war burying ground. The President and cabinet decided that his decision was well taken.

President Roosevelt is considerably reduced in weight as a result of his western hunting trip. He has a busy summer in prospect in Washington. His only trips away from the White House will be one on which he will attend the commencement at Harvard the latter part of June, while this year will be the 25th anniversary of his own graduation, visiting Oyster Bay on the way home, and a flying trip to Brooklyn for the dedication of the monument to General Slocum, on Decoration Day.

Says a writer for the Associated Press:—Away in the interior of Japan there is a leper settlement known as Kumamoto. Thither Sisters Luke, Adelid and Martha are going. They arrived yesterday (May 21st) from Quebec and left this afternoon by the *Empress of India* for Japan. Their sacrifice is purely voluntary and they are well aware of their destiny. The sisters are young, healthy and strong, and nature has dealt kindly with them in the matter of face and figure, yet they go bravely to their field of labour with no other aim or view than

nursing and caring for Christ's poor and afflicted. The sisters are going to devote their life to caring for the lepers of Japan. They will never leave the leper settlement once they have set foot in it. They have turned their backs on the world they knew and the world that knew them, and bravely they are setting their steps for that field of labour which knows but one end—a death so slow and in so repulsive a form that the stoutest hearts shrink from mere contemplation of it.

President Roosevelt has taken up the question of immigration abuses on both the Atlantic and Pacific coasts, and will make a thorough investigation in order to call the attention of Congress to the necessity for the amendment of the immigration laws. The agitation on the Pacific Coast against the influx of Japanese labourers and the disclosures of corruption to Europe have induced the President to probe the questions to the bottom. He has called upon the Departments of State and of Commerce and Labour for all the information in their possession, and has arranged for conferences with Secretary Metcalf, Commissioner-General Sargent and others acquainted with the conditions.

Thomas Brigham Bishop, who wrote "John Brown's Body," "Shoo Fly, Don't Bother Me," and other noted songs, died at his home, No. 807 North 63d Street, Philadelphia, on May 16. He was born in Wayne, Maine, June 29, 1835. At the age of 16, he took up the study of music in Providence, R. I. His first song composition was "Johnny, Fill Up the Bowl." It was this popular drinking song that in later years became "When Johnny Comes Marching Home," the song which gave cheer to northern families waiting patiently for the return of soldiers who had gone to the front. Among others of Mr. Bishop's songs which obtained popularity were: "Kitty Wells," "Leaf by Leaf the Roses Fall," "Pretty as a Picture," "Sweet Avalanche" and "On the Down Hill of Life."

A twenty-story tenement, covering an entire block, the largest, tallest, airiest and best equipped residence building in the world, is planned for Brooklyn by Mrs. Oliver H. P. Belmont and a number of society women of wealth. The tenement is to be equipped with all modern conveniences and yet have apartments, large and clean, sunny and light, renting for less than is charged for quarters much inferior on the East Side. John Wanamaker and George J. Gould are named as two of the powerful men committed to the aid of this project. It will not be a charity, but philanthropic. It is to be a children's tenement. Not only will children be welcomed, but it is already practically decided that, so far as practicable, no apartments shall be let to tenants without children. On the ground floor will be a department store, where the occupants of the model tenement may buy everything at wholesale cost. Outsiders will have to pay full retail prices. It is planned that the tenement will be conducted by women. Women have prepared the plans as far as they have been worked out.

Dr. Charles E. Woodruff, a surgeon in the United States army, advances the theory that brunettes only should be chosen in selecting troops for the tropics. It is in his investigations on the effects of tropical light on white men that he finds reason for his belief. Skin pigmentation, he believes, was evolved for the purpose of excluding the dangerous actinic or short rays of light which destroy living protoplasm. Blondes disappear when Europeans migrate southward. Europeans have failed to colonize in the tropics because of the fatal effects of subjecting a white skin to tropic light. The suggestion is meeting opposition due to its attack on some long treasured theories on the value and necessity of light. Among light faddists the light bath is deemed essential to health. And we may have gone to an extreme on the subject. Our ancestors believed in blinds and darkened rooms, and it can not be denied that the present generation suffers from nervous disorders wholly unknown a century ago. Major Woodruff believes American troops in the Philippines should be made up of dark men of

short stature; that the term of duty should be limited to twelve months, and that all unfit for labour afterward should be pensioned. Now let all short, dark men rush to the recruiting office.

Edward W. Mitchell died recently in Chicago and the members of the Chicago Board of Trade made up a fund to bury him. A writer in the *New York American* says: "Mitchell died a pauper; he was once a great man. Where the names of Gates, Morgan, Armour and other stock plungers and market plungers are now printed Mitchell's name was printed thirty years ago. Mitchell was a big grain operator in Chicago when Fisk and Gould were piling up money in railroads in New York. In 1868 he 'cornered' the wheat market in Chicago. He had a company of fellow conspirators against consumers. They shot the prices sky-high. Mitchell made a million or more. Then he went into the market as a bigger plunger. He was betrayed and sold out and found himself penniless. That was thirty-five years ago. Mitchell for ten years sought to regain his fortune, but he was outclassed by keener-minded men. Then he became a pauper. And every man that has tried to 'corner' a food product has died poor. There is a retribution for food gamblers. It does not seem to follow stock gamblers. The same evil fortune may yet overtake 'those conservative business men' who, through the infamous meat trust, are robbing the people of the United States."

According to the *Kansas City Journal*, Kansas bank deposits have passed the \$100,000,000 mark. Of this amount \$53,110,828 are held by 549 incorporated state banks, twenty-two private banks and one trust company. The rest is held by national banks. The cash and sight exchange has also increased \$1,500,000, making the average legal reserve now carried 38 3/4 per cent. of the entire deposit. This is the high-water mark for Kansas bank deposits, and it is natural that it should be so, for Kansas broke all records last year and will break her own record this year in almost every one of the varied industries that earn her annual income of considerably over \$200,000,000. In spite of unsettled conditions in the oil fields, the output of Kansas oil and gas will easily exceed that of last year, which was the greatest in the history of the state. The new developments as well as the steady flow of the old wells go to confirm the opinion of the experts that the Kansas gas and oil fields are the largest and richest in the world. The output of Kansas coal mines continues steadily upward, and new lead and zinc mines are being developed on a large scale. The same story of steady increase is true of the state's crops of corn, hay, potatoes, garden truck, as well as of poultry, eggs, butter and milk.

In the case of Barrett et al. vs. Mutual Life Insurance Company of New York, recently decided by the Kentucky Court of Appeals, it appeared that a policy issued December 16, 1890, on the life of a husband and payable to his wife at his death, in consideration of an annual premium of \$189 for twenty years, contained the following clause, viz.: "After three full annual payments have been paid upon this policy the company will upon legal surrender thereof, or within six months thereafter, issue a non-participating policy for paid-up insurance." The husband paid four annual premiums, but failed to pay the fifth, due December 16, 1893. He did not, however, demand a paid-up policy until December 7, 1894. The company replied that the policy had lapsed, and that as no application for a paid-up policy was made within six months, the policy became forfeited according to its printed terms and was of no value. In an action by the husband and wife the court held, reversing the decision of the court below, that though the action was not brought until eight years after the default occurred, the demand having been made within five years after such default, an action for the issuance of a paid-up policy might be brought on the written contract at any time within fifteen years after the cause of action accrued. The court further held that in an action for a paid-up policy, where there was

no demand by the company for a surrender of the policy, and there being a demand for a paid-up policy, which was refused on the ground that the policy was no longer in force, it was not incumbent on the policy-holder to tender the policy to the company before suit.

Statistics received by the State Department of Labour show that only three foreign countries have as many organized working people as New York state, and in proportion to population New York leads even these. Members of labor unions in Great Britain and Ireland number 1,902,308; in Germany, 1,276,831; in France, 715,576, and in New York, 400,000. The ratio is one to each eighteen inhabitants in New York, one to twenty-two in Great Britain, one to forty-four in Germany, and one to fifty-three in France. "It is a significant fact," says the Department, "that the hours of labour are short or long in almost the precise ratio of the degree of organization." The Department's quarterly bulletin states that "in the last quarter of 1904 the improvement in industrial activity which began in the summer became so pronounced that the percentage of idleness was smaller than in 1903, or even 1902, as shown by the following: Among approximately 100,000 wage earners in the various industries of the state only 108 per 1,000 were reported idle at the end of October, 1904, as compared with 17 and 112 in October, 1903 and 1902, respectively; for the close of November in 1902, 1903 and 1904 the respective ratios were 143, 164 and 111; for the end of December, 222, 231 and 196. The improvement was fairly general throughout the various trade and industries with the single exception of building."

Fire losses in the United States last year were the heaviest on record, according to the statement made by President Washburn at the annual meeting of the National Board of Fire Underwriters in New York on May 11th. This means that the fire damage was heavier even than in the years marked by the great fires of Chicago and Boston. The list of fires was unusually large, and the disaster at Baltimore was destructive enough in itself to render the year noteworthy in the annals of underwriters. The total loss for 1904 was estimated at \$29,798,050, an increase of over \$8,100,000 as compared with the year preceding, which, however, was over \$15,700,000 less than that for 1902. During the first four months of the present year no less than seven conflagrations occurred, in which the losses ranged from \$500,000 to \$3,000,000. Naturally the underwriters are in favour of more stringent building ordinances in the cities. The subject of federal supervision was touched upon by Mr. Washburn, who said that the bills looking to that end which have been introduced in Congress would not be satisfactory to underwriters without amendment. At the same time they opened the door for discussion, and he suggested that it would be well worth while to try a plan of national supervision if the companies could be thereby relieved of burdensome legislation and increasing taxes and could secure uniformity of policies and of legal decisions. Having reference to the source from which it comes, this is an interesting statement which is likely to be heard of further when Congress meets.

#### HOSPITAL FLOWER FUND.

Below is an extract from a letter written, under date of May 21st, by Miss Milliken, 33 Kami ni bancho, Tōkyō, which will interest contributors to the Hospital Flower Fund.

"Yesterday Miss Mizuta and I went to the Toyama Hospital, taking a plentiful supply of peonies and iris as the gift of the Yokohama ladies. It was a damp day and more men than usual were confined to the wards and their pleasure was thus correspondingly great.

They brightened up at once at the sight of the gay colors and their pleasure was increased when they learned that the gift had been sent by ladies of another city. They like to know, that they are thought about and considered (poor wounded fellows) as well as those who are fighting at the front. When they had arranged the flowers with their usual taste,

each in a little bottle by his bed, the appearance of the whole ward was brightened.

But it was the men in the separate rooms, too ill even to make a bow, who seemed to appreciate the gift most. They held the flowers lovingly in their bandaged hands and they sent message of sincere appreciation and thanks.

Those who would like, in the way described above, to minister to the comfort and cheer of the wounded and sick may send their contributions to Mrs. H. Loomis, 223 Bluff, who will see that the various hospitals share in their gifts.

## CORRESPONDENCE.

## LETTERS OF THANKS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

British Legation, June 9th, 1905.

SIR,—I would be much obliged if you would allow me to express through the medium of your paper my thanks to the workers who have so kindly helped me to send in ten thousand caps for the wounded, in answer to a request for caps made by the Red Cross Society in January.

A Sewing Bee was formed in Tokyo for this purpose. It met weekly during the winter and spring months at the houses of its different members. The work, however, was so heavy that it was decided at once to start a joint Bee in Yokohama as well as one in Kobe. Mrs. Tegner kindly undertook the Yokohama one, and Mrs. Bonar the Kobe branch.

The three Bees have worked splendidly, and sent in an average of 550 caps per week. The "Bees" have covered all their expense, by subscriptions collected by their several heads, and to-day a meeting was held at my house when the reports were read and the accounts of the three towns closed. The following is the result. Yokohama, caps 4,231; Kobe, caps 2,146; Tokyo, caps 4,450. Yokohama money collected, yen 507; Kobe, yen 161; Tokyo, yen 642, total yen 1,310. Kobe was unable to work more than a few weeks as it had other charity work already undertaken on hand. So from Kobe we have no surplus but we have in hand from Yokohama and Tokyo yen 337.44, and about 879 caps.

With the approval of the members of the "Bee" it was decided to hand over the money to the President of the Ladies Volunteer Nursing Association, the Marchioness Nabeshima, who kindly to-day came and read in Japanese the letter of thanks to the "Bee" which follows, and which the Baroness Sannomiya then read us the English translation of.

The members of the "Bee" greatly appreciated this recognition. A similar letter was then handed to Mrs. Tegner for the Yokohama "Bee," and one was given to me to send to Mrs. Bonar at Kobe. Mrs. Bonar's report from Kobe was read. Mrs. Tegner read us hers from Yokohama and the meeting was closed by the Marchioness Nabeshima taking over the money in hand.

I wish also to thank not only those who have lent me their houses, and given me their work and encouragement, but those without whose help the "Bees" could not have existed, namely the generous subscribers of all three towns. The enclosed lists will show how general has been the response to our appeal. I wish to add hearty thanks to Mrs. Tegner and Mrs. Bonar, without whose support I should never have had the courage to undertake the work, and also to Miss Greenwood, who has acted as secretary for me.

I am, Sir, with apologies for taking up so much of your valuable space,

Yours sincerely,

BEATRIX BARCLAY.

## MRS. TEGNER'S REPORT.

Money received from firms in response to circulars sent out:—Mr. D. H. Lake yen 5. Messrs. Bavier and Co. 5. "An Oher" 10. Jardine, Matheson and Co. 25. Bennett, Daniel and Co. 5. Mr. G. W. Rogers 5. Mr. Keane (E. T. Mason and Co.) 5. Times Encyclopedia Britannica 5. Mr. Copmann 25. Captain Weston 5. Messrs. Arthur and Bond 5. Mr. and Mrs. Macbeth 5. Mr. Howie 5. Captain Martin 5. Mr. Charles Averil 5. Mr. A. Owsen 5. Mr. Retz 10. Messrs. Heller Bros. 5. Mr. Ulysse Pila 5. Mr. Coye 5. Messrs. J. R. Simon and Co. 5. Messrs. Smith, Baker and Co. 5. Mr. Powys 5. Messrs. North and Rae 5. Messrs. Vantine and Co. 5. The Japan Brewery Co. 5. Mr. Percival 5. Messrs. Runge and Thomas 5. Messrs. Dell Oro and Co. 5. Messrs. Hell-

yer and Co. 5. Mr. McGowan 5. Mr. Jaffray 5. Messrs. Siber, Wolf and Co. 5. Toyo Kisen Kaisha 5. Yoshino Nursery 5. Compagnie Messageries Maritimes 10. S. R. and Co. 5. Mr. William Harris 5. Messrs. Varnum, Arnold and Co. 5. The Singer Manufacturing Co. 10. A Friend 5. Mr. Syme Thomson 5. Jno. W. Hall and Co. 5. Mr. E. Rogers 5. Messrs. Dentici and Co. 5. Musashiya and Co. 5. Mrs. Nomura 10. Sakura Gumi and Co. 5. Mr. C. V. Sale 5. Messrs. Samuel Samuel and Co. 5. and Messrs. Tanabe and Co. 5.—yen 320; subscription "L. S. Bee" yen 187=yen 507.

## OTHER CONTRIBUTIONS.

All Printed Circulars—donated by Mr. Thorne of the Box of Chorus; six dozen caps Mrs. Bent, some red cotton Lane, Crawford, & Co., piece of cloth Mr. Hime, a piece of cloth Messrs. Wiedeman, No. 70, a piece of cloth Tsuruya and Co., and a piece of cloth Bowden Bros. Receipts from firms yen 320, from "Ladies Sewing Bee" yen 187, contribution in cloth, etc., total yen 507. Expenses yen 361.89. In hand yen 145.11.

## REPORT OF KOBE LADIES WORKING PARTY.

The Kobe working party has consisted of forty members who have not only met with great regularity every week to work, but have also done a good deal at home also. These ladies and other friends in the foreign community, have subscribed the sum of yen 161 towards the expenses of the materials. We have made in all two thousand caps.

Our thanks are due to all our workers who have given much time and thought to the work, and especially to Mrs. Rentiers and her household who have undertaken all the work of cutting out and preparing the caps.

LILIAS N. BONAR.

## TOKYO REPORT.

The ladies who have worked for the "Bee," are:—Mrs. Benstead. Mrs. Brand, Mrs. Buncombe. Mrs. Cunningham. Mrs. Cowan. Miss Cowan. Miss Duer and the Convent. Miss Elliot. Mrs. Fardel. Mrs. Gardiner. Miss Gorton. Mrs. Griffin. Mrs. Hall. Mrs. Haworth. Miss Hays. Miss Julius. Mrs. Kirby. Miss Lovell. Mrs. McKim. Miss McKim. Miss MacAdam. Mrs. Purvis. Miss Pencock. Miss Pringle. Miss Rioch. Mrs. Swift. Mrs. Sweet. Miss Schereschewsky. Mrs. Vickers. Mrs. Waton. Mrs. White. Miss Wallace. Miss Greenwood, (Secretary).

## LIST OF SUBSCRIBERS.

Baroness d'Anethan yen 5. Lady MacDonald 5. Viscountess Aoki 6.13. Mrs. Brunson 5. Mrs. Griscom 7. Mrs. Maxwell 5. Mrs. Schäfer 5. Mme. Thiel 6.50. Mme. Harmand 5. Mme. Schnitzinger 5. Countess Herzfeldt 5. Mme. de Man 5. Mrs. Gubbins 5. Miss Greenwood 2. Mrs. Miller 5. Mme. Corvisart 5. Mrs. Hume 5. Mrs. Hoffman 6.13. Mrs. Wilson 6.20. Miss Barclay 1. Mrs. Gardiner 5. Mme. von Dané 5. Mrs. Conder 5. Mme. Moslé 5. Mrs. Vickers 5. Miss Decker 1. Mrs. Teusler 5. Mrs. Swift 5. Mrs. Noble 6.20. Mrs. Pershing 5. Mme. von Eckert 5. Madame Mitsui 50. Mme. Yang 5. Mrs. MacArthur 5. Mme. André 5. His Ex. Count Arco Valley 12.26. Mr. Lowenthal 5. Major Armstrong 5. Mr. Loonen 25. Captain Brinkley 5. Count Metternich 5. Herr von Grünau 6. Herr von Wolfkehl 5. Mr. Hopler 5. Colonel Pakenham 10. Count Miniscalchi 5. Herr von Schulte 5. Lieut. Boldt 5. Mr. Sanguinetti 5. Monsieur Panafieu 5. Monsieur Camhon 5. His Ex. Monsieur de Pereira 5. Mr. Cox 5. Mr. White 5. His Ex. M. de Freitas 5. Mr. Laughlin 5. Mr. Egan 5. His Ex. Count Vinci 5. Mr. Conder 5. Monsieur Rossi 5. Monsieur Pasco 5. His Ex. Monsieur Barrera 5. Monsieur Raneto 2.50. Monsieur Romero 2.50. Monsieur Sanchez 2.50. Mr. Stone 15. Captain Lindberg 5. Monsieur de Anker 5. Mr. Denison 5. Count Collarado 5. Monsieur Castaneda 5. A Friend 10. Mr. Gillas 5. Mr. Leliman 5. His Ex. Phya Narissa Rajkitch 5. Phra Jayasuriude 5. His Ex. Minhui Cho 5. Captain Hutchison 5. Captain Jackson 5. Mr. B. J. Finch 5. Captain Toke 5. A Friend 5. Mr. K. Rojima (Niji Ginko) 5. Mr. Hijo (Hijo Bank) 5. Mr. S. Shiotou (Kokumun Shinbun) 5. Mr. K. Hara (Mojji Fire insurance) 5. Mitsui Bishi Co. 20. Nippon Yusen Kaisha 20. Mr. Tanaka's Bank 5. China and Japan Trading Co. 5. Kawasaki Ginko 5. Messrs. Lane Crawford and Co. 25. Imperial Hotel 5. Morimura Ginko 25. Messrs. Shirokuni & Co. Tokyo 5. Mrs. S. Ida, Takashimaya 5. Messrs. Yagiya 5. Sakuragumi Ship Bldg. Co. Senju 5. Ishikawajima Ship Bldg. Co. 5. Imperial Marine Fire Insurance 5. Messrs. Tanaka and Co. Carriage Works 5. total yen 657.92.

Expenses of making 4,800 caps, and supplying Kobe and Yokohama with crosses, materials, stationery, postage, etc., and making 1,760 caps at 2½ sen each, yen 445.59; carriage on 2,146 caps from Kobe 20.00, total 465.59.

Balance in hand yen 192 33 sen.

## RED CROSS SOCIETY OF JAPAN.

Tokyo, June 5th, 1905.

DEAR MADAM:—It is very kind and sympathetic of you that you have started to make patients' caps

with the same purpose as ours. These caps you have sent to us to be given to the present war-victims number to this date as many as ten thousand. We have distributed all these together with our own among the patients directly and indirectly, telling them by every chance that they were made and given by you.

Representing our Association and on behalf of Princess Kanin, Honorary President, I feel great honour in taking the liberty of asking you to convey to your members how grateful those patients are and take this opportunity to express my sincere thanks for the kindness and sympathy you have so practically extended to this Association.

I am, Dear Madam, Yours obediently.

MARCHIONESS NABESHIMA,  
President.

## YOUNG MEN'S CHRISTIAN ASSOCIATION NOTES.

1. WORLD'S CONVENTION.—The World's Convention of Young Men's Christian Associations was held at Paris, April 27-30. This convention was held as a semi-centennial celebration of the convention held in Paris in 1855, at which time the World's Federation of Associations was organized. There were present over 700 delegates, representing twenty different countries, among whom were four representatives of the National Union of Japan, Rev. Y. Honda, Dr. K. Ibuka, K. Gorai, Esq., Galen M. Fisher, Esq. One of the most significant events of the conference was the hearty reception accorded the representatives from Japan. The following is Dr. Ibuka's brief message of greeting to the convention: "It was far from easy, as you may imagine, for us to leave our country at this time, but we felt that the importance of this Convention made the effort well worth while. We bring to you not only the salutations of the Japanese Associations but also a message: 'Although our country is engaged in war with one of the great European powers, we as individuals and as Christians are at peace with all the nationalities of the world.' I have been glad to shake hands with the delegates from all countries, but especially glad to grasp the hand of Pastor Helman Lezius of Russia. We are praying for the Czar as well as for our own Emperor. I wish to express our hearty thanks for your sympathy with us in this trying time. I must ask you to join us in prayer for a speedy but lasting peace, and also that when things come to be settled they may be settled right."

The World's Federation of Associations embraces twenty-one national organizations, united in the common work among the young men of the world. There is a total of 7,376 local Associations with a total membership of 68,000 young men.

2. A BUILDING GIVEN TO KYOTO.—Among the delegates present at the convention was the Hon. John Wanamaker of Philadelphia. From young manhood Mr. Wanamaker has been an active worker in the Association and has known it thoroughly. He has shown his confidence in the value of its efforts in behalf of young men by contributing largely to his home Association in Philadelphia and by giving most of the funds for a building each at Madras and Calcutta. One of the most stirring events of the Paris Conference was the announcement that after months of careful inquiry and final consultation with the delegates present, Mr. Wanamaker had pledged \$100,000 to supply Association buildings for three of the capitals of the Far East. Of this amount \$25,000 is for Kyoto, \$25,000 for Seoul, and \$50,000 for Peking. The condition of the Kyoto gift is that money shall be raised locally to provide the lot and that the corner stone shall be laid in May of 1906.

Mr. Wanamaker, one of the most successful and cautious business men in the world, has made the following statement concerning his investments in Young Men's Christian Association buildings:

"I have a great many investments that have disappointed me. I have tried to exercise good judgment about the expenditure of time and money, but the Christian Association work has never disappointed me, and I have no better investment in religious work than that of which the Christian Association is a part."

"If I had my life to live over again, I would not put less money in the Young Men's Christian Association work, but would put double what I have done."

## TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

## DELCASSÉ AND THE MOROCCO QUESTION.

London, June 8.

The comments of the French papers on the resignation of M. Delcassé attest the gravity of the Morocco embroglio. It is

believed that M. Rouvier's first endeavour will be to find a compromise acceptable to Germany.

#### CHINA WARSHIPS RECALLED.

The battleships *Canopus* and *Goliath*, bound to China, have been recalled from Colombo.

#### THE SCANDINAVIAN TROUBLE.

The Norwegian Parliament has unanimously passed a resolution severing the connection between Sweden and Norway, declaring that King Oscar has ceased to be King of Norway, and conferring on the present Ministry the powers of government formerly appertaining to the King.

#### GERMANY AND MOROCCO.

London, June 9.

Germany has formally proposed to the Powers a conference on the Morocco Question.

#### SUBMARINE SUNK.

The submarine, *A 3*, has been lost outside Plymouth. Fifteen perished, including Lieut. Fletcher. She suddenly sank; there was no explosion.

#### NEW SPEAKER.

Rt. Hon. J. W. Lowther has been elected Speaker of the House of Commons.

#### NORWAY.

The new Norwegian flag will be hoisted and saluted throughout the country on Saturday.

#### RECALL OF BRITISH BATTLESHIPS.

London, June 10.

The *Standard* says that it has been decided to recall immediately the whole of the British battleships from the China station.

[NOTE.—The British battleships at present in China waters are *Albion* (12,950 tons); *Centurion* (10,500 tons); *Glory* (12,950 tons); *Ocean* (12,950 tons); and *Vengeance* (12,950 tons).]

#### FRANCE'S NEW FOREIGN POLICY.

The French newspapers intimate that as part of the new policy a new ambassador will go to Berlin and a new envoy to Morocco. As evidence of the acuteness of the situation, which M. Delcasse's resignation may have modified, the French Minister for War conferred on Wednesday with the Commanders of Army Corps on the frontier and ordered them to bring up the forces to full strength.

#### PEACE PROPOSALS.

Later.

The meeting of peace commissioners is assured.

#### THE AMERICAN PEACE COMMUNICATION.

London, June 11.

President Roosevelt has sent to the Japanese and Russian Governments a communication in which he says that it is felt the time has come when in the interests of all mankind he must endeavour to see whether it is not possible to bring to an end the terrible and lamentable conflict. The United States is interested in both Japan and Russia by ties of friendship and good will and it is felt that the progress of the world was set back by the war between these two great nations. He urged the two Governments not only for their own sakes but in the interest of the whole civilized world to open direct negotiations for peace.

A special London telegram of June 10 says a meeting of peace delegates is assured.

#### BOTH BELLIGERENTS ACCEPT.

London, June 11.

Both belligerents have accepted President Roosevelt's proposal. The Bourses of St. Petersburg and Tokyo are showing much activity.

#### THE CRISIS IN MOROCCO.

London, June 13.

Reuter's agent telegraphs from Fez that Germany has already received some minor commercial concessions. It is feared that any modification of the *status quo* by the grant of further concessions will lead to a serious crisis. It is stated on good authority that Count Tattenbach, the German Envoy to Morocco, has informed the Sultan that he has no cause to fear France, as Germany is ready to champion him. The Count reminded him that if the Moorish frontier is continuous with the Algerian frontier, the French frontier is likewise continuous with the German. This has produced a great impression in St. Petersburg.

#### THE PEACE NEGOTIATIONS.

Later.

Baron Komura's note, which was handed to Mr. Griscom, the American Minister in Tokyo, shows that Japan's conception of the object of the proposed meeting does not in any way coincide with that of the Russian Foreign Office. The limited nature of the Russian Foreign Office conception causes some misgivings in diplomatic circles in St. Petersburg. It is said that if Russia's attitude is maintained the present movement will lead to nothing. Others regard Russia's attitude as a natural endeavour to avoid the impression that she is determined beforehand to accept Japan's terms.

#### ATTACK ON THE GREEK PREMIER.

London, June 14.

The Greek Premier was seriously stabbed in the abdomen outside the Chamber.

#### AMERICAN TRADE WITH CHINA.

President Roosevelt, replying to a deputation of the American Asiatic Association, has promised to do his utmost to promote American trade with China. He said that he would confer with the departmental officials on the subject. The deputation urged the relaxation of the Chinese exclusion measures.

#### PEACE.

Later.

A telegram from Washington says that the place of meeting for the conference is not settled. Neither Washington nor Manchuria is satisfactory. President Roosevelt may act as arbitrator.

(Received at the Military Head Quarters; p.m. 8th.)

#### IN MANCHURIA.

Our force which had advanced in the direction of Liangshuisien (about 2½ miles east of Tsenchingtsz, called also Nanchingtsz) drove back, at 3.30 a.m. on the 7th, a body of the enemy who were on the north, numbering about a company of infantry and 50 sabres. At 6 o'clock our troops took possession of the highland east of Chapengan about 4 miles north-east of Tsenchingtsz.

[This indicates that the Japanese are advancing along the Kaiyuen-Kirin road.—Ed. J.M.]

At 6.30 a.m. on the 7th a company of the enemy's cavalry advanced to Sufangtai (10 miles north of Changtu), at 7.30 a.m. some 50 of his troopers pushed towards Ta-aotun (7 miles north-west of Changtu), and at the same time 150 of his cavalry approached Shihientien (2½ miles north of Ta-aotun), but all these attacks were repulsed.

(Received at the Military Head Quarters, p.m. 10th.)

At 4 p.m. on the 9th our troops, driving back the enemy along the line extending from the heights north of Liangshuisien to the heights north of Nanchingtsz, occupied the line.

On the same day our troops occupied the

districts near Rhshihlipau (10 miles north-east of Changtu), Sufangtai, Tungkiatsz (10 miles north of Changtu) and Kinglungshan (13 miles north-west of Changtu).

Otherwise there is no change.

(Received at the Military Head Quarters; p.m. 11th inst.)

On the 10th our cavalry drove back the enemy's cavalry from Hsiyingtsz (about 7 miles south of Liaoyangwopeng) and Hsi-pingfang (some 2½ miles south-west of Hsiyingtsz) and occupied these places. Another body of this force expelled the enemy from Hsiaochingtsz (18 miles north of Kangping) and Kaukiawopeng (about 2½ miles north-east of Hsiaoching) and occupied the highlands on the north of Hsiaowaitang (about 2½ miles east of Kaukiawopeng and 10 miles west of Liaoyangwopeng).

Otherwise, with the exception of skirmishes between scouts, there is no change.

(Received at the Military Head Quarters; 12th, p.m.)

On the 11th a mixed column of the enemy's troops advanced from Hsiao-Peh-yinlio (about 15 miles north-east of Ying-pienmun), *via* Nienyuling, against Ying-pienmun, but being driven back by our troops at Sumiaotsz (about 4 miles north-east of Ying-pienmun) they retired north in disorder.

[This incident took place in the east sector of the field.—Ed. J.M.]

On the same day at 6.30 a.m. a force of the enemy composed of 1 battalion of infantry, about 2 sotnias of cavalry and 4 guns advanced from the north-east against Rhshihlipau, and on the same morning at 4.30, some 600 of his cavalry with 4 guns advanced against Sufangtai, but both attacks were repulsed.

There is no special change in other directions.

(Received by the Naval Department.)

#### ROJESTVENSKY.

A telegram from Sascho hospital says that neither of Admiral Rojestvensky's wounds shows any signs of supuration and he is progressing towards recovery. His pulse, however, is very irregular, but that is not thought to be the result of his present wounds.

#### MISCELLANEOUS.

The *Oral*, one of the Russian hospital-ships temporarily seized by our Squadron during the battle in the Japan Sea, was found to have on board the master of the British S.S. *Oldhamia* and 4 of her crew. Further, it has been established that there are suspicions of her having violated the Hague Convention in other respects, and she will therefore be brought before a prize court at Sascho.

With regard to the *Castroma*, up to the time of her arrival at *Sibouti* she was fitted with wireless telegraphic apparatus; during her voyage she supplied surgeons to fill vacancies on board the Russian war-ships, and in spite of having reported her equipment to be in accordance with the second Article of the Hague Convention, she changed the colour of her lines from red to green. There were thus many causes for suspicion, but it has been decided not to examine further into the matter and to adopt the lenient course of releasing the vessel.

(The *Oral* is a 19-knot ship of 7,650 tons, built in 1889.—Ed. J.M.)

(RECEIVED AT THE FOREIGN OFFICE.)

#### THE IMPERIAL MARRIAGE.

The Imperial wedding in Berlin passed off without a hitch in beautiful weather. At the banquet in the Palace Prince Arisugawa

conducted the Princess Christian of Denmark, and Princess Arisugawa was conducted by the Grand-Duke, the father-in-law of the Crown Prince.

Prince Arisugawa presented to the Imperial couple a particularly handsome flower vase. It elicited the greatest admiration from the Emperor and Empress and from the Crown Prince and Princess. The Emperor presented to Princess Arisugawa, a bracelet of remarkable beauty. The Chief Chamberlain gave a banquet in honour of Prince Arisugawa at which many high officials, scholars and artists were present, and Prince Bulow also entertained the Prince and Princess. Prince Arisugawa is to visit the Krupp factory on his way back from Berlin.

#### RUSSIANS AT MANILA INTERNED.

It has been finally decided that the Russian ships at Manila shall be disarmed and interned. The course of events has been as follows: The *Aurora*, *Oleg* and *Zemchug* arrived at Manila at 10 p.m. on the 3rd and applied for permission to effect repairs, pleading inability to put to sea. A committee of examination was appointed and it reported that at least 60 days would be required to complete the repairs. The American Government then informed the Japanese Government that instructions had been sent to Manila in the sense that unless the Russian ships put to sea in 24 hours they must be disarmed. On the 7th the Governor-General of Manila informed Mr. Narita, the Japanese Consul, that in pursuance of the above instructions from Washington the 24 hour period would commence from noon on the 7th. On the afternoon of the 8th the Governor-General informed Mr. Narita that, the 24 hours having expired, the Russians had been directed to hand over their ships to the American naval authorities, who were then in the act of receiving them.

#### A PETITION TO THE TSAR.

The following is the gist of the petition to the Throne adopted at the recent meeting of representatives of local assemblies and heads of municipalities held in Moscow:—

Serious misfortune now threatens Russia and Your Majesty's position. We, Your subjects, forgetting past differences of political views, have now unanimously decided to carry our complaints direct to Your Majesty.

Your Majesty—By abuses of power on the part of the advisers beside the Throne and by the evils they have committed, a terrible defeat in war has been called down upon Russia's head. Our army has been incompetent to break the foe; our navy has been annihilated. In addition, domestic disturbances more formidable than this foreign enemy are about to break out.

Your Majesty, seeing with Your own eyes the inability and corruption of the bureaucratic government, has ordered its reform. But Your edict has been disregarded and nothing has yet been done to give effect to it. Your Majesty has decided to assemble the representatives of the people, and to learn the real state of affairs and to seek their cooperation in reforming the policy of the State. But that edict also remains still a dead letter in spite of the misfortunes that are overtaking the country.

Your Majesty—We Your subjects, pray You at once to summon the people's representatives before it is too late. These representatives, in conjunction with Your Majesty, will determine the question of peace or war as well as the possibility of complying with or the necessity of rejecting the terms of peace, thus giving to the contest a national character. When that is done there will

be no more quarrels among brethren, and all will flock together under the country's flag.

Your Majesty—Russia's honour, her national power, her domestic tranquillity, which is closely associated with the pacific nature of her foreign relations—all these things depend upon the decision of Your Majesty alone. We pray that Your Majesty will not hesitate at this crisis of the country's misfortune. The responsibility of the nation and Your Majesty's responsibility to the nation, are truly heavy.

#### ADMIRAL ENQUIST.

Admiral Enquist's report, dated the 5th of June, is as follows:—"The sea-fight commenced on the 27th. The Japanese fleet appeared in the north at 1.45 p.m. Then the fight began. The enemy's plan was to prevent us from reaching Vladivostok. Whenever our squadron attempted to steer north, the enemy, utilizing his superior speed, bore down on the head of our column. His battle-ships concentrated on our principal battle-ships. Nine Japanese armoured cruisers (there exist only 8.—Ed. J. M.) manoeuvred independently and essayed to get our battleships under a cross fire. During the fight it became necessary for our cruisers to operate against these vessels of the enemy, and the transports were thus exposed to great danger. When night fell the enemy opened a torpedo attack. It was impossible for us to distinguish the result, and I am consequently unable to report them. I frequently attempted to escape to the north, but the repeated attacks to which I was subjected finally compelled me to make my way southward.

On the morning of the 28th I lost touch with our main squadron, and being subjected to the attack of the whole of the enemy's fleet (this is impossible as the two main squadrons of the Japanese fleet were then 300 miles away at the Liancourt Rocks.—Ed. J. M.), my cruiser suffered heavily. Moreover she was short of coal, and I finally decided to steer for Manila. I can not too greatly praise the conduct of the men under my command.

#### ANOTHER ADMIRAL'S REPORT.

Shanghai, June 6.

Reuter gives the following as Rear-Admiral Leichenstein's report:—"The commander of the destroyer *Bodri* reports:—"The fight began at 1 p.m. on the 27th. At 7 p.m. the destroyer *Buini* went alongside of the flag-ship *Suvaroff* and took away Admiral Rojestvensky, who had been wounded on the head. Our fleet proceeded north that day in the following order:—*Nicholai I*, *Orel*, *Bonodino*, *Alexander III*, *Apraxin*, *Seniavine*, *Oushakoff*, *Sissoi Veliky*, *Navarin*, and *Nakhimoff*, forming the east column; and *Sviatlana*, *Almaz*, *Oleg*, *Aurora*, *Dimitri Donskoi* and *Monomakh*, forming the west column, with the transports and the torpedo-destroyers between the columns. At 7.30 p.m. the cruiser column changed direction to port, and after a time the *Donskoi*, *Izumrud*, *Almaz* and *Sviatlana* resumed their northerly course, while the *Aurora*, *Oleg* and *Zemchug* went south, the destroyers *Bodri* and *Blestyashchik* following the latter squadron at a speed of 10 knots. On the 28th at 11 a.m. these southward-steering cruisers passed the Tsushima Strait, but at 5 a.m. the *Blestyashchik* sank, and the *Bodri* took off her crew of 4 officers and 75 men. The *Bodri* then resumed her southward course, but she lost the cruiser squadron and besides had now burned all her coal as well as all her wooden fittings. She

finally lost power of motion, but was sighted by an English steamer and towed to Shanghai. The Chinese officials ordered the *Bodri* to put to sea again within 24 hours, but that evening Kamimura's squadron came to the Saddle (it did not.—Ed. J. M.) and moreover we had no coal for a sea-voyage, so having lost our opportunity to get out, there was nothing for it but to remain at Shanghai."

#### THE TSAR'S THANKS.

Reuter reports that the Emperor of Russia has conveyed to Admirals Rojestvensky and Enquist as well as to the Captain of the *Almaz* and to all the officers and men under their command His Majesty's thanks.

#### PEACE RUMOURS.

In Washington the state of the peace question is considered satisfactory. The duty of the United States is concluded with the receipt of the communications from Japan and Russia. When the Tsar consents to the Japanese proposals, the two countries will open the conference of plenipotentiaries. (We presume that the "proposals" here mentioned refer to place and time.—Ed. J. M.)

## LATEST COMMERCIAL.

## IMPORTS.

Yokohama, June 16.

A few small contracts have been made in Cotton Yarns at quotations. In Shirtings the market has revived since the disposal of the Baltic fleet. The tone of the import market is distinctly better than it has been for some weeks past. Nothing is doing in Fancy Cottons and Woollens.

## COTTON PIECE GOODS.

White Shirting—{ 40 yds. 36 in. } ... 0.10 to 0.18

Calcutta, Medium to best... 140.00 to 220.00

Madras (Aurpah), Medium to best... 100.00 to 140.00

Madras (Dry Leaf), Medium to best... —

## EXPORTS.

## RAW SILK.

We withdraw quotations, being between seasons, and old crop practically finished. There have been some transactions in new crop, forward purchases for July-August shipment being mentioned at yen 1,070 for Double Extra 130 13-15 denier, and yen 1,000 for Koshi Kusanagisha. Small parcels of new silk have arrived from the Tokaido districts and business is being done in No. 1 ½ at yen 950. Further supplies are expected soon.

## WILD WITH ECZEMA

And Other Itching, Burning,  
Scaly Eruptions with  
Loss of Hair.

## Speedy Cure Treatment.

Bathe the affected parts with Hot Water and Cuticura Soap, to cleanse the surface of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply Cuticura Ointment freely, to allay itching, irritation, and inflammation, and soothe and heal, and lastly take Cuticura Resolvent Pills, to cool and cleanse the blood. A single set is often sufficient to cure the most torturing, disfiguring, itching, burning, scaly, pimply humours, eczemas, rashes, irritations, and chafings, with loss of hair, when all else fails.

The agonizing itching and burning of the skin, as in eczema; the frightful scaling, as in psoriasis; the loss of hair and crusting of the scalp, as in scalded head; the facial disfigurement, as in pimples and ringworm; the awful suffering of infants and the anxiety of worn-out parents, as in milk crust, tetter, and salt rheum, — all demand a remedy of almost superhuman virtues to successfully cope with them. Such are the CUTICURA remedies, the purest, sweetest, most speedy and economical curatives for the skin, scalp, and blood ever compounded. Mothers are their warmest friends.

## Millions of Women Use Cuticura Soap

Assisted by CUTICURA OINTMENT for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes and chafings, in the form of baths for annoying irritations and inflammations of women, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and many sanative, antiseptic purposes which readily suggest themselves, as well as for all the purposes of the toilet, bath, and nursery.

## CUTICURA RESOLVENT PILLS

(Chocolate Coated) are a new, tasteless, odourless, economical substitute for the celebrated liquid CUTICURA RESOLVENT, as well as for all other blood purifiers and humour cures. Put up in screw-cap pocket vials, containing 60 doses.

CUTICURA REMEDIES are sold throughout the world. Australian Depot: R. TOWNS & Co., Sydney. British Depot: 27-29, CHARLTON ROAD, LONDON. French Depot: 6 Rue de la Paix, Paris. For Sale Everywhere.

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 24TH, 1905.

## DEATH.

At 61, Motomachi Ichome, Yokohama, on the 17th inst., ADA, wife of W. B. Mason, Jun., aged 24 years.

## SUMMARY OF NEWS.

THERE are now 67,701 Russian prisoners in Japan.

THERE are now no Russians in North-eastern Korea.

ADMIRAL ROJESTVENSKY is recovering from his wounds.

ON June 3rd, the first issue of the Seoul *Weekly Press* was published.

HEAVY rains and destructive floods are reported from all parts of the country.

THE Russians captured in the late naval battle number 7,282 including 415 officers.

A GREAT reception is being prepared in England for Prince and Princess Arisugawa.

THE Russians in Manchuria have fallen back on their second line of defence near Kirin.

H.I.H. the Empress left the capital for Hayama on Tuesday for a change of air.

COLONELS TANIGUCHI, TOMOKA, and MOJI have been promoted to the rank of Major-General.

AT 8.50 a.m., on June 19th, an explosion occurred in the compound of the Iwahana Ammunition Factory, Takasaki. Three men were severely

and several were slightly injured. The cause is not yet known.

MAJOR-GENERAL T. NAMBU has been appointed President of the Military College.

MAJOR-GENERAL OSAWA, of the Imperial Headquarters, left Tokyo on June 15th for the front.

MR. & MRS. H. J. VINCENT celebrated their Golden Wedding in Yokohama on Wednesday.

TOKYO journals say that Admiral Togo will shortly return from the front at the request of the Emperor.

MR. TSURUHARA, Mayor of Osaka, is reported by Japanese papers to have tendered his resignation.

PRINCE FUSHIMI, the younger, returned from the front on June 16th, arriving at Shimbashi by the 9.30 a.m. train.

A TELEGRAM from Ujina reports that 836 invalids arrived there from the front on June 21st in two transports.

THREE Russian prisoners, who recently escaped from Hamadera, near Osaka, were arrested on June 21st at Nagasaki.

THE steamer *Kasato Maru* (formerly the Russian hospital ship *Kazan*) arrived at Kure on June 21st from Port Arthur.

TWO RUSSIANS on June 17th drifted ashore in a boat at Tsushima. They are prisoners who recently escaped from Kokura.

THE *Jiji* states that the trial of Captain Hougoun and K. Maki will shortly take place in the Tokyo District Court before Judge Inamura.

THE steamer *Kwanon Maru*, which was employed as a transport, is reported by a Ujina telegram to have been released on June 22nd.

ADMIRALS ROJESTVENSKY and NEBOGATOFF, who are now at Sasebo Naval Station, are expected to be sent to the Buddhist temple Chishaku, Osaka.

MR. MORGAN, the U. S. Minister to Korea, left Tokyo for Seoul on Wednesday. A large gathering of officials saw him off at Shimbashi.

ON June 22nd, 56 officers and 1,043 men of the American Army arrived at Nagasaki by the transport *Sherman* from Manila on their way home.

VICE-ADMIRAL SIR GERARD NOEL, commander-in-chief of the China Station, has been promoted to Admiral. He hoisted his flag in that capacity on June 7th.

THE gross income of the Tokyo Electric Railway Co., for the first half-year was yen 709 971.97. The interim dividend for the half year was 5½ per cent.

INMATES of the military hospitals in the Empire, who recently numbered about sixty thousand, have now decreased to about forty thousand. Eight thousand are in Tokyo.

FIVE RUSSIANS among the prisoners at Matsuyama escaped on the night of June 14th. On the following morning, they were arrested at a sea-side place in the district of Onsen.

ADMIRAL YAMAMOTO, Minister for the Navy, has ordered that the gun-boat *Amagi* be removed from the navy list. She was built in 1877 at

Yokosuka. She is of 911 tons displacement, 710 horsepower, and 11 knots speed. She has been stationed at Yokohama since the outbreak of the war.

THE Chinese gun-boat *Kanyuen*, which has been constructed at the Kawasaki Shipbuilding Yard, Kobe, having completed her equipment, will leave for China within a few days.

EIGHTY-THREE cases containing silver bullion valued at yen 357,115 arrived at Nagasaki on June 21st from Shanghai. The shipment is for the Kobe branch of the Specie Bank.

It is said by an Aomori telegram that a Norwegian steamer, which was stranded in the neighbourhood of the port, sank on June 21st owing to the storm. Details are not yet known.

MAJOR-GENERAL TOYOHASHI has arrived at Hiroshima from the front. On the morning of June 18th, he left for Tokyo. He was the commander of the heavy artillery during the siege of Port Arthur.

THE *Nichi Nichi* and the *Hochi* on June 20th, in the Tokyo District Court, were punished with a fine of yen 30 each on a charge of having infringed the laws with regard to the preservation of military secrets.

THE Upper House of Convocation of the Province of Canterbury passed a resolution in favour of authorizing the Bishops, on the application of incumbents, to dispense with the public recitation of the Athanasian creed.

POSTHUMOUS honours have been given to the non-commissioned officers and men who were killed in the recent naval battle. A hundred and four were decorated with the order of the Golden Kite, varying from sixth to seventh rank.

TWELVE men of the British steamer *Victoria* refused to go to sea on her again for fear of the Russians, and in consequence the vessel left Yokohama for the north on Wednesday with a new crew of Japanese and Chinese.

It is reported by a telegram from Hakodate that the Nippon Yusen Kaisha's steamer *Owari Maru* went ashore on the night of June 16th in the neighbourhood of Yeisan on her way from Muroan to Hakodate. The crew are safe.

THE Russian prisoners at Himeji publish a daily paper under the name of the *Prisoners' Journal*. The first number was issued towards the end of May. Their object is to circulate the paper among their compatriots in Japan and so to establish communication with them.

THE steamer *Iki Maru*, which was under construction at the Nagasaki Shipbuilding Yard, was launched on June 19th. She belongs to the Sanyo Railway Company and is 1,500 tons gross and has a speed of 15 knots. She will be employed on the service between Shimonoseki and Fusan, Korea.

EARLY on the morning of June 21st, M. Nakagawa, keeper of the tea-house Yamamume-ro, North Horii-cho, Osaka, killed half a dozen persons with a sword. The victims were the mother, younger brother and sister of his wife, one female servant and two geisha. After the crime the murderer, having substituted for his blood-stained coat a ceremonial dress, gave himself up to the Nishi Police Office. The cause is reported to have been a difference with his wife's mother.

## THE PEACE NEGOTIATIONS.

Friday, June 16.

There are various telegrams about the peace negotiations. Some difficulty is experienced in interpreting the news published yesterday by the Legation of France to the effect that the conference will be opened when the Tsar has given his consent to the Japanese propositions, but doubtless the propositions in question relate solely to the time and place of meeting.

The *Fiji Shimpō* has several messages from London. One is from *The Times* correspondent in St. Petersburg. He says that he is assured that the Russian Government will consent to any place chosen by Japan for the purposes of the conference and that Manchuria would not be objectionable. Another represents Russia as very anxious for an armistice. Yet another alleges that the Tsar has summoned the British Ambassador to the Palace and had a talk with him. And the last telegrams says that M. de Witte is to proceed at once to Washington.

These messages suggest that Russia is more in earnest than previous intelligence led the public to suppose.

St. Petersburg papers affirm that no peace concluded without consulting the nation can be lasting. That is a rather curious statement. Nations never are consulted about terms of peace. Ministries conclude treaties of peace on the best terms they can get and take the chance of their respective countries agreeing.

The *Fiji Shimpō* commenting on the discrepancy of the various items of intelligence, is inclined to question the correctness of the latest information—the information which represents Russia as prepared to make all necessary concessions by way of preliminary. Were that the case the difficulties which now obviously exist would be inexplicable. Our contemporary naturally thinks that if Russia, before even entering the conference chamber, places these frivolous obstacles in the path, the prospect of her adopting a sensible and sincere attitude at the conference is extremely doubtful.

The fact is, in our opinion, that Russia, though she wants to swallow the pill, can not conquer herself sufficiently to refrain from wry faces. She is seeking to save her dignity by methods which are alike petty and frivolous. It is a poor kind of diplomacy. The wise and manly course would be to show some sincerity by refraining from vexatious wrangling about non-essentials; to go to the conference frankly and freely, and then to reject Japan's terms if they proved intolerable. There might be a hope of winning the world's sympathy by that procedure, and, what is far more important to the bureaucracy in St. Petersburg, winning a measure of the Russian nation's sympathy.

The *Shogyō Shimpō*, organ of the business men, considers that in proposing Paris Russia is deliberately insulting Japan. Paris is the capital of Russia's ally. Japan can not forget Kamranh and Honkohe. To ask her to send her plenipotentiaries to Paris is to place her in the position of a suppliant for peace, as though she, not Russia, were the beaten side. A country which essays such manoeuvres by way of prelude to discussing peace terms, can not be credited with any sincerity. Nor is it Japan only that Russia flouts. It is also the President of the United States. She openly betrays her contempt for his intervention when she makes these vexatious propositions. Evidently the fight must go

on. Japan does not shrink from it. She will carry it to the bitter end.

With regard to these comments of the *Shogyō*, it may be observed that to place Japan in the position of a suppliant for peace is precisely and plainly what Russia is apparently endeavouring to accomplish. It is a shallow and futile essay; shallow because no ordinarily intelligent person can be deceived by it; futile because Japan has sufficient perspicacity to avoid being thus entrapped.

We observe that the objections to M. Nelidoff are not so strongly expressed as they were at the outset. It is pointed out that the Russian Ambassador at Constantinople is regarded as eligible for the portfolio of Foreign Affairs, and that consequently M. Nelidoff must be counted a personage of considerable importance.

The *Nichi Nichi Shimbun* has a long and interesting article on the navigation of the Amur and the maritime carrying trade of Siberia. It thinks that the privileges of freely navigating the Amur and all its tributaries, and freely engaging in the cabotage of Siberia should be included among the terms of peace. There is no other way of really carrying out the policy of the open door. Numerous statistics are given by the *Nichi Nichi* to prove the importance of the Amur as a water-way.

Saturday, June 17.

According to the *Kokumin Shimbun's* Washington telegrams the President has already made official announcement that Washington is to be the place for the meeting of the conference. From this we infer that the President was asked to undertake some duty of arbitration in the matter. Washington is an excellent place for the purpose. It is a kind of half-way house from the points of view of both parties. Evidently about a month must pass before the conference can actually open there. Indeed the time may be longer should any difficulties arise with regard to the personnel of the plenipotentiaries.

There is much talk, says the *Hochi Shimbun*, of appointing Viscount Aoki to be peace plenipotentiary.

The *Fiji Shimpō* persists in thinking that there is very little chance of Russia showing herself reasonable when the conference opens, considering her attitude in the preliminary stages. Her proposal of Paris as the place of meeting furnishes an unmistakable indication of her mood. That difficulty was removed by the assistance of the President, but there will be no such extraneous aid in the negotiations themselves. What is to be hoped, says the *Fiji*, is that the Japanese plenipotentiaries will show themselves absolutely firm. They have nothing to do but to submit their proposals and Russia has nothing to do but to say yes or no. There can be no haggling. Japan would be pleased to have peace, but she does not want any peace unless it gives guarantees of permanence. The *Nichi Nichi Shimbun* also insists with much force on the absolute necessity of avoiding any patched-up peace which would prelude a rivalry of armaments and a renewal of the struggle. There is observable a conflict of views between journals like the *Fiji Shimpō*, the *Nichi Nichi Shimbun* and the *Yomiuri Shimbun* on the one side, and the *Kokumin Shimbun* on the other. The school of thought represented by the first three considers the present occasion to be of supreme importance and believes that no similar opportunity for securing permanent tranquillity in the Far East is likely to occur during many

cycles. Therefore these journals would have the nation express its views unequivocally as to the terms of peace. But the *Kokumin* is not disposed to allow that this occasion should be regarded as unique. It holds that Japan is only on the threshold of a great career, and that she will have many future opportunities of speaking in powerful accents. Therefore it would have the people preserve silence, or at any rate refrain from noisy discussion of the terms of peace, trusting the matter implicitly to the hands of officialdom. This difference of view shows itself in the leading articles published by the above journals. It is an interesting difference but not very cardinal, for, as a matter of fact, the people are evidently determined to make their voices heard in the matter at the present stage at all events, though we venture to predict that, as is invariably the rule in Japan, there will be a dominant disposition in the end to accept a moderate settlement. The one fact which emerges quite clearly is that the nation would rather continue the war than conclude any peace of a merely temporary nature.

It is observable that the leaders of the *Seiyū-kai* have not moved at all. They have preserved a quiet and sensible demeanour, well understanding that to cry out loudly about terms of settlement before even the opening of a conference, is at best a somewhat hasty procedure. The *Kokumin Shimbun* applauds this reticence as worthy of a great party, and contrasts it in somewhat sarcastic tones with the flurry of other publicists. In short the aim of the *Kokumin* is to educate a moderate and circumspect mood. It points out with historical illustrations that to ask for too much, even where an opportunity of obtaining much presents itself, is an inevitable prelude to future complications.

An anonymous diplomatist quoted by the *Nichi Nichi Shimbun* expresses a very confident belief that peace will be concluded. He founds his faith mainly on the fact that President Roosevelt would never have publicly proposed a conference had there not been an ample prospect of its success. Russia may revert for a time to her familiar policy of evasion and quibbling, but she will ultimately take a broader line. It is not to be supposed that she has determined neither to concede any territory nor to pay any indemnity. Were she animated by such a resolve, her consent to appoint plenipotentiaries and to enter the conference chamber would be little short of an insult to the President of the United States. But of course much will depend on the amount of Japan's demands. If she confines herself to asking for a sum merely sufficient to recoup her outlays she will have the world with her. If she asks for a sum calculated with the idea of crippling the finances of Russia, she will have the world against her.

There has been a rumour that Count Okuma addressed a telegram to the President of the United States but the Count denies it. He thinks that the mistake was due to a long telegram sent to the *Chicago Daily News* by the latter's correspondent after interviewing the Count. Concerning the prospects of the conference Count Okuma is not at all sanguine. He believes that Russia does not yet acknowledge to herself that she has been defeated. She could continue the war for one or two years longer without greatly embarrassing her finances, and her discomfiture in the Far East has not shaken her seriously in Europe. In short, the Count is persuaded that to induce her to listen to satis-

factory term some further victories must be won. This opinion, we observe, was expressed before the news had been received that Washington is to be the place of conference and when Russia's proposal of Paris was creating some excitement. As to the actual terms of peace, however, the Count is at once moderate and explicit. Japan must not seem to humiliate her adversary. From a military point of view the present moment may not be an advantageous time for negotiating, since the investment of Vladivostok is pending. But the fight is not for the sake of fighting it is for the sake of securing peace. The object of the war is accomplished so soon as terms ensuing tranquillity can be obtained, and it has always to be remembered that from the moment of sheathing swords Japan and Russia will desire to be friends. What then are suitable terms having regard to all these considerations? They are, first the payment of an indemnity—not an exorbitant sum but simply a sum such as shall cover Japan's expenditures. Secondly, the disarming of Vladivostok and its conversion into a free port. Thirdly, the cession of Saghalien, once Japan's possession. Fourthly, the restoration of Liaotung to the position it would have occupied had not the Shimonoseki Treaty been disturbed by the interference of the Three Powers. Fifthly, an explicit promise from Russia to abstain from all interference in China and Korea. And sixthly, suitable arrangements about fishing privileges on the Siberian coasts.

In the *Kokumin Shinbun*, which has much authority, we find an article which suggests strong belief in the probabilities of peace. The article is evidently intended to be in part a reply to the *Fiji Shimpō* which recently alleged that the war party might at any moment regain the upper hand in St. Petersburg and consequently the progress of peace negotiations might be interrupted. That view, according to the *Kokumin*, betrays ignorance of the real situation in Russia. It is not the original peace party that has now held out the olive branch. It is the war party. The war party has recognised not only the hopelessness of carrying on the combat, but also the fact that to do so would inevitably precipitate domestic troubles of the gravest nature. Some time ago the leaders of the war party communicated to a certain Power their desire for peace and their conviction of its necessity. From them there is not likely to be any serious obstruction to the course of the negotiations, though necessarily the result of the conference is not foreseeable and Japan will not attempt to forecast it: she will continue the war vigorously. As to the preliminary difficulties now presenting themselves, the *Kokumin* regards them as almost an inevitable incident of any conference to which Russia is a party. She tries to save her face in trivialities in order to be able to concede essentials with some reserve of magnificence. It is a poor policy but it seems to be engrained.

On the alleged authority of the last Berlin telegrams but apparently on the strength of independent information also, the *Kokumin Shinbun* expresses gratitude for the part taken by the German Emperor in promoting the cause of peace. Evidently our contemporary believes that while President Roosevelt openly approached the Russian Government, the Kaiser privately employed his influence in St. Petersburg to bring about the same result. This action will not fail to obtain the appreciation and

the thanks of the Japanese nation, especially as the Kaiser is adopting precisely the same line as the President, namely, announcing that with the opening of a peace conference his mission ends. His Majesty thus demonstrates that he is acting solely in the interests of humanity and not with any ulterior object.

We learn on good authority that, by the desire of Russia and Japan, Washington has been selected as the place of conference. The fact will be officially communicated in a day or so.

Sunday, June 18.

A telegram to the *Hochi* from London says that America, Germany and France are disposed to bring pressure on Japan to induce her to make her demands easy, but England takes the line that Japan is the victor, and that no third Power has any right to interfere in such a matter.

The latest news of China's attitude is that the Peking Government has conceived the idea of being represented at the peace conference. Telegrams have been sent, it is said, to the Northern and Southern Superintendents of Trade, namely, the Viceroy of Chili and the Liankiang, as well as to the Chinese Representatives in foreign countries, urging the advocacy of this course. The telegram (*Hochi Shinbun*) further alleges that the project has the sympathy of England and America, and that Prince Sü would be the Chinese plenipotentiary. China has doubtless good reason to be anxious, for the settlement now about to be discussed in Washington concerns her very closely. But after having effaced herself completely in the hour of danger, and after having left Japan to fight the battle single-handed, China can not reasonably ask to be represented in the conference chamber. We do not believe that Great Britain and America have expressed their sympathy with any such idea, and we do believe that China has too much sense to entertain it.

The Chinese Representative in St. Petersburg telegraphs that Russia's programme is to ask for an armistice, and to send her plenipotentiaries to Washington after Japan has agreed to cease fighting. Japan, we are persuaded, will never agree to such a proposal unless she obtains the most effective guarantees. To stop the war for the purposes of a conference with Russia would be the most confiding achievement of diplomacy ever witnessed. All the leading Tokyo journals speak in unequivocal terms; they ridicule the notion.

New York telegraphs that the conference will commence its sittings at the beginning of September, but no reason for this extraordinary delay is assigned. In Washington nothing is affirmed as to the date of the conference, but it is said that there will not be any armistice until the treaty of peace has been signed.

The attitude attributed by Reuter's telegram to the press of St. Petersburg is ridiculed by Tokyo newspapers. They call it a perversion of the true situation. Yet it is exactly what might have been anticipated. Russia is manoeuvring to make it appear that the peace proposal comes from her adversary not from herself. She will be cleverer than we believe her to be, high as is our opinion of her astuteness, if she succeeds in persuading the world that the cry for peace emanates from the victor not the vanquished. It is a paltry trick after all, and an unwise one too, for its only effect must be to demonstrate the extreme inexpediency of an armistice until peace is actually in sight.

Monday, June 19.

There is much talk about the plenipotentiaries that Japan will appoint. Marquis Ito has come to Tokyo and held conferences with Count Katsura and Baron Komura, but it is recognised as improbable that Japan will make any nomination before she sees whom Russia appoints.

A telegram says that the Russo-phil organs in Shanghai declare Japan to be desirous of peace because her material of war and her finances are alike exhausted. Amusing inferences, are they not? One would imagine that the positions were reversed, and that Japan had been suffering defeats not Russia.

Tuesday, June 20.

There is nothing definite about the personnel of the plenipotentiary tribunal which is to assemble in Washington. It seems to be thought that Russia's idea of appointing M. Nelidoff was intimately connected with her choice of Paris as the place of meeting, and that Washington having now been substituted, there will no longer be any special desire to nominate M. Nelidoff. At any rate no definite statement on this point seems to have reached the Japanese Government via Washington, and pending the receipt of such intimation Japan will naturally refrain from choosing her plenipotentiaries. On Monday a meeting was held at the Premier's residence in Tokyo, and was attended by the four *Genro*—Marquises Ito and Yamagata and Counts Inouye and Matsukata—as well as by the Ministers of War and the Navy. After the meeting Count Katsura proceeded to the Palace, and some Tokyo journals infer that it has been decided to appoint Marquis Ito and Baron Komura. But the *Fiji Shimpō* forecast appears to be much more credible, namely, that Japan will refrain from taking any definite step until she has a clear intimation of Russia's purpose. St. Petersburg has distinctly shown that it approaches this business with a determination to make capital out of petty points. Russian statesmen seem all disposed to grasp at every opportunity of placing Japan in the position of a suppliant for peace, and they are quite capable of waiting until Japan nominates first-rank publicists to represent her, whereas Russia would deliberately name second-class men. Besides, it is the business of Russia to take the initiative, and Japan will remember that fact as well as the unwisdom of affording any opening to her not over-scrupulous *vis-a-vis*. If Japanese nominations have been made we may take it as certain that they have been preceded by Russian nominations.

The *Fiji Shimpō* has very little hope of a successful issue to the negotiations. Russia's mood is unmistakable. She wants to place upon Japan's shoulders the onus of having sued for peace, and so long as she continues to be swayed by such ill-placed *amour-propre* she will not be found a reasonable *vis-a-vis*. There is indeed a glimmer of peace upon the horizon, but it is only a very faint glimmer, and nothing could be more unwise than to slacken military and naval operations for the sake of such a will-o-the-wisp.

The indifferent prospects of peace have not only checked the recent upward movement of Japanese securities, but have even caused a downward tendency. Doubts about Russia's sincerity are referred to as the principal cause, but probably that character should be assigned rather to the discovery that the conference will not open before October. All those—and there were

doubtless many—who purchased stocks and shares on speculation when the first news of a peace conference arrived—found themselves in a dilemma when the October news arrived, for two months is the limit of time transactions on the Tokyo Exchange. Unable to wait until October and seeing no hopeful prospect in the interval, these speculators probably unloaded as fast as possible and dragged down the market. Nippon Yusen Kaisha shares have fallen 2.25 yen; cotton spinning shares from 1 to 2 yen; Tokyo Exchange shares, 7 yen, and so on. London, however, evidently takes a hopeful view. There is no sign of any decline of prices there.

Wednesday, June 21.

On Tuesday the *Chuo Shinbun* published an extra declaring positively that Marquis Ito and Baron Komura had been chosen to represent Japan at the approaching peace conference. We did not reproduce the statement because we doubted its authenticity. On Wednesday it was denied by all the leading journals. There appears to be no doubt that Marquis Ito's appointment is desired in many quarters and that efforts are being made to induce him to accept the onerous post, but up to Wednesday evening he does not appear to have officially accepted. The *Chuo*, however, adheres to its story. It even alleges that the nominations will be published immediately, and if our contemporary speaks on the authority of its proprietor, Mr. Ooka Ikuzo, much credit must be attached to its utterances.

The fact is, in our opinion, that Japan, whatever her choice may be in private, will not publish anything or even make any final selection, until she knows Russia's mind. St. Petersburg seems to be much perplexed. Nelidoff's name presented itself naturally in the context of the proposal to make Paris the place of conference, but Russia has discovered, or been instructed, that her Ambassador in Paris, an official comparatively obscure, would not be at all acceptable to Japan. Her difficulty is to find any one willing to undertake a function so arduous and some one, at the same time, possessing a sufficiently high reputation. The greater the fame a man has acquired the more reluctant he must feel to risk it by assuming such duties. M. de Witte would be the ideal person, and next in order of eligibility stands Count Lamisford, but apparently neither of these can be spared or persuaded. Baron Rosen and Count Cassini were spoken of for a moment, but no one can have seriously regarded either of these diplomatists as an eligible candidate. Thus Russia is in a difficulty, and until she solves it the Japanese, we may take it for granted, will not proclaim any choice which events might prove to be deficient or excessive. Than Marquis Ito the Emperor of Japan has no greater subject to send. We may be sure that His Majesty will not send the statesman whom above all others he has delighted to honour, if the Marquis is to have for *vis à vis* a second-rate Russian official. One thing that can be confidently affirmed at this juncture is that Japan is willing to send the best she has. There can be no manner of doubt about her sincerity. It is much to be desired that Russia could rise to the same standard on this occasion at all events.

Mr. Kato Takaaki, interviewed by a member of the *Chuo Shinbun's* staff, deprecates the error of supposing that President Roosevelt's intervention was prompted by a re-

quest from Russia. The Washington note may have been preceded by some feeling of the belligerents' pulses, but it was not the result of any solicitation on Russia's part, and in that sense Russia can not for one moment be said to have lowered her head. Therefore those Japanese who open their mouths widely to formulate demands labour under a serious misapprehension. If peace is to come, it will be invited by the moderation of Japan's terms. Mr. Kato does not venture to lay down any programme of terms, but he speaks of the disarming of Vladivostok and its conversion into a free port as among the conditions to which Russia's consent will be hard to obtain.

Recently we quoted from the *Nichi Nichi Shinbun* the views of an anonymous statesman described as well versed in foreign affairs. Another publicist similarly described is now quoted. He endorses everything said by the former. Japan is fully entitled to ask for the re-payment of her military and naval outlays. The world will go with her thus far, and if Russia break off the negotiations on that ground, she will lose all sympathy. But Japan must not attempt to cripple Russia financially. An indemnity based on that purpose would be universally condemned. As to Vladivostok, its disarming and its conversion into an open commercial port are reasonable conditions. They must however, be supplemented by an explicit understanding that Russia will not create another fortified naval base in Far-Eastern waters. If she struggles against such a pledge, let Japan, on her side, offer to dismantle the forts at Port Arthur. That would be fair give and take. Concerning Saghalien, there is time enough to talk. Circumstances may have changed before the day of opening the conference.

Mr. George Kennan, speaking through the columns of the *Nippon*, repeats what we have already said about the extreme unwisdom of granting an armistice until a treaty of peace is actually signed. Mr. Kennan speaks with even greater frankness than we should have ventured to employ. He says that Russia is not for one moment to be trusted. "Insincerity" is written across every page of her history. She will surely ask for an armistice so soon as ever the preliminaries for a conference are arranged, and then, having employed the armistice to double the Siberian railway, to pour troops into Manchuria and to strengthen her position in every possible way, and having frittered away the summer in talk, she will find a pretext for breaking off the conference in her own good time.

As to the indemnity question, Mr. Kennan is not sanguine. Russia has levied and collected big indemnities from other Powers, but she has never paid indemnities herself, and even though the Tsar be willing, even though France be ready to lend the money, the Grand Dukes will never allow any large sum to pass beyond their reach.

The *Jiji Shimpō* continues to write in the strongest strain. It utterly rejects the idea that Russia is in earnest, and it repeats again and again its contention that unless peace can be made on such a footing as to be durable for 30 or 50 years, it is better to fight on now.

The *Kokumin Shinbun* bids the public to be assured that there is no intention whatever of discontinuing the war for the sake of conducting peace negotiations. The two things must go on side by side.

Thursday, June 22.

The *Jiji Shimpō* says that the idea of

appointing Marquis Ito to be Japan's plenipotentiary has been abandoned. Our contemporary states that the opinion prevalent in official circles was in favour of Marquis Ito, but the obvious consideration suggested itself that Japan must not appoint her most prominent statesman until the nature of Russia's selection is known. Russia is behaving with marked evasiveness. She has endeavoured to represent Japan as the suppliant for peace, and she has even gone to the length of refusing to publish her own reply to President Roosevelt's invitation, thus plainly seeking to suggest that the document contains some reservations which differentiate it from Japan's reply. No thoughtful person can be deceived by such a manoeuvre. It is President Roosevelt's unquestionable duty to see that each belligerent enters the conference chamber on absolutely equal terms so far as the preliminaries of consultation are concerned. He has Russia's reply in his hand and he has also Japan's reply. If they differ in any material respect, he would have the difference adjusted before the conference was definitely agreed to. Besides, though Russia may conceal her reply from the eyes of the world, she can not conceal it from Japan. It must have been communicated verbatim to the latter, and in that fact we have an absolute guarantee that it embodies as unreserved an acceptance of the President's invitation as Japan's reply embodies. Thus we arrive at the conclusion that Russia's reluctance to publish her answer must be classed with those petty diplomatic tricks which she so much affects and which have taught the world to regard all dealings with her in a very equivocal light. In the face of such a want of frankness, such obvious shiftiness, Japan must observe extreme caution. Did she appoint her most prominent statesman to be her plenipotentiary before Russia had made any nomination, it is quite within the range of St. Petersburg's methods to nominate some one of quite inferior standing, and then to invite the public to draw the inference that Japan, not Russia, is asking for peace. These considerations have already been referred to in our columns, and we were therefore quite prepared to find that the rumours of Marquis Ito's nomination were at any rate premature. Japan's evidently wise course is to refrain from appointing any special representative, and to rely simply upon the machinery available in the regular routine of procedure, namely, her Minister of Foreign Affairs, Baron Komura, and her Representative in Washington, Mr. Takahira. Happily Baron Komura is a statesman of the highest ability. Japan's interests will be safe in his hands.

#### THE BOUGOUIN CASE.

We read with great regret in Tokyo newspapers that the preliminary investigation in the case of Captain Bougouin and Mr. Maki has resulted in establishing a *prima facie* case against them, and both have been committed for public trial. On the other hand, Mr. F. Strange has been acquitted, no sufficient evidence being forthcoming. Of course it does not by any means follow that Capt. Bougouin's guilt is established because the preliminary inquiry has led to his committal. Nothing is shown except that in the opinion of the examining tribunal there is a sufficiently clear case to warrant his committal for public trial. His many friends may still retain their belief in his innocence. Meanwhile he remains out on bail.

## MANCHURIA.

Friday, June 16.

According to the *Asahi's* information the Japanese armies in Manchuria have commenced, or are on the verge of commencing, an extensive movement. Naturally no clue is given as to its exact nature, but that it will accomplish its object we have no doubt. Meanwhile Linevitch has received some reinforcements. They are said to amount to 6 Divisions, one of which has proceeded to Vladivostok and the remaining 5 are posted on the lines from Taolu (north-east of Kaiyuan), Huoshihling, Supingchich and Pamienching. If this information be correct a heavy battle may be expected in the region south of Fenghua.

Saturday, June 17.

Appearances are said to indicate that Linevitch contemplates fighting a great battle along the line from Heilungching on the east to Pamienching on the west. In other words, he will defend Kirin and Changchun in advanced positions. With that object he is said to have concentrated the whole of his available forces along the Heilungching-Pamienching line. If the news be correct, we can understand his alleged unwillingness to see a peace-conference opened. He hopes to win a big fight in central Manchuria. But the peace-conference need not interfere with his plans. There will be plenty of time. The interesting point is, however, that these plans seem to be informed solely by the principle which has guided the whole of Russian strategy since the outset of the war, the principle of confining the army's operations to the defensive. At one time there was a persistent rumour that Linevitch and Kuropatkin had fallen out because the former wanted to adopt offensive tactics. No signs of any such change have been apparent. The petty attacks which the Russian troops undertake from time to time, attacks involving one or two battalions at most, have nothing to do with offensive strategy; they are merely reconnaissances. And if Linevitch now intends to lie in partially fortified lines, there receiving the Japanese onset, he will be defeated as Kuropatkin was invariably defeated under similar circumstances.

Sunday, June 18.

A Russian telegram from Harbin despatched at 9.10 p.m. on the 13th instant, says that on the 9th and 10th a great movement of the Japanese troops was observed along the Mukden highway and on the Changtu parallel of latitude in the east of the field. This would mean an advance from Kaiyuan and, perhaps, Changtu, these being the quarters indicated by the expression "Mukden highway," and presumably an advance towards Heilungching in the east of the field. But the language of the Russian despatch is vague. The official reports published in Tokyo on the 11th and 12th did not indicate any very extensive movements, though the occupation of some places north of Changtu was spoken of. This Harbin telegram is published by the *Fiji Shimpō*. Another message which appears in the *Yomiuri* and is said to have been received by a foreign newspaper correspondent in Tokyo, states that Linevitch has his head quarters at Chochingling (?), south of Changchun, and that he has massed 300,000 men with 400 heavy guns at Kirin. The Japanese, however, working over a front of 100 miles, are gradually enveloping him. If he can not hold Kirin his plan is to fall back upon the Sungari line

where he has semi-permanent fortifications and where several military railways have been laid; but it is not thought possible for him to withdraw this great army from Kirin. News of the virtual annihilation of the Baltic Fleet is said to have been published throughout the army, where it has produced much depression.

All this is very vague, and although we can scarcely doubt that some important movements are progressing in Manchuria, there is difficulty in imagining the consummation of any strategy capable of enveloping an army of 300,000 men whose outposts have not yet been brought into action. Nothing can be safely affirmed except that the rumours from Russian sources indicate a state of activity concerning which the Japanese reports begin to speak only from the 16th inst.

The *Fiji Shimpō* publishes a telegram from Yingkow giving the gist of a report brought by a secret messenger—presumably a Chinese—who has just visited Harbin. He says that from Changchun northward passengers are allowed to use the East China Railway, but that their persons and their baggage are subjected to the strictest examination and if anything at all suspicious be found, arrest and torture follow. Many innocent travellers are said to have been done to death. Three trains start from Changchun daily but people who leave that place for Harbin are not allowed to return by rail. No one who has once entered the Russian lines is permitted to return from them. From Harbin only one train leaves daily for Irkutsk and Vladivostok, and only one train enters from those places. The trains from the west consist of 27 carriages which are nearly entirely filled with troops and munitions of war, and the troops are sent southward. There are 54,000 men of all arms with 300 guns posted on the east, west and south of Harbin. A large part of this force, namely 12,000 men with 120 guns, are at the Sungari line. At the Harbin station there are 16,000 with 80 guns. There is also a strongly fortified position stretching throughout a line of some 3 miles in the vicinity of the station, from  $2\frac{1}{2}$  miles to  $7\frac{1}{2}$  miles distant. Here forts have been built and mines laid. It would seem that the Russians have specially provided against a Japanese attack from the south and west. General Gripenburg (?) is said to be commanding in the town of Harbin and Grand Duke Nicholas (?) at the Sungari line. On the south, east and west of Harbin there are 18 hospitals. There are 56,000 sick and wounded. During May 20,000 were sent to Russia by rail, but there still remain 56,000. Cholera and dysentery began to be serious in May and are growing worse. More than 100 new patients are reported daily. The arrangements for the supply of provisions and clothing are deficient so that many of the troops are still wearing winter uniforms. They are said to be much dispirited and to be earnestly desiring peace.

Japanese officers who have just returned from the front say that the Russians have one division of troops at Liangshwisan south of Taolu, with 20 guns. Thence they conduct frequent reconnaissances. An official telegram announced that on the 9th instant the Russians were driven from this place, Liangshwisan and the position was occupied by the Japanese. The reports of the above officers evidently antedate that event.

A tremendous thunder storm broke over Tieling and its neighbourhood on the 1st instant. It lasted only 2 hours, but the

deluge of rain was so severe that the district was converted into a lake.

The *Fiji Shimpō* states that it would be a great mistake to infer any cessation of military activity on account of the peace talk. The plan of campaign is being vigorously prosecuted and important developments may soon be expected.

It will be remembered that Linevitch reported a great achievement of the Cossacks on the 18th of May. They were said to have ridden round the Japanese left flank and annihilated 2 companies of Japanese, destroying also a large commissariat convoy. The particulars of this affair are now to hand. It was very different from what the Cossacks seem to have stated. Briefly speaking their so-called achievement was to attack a Japanese field-hospital, murder in cold blood surgeons and nurses who wore the distinguishing badge of the Red Cross, and steal or destroy the hospital accessories. There does not seem to have been any extenuating circumstance. The Cossacks must have known perfectly well that the object of their attack was a hospital and that the victims of their onslaught should have been protected by all the laws of war. Had such an act been perpetrated against a Russian field-hospital by the Japanese the world would have been quickly informed. Happily the dimensions of the outrage do not appear to have been great so far as numbers are concerned. Only 18 men are missing. Twenty-one, originally carried away, were afterwards released.

Monday, June 19.

London says that the Russian troops at Kungchuling are in a difficult situation and that General Kawamura's cavalry has pushed to the north of Kirin and threatens to cut the communications of that place. Kungchuling is about midway between Fenghua and Changchun. There are no indications in the official reports that the Japanese forces have penetrated so far, and as for the communications of an army of 200,000 or 300,000 men being cut by a small force of cavalry, the feat is not easy to conceive. It will be remembered, however, that London recently spoke of the Japanese van in the east of the field having reached Moma (or Momasa), and this persistence of rumour is certainly remarkable.

On the other hand we have a rumour from Yingkow that Mischenko, after his many attempts and as many failures to accomplish a turning movement by means of cavalry alone, has formed a Division of all arms with detachments taken from various units, and is marching through Mongolia to attack Hsinmintun. The Hungtut and the Chinese volunteers are said to be in close touch with him and to be luring him on. The *Fiji Shimpō*, which publishes this telegram, is disposed to think that the movement against Hsinmintun is one of the great plans of Linevitch, who is known to be a man of much daring. He has conceived—to use our contemporary's words—the idea of making at least one flower bloom over the grave of Russia's military reputation in Manchuria, and so he has sent Mischenko upon this bold enterprise. To assist it, he concentrated troops along the line confronting the Japanese left, and it was by bodies of these troops that frequent small advances were made lately against the Japanese positions. The object of such concentration and such advances was to create an impression of activity in that quarter of the field and thus to cover the out-flanking movement of Mischenko through Mongolia. But the Japanese are wide awake, and Mischenko will

probably fare no better than the covering cavalry has just fared in the fight on the 16th.

If this movement of Mischenko's force be really taking place, Russia is trampling under foot the neutrality of Mongolia, and her attempts to have the limits of neutrality extended as well as her threats to send an army through Mongolia unless her demands be fulfilled assume a more fictitious character than ever.

Terrible accounts are circulated about the barbarous conduct of Mischenko's Cossacks who are engaged in the southward raids recently spoken of. They carry very little in the way of provisions, and, depending upon the resources of the country for support, they do not scruple to rob and plunder everywhere. Murder and rape adorn their progresses, and wherever they have passed, the corpses of men and women are to be found. Thus in the track of the Cossacks who recently achieved the exploit of attacking a Japanese field hospital, it is said that there was found a Chinese cart with the corpses of six young people, one of them, a girl of 16, being mutilated in an indescribable manner.

Another statement made is that Mischenko's Cossacks have for guides a number of Hungtusz whom they have dressed in Japanese uniforms so exactly imitated as to be indistinguishable from the originals.

The *Fiji Shimpō* has a very strong article on the cruel and barbarous conduct of the Russians, or at any rate of some sections of their armies, during the present war. There stand to their eternal discredit the murdering of wounded men in cold blood—a brutality again and again perpetrated; the sinking of transports without any attempt to save their hundreds of occupants; the seizure and detention of non-combatants; the destruction of merchantmen; the attack of field-hospitals and the slaughter of unresisting surgeons and nurses; the violation of neutral territory; the raiding of private property; the despoiling of soldiers and officers; the murder of peaceful unoffending people of both sexes and all ages; the violation of women; and the wanton burning of Chinese houses. The *Fiji Shimpō* naturally writes very indignantly, and is disposed to think that the latest atrocities perpetrated by the Cossacks may be attributed to a mood of desperation begotten of perpetual defeat. To us (*Japan Mail*) not the least strange feature of all this business is the apparent indifference of the foreign public. There seems to be a determination to keep silence. One Yokohama foreign journal recently made the astounding assertion that a cleaner war than this was never waged. Are we to suppose then that all the stories told about Russian doings are fictions? Yet, if even a fraction of them be true, it is a shocking record, and not the least shocked, probably, are many of the Russians themselves, for although many excesses, terrible excesses, have been committed by their armies, we believe the average Russian officer and soldier to be as temperate and kindly as are the men of any military force in the world.

Tuesday, June 20.

It would seem from subsequent intelligence that the inference drawn in these columns concerning the fight on the Japanese left on the 16th instant was correct. The Japanese attack upon Tienkiawopeng, and the subsequent capture of Liaoyangwopeng did not represent the beginning of a general advance but were movements undertaken in anticipation of a projected out-flanking enterprise by Mischenko's cavalry. The facts, as now related, are that Mischenko was massing his

main force at Liaoyangwopeng, which lies on the north-west of Fakumun, and that he had his outposts at Tienkiawopeng, where a position exists favourable for covering operations in the rear. His plan was to make his preparations leisurely and then, in his own good time, to sweep round westward of Fakumun and cut the Japanese communications in that quarter of the field. But the Japanese divined his purpose or obtained information of it and defeated it completely by a sudden attack on the 16th which drove the Russian outposts from Tienkiawopeng and their main body from Liaoyangwopeng in confusion. A portion of them retreated north to Tawa, which will be found on the map southward of Pamienching, but the greater part fled in three directions, and seem to have subsequently made their way through Mongolia to Chengkiatun where they are re-assembling. They are said to have been joined in this retreat by the cavalry already in Mongolia; that is to say, the cavalry which made the celebrated raid on the 18th and 19th of May against a Japanese field hospital, and which thereafter withdrew into Mongolia with a loss of 300 men. Mischenko's intention was doubtless to heavily re-inforce the field-hospital's assailants from Liaoyangwopeng and despatch them upon a wide flanking movement, keeping in the cantonment at that place and at Tienkiawopeng a force sufficient to constitute a direct menace against the Japanese left at Fakumun. But apparently he was quite unprepared for the Japanese to assume the offensive so vigorously as they did. The official report shows that they moved out at a little after mid-night on the 16th and delivered a sudden attack which apparently took the Russians by surprise. Mischenko found himself assaulted from three directions, and his Cossacks adopted the wisest course under the circumstances, ran away. It is probable that nothing more will be heard of flanking enterprises on the part of Mischenko for the present at all events. The rainy season must now have commenced, or be on the verge of commencing, in Manchuria, and during the rainy season military operations on any considerable scale are out of the question. So far as Mischenko is concerned he may be said to have lost his chance, but in the matter of a general resumption of the Japanese advance in the immediate future, some observers are sceptical. There are certain definite objectives, they say, and these will be pursued irrespective of the weather, but unless some solid advantage, not apparent to outsiders, suggest the advisability of pushing forward the Kangping-Changtu lines, it is a reasonable hypothesis that there will be no large activity for the present. That is the forecast made in some quarters. Other publicists, however, are not less confident that a resumption of general activity may be looked for immediately, and in support of the latter view there is the fact that climatic considerations were not allowed to interrupt the Japanese movements last year, or at any rate not allowed to interrupt them on any large scale.

Wednesday, June 21.

The *Asahi Shimbun* says that since the Russians were driven from Liaoyangwopeng on the 16th instant, whence they retreated to Chengkiatun, they have received large re-inforcements and are now apparently bent on renewing their southward movement, so that a battle seems imminent.

In the eastern part of the field also General Madoriloff has collected three Divisions at Shanchingtsz on the south of Hailung-ching, and is evidently determined to dispute

the Japanese advance there. A battle in this quarter too is consequently imminent.

Our readers doubtless remember that a telegram sent from London on the 11th instant said that, according to intelligence received in St. Petersburg, the Japanese had captured Omso (or Omaso) which lies 75 miles east of Kirin. Shanghai now publishes a telegram from Harbin, dated the 10th instant, to the effect that the Russians have "re-occupied Omso." What conclusion are we to draw from these two telegrams virtually identical in date and directly contradictory in terms? Both agree in indicating that something has happened at Omso. But supposing that Petersburg, on the 10th instant, made the admission that the place had been taken by the Japanese, is it conceivable that the same St. Petersburg, being informed by Harbin about its re-capture, would have kept the latter fact secret? We greatly doubt, as we said at the time of receiving the original report, whether the Japanese have reached Omso, but if they have and if, having captured it once, they have been driven out again, it is not from General Dessino that the world expects to hear news of the latter fact eleven days after the event.

A Polish *sous-officier* who has been taken prisoner alleges (*Asahi Shimbun*) that Linevitch expects the main shock of the Japanese onset at Changchun, and that although he is guarding the whole line from Kirin to Changchun, his chief force is concentrated at the latter place. In other words, he looks for the Japanese to advance up the line of railway direct to Harbin.

Shanghai also states that the Russian losses on the 16th were 2 killed and 16 wounded. The Japanese official report tells of 80 Russian dead in one section of the field alone!

Thursday, June 22.

The approach of the rainy season is said to be now heralded in Manchuria by terrible dust-storms which obscure the whole sky and render life almost intolerable. It is difficult to ascertain clearly whether the Japanese began a forward movement on the eve of these embarrassing climatic conditions, or whether they merely advanced in consequence of a Russian retreat. Originally Linevitch had evidently resolved—as has more than once been explained—to make his first line of defence along the positions extending from Yehoching, on the Kaiyuan-Kirin road, to Pamienching on the Fakumun-Hualite road. There is reason now to think that he has decided on a closer system of defence and that he has withdrawn to his second lines, which extend probably from Itungchou to Fenghua and thence to Chengkiatun. If that be so—and it is suggested by telegrams from Paris and St. Petersburg alike—, then the forward movement made by the Japanese on the 19th was not the re-opening of the campaign, but must be regarded merely as a response to the enemy's retirement. It is plain, at all events, that the Japanese were very close on the heels of the retreating Russians, and possibly Marquis Oyama may see his account in keeping the enemy on the run. But we do not look for that. The withdrawal of Linevitch from his advanced lines does not necessarily indicate any access of weakness. It suggests, rather, that some menace of danger in another quarter has shown the advisability of a smaller deployment. The events of the next few days will decide these questions.

Meanwhile we have a new development announced by a small official report on the night of the 21st:—"A body of our troops has occupied Kyongsong in north-eastern Korea. The Russians, several thousands

strong with artillery, have retreated in the direction of Susong, 10 miles distant." That is a very unpretentious announcement, but the movement itself has considerable importance. Ever since last summer the Japanese and the Russians have been confronting each other in north-eastern Korea. At one time, 20th December, the Russians pushed southward as far as the immediate neighbourhood of Yuensan, having wrought a good deal of destruction *en passant* at the Japanese settlement of Songjin. Thereafter they withdrew to Kilju, and then they established their head-quarters at Kyongsong, which is some 62 miles from the Tumen River. There they massed a very considerable force, and thence they sent scouting parties in various directions, laying the country freely under contributions and receiving voluntary or involuntary assistance from the Korean local officials. The Japanese, however, did not pay much ostensible attention to these proceedings. They took the measure of the Russian foot with accurate acumen, and concluded that north-eastern Korea was not, at that juncture, a place calling for the employment of any considerable force, whatever menaces the Russians might prepare there. Gradually, however, as convenience suggested and as the development of plans in other parts of the field dictated, they massed a force at Songjin, which pushed its outposts as far as Kilju, and it is this force which has now advanced north, and expelled the Russians from Kyongsong. The distance from Songjin to Kyongsong is 82 miles, so that the Japanese must have moved out of the former place several days ago, and must have been in considerable force since the Russians, although several thousands strong and possessing artillery, seem to have fallen back without offering any serious resistance. There has been no hint of any fortified lines between Kyongsong and the Tumen—a distance of 62 miles—but the Russians are reported to have made considerable preparations to dispute the passage of the river and they have strong fortifications in Possiet Bay, which is 20 miles from the Tumen. There is no certainty, of course, that the Japanese entertain any intention of crossing the Tumen, or of attacking the Possiet-Bay forts, but such operations would be a natural sequel of the command of the sea finally won by Togo in the recent great battle. From Possiet Bay to Vladivostok there is an interval of 100 miles, and from Possiet Bay to the nearest part of the railway the distance is 85 miles. It is quite within the range of possibilities that interesting and important developments may soon be witnessed in this part of the field, though it is also possible that the Japanese plan may not extend beyond the expulsion of the Russians from Korean soil. We may note that the crossing of the Tumen River would mark a new stage of the war, namely, the first invasion of Russian territory.

#### PRESIDENT ROOSEVELT'S INTERVENTION.

We learn with great surprise from a correspondent whose letter appears elsewhere in our columns that "a good many Americans" and "a number of Japanese" condemn President Roosevelt's intervention in the cause of peace as "precipitate," and even regard it as in some degree unfriendly to Japan. It is quite true that Russia has taken advantage of the occasion to flout Japan, and to create the false impression that the desire for peace is on Japan's side alone. Indeed the journals of St. Petersburg

have sought to suggest that the proposal emanated from Japan in the first instance. But surely nothing else could have been expected under the circumstances? Russia is human, very human indeed, and since she is writhing under the sense of a most humiliating defeat it were extravagant to look for any displays of grace or magnanimity on her part. President Roosevelt, however, is in no sense responsible for such things. He had to take the material as it existed. He could not be expected to modify or refashion it. Besides, before we sit down to pass judgment on his act, we must possess knowledge which is not at present within reach. We must be able to say that he acted without previously consulting Japan. Nothing in the world is less likely. Without pretending to any insight which the general public does not enjoy, we venture to affirm that President Roosevelt never risked such a fiasco as might have followed the unprefaced launching of a letter of advice at the heads of the two belligerents. He knew exactly what he was doing, and if Russia has shown herself incapable of fully appreciating his large-minded humanity, nay has even acted in a manner such as may almost be called a slight, that is not his fault. He has done the best that any potentate could have done. We may be quite sure that he understood what kind of risks he was running, and that history will honour him for braving them. If there be any fault it rests with the country which, having agreed beforehand to accept an invitation, essayed subsequently to abuse it on behalf of her own tarnished reputation.

#### MR. SAKATANI ON FINANCE.

At a meeting of the Boyeki Kyokai held on the 18th inst., Mr. Sakatani, Vice-Minister of Finance, delivered an interesting lecture. He said that the sums paid out hitherto on account of the war aggregated 850 million *yen*. It was remarkable that in spite of this great expenditure no economical disturbance had been experienced. Probably that result was attributable to two facts. One was that the Treasury had taken care to purchase as far as possible direct from producers without the aid of middle-men, and thus the money had been widely scattered among the people, who, in turn, found it convenient to subscribe for the State loans, and this inflow of funds into the provinces had greatly helped to avert distress from the families of the soldiers serving at the front. Moreover, by this system of direct transactions and speedy payments the Treasury had been able to get things comparatively cheap. Another factor which had prevented disturbance was the introduction of foreign capital, by which the gold standard had been kept stable. Mr. Sakatani saw no financial reason why the country should not be able to continue the war for a much longer period if necessary. As for the state of affairs after the war, he could not regard it with the same confidence unless the people, taught by the experiences garnered subsequently to the war with China, restrained the speculative tendencies they had then exhibited. In conclusion Mr. Sakatani remarked that the great obstacles to the development of the nation's foreign trade were dishonest merchants and adulterated goods. In connexion with this he mentioned the great success which was attending the Government's export of tobacco, simply because confidence had been established in the uniformity of the quality and the strict observance of contracts.

#### PRINCE HIGASHI-FUSHIMI.

His Imperial Highness Prince Higashi-Fushimi commands the cruiser *Chiyo-da* which, since the outbreak of the war, has been a part of Vice-Admiral Kataoka's Squadron. The *Chiyo-da* distinguished herself at the outset in an engagement with Russian destroyers in Pigeon Bay. There she was heard of in pursuit of the *Novik* and now she has been doing good work in the Battle of the Japan Sea. Yorihiro Prince Higashi-Fushimi's title would have been "Komatsu" had not the latter been confined to one generation when the name of "Higashi-Fushimi" was newly created. Captain Inuzuka, Aide-de-camp to the Prince, has published the following report:—"As long as his ship was performing scouting duties the Prince did not pass even one night in his cabin; he was always on the alert. When, on the 27th of May, the signal was made that the enemy's ships were in sight, His Imperial Highness showed great satisfaction. From 11 a.m. the squadron to which the *Chiyo-da* belonged was engaged enticing the enemy to the neighbourhood of the main body of our Fleet. Observing the bold advance of the Russian ships the Prince said:—'They certainly deserve praise for their courage in coming all the way from the West of Europe to fight in the far-east of Asia. This battle is vital for our country. Every man of us should go into the combat determined to win or perish.' As the enemy drew close he opened fire on us and kept it up until one in the afternoon, but his gunnery was so bad that he never got the range and his shells all dropped astern of our ship. Soon after this the main force of our fleet fell in with him and a general engagement ensued. The *Chiyo-da* was then pressing on the rear of the Russians. One of them was observed steaming south evidently with the intention of escaping. The *Chiyo-da* gave chase but on drawing up found that the vessel was a hospital-ship. Leaving her, therefore, our cruiser again bore down on the enemy's rear, and it happened that just then the *Illis* had fallen out of the line injured. The *Chiyo-da* opened on her at once and sunk her. Shortly afterwards, as she steamed back towards the Russians, she fell in with a section of his vessels in full retreat. She opened fire on them, but it seems that flight was their object, not fighting, for they pushed on at full speed and disappeared in the fog. Presently the *Chiyo-da* sighted the enemy's repair-ship *Kamchatka*, which had dropped back, being unable to get north. The cruiser opened on her at once, shot away her mast and set her on fire. She began to list, and Prince Higashi-Fushimi at once gave orders to leave her to the other vessels to deal with as she was evidently in a sinking condition, while the *Chiyo-da* turned her attention elsewhere. Soon she fell in with another of the enemy's ships and engaged it. A sharp duel ensued. The Russians' shells grazed the bridge of the *Chiyo-da* and many of them passed close over her. Finally the Russian vessel was silenced and an hour later she and the *Kamchatka* received their *coup de grace* from the Japanese torpedoers. The fight lasted from 2 p.m. until 7 p.m., a space of 5 hours, during which the Prince stood on the bridge all the while, his face black with the smoke from the guns. The next morning the *Chiyo-da* gave chase to the *Izumrud*, but the latter had the heels of her." They were two days of very "crowded life" and Prince Higashi-Fushimi acquitted himself in a competent and gallant manner.

## THE "ST. KILDA" AND THE "TETARTOS."

Friday, June 16.

The telegraphic news received by the Foreign Office with regard to the sinking of the British steamer *St. Kilda* is this:—The Dutch Mail steamer *Flores*, which arrived at Singapore on the 13th, carried a number of mail bags and 41 Chinese taken from the British steamer *St. Kilda*. The *Flores* had met the Russian auxiliary cruiser *Dnieper* off Diamond Point (north of Sumatra) on the 11th and had been ordered to stop. The *Dnieper* then transferred to her the mail bags and the Chinese. The latter stated that the *St. Kilda* left Hongkong on the 4th instant carrying mail matter from Hongkong and Singapore for Japan. On the same day at 4 p.m. she fell in with the *Dnieper* and was stopped. The *Dnieper* sent an officer to examine the British steamer's papers and cargo, which consisted principally of rice and provisions. She then ordered the crew to leave, and proceeded to transfer a quantity of provisions from the *St. Kilda* to her own hold. This operation lasted throughout the night and at 9 a.m. on the 5th the *Dnieper* sunk the *St. Kilda*. A part of the mail bags were broken open or destroyed. The master and the European members of the *St. Kilda*'s crew were detained on board the *Dnieper*, but the Chinese and the remaining mail matter were transferred, six days later, to the Dutch steamer which carried them to Singapore.

This *Dnieper* is the quondam *Smolensk*, which engaged in similarly lawless practices in the Red Sea last year. She is now acting as an undisguised pirate but flying the Russian flag all the while. It is unnecessary to dilate upon the gravity of this incident. If the particulars given above be confirmed, the Russian Government can not possibly uphold the action of the *Dnieper*. But how to stop her depredations is the question. She is a 19-knot vessel of over 5,000 tons, and very few steamers in these waters could catch her if she desired to show her heels. The *Rion*, her consort, is reported to have called at Batavia on the 14th and to have left again for Europe on the morning of the 15th, but the *Dnieper* has not been heard off since her last appearance off Diamond point.

Sunday, June 18.

A telegraphic inquiry addressed to the master of the *Tetartos* has elicited the fact that the steamer was sunk on the 29th of May at a point 100 miles east of Kiaochow. Her crew were transferred to the *Rion* and carried to Batavia. The *Fiji Shimpō* says that a special agreement exists between the owners of the steamer and the charterers (Osaka Shosen Kaisha), exonerating the latter from all responsibility. It will therefore be for the German Government to demand compensation from Russia. The *Tetartos* was flying a neutral flag, was carrying non-contraband cargo and was bound for a neutral port. Her sinking by a Russian cruiser under such circumstances was an act of piracy.

Tuesday, June 20.

Shanghai journals are reported to be writing very vehemently about the robbing of the *St. Kilda*'s cargo and the sinking of the ship, which acts they justly describe as piracy, pure and simple. They call upon the British Government to destroy these pirates and undoubtedly the British Government will do its duty. What accentuates the outrage, if anything could accentuate it, is that the *Dnieper* (ex-*Smolensk*), which perpetrated it, is the very vessel guilty last

year of similar indefensible acts, though on a much less wholesale scale, in the Red Sea, and is one of the very vessels concerning which the Russian Government promised to both England and Germany that there should be no repetition of such lawless acts. Germany, indeed, is affected just as much as England, for the sinking of the *Tetartos* was as piratical an act as the sinking of the *St. Kilda*. Another British steamer is now a week over-due at Yokohama. She was coming from British India with a cargo of raw cotton and it is thought that these auxiliary cruisers may have held her up and sunk her. The trouble in dealing with such matters is that the responsible Government can always repudiate the acts of the cruisers and can escape by paying compensation, for in the face of reparation of that nature no rational Power would go to war. No doubt can be entertained that the Russian Government will do whatever is right in the way of atoning to Germany and England, and there the matter will end so far as its international aspect is concerned, though many a generation must have come and gone before Russia can rehabilitate her reputation as a civilized observer of the laws of maritime warfare. The interesting question is, under whose instructions are the *Dnieper* and the *Rion* acting? It is not conceivable that their commanding officers when they separated from the Baltic Squadron on the 25th of May, went off forthwith upon a corsair cruise without any orders from Rojstvensky. They most assuredly had the explicit instructions of the Admiral, and these instructions must have been to harass the maritime trade of Japan in every possible way. Acting upon this commission they set out to sink everything against which even a suspicion of connexion with Japan could be entertained; British ships carrying food-stuffs to Yokohama from British ports, and German ships carrying timber from Japanese ports to Chinese. If Rojstvensky be in any way qualified to discharge the functions of a naval commander, he must have known well that such doings would have one of two results; either to embroil his country with the Powers thus flouted or to oblige the St. Petersburg Government to make humiliating explanations and reparation. Which outcome did he contemplate? Looking at his cognate violations of French neutrality in Indo-China, one is strongly tempted to think that Rojstvensky deliberately acted in obedience to his own knowledge of the policy approved by the Grand-Ducal clique in St. Petersburg, the policy of closing this war with a grand mêlée which would bring the whole world into the settlement and open a back-door for Russia's retreat. We recognise that there is much wildness in such a suspicion, and that far-fetched suspicions are generally at variance with the truth. But how are the extraordinary doings of Rojstvensky and his ships to be accounted for?

(RECEIVED AT THE FOREIGN OFFICE.)

The German steamer *Tetartos*, which left Otaru on the 23rd May for Tientsin, under charter to the Osaka Shosen Kaisha, fell in with the Russian Volunteer converted auxiliary cruiser *Rion* at 5 p.m. on the 28th May at a point 60° S.E. by S. from Shantung Promontory. She was first ordered to follow the Russian cruiser, but on the 29th at 7 a.m. she was sunk in long. 122° 4' E., lat. 36° N. Her crew were all taken off. Subsequently the *Rion* drifted in the fog for 6 days, for on the 3rd of June she visited a steamer which was on its way from Nagasaki to Shanghai. On the 4th June

she steamed at full speed southward, and arrived at Batavia on the 12th. The crew of the German steamer arrived at Singapore on the 15th. They say they were badly treated on board the *Rion*. Seven of the crew were Japanese.

Thursday, June 22.

The crew of the German steamer sunk by the *Rion* near Kiaochow Bay, 2 officers and 40 men—some accounts say 10 men—are said to be in the hands of the Dutch Authorities at Batavia. There is a conjecture that the detention of these people is for purposes of investigation, but if so the Dutch Authorities must be acting in deference to German desire, inasmuch as Holland is not concerned in this matter and the Batavian officials would have no right to detain the crew of a German steamer. Rumour speaks of another German steamer having been sunk by the same cruiser, but there are as yet no details. A correspondent writes to us expressing surprise that the Berlin Government has not yet taken any diplomatic action in the matter, but we find no difficulty in appreciating the reason. The Berlin Government has not yet been placed in full possession of the facts. His Britannic Majesty's Government received accurate information from Singapore, where the crew of the *St. Kilda* landed on the 13th instant, but the crew of the *Tetartos* did not reach Batavia until the 14th, and some time was therefore required for their examination and for the transmission of their evidence. It is not for a moment to be supposed that Germany will acquiesce in such an outrage. The serious aspect of the case, as we have already pointed out, is that it is almost impossible to imagine the commander of the *Dnieper* and *Rion* engaging in such operations without full instructions from Admiral Rojstvensky, and that the sinking of British ships at sea in the face of the Russian Government's distinct pledge that the Baltic Squadron would refrain from all illegal interference with neutral commerce, and in the face of the very strong remonstrances made last year in the case of the *Knight Commander*, assumes almost the character of a deliberate insult to the British flag. But of course the Russian Government does not contemplate anything of that kind and will not endorse it. There may be among the Grand Dukes a clique who see salvation in creating a general disturbance, and it may be that Rojstvensky was acting in accordance with his interpretation of these personages' policy. But conjectures of that kind are idle. Little doubt can be entertained that responsible Russian statesmen will disavow these outrageous acts of their agents, and will give due reparation as well as sufficient pledges. Should it prove, however, that the *Lily*, the *Esau*—both British steamers—and the American steamer *Nicholai*, have all fallen victims to the piratical depredations of the Baltic corsairs, a very large phial of wrath will be poured upon the head of unfortunate Russia, and she will have ample cause to rue more bitterly than ever the day when she sent the Baltic Squadrons on their mischievous and fatal errand.

Marquis Tokudaiji, Grand Chamberlain, paid a visit to Marquis Ito at 2.30 p.m. on June 20th conveying a message from the Emperor. Subsequently Marquis Ito proceeded to the Palace and was received by His Majesty in audience. On the same day, Count Kaisara, the Premier, and Marquis Yamagata, Chief of the Staff Office, were received by the Emperor.

## WAR EXPENDITURES:

Mr. Sakatani has just told us that the actual outlays thus far made on account of the war aggregate 850 million *yen*. This statement carries the account to the end of May, presumably, or a period of 16 months, and represents an average expenditure of 53 million *yen* monthly. But evidently an average struck under such circumstances is misleading, for the dimensions of the forces now in the field and consequently the expenditures entailed are very much larger than they were in the early months of the war. The *Keisai Zasshi* puts the average at 70 millions, but its calculation is based on the assumption that all the funds hitherto provided—namely 576 million *yen* in last fiscal year and 780 millions in the current year—will have been spent by the end of August next. There does not seem to be any solid basis for such a hypothesis. Talk has certainly been heard of summoning an extraordinary session of the Diet in August, in order to obtain a further appropriation of 300 million *yen*, which will probably be needed on account of several unforeseen outlays, as for example the maintenance of a large army of prisoners, the raising of the ships in Port Arthur, the re-arming of that place and so on. Apparently the project has been abandoned, but even had it been put into practice it would only have meant that 1,080 millions are expected to be spent by March 31st, 1906, instead of 780 millions as originally estimated. An outlay of 1,080 millions in 12 months represents 90 millions monthly, but if we extend the average over the whole period of the war, as our contemporary does, the resulting figure is 64 millions. One thing, however, is certain, namely that the Government's estimate for the current year was 65 millions monthly, and that if the war continues on its present large lines, these 65 millions may be found to have swelled to 90. If Japan's bills tot up to such figures, what must Russia's outlays be?

There appears to be a general sense of satisfaction with regard to the methods pursued by the authorities in purchasing war-stores. Mr. Tomatsu, Chief of the Quartermaster's Bureau of the War Department, has been disclosing some details of this matter. The great aim, he says, has been to avoid enriching individuals and impoverishing the localities. In pursuance of the former purpose middle-men have been eliminated, and in pursuance of the latter purchases have been made as direct as possible from producers and on the widest basis. Such methods were naturally opposed by the big merchants, but the Government persevered, and has now the satisfaction of knowing that it bought cheaply and that its expenditures helped to mitigate the distress caused by the enforced absence of so many bread-winners. Steps were taken also to give employment to domestic manufacturers, especially where household industry was concerned, and although the supplies thus obtained were necessarily insufficient, it is certain that much relief was afforded to the people. Mr. Tomatsu appears to think that these methods tended further to increase the country's power of taking up the war-loans, but it seems to us that, so far as the mere machinery of subscription is concerned, the proposition is open to doubt. What may certainly be assumed, however, is that these wise measures have promoted the general prosperity of the people to a degree seldom witnessed in war-time, as is shown by a

table which the *Keisai Zasshi* publishes with reference to bank deposits:—

Comparative Table showing Bank Deposits for each Month since the War began, the Figure for January, 1904, being taken as 100.

Month.	Tokyo Banks Union.	Osaka Banks Union.	Post Office Saving Banks.
1/04 .....	100	100	100
2/04 .....	101	97	98
3/04 .....	100	102	99
4/04 .....	100	97	99
5/04 .....	103	100	101
6/04 .....	106	94	107
7/04 .....	112	90	110
8/04 .....	118	96	113
9/04 .....	110	99	117
10/04 .....	111	99	119
11/05 .....	107	106	121
12/05 .....	109	107	122
1/05 .....	111	111	125
2/05 .....	112	111	128
3/05 .....	116	113	131
4/05 .....	123	Not yet known.	132

This table seems to indicate a steady growth of the people's wealth in spite of the sums contributed to the war loans. We say "in spite of the sums" because that is a common expression, but the truth is that only a fraction of those sums has left the country and that it has been more than compensated by foreign loans. What the table demonstrates more unequivocally is that the burden of increased taxation is not weighing too heavily on the people.

On the other hand the accommodation sought from the banks has not been large, and the fact suggests a certain measure of stagnation in the world of affairs. Probably here too the Government's policy furnishes some explanation; for, on the one hand, the copious scattering of money throughout the country, and, on the other, the encouragement given to household manufactures, may well have tended to satisfy a demand which must otherwise have been carried to the banks.

In one direction we find the Government's policy criticised. The *Keisai Zasshi*, for example, claims that instead of bringing over the produce of the foreign loans in specie and adding it to the hard-money reserves of the Central Bank, a better plan would be to employ the indirect method of buying importers' bills. Critics who take this line argue that an increased issue of convertible notes accompanies the Treasury's method, with the result that prices are raised, imports are encouraged, and a drain ensues upon the Bank's specie reserves. In short the attempt to keep up the reserves is defeated by the creation of a state of affairs entailing other mischief also. This is a very large subject. We do not see how it can be intelligently discussed without much fuller data.

## NAVAL NOTES.

Japanese journals write in a tone of some surprise about the *nonchalant* behaviour of certain members of the *Orel's* crew and medical staff who recently arrived at Nagasaki from Saselie en route for home. We read that one remarkable feature was the quantity of baggage possessed by these people, and another that among their impedimenta were a number of nurses, for the most part highly attractive ladies of about 20 years or thereabouts. That is all right, of course. The voyage from the Baltic to Vladivostok, or to the submarine station where several of the ships stopped short of their goal, was an affair of many months, and the staff of the hospital ship naturally

provided themselves with an ample equipment; while as for the nurses, all that need be said is that to be attractive is a habit with ladies of twenty. But our contemporaries go on to relate that several of the Russians, when they found themselves at Nagasaki, immediately hastened to seek amusements which did not accord with their situation. Can one greatly wonder? Human nature asserts itself under all circumstances, and we may charitably suppose that these Russians deemed it not unreasonable to solace themselves with the delights of Nagasaki—which is a very delightful place—after the comparative privations of their long voyage and the chagrin of the crushing defeat their country had just suffered.

Admiral Rojestvensky is reported to be progressing steadily towards recovery. Some splinters of bone have been removed from the wound on his head, but there are some others still to come away.

A steamer called the *Kubaben* (?), chartered by the Tanimichi Transport Company of Tokyo and carrying fish manure from Mashike in Hokkaido to Yokohama, ran on a rock at a place about a mile from the light-house of Shiriya-saki in Awamori Prefecture on the 14th instant. Eight foreigners, 26 Chinese and 8 Japanese who were on board, reached the shore. The accident was due to a thick fog.

The repairs of the battle-ship *Orel* will require some short time, but the other four captured ships can put to sea almost immediately, and their officers have been appointed.

The principal medical officer of the *Sado Maru* describes the saving of the crew of the *Admiral Nakhimoff* on the 28th of May. When the *Sado Maru* came in sight of the big (8,500 tons) Russian cruiser, she was observed to be deep down by the head. Boats had been lowered, but many of her crew were swimming in the sea, and some were clinging to ropes. The destroyer *Shiranui* was already busy saving life. Shortly afterwards the *Vladimir Monomakh* was sighted in a similar condition, but the duty of saving her people was left to the *Manchu Maru*, which was then actually engaged in the work. The *Sado Maru* picked up 26 officers, 9 petty-officers and 489 blue-jackets including 15 wounded, 2 of whom died almost immediately. Many of the Russians were in a most exhausted condition and no small trouble had to be exercised in restoring them.

Floating mines continue to be a constant menace to vessels navigating the North-China Seas. It is stated that ships bound for Yingkow or other ports in the Gulf of Petchili, never travel singly but always in pairs, so that one can act a saviour in the event of the other's destruction. They are supplied with rifles and 250 rounds of ammunition, but their crews not being skilled in the use of such weapons, do not make very effective practice. One vessel which recently entered Yingkow reports having seen six floating mines and having fired away all her ammunition at them fruitlessly. On her outward voyage she sighted 3 mines and blew up 2 of them. The situation has been complicated by the sinking of Russian war-ships off the coast of Iwami, as one of these ships is said to have carried 100 mines.

Japanese newspapers state that Rear-Admiral Uryu applied for permission to take his detachment of ships up the Yangtze for

the purpose of assuring himself as to the state of affairs. Viceroy Chou, however, considering that such a course would provoke complications under the circumstances of the time, decided to submit the application to the Waiwupu in Peking. We think it very improbable that Admiral Uryu made any such application.

Nothing has yet been heard of the missing steamer *Esan* (British) which left Singapore on the 4th of May with a cargo of rice for Japan. Another steamer—apparently called the *I. Nicholson*—which left Philadelphia on the 11th of February and passed Bangkok on the 10th of April is also missing. If we add to these the *Claverdale* and the *Victoria*, there results quite a list of vessels which may have been "held up" by the Russians. But it is to be noted that whatever the Russians may do to a neutral ship, they can not sink her crew in the sea, and there has never yet been any instance of a vessel's fate remaining unknown inasmuch as the existence of her crew has always furnished a clue.

We acknowledge receipt from the Navy Department of a copy of the report on the health of the Imperial Navy for the year 1902, compiled by Baron Saneyoshi, Chief of the Bureau of Medical Affairs in the Department. It forms a most interesting collection of statistics.

Admiral Togo has conferred *Kanjo* on the following officers:—

Lieutenant Kamada of the destroyer *Shirakumo*,  
Commander Ishida of the cruiser *Izumi*,  
Commander Eguchi of the cruiser *Chihaya*,  
Commander Hirose of the Hirose Destroyer Section,  
Commander Suzuki of the Suzuki Destroyer Section,  
Lieut.-Commander Fujimoto of the Fujimoto Destroyer Section,  
Lieut.-Commander Fukuda of the Fukuda Torpedo Section,  
Lieut.-Commander Aoyama of the Aoyama Torpedo Section,  
Lieut.-Commander Kawada of the Kawada Torpedo Section,  
Commander Kawase of the Kawase Torpedo Section,  
Lieut.-Commander Otaki of the Otaki Torpedo Section,  
Lieut.-Commander Aiba of the destroyer *Sazanami*,  
Lieut. Yoshikawa of the destroyer *Kagero*.

It is stated that operations have been commenced for raising the special-service steamer *Itis* which sank off Tsuno-mura on the coast of Iwami. This is the steamer said to have been carrying a hundred mines in her hold. Whether the attempt to raise her is in order to get rid of the mines or to save the ship, we do not know. She is a steamer of 7,507 tons.

#### KOREA.

Thirty-five Koreans have been killed by the explosion of a Russian torpedo which they fished out of the water and were examining. This shocking incident occurred at Ulsan.

Li Yongik appears to have recovered some if not all his influence in Seoul. He is said to have obtained control of the Household's finances and complications have arisen in consequence. Recently rumour assigned to him a somewhat arbitrary act; namely, the appointment of four refugees to positions under the Government, having previously obtained their pardon at the hands of the Emperor. This led to trouble in the Cabinet, and now there is trouble among the officials of the Household. The Japanese Minister, who evidently makes it a rule to interfere as little as possible in matters relating to the personnel of the Administration, is reported to have hinted the advisability

of checking the machinations of this gentleman who causes so much commotion in the sphere of Korean politics.

Some Japanese journals say that Mr. Mochizuki Riutaro, a Japanese subject, has obtained from the Emperor of Korea a charter which constitutes him virtual monopolist of all industrial and commercial undertakings in the island of Quelpart. This island has very productive fisheries along its coasts. Quite a considerable Japanese colony has grown up there—from 500 to 600 houses, whose occupants devote themselves almost exclusively to fishing. Fine oranges and mushrooms are also produced; there are good pasturages for horse-breeding, and some wealth of timber is also said to exist. Nothing is stated as to the consideration given by Mr. Mochizuki for this important concession, but rumour alleges that, according to his own assertion, he has no liability whatever beyond the payment of taxes, and is not required to hand over any royalties on such enterprises as he may undertake.

Concerning the Russians in Korea they are said to have retreated precipitately. It will be remembered that three thousand of them were recently reported to have assembled at Kyongsong and to be threatening a forward movement. It will also be remembered that they have been assembling at various points in north-eastern Korea and threatening forward movements during more than a twelvemonth. Once they pushed south very nearly to Yuensan, but they never made anything like a resolute stand in the presence of attack, and indeed their doings on the whole have been singularly futile. It has often been pointed out that an invasion of Korea from the direction of Possiet Bay could not possibly succeed, or even be essayed, unless the maritime flank of the invasion were covered, in other words, unless the Russians had command of the sea. That consideration combined with a knowledge of the fact that these frequent irruptions southward were never supported by any large reserves in rear nor supplemented by commissariat arrangements, led the Japanese to treat this menace with a degree of contempt which has been amply justified by events. The news now is that the Russians have hastily withdrawn to the Tumen, and the reason assigned for their retreat is the destruction of the Baltic Fleet, which catastrophe places the entire command of the coast-line in Japanese hands.

#### RELIEF FUNDS.

The Rev. C. Warren Clark, one of the early English instructors in Japan, though not so early or so celebrated as the great triumvirate Verbeck, Hepburn and Brown, has written a little book called "Katsu Awa, the Bismarck of Japan." Every one at all familiar with Japan's modern history knows something about this truly wonderful Katsu Awa. It fell to his lot to make one of the most momentous decisions on record, the decision whether the Tokugawa clan should fight for the maintenance of the administrative sovereignty enjoyed by them during nearly three centuries, or whether they should surrender it quietly to the Mikado's party. Perhaps it is misleading to speak of the power of decision resting with Katsu. The fact is that he possessed only the power to advise. But without his advice there can be no doubt what the Tokugawa's choice must have been, and without his grand courage and extraordinary tact such counsels as he gave could never

have been carried into practice. It is of this man, one of the most profoundly astute and heroic in the drama of the Japanese Restoration, that we have now an appreciation from the pen of Mr. Clark, who knew him intimately and has many reasons to remember him with gratitude and admiration. The little book, which costs only fifty *sen*, is well illustrated and has much to commend it to every one desirous of studying the remarkable story of modern Japan. It has also another title to public favour. It was written by Mr. Clark in order that the proceeds of its sale might swell the income of the "Japanese Orphan Relief Fund" which appears to owe its origin to the Very Rev. Bishop Harris of Tokyo, and of which the special committee in Japan consists of Bishop M. C. Harris and the Rev. Y. Honda, of the Methodist Episcopal Church, Tokyo; Rev. J. Chappell, Sendai, and Rev. J. Lindsley Patton, Kyoto, Protestant Episcopal; Rev. James H. Pettee, D.D., and Mr. I. Ishi, Okayama Orphanage, Congregational; Rev. T. M. MacNair, Tokyo, Presbyterian; Rev. J. L. Dearing, D.D., Tokyo, Baptist; and Rev. James H. Ballagh, Yokohama, Dutch Reformed.

These gentlemen, well known in connexion with missionary work, rightly think that the present is eminently a time to practise the Christian charity which they preach, and that succour given now to the widows and orphans of the brave men who are sacrificing their lives beyond the sea for their country will be received with deep gratitude. They have already collected and distributed considerable sums, but the need is immense and the hearty co-operation of all is required to satisfy it even in part. A thousand *yen* have thus far resulted from the sale of Mr. Clark's book. It should find many readers in Japan, as the cause in which it was written should find many contributors.

#### DEATH OF MR. KOMUCHI TOMOTSUNE.

The death is announced of Mr. Komuchi Tomotsune, a well known politician of Progressist persuasion and a prominent member of the Lower House. He held the office of Chief of the Legislative Bureau under two Cabinets, and has been much before the public as a founder of the *Tai-Ro Doshikai*. During a recent visit to Korea he contracted inflammation of the lungs which finally carried him off at the age of 57.

#### THE PEST.

There have been no less than 12 cases of pest in the Fukagawa suburb of Tokyo since April. Moreover the carcass of a rat showing the bacillus was recently found in the Kanda district. The Tokyo Municipality's Hygienic Authorities have issued a warning, enjoining various precautions which are described in detail.

An official telegram states that on June 15th, a fresh case of plague appeared in the district of Ayanta, Kagawa prefecture, and one of the previously reported cases ended fatally.

The Home Department has received a telegram from Formosa to the effect that on June 14th, two fresh cases each were reported in Taipei, Yeyan, Teckcham, and Yensui; and eight of the cases already reported resulted fatally. Since the first appearance in January up to the present, 2,260 cases have been reported in the island and 1,964 of the cases proved fatal.

In Mannen-cho, Fukagawa, Tokyo, a fresh case has appeared. The patient is a youth named T. Takamori an employee of a *sake* merchant.

## A GOLDEN WEDDING.

Golden Weddings are unique in any of earth's transitory communities, but more particularly in such a place as Yokohama, where the resident foreign population is so small and in such a state of perpetual flux. Yet twice in its short history have such interesting events been celebrated here. The first was some years ago, when the venerable Dr. and Mrs. Hepburn commemorated the jubilee of their happy marriage by a unique gathering of friends; the second Golden Wedding of Yokohama residents was celebrated on Wednesday by Mr. and Mrs. H. J. Vincent. Mr. and Mrs. Vincent arrived in Japan in 1864, and have been resident here ever since. Born at Salisbury in 1830, Mr. Vincent was married at St. Anne's Church, Belfast, on June 21st, 1855, to Miss Elizabeth Wood, who was born in that city in 1835. Mr. Vincent, we might mention, in 1854, had been to Malta with the 62nd Regiment, going thence from Fermoy, and returned on promotion to Ireland. At the time of his marriage he was on the staff of a Depot Battalion, as Quarter-Master Sergeant, and was then stationed at Mullingar, serving there for about two years. On the battalion being ordered to Templemore, Mr. Vincent was transferred to the 2nd Battalion, 20th Regiment, which had been raised in the Emerald Isle in 1858. The battalion went to England in 1861, and in 1863 proceeded to India. Arriving at Calcutta they found orders awaiting them to proceed at once to China. They remained there only a few months before moving on to Japan, where they arrived in 1864, with Mr. Vincent as Sergeant-Major. The 20th remained here for two years, and on its leaving Japan, being relieved by the 10th Regiment in 1866, Mr. Vincent resigned the service, declining the commission which awaited him at Hongkong. To show the esteem in which Mr. and Mrs. Vincent were held by their old regiment we might mention that each received handsome presents from the officers, non-commissioned officers and men; while the speeches made at the farewell dinner given to them filled three columns of the *Japan Herald* of that day. Mr. Vincent subsequently joined the British Consular service, being superintendent of the gaol for many years.

Mr. Vincent has not left Japan since first he came here, except for a flying trip to Hongkong, in 1870, but Mrs. Vincent has paid several visits to the old country. She has, indeed, been a great traveller. At the age of two she journeyed from Ireland to Australia, returning to the Emerald Isle when ten years old, on the death of her father. Those early voyages were made in sailing ships, one of which was the well-known clipper packet *Herald*; another adventurous trip was by camel train from Cairo to Suez before the Suez Canal was cut. Mr. and Mrs. Vincent's family, who were all educated at home, are now rather widely separated. Two sons are in Japan, another son is Senior Physician to the Wadsworth Asylum, Yorkshire; one married daughter is in Yokohama, another in Canada, and the youngest is at present paying a visit to England.

Mr. and Mrs. Vincent were "At Home" at their residence, No 31, Bluff, on Wednesday afternoon, Mrs. Vincent being assisted in receiving her numerous guests by her daughter, Mrs. J. W. Cain, while the honours of the tea-tables were gracefully performed by her elder grand-daughters, the Misses Muriel and Edith Cain, and other ladies. The

house and beautiful gardens were all thrown open to accommodate the large number of friends who came to extend their felicitations during an afternoon, which, though windy, was ablaze with golden sunshine. Innumerable baskets of flowers sent by friends bedecked the spacious rooms, the predominating colour, needless to say, being emblematic of the happy event, while one floral scheme carried out the dates 1855-1905. The following selections of music were given during the course of the very enjoyable proceedings:—

PIANO DUO....."The Hebrides".....Mendelssohn.  
Mrs. A. BELLAMY BROWN and Mr. KARL VINCENT.  
SONG....."Caro Mio ben".....Gordani.  
Miss MENDELSON.  
VIOLIN SOLO....."La Serenata".....Braga.  
Mr. C. H. THORN.  
SONGS....."Heart, My Heart".....  
"The Butterfly,".....  
"On my couch reclining".....Karl Vincent.  
"No Confession,".....  
"Softly through my Soul,".....  
Mrs. E. C. IRVINE; Violin obligato, Mr. C. H. Thorn.  
SONG....."Hushen".....Alicia Needham.  
Mrs. G. W. BROCKTHURST.  
SONGS....."The Yeoman's Wedding".....Poniatowski.  
"Echo".....Lord Henry Somerset.  
"Promise of Life".....Cowen.  
Mr. S. H. SOMERTON.  
PIANO-SOLO....."Golden Wedding Memories".....Vincent.  
Mr. KARL VINCENT.  
"God Save the King."

In addition to gifts from members of the family, a very handsome and ornate piece of enamelled gold plate was presented to Mr. and Mrs. Vincent by a number of their friends. Made in Kyoto of what is known as *Zogan* work, this, a salver or tray, bears on its inside face a number of landscape scenes, executed in the best style of the western capital. Some haste had to be employed in order to ensure the completion of this charming and appropriate testimonial and it was not found possible to engrave any words upon it. A suitable inscription will, however, be added later on. This mark of respect and esteem was duly presented to Mr. and Mrs. Vincent by Mr. John Griffin, one of their oldest friends, on behalf of the subscribers but no set ceremony was observed on the occasion, owing to the advanced age of the recipients.

## CHINA.

The rumour that the Chinese Government is endeavouring to bring about a conference of the Powers to discuss the settlement of the Manchurian problem, evokes a very strong comment from the *Yomiuri Shinbun*. Our contemporary asks why China did not take this course at the outset when Russian trespasses in Manchuria were flagrant, and when there was every prospect of the Three Provinces being swallowed up by the great Northern Power. The situation might have been saved and the war averted had China done so. But she effaced herself, stood timidly aside, and left Japan to fight single handed. With what sort of conscience, then, can she now invite the nations to discuss and settle a matter over which Japan, by lavish outlay of blood and treasure and at the risk of her own existence, has acquired the right to be arbiter? It really seems as though China had studied the trickiness of Russia and were modelling herself on the lines of her exemplar.

It is almost quaint to find China to-day resorting, as a matter of self-defence, to the very measures which she once opposed so strongly when they were urged upon her by foreign States, namely the building of railways and the opening of ports. Rumour

says that she now contemplates the opening of several important towns in Mongolia, and that she has determined to construct a line from Peking to Changkiakou, carrying it thence to Kulung, where, it may be remarked *en passant*, the Dalai Lama still lingers. These steps, it goes without saying, are dictated by the menace of Russian aggression, which, having been checked in Manchuria, is obviously turning towards Mongolia. Russia stoutly opposed the opening of Antung, Tatum and Mukden to foreign trade, and she is now endeavouring to prevent the opening of Kulung, Ili, and so forth. But the Chinese Government seems to have concluded that it must be now or never. A great many people will point the finger of scorn at this apparently belated enlightenment on China's part, but China has only to point to her own history by way of reply. Once in the period covered by the world's authentic annals China was the most liberal and the most tolerant of all States. She was constrained to become conservative and distrustful, contrary to her own inclination, and if she reverts now to her old mood, who shall ridicule her?

The report of S. C. Farnham, Boyd & Co., for the year ending the 30th of April last shows a divisible balance, after payment of an interim dividend of 5 per cent, of Tls. 576,524. It will be noted that in the total assets, stated at Tls. 7,455,033, is included a sum of Tls. 329,872, cash in Hongkong and Shanghai Banking Corporation.

The first ordinary general meeting of the shareholders in the Weihaiwei Gold Mining Company, Limited (1905), was held at 10, Peking Road, Shanghai, on June 13. Mr. E. S. Little presided. The chairman proceeded to make a statement as to the present position of the Company. He said that they had every reason to hope for good things. If they stood by the property and workings the shareholders would be rewarded for the confidence they had in their mine. The further they developed, the more hope they had of good returns. Of the 20,000 shares, 2,500 alone had not been taken up.—Mr. Duff said he thought the developments at the mine very encouraging; everything looked brighter as they went further. There was never better ore came out of a mine than that produced at the meeting, and if they had five or six feet of such the shareholders would soon receive dividends.

News was received in Shanghai on June 13th that the first locomotive, drawing the inspection train of M. Jadot, the Chief Engineer of the Pei-Han Railway, crossed the Yellow River bridge on Sunday, the 11th instant. The bridge, which is 3,010 metres in length, was commenced in January 1904, and it is expected that it will be opened to general traffic in November next.

On the 9th inst. in the Hongkong Supreme Court, Dodwell and Co., Ltd., sued Mr. E. J. Moss for \$54,631, balance due on the liquidation of Dodwell, Carlill & Co. The case was undefended, and the Chief Justice, Mr. F. T. Piggott, gave judgment for the plaintiffs with costs, a request being made to the Consul at Foochow to effect execution there.

The report of the *Shanghai Mercury* Ltd., for the year ending the 30th of April last, shows a divisible balance of Tls. 6,410, after paying an interim dividend of 4 per cent., writing off Tls. 4,296 for depreciation and Tls. 2,000 from goodwill. It is proposed to pay a final dividend of 5 per cent, making 9 per cent for the year, and carry forward the balance, Tls. 1,170.

It is reported that Rear-Admiral Sah, second in command of the combined Peiyang and Nanyang Squadrons, has been appointed by the Throne, on the recommendation of Viceroy Yuan Shih-kai, Special Commissioner to watch the Grand Manoeuvres of the various Continental

armies this summer and autumn. Admiral Sah will take with him a number of young officers, graduates of the Naval and Military Academies of Tientsin and Nanking.

A telegraphic dispatch from Peking reports that the Shangpu and the Waiwupu have received telegrams from a large number of influential merchants and gentry of Canton and cities between that and Kowloon, strongly opposing the desire of a certain British syndicate to build a line between the two points, and claiming that the work should be done by Chinese capital alone.

Hongkong's working account for the first quarter of this year shows a surplus of \$800,515.

The sailing ship *Travancore* has been safely towed into Hongkong. A few of her plates were buckled, and she had almost filled with water through the opened rivet holes and plates. These were plugged by a diver, and the water was pumped out.

### THE NEUTRALITY QUESTION.

We take from the leading columns of *The Times* certain extracts which may be commended to the attention of those who endeavoured on purely technical and paltry grounds to establish the legality of the liberty given to Russian war-ships in French territorial waters in April and May:—

It is the opinion of the best naval experts that, without the facilities which the Baltic Fleet has enjoyed in French waters all through its long Odyssey, it could never have reached the Far East at all. At any rate, it is an undeniable fact that it was its long sojourn at Madagascar that gave time for Rogjensky to be reinforced by the second home squadron, and now that he is nearing the scene of decisive operations it is again under shelter of another French colony that he is not only making his final preparations for action but awaiting the arrival of yet another squadron to reinforce him. We ask any reasonable Frenchman to put himself for a moment in the place of the Japanese and to say whether these circumstances do not constitute very strong justification for the anxiety and resentment which are being manifested in Japan. The efficiency of a nation's discharge of its duties as a neutral power must be judged by results, and not merely by the text of specific regulations. If, without any technical breach of such regulations, one of the belligerents can defeat their whole purpose, then the only conclusion to be drawn is that those regulations are inadequate, and other means must be found to fulfil an imperative duty.

We may fairly ask the French, should any amongst them still feel tempted to pooh-pooh Japanese opinion as extravagant, to consider what would be their own feelings and their own language in similar conditions. Suppose the fate of France, for generations to come, hung upon the issue of a naval battle, and that the enemies of France sought and found in a succession of British harbours hospitality of the same extent and kind which the various divisions of the Baltic Fleet have been finding in a succession of French harbours from Brest and Cherbourg to the coast of Annam. What would be their sentiments, what their words, what their attitude towards the Power who gave their enemies the means of threatening them with destruction?

The complaint of the Japanese is the broad complaint that France has allowed the "asylum" which she may legitimately afford to the belligerent ships of Russia to be abused, so that Russia has in fact used French waters and French territories as a base of operations against Japan. That this is the nature of the charge is clear from a weighty letter which Professor Holland sent us more than a fortnight ago. He admitted in that letter, as all well-informed persons know, that the 24 hours' rule is not a rule of international law, though it is a rule of English municipal law, and though it was accepted by several other Powers, and notably by Russia herself during the war of 1898. But he also drew attention to the words of the French proclamation at the beginning of the present war, which provide, amongst other things, that no belligerent may use a French port "dans un but de guerre"—for purposes of war—and which further lay down that belligerents sojourning in such ports may not make use of them "as the base of an operation of any kind against the enemy." Have we not the Russians used Jibuti, Madagascar, Kamarin Bay, and Honkobe Bay "dans un but de

guerre"; have they, or have they not, used them as the bases of operations directed against Japan?

That is the real issue in a nutshell, and "upon the merits," as our lawyers say, there can be but one opinion on it. We have no wish whatever to engage in a polemical discussion with our contemporary the *Temps*, for whose moderation and good sense we entertain a high regard, but we must altogether protest against the contention it advances that France is being criticized because she does not observe the British rules of neutrality. She is being criticized, not because she fails to observe our rules, but because if the main facts alleged are even approximately true, she has failed to observe the principles which underlie our rules and all other rules, and which as Professor Holland has shown, are the basis of her own proclamation. It is submitted that she ought to have taken the steps, which she is now said to be taking, within a reasonable time after the Russian Admiral's arrival, and not to have deferred them until his coaling and provisioning operations were almost completed, and his colleague was almost in touch with him.

### NOTES ON CURRENT EVENTS.

When war threatened to break out between Russia and Japan, the veteran soldier, General Dragomiroff, whose military reputation stands higher than that of any other Russian, was understood to have raised a warning voice and spared no effort to avert a conflict of which his remarkable insight made him doubt the results from his country's point of view. The public was therefore surprised when, some months ago, this same General was widely quoted as declaring that, taking for precedent some of the great combats of mediæval Europe, this war might very well continue for ten, twenty, thirty, or even fifty years, and that, rather than confess defeat, Russia should deliberately contemplate such continuance. Presently also General Dragomiroff was represented as having urged that the Imperial Guards should be sent to Manchuria, and altogether from having been originally a moderate statesman, he was now depicted in the light of an extreme jingo. People wondered, but the statements were so confident as to preclude any hypothesis other than a complete change of front on the part of the old General under the influence of patriotic dementia. It appears, however, that there was another explanation; the explanation that General Dragomiroff had never said any of the things attributed to him, and that the canard-monger had been taking unusual liberties. The General has written to *Le Temps* declaring that such is the case. Of course he does not undertake to set forth his views about the war, but he does most explicitly deny that he ever entertained or uttered the views attributed to him, and he plainly hints that they were falsely put into his mouth by persons interested in obtaining currency for such opinions. The reference is, of course, to the war party. We are to conclude that these men, who for long have acted as arbiters of Russia's fortunes, do not shrink from devices generally monopolized by the fraudulent stock broker.

We read in Japanese papers that on the 9th instant Lady MacDonal was received in private audience by the Empress, when she conveyed to Her Majesty information that a sum of 26,797 yen had been contributed by English ladies to the Japanese Soldiers Relief Fund. Lady MacDonal and her friends in England, many of whom have visited Japan, were instrumental in collecting this handsome sum.

Mr. Wakatsuki, chief of the Taxation Bureau in the Finance Department, speaking at a meeting of the Trade Society a few days ago, noted the fact that the present con-

ventional tariff expires in the 42nd year of Meiji—5 years hence—and that already for a long time the authorities have been conducting investigations with a view to the new tariff. One of the main questions was whether the conventional tariff should be completely abolished or whether in certain cases it ought not to be preserved. Presumably Mr. Wakatsuki here referred to the expediency of having something to exchange with countries which impose protective duties. More immediately pressing was the Russo-Japanese commercial treaty which would have to be revised after the war. It would then be necessary to consider what conventioned rates should be imposed on sugar and kerosene which constitute the staple imports from Russia. (This part of Mr. Wakatsuki's speech is so ill-reported that we can not clearly follow his reasoning.—Ed. J.M.)

The Bank of Japan has raised its rate of interest 2 *rin* daily. This step is attributed to a keen demand for money now beginning to be felt. The Tokyo press approves of this step.

Hitherto the garrison of Saghalien has been spoken of as numbering six thousand men, but there is now talk of some reinforcements having been sent—nothing very formidable, however; only two or three companies.

It is stated that a battalion of the Cronstadt garrison troops, which left Russia in March, has arrived at Vladivostok. What detained them so long *en route* we do not know. Steps are being taken to increase the defences of the fortress, and it is added that two companies of torpedo corps and two battalions of sappers have re-inforced the defenders. Several of the *Bogatyr's* guns are rumoured to have been mounted in the forts, from which we infer that, in spite of many reports to the contrary, the repair of the cruiser has never been effected.

Prince and Princess Arisugawa have been making some stay at Hamburg. They left that place for the Hague on the 15th, whence they will proceed to Brussels, and embark at Ostend on the 20th for England.

Since the beginning of the War the Japanese have purchased 230,000 tons of shipping, and 156,000 tons have been chartered to replace the vessels requisitioned for the public service. Moreover, 140,000 tons have been captured, and since the ships destroyed and lost aggregate less than 60,000 tons, there has been a nett increase of 450,000 tons as compared with the period immediately preceding the war. It is also noticed by the *Shogyo Shimpō*, from which we take these figures, that whereas the entrances and clearances of foreign owned ships in Japanese ports showed a decrease of 60 per cent. during the war—the calculation extends to the end of May—there was an increase of 20 per cent. in the quantity of goods moved, which shows that great activity must have prevailed in Japanese shipping circles.

Mrs. Robert Ogden Doremus, died at her home, No. 80 Madison Avenue, New York, on May 21, aged 76. Mrs. Doremus was Estella Skidmore, whose father had served as a gunner in the American Revolution. Mrs. Doremus was thus the only real daughter of the American Revolution, and the only one in the New York chapter. She was married to Dr. Doremus in 1850. Mrs. Doremus is survived by her husband, by her three sons, and by her daughter.

OFFICIAL REPORT OF THE BATTLE IN THE  
SEA OF JAPAN.

(CONTINUED.)

FIGHT OF THE DEWA, URYU AND TOGO (CAPT.)  
SECTIONS AND OF THE CRUISER SQUADRON.

At 2 p.m., when the order to open the fight was given, the Dewa, Uryu and Togo Sections and the Cruiser Squadron, separating from the Main Squadron, steamed back south keeping the enemy on the port bow. In pursuance of the strategical plan already laid down they proceeded to menace the vessels forming the enemy's rear, namely, the special-service steamers and the cruisers *Oleg*, *Aurora*, *Svetlana*, *Almas*, *Dimitri Donskoi*, and *Vladimir Monomakh*. The Dewa and Uryu Sections, working together in line, reached the enemy's Cruiser Squadron, and steaming in a direction opposite to his course, engaged him, gradually passing round his rear and emerging on his starboard, where the attack was renewed on parallel courses. Then, taking advantage of their superior speed, these sections changed front at their own convenience, sometimes engaging the enemy on the port side, sometimes on the starboard. After 30 minutes of this fighting the enemy's rear section gradually fell into disorder, his special service steamers and war-ships scattering and losing their objective. At a little after 3 p.m. a vessel like the *Aurora* left the enemy's rank and approached our ships, but being severely injured by our heavy fire, she fell back. Again, at 3.40 p.m., three of the enemy's destroyers sallied out to attack us but were repulsed without accomplishing anything.

The result of this combined attack by the Dewa and Uryu Sections was that by 4 o'clock there had been a marked development of the situation, the enemy's rear sections being thrown completely into disorder. Ships in this quarter had fallen out of their formation, all seemed to have suffered more or less injury and some were seen to have become unmanageable.

The Uryu Section, at about 4.20 p.m., seeing one of the enemy's special-service steamers (probably the *Anjier*), a three-master with two smokestacks, which had become isolated, at once bore down on her and sunk her. This Section also fired heavily on another special-service steamer, a four-master with 1 funnel (probably the *Ilus*), and nearly sunk her.

About this time our Cruiser Squadron and the Togo Section arriving on the scene, joined forces with the Dewa and Uryu Sections, and all working together pursued and attacked the enemy's disordered Cruiser Squadron and special-service steamers. While this was in progress, four of the enemy's war-ships (perhaps the coast defence vessels), which had been forced back by our Main Squadrans, came steaming south and joined his Cruiser Squadron. Thus the Uryu Section and our Cruiser Squadron became heavily engaged with these for a time at short range and all suffered more or less, but fortunately their injuries were not serious.

Previously to this, the *Kasagi*, flag-ship of the Dewa Section, had been hit in her port bunker below the water-line. As she made water, it became necessary for her to proceed to a place where the sea was calm in order to effect temporary repairs. Rear-Admiral Dewa himself took away the *Kasagi* and the *Chitose* for that purpose, and the remaining ships of his section passed under the command of Rear-Admiral Uryu. At 6 p.m. the *Kasagi* reached Aburaya Bay, and Rear-Admiral Dewa transferring his flag to the *Chitose*, steamed out during the night, but the *Kasagi's* repairs required so much time that she was not able to take part in the pursuit the following day. The flag-ship *Naniwa* of the Uryu Section also received a shell below the water-line astern, and at about 5.10 p.m., she had to leave the fighting line and effect temporary repairs.

Alike in the north and in the south the enemy's whole fleet was now in disorder and had fallen into a pitifully broken condition. Therefore at 5.30 p.m., our Armoured Cruiser Squadron separated from the Main Squadron and steaming south, attacked the enemy's Cruiser Squadron. At the same time the

enemy, forming a group, all fled north, pursued by the Uryu Section, the Cruiser Squadron and the Togo Section. On the way, the enemy's battle-ship *Kniaz Suvaroff*, which had been left behind unmanageable, as well as his repair-ship, *Kamchatka*, were sighted, and the Cruiser Squadron with the Togo Section at once proceeded to destroy them. At 7.10 p.m. the *Kamchatka* was sunk, and then the Fujimoto Torpedo Section, which accompanied the Cruiser Squadron, steamed out and attacked the *Suvaroff*. She made her last resistance with a small gun astern but was finally struck by two of our torpedoes and went down. This was at 7.20 p.m. Very shortly afterwards our ships in this part of the field received orders to rendezvous at the Ulnung Islands, and subsequently we ceased fighting and steamed to the north-east.

FIGHT OF THE DESTROYER AND TORPEDO  
SECTIONS.

The fight during the night of the 27th began immediately after the battle during the day had ceased. It was a vehement and most resolute attack by the various destroyer and torpedo sections.

From the morning of this day a strong south-west wind had raised a sea so high that the handling of small craft became very difficult. Perceiving this I caused the torpedo section which accompanied my own Squadron to take refuge in Miura Bay before the day-fighting commenced. Toward evening the wind lost some of its force but the sea remained very high and the state of affairs was very unfavourable for night-operations by our torpedo-craft. Nevertheless our destroyer sections and torpedo sections, fearing to lose this unique occasion for combined action, all stood out before sunset, regardless of the state of the weather, and each vying with the other to take the lead, approached the enemy. The Fujimoto Destroyer Section steaming from the north, the Yajima Destroyer Section and the Kawase Torpedo Section from the north-east, bore down on the enemy's Main Squadron, while the rear of the same Squadron was approached by the Yoshijima Destroyer Section from the east and the Hirose Destroyer Section from the south-east. The Fukuda, Otaki, Aoyama and Kawada Torpedo Sections coming from the south, pursued the detached vessels of the enemy's Main Squadron as well as the group of cruisers on a parallel line in his left rear. Thus as night fell these torpedo-craft closed in him from three sides. Alarmed apparently by this onset, the enemy at sunset steered off to the south-west, and seems to have then changed his course again to the east.

At 8.15 p.m. the night-battle was commenced by the Yajima Destroyer attacking the head of the enemy's Main Squadron, whereafter the various sections of torpedo-craft swarmed about him from every direction, and until 11 p.m. kept up a continuous attack at close quarters. From night-fall the enemy made a desperate resistance by the aid of search-lights and the flashing of guns, but the onset overcame him, he lost his formation and fell into confusion, his vessels scattering in all directions to avoid our onslaught. The torpedo sections pursuing, a pell-mell contest ensued, in the course of which the battle-ship *Sissoi Veliky* and the armoured cruisers *Admiral Nakhimoff* and *Vladimir Monomakh*, 3 ships at least, were struck by torpedoes, put out of action and rendered unmanageable. On our side No. 69 of the Fukuda Torpedo Section, No. 34 of the Aoyama Section, and No. 35 of the Kawada Sections, were all sunk by the enemy's shells during the action; while the destroyers *Harusame*, *Akatsuki*, *Ikaruchi* and *Yugiri*, as well as the torpedo boats *Sagi*, No. 68 and No. 23, suffered more or less from gun-fire or from collisions, being temporarily put out of action. The casualties also were comparatively numerous, especially in the Fukuda, Aoyama and Kawada Sections. The crews of the three torpedo boats which sank were taken off by their consorts the *Kari*, No. 31 and No. 61.

According to statements subsequently made by prisoners, the torpedo attack that night was indescribably fierce. The torpedo-craft steamed in so rapidly and so close that it was impossible to deal with them, and they came to such short

range that the war-ship's guns could not be depressed sufficiently to aim at them.

In addition to the above the Suzuki Destroyer Section and other torpedo sections proceeded in other directions the same night to search for the enemy. On the 28th at 2 a.m. the Suzuki Section sighted two ships steaming north at a distance of some 27 miles east-north-east of Kurasaki. The Section immediately gave chase, and sunk one of the ships. Subsequent statements by prisoners rescued from her, showed her to be the battle-ship *Navarin* and that she was struck by two torpedoes on each side, after which she sank in a few minutes. The other torpedo sections searched in various directions all night but accomplished nothing.

## THE FIGHT ON THE 28TH OF MAY.

At dawn on the 28th of May the fog which had prevailed since the previous day lifted. The main Squadron and the Armoured Cruiser Squadron had already reached a point some 90 miles south of the Ulnung Islands, and the other sections as well as the various torpedo-craft which had been engaged in the attack during the night, gradually and by different routes, drew up towards the rendezvous. At 5.20 a.m. when I was about to form the Armoured Cruiser Squadron into a search cordon from east to west for the purpose of cutting the enemy's line of retreat, the Cruiser Squadron which was advancing northward, being then about 60 miles astern, signalled that it had sighted the enemy eastward and that several columns of smoke were observable. Shortly afterwards this Squadron approached the enemy and reported that his force consisted of 4 battle-ships—2 of these were subsequently found to be coast-defence vessels—and 2 cruisers and that it was advancing north. Without further inquiry it became clear that these ships formed the chief body of the enemy's remaining force. Therefore our Main Squadron and Armoured Cruiser Squadron put about, and gradually heading east, barred the enemy's line of advance, while the Togo and Uryu Sections, joining the Cruiser Squadron, contained him in rear, so that by 10.30 a.m., at a point some 18 miles south of Takeshima (the Liancourt Rocks), the enemy was completely enveloped. His force consisted of the battle-ships *Orel* and *Nicolai I*, the coast-defence ships *Admiral Apraxin* and *Admiral Seniavine* and the cruiser *Ismrud*, five ships in all. Another cruiser was seen far southward but she passed out of sight. Not only had these remnants of the enemy's fleet already sustained heavy injuries, but also they were of course incapable of resisting our superior force. Therefore soon after our Main Squadron and Armoured Cruiser Squadron had opened fire on them, Rear-Admiral Nebogatoff, who commanded the enemy's ships, signalled his desire to surrender with the force under him. I accepted his surrender and as a special measure allowed the officers to retain their swords. But the cruiser *Ismrud*, previously to this surrender, had fled southward at full speed, and breaking through Togo's Section, had then steamed east. Just then the *Chitose* which, on her way back from Aburaya Bay, had sunk one of the enemy's destroyers *en route*, reached the scene, and immediately changing her course, gave chase to the *Ismrud*, but failed to overtake her and she escaped north.

Previously to this the Uryu Section, while on its way north at 7 a.m. sighted one of the enemy's ships in the west. Thereupon the *Otowa* and the *Nitaka*, under the command of Captain Arima of the former cruiser, were detached to destroy her. At 9 a.m. they drew up to her, and found that she was the *Svetlana* accompanied by a destroyer. Pushing closer they opened fire and after about an hour's engagement, sunk the *Svetlana* at 11.06 a.m. off Chyuk-pyong Bay. The *Nitaka*, accompanied by the destroyer *Murakumo* which had just arrived, continued the pursuit of the enemy's destroyer *Budisti*, and at 11.50 a.m. drove it ashore and destroyed it in an unnamed bay some 5 miles north of Chyuk-pyong Bay. The survivors of these two vessels were all rescued by our special-service steamers *America Maru* and *Kasuga Maru*.

The main part of our combined squadron which had received the enemy's surrender

were still near the place of the surrender and were engaged in dealing with the four captured ships when, at 3 p.m., the enemy's vessel *Admiral Oushakoff* was sighted approaching from the south. A detachment consisting of the *Iwale* and the *Yakumo* were immediately sent after her, and at a little after 8 p.m. they overtook her, as she steamed south. They summoned her to surrender, but for reply she opened fire, and there was nothing for it but to attack her. She was finally sunk, and her survivors, over 300, were rescued.

At 3.30 p.m., the destroyers *Sazanami* and *Kagero* sighted two destroyers of the enemy, escaping east and then at a point some 40 miles south-west of Ulneung Islands. These were pursued at full speed to the north-west, and being overtaken at 4.45 p.m., an action commenced. The rearmost of the two destroyers then ran up a white flag in token of surrender, whereupon the *Sazanami* immediately took possession of her. She was found to be the *Biedvi* with Vice-Admiral Rojestvensky and his staff on board. These with her crew were made prisoners. The *Kagero* meanwhile continued the chase of the other destroyer up to half past six, but she finally escaped north.

At 5 p.m., the Uryu Section and the Yajima Destroyer Section which were searching for the enemy in a westerly direction, sighted the battleship *Dmitri Donskoi*, steaming north, and went in pursuit. Just as the Russian vessel had reached a point some 30 miles south of the Ulneung Islands the *Otowa* and the *Nitaka* with the destroyers *Asagiri*, *Shirakumo* and *Fubuki* which were coming back from Chyuk-pyong Bay, bore down on her from the west and opened fire, so that she was brought between a cross cannonade from these and the Uryu Section. This heavy fire from both sides was kept up until after sun-set, by which time she was almost shattered but still afloat. During the night she passed out of sight. So soon as the cruisers had ceased firing on her the *Fubuki* and the Yajima Destroyer Section attacked her but the result was uncertain. On the following morning, however, she was seen drifting near the south-east coast of the Ulneung Islands where she finally sank. Her survivors, who had landed on the islands, were taken off by the *Kasuga* and the *Fubuki*.

While the greater part of the combined squadrons were thus busily engaged in the north dealing with the results of the pursuit, there were in the south also some considerable captures of ships remaining at the scene of the action. Thus the special-service steamers *Shinano Maru*, *Tuinan Maru* and *Yanata Maru*, which had set out early on the morning of the 28th charged with the duty of searching the place of the engagement, sighted the *Sissoi Veliky*, at a point some 30 miles north-east of Karasaki. She had been struck by torpedoes the night before and was now on the point of sinking. They made preparations for capturing her and took off her crew. She went down, however, at 11.06 a.m. Again at 5.30 a.m. the destroyer *Shiranui* and the special-service steamer *Sado Maru* found the *Admiral Nakimoff* in a sinking condition some 5 miles east of Kotozaki in Tsushima. Thereafter they sighted the *Vladimir Monomakh* approaching the same neighbourhood with a heavy list. The *Sado Maru* took measures for capturing both these ships, but they were so greatly shattered and were making water so fast that they sunk in succession at about 10 a.m. after their crews had been removed. Just then the enemy's destroyer *Gronky* came to the same neighbourhood and suddenly steamed off northward. The destroyer *Shiranui* went in pursuit, and at about 11.30 a.m. attacked her, No 63, a unit of the torpedo-boat sections, co-operating in the attack. The enemy's fire having been silenced the destroyer was captured and her crew were made prisoners, but her injuries were so severe that she sank at 12.43 p.m. In addition to the above the gun-boats and special service steamers of our fleet, searching the coasts in the neighbourhood after the battle, picked up not a few of the crews of the sunken ships. Including the crews of the captured vessels the prisoners aggregated about 6,000.

The above are the results of the battle which

continued from the afternoon of the 27th till the afternoon of the 28th. Subsequently a part of the fleet conducted a search far southward, but not a sign was seen of any of the enemy's ships. About 38 of his vessels had attempted to pass the Sea of Japan, and of these the ships that I believe to have escaped destruction or capture at our hands were limited to a few cruisers, destroyers and special-service steamers. Our own losses in the two-days' fight were only 3 torpedo-boats. Some others of our vessels sustained more or less injury, but not even one of them is incapacitated for future service. Our casualties throughout the whole fleet were 116 killed and 538 wounded, officers being included, as shown in the detailed list appended.

There was no great difference in the strengths of the opposing forces in this action, and I consider that the enemy's officers and men fought with the utmost energy and intrepidity on behalf of their country. If nevertheless our combined squadrons won the victory and achieved the remarkable success recorded above, it was because of the virtues of His Majesty the Emperor not owing to any human prowess. It can not but be believed that the small number of our casualties was due to the protection of the spirits of the Imperial Ancestors. Even our officers and men, who fought so valiantly and so stoutly, seeing these results, found no language to express their astonishment.

#### COMPARATIVE STATEMENT.

##### THE ENEMY'S SHIPS AND THEIR FATE.

I. Battle-ships 8; whereof 6 were sunk (the *Kniaz Suvoroff*, the *Alexander III*, the *Borodino*, the *Ossliabya*, the *Sissoi Veliky* and the *Navarin*) and 2 were Captured (the *Orel* and the *Nicholsai I*).

II. Cruisers 9; whereof 4 were sunk (the *Admiral Nachimoff*, the *Dmitri Donskoi*, the *Vladimir Monomakh* and the *Spetliana*); 3 fled to Manila and were interned (the *Aurora*, the *Oleg* and the *Zemchug*); 1 escaped to Vladivostock (the *Almaz*) and one became a wreck in Vladimiro Bay (the *Ismrud*).

III. Coast-defence ships 3; whereof 1 was sunk (the *Admiral Oushakoff*) and 2 were captured (the *Admiral Apraxin* and the *Admiral Senia-vine*).

Destroyers 9; whereof 4 were sunk (the *Buini*, the *Buistri*, the *Gronky* and one other); 1 captured (the *Byedovi*); 1 went down on account of her injuries when attempting to reach Shanghai (the *Blestyashtchi*); 1 fled to Shanghai and was disarmed (the *Bohri*); 1 escaped to Vladivostock (the *Bravi*) and the fate of 1 is unknown.

IV. Auxiliary cruiser 1; which was sunk (the *Urat*).

V. Special-service steamers 6; whereof 4 were sunk: the *Kamchatka*, the *Itis*, the *Anastsey* and the *Russi*, and 2 fled to Shanghai where they were interned (the *Korea* and the *Sveri*).

VI. Hospital-ships 2; which were both seized, one (the *Kastroma*) being subsequently released, and the other (the *Orel*) made prize of war.

#### RECAPITULATION.

38 Ships.

- 20 Sunk.
- 6 Captured.
- 2 Went to the bottom or were shattered while escaping.
- 6 Disarmed and interned after flight to neutral ports.
- 1 Fate unknown.
- 1 Released after capture.
- 1 Escaped.

#### A WEE "OUI."

Someone and I

Were walking

All in a winter night,  
The star-sprent skies were o'er us,  
And all our world was white;  
Tho little I looked on the meadows,  
And little I gazed on the sky,  
Do those skies ever glow  
On that white world of snow

As radiant as when  
We walked in it then,  
She and I?

Someone and I

Were driving

All on a summer day,  
When the wood went wild with music  
And the fields were sweet with May.  
But I found in her face my lilies,  
In her eyes my violets shy.  
O, sweet summer day,  
In what clime do you stray  
Since we watched your light blest  
Fading slow down the west,  
She and I?

Someone and I

Were sailing

Out on the moonlit sea,  
And the song of the tide was richer  
Than the wildwood melody.  
But her face was more sweet than the waters,  
Her voice than the ripples by.  
O, for sea without shore  
Where to drift evermore,  
At morning and noon,  
And beneath the white moon,  
She and I!

Someone and I

Were talking

As the moon went down in the sea,  
I may not say what I told to her,  
Or tell what she said to me.  
But if she had said one word less kind,  
Or had sat one shade less nigh—  
But I thank *le bon Dieu*  
That He meant her for me,  
And she said a wee "Oui"  
With her heart beating thro  
And her eyes shining true.  
And I knew we'd not rue,  
She and I.

Someone and I—

When dreaming

To the winds thro the maple trees  
I float down silver rivers  
To drift on opal seas,  
Or walk the sweet May meadows  
Neath happy stars hung high,  
Thro the purl of the sireams  
Comes the song, in my dreams,  
That we heard the world sing  
When our world was in spring,  
She and I.

Someone and I—

Yes, Dearest,

Just twenty-five years to-day  
Since we watched the moon out on the waters  
And walked mid the bloom of May;  
And we've had our winter and summer,  
Our cloudy and starry sky,  
And we've laughed and wept together  
In fair and in stormy weather,  
But I thank *le bon Dieu*  
That He gave you to me  
And you said that wee "Oui."  
For you've made my life good  
Since we walked in that wood,  
You and I.

Someone and I—

There's a Country

Of love, without love's pain;  
Of friends, without friends' parting;  
Where hearts are young again.  
If I should make bold to ask it,  
Would God and she say "Ay"  
To walk side by side  
Neath the palms and the pines,  
In that Land stretching wide  
Where the Hiddekel shines,  
And the asphodel glows  
With the lily and rose;  
There to walk and to talk,  
True heart and heart true,  
Well, for ages a few,—  
Say a thousand or two,—  
She and I?

S. L. L. YENDYS.

[Read at a recent silver wedding in Yokohama.]

MONTHLY SUMMARY OF JAPANESE  
CURRENT LITERATURE.

The march of events in the Far East indicates that at the close of the war, perhaps even before that, the Japanese will find themselves in possession of exceptional opportunities for national development on a scale hitherto undreamt of and much will then depend on the adaptability of the nation as a whole to the new functions it will be called on to perform. Hence it is that the subject of colonization is much discussed in contemporary literature. Three well written articles entitled *Nihonjin to Shokumin-teki Seikaku* (Japanese and Colonizing qualifications) appeared in three recent issues of the *Yomiuri Shinbun* (June 7th, 8th, 9th); from which we make the following extracts. It cannot be affirmed that in the past our people have shown any special love of colonization nor any marked qualifications for making successful settlers in foreign countries. The population of Hokkaidō has advanced very slowly, and yet the big island is at our very doors. We have governed Formosa for some years, but our people do not go therein large numbers. We have sent many labourers to Hawaii and to America, but those fields will no longer be available to us according to present appearances. Have we got it in us to develop colonies of our own on purely Japanese lines? This question will be best answered by our passing in review the various qualifications necessary to make a successful colonist. Taking Western nations, we find that some have been very successful as colonists; others quite the reverse. Subjoined are the elements of success.

(1) *Physical Strength.* Settlers must be able to stand the climate of the new country and to have sufficient bodily vigour to endure hardships. As a nation we are not lacking in this. (2) *A spirit of daring and enterprise.* Much of the exploration that has gone on in the world has been prompted far more by mere love of adventure and discovery than by hope of profit. To find out something hidden, to do something new, to brave dangers and overcome difficulties—these things have a special charm for certain minds. This kind of courage the Japanese possess as much as any nation. (3) *A Commercial Spirit.* In all colonies there is ever keen competition between the settlers from different countries, and as a rule the best business men win. The Dutch supplanted the Spaniards all over the world principally because they were better traders. Colonies that under Spanish and Portuguese rule had failed were rendered successful in Dutch hands by the development of commerce and industry. In this quality we have hitherto been deficient as a nation. We are unthrifty, wanting in forethought and careful calculation, and do not realize the value of credit. (4) *Permanent residence in foreign countries.* No success is scored in settlements where the residents are perpetually changing, where the great object is to pile up money to carry back to the old country. Home sickness has ruined many settlements. As a nation we suffer grievously from this complaint and unless we can conquer it successful colonization will be impossible. (5) *A keen spirit of competition.* Wherever we may go we shall find rivals—business men and politicians who will do their very best to push their country's interests and to increase its prestige. When it comes to real war we are brave enough, but in diplomacy and business conflicts we are often worsted simply because we are not really in earnest. But as colonists we can't afford to maintain a spirit of philosophic indifference to the advantages won by the push of men of other nationalities. (6) *Skilfulness of the Native Population.* In the history of the world's colonization the effect produced by diverse settlers on uncivilized Africans and Asiatics has varied greatly. In some cases the natives have been raised to a higher level by contact with European civilisation; in other cases they have been corrupted by it and have started on the road to extinction. We can't say that in our own country our management of the Ainu has proved a success. To improve the native population without unnecessarily interfering with its ancient customs is not an easy task. At all events settlers must always avoid stirring up race hatred by an assumption of sup-

eriority. (7) *The art of Skilful Government.* In countries where the natives are subject to our Government care must be taken to conciliate them. Forced obedience and willing obedience are very different things.

To expect to see all the above-named qualifications in our countrymen would be unreasonable. There are undoubtedly a few in which we are defective; but our inadaptability to the new rôle we have to play is not such as to cause discouragement by any means. In colonization the action of Governments goes a long way. Individuals can do little unless backed by their Governments.\* The Chinese have always lacked adequate Government support; so, though they have flooded the labour market with coolies, they have founded no real Chinese colonies anywhere. Different conditions control the various kinds of colonists. There are (1) colonies where the country is under the sole control of the Government of the colonists; (2) colonies where the countries are under the protection of the Governments of the colonists and hence where the transactions of individuals are controlled by local conditions of various kinds, and (3) colonies in independent countries. Japan is at present trying her hand at these three kinds of colonization: (1) Formosa, (2) Korea, (3) China, Hawaii, Mexico, etc. But still wider fields will be opened up than those she now occupies and hence the question of her mental and moral equipment for this new kind of warfare becomes a matter of great moment.

A writer in the *Yomiuri Shinbun* predicts that those native poems called *Tanka* (short poems) are doomed to be only valued as relics of a literary past. They suited the country both as regards sentiment and form in the days of its isolation, but this class of poetry is felt by modern poets to be a very unsuitable means of communicating the many new thoughts of modern Japanese. What is called the New Style Poem (*Shintaisshi*) seems to have come to stay; though it is to be hoped that it will yet undergo greater development.

\* \* \*

In the matter of ephemeral literature, as in other respects, the Meiji era will a century hence be looked back on as the age of experimentation. Everything is being tried. Perpetually our eyes alight on magazines of whose existence we had been unaware and yet which seem to fulfil a limited purpose in a tolerably successful manner. Such is the *Tegami Zasshi* (Letter Magazine), No. 2. (Vol. II) of which now lies before us. The principal objects of this publication are:—(1) To acquaint the public with the various styles of letter-writing; (2) to improve the methods in use; and (3) to give specimens of witty and high-class writing. The book is tastefully got up and the printing is clear. It covers about 60 pages. It contains several foreign letters: one from Mr. B. H. Chamberlain in reference to information for his Guide-Book; one from Mrs. Patton, of Shanghai, and one or two more. But the most valuable part of the magazine is that which gives specimens of Japanese letter-writing. The general attitude adopted by the magazine is one of opposition to the tedious formality of the old style of writing. In several articles to be found in the number before us the unsuitableness of the old style of writing to Japan's circumstances to-day is pointed out. One writer, Mr. K. Ikeda, urges the importance of discontinuing the common Japanese practice of introducing irrelevant social or family subjects into business letters. The prefacing of a business letter with long formal inquiries respecting health or apologies for past neglect in writing has been wrongly taught in our elementary schools. It ought to be stamped out. Specimens of women's letters are given; one, somewhat lengthy, is from a Japanese girl in America, giving her first impressions of the country. The *Tegami Zasshi* is published by the Yûrakusha, 1 Yûraku-chō, 3 chōme, Kojimachi, Tōkyō.

\* This is the old Japanese notion, and to a large extent the French and German notion, but the prosperity of most of the English colonies is traceable to private enterprise and "go" rather than to Government patronage.—(WRITER OF SUMMARY.)

What may be called "war literature" grows day by day and to keep pace with it is out of the question. The Yûrakusha has lately issued a new comic paper called the *Tōkyō Puck*. The first number appeared on April 15th, the 2nd on May 10th. The second number seems to have taken the fancy of the public better than the first, as a second edition was called for almost immediately. They are both full of war pictures some of which are clever, others rather commonplace. No. 1 has on its title page a large picture of the Emperor of Russia in an attitude that will be well understood by Japanese as indicating fruitless regret. Underneath the picture are the words *Rotei sei-sai na kui (hose) [coll: hese] wo kumu no kui*. One of the pictures represents a prisoner sitting at table eating his foreign food, with a soldier near him devouring his rice-balls. The explanation runs thus, *Rosukō no horyō wa seiyō ryōri de, chiyū naru waga heishi wa nigirumushi*. No. 2 of the *Tōkyō Puck* opens with a good cartoon of the principal members of the Cabinet. The next large picture is by far the cleverest of the whole. It is highly coloured and reveals a laboratory with representatives of all the Great Powers assembled as chemists for the purpose of analysing a bottle of Japanese wine.\* Anxiety is written on the faces of the representatives of all the Powers but two, who are standing apart from the others, smiling as though they knew very well the properties of the liquid as to whose potentialities the other Powers are so concerned. These are John Bull and Uncle Sam, who take no part in the analysis, but are merely highly amused onlookers. There are many other amusing skits in the *Tōkyō Puck*, some of which are explained in English. On the whole the compilers are to be congratulated on the production. It is pretty sure to command a large sale. France's supposed double-dealing is cleverly cartooned. The price is 12 sen per copy.

The Yûrakusha has for several years past been issuing a paper called "The Youth's Companion," the object of which is to help students of English by furnishing specimens of translation of English into Japanese and Japanese into English. It resembles in scope and get up "The Student," (the *Chūgai Eiji Shinbun*, and one or two other papers. We presume that there is a considerable demand for such periodicals. Where the translations into English are made by Japanese and not corrected by a foreigner mistakes are numerous. A paper such as the "Youth's Companion" should not print defective English without comment. We find on p. 55 of the May 15th number of this paper a letter from a Mr. Takaki which opens with this sentence, "We must congratulate one another with heartiest pleasure upon the surrender of Port Arthur and I have been able to suppose how our people have been enjoyed in great congratulation specially on the first day of the New Year. . . . I cannot tell you how I pleased was with it by my poor pen." The best parts of such papers are the grammatical explanations and the translation into Japanese of English phrases. It is a pity that the proof reading is not better done and that defective and incorrect English sentences are allowed to mislead the students who rely on such periodicals for guidance.

Mr. Toyabe Shuntei's *Jidai Jimbutsu Gettan* is a handy little volume of Character Sketches, published by the Hakubunkan and for sale at 70 sen a copy. It covers 560 pages and includes sketches of a great many leading Japanese politicians and of a few prominent foreigners such as the Emperors of Germany and Russia, Mr. Chamberlain, De Witte, President Roosevelt, Sir William Harcourt. The author tells us that he has aimed at impartiality and at adherence to known facts. Apart from the large amount of information it contains on recent events, the book is well worth having as a specimen of fine writing. Competent Japanese judges are agreed in thinking that Mr. Toyabe wields a very powerful pen.

\* This wine instead of being described by means of the usual characters, is cleverly termed 武道酒. *Budōshu*, "Wine of the Warriors' Way." England knowing the value of the liquor, astonishes the others Powers by giving a large order for the new beverage.—(WRITER OF SUMMARY.)

The *Jiji Shimpō* a short time ago published an interesting leader on the spread of the Japanese language in Korea. Japanese and Korean grammar being much alike, and the Koreans having considerable linguistic ability, it is found that after two or three years study they speak Japanese correctly and fluently, and the *Jiji* says that their pronunciation is so good that a listener would not know that the speaker was a foreigner. In Korea during the next 10 years a knowledge of Japanese by Koreans will secure official employment. This of itself will give a great impetus to the study of the language, continues the *Jiji*. But our Government should take steps to establish more schools in Korea for teaching Japanese. There are at present about 30 schools where Japanese is taught, each being attended by 100 pupils. But these are insufficient. As Middle Schools have yet to be created in Korea, it might be well to arrange that the teaching in these schools should all be in Japanese. In addition to these measures if Japanese were taught to the senior pupils of Primary Schools, it would soon get to be known all over the country.

\* \* \*

To the *Taiyō* Mr. Toyabe Shuntei contributes a defence of Baron Komura's attitude and policy during those trying weeks when Russia was abusing French neutrality. Mr. Toyabe thinks that newspaper writers did not realize as Mr. Komura realized how extremely delicate the situation was and how desirable it was to be patient in trying to obtain by diplomacy all that Japan had a right to claim from France. Now that the crisis is over and the Fleet whose movements were the cause of so much agitation has been almost totally destroyed, not much interest is attached to Mr. Toyabe's views on Baron Komura's management of the negotiations. Mr. Toyabe has always been an admirer of the Baron and his confidence has not been shaken by recent events. Writing on Delcassé's career as a Foreign Minister, Mr. Toyabe observes that though his European policy has undoubtedly conferred great benefits on France, his attitude to Japan during the recent complications was vacillating and lacking in straightforwardness.

Mr. Ōishi Masami, in an article entitled "The Taking of St. Petersburg," contends that it would be quite practicable for Japan to march an army to the Russian capital, capture it and make her own terms with the Czar. He admits that the cost of such an expedition would be something enormous, but he thinks that by strict economy and self-denial on the part of the whole nation, by mortgaging the railways and by resort to other measures, the money could be found. Mr. Ōishi does not tell us what benefits Japan would be likely to get by the pursuit of such a policy. But the scheme is too wild to need discussion. There are two alternative policies proposed by Mr. Ōishi. One is to take all the territory lying around Lake Baikal and to erect a long line of fortifications against Russia; the other is only to keep the Liaotung Peninsula and hand over Manchuria to China. The march to St. Petersburg takes Mr. Ōishi's fancy most and would in his conception be the proper termination of the war.

Mr. Koyama contributes to the *Taiyō* a long article on the extent to which the balance of power in the West will be affected by the present war. The struggle for predominance among progressive nations, says Mr. Koyama, goes on fiercely from year to year. Success is dependent on four things. (1) Wealth; (2) Assimilative power; (3) Geographical position and advantages; (4) Armaments. This war will certainly lead to a reshuffling of the European cards and to a dealing out of new hands. The war has tended to demonstrate the unsuitability of the Franco-Russian Alliance. The ideals of the two nations are too far apart to allow of France and Russia's working harmoniously together for any length of time. Even now, observes Mr.

Koyama, France is beginning to realize this and is turning to England as a country whose aims and ideals do not in the main differ from hers. Mr. Koyama enumerates the benefits which England has obtained by this war. Throughout the whole of Asia her prestige has been increased by the weakening of Russia and by her alliance with Japan. Mr. Koyama seems to be apprehensive that England may not prove equal to the task of maintaining the new advantageous position she has gained. Some allowance must doubtless be made for writers like Mr. Koyama, who show some signs of the "swollen head" malady. Mr. Koyama next points out that Germany is benefiting and will benefit enormously by the effects of this war. Her rivalry to England will become keener. France is already beginning to see, says Mr. Koyama, that Japanese victories will affect her Far Eastern policy very seriously, involving costly changes in defensive measures.

When Mr. Koyama comes to discuss America and American policy he shows considerable bias. Here is the order of moral rank in which he ranges the different countries. Russia, the biggest sinner in unscrupulous aggression. Germany, France and England, half saints and half sinners. America and Japan, out-and-out saints. Here are Mr. Koyama's words literally translated: "The only two countries in the world whose foreign policy is founded on respect for what is just and the necessity of self-protection at present and whose future foreign policy will be more and more of this character are Japan and America." One of the effects of the war, proceeds Mr. Koyama, will be to make America cling more and more to the Monroe doctrine. Mr. Koyama passes in review America's appropriations of Spanish territory. These acquisitions were all of the saintly kind, says Mr. Koyama, prompted by the sense of right only and tainted by no spirit of spread-eagleism. America is the only country with whom we are thoroughly in sympathy and the sympathy will grow. Passing on to discuss Japan's relations to China, Mr. Koyama says that after the war is over Japan and China will be greater friends than they have ever been and Japan must utilize enlightened Chinamen for the opening up and transformation of the big celestial empire. The two countries must work together for the maintenance of the *status quo* in the Far East.

Mr. Hatano Denzaburō contributes an article to the *Taiyō* on "The Granting of Mining Rights to Foreigners." He says that this subject has not been properly discussed in Japan and that few Japanese know much about the question. Mr. Hatano is of opinion that mining rights should be granted to foreigners for economic reasons, which he proceeds to state in detail. We give the substance of his article below:—In recent years nothing is more marked than the universal desire among our business men to see foreign capital flowing into this country unimpeded. An enormous amount has already come, but we have to pay a higher rate of interest for it than is desirable, and now that before long a great number of new enterprises will have to be started, it is most desirable that we should no longer borrow money from foreigners, but allow them to bring their own capital to this country, Korea and Formosa and start various industries. Mr. Hatano next gives an account of sundry foreign loans made by Japan to show how willingly foreigners lend on proper security. The Government can borrow as much money as it needs. Private companies have also been very successful, their

nished by the joyous and almost puerile delight with which France identified herself with the cause of reaction, and resigned to others her old supremacy in European liberalism? P. 63.—(WRITER OF SUMMARY.)

\* *Taigwai tōki seisaku ni oite, genzai wa mura, shōrai masumasu kō (甲) ni (kōru—sagari no tame sunawachi sōto jōri no hitayō ni itaru mono) ni soku suru koto, kakujitsu ni shite utagai naki mono wa, sekai tekko-kuchi buda waga Nihon to Beikoku to aru nomi.*

† The Anglo-Japanese Alliance is evidently a big blunder, according to Mr. Koyama. He thinks that Japan and England have different political ideals.—(WRITER OF SUMMARY.)

foreign loans having reached the sum of 140 million yen. This money has been distributed among 89 companies. Some 12 or 13 kinds of companies are given, with the capital subscribed to each. England stands first among the subscribers to various enterprises. Mr. Hatano at the conclusion of his article argues that the granting of mining rights to foreigners is a matter that ought not to be postponed. Foreigners have had many other rights granted to them, such as the right of leasing land for such long periods as to be equivalent to ownership. In the 21st Session of the Diet bills bearing on the mortgaging of railways, mines, and workshops to foreigners were brought forward by the Government but no steps were taken towards granting mining rights to foreigners. It might be necessary to make a selection of the foreigners to whom such rights should be ceded. But this could be effected.

Mr. Sasa Tomofusa writes in the *Taiyō* under the title "Marquis Itō and his Political Enemy" in substance as follows:—Change follows change in the political world and the varying attitudes of statesmen to each other forms an interesting subject of study to all politicians. With the lapse of years manifold are the transformations to be seen in the political panorama. Among our elder statesmen there are no more prominent figures than those of Count Okuma and Marquis Itō. They have always been rivals and are so to-day. Some people seem to be of opinion that Count Okuma's forte is education and that his career as a politician has been pretty much of a failure. This is not my opinion. While recognising that that splendid institution at Waseda does more honour to Count Okuma than anything he has achieved in politics, it must not be forgotten that all along he has played a most important rôle as an opposition leader and his whole career as a statesman may be said to be a great success. His relations with Marquis Itō have undergone several changes. Up to 1898, the year of the formation of a Party Cabinet by Count Okuma, Marquis Itō both respected and feared the Count. The manner in which the Marquis helped forward the formation of the Kenseitō *Nishaku* by paving the way for its establishment forms an interesting chapter in the history of modern politics. It would seem as though he foresaw its failure and the consequent detraction of the fame of his great rival. Had Count Okuma set his face against amalgamation with the Jiyūtō, his Cabinet might have succeeded. But the attempt to combine elements that had no natural affinity to each other wrecked the whole enterprise. When this took place Marquis Itō said to himself, "Count Okuma is no such great statesman as the world has supposed him to be." The old fear of and respect for Count Okuma existed no longer. But if the Marquis chuckled when the Okuma Cabinet fell to pieces like a pack of cards, the time for his rival to chuckle in return was not far distant. In due time the Marquis having imbibed the English notion that Constitutional Government means Party Government, set about forming the Seiyūkai with a view of establishing a Party Cabinet later on. But the Marquis made a mess of the whole business by the manner in which he acted towards Marquis Yamagata and owing to his disqualification for acting as a leader of a political party. His failure to establish Party Government was even greater than that of Count Okuma. This experience had the effect of altering Marquis Itō's opinion in reference to the power of his rival. He perceived that though out of power Count Okuma's opinion on finance, on taxes, on Japan's foreign policy and other questions was invariably sought and great weight was attached to it and hence the old respect for and fear of his rival revived.

\* \* \* Writing in the *Shigakkai* (Historical World) on "What we expect from our Historians" Dr. Inoue Tetsujirō comments on the writing of history in Japan in modern times somewhat in the following strain. During the past ten or fifteen

\* Instead of saying, "Oh that my enemy would write a book!", the Count felt like saying "Oh that my enemy would try to form a Party Cabinet!" The Marquis did try and his failure overtopped that of Count Okuma.—(WRITER OF SUMMARY.)

years numerous works on history have been published, but most of them are sadly deficient in some essential qualities of this class of literature. In order to make it clear what in my opinion is desirable in histories designed to serve as standard books of reference, I will enumerate the necessary characteristics of such works. (1) *They should be written in choice language.* Among the histories that pour out of the press there are hardly any that fulfil this demand. No one would read them for the sake of the style in which they are written, that is, no one would read them for pleasure, though they may be referred to for the verification of facts. Now our great national histories being written in classical style, are read and re-read by all persons who have a taste for literature. Such are Kitabatake Chikafusa's *Shinkō Seitōki* (神皇正統記) Kuriyama Sempō's *Hoken Taiki* (保建大記) and Rai Sanyō's *Nihon Gwaishi*. In China the same holds good; and so it is in the West. The Greeks and Romans had their classical histories and modern England has its Hume, its Macaulay and its Gibbon. (2) *Our historians must be men of talent, men of judgement, and men of learning.* Our modern history writers, though possessing the first of these qualifications, are without the last two. Judgement is not a faculty that can be developed in a few years, yet it is required to enable a writer to make a judicious choice of material and for the arrangement of that material in a manner that shall result in the production of a narrative at once clear and striking. In a history so much depends on the colour imparted to the record by the mind of the historian. The sense of proportion must be strongly developed in the writer of history, or events will not be truly and adequately described. The historian must be somewhat of a philosopher, somewhat of a psychologist, somewhat of a sociologist, somewhat of a politician. It is hardly possible for very young men to possess these qualifications. Hence the defects of many of our modern histories. (3) *The next thing that our historians must do is to fix their attention on the undercurrents of thought that explain more than half the events that happen.* Events are ideas carried into practice. It is not enough for an historian to describe the effect without making the cause plain. For instance, what an enormous number of events in Occidental history may be traced to religious belief, to socialism and other wide-spread theories and opinions. In our country all the great changes which in this Meiji era have astonished the world had their origin in states of mind, in teaching, in sentiment that existed before the Meiji era and only waited for a favourable opportunity for asserting themselves. There is nothing more striking in history than the way in which the power of thought to control men's actions is illustrated. (4) *History must not consist of a mere collection of facts that are curious or entertaining, but must be made an accurate record of the events that have happened during a given period.* History must aim at scientific accuracy. The object of many of our historians seem to be to tickle the fancy of readers by presenting to them that which is strange only. (5) *Historical study and the writing of history must be placed on a level with other lines of investigation in seriousness, accuracy and thoroughness.* . . . The above considerations are worthy of the attention of the many young men who are engaged in the compilation of history in this country.

#### THE BOOK-SHELF.

*A Modern Utopia*, by H. G. WELLS; London, T. Fisher Unwin.

FROM the time when Plato dreamed of a New Republic down through the ages unto the present day, minds predisposed to such speculation have always lingered over the project of a community of men emancipated from the traditions of this earthly earth, cut adrift from its failures and disappointments, and setting up in its stead a City of God, such as St. Augustine conceived, or an Utopia like Sir Thomas More's, or an Icaria like Cabot's, or even a city of the Sun like unto Campanella's; not to mention that idealised

American Boston that Bellamy sketches in "Looking Backward." The tradition of all these dreamers is carried on in our day by Mr. H. G. Wells, and in his latest book, "A Modern Utopia" he depicts a new planet in which he finds realized many of the hopes and aspirations which only a few of Earth's advanced thinkers allow themselves the liberty of dallying with. Unlike many of the writers who have preceded him, Mr. Wells boldly breaks away from this earth and finds himself in a planet the other side of Sirius which reproduces in exact facsimile the physical earth to which we belong. "It is a planet like our planet, the same continents, the same islands, the same oceans and seas, another Fuji-yama is beautiful there, dominating another Yokohama; and another Matterhorn over-looks the icy disorder of another Theodule. It is so like our planet, that a terrestrial botanist might find his every species there, even to the meaneast pond-weed, or the remotest Alpine blossom." Such is the outer aspect of affairs, but the people who inhabit this Utopia though in outward seeming like unto ourselves are centuries in advance of the inhabitants of earth in regard to intellectual and physical development. According to Mr. Wells they have advanced along the same road over which we are sadly toiling, and when he makes their acquaintance they have banished war and racial distinctions and realized Tennyson's dream of "the federation of the world." Their architects and engineers have realized all the possibilities of their various sciences, and consequently the houses which the Utopians inhabit are all that the most faddy of hygienists can desire. They have trains that run up to 300 miles an hour, they cross under seas and oceans by gigantic sub-ways, they communicate with each other by a system of wireless telegraphy which has been so improved upon that the elaborate stations which Marconi and De Forest use, together with their unsightly poles and dynamos, are entirely done away with. Horses no longer litter the streets, nor dogs and other household pets spread contagion. Although the Utopians have advanced so very far along the highway leading to the ideal, and have an elaborate series of laws governing the individual from his birth until his death—laws which are intended to prevent the birth of the "unfit"—they have not quite succeeded in effectually eliminating the criminal classes, or shall we say criminal instincts inherited from distant ages. It is therefore necessary for them from time to time to deport their criminally-inclined members to solitary islands in distant oceans, escape from which is impossible. Mr. Wells, unlike many writers who have preceded him in this field of speculation, makes his Utopians very human; he evidently allows for the passions of love, ambition, vanity, self-seeking, over-reaching, else why does he provide courts of justice with a bench of magistrates with counsel to plead at the bar? The governing of this New Utopia lies in the hands of a peculiar class known as the Voluntary Nobility, or Samurai. It is a class which comprises both men and women, who are bound by Rules known as the Lesser, Common, and Greater. All denizens of Utopia may enter the Samurai class, but the rules and restrictions which hedge it around are so elaborate and involve so much self-denial, that it is really an exclusive caste and grows more restricted as time passes.

"The leading principles of the Utopian religion is the repudiation of the doctrine of original sin; the Utopians hold that man on the whole is good. That is their cardinal belief. Man has pride and conscience, they hold, that you may refine by training as you refine his eye and ear; he has remorse and sorrow in his being, coming on the heels of all inconsequent enjoyments. He is religious; religion is as natural to him as lust and anger, less intense indeed, but coming with wide-sweeping inevitableness as peace comes after all tumults and noises. And in Utopia they understand this, or, at least, the Samurai do, clearly. \* \* \* They accept religion as they accept thirst, as something inseparably in the mysterious rhythms of life. And just as thirst and pride and all desires may be perverted in an age of abundant opportunities and men may be de-

graded and wasted by intemperance in drinking, by display, or by ambition, so too the nobler complex of desires that constitutes religion may be turned to evil by the dull, the base, and the careless. \* \* \* Utopia which is to have every type of character that one finds on earth, will have its temples and its priests just as it will have its actresses and wine, but the Samurai will be forbidden the religion of dramatically lit altars, organ music and incense as distinctly as they are forbidden the love of painted women or the consolations of brandy. \* \* \* They will hold God to be complex and of an endless variety of aspects, to be expressed by no universal formula nor approved in any uniform manner. Just as the language of Utopia will be a synthesis, even so will its God be. The aspect of God is different in the measure of every man's individuality, and the intimate things of religion must therefore exist in human solitude between man and God alone."

One of the most striking of the rules of the Samurai refers to the discipline of silent reflection. "For seven consecutive days in the year, at least, each man or woman under the Rule must go right out of all the life of man into some wild and solitary place, must speak to no man or woman, and have no sort of intercourse with mankind. They must go bookless and weaponless, without pen or paper or money. Provisions must be taken for the period of the journey, a rug or sleeping sack—for they must sleep under the open sky—but no means of making a fire. They must not go by beaten way, or wherever there are inhabited houses, but into the bare, quiet places of the globe, the regions set apart for them." This discipline, says Mr. Wells, was invented to secure "a certain stoutness of heart and body in the members of the Order, which otherwise might have lain open to too many timorous, merely abstemious, men and women. The discipline was also chosen to draw their minds for a space from the insistent details of life, from the intricate arguments and the fretting effort to work, from personal quarrels and personal affections, and the things of the heated room."

We have not space to go with Mr. Wells into the new London of this new earth, to visit its ideal homes and ideal communities of ideally dressed men and women, to examine its codes of ideal laws, nor to hold conversation with such of its inhabitants as, speaking our tongue, could explain to us how all these ideals were reached, and to yet what loftier heights aspiring Utopians hope to attain. We must refer our readers to the book. Those that like this kind of reading will find it "full of meat," and telling of the "best of all possible worlds."

#### CUSTOMS PROTEST.

The director of the Yokohama Customs delivered two decisions on June 21st. One referred to a protest by Messrs. Cornes and Co., No. 50, Yokohama. The firm imported gold-coloured paper (to be used ornamentally) with a certificate of origin, on which the appraisers imposed 20 per cent *ad valorem* duty in accordance with No. 497 of the tariff. The importers contended that the paper should be dealt with under No. 293 of the tariff, which corresponds with No. 46-B of the Japan-German conventional tariff and that the duty should be 10 per cent *ad valorem*. The protest was dismissed on the ground that the article in dispute is manufactured with paper and that consequently it is not included in the classification of No. 293 of the statutory tariff or No. 46-B of the Japan-German conventional tariff, which provides for "all other kinds of paper."

Another decision was given on a protest by Messrs. E. Orth and Co., No. 177, Yokohama. The Customs authorities ordered the firm to pay 10 per cent *ad valorem* duty on aluminum plate under No. 496 of the tariff. The firm filed a protest contending that the metal should be dealt with in accordance with No. 270 of the tariff and that the duty should be 5 per cent. The protest was not sustained on the ground that No. 496 provides for "all articles, raw or unmanufactured" but No. 270 for only metal material.

## BRASSEY'S NAVAL ANNUAL.

[SPECIALLY WRITTEN FOR THE "JAPAN MAIL."]

## THE FOREIGN NAVIES: FRANCE.

The fiscal year has seen the fall of M. Pelletan, French Minister of Marine, and the accession to office of M. Gaston Thomson, who has devoted much of his time to naval and financial questions, who was reporter on the Naval Budget in 1893, and who when he accepted this latest post was vice-President of the Extra-Parliamentary Commission on the Navy. The French preliminary estimates for 1905 amount to £12,722,752. Six vessels are to be laid down,—an armoured cruiser, four destroyers and a despatch vessel. In the discussions on the estimates, delays in construction, insufficiency of stocks of ammunition and coal and the difficulty of manning the Navy under the new law for military service were specially commented upon. The programme of 1900 proposed that the French Navy should comprise 28 battleships (four squadrons of six battleships and four in reserve), 24 armoured cruisers and 52 destroyers. It is now stated that the expense will exceed the estimate by £1,460,000 and that it will take eight years (instead of seven as estimated in 1903) for the ships under this programme to be completed. It is recommended by M. Bos, the reporter of the commission on the Navy Estimates for 1905, that three battleships or armoured cruisers must be completed each year in order that the French Navy may maintain its position. According to the opinion of most of the officers whom M. Bos has consulted, the type of ship should be of 15,000 tons displacement, of at least 23 knots speed on service and with a main armament of four 12-in or 9.4-in guns of the new model and the rest of the armament composed of 7.6-in guns. In order to remain within the limits of an expenditure of about £5,000,000 per annum on new construction, it is suggested that instead of three ships of 15,000 tons two of 15,000 tons and one of 12,000 tons should be built each year.

## GERMANY.

The German naval estimates for 1905-6 amount to £11,424,845 of which £3,366,128 are devoted to ship building. In view of the experience of the Russo-Japanese war the German Government proposes to form a special corps for the purpose of laying and removing mines as well as for the construction of a large mining vessel which is projected. This corps will be quartered at Cuxhaven. Germany intends to arm her destroyers with heavier guns than before.

The German Admiralty does not for the present intend to ask for new battleships, but Admiral von Tirpitz stated in February last that he would probably call for the restoration of the six large armoured cruisers that were struck out of the 1900 bill and for seven destroyer divisions (42 destroyers) in place of the seven third class cruisers struck out at the same time. On January 1, 1905, the Imperial Navy consisted of 27 battleships and 8 coast defence ships (being 35 first, second and third class battleships according to British classification), 7 armoured cruisers, 6 protected cruisers, 24 protected and 11 unprotected third class cruisers, 10 gunboats, 53 destroyers and 79 torpedo boats of various sizes. In the estimates for 1905-6 a sum of £73,400 is set apart for experiments connected with submarines, with a view to building at least one boat of this type.

## ITALY.

The Italian Navy has made considerable progress, 2 battleships having been launched and another completed. The only armoured cruiser under construction is also out of hand. The Navy estimates amount to £5,087,642, about the same as last year, the sum to be devoted to new construction being £1,533,000. The completed ship is the *Regina Margherita*, which steamed 20.2 knots on her trials and has an armament of four 12-in, four 8-in and twelve 6-in guns. The vessels launched were the *Regina Elena* and the *Vettorio Emanuele III.*, and two ships of the same class are on the stocks. Their estimated speed is 22 knots. At best, however, they cannot rank higher than armoured cruisers, though they are well protected and their arma-

ment—one 12-in gun fore and aft and twelve 8-in. guns mounted in pairs in six turrets—makes them formidable ships.

## UNITED STATES.

The United States navy has at present twenty-six battleships completed, completing or under construction. The only battleship completed during the past year was the *Ohio* of 12,440 tons, which attained a speed of 17.86 knots on her trials. The contract required a speed of 18 knots, so that the contractors became liable to a penalty of £5,000. Mention was made last year of the passage made by the *Kearsarge* across the Atlantic at an average speed of 13.1 knots, which was then regarded as a remarkable performance, but her feat has been eclipsed by the *Kentucky*, which steamed from Madeira to New York at an average of 13.8 knots.

It has to be noted that while the General Navy Board recommended in the programme of new construction 3 battleships, 5 scout cruisers, 6 destroyers and other craft, the Naval Committee of the House of Representatives decided to recommend two instead of three battleships. Three of the scout cruisers, which displace 3,750 tons, steam 24 knots and carry twelve 3-in guns, have been laid down.

The General Board had some very interesting observations to make with regard to the estimates for the three battleships which they recommended. To secure homogeneity they fixed upon the *Connecticut* as the standard, and declared that no departure from that vessel in displacement, speed, steaming radius and manœuvring qualities should be made without grave reasons. Certainly no less speed than her 18 knots could be considered, and an increase, such as the 19 knots of the five smaller *Georgias*, could be obtained only by a material sacrifice in some other direction, which was not desirable. Indeed the Board held the opinion that even if by improvements in engines or boilers or hull design the speed of 18 or 18½ knots could be obtained with less weight of machinery it would still be better to ensure only that speed and utilise the saved weight in additional armour and armament. The Board recommend that a departure from the *Connecticut* should be made in the matter of armour and armament. So long as they do not differ so as to affect the relative strength of end-on and broadside fire, there is no reason why the gun powers of the various ships of a squadron should be identical. Superiority in end-on fire, for instance, is not to be deprecated unless accompanied by a diminution of broadside fire. "The greater accuracy at long ranges of heavy as compared with light guns, their relatively as well as positively increased rapidity of fire, their greater collective effectiveness against armoured ships, and the evidence furnished by the war in the East that naval battles will be most often fought at long ranges all point to increasing the number of heavy guns at the expense of the intermediate battery." Considering that the long fighting ranges in this war have been near if not beyond the limit of the smaller gun's power and that the accuracy of the bigger gun is naturally the greater, there seems no reason to doubt the general correctness of the reports that have claimed for the heavy guns a great preponderance of the hits scored on the Russian ships. The proposed change in armament should not be deferred, and the Board therefore recommended that if found practicable the battleship should be given a battery of heavy turret guns, none of which should be less than 10-in and at least four of which should be 12-in, without intermediate battery, the secondary battery to be unprotected by armour, but smoke pipes and air ducts to be protected, if possible, as far as the upper deck by heavy armour. There should be no needless multiplication of calibres and no introduction of new calibres such as 9-in. or 11-in., and, finally, the increased ammunition supply rendered necessary by the increased rapidity in the fire of heavy guns should be borne in mind.

The Bureau of Construction and Repair, while concurring generally in the recommendations of the General Board, pointed out that such a battery arrangement was by no means new or untried, and

instanced the case of Germany, which was now reconstructing four battleships designed more than 12 years ago for an armament on this principle. They also said:—"Among the disadvantages of the concentration of the battery in guns of large calibre, omitting the intermediate battery, may be mentioned the difficulty of obtaining suitable space for the magazines of at least two of the heavy gun turrets; the serious increase in tensile stresses on the upper deck, which in one of the designs so far treated, involves an increase of nearly 100 per cent; and the non-utilization for battery of the large armoured area amidships, this armour being, however, absolutely necessary for the protection of the stability of the vessel and the vital parts of the hull and machinery."

We have reproduced the report of the General Navy Board at some length with reference to armour and armament because certain considerations suggest themselves which it may be of interest to outline here. It is of course quite true that previous to the Battle of the Japan Sea a great part of the fighting was conducted at comparatively long ranges. In the engagement off Chemulpo the shortest distance was reported as 5,200 yards. The battle of August 10 was fought at much longer and also at much shorter ranges. During the first stage the opposing forces were 11,000 to 8,000 yards apart, and the second phase of the action started at 7,500 yards. But towards the end of the engagement, (we are now drawing for our facts upon Sir Cyprian Bridge's article) after the sudden aberration of the *Cesarevitch* and the breaking up of the Russian formation, the Japanese closed to 3,500 yards. And it should further be noted that in the battle of the Japan Sea Admiral Togo's ships engaged the enemy occasionally at 4,000 and even at the comparatively short range of 2,500 yards. Moreover long range fighting would seem to have been imperatively imposed upon the Japanese Admiral by his numerical weakness in battleships—the loss of one of which on August 10 would have been nothing short of a national catastrophe. Many persons therefore will no doubt demur to the conclusion that long range fighting between forces of equal power is now an accepted doctrine.

## COMPARATIVE STRENGTH.

In the chapter on comparative strength a table is given which shows the estimated strength of the naval Powers in first class battleships when all the ships now on the stocks are completed. According to this Britain will have at the end of 1906 46 battleships, Germany 20, America 19, France 13, Russia 9, Italy 6, Japan 4; at the end of 1907 the figures will be: Britain 48, Germany 22, America 22, France 17, Russia 9, Italy 8, Japan 6. At the end of 1908 they will be: Britain 50, Germany 24, America 25, France 17, Russia 13, Italy 8 and Japan 6. The writer remarks that it is in the interest of both countries that the Anglo-Japanese alliance should be renewed, and he concludes: "At the end of 1908 the United States will become the second naval power of the world, and the British and United States Navies combined would be able to put into line seventy-five first class battleships as compared with sixty-nine possessed by the five other naval Powers. An alliance between Great Britain and the United States would enable the two great branches of the English-speaking race to ensure the peace of the world and moreover permit the respective Governments to considerably diminish the burdens now imposed on their taxpayers in the race for naval supremacy. To bring about such an alliance should be the aim of statesmen on both sides of the Atlantic, but it must be entered into by the British people not as suppliants but on equal terms."

## THE WAR.

Sir Cyprian Bridge's comments upon the naval campaign in the Far East are in the highest degree instructive. He finds that the Japanese began the war with a naval force insufficient for such an undertaking if numbers are considered, for the Russian squadron in the Far East was really only a detachment of the whole Russian navy and, it was to be

expected, would be speedily reinforced. But as every people likely to be forced into war ought to do, they had carefully examined every condition and felt confident they could dispose of the first squadron before another could come to its aid. They took risks as an inferior fleet does when it concentrates the greater part of its strength on part of the enemy. This is what was done at St. Vincent and Trafalgar, for the assumption—which the results justified—in those battles was that the unengaged part of the enemy's force would not or could not come up in time to assist its consorts before they were defeated. Unthinking audacity in war is foolish, if not criminal; calculated audacity is amongst the highest warlike qualities. It is a quality of which the Japanese in the campaign of 1904 have given us many examples.

He comments upon the inefficiency of the locomotive torpedo which, he says, has been shown to be a weapon of limited efficiency, to be depended on only in special circumstance of infrequent occurrence, and he concludes: "It is not too much to say that experience of the late campaign, confirming as it does the arguments of students of tactics in these days of long-range guns, justifies a demand that torpedoes should be withdrawn from the armament of cruisers and battleships."

Nor can he see what submarines could have done. Even when all the inlets from Mokpho to Dairen were open to them they must have hampered the fleet greatly, and had the neighbouring coast been in the hands of neutral Powers their company would probably be found intolerable by a cruising fleet. He thinks full consideration of the conditions disclosed by the present war is likely to lead to the conclusion that the adoption of the submarine is no sign of naval progress, but is on the contrary a retrograde step. He remarks also upon the absence of any attempt on either side to use the ram, and says it will be interesting to see how long the ram-bow will continue to be a feature of war-ship design.

Admiral Bridge believes that the day of long range fighting has come, and he asks is the big armoured cruiser a justifiable type? He does not answer the question directly, but, assuming that cruisers are intended to be cruisers and not ships for fighting in general actions or forming part of the line, he indicates his own view by asking further: would not two *Askolds* with a united displacement of 11,110 tons have been more useful to the Russian fleet than the *Gromoboi*, displacing 12,336 tons? Plainly he does not think the big armoured cruiser type is justified, for as he puts it: "It would be bold to maintain that two *Regina Elenas* of nearly identical displacement (24,850 tons against 24,666 tons) of heavier armament, of superior defensive armour, of equal coal endurance, and of higher speed would not have been more useful than the *Gromoboi* and the *Rossia*. "Is not the adoption of the big armoured cruiser an unconscious admission that battleships of more moderate dimensions than those of the 'first class' are necessary? The admission seems to take this form: 'you may build a moderate-sized battleship if you like, but she must have certain inherent defects,' and must be called a cruiser.' Manipulation of names may help a policy in time of peace; to rely upon it in war would be to seek for disaster."

The campaign has not, Admiral Bridge thinks, afforded any proof of the value of a superiority in speed even in the domain of strategy. Speed is only one of the various elements of fighting efficiency, and ought not to be given undue predominance over the element of offensive power in a ship meant to be capable of destroying or defeating her antagonist. For certain classes of vessels, which will usually be of small size, very high speed, speed greater than that of an antagonist if possible, should be provided, but such craft can play only a special and restricted part in war.

Finally Sir Cyprian Bridge takes note of the importance of moral qualities in war. He says:

The Japanese are endowed with a mental alertness surpassed by that of no people in the world. Readiness of resource and promptness of adaptation to changed conditions were as evident in the Japanese Navy as the absence of them was in the Russian.

The valour of one side was not surpassed by that of the other, but the respective manifestations of it differed greatly. On the Russian side it took the more passive form of unflinching fortitude; on the Japanese it manifested itself as heroic but calculated audacity. It is certain that the latter is the more valuable to a navy. When the Russians desisted from an operation, or abandoned some course on which they had entered, the decision in either case was based on no discoverable rational ground. When the Japanese stopped in the middle of what looked like a promising affair, they always had a good reason for stopping—ships must not be risked too incautiously whilst reinforcements were preparing to join their enemy; ammunition must not be allowed to run quite out; some other operation must not be spoiled by precipitancy. Their action was made possible by their possession of the quality of self-restraint in the midst of exciting circumstances. The individual Russian knew little of the circumstances which had produced the war, and had little interest in the struggle. The humblest Japanese knew what had been done to his country in 1895 about Port Arthur, and was pervaded by the feeling that his countrymen were fighting for national existence. Add to this a feeling of intense loyalty and patriotism which supplies the place of a deeply revered religion and the spirit which the Japanese brought to the prosecution of the war can be understood. A nation actuated by such a spirit goes into a war with a prospect of success that nothing else can give. Is the spirit likely to be produced or fostered in the lecture-rooms and drill-grounds which some navies at the present day are so fond of substituting for practical experience of blue water?

#### TACTICS.

The article by Vice-Admiral Custance under the caption of "A Plea for the Study of Tactics," is largely historical but certainly none the less interesting. He shows how in classic times, the motive power being the oar, the principal weapon was the ram. While it is true that the Greeks employed the ram with great effect against the Persians yet that weapon did not long enjoy its vogue, for its uncertainty in the case of equal fleets dictated the necessity of boarding. Thenceforward the ram, though intermittently put in operation, was almost invariably subsidiary to the sword and missile, both in the rowing and sailing periods. He mentions the case of Lissa, where the Austrians in double quarter line, depending on the ram, passed through a gap in the badly formed line of the Italian fleet which relied on the gun. One of the Italian ironclads was sunk, and the conclusion was thereupon reached that the ram was more formidable than the gun. So all the navies proceeded to build rams. Admiral Custance describes the investigations made and the view taken on this subject by the late Vice-Admiral Colomb, who with imperfect data at his disposal reached the conclusion that the ram was superior as a weapon to the gun. Twenty-five years later Rear-Admiral H. J. May was able to prove that even with the highest skill and best possible ship ramming must always be a most hazardous undertaking, and thus after upwards of 2,000 years we have come to the same conclusion and probably for the same reason as the Greeks.

The writer of this article agrees in a marked sense with Sir Cyprian Bridge in reference to both ram and torpedo. We now know, he says, that "any ship which attempts to push inside of 4,000 yards of a battleship's broadside, properly served, without first silencing some of her guns must expect to suffer serious damage and loss. This is an additional reason for discarding the ram, and also indicates that the Whitehead torpedo cannot be counted on until its range and accuracy have been largely increased and proved by experiments at sea to have been so."

As to the value of speed these distinguished officers hold opinions almost exactly alike. Admiral Custance says the claim made by May that speed gave choice of weapons was unfounded, for there is but one weapon—the gun; and the claim that it gives choice of range is true only to a limited extent, for the enemy's broadside fire has to be reckoned with and may compel a turn away, thus fixing the minimum range. He adds that whether speed gives any tactical advantage beyond the power to accept or refuse action is still a very doubtful question. H.

#### BASEBALL.

##### WASEDA V. CALIFORNIA.

The California 'varsity baseball team defeated the Japanese players from Waseda University on May 15 on the campus grounds at Berkeley by a score of 5 to 0. The California men were not obliged to exert themselves at any stage of the game, and did not care to do so, having been out of training for five weeks. The hot weather made hard and fast work undesirable. The Japanese showed they were clever fielders, but weak hitters. They made a number of creditable and some brilliant plays, but they also made errors at critical moments when men were on bases. Causley hit for a home run in the seventh inning, scoring two men, this constituting the feature of the game. Newman pitched for the 'varsity, and had little difficulty in puzzling the men from Japan. He gave the Japanese team three hits and one of these was a scratch of the "Texas league" variety. Bliss caught for the 'varsity. A great crowd witnessed the game lingering to the end, despite the fierce heat on the bleachers. Score:—

CALIFORNIA.

#### SUMMARY.

Stolen base—Causley. Home run—Causley. Two-base hit—Schafer. Sacrifice hits—Tachihara, Oshiwawa, Izumitani, Jordan. Bases on called balls—Kono 1. Struck out—By Kono 3, by Newman 13.

The torrential rain on Saturday prevented the game arranged by the Y.C. and A.C.

#### LAWN TENNIS.

The match between eight representing the Yokohama Commercial School and a team of the Y.C. & A.C. was played on Wednesday on the Cricket Ground and resulted in favour of Yokohama though the Japanese students put up a very fine game in parts. There was a good attendance of spectators. Foreigners was well as Japanese, and the keenest interest was manifested in the game. Four courts were going during the afternoon, as follows:—

Y. C. S.		Y. C. & A. C.	
a.—T. Morokoshi and K. Watanabe	v.	J. M. Mollison and K. Van R. Smith	
b.—T. Yoshida and K. Jinbo	v.	H. Grimbale and M. F. Stephens	
c.—G. Akino and K. Usui	v.	T. J. Chapman and A. W. Read	
d.—S. Kumita and Y. Koga	v.	B. C. Foster and W. J. White	

J. M. Mollison and K. Van Smith won their double, the score being 6-4, 6-4; Chapman and Read gained theirs—7-5, 6-4; and Stephens and Grimbale were victors by 8-6, 6-2. White and Foster, however, lost their match, the scores being 6-2, 6-0.

Yokohama thus won three sets out of four. Messrs. A. J. McClure, E. W. Maitland, H. W. Kilby, and G. G. Brady acted as scorers.

## STORMY WEATHER.

Rain is to be expected at this season but not such continuous rain as we are now having. It has already done much damage and seems likely to do more. The barley crop, which promised to be very good, can not be harvested, and every day's delay means heavy loss. Nor is there any immediate prospect of a change for the better. Centres of depression—three are separately described—appear to be cruising about the seas of China and Japan, bringing with them deluges of rain and strong winds. The meteorological experts give little hope of a speedy improvement.

According to the Tokyo Meteorological Bureau, a storm was experienced at 2 p.m., on June 19th in the south-western parts of Okinawa prefecture (Lu-chu islands) and it slowly advanced toward the main land. Consequently, Kyushu and the western parts of the mainland experienced heavy rain, and on the same night and the following day the eastern provinces, including Tokyo, were subjected to unsettled weather. To-day, the 21st, the region of low pressure is expected to pass off, and there will be temporarily fair weather subject to sudden change. The authorities of the Bureau believe that this year there will be more rain than in previous years.

The following telegrams with regard to damage caused by the continuous rain have been received:—

The rivers Tenryu, Fuji, Abe and Kano, in Shizuoka prefecture overflowed their banks, causing severe damage to cultivated fields. If the heavy rain continues a few days longer there will be no crop of wheat and barley.

On June 18th, flooding took place in the districts along the Banyu river, near Oiso, and communications were interrupted.

A heavy storm was experienced at Karatsu and neighbouring places on June 20th.

The Yedo river in the district of North Katsushika, near Tokyo, overflowed its banks.

On the 18th, a strong storm was experienced throughout Formosa, the result being that several bridges were destroyed, and traffic on the railway was interrupted. At Taipeh some houses collapsed and some persons were killed.

Telegrams have been received from the interior as follows with regard to the recent typhoon and rains:—

Owing to the flooding from the Fuji and other rivers in Shizuoka prefecture, many buildings, including some police stations and bridges over rivers, were destroyed.

At several sections of the Tokaido Railway, damage was caused, and on the evening of June 19th, traffic was temporarily interrupted. Repairs were completed before the following morning.

Damage in Nagawo prefecture was similar to that of the foregoing province. The Section between Fuji and Oya on the Chuwo Railway, was severely damaged so that the transport of new cocoons was impeded.

It is officially reported that on the night of June 19th, a landslide occurred at the village of Yoshino, Kagoshima. Six houses collapsed and thirty-five occupants were killed and two injured. Damage was caused on the Kyushu Railway. Some telegraph poles fell so that communication was temporarily stopped.

On June 20th, heavy rain was still falling at Kure, Hiroshima, and other western places. Owing to the floods a locomotive was overturned at Itsukaichi station, near Hiroshima. One man was killed and two were injured.

On June 20th, inundations occurred in Oso, a district along the Tone river, in Saitama prefecture, causing damage to houses, bridges, etc.

On the same day, at Ota, Yokohama, a landslide occurred destroying three houses. Fortunately the occupants escaped.

Owing to the recent storm a landslide has taken place at a point between Kasagi and Okawara on the Kwansai Railway. As a result, traffic is interrupted.

As usual during the *Nyubai*, the weather is gloomy and changeable, with heavy rains in the central and western provinces, by which severe damage has been caused to buildings, railways, etc. The Tokyo Meteorological Bureau reports that on June 20th a gale visited the western part of the main land and advanced northward traversing the central provinces. Hiroshima, Kure and other places experienced on the 21st heavy rains. Further a centre of low pressure appeared in the direction of Okinawa prefecture (Lu-chu islands) and was slowly advancing eastward. As a result, the weather in Tokyo and the surrounding districts is expected to be changeable for some days to come.

A report from Manchuria says that a terrible gale has been experienced for some days past, preventing operations at the front.

A landslide occurred in the district of Ono, and a house was crushed. Five occupants were killed. A Kure telegram reports that owing to the storm, three vessels collided in the harbour and sustained damage. Three boats are missing. A military factory was flooded, and work in a department of the factory was stopped.

The reservoir of the Hiroshima water-works was destroyed on the 21st by the heavy rain. An official telegram says that on the previous day, 14 houses in Hiroshima collapsed and 4 persons were drowned.

Telegrams from Niigata, Toyama and other prefectures report damage similar to that of the foregoing places.

## THE LAW COURTS.

## THE TSUKIJI AFFAIR.

The preliminary examination of Captain Bougoin, Mr. F. Strange and H. Maki, an employee of the former, in the Tokyo District Court having been concluded, a decision was delivered on June 15th. Captain Bougoin and the Japanese were committed for trial and Mr. Strange was acquitted on the ground that the evidence against him was not sufficient.

The *Niji* reports that as the decision of the preliminary examination is concerned with military secrets, it is not possible for newspapers to publish the details.

## CLAIM FOR DAMAGE.

A case in which Mr. F. Retz claims yen 3,911 from the Shimoda Construction Company came up again on June 16th in the Yokohama District when Messrs. Yokoyama and Yendo, the well-known civil engineers of Tokyo, were summoned as expert witnesses.

Before the hearing, the experts, at the request of plaintiff, inspected two dwelling houses on Lot No. 179, Bluff, and a godown on No. 223, Yamashita-cho, which were built by defendants, and presented their reports in writing to the Court. The experts now gave technical explanations. Their opinions were that some parts of the buildings were imperfect but that the defects, however, could not be insisted on unless the contract between the parties was known.

The Court again adjourned the hearing.

## THE TSUKIJI AFFAIR.

The trial of Captain Bougoin and H. Maki, who are charged with infringement of the Law for the Preservation of Military Secrets, will take place in the first criminal section of the Tokyo District Court before Judge K. Imai, and Public Prosecutor T. Yasuzumi. The day of the trial is not yet fixed.

It is reported by Tokyo journals that Messrs. S. Isobe and K. Seki, lawyers of Tokyo, have been employed by Captain Bougoin for the defence in his pending trial.

## ALLEGED FRAUD.

The trial of Mr. A. C. St. Clair (33), an American, took place on June 20th in the Tokyo District Court.

The Public Prosecutor stated that the accused stayed at the Imperial Hotel and the Tokyo Hotel for some days and left without paying, and that he obtained some curios from a Japanese merchant, of Moto-machi, Yokohama, and several bonds from a British gentleman in Tokyo, by means of fraud.

The accused said that he did not intend to avoid payment of the hotels and for the goods and bonds he had obtained but that he had no chance to pay as he was on a visit to a mine in the district of Taira, Iwaki province. Before he could pay he was arrested.

The accused's Counsel stated that Mr. St. Clair was employed by the owner of the mine, on the recommendation of Mr. K. Hara, a lawyer of Tokyo, that he was a civil engineer and was attending to his duties when he was arrested. Counsel asked the Court for leave to examine Mr. Hara as a witness.

The Court decided to summon the witness for June 27th.

## YACHTING.

In spite of the disagreeable weather, three of the 21 raters turned out to race on Saturday for the prize presented by Mr. T. M. Laffin. Shortly before 2 p.m. the rain seemed likely to ease up, but it came on again with persistence, and at times the boats were shut out from sight. *Witch* got a bit the better of a rather poor start, crossing the line ahead of *Aimee* and *Valkyrien*. *Witch* and *Aimee* went about to port tack, and stood towards the breakwater, when the wind, which had been N. E., backed to N., and gave a big advantage to *Valkyrien*, which had kept on the starboard tack. *Witch* and *Aimee* worked along the breakwater in close company, the smaller boat keeping on the weather of the *Aimee*. *Valkyrien* cleared the Harbour Entrance over a minute ahead of *Aimee*, and *Witch* got stuck in a bald patch, and being hung up by the tide, was some minutes behind before she got going on the reach to the Lightship. Before this mark was reached, *Aimee* had passed *Valkyrien*, and travelling fast down wind increased her distance on the run to the Widow buoy. *Witch* travelled fast on this leg, and turned the outer mark within two minutes of *Aimee*. Returning to the Lightship, the wind shifted about a good deal, and the leading boat was making good time towards the Harbour Entrance while the other two were finding it necessary to tack to make the Lightship. *Valkyrien* got round that mark ahead of *Witch*, but not enough to allow her Club time. Times at the finish:—

	Finish.	Club Time.	Corrected.
<i>Aimee</i> .....	4-26-46.	scratch.	4-26-46.*
<i>Valkyrien</i> .....	4-39-24.	"	4-39-24.
<i>Witch</i> .....	4-42-26.	4-58	4-37-28.†

\* First prize, presented by Mr. T. M. Laffin.

† Second prize.

Four boats of the Lark Class raced over the Lightship course. In the light wind they had tricky work beating out of the harbour, and on the leg to the Lightship found the tide almost too strong for them. Times at finish were:—

No. 11.....	3-54-38	First prize.
" 5.....	3-56-19	
" 4.....	3-46-51	
" 3.....	gave up.	

The race scheduled by the Mosquito Yacht Club was not sailed.

## MEN'S READING ROOM.

An "At Home" was held at the Men's Reading Room on Saturday afternoon, and although the weather was unpropitious there was a fairly large attendance. The rooms have recently been greatly improved, and now look quite cosy and comfortable. The "At Home" was arranged by the Social Committee, of which Mr. James Neil is chairman. Tea was served, together with fancy cakes, ices, etc., and the members and guests were well looked after by Mrs. Neil, Mrs. Thoma, Mrs. Macbeth, Misses Bunting and the Misses Austen. During tea some gramophone selections were given, and afterwards Miss Griffin played a pianoforte solo, Miss Saunders sang "Down the Vale," and another charming song, and Mr. S. H. Somerton sang "Thursday," and "The Promise of Life." Altogether a very pleasant time was spent, and the improved appearance of the rooms was commented upon in appreciative terms.

## THE CONGESTION AT THE CUSTOMS.

Both Yokohama and Kobe are suffering from congestion of goods landed at the Custom House. In Yokohama the Customs authorities were approached by importers and in consequence the following new regulations were issued, taking effect from June 7th:—

Since the outbreak of the present war the quantity of goods imported into Yokohama has greatly increased, so that the Customs warehouses have become insufficient to store them. The goods in the warehouses and annexed buildings are piled one on another in enormous quantities, causing a delay in delivery. This is a source of great trouble to the importers. To make up for the insufficiency of warehouses the Custom House has prepared a plot of ground of 1,400 *tsubo* for landing iron or similar kinds of imports which will not be affected by weather. But even this step does not suffice to get quick delivery for the importer, so the authorities have decided to make the following further arrangements.

Goods may be examined on board ships or lighters before landing at the Custom House.

The goods which may be examined in lighters are as follows:—

(1) Kerosene or petroleum oil (in cans); Oil, or spirit of turpentine (in can or cask); Oil, fats and waxes, ingredients of fixed quantity; Iron rails and fittings thereof; Iron pipes and tubes; Iron, pig and ingots; Iron nails (in keg); Teak timber; Timber, lumber, boards and planks; Rough or unworked stone (for building purposes); Bricks and tiles (for building purposes); Cement; Coal; Coke; Coal briquettes or patent fuel; Saltpetre; Alum; Soapstone; Gypsum; Window glass, containing 100 sq. ft.; Broken or powdered glass; Bleaching powder (chloride of lime); Acetic Acid; Black lead or plumbago; Pitch; Plaster of Paris; Putty; Rosin; Malt; Grain; Beans and Peas; Sesame; Cotton seeds; Wheat flour; Crude salt in bulk; Salt salmon; Fresh eggs; Molasses; Animals of any kind; Gunpowder; Dynamite and other explosives and volatile matter.

(2) Goods (beside the above) of same nature and fixed quantity;

(3) Import goods free of duty;

(4) Export goods.

Of the above, some goods may be examined in the ships, except salt salmon and fresh eggs.

Out of the above mentioned goods, some may be examined in ships or lighters.

Heretofore imported goods (including those free of duty) could not be taken delivery of before examination. But on and after 1st June next the following goods are allowed to be taken delivery of before examination, leaving a sample only for subsequent examination:—Wool; Rice; Bran; Paddy; Cotton, raw or ginned; Cotton waste; Cotton raw in the seed; Flax; Hemp; Jute; Manila Rope and China grass, bucked or otherwise; Guano; Packing Mats; Tea box lead; Plants, Trees, Shrubs, Roots, Shoots and Bulbs.

In regard to the import of hard-ware, it was formerly the custom for the examiner to put a red mark on the goods after having them examined and also for the official of the Goods Dept. to put a white mark on them in inspecting the number of such goods, when delivered. On or after 1st April last this practice was altered and the examiner will simply examine a part of the goods and the whole lot will be examined by officials of the Goods Dept. at the time of granting a permit, thus saving labour.

With regard to electro-plated ware consignees were hitherto accustomed to unpack the goods and count the number in the warehouse. Considering this to be a source of delay in landing and delivery, the practice is forbidden on or after 6th June.

It is stated in the Custom House Regulations that in case imports or exports are not taken delivery of or sent out within 72 hours after landing or reaching the Customs, they will be stored by the Customs, at the expense of the parties concerned. The term on import goods was later extended to one week after landing, but on account of the insufficiency of the warehouse accommodation the Customs authorities consider it in the general interest of traders to force a quick delivery by shortening the term to 4 days instead of one week.

In Kobe, we read in the *Kobe Herald*, a meeting of importers has been held, presided over by Mr. J. Marshall (Messrs. Findlay, Richardson & Co.), which decided to send the following letter to the shipping companies of the port:—

Kobe, June 19th, 1905.

Dear Sirs,—As individual firms, most of us have had occasion to complain of the extraordinary haphazard way in which our goods are landed at this Port, but so far no attempt has been made to redress wrongs. In our opinion, our interests are sacrificed in order that your respective ships may be

rushed forward, and we cannot too strongly protest against this unjust treatment. To this dumping may, in no small measure, be ascribed the present confusion at the Custom House. We submit that if you had your own employees to superintend and properly direct the landing of cargo, we would not only know where to look for it, but almost be certain to receive it in a less unsatisfactory condition than we at present do. You will recognise that if cargo were landed in a systematic manner, its passage through the Custom House would be greatly expedited. By tacitly allowing you to appoint your various regular Landing Agents instead of leaving us to take delivery of our goods from alongside, in terms of your own Bills of Lading, we consider we have, all along, done as much as we can to aid you in the rapid despatch of your steamers; but in order to make it possible or desirable for us to continue granting you this facility we must be able to rely upon your adopting such measures as may not only ensure perfect safety for our goods while lying at the *Haatoba*, but also give us a reasonable chance of getting delivery of same without any undue delay. To summarise, what we should like to be done by the Steamship Companies represented at this port is:—

That they should make application to the Custom House to have a certain separate space allotted to them for each class of cargo in course of landing.

That each Company should appoint a sufficient number of competent men to superintend and direct in a methodical way the landing and also the sorting of cargo on the *Haatoba*, or wherever (as in the case of cotton) the goods may happen to be deposited.

That Consignees shall, on presentation of their Bills of Lading, obtain delivery of their goods on shore in the same way as if applying for same on board, and that it shall not be part of their business to employ hands to search for such cargo.

That the Shipping Companies shall assume full responsibility for the safety of the goods until delivered to Consignees.

The position at present taken up by Shipping Agents in practically refusing to recognise any liability is against the interest of all Shippers, and is a serious handicap to the trade of the port.

It seems to us that instead of observing an attitude more or less antagonistic to Shippers, it should rather be the aim of Shipping Companies to work in harmony with their constituents, thereby proving that there is between them a community of interest.

In conclusion, it would be perhaps meet and proper to remind you that one cannot damage another at his own pleasure, profit and/or convenience, which fact is the foundation of all law and equity.

## OPENING OF THE KEI-LU RAILWAY.

"Esson Third," writing to the *North-China Daily News* from Seoul under date of May 28th, gives the following account of the opening of the Seoul-Fusan Railway:—

For the last week Seoul has been enlivened by the visit of Commander Prince Fushimi, and the opening ceremony of the Seoul-Fusan Railway. For two weeks and more, the railway authorities have been busy with elaborate preparation outside of the South Gate. Immense gateways in various designs of tower and archway, and dressed out in pine branches, occupied the central entrance to the new station yards. To the east, above them on the hillside, were erected an audience-hall and dining-rooms. Hideous bamboos and straw ropes and tin roofs to begin with were, by the wave of some magic wand, transformed, and touched off, and ornamented till the effect was most pleasing in its combination of form and colour, restful to the eye, and delightful in contrast to the disorderly clay surroundings of the old city of Seoul.

The ceremony did not last long enough to weary the audience, and although spoken in a language unintelligible to most Westerners, it was highly interesting by reason of the precision, order, and method that marked it. One could read through the lines of that opening ceremony the care and exactness that explains Japan's success in the stupendous war now on hand.

At about eleven o'clock Prince Fushimi and his staff took their seats on the platform, followed by the foreign representatives and Korea's old and off-tried officials.

Korea was at first chagrined that Prince Fushimi, junior, and not the father, the Lieutenant-General, should be the visitor; but she has no reason to regret the choice, for what Korea needs to-day most of all, is to see a young man in the highest walk of life who does not think his hands too soft, or his birth too distinguished to make the rough places of the world undignified for him. It was a matter of deep interest to the onlooking Koreans to know that this straight and soldierly Prince had faced the Russian twelve-inch guns on the 10th August last, and had been wounded like any common jackey. At his side sat Prince Yi Chagak, Korea's representative,

youthful and gentlemanly, a delightful young man to meet, but unsuited to the "whips and scorns of time."

Behind the Prince sat General Hasegawa, the cut of whose face gave one to know why he was appointed commander of the Imperial Guards. A pleasant twinkle at times too looked out from the grim visage of the soldier, but the countenance is that of a man of war, who will drive his way through a continent if the need require.

Dr. Furuichi, President of the Road, acted as master of ceremony, and after various short papers had been read, Dr. H. N. Allen, American Minister, made an address in English congratulatory of the occasion of the opening of the railway. It was with pleasure that those present saw him once again on the public platform. He was present years ago at Korea's birth into the world, and now again he was to share in her graduating exercises into the assembly of nations. Mr. Hayashi also spoke—and the company then adjourned to the dining-rooms where an abundance of supply, delicately prepared, and artistically arranged, awaited them. At the close of the déjeuner the Prince arose and led three *banzai* cheers for the island and the Emperor over the sea, and then the afternoon was given up to the beautiful gardens on the hill top that had been extemporised, with their flowing plants and old trees, and other interesting pieces of Japan, transplanted into the abode of the Hermit.

Outside of the enclosure, from a bamboo tower, buns, and fruit, and coins, and candy were scattered by the barrowful among the people. The scramble that ensued was surely equal to the retreat of Kuro-patkin from Mukden. If Korea had been fighting for her life her people could not have exhibited more perspiring earnestness than they did over that shower of buns from the bamboo heavens above them. But no one was reported hurt and all were happy.

In the evening there was an exhibition of fireworks which, for variety and beauty, were well up to other items of the day. On a black sky that rolled up from the west and threatened rain, the bursting of star balls and rockets was wonderfully beautiful. From a town lighted up by long lines of Japanese lanterns and arc lights, went up the hum of swarming multitudes, that burst into shouts and burraths at the report of the bombs in mid-air.

When one reads these days of star balls and flash-lights illuminating the ghastly carnage of war, how delightful it was to know that all this bombardment and exploding of gunpowder meant a holiday and delighted people, fed to satiety and overwhelmed with the wonders of the occasion.

## CORRESPONDENCE.

## WHERE DID IT TAKE PLACE?

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—The translations of Reuter's skeleton messages by Far Eastern journalists at times afford food for merriment. We had a classic example the other day when a Singapore paper dealing with a message about the Tsukiji affair announced that "Capt. Bougouin and a strange Englishman had been arrested." Now we have three local papers endeavouring to tell us where Princess Margaret of Connaught was married, and each pitching on a different place, as witness:—

Prince Gustavus Adolf, Duke of Scandia, and Princess Margaret Victoria, daughter of the Duke of Connaught, were married at St. Joseph's Cathedral.—*Japan Gazette*.

Prince Gustavus, eldest son of the Crown Prince of Sweden and Norway, and Princess Margaret, eldest daughter of the Duke of Connaught, were married in St. George's Cathedral, Windsor, in magnificent weather.—*Japan Times*.

Prince Gustavus, eldest son of the Crown Prince of Sweden and Norway, and Princess Margaret, eldest daughter of the Duke of Connaught, were married in St. George's Chapel, Windsor, in magnificent weather.—*Japan Mail*.

Now where did they get married?

Yours, etc.,

BRITISHER.

## THE PEACE NEGOTIATIONS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—I would not for a moment dispute the propriety of your assigning the interruption of telegraphic service between Nagasaki and Kobe, as the cause of the delay in receiving certain telegrams from abroad recently, for there was nothing in them that justifies the charge that they were delayed by the Censor; but will you explain why your telegrams, by Reuter's Special Service, giving the information that the Kaiser had created Count von Bulow a Prince; that there was so much friction in the French Cabinet that M. Delcassé had resigned; and that the German Crown Prince was married in Berlin with great pomp, all bear date London, June 8th, while the very same

messages in some of your contemporaries are dated London, June 6th?

Again, in your leading article of June 16th, you say: "A strange idea appears to exist in some quarters that Japan would be guilty of an act shocking in the eyes of the civilized world did she not agree to an armistice from the moment that peace negotiations commence." Does "some quarters" refer to Japan, or have you seen indication of such a feeling as you mention in communications from abroad? I approve heartily of the general tone of your leader, but I must confess that I have failed to detect any intimation that the world expects Japan to grant an armistice unless the terms thereof are entirely satisfactory to herself, and moreover unless Russia's good faith is guaranteed by some substantial pledge, or vouched for by responsible sponsors; and since these conditions are virtually unattainable, I see little reason for expecting such an armistice, because, as you say, it could only have results that would be seriously, almost fatally, disadvantageous to Japan, practically nullifying all that she has gained up to the present moment.

I hold no brief from my Government or from my fellow-countrymen, yet I think I express the sentiments of a good many Americans when I say that I regret President Roosevelt's precipitate action in trying to induce the two belligerents to discuss terms of peace at this juncture, when Russia has everything to gain and Japan everything to lose. It has, as you see, resulted in Russia's once more doing something that savors strongly of contempt for Japan, amounting almost to impudence; and the Japanese people are quite justified in feeling that the United States has, by its official act, displayed a lack of consideration that almost amounts to unfriendliness. I do not know how this will strike you, but I assure you that I have heard a number of Japanese express themselves in this way. Had President Roosevelt deferred his effort to bring about peace until Japan had secured something tangible, something that might have compelled respect from Russia, it would have been better.

Yours faithfully,  
June 18th, 1905.

AN AMERICAN.

### THE FROG IN THE WELL.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR.—The Rev. A. D. Berry has written to you complaining that he has been accused by me of "ignorant self-assurance," "obtuseness," and of being "ill-informed" on the religious questions on which he so dogmatically writes. The reverend gentleman has conveniently forgotten that he threw the first stones, unaware apparently of the fragile nature of the house in which he resides. He was charitable enough to write thus of one article that he knew to be written by me and of others which he imagined might be written by me: "They all alike show a strange in season and out of season bias against the Christian religion." Now, Sir, in neither of the two articles referred to is there a single sentence or clause that is anti-Christian. The articles are anti-humbbug, anti-claptrap, anti-make-believe, anti-cheapjack forms of Christianity, anti-secularized Christianity, and nothing more. The line taken by me on the question of mixing up amusements with the preaching of the Gospel is the line taken by the whole of the Roman Catholic Church, by the Greek Church, by the majority of the clergy of the Church of England and by thousands of Protestant ministers belonging to other denominations. To tell such religious experts that "pingpong is Christianity and music too and hair cutting too" would only serve to reveal one's own ignorance of logic and the law of cause and effect. To say, that the connection of amusements and Christianity is that of the steam engine to the railway cars shows how hopelessly confused is the mind which sees things thus. The engine pulls the cars, but not all the pingpong in the world has power to convert anybody. If, Sir, this is not "obtuseness" on the part of Mr. Berry we do not know the meaning of that term.

Here is another astonishingly ignorant assertion: "If any man in this world thinks he can satisfy his conscience and keep the moral law without the help of Jesus, it simply means that he does not know his own conscience yet and does not know the Moral Law." Such language would of course pass unchallenged if delivered in the pulpit of the chapel where the reverend gentleman is wont to hold forth on Sundays, but in the columns of a newspaper any man who undertakes to insult the whole of the thinking non-Christian world by penning such language must expect to be pounded by the "man in the street" and by the student at his desk. How much, we wonder, does Mr. Berry know of the high-souled ethics of ancient and modern times venerated and practised by the millions upon millions of Asiatics and Europeans who have either never known anything of Christianity or have rejected it in the form presented to them? The moral law

is of course greater than Christ. Its existence alone made Christ's teaching possible. To it he appeals for all the authority claimed for his words. It is queer topsy-turvyism to imagine that the moral law derived its authority from Christ. The authority of Christ's teaching of course is entirely dependent on its agreement with the moral sentiments of mankind.

As regards the assertions made by Mr. Berry in his later letter re dogma and benevolent work, they are most inaccurate. Because believers in hell and damnation have done an enormous deal of good in the world, that does not say that seekers after truth are to try and hold on to this belief. Dogma! What is it, but the ever changing opinion of a number of gropers in the dark after religious certainty that is not to be had? If Mr. Berry is satisfied with the slender evidence on which the big supernatural structure rests, he is welcome to that satisfaction. But he must take note of the fact that, while holding on resolutely to what it conceives to be the fine moral essence of Christianity, a very large section of Protestant Christendom in Europe and America has unequivocally rejected the orthodox doctrines concerning sin, the atonement miracles, the Divinity of Christ and future punishment. The notion that belief in Christian dogma is necessary to-day as a stimulus to benevolence is one of the wildest of chimeras. The majority of the subscribers to the charities of Europe and America have no such belief.

The Japanese have subscribed vast sums of money for benevolent objects without belief in any kind of supernaturalism. Mr. Berry is spending his strength in trying to champion exploded notions. He is kind enough to describe my article on the Imperial Gift to the Y. M. C. A. as a "tangle of misapprehension." Suppose he were sit down and try to understand that article and the point of view of the writer. Suppose he were to remember that to the majority of the great minds of the nineteenth and twentieth centuries his doctrine of sin and atonement appear in the light of gross perversions of the truth, as absolutely anti-moral and even as un-Christian, if the word Christian be understood in its highest sense. Mr. Berry doubtless knows the Japanese proverb, *I no kawazu daikai wo shiranu*. Let me assure him, after spending many decades in the study of various forms of religious and philosophical belief, that there is a great sea of religious thought of which he in his small Methodist well has not the least conception. Perhaps it might be wiser for him to grant to others the liberty of belief and unbelief he claims for himself and to cease championing, at any rate in the columns of a newspaper, such a ridiculous doctrine as the dependence of salvation, that is a title to enter paradise, on belief in certain dogmas or in certain assertions concerning Christ and his place in the universe. As regards the question of gentlemanly courtesy, plain speaking is no breach of that, or Mr. Berry would stand condemned by what he wrote about my original article. About Mr. Berry's general knowledge I have no information, but on the subject of religion, which without presumption I may say I know very thoroughly, I have no hesitation in affirming that Mr. Berry, though a clergyman, shows little acquaintance with and no respect for the sincere beliefs and the scepticism of devout minds outside the precincts of the Protestant sect to which he belongs. I have been unwillingly dragged into what will probably prove to be a fruitless controversy by an uncalled for attack on an article written against the notion that lawful ends may be attained by unlawful means.

I am, yours, etc.,

THE WRITER OF THE ARTICLE.  
June 16th, 1905.

### ANNUAL MEETING OF THE CANADIAN METHODIST MISSION AND THE JAPAN METHODIST CHURCH.

The annual meeting of the Canadian Methodist Mission was opened in the Central Tabernacle, Hongo, Tokyo, on Thursday, May 18th. The Rev. A. C. Borden, B.D., presided. On account of serious illness Rev. W. W. Prudham, of Toyama, was unable to be present. During three successive days the members of the Mission were busy reviewing the work of the past year, and planning for the further expansion of the work. One of the most gratifying achievements of the year has been the organization of a Mission "Shadan" which will enable the missionaries of the Canadian Methodist Church to hold mission houses, schools and preaching place in Japan. Already considerable of the property has been transferred to the organization.

Communications from the Mission Rooms in Toronto were read, which referred to the decision of the Board to send two more missionaries to Japan in the month of December. Another item referred to the deep sympathy which is felt in the Canadian Church for those who are suffering on account of the war. Through the Sunday Schools funds are to be raised for the purpose of aiding destitute families

and providing for the care of orphans, if such a scheme is feasible.

On Tuesday, June 23rd, the Annual Conference of the Japan Methodist Church was opened in the Methodist Church, Azabu. The conference is composed of all the ordained ministers in the Church, including the foreign missionaries, and elected by representatives equal in number to the ministers.

The morning of the first day was occupied with the ministerial session, in which questions relating to ministerial character and qualifications, the reception of candidates for the ministry, the standing of probationers, and ordination to the ministry, were considered. Of the thirty-four ministerial members of the Conference, two were unable to attend, one was still pursuing theological studies in America, and one, the greatly beloved pioneer missionary of the Church, Rev. Davidson Macdonald, had passed away. In the afternoon a semi-social meeting was held, and various matters connected with Church organization and work were freely discussed.

On Wednesday, the 24th, the general sessions of the Conference opened. The calling of the roll showed, as usual, that while nearly all the ministers were present, there was only a sprinkling of laymen, six out of a possible thirty-three. The absence of the lay element is regrettable, but it is one of those things which time will correct. As the responsibility for the support of the work of the Church passes over from the Missionary Society to the membership of the Church, the latter will inevitably come to take a livelier interest in the business of the Annual Conference.

An interesting incident of the first day of the Conference was the offer made by Mrs. Ross and Mrs. Strachan, the President and Secretary of the Woman's Missionary Society of the Canadian Methodist Church, of a finely carved chair, which for many years had been constantly used by Dr. Macdonald, as serve during the sessions of the Conference as President's Chair. In a resolution of acceptance the Conference expressed its sense of the honour conferred upon it by this act on the part of Mrs. Ross and Mrs. Strachan. The esteem in which Dr. Macdonald has from the beginning been held by the members of the Conference cannot, perhaps, be better illustrated than by stating the simple fact that for the first ten years after the organization of the Conference he was elected President every year but one, and that year he positively declined the honour. As this was the first Conference since Dr. Macdonald's decease, a Memorial Service was held in the Azabu Church on Sunday, May 28th. There was a large attendance, and many tributes were paid to his large-heartedness and sterling worth, some of them by ministers who were among his earliest converts. By his life and labours in Japan he has left an indelible impression upon the Japan Methodist Church.

Another interesting memorial service was held in the same Church on Saturday, May 27th, this being the seventh year since the death of the Rev. M. Kobayashi, one of the most prominent of the older ministers of the Church, and the leader for many years before his death in efforts looking towards self-support in the Japan Conference. He, too, exerted an influence for good upon the Church which is still felt.

The election of President took place on the morning of the 24th inst., when Rev. Y. Hiraiwa was re-elected to the position he has occupied continuously since 1901.

Among the memorials coming up to the Conference from the five Districts into which the territory occupied by the Conference is divided, the larger number were in the form of additional preachers and buildings to enable us to provide for our rapidly increasing work.

Among the reports presented, some having a special interest may be noted.

The Conference Property Committee reported that during the year it had dealt with the Mission and Church property, in view of the incorporation of the Missionary "Shadan," to hold Mission property. The joint committee had happily been able to come to an understanding which was entirely satisfactory both to the Mission Council and to the Conference committee. They recommended that steps should be taken by the Conference to form an Association similar to that already formed by the Mission, for the purpose of holding such property as had been mutually agreed upon as belonging to the Conference. Steps were taken to give this recommendation practical effect.

The Committee to confer with the Mission Council reported that it had met the Council and discussed the question of taking up school work again at Azabu, also the status of the Central Tabernacle. The Committee recommended that as regards the Azabu School question, it was not desirable to begin educational work at that point at present, since we had as yet no definite knowledge in regard to the probabilities of Methodist Union, with which the educational question was intimately connected. In regard to the Central Tabernacle in Hongo, it was recommended that the work hitherto carried on by

the Mission and Conference as two departments, be unified, and the work at that point have henceforth the same status as the other Churches of the Conference. The purpose of the recommendation is to strengthen the work at the Tabernacle by placing it all under one head, and, while not neglecting the general work among the students of that section of the city, to pave the way for more vigorous efforts in the direction of building up a strong self-supporting Church. It may be added that in regard to both of the above questions the Mission Council and Conference are in thorough agreement.

The report of the Statistics Committee showed that there had been a slight increase both in membership and in contributions during the year.

The Hymnal Committee reported that of the New Union Hymnal, used by nearly all the Protestant Churches in Japan, some 40,000 copies had already been sold.

The report of the Committee of the Church organ, the *Gokyo*, gave rise to some discussion, and various suggestions were made with a view to increasing the circulation of the paper, and increasing its value to the homes of our people.

The Committee on the Conference Preachers' Aid Fund recommended the raising of a substantial amount and investing it safely, the interest to be used in providing for the needs of those preachers who by reason of increasing age or ill-health are obliged to retire from the active work, as well as for the families of those deceased. A Special Committee was appointed to take the matter in hand during the year.

A pleasing feature of the Conference was the reception of Fraternal Delegates from other Churches and allied organizations, which took place on Saturday morning, May 27th, when representatives from the Methodist Episcopal, Methodist Protestant, Evangelical Association, United Brethren, and Congregational Churches, and from the Young Men's Christian Association, the Evangelical Alliance, and the Woman's Temperance Union, were introduced and addressed the Conference. Other visitors to the Conference were Mrs. Ross, President of the Canadian Methodist Missionary Society of the Canadian Methodist Church, and Mrs. Strachan, Secretary of the same society, and Rev. F. A. Cassidy, M.A., formerly a member of this Conference, but at present connected with the Methodist Episcopal Church.

At the close of the Conference the following ministers were elected Chairmen of Districts: Tokyo, Rev. Y. Hiraiwa (*ex officio*, being President of Conference); Shizuoka, Rev. H. Tsuchiya; Yamanashi, Rev. D. Hatano; Kanazawa, Rev. D. R. McKenzie.

The next Annual Conference will be held in Kofu, Yamanashi Ken, beginning on the first Tuesday of May.

The prospects for successful missionary effort have never, in the sixteen years since the Conference was organized, been so bright as they are to-day. The two sides of the work represented by this Mission Council on the one hand and the Japan Conference on the other, are in most hearty accord, not only as regards the general lines of work, but also as regards details. And in this lies to no little extent our confidence in the future of our work.

#### YOKOHAMA GENERAL HOSPITAL.

The Committee gratefully acknowledges the following donations and Subscriptions received since November 1st, 1904:—

M. J. NEVILLE.  
Hon. Sec.

#### TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

#### FRANCE, GERMANY AND MOROCCO.

London, June 15.

M. Rouvier is encountering unexpected difficulties in selecting a Foreign Minister and an Ambassador to Berlin. Meanwhile Count Tattenbach is strengthening the German position and has obtained valuable concessions, including the construction of a new port at Tangier.

#### RUSSIA'S REPLY.

The text of Russia's reply has been published in St. Petersburg.

#### EXPLOSION ON BRITISH BATTLESHIP.

London, June 16.

While the British battleship *Magnificent* was practising off Tetuan, a 6-in. shell exploded inside the gun, and eighteen men, including the gunnery lieutenant, were wounded.

Later.

With reference to the gun accident on board the British battleship *Magnificent*, the cartridge of the six-inch shell missed fire, whereupon the breech was opened, and instantaneously an explosion occurred. Lieutenant Stobart and three men have succumbed to their injuries.

#### THE LATE M. DELYANNIS.

The death of M. Delyannis is regarded in Greece as a national calamity, causing serious political confusion. The Funds are generally lower and the Bourse has been closed till after the funeral in order to avert a panic.

#### MOROCCO.

Mr. Gerald Lowther, H.B.M.'s Minister, on the 7th of June presented a categorical refusal on the part of Great Britain to join in an international conference.

Count Tattenbach, German Envoy, on the 9th June, conveyed Germany's acceptance.

#### PEACE CONFERENCE TO BE HELD AT WASHINGTON.

Later.

A Washington dispatch says it is officially announced that Washington has been selected for the holding of the conference of the peace plenipotentiaries.

#### FRENCH FOREIGN OFFICE.

M. Rouvier, the French Premier, has decided to retain for the present the portfolio of Foreign Affairs.

#### THE ROYAL MARRIAGE.

Prince Gustavus, eldest son of the Crown Prince of Sweden and Norway, and Princess Margaret, eldest daughter of the Duke of Connaught, were married in St. George's Chapel, Windsor, in magnificent weather.

#### THE ARROGANT RUSSIAN PAPERS.

The press of St. Petersburg continues to comment most arrogantly on the peace suggestions, declaring that Japan needs peace more than Russia.

#### A GRAND DUKE RESIGNS.

The Tsar has accepted the resignation of Grand Duke Alexis of the positions of Su-

preme Chief of the Fleet and Head of the Navy Department, but retains him in the dignities of Grand Admiral and Aide-de-camp Tsar.

#### RUSSIAN MINISTER RESIGNS.

London, June 17.

Admiral Avellan has resigned the post of Minister of Marine.

#### FRENCH POLITICS.

M. Rouvier, the French Premier, has relinquished the Ministry of Finance and takes control of the Foreign Office entirely.

The German Ambassador, Prince Radolin, is conducting important discussions with M. Rouvier.

#### THE MOROCCO QUESTION.

Austria, Italy and America have intimated that they are prepared to join in a conference with reference to Morocco, always provided that the Powers chiefly concerned accept the invitation.

#### PEACE.

It is announced that the selection of Washington as the meeting place of the plenipotentiaries appears to imply progress making for peace. Otherwise nothing whatever is known as to the parleying.

#### PEACE POURPARLERS.

London, June 18.

Reuter's agent at Washington says that an exchange of views is proceeding between Tokyo and St. Petersburg, via Washington, with reference to the peace conference.

#### NEW FRENCH FINANCE MINISTER.

M. Merour succeeds M. Rouvier as Minister of Finance.

#### RUSSIAN DENIALS.

London, June 18.

The Russian Foreign Office has denied that there has been any exchange of views regarding an armistice.

#### FRANCO-GERMAN RELATIONS.

It is understood that M. Rouvier, in view of the seriousness of the German pressure and the real anxiety in French political circles regarding Germany's intentions, hesitates about refusing to hold a conference over Morocco, despite the emphatic assurances from England that she will give the fullest support to the French policy. The British positive refusal to join in a conference complicates the situation somewhat. It is an undoubted fact that the French Army Corps on the frontier are being brought to their full strength and that the leave of officers is restricted.

Later.

*Le Temps* has an article which says that Mr. Gerald Lowther's refusal on behalf of Great Britain to enter the proposed international conference regarding Morocco was based on instructions given prior to the resignation of M. Delcasse. It declares that Great Britain is bound by the *entente* not to embarrass France.

#### THE SINKING OF THE "ST. KILDA."

London, June 20.

Sir Charles Hardinge, the British Ambassador at St. Petersburg, has brought the sinking of the British steamer *St. Kilda*, near Hongkong, to the attention of Count Lamsdorff, the Russian Minister of Foreign Affairs, pointing out the gravity of the situation arising from such an incident. He has asked for reparation and demands that immediate steps be taken to render the repetition of such acts impossible.

Count Lamsdorff promised to refer the matter to the Minister of Marine. He added that last year's assurances given to Great Britain still held good, and that the case of

the *St. Kilda* was an isolated one, and was probably due to misunderstanding.

#### NATIONAL ASSEMBLY FOR RUSSIA.

London, June 20.

The Tsar has informed the deputation from the Congress of members of the Zemstvoes that he is unalterably resolved to convoke a National Assembly.

#### THE "ST. KILDA" AFFAIR.

London, June 21.

In the House of Commons Mr. Balfour, the Premier, stated that Great Britain took immediate steps upon the sinking of the steamer *St. Kilda* by the Russian converted cruiser *Dnieper*. Correspondence was proceeding between the British and Russian Governments. It is a matter of which Great Britain takes a very grave view, because the British Government had received the most specific assurances that no such action would be again taken by Russian cruisers.

#### THE TSAR AND HIS SUBJECTS.

The Tsar's gracious reception of the members of the Zemstvo and his emphatic promise of reformed institutions are regarded as a turning point in history, and have produced the best effect.

#### REPORTED JAPANESE ADVANCE.

London, June 22.

The *Daily Telegraph's* Tokyo correspondent says that the Japanese are continuing their victorious advance. The Russians are completely outflanked on both wings. Joyful news may shortly be expected.

[NOTE—Where is this outflanking? We had not heard of it previously.—Ed. J.M.]

#### BRITISH MILITARY STORES SCANDAL.

Later.

Mr. Balfour, the Premier, is appointing a Royal Commission to continue the investigation into the stores scandal.

The Opposition has given notice of a vote of censure on the conduct of the Government in connection with the stores scandal.

[Note—This telegram evidently refers to the scandal mentioned in a *1/2* telegram the other day.]

#### THE ARISUGAWAS' VISIT.

The political importance of the approaching visit of Prince and Princess Arisugawa is fully recognised in England. Every honour due to the exalted representatives of Great Britain's ally will be paid.

Admiral Neville and General Nicholson will especially attend upon his Highness, who will be lodged at York House.

The Lord Mayor and Corporation of the city of London will entertain the Prince at luncheon at the Guildhall.

Various Royal and other functions have been arranged in their honour.

(Received at the Military Head Quarters; 15th p.m.)

#### MANCHURIA.

The enemy's troops advanced yesterday against Sufangtai, Papehtats (10 miles north of Changtu) and Haichingwopeng (13 miles north-west of Changtu) but were driven back.

For the rest, there is nothing to report except some skirmishes of scouts.

(Received at the Military Head Quarters; p.m. 17th.)

#### THE WEIYUANPAUMUN QUARTER.

On the 16th instant at 9 a.m. about 300 of the enemy's cavalry advanced from Shwangmiaotsz in the direction of Kuyushu, but were driven back by our troops.

(Weiyuanpaumun is on the Kaiyuan-Itungchow road, that is to say, the eastern of the roads converging from the north on Tieling.—Ed. J.M.)

#### THE CHANGTU QUARTER.

Our advanced force drove back a body of

the enemy from Sumienching and took possession of the latter place.

#### THE TAHSIAOTUN DIRECTION.

A force of our troops drove back the enemy's cavalry from Shwangchatsz (7½ miles west of Sumienching) and took possession of the place.

#### THE KANGPING DIRECTION.

(Kangping lies to the north-west of Fakumun.—Ed. J.M.)

At 1.40 a.m. on the 19th our central column forced the enemy's cavalry camps at Tienkiawapeng (17 miles north-east of Kangping), and pursuing him vigorously, attacked his positions extending from the southern end of Liaoyangwapeng to the east side, between 4 a.m. and 8.30 a.m. At 9 a.m. Liaoyangwapeng fell entirely into our hands.

Our right column, driving the enemy's cavalry before it, took possession at 8 a.m. of Lochuankau (9 miles east of Liaoyangwapeng) and of Makiapau (5 miles east of Liaoyangwapeng). Then again opening with artillery on the enemy's cavalry which had retreated to the north of Liaoyangpung, we inflicted heavy loss on him and finally threw him into disorder.

Our left column pursuing about a thousand of the enemy's cavalry which had broken and fled from the north-west of Liaoyangwopeng, opened a heavy fire on him and inflicted great loss.

According to the statements of prisoners the enemy's force in Liaoyangwopeng consisted of 5,000 cavalry under Mischenko with 20 guns, and he scattered in three directions, the main body to the north, one part to the north-east, and one to the north-west. In this fight there are clear evidences that the enemy fell into an extraordinary panic and fled in extreme disorder. The provisions, fodder and clothing abandoned by him indicate a state of much distress as to supplies. We took several hundred *koku* of various cereals.

The enemy in retreating set fire to a house at the southern end of Liaoyangwopeng. There is reason to infer that his object was to cremate the bodies of his dead.

Our casualties were 30 killed (including officers) and 185 wounded. The enemy's losses are uncertain, but the bodies abandoned by him in front of our centre column and those cremated amounted to 80 and there were a large number of horses. It is probable, therefore, that if his casualties in the various sections of the field were added together they would be very large.

(Received at the Military Head Quarters; p.m. 20th)

#### WEIYUANPAUMUN QUARTER.

Our troops, which, at 1.30 a.m. on the 19th, had occupied Lienhwachieh without encountering the enemy, pushed along the Kirin high-road in the afternoon, gradually driving the enemy before them and occupied Yangmutintz (about 20 miles north-east of Weiyuanpaumun.).

On the same day at 3.20 p.m. another body of our troops driving back the enemy from Yangtszling (about 12 miles north of Weiyuanpaumun), occupied at 9.40 p.m. the hills on the north-west of Shihkiwotsz (7½ miles north of Yangtszling), and thereafter expelling the enemy from the hills on the north and north-east of that place (Shihkiwotsz), drove him north in confusion.

(This shows that two bodies of Japanese troops have pushed from Weiyuanpaumun—which is the gate of the Palisades on the road from Kaiyuan to Kirin—, one to the

north-east, the other to the north, each to a distance of some 20 miles from Wei-yuan-paun.—Ed. J.M.)

#### CHANGTU QUARTER.

Our troops which had advanced along the Railway, drove the enemy's infantry and cavalry from the highlands  $2\frac{1}{2}$  miles north of Shihotsz station, and at 6.30 a.m. on the 19th occupied the highlands on the south of Shihangmiaotsz (about 18 miles north-east of Changtu). The above station (Shihotsz) was entirely wrecked.

Our losses in this fight were only 4 men wounded. As to the enemy's casualties, he left 10 dead bodies (one of an officer) and 3 horses. It would appear that his losses were comparatively heavy. We took one man prisoner and captured a machine-gun and a horse.

Our troops which advanced along the Fenghua high-road, drove back the enemy from Pehfangshingkau (about  $2\frac{1}{2}$  miles south-east of Kinglungshien) at 3.30 a.m. on the 19th, and pouring on him a heavy fire of rifles and guns, obtained possession of Liutiaokau (some 19 miles north of Changtu and  $6\frac{1}{2}$  miles north of Pehfangshingkau) at 8.40 a.m.

There is no special change in any other quarter.

(FROM THE "HOCHI SHIMBUN.")

#### PEACE PRELIMINARIES.

General Linevitch is said to be very strongly opposed to an armistice. The Russians have retreated for 25 miles.

Reports from Russia indicate that Baron Rosen has set out for Washington and that Kuropatkin and Nelidof will be the Russian plenipotentiaries.

(FROM THE "ASAHI SHIMBUN.")

#### A RUSSIAN RETREAT.

A Washington telegram says that according to news from Paris, Linevitch has abandoned his first lines of defence.

#### THE PEACE CONFERENCE.

It is expected that the Japanese plenipotentiaries will reach Washington at the beginning of August and that the Conference will commence its sittings before the 20th of that month.

The Russian war party are doing their best to prevent the conclusion of a peace treaty. They repose hopes in a victory by Linevitch.

(RECEIVED AT THE FOREIGN OFFICE.)

#### THE PEACE NEGOTIATIONS.

The *Vossische Zeitung* writes as follows about the peace negotiations:—"The Russian Army and Navy having alike been shattered, the St. Petersburg Government has decided to make peace if Japan's terms be admissible. This is a proof that Russia has recognised her inability to secure a victory by continuing the fight. It has evidently been no easy achievement for the Tsar to form this decision, and the world will applaud him all the more for determining not to continue a cruel and useless war. Japan, too, is doubtless disposed to exercise moderation so as not to imperil the results of her success. Her continued victories have raised her prestige to an extraordinary extent. The Japanese are now known as a people that have never been beaten in battle. They cannot desire any further successes. But they have now to take care that the peace concluded is not merely a temporary truce. They must obtain guarantees that Russia shall not attempt to take revenge some years hence. If there is any fear of revenge Japan will probably prefer to continue the present

war. On the other hand, in order to restore peace permanently, and not to witness an inevitable war of revenge at no distant date, Japan must exercise moderation and must refrain from imposing terms which would humiliate her adversary. Of course the issue of the negotiations is uncertain. There is nothing for it but to await their course. But certainly no third Power should be allowed to interfere.

#### M. ROUVIER.

M. Rouvier, who has been acting temporarily as Foreign Minister since the resignation of M. Delcassé, has now been appointed to the portfolio. He continues to be Premier as before but he has been relieved of the portfolio of Finance which he held in combination with that of Premier. M. Merour has been nominated his successor as Minister of Finance.

#### RUSSIAN RESIGNATIONS.

According to a Wolff's telegram from St. Petersburg it is believed in the Naval Department that as a consequence of the Grand Duke Alexis' resignation, Admiral Avellan will resign the portfolio of the Navy. There is a report that he has already submitted his resignation.

A Reuter's telegram says that Grand Duke Alexis has resigned the office of Commander-in-chief of the Navy.

#### FRENCH SILK MARKET.

Lyons, June 17.

The market for new cocoons is now in full swing. Rates are not yet definitely settled but they are far higher than last year, the general price being from 3 francs upwards. The exceptionally high rate of  $3\frac{1}{2}$  francs has been reached.

#### RUSSIAN DISCONTENT.

The latest news from Moscow says that the Mayors of provincial towns are enraged against the prefectural Governor who forbade all discussion relating to a national assembly. They have decided to open in Moscow a meeting of all the Mayors, and 86 have promised to attend. Thirty-one prefectural associations and 250 local assemblies have declared by manifesto that unless the Government gives pledges for carrying into effect the promises of liberty and reform these associations will refuse to exercise their functions.

The Tsar is stated to have promised to give audience to the representatives of the meeting held in Moscow and the issue of the affair will be decided in accordance with the outcome of the audience.

#### PRINCE ARISUGAWA.

Prince and Princess Arisugawa arrived at the Hague on the 18th instant. They were met by the Queen's representative and a number of high officials, and in response to the Queen's invitation they took up their quarters in the Palace. On the 19th the Prince and Princess were received by the Queen, and that night they attended a banquet in the Palace. On the 21st they are to lunch with the Queen Dowager.

#### THE "ST. KILDA."

According to the newspapers the British Ambassador in St. Petersburg on the 18th instant presented to Count Lamsdorff a strong protest and a demand for compensation in connexion with the sinking of the *St. Kilda* by the converted cruiser *Dnieper*. Count Lamsdorff promised to hand the protest to the Minister of Marine. The whereabouts of the *Dnieper* is not known and no report has yet been received from her captain. Count Lamsdorff assured the

Ambassador that the undertaking given last year to the British Government is still valid, and that as the undertaking had now been observed for nearly a year, this incident was probably due to a mistake arising out of the confusion into which Russia's naval power has fallen in the Far East.

#### THE TZAR AND HIS PEOPLE.

There were all kinds of conjectures as to whether the Tsar would decide to grant audience to the representatives of the St. Petersburg and Moscow local assemblies, and it cannot be doubted that very diverse opinions on this subject were expressed at the Palace Council. However, according to the St. Petersburg telegraphic agency the Tsar invited the representatives to the Peterhof on the 19th.

Prince Troubetzoi acted as their spokesman, and made a long and detailed statement relating to the troubles of Russia which, he said, had rendered a direct appeal to the Tsar inevitable.

The Tsar replied that he earnestly regretted the great sacrifices that this war had entailed, especially the last naval engagement. His Majesty then said:—"It gives me great pleasure to observe your sincerity. Now that I am about to give effect to a new system of government I do not doubt that you will assist me in my work. My determination to call a National Assembly cannot be shaken. I have unshaken confidence in that course and I shall continue to follow it. You may proclaim the fact to all my people in city and country. Hereafter I count on your assistance in this new work. The National Assembly will be a firm bond of union between Sovereign and subject and will be the foundation of the Russian state policy."

(Received by the Head Quarters Staff.)

#### RUSSIANS IN KOREA.

A body of our troops in N.-E. Korea occupied Kyong-song at 11 a.m. on the 20th. The enemy in that district, several thousand strong, with artillery, retired to Susong, which is 10 miles northward of Kyong-song.

## EXPORTS.

## RAW SILK.

A quiet week. Small transactions daily both in old and new silk, the old being of poor quality and fetching low prices. With regard to new crop, holders ask very high prices, which, so far, consuming markets in Europe and America refuse to pay. Some enterprising shippers have taken a few sample lots, Koshu Yajima bringing as much as yen 1,015. Supplies at present are very scanty, and we must wait for further arrivals before we can give any list of quotations.

# FOR BABY'S SKIN SCALP AND HAIR

## Something for Mothers to Think About

EVERY CHILD born into the world with an inherited or early developed tendency to distressing, disfiguring humours of the skin, scalp, and blood, becomes an object of the most tender solicitude, not only because of its suffering but because of the dreadful fear that the disfigurement is to be lifelong and mar its future happiness and prosperity. Hence it becomes the duty of mothers of such afflicted children to acquaint themselves with the best, the purest, and most effective treatment available, viz., THE CUTICURA TREATMENT.

Warm baths with CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, gentle anointings with CUTICURA OINTMENT, to instantly allay itching, irritation, and inflammation, and soothe and heal, to be followed in the severer cases by mild doses of CUTICURA RESOLVENT PILLS (see below), to cool and cleanse the blood, are all that can be desired for the alleviation of the suffering of skin-tortured infants and children and the comfort of worn-out, worried mothers. A single set is often sufficient to cure when the best physicians fail.

## Millions of Women Use Cuticura Soap

Assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itchings, and chafings, in the form of baths for annoying irritations and inflammations, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sensitive, antiseptic purposes which readily suggest themselves to women, especially mothers, and for all the purposes of the toilet, bath, and nursery.

CUTICURA RESOLVENT PILLS (Chocolate Coated) are prepared to meet the wants of delicate women, and sensitive children, and are pure, sweet, and tasteless. They are beyond question the most successful blood purifiers and humour cures yet compounded.

CUTICURA REMEDIES are sold throughout the world. Australian Depot: R. TOWNS & Co., Sydney. British Depot: 7-23, Chancery Lane, London. French Depot: 2 Rue de la Paix, Paris. Forras Devo and Chem. Co., Sole Vende, Boston, U. S. A. "All about the Skin," free.
